In this Operator’s Manual, you will find the following symbols:

⚠️ WARNING
Warning notes draw your attention to hazards that endanger your health or life, or the health or life of others.

⚠️ Notes on material damage alert you to dangers that could lead to damage to your vehicle.

ℹ️ This symbol indicates useful instructions or further information that could be helpful to you.

► This symbol designates an instruction you must follow.
► Several consecutive symbols indicate an instruction with several steps.
▷ This symbol tells you where you can find further information on a topic.
▷▷ This symbol indicates a warning or an instruction that is continued on the next page.

Display
This font indicates a display message in the multifunction display/COMAND display.

Editorial office
Not to be reprinted, translated or otherwise reproduced, in whole or in part, without the written permission of Daimler AG.

As at 25.05.2011
Welcome to the world of Mercedes-Benz

Before you drive off, please familiarize yourself with your vehicle and read this manual, especially the safety and warning notes. This will help you to obtain the maximum pleasure from your vehicle and avoid endangering yourself and others.

The equipment or model designation of your vehicle may differ according to:

- model
- order
- country variant
- availability

Mercedes-Benz is constantly updating its vehicles to the state of the art.

Mercedes-Benz therefore reserves the right to introduce changes in the following areas:

- design
- equipment
- technical features

Therefore, you cannot base any claims on the illustrations or text content in this Operator's Manual.

The following are integral components of the vehicle:

- Operator's Manual
- Maintenance Booklet
- Equipment-dependent supplements

Keep these documents in the vehicle at all times. When you sell the vehicle, always pass the documents on to the new owner.

The technical documentation team at Daimler AG wishes you safe and pleasant motoring.

Product information

Mercedes-Benz recommends that you use genuine Mercedes-Benz parts, conversion parts and accessories that have been approved for the type of vehicle. Mercedes-Benz tests genuine parts as well as conversion parts and accessories which have been specifically approved for your vehicle for their reliability, safety and suitability. Despite ongoing market research, Mercedes-Benz is unable to assess other parts. Therefore, Mercedes-Benz accepts no responsibility for the use of such parts in Mercedes-Benz vehicles, even if they have been independently or officially approved. The use of non-approved parts could affect your vehicle's operating safety. Mercedes-Benz therefore recommends that you use genuine Mercedes-Benz parts, conversion parts and accessories that have been approved for the type of vehicle. Genuine Mercedes-Benz parts, approved conversion parts and accessories are available from any authorized Mercedes-Benz Center. Here, you will receive advice about permissible technical modifications, and the parts will be professionally installed.

Operator’s Manual

Notes on the Operator’s Manual

This Operator’s Manual contains a great deal of helpful information. We urge you to read it carefully and familiarize yourself with the vehicle before driving.

For your own safety and longer service life of the vehicle, we urge you to follow the instructions and warnings contained in this Operator’s Manual. Ignoring them could result in damage to the vehicle or personal injury to you or others. Vehicle damage caused by failure to follow instructions is not covered by the Mercedes-Benz Limited Warranty.

Vehicle equipment

This Operator’s Manual describes all models and all standard and optional equipment of your vehicle available at the time of going to print. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions. The equipment in your vehicle may therefore differ from some of the descriptions or illustrations.

The original purchase agreement lists all systems installed in your vehicle. Contact an authorized Mercedes-Benz Center if you have any questions about equipment or operation.

The Operator’s Manual and the Maintenance Booklet are important documents and should be kept in the vehicle.

Service and vehicle operation

Service and literature

Your vehicle is covered under the terms of the warranties printed in the Service and Warranty Information booklet. Your authorized Mercedes-Benz Center will exchange or repair any defective parts originally installed in the vehicle in accordance with the terms of the following warranties:

- New Vehicle Limited Warranty
- Emission Systems Warranty
- Emission Performance Warranty
- California, Connecticut, Maine, Massachusetts, New York, Pennsylvania, Rhode Island and Vermont Emission Control Systems Warranty
- State warranty enforcement laws (lemon laws)
**Information for customers in California**

Under California law you may be entitled to a replacement of your vehicle or a refund of the purchase price or lease price, if after a reasonable number of repair attempts Mercedes-Benz USA, LLC and/or its authorized repair or service facilities fail to fix one or more substantial defects or malfunctions in the vehicle that are covered by its express warranty. During the period of 18 months from original delivery of the vehicle or the accumulation of 18,000 miles (approximately 29,000 km) on the odometer of the vehicle, whichever occurs first, a reasonable number of repair attempts is presumed for a retail buyer or lessee if one or more of the following occurs:

1. the same substantial defect or malfunction results in a condition that is likely to cause death or serious bodily injury if the vehicle is driven, that defect or malfunction has been subject to repair two or more times, and you have directly notified Mercedes-Benz USA, LLC in writing of the need for its repair.

2. the same substantial defect or malfunction of a less serious nature than category (1) has been subject to repair four or more times and you have directly notified Mercedes-Benz in writing of the need for its repair.

3. the vehicle is out of service by reason of repair of the same or different substantial defects or malfunctions for a cumulative total of more than 30 calendar days.

Please send your written notice to:
Mercedes-Benz USA, LLC
Customer Assistance Center
One Mercedes Drive
Montvale, NJ 07645-0350

**Maintenance**

The Service and Warranty Booklet describes all the necessary maintenance work which should be done at regular intervals.

Always have the Service and Warranty Booklet with you when you bring the vehicle to an authorized Mercedes-Benz Center. The service advisor will record every service for you in the Service and Warranty Booklet.

**Breakdown assistance**

The Mercedes-Benz Roadside Assistance Program offers technical help in the event of a breakdown. Calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.

1-800-FOR-MERCedes (1-800-367-6372) (USA)
1-800-387-0100 (Canada)

For additional information, refer to the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty booklet (Canada). You will find both in your vehicle literature portfolio.

**Change of address or change of ownership**

In the event of a change of address, please send us the "Change of Address Notice" found in the Service and Warranty Information Booklet, or simply call the Mercedes-Benz Customer Assistance Center (in the USA) at the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service Center (in Canada) at 1-800-387-0100. This will assist us in contacting you in a timely manner should the need arise.

If you sell your Mercedes, please leave the entire literature in the vehicle so that it is available to the next owner.
If you bought this vehicle used, be sure to send in the "Notice of Purchase of Used Car" found in the Service and Warranty Information Booklet, or call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERcedes (1-800-367-6372) or Customer Service (in Canada) at 1-800-387-0100.

Vehicle operation outside the USA and Canada

If you plan to operate your vehicle in foreign countries, please be aware that:

- service facilities or replacement parts may not be readily available.
- unleaded fuel for vehicles with a catalytic converter may not be available. Leaded fuel may cause damage to the catalytic converter.
- the fuel may have a considerably lower octane rating. Unsuitable fuel can cause engine damage.

Some Mercedes-Benz models are available for delivery in Europe through our European Delivery Program. For details, consult an authorized Mercedes-Benz Center or write to one of the following addresses.

In the USA

Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada

Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

Operating safety

Safety notes

⚠️ WARNING
Work improperly carried out on electronic components and associated software could cause them to cease functioning. Because the vehicle’s electronic components are interconnected, any modifications made may produce an undesired effect on other systems. Electronic malfunctions could seriously impair the operating safety of your vehicle.

Contact an authorized Mercedes-Benz Center for repairs or modifications to electronic components.

Other improper work or modifications on the vehicle could also have a negative impact on the operating safety of the vehicle.

Some safety systems only function when the engine is running. You should therefore never turn off the engine while driving.

⚠️ WARNING
Heavy blows against the vehicle underbody or tires/wheels may cause serious damage and impair the operating safety of your vehicle. Such blows can be caused, for example, by running over an obstacle, road debris or a pothole.

If you feel a sudden significant vibration or ride disturbance, or you suspect that damage to your vehicle has occurred:

- turn on your hazard warning flashers.
- slow down carefully.
- drive with caution to an area which is a safe distance from the road.

Inspect the vehicle underbody and tires/wheels for possible damage. If the vehicle appears unsafe, have it towed to the nearest authorized Mercedes-Benz Center or other qualified maintenance or repair facility for further inspection or repairs.
General notes

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.
Any unauthorized modification to this device could void the user’s authority to operate the equipment.
The Product label with FCC ID and IC certification number can be found in the battery case of the SmartKey.

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.
Any unauthorized modification to this device could void the user’s authority to operate the equipment.
The Product label with FCC ID and IC certification number can be found in the battery case of the SmartKey.

Diagnostics connection

! WARNING
If you connect equipment to the diagnostics connection, it can affect the operation of the vehicle systems. This can impair the operating safety of your vehicle while driving. There is a risk of accident.
Do not connect any equipment to the diagnostics connection.

! WARNING
Loose equipment or equipment cables that are connected to the diagnostics connection can obstruct the area around the pedals. The equipment or the cables could get between the pedals in the event of sudden braking or acceleration. As a result, the movement of the pedals may be impaired. There is a risk of accident.
Do not attach any equipment or cables in the driver footwell.

! If the engine is switched off and equipment on the diagnostics connection is used, the starter battery may discharge.
The diagnostics connection is only intended for the connection of diagnostic equipment at a qualified specialist workshop.
Connecting equipment to the diagnostics connection can, for example, lead to emissions monitoring information being reset. This may lead to the vehicle failing to meet the requirements of the next emissions test during the main inspection.

Qualified specialist workshop

An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary specialist knowledge, tools and qualifications to correctly carry out the work required on your vehicle. This is especially the case for work relevant to safety.
Observe the notes in the Maintenance Booklet.
Always have the following work carried out at an authorized Mercedes-Benz Center:
- work relevant to safety
- service and maintenance work
- repair work
- alterations, installation work and modifications
- work on electronic components
Correct use

**WARNING**

There are various warning stickers affixed to your vehicle. Their purpose is to alert you and others to various dangers. Therefore, do not remove any warning stickers unless the sticker clearly states that you may do so. If you remove any warning stickers, you or others could fail to recognize certain dangers and be injured.

When driving your vehicle observe the following information:

- the safety notes in this manual
- the "Technical data" section in this manual
- traffic rules and regulations
- laws and safety standards pertaining to motor vehicles

Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and rectified. If the problem is not resolved to your satisfaction, please discuss the problem again with a Mercedes-Benz Center or contact us at one of the following addresses.

**In the USA**

Customer Assistance Center
Mercedes-Benz USA, LLC
One Mercedes Drive
Montvale, NJ 07645-0350

**In Canada**

Customer Relations Department
Mercedes-Benz Canada, Inc.
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

Reporting malfunctions relevant to safety

USA only:

The following text is reproduced as required of all manufacturers according to Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the National Traffic and Motor Vehicle Safety Act of 1966.

Reporting safety defects

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to [http://www.safercar.gov](http://www.safercar.gov); or write to: Administrator, NHTSA Headquarters, 1200 New Jersey Avenue, SE, West Building, Washington, DC 20590.

You can obtain additional information about vehicle safety from: [http://www.safercar.gov](http://www.safercar.gov).

Limited Warranty

Follow the instructions in this manual about the proper operation of your vehicle as well as about possible vehicle damage. Damage to your vehicle that arises from culpable contraventions against these instructions is not covered by Daimler AG’s Mercedes-Benz Limited Warranty.
Data stored in the vehicle

Information about electronic data acquisition in the vehicle

(Including notice pursuant to California Code § 9951)

Your vehicle records electronic data. If your vehicle is equipped with mbrace, data is transmitted in the event of an accident. This information helps, for example, to test vehicle systems after an accident and to continually improve vehicle safety.

Daimler AG can access this data and submit it:

- for safety research or vehicle diagnosis purposes
- with the consent of the vehicle owner
- on the instruction of prosecuting authorities
- for use in arbitration of disputes that involve Daimler AG, its affiliates or its sales and service organizations
- as otherwise required or permitted by law.

Please observe the mbrace purchase agreement for further details on the recording and transfer of data by this system.

1 The system is called TELE AID in Canada.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (page 21).

Occupant safety

Introduction

In this section, you will learn the most important facts about the restraint system components of the vehicle.

The restraint system consists of:

- seat belts
- child restraint systems

Additional protection is provided by:

- SRS (Supplemental Restraint System)
- air bag system components with:
  - PASSENGER AIR BAG OFF indicator lamp
  - front-passenger seat with Occupant Classification System (OCS)

The different air bag systems work independently of each other. The protective functions of the system work in conjunction with each other. Not all air bags are deployed in an accident.

⚠️ WARNING

Modifications to or work improperly conducted on restraint system components or their wiring, as well as tampering with interconnected electronic systems, can lead to the restraint systems no longer functioning as intended.

Air bags or Emergency Tensioning Devices (ETDs), for example, could deploy inadvertently or fail to deploy in accidents although the deceleration threshold for air bag deployment is exceeded. Therefore, never modify the restraint systems. Do not tamper with electronic components or their software.

See "Children in the vehicle" (page 51) for more information on infants and children traveling with you in the vehicle and restraints for infants and children.

SRS (Supplemental Restraint System)

Introduction

SRS reduces the risk of occupants coming into contact with the vehicle’s interior in the event of an accident. It can also reduce the effect of the forces to which occupants are subjected during an accident.

SRS consists of:

- [ ] SRS warning lamp
- air bags
- air bag control unit (with crash sensors)
- Emergency Tensioning Devices
- seat belt force limiters

SRS warning lamp

SRS functions are checked regularly when you switch on the ignition and when the engine is running. Therefore, malfunctions can be detected in good time.

The [ ] SRS warning lamp in the instrument cluster lights up when the ignition is switched on. It goes out no later than a few seconds after the engine is started.
**WARNING**

The SRS self-check has detected a malfunction if the [ ] SRS indicator lamp:

- does not light up at all
- does not go out after approximately four seconds after the engine is started
- comes on after the engine was started or while driving.

For your safety, Mercedes-Benz strongly recommends that you have the system checked as soon as possible at an authorized Mercedes-Benz Center. SRS may otherwise fail to activate when it is needed in the event of an accident, which could lead to serious or fatal injuries. SRS might also be activated unexpectedly and unnecessarily, which could also result in injury.

In addition, work carried out improperly on SRS may render SRS inoperative or cause unintended air bag deployment. Work on the SRS system should only be carried out by qualified specialist personnel. Consult an authorized Mercedes-Benz Center.

If it is necessary to modify an air bag system to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details. USA only: for further information contact our Customer Assistance center at 1-800-FOR-MERcedes (1-800-367-6372).

---

**Safety guidelines for seat belts, Emergency Tensioning Devices (ETDs) and air bags**

**WARNING**

- Damaged seat belts or seat belts that have been subjected to stress in an accident must be replaced. Their anchoring points must also be checked. Only use seat belts installed or supplied by an authorized Mercedes-Benz Center.
- Air bags and pyrotechnic Emergency Tensioning Devices (ETDs) contain perchlorate material, which may require special handling and regard for the environment. Check your national disposal guidelines. California residents, see www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm.
- Air bags and ETDs are designed to function on a one-time-only basis. An air bag or ETD that has deployed must be replaced.
- Do not pass seat belts over sharp edges. They could tear.
- Do not make any modification that could change the effectiveness of the seat belts.
- Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.
- No modifications of any kind may be made to any components or wiring of the SRS.
- Do not change or remove any component or part of the SRS.
- Do not install additional trim material, seat covers, badges, etc. over the steering wheel hub, front-passenger front air bag cover, outer sides of the seat backrests, door trim panels, or door frame trims.
- Do not install additional electrical/electronic equipment on or near SRS components and wiring.
- Keep area between air bags and occupants free of objects (e.g. packages, purses, umbrellas, etc.).
- Air bag system components will be hot after an air bag has inflated. Do not touch them.
- Never place your feet on the instrument panel, dashboard, or on the seat. Always keep both feet on the floor in front of the seat.
- Improper repair work on the SRS creates a risk of rendering the SRS inoperative or causing unintended air bag deployment. Work on the SRS must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.
- For your protection and the protection of others, when scrapping the air bag unit or ETD, our safety instructions must be
followed. These instructions are available from any authorized Mercedes-Benz Center.

- Given the considerable deployment speed, required inflation volume, and the material of the air bags, there is the possibility of abrasions or other, potentially more serious injuries resulting from air bag deployment.

If you sell your vehicle, Mercedes-Benz strongly recommends that you inform the subsequent owner that the vehicle is equipped with SRS. Also, refer them to the applicable section in the Operator's Manual.

### Air bags

#### Important safety notes

**WARNING**

Air bags are designed to reduce the potential of injury and fatality rates in certain situations:

- frontal impacts (driver’s and front-passenger front air bags and knee bags)
- side impacts (head bags and side impact air bags)

However, no system available today can completely eliminate injuries and fatalities. When the air bags are deployed, a small amount of powder temporarily comes out of the air bags. This powder generally does not constitute a health hazard and does not indicate that there is a fire in the vehicle. In order to prevent potential breathing difficulties, you should leave the vehicle as soon as it is safe to do so. If you have any breathing difficulty but cannot get out of the vehicle, then get fresh air by opening a side window or door.

**WARNING**

In order to reduce the potential danger of injuries caused during the deployment of the front air bags, the driver and front passenger must always be correctly seated and wear their seat belts.

For maximum protection in the event of a collision, you must always be in the normal seat position with your back against the backrest. Fasten your seat belt and make sure that it is correctly positioned on your body.

As the air bag inflates with considerable speed and force, a proper seating position and correct positioning of the hands on the steering wheel will help to keep you at a safe distance from the air bag. Occupants who are not wearing their seat belt, are not seated properly or are too close to the air bag can be seriously injured or killed by an air bag as it inflates with great force instantaneously:

- sit with the seat belt fastened correctly and in a position that is as upright as possible with your back against the backrest.
- move the driver’s seat as far back as possible, still permitting proper operation of vehicle controls. The distance from the center of the driver’s chest to the center of the air bag cover on the steering wheel must be at least 10 inches (25 cm) or more. You should be able to accomplish this by adjusting the seat and steering wheel. If you have any difficulties, please contact an authorized Mercedes-Benz Center.
- do not lean your head or chest close to the steering wheel or dashboard.
- only hold the steering wheel on the outside. Placing hands and arms inside the rim can increase the risk and potential severity of hand/arm injury when the driver front air bag inflates.
- adjust the front-passenger seat as far back as possible from the dashboard when the seat is occupied.
- Occupants, especially children, should never place their bodies or lean their heads in the area of the door or the seat where the head bag or side impact air bag inflates. This could result in serious injuries or death should the head bag or side impact air bag be deployed. Always sit as upright as
possible, wear the seat belt properly and use an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.

Failure to follow these instructions can result in severe injuries to you or other occupants. If you sell your vehicle, it is important that you make the buyer aware of this safety information. Be sure to give the buyer this Operator’s Manual.

⚠️ **WARNING**

There is a possibility of a head bag- or side impact air bag-related injury if occupants, especially children, are not properly seated or restrained when next to a head bag or side impact air bag that needs to deploy rapidly in a side impact in order to do its job.

To help avoid the possibility of injury, please follow these guidelines:

1. Occupants, especially children, should never place their bodies or lean their heads in the area of the door or the seat where the head bag or side impact air bag inflates. This could result in serious injuries or death should the head bag or side impact air bag be deployed.

2. Always sit as upright as possible, and use the seat belts properly. Make sure that children 12 years old and under use an appropriately infant restraint, toddler restraint or booster seat recommended for the size and weight of the child.

3. Always wear seat belts properly.

If you believe that, even with the use of these guidelines, it would be safer for your passenger seat occupants to have the passenger side head bag or side impact air bag deactivated, then deactivation can be carried out upon your written request at an authorized Mercedes-Benz Center at an additional cost.

Please contact an authorized Mercedes-Benz Center or call the Customer Assistance Center (in the USA) at 1-800-FOR-MERcedes (1-800-367-6372), or Customer Service (in Canada) at 1-800-387-0100 for details.

The air bags are only deployed if the air bag control unit detects the need for deployment. Only in the event of such a situation will the air bags provide their supplemental protection.

The driver and passenger should always wear their seat belts. Otherwise, it is not possible for the air bags to provide their supplemental protection.

In the event of other types of impacts and impacts below air bag deployment thresholds, air bags will not deploy. The driver and passengers will then be protected to the extent possible by a properly fastened seat belt. A properly fastened seat belt is also needed to provide the best possible protection in a rollover.

Air bags provide additional protection; they are not, however, a substitute for seat belts. All vehicle occupants must fasten their seat belts regardless of whether your vehicle is equipped with air bags or not.

It is important for your safety and that of your passenger to have deployed air bags replaced and to have any malfunctioning air bags repaired. This will help to make sure the air bags continue to perform their protective function for the vehicle occupants in the event of a crash.

**Front air bags**

The front air bags increase protection for the driver’s and front-passenger’s head and chest.
Driver's air bag [1] deploys in front of the steering wheel; front-passenger front air bag [2] deploys in front of and above the glove box. They are deployed:

- in the event of certain frontal impacts
- if the system determines that air bag deployment can offer additional protection to that provided by the seat belt
- depending on whether the seat belt is being used
- independently of other air bags in the vehicle

If the vehicle over turns, the front air bags are generally not deployed. If the system detects high vehicle deceleration in a longitudinal direction, the front air bags are deployed.

Your vehicle has adaptive, two-stage front air bags. In the event of a collision, the air bag control unit evaluates the vehicle deceleration. When the first deployment threshold is reached, the front air bag is filled with enough propellant gas to reduce the risk of injuries. The front air bag is fully deployed if a second deployment threshold is exceeded within a few milliseconds.

The deployment of the front-passenger front air bag is also influenced by the weight category of the front passenger, which is determined by the Occupant Classification System (OCS) (> page 42).

The front air bags are not deployed in situations where a low impact severity is predicted. You will then be protected by the fastened seat belt.

The front-passenger front air bag will only deploy if:

- the system, based on the OCS weight sensor readings, detects that the front-passenger seat is occupied.
- the indicator lamp in the center console is not lit.
- the air bag control unit predicts a high impact severity.

**Driver's/front-passenger knee bag**

The driver and front-passenger knee bags enhance the level of protection against:

- knee injuries
- thigh injuries
- lower leg injuries

Driver's knee bag [1] deploys below the steering wheel. Front-passenger knee bag [2] deploys below the glove box. If the system determines that deployment of the knee bags can offer additional protection to that provided by the seat belt in the event of a frontal impact, the system will deploy them together with the front air bags. The knee bags operate best in conjunction with correctly positioned and fastened seat belts.

**Side impact air bags**

**WARNING**

The pressure sensors for side impact air bag control are located in the doors. Do not modify any components of the doors or door.
trim panels including, for example, the addition of door speakers. Improper repair work on the doors or the modification or addition of components to the doors create a risk of rendering the side impact air bags inoperative or causing unintended air bag deployment. Work on the doors must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.

⚠️ WARNING

Only use seat covers which have been tested and approved by Mercedes-Benz for your vehicle model. Using other seat covers may interfere with or prevent the deployment of the side impact air bags. Contact an authorized Mercedes-Benz Center for availability.

When deployed, the side impact air bags offer additional protection for the thorax of the vehicle occupants on the side of the vehicle on which the impact occurs. However, they do not protect the:

- head
- neck
- arms

The side impact air bags are deployed:

- on the side on which an impact occurs
- at the start of an accident with a high rate of lateral vehicle deceleration or acceleration, e.g. in a side impact
- independently of the use of the seat belt
- independently of the front air bags
- independently of the ETDs

If the vehicle overturns, the side impact air bags are generally not deployed. They are deployed if the system detects high vehicle deceleration or acceleration in a lateral direction and determines that side impact air bag deployment can offer additional protection to that provided by the seat belt.

Side impact air bags will not deploy in side impacts which do not exceed the system's preset deployment thresholds for lateral acceleration/deceleration. You will then be protected by the fastened seat belt.

If the OCS detects that the front-passenger seat is not occupied and the front-passenger seat belt is not fastened (the belt tongue is not engaged in the seat belt buckle), the side impact air bag on the front-passenger side will not deploy. The side impact air bag on the front-passenger side will deploy if the front-passenger seat belt is fastened, regardless of whether the front-passenger seat is occupied or not.

Head bags

The head bags enhance the level of protection for the head (but not chest or arms) of the vehicle occupants on the side of the vehicle on which the impact occurs.

Example: Coupe

Side impact air bags 1 deploy next to the outer seat cushions.
Example: Coupe

Head bags 😂 deploy in the area of the side window.

They are deployed:
- on the side on which an impact occurs
- at the start of an accident with a high rate of lateral vehicle deceleration or acceleration, e.g. in a side impact
- if the system determines that the vehicle occupants are offered additional protection to that provided by the seat belt
- independently of the use of the seat belt
- independently of the ETDs
- on the driver's side and passenger side, in the event of a vehicle rollover and if the system determines that air bag deployment can offer the vehicle occupants additional protection to that provided by the seat belt
- independently of the front air bags

Head bags 😂 will not deploy in side impacts which do not exceed the system's preset deployment thresholds for lateral acceleration/deceleration. You will then be protected by the fastened seat belt.

If the OCS has classified the front-passenger seat as unoccupied and the front-passenger seat belt is not fastened, the head bag on the passenger side will not deploy. The head bag on the front-passenger side will deploy if the front-passenger seat belt is fastened, regardless of whether the front-passenger seat is occupied or not.

**Occupant Classification System (OCS)**

**How the occupant classification system works**

The Occupant Classification System (OCS) categorizes the occupant on the front-passenger seat using a weight sensor. The front-passenger front air bag and the front-passenger knee bag are deactivated automatically for certain weight categories. The [ ] indicator lamp shows you the current status. When the [ ] indicator lamp is illuminated, the front-passenger front air bag and the front-passenger knee bag are deactivated.

The system does not deactivate:
- the front-passenger side impact air bag
- the front-passenger head bag
- the Emergency Tensioning Devices

To be classified correctly, the front passenger must sit:
- with the seat belt fastened correctly
- in a position that is as upright as possible with their back against the seat backrest
- with their feet on the floor

If the front-passenger's weight is transferred to another object in the vehicle (e.g. by leaning on armrests), OCS may not be able to approximate the occupant's weight category.

To establish whether the front passenger is being properly detected, both the driver and the front passenger should pay attention to the [ ] indicator lamp.

If the front-passenger seat, the seat cover or the seat cushion are damaged, have the necessary repair work carried out at an authorized Mercedes-Benz Center.

For safety reasons, Mercedes-Benz recommends that you only use seat accessories that have been approved by Mercedes-Benz.
**WARNING**

If the indicator lamp lights up when the front-passenger seat is occupied by an adult or a larger person, ask the passenger to reposition themselves on the seat so that the indicator lamp goes out.

In the event of a collision, the air bag control unit will not allow front-passenger front air bag and front-passenger knee bag deployment when the OCS has classified the front-passenger occupant as weighing as much as or less than a typical 12-month-old child in a standard child restraint or if the front-passenger seat is classified as being unoccupied.

If OCS has detected that the front passenger weighs the same as or less than a typical 12-month-old child in a standard child restraint system, the indicator lamp lights up when the engine is started and remains lit. This indicates that the front-passenger front air bag is deactivated.

If OCS determines that the front-passenger seat is unoccupied, the indicator lamp lights up once the engine has been started and remains lit. This shows that the front-passenger front air bag and front-passenger knee bag are deactivated.

If OCS determines that the front passenger weighs more than a typical 12-month-old child in a standard child restraint system and classifies this as a small person (e.g. a teenager or small adult), the indicator lamp lights up for approximately 6 seconds when the engine is started. Depending on occupant weight sensor readings from the seat, it will then remain illuminated or go out. If the indicator lamp is illuminated, the front-passenger front air bag is deactivated. With the indicator lamp out, the front-passenger front air bag and front-passenger knee bag are deactivated.

If OCS has determined that the front passenger is an adult or medium sized person, the indicator lamp lights up for approximately 6 seconds when the engine is started and then goes out. This shows that the front-passenger front air bag and front-passenger knee bag are activated.

If the indicator lamp is illuminated, the front-passenger front air bag and the front-passenger knee bag are deactivated and are not deployed.

If the indicator lamp does not light up, the front-passenger air bag is enabled and will be deployed:

- in the event of certain frontal impacts
- if the impact exceeds a preset deployment threshold
- independently of the other air bags

If the front-passenger air bag is deployed, the rate of inflation is influenced by:

- the rate of vehicle deceleration as assessed by the air bag control unit
- the front passenger's weight category as determined by the OCS

For further information, see "Air bag display messages" (page 171).

**WARNING**

Children 12 years old and under must be seated and properly secured in an appropriate infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.

The infant or child restraint must be properly secured with the vehicle’s seat belt fully in accordance with the child seat manufacturer’s instructions.

Occupants, especially children, should always sit as upright as possible, wear the seat belt properly and use an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.
Children can be killed or seriously injured by an inflating air bag. Note the following important information:

- Your vehicle is equipped with air bag technology designed to deactivate the front-passenger front air bag in your vehicle when the system senses the weight of a typical 12-month-old child or less along with the weight of a standard appropriate child restraint on the front-passenger seat.
- A child in a rear-facing child restraint on the front-passenger seat will be seriously injured or even killed if the front-passenger front air bag inflates in a collision which could occur under some circumstances, even with the air bag technology installed in your vehicle.
- If you install a rear-facing child restraint on the front-passenger seat, make sure the indicator lamp is illuminated, indicating that the front-passenger front air bag is deactivated. Should the indicator lamp not illuminate or go out while the restraint is installed, please check installation. Periodically check the indicator lamp while driving to make sure the indicator lamp is illuminated. If the indicator lamp goes out or remains out, do not transport a child on the front-passenger seat until the system has been repaired. A child in a rear-facing child restraint on the front-passenger seat will be seriously injured or even killed if the front-passenger front air bag inflates.
- If you place a child in a forward-facing child restraint on the front-passenger seat:
  - move the seat as far back as possible
  - use the proper child restraint recommended for the age, size and weight of the child
  - secure child restraint with the vehicle's seat belt according to the child seat manufacturer's instructions
- For children larger than a typical 12-month-old child, the front-passenger front air bag may or may not be activated.

If the driver's air bag deploys, this does not mean that the front-passenger front air bag also has to deploy.

The OCS may have detected that the seat:

- is empty or occupied by a person with a weight of up to or less than that of a typical 12-month-old child seated in a standard child restraint
- is occupied by a small individual, such as a young teenager or a small adult
- is occupied by a child in a child restraint system whose weight is greater than that of a typical 12-month-old child.

These are examples of when the OCS deactivates the front-passenger front air bag and front-passenger knee bag. Deactivation takes place although the collision fulfills the criteria for deploying the driver's air bag.

If the SmartKey has been removed from the ignition lock or has been set to position 0 with
the Start/Stop button, \( \text{indicator lamp} \) does not light up.

**WARNING**

If the red SRS warning lamp in the instrument cluster and the \( \text{indicator lamp} \) light up simultaneously, the OCS is malfunctioning. The front passenger front air bag will be deactivated in this case. Have the system checked by qualified technicians as soon as possible. Contact an authorized Mercedes-Benz Center.

Only have the seat repaired or replaced at an authorized Mercedes-Benz Center.

In order to ensure proper operation of the air bag system and OCS:

- Sit with the seat belt properly fastened in a position that is as upright as possible with your back against the seat backrest.
- When seated, a passenger should not position him/herself in such a way as to cause the passenger's weight to be lifted from the seat cushion as this may result in the OCS being unable to correctly approximate the passenger's weight category.
- Read and observe all warnings in this chapter.

### System self-test

The \( \text{indicator lamp} \) illuminates when you:

- turn the SmartKey to position 1 or 2 in the ignition lock
- press the Start/Stop button once or twice

If an adult occupant is properly sitting on the passenger seat and the OCS classifies the occupant as an adult, the \( \text{indicator lamp} \) illuminates and goes out again after approximately 6 seconds.

If the seat is not occupied and the OCS classifies the front passenger seat as being unoccupied, the \( \text{indicator lamp} \) will illuminate and not go out.

---

**WARNING**

If the \( \text{indicator lamp} \) does not illuminate, the system is not functioning. You must contact an authorized Mercedes-Benz Center before seating any child on the passenger seat.

For more information, see "Problems with the Occupant Classification System" (> page 46).

**WARNING**

Never place anything between seat cushion and child seat (e.g. a pillow), since it reduces the effectiveness of the OCS. The underside and rear side child restraint system must be placed entirely on the seat cushion and the backrest of the front-passenger seat backrest.

If necessary, adjust the tilt of the passenger seat backrest.

An incorrectly mounted child seat could cause injuries to the child in case of an accident, instead of increasing protection for the child. Follow the manufacturer’s instructions for installation of child restraint systems.
## Problems with the occupant classification system

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The indicator lamp illuminates and remains illuminated. The person on the front-passenger seat: • has the weight of a typical adult • has been determined by the system not to be a child.</td>
<td>The OCS is malfunctioning. ▶ Have the OCS checked as soon as possible at an authorized Mercedes-Benz Center. ▶ Observe the additional display messages in the multifunction display (▶ page 171).</td>
</tr>
</tbody>
</table>

⚠️ **WARNING**

If the indicator lamp illuminates and remains illuminated when the weight of a typical adult or someone larger than a small individual has been detected on the passenger seat, do not allow any occupant to use the passenger seat until the system has been repaired.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The indicator lamp does not illuminate and/or does not remain illuminated. The front-passenger seat is: • unoccupied • occupied with a weight up to or less than a typical 12-month-old child in a standard child restraint system</td>
<td>The OCS is malfunctioning. ▶ Make sure there is nothing between the seat cushion and the child seat. ▶ Check the installation of the child restraint system. ▶ Make sure that no objects are applying additional weight onto the seat. ▶ If the indicator lamp does not illuminate, have the OCS checked as soon as possible at an authorized Mercedes-Benz Center. Do not transport a child on the front-passenger seat as long as the OCS is not functioning. ▶ Observe the additional display messages in the multifunction display (▶ page 171).</td>
</tr>
</tbody>
</table>

⚠️ **WARNING**

If the indicator lamp does not illuminate or remains out with the weight of a typical 12-month-old child in a standard child restraint or less, or is unoccupied, on the front-passenger seat, do not transport a child on the front-passenger seat until the system has been repaired.
**Exiting in an emergency (Coupe only)**

If the vehicle is lying on its roof after an accident, the hinge fasteners of the gullwing doors are released pyrotechnically. You will hear a bang if this is the case. After the fasteners have been released, the doors are forced outwards. Simultaneously, the door locks are unlocked. The SRS warning lamp lights up.

The hinge fasteners are only released when the control unit recognizes that certain conditions have been fulfilled, e.g. when the vehicle is in a stabilized position on its roof.

The doors can then be moved from the inside/outside by pulling the door handle.

**Seat belts**

**Important safety notes**

The use of infant or child restraints is required by law in all 50 states, the District of Columbia, the U.S. territories and all Canadian provinces.

Even where this is not the case, all vehicle occupants should have their seat belts fastened when the vehicle is in motion.

See "Children in the vehicle" (p. 51) for further information on infants and children traveling in the vehicle as well as on child restraint systems.

**WARNING**

Always fasten your seat belt before driving off. Always make sure your passenger is properly restrained. You and your passenger should always wear seat belts.

Failure to wear and properly fasten and position your seat belt considerably increases your risk of injuries and their likely severity in an accident.

If you are ever in an accident, your injuries could be considerably more severe if you have not fastened your seat belt correctly. If you do not fasten your seat belt, you are much more likely to collide with parts of the vehicle interior or be ejected from it. This may result in serious or fatal injury.

In the same crash, the possibility of serious or fatal injury is considerably reduced if you wear your seat belt properly. The air bags can only offer the intended protection if the occupants are wearing their seat belts properly.

**WARNING**

Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the seat belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The seat backrest and seat belt provide the best restraint when the wearer is in a position that is as upright as possible and the seat belt is properly positioned on the body.

**WARNING**

Never let more people ride in the vehicle than there are seat belts available. Make sure everyone riding in the vehicle is correctly restrained with a separate seat belt. Never use a seat belt for more than one person at a time.

**WARNING**

Damaged seat belts or seat belts that have been subjected to stress in an accident must be replaced and their anchoring points must also be checked.

Only use seat belts which have been approved by Mercedes-Benz.

Do not make any modifications to the seat belts. This can lead to unintended activation of the ETDs or to their failure to activate when necessary.

Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.
Have all work carried out only by qualified technicians. Contact an authorized Mercedes-Benz Center.

Correct use of the seat belts

⚠️ WARNING

USE SEAT BELTS PROPERLY

- Seat belts can only work when used properly. Never wear seat belts in any other way than as described in this section, as that could result in serious injuries in the event of an accident.
- Each occupant should wear their seat belt at all times, because seat belts help reduce the likelihood of and potential severity of injuries in accidents, including rollovers. The integrated restraint system includes SRS (driver front air bag, knee bags, front-passenger front air bag, side impact air bags, head air bags), Emergency Tensioning Devices (ETDs) and seat belt force limiters. The system is designed to enhance the protection offered to properly belted occupants in certain frontal (front air bags, knee bags and ETDs) and side (side impact air bags, head air bags and ETDs) impacts which exceed preset deployment thresholds.
- Never wear the shoulder belt under your arm, across your neck or off your shoulder. In a frontal crash, your body would move too far forward. That would increase the chance of head and neck injuries. The seat belt would also apply too much force to the ribs or abdomen, which could severely injure internal organs such as your liver or spleen.

Adjust the seat belt so that the shoulder section is located as close as possible to the middle of the shoulder (it should not touch the neck).
- Position the lap belt as low as possible on your hips and not across the abdomen. If the lap belt is positioned across your abdomen, it could cause serious injuries in a crash.
- Never wear seat belts over rigid or breakable objects in or on your clothing, such as eyeglasses, pens, keys etc., as these might cause injuries.
- Make sure the seat belt is always fitted snugly. Take special care of this when wearing loose clothing.
- Never use a seat belt for more than one person at a time. Do not fasten a seat belt around a person and another person or other objects at the same time.
- Seat belts should not be worn twisted. In a crash, you would not have the full width of the seat belt to distribute impact forces. The twisted seat belt against your body could cause injuries.
- Pregnant women should also always use a lap-shoulder belt. The lap belt portion should be positioned as low as possible on the hips to avoid any possible pressure on the abdomen.
- Place the seat backrest in a position that is as upright as possible.
- Check your seat belt during travel to make sure it is properly positioned.
- Never place your feet on the instrument panel, dashboard, or on the seat. Always keep both feet on the floor in front of the seat.
- When using a seat belt to secure infant restraints, toddler restraints, or children in booster seats, always follow the child seat manufacturer’s instructions.

⚠️ WARNING

Do not pass seat belts over sharp edges. They could tear.

Do not allow the seat belt to get caught in the door or in the seat adjustment mechanism. This could damage the seat belt.

Never attempt to make modifications to seat belts. This could impair the effectiveness of the seat belts.
Fastening seat belts

**WARNING**

Children 12 years old and under must be seated and properly secured in an appropriately sized infant restraint, child restraint system, or booster seat recommended for the size and weight of the child. For additional information, see the "Children in the vehicle" section.

A child's risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

Example: Coupe

1. Adjust the seat and move the backrest to an almost vertical position (page 85).
2. Pull the seat belt smoothly from belt sash guide ①.
3. Without twisting it, guide the shoulder section of the seat belt across the middle of your shoulder and the lap section across your hips.
   - Engage belt tongue ② in buckle ③.
   - If necessary, pull upwards on the shoulder section of the seat belt to tighten the belt across your body.

The seat belt on the front-passenger side is equipped with a special seat belt retractor to secure child restraint systems properly on the front-passenger seat. For further information about special seat belt retractors, see (page 53).

For more information about releasing the seat belt with release button ④, see "Releasing seat belts" (page 49).

Releasing seat belts

1. Press release button ④ (page 49) and guide belt tongue ② (page 49) back towards belt sash guide ① (page 49).

2. Make sure that the seat belt is fully rolled up. Otherwise, the seat belt or belt tongue will be trapped in the door or in the seat mechanism. This could damage the door, the door trim panel and the seat belt. Damaged seat belts can no longer fulfill their protective function and must be replaced. Consult an authorized Mercedes-Benz Center.

Belt warning for the driver and front passenger

Regardless of whether the driver’s and front-passenger seat belts have already been fastened, the seat belt warning lamp lights up for six seconds each time the engine is started. It then goes out if the driver and the front passenger have fastened their seat belts.

If the driver's seat belt is not fastened after the engine is started, an additional warning tone will sound. The warning tone goes out after approximately six seconds or once the driver's seat belt is fastened.
If, after six seconds, the driver or front-passenger have not fastened their seat belts and the doors are closed:

- the seat belt warning lamp remains illuminated as long as either the driver's or front-passenger seat belt is not fastened.
- the seat belt warning lamp lights up if the vehicle speed exceeds 15 mph (25 km/h). Additionally, a warning tone will sound with increasing intensity for a maximum of 60 seconds or until the driver's or front-passenger seat belt are fastened.

If the driver or front passenger unfasten their seat belt while the vehicle is in motion, the seat belt warning lamp lights up and a warning tone sounds again.

The warning tone ceases after 60 seconds even if the driver or front passenger have still not fastened their seat belt. The seat belt warning lamp stops flashing but remains illuminated.

After the vehicle comes to a standstill, the warning tone is reactivated and the seat belt warning lamp flashes again if the vehicle speed again exceeds 15 mph (25 km/h).

The seat belt warning lamp only goes out if:

- both the driver and the front passenger have fastened their seat belts.
- the vehicle is stationary and a door is open.

For more information on the seat belt warning lamp, see "Warning lamps in the instrument cluster, seat belt" (page 191).

Emergency Tensioning Devices and belt force limiters

The seat belts are equipped with ETDs and seat belt force limiters.

If the front-passenger seat is not occupied, do not engage the seat belt tongue in the buckle on the front-passenger seat. Otherwise, the Emergency Tensioning Device could be triggered in the event of an accident.

The ETDs tighten the seat belts in an accident, pulling them close against the body.

The ETDs do not correct incorrect seat positions or incorrectly fastened seat belts.

The ETDs do not pull vehicle occupants back towards the backrest.

Seat belt force limiters, when triggered, help to reduce the peak force exerted by the seat belt on the vehicle occupant.

The seat belt force limiters are synchronized with the front air bags, which take on a part of the deceleration force. Thus, the force exerted on the occupant is distributed over a greater area.

When the ignition is switched on, the ETDs cannot be triggered unless:

- the restraint systems are operational; see "SRS warning lamp" (page 36)
- the belt tongue is engaged in the buckle on each of the three-point seat belts.
- the front-passenger seat is occupied and the belt tongue is engaged in the buckle on the front-passenger side.

The ETDs are triggered depending on the type and severity of an accident:

- in the event of a head-on or rear-end collision if the vehicle decelerates or accelerates rapidly in a longitudinal direction during the initial stages of the impact
- in the event of a side impact if the vehicle is subjected to high lateral acceleration/deceleration
- Coupe: in certain situations if the vehicle overturns, and the system determines that it can provide additional protection
- Roadster: if the vehicle overturns

If the Emergency Tensioning Devices (ETDs) are triggered, you will hear a bang, and a small amount of smoke may also be released. Only in rare cases will the bang affect your hearing.
The smoke that is released generally does not constitute a health hazard. The SRS warning lamp lights up.

**WARNING**

Pyrotechnic ETDs that were activated must be replaced.

For your safety, when disposing of the pyrotechnic ETDs always follow our safety instructions. These are available at any authorized Mercedes-Benz Center.

---

**Children in the vehicle**

**Important safety notes**

**WARNING**

When leaving the vehicle, always remove the SmartKey from the ignition lock. Always take the SmartKey with you and lock the vehicle. Do not leave children unattended in the vehicle, even if they are secured in a child restraint system, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury. The children could:

- injure themselves on parts of the vehicle
- be seriously or fatally injured through excessive exposure to extreme heat or cold
- injure themselves or cause an accident with vehicle equipment that can be operated even if the SmartKey is removed from the ignition lock or removed from the vehicle, such as seat adjustment, steering wheel adjustment, or the memory function

If children open a door, they could injure other persons or get out of the vehicle and injure themselves or be injured by following traffic.

Do not expose the child restraint system to direct sunlight. The child restraint system’s metal parts, for example, could become very hot, and the child could be burned on these parts.

---

**WARNING**

Do not carry heavy or hard objects in the passenger compartment unless they are firmly secured in place. Unsecured or improperly positioned cargo increases a child’s risk of injury in the event of:

- strong braking maneuvers
- sudden changes of direction
- an accident

If an infant or child is traveling in the vehicle:

- Secure the child using an infant or child restraint appropriate to the age and size of the child.
- Make sure that the infant or child is properly secured at all times while the vehicle is in motion.

---

**Child restraint systems**

**Important safety notes**

We recommend all infants and children be properly restrained using the child restraint systems at all times while the vehicle is in motion.

The use of infant or child restraints is required by law in all 50 states, the District of Columbia, the U.S. territories and all Canadian provinces.

Infants and small children should always be seated in an infant or child seat restraint system appropriate for the size and weight of the child. They must be properly secured in accordance with the manufacturer’s installation instructions for the infant or child seat restraint system. All infant and child seat restraint systems must comply with the US Federal Motor Vehicle Safety Standards 213 and 225 and Canadian Motor Vehicle Safety Standards 213 and 210.2.

A statement by the child restraint manufacturer of compliance with these standards can be found on the instruction
label on the restraint system. You will also find the statement in the instruction manual provided with the child restraint system. When using any infant restraint, child restraint or booster seat, make sure to carefully read and follow all manufacturer’s instructions for installation and use. Please read the warning labels affixed to the interior of the vehicle or to the infant restraint or child restraint system.

**WARNING**

Children under 12 years must be secured correctly in a suitable infant or child restraint system or booster seat suitable for the size and weight of the child.

The infant or child restraint system must be correctly secured using the vehicle’s seat belt in complete accordance with the child seat manufacturer’s instructions.

Occupants, in particular children, must sit as upright as possible, fasten the seat belt correctly and use a suitable infant restraint system, child restraint system or booster seat suitable for the size and weight of the child. Children can be killed or seriously injured by an inflating air bag. Please observe the following important information:

- your vehicle is equipped with air bag technology designed to deactivate the passenger front air bag in your vehicle when the system senses the weight of a typical 12-month-old child or less along with the weight of a standard appropriate child restraint on the passenger seat.
- a child in a rear-facing child restraint on the passenger seat will be seriously injured or even killed if the passenger front air bag inflates in a collision which could occur under some circumstances, even with the air bag technology installed in your vehicle.
- if you install a rearward-facing child restraint system on the front-passenger seat, make sure the indicator lamp is illuminated, indicating that the front-passenger front air bag is disabled. If the indicator lamp does not light up or goes out when the child restraint system is installed, check the anchorages of the restraint system. Check the indicator lamp regularly while driving to ensure that the indicator lamp is illuminated. If the indicator lamp goes out or remains out, you may only carry a child on the front-passenger seat once the system has been repaired.
  - when securing a child in a child restraint system on the front-passenger seat, you must:
    - move the front-passenger seat as far back as possible
    - use a child restraint system that is suitable for the age, size and weight of the child
    - observe the manufacturer’s installation instructions in order to install and secure the child restraint system correctly.
  - for children larger than the typical 12-month-old child, the passenger front air bag may or may not be activated.

**WARNING**

Infants and small children should never share a seat belt with another occupant. During an accident, they could be crushed between the occupant and seat belt.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

Children too big for a toddler restraint must ride in seats using regular seat belts. Position the shoulder belt across the chest and shoulder, not face or neck. A booster seat may be necessary to achieve proper seat belt positioning for children over 41 lb (18 kg) until
they reach a height where a lap/shoulder belt fits properly without a booster. When the child restraint is not in use, remove it from the vehicle or secure it with the seat belt to prevent the child restraint from becoming a projectile in the event of an accident.

**Special seat belt retractor**

The seat belt on the front-passenger seat is equipped with a special seat belt retractor. When enabled, the special seat belt retractor ensures that the seat belt does not slacken once the child seat is secured.

**Installing a child restraint system:**

- Always comply with the manufacturer's installation instructions.
- Pull the seat belt smoothly from the seat belt retractor.
- Engage the seat belt tongue in the belt buckle.

**Activating the special seat belt retractor:**

- Pull the seat belt out fully and let the seat belt retractor retract it again. While the seat belt is retracting, you should hear a ratcheting sound. The special seat belt retractor is enabled.
- Push down on the child restraint system to take up any slack.

**Removing a child restraint system/deactivating the special seat belt retractor:**

- Always comply with the manufacturer's installation instructions.
- Press the seat belt release button and guide the belt tongue to the belt outlet. The special seat belt retractor is deactivated.

**WARNING**

Never release the seat belt buckle while the vehicle is in motion, since the special seat belt retractor will be deactivated.

**Installing child restraint systems**

Observe the "Important safety notes" section (> page 51).

The Top Tether anchorage is installed behind the front-passenger seat.

- Slide the front-passenger seat forward.
- Remove cover ① from the Top Tether anchorage in the direction of the arrow.
- Position Top Tether belt ④. Comply with the manufacturer's installation instructions when doing so.
- Hook Top Tether hook ③ into Top Tether anchorage ②.

Ensure that:

- Top Tether hook ③ is hooked into Top Tether anchorage ② as shown.
- Top Tether belt ④ is not twisted.

When Top Tether hook ③ is connected, the child restraint system can be secured.
To activate: press PANIC button ① for at least one second. An alarm sounds and the exterior lighting flashes.
To deactivate: press PANIC button ① again.

or

Insert the SmartKey into the ignition lock.

or

Press the Start/Stop button. The SmartKey must be in the vehicle.

Driving safety systems overview

In this section, you will find information about the following driving safety systems:

- ABS (Anti-lock Braking System)
- BAS (Brake Assist System)
- ESP® (Electronic Stability Program)
- EBD (electronic brake force distribution)
- ADAPTIVE BRAKE

Important safety notes

⚠️ WARNING

The following factors increase the risk of accidents:

- Excessive speed, especially in turns
- Wet and slippery road surfaces
- Following another vehicle too closely
The driving safety systems described in this section cannot reduce these risks or prevent the natural laws of physics from acting on the vehicle. They cannot increase braking or steering efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of a vehicle equipped with the driving safety systems described in this section must never be exploited in a reckless or dangerous manner which could jeopardize the user's safety or the safety of others. Always adjust your driving style to the prevailing road and weather conditions and keep a safe distance to other road users and objects on the street. If a driving system malfunctions, other driving safety systems may also switch off. Observe indicator and warning lamps that may come on as well as messages in the multifunction display that may appear.

In wintry driving conditions, always use winter tires (M+S tires) and if necessary, snow chains. Only in this way will the driving safety systems described in this section work as effectively as possible.

### ABS (Anti-lock Braking System)

**Important safety notes**

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not pump the brake pedal. Use firm, steady brake pedal pressure instead. Pumping the brake pedal reduces the braking effect.</td>
</tr>
</tbody>
</table>

ABS regulates brake pressure in such a way that the wheels do not lock when you brake. This allows you to continue steering the vehicle when braking. ABS works from a speed of about 5 mph (8 km/h) upwards, regardless of road-surface conditions. ABS works on slippery surfaces, even when you only brake gently. The ![ABS warning lamp in the instrument cluster lights up when the ignition is switched on. It goes out when the engine is running.](image)

### Braking

If ABS intervenes when braking, you will feel a pulsing in the brake pedal.

- **If ABS intervenes:** continue to depress the brake pedal with force until the braking situation is over.
- **To make a full brake application:** depress the brake pedal with full force.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABS prevent the wheels from locking. The brakes will function as usual once you release the brake pedal. BAS is deactivated.</td>
</tr>
</tbody>
</table>

### BAS (Brake Assist System)

Observe the "Important safety notes" section (page 56).

BAS operates in emergency braking situations. If you depress the brake pedal quickly, BAS automatically boosts the braking force, thus shortening the stopping distance.

- **Keep the brake pedal firmly depressed until the emergency braking situation is over.**

The pulsating brake pedal can be an indication of hazardous road conditions and functions as a reminder to take extra care while driving.

### BAS (Brake Assist System)

Observe the "Important safety notes" section (page 56).

BAS operates in emergency braking situations. If you depress the brake pedal quickly, BAS automatically boosts the braking force, thus shortening the stopping distance.

- **Keep the brake pedal firmly depressed until the emergency braking situation is over.**

The pulsating brake pedal can be an indication of hazardous road conditions and functions as a reminder to take extra care while driving.
ESP® (Electronic Stability Program)

Important safety notes

**WARNING**
Under no circumstances should you deactivate ESP® when the ESP® warning lamp in the instrument cluster flashes. Proceed as follows:

- when driving off, apply as little throttle as possible.
- while driving, ease up on the accelerator pedal.
- adapt your speed to suit the prevailing road and weather conditions.

Failure to observe these guidelines could cause the vehicle to skid. ESP® cannot prevent accidents resulting from excessive speed.

**WARNING**
Switch the ignition off when:

- the electric parking brake is being tested using a brake dynamometer.
- the vehicle is being towed with the rear axle raised.

Application of the brakes by ESP® may otherwise destroy the brake system.

**WARNING**
Only use wheels with the recommended tire sizes. Only then will ESP® function properly.

You can select between the three following states of ESP®:

- ESP® is activated.
- SPORT handling mode is activated.
- ESP® is deactivated.

ESP® is activated as soon as you start the engine. When SPORT handling mode is activated, the SPORT warning lamp lights up in the instrument panel. When ESP® is deactivated, the ESP® and SPORT warning lamps light up in the instrument panel.

ETS (Electronic Traction System)

Observe the "Important safety notes" section (> page 56).

Traction control is part of ESP®.

Traction control brakes the drive wheels individually if they spin. This enables you to pull away and accelerate on slippery surfaces, for example if the road surface is slippery on one side.

Traction control remains active if you deactivate ESP®.

Characteristics of ESP®

**WARNING**
ESP should not be deactivated during normal driving.

Deactivating ESP SPORT will have the following effects:

- there is no limit to the engine torque.
- the system-based traction control is limited.

"ESP OFF" is designed for driving on closed tracks when the vehicle's natural oversteer and understeer characteristics are desired and requires a highly skilled and experienced driver able to handle these critical driving situations. You could lose control of your vehicle and cause an accident. Please be aware of these limits when you switch off ESP.

**WARNING**
Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle.
if the vehicle starts to skid or a wheel starts to spin.

ESP® monitors driving stability and traction, i.e. power transmission between the tires and the road surface.

If ESP® detects that the vehicle is deviating from the direction desired by the driver, one or more wheels are braked to stabilize the vehicle. If necessary, the engine output is also modified to keep the vehicle on the desired course within physical limits. ESP® assists the driver when pulling away on wet or slippery roads. ESP® can also stabilize the vehicle during braking.

If ESP® intervenes, the ![warning lamp] warning lamp flashes in the instrument cluster.

**WARNING**

If the ![warning lamp] warning lamp in the instrument cluster flashes, proceed as follows:

- do not deactivate ESP® under any circumstances
- only depress the accelerator pedal as far as necessary when pulling away.
- adapt your driving style to suit the prevailing road and weather conditions.

Otherwise, the vehicle could go into a skid. ESP® cannot reduce the risk of an accident if you drive too fast. ESP® cannot override the laws of physics.

![warning lamp] Only use wheels with the recommended tire sizes. Only then will ESP® function properly.

ESP® is activated automatically when the engine is running. In the following situations, it may be better to activate SPORT handling mode or deactivate ESP®:

- when using snow chains
- in deep snow
- on sand or gravel

**Characteristics when ESP® is deactivated**

When you deactivate ESP®:

- ESP® no longer improves driving stability.
- engine torque is no longer limited and the drive wheels are able to spin. The spinning wheels produce a cutting effect for better traction.
- traction control is still activated.
- ESP® still provides support when you brake firmly.

If ESP® is deactivated and one or more wheels start to spin, the ![warning lamp] warning lamp in the instrument cluster does not flash. In such situations, ESP® will not stabilize the vehicle.

**Deactivating/activating ESP®**

ESP® is activated as soon as you start the engine.

To deactivate ESP®, press and hold down button ![button] until the ![warning lamp] and ![warning lamp] warning lamps in the instrument panel light up. The OFF message appears in the multifunction display.
WARNING
ESP® is deactivated if the ⚠️ and ⚠️ warning lamps in the instrument cluster are lit continuously when the engine is running. There is an increased risk of your vehicle skidding in certain situations. You should always adapt your driving style to suit the prevailing road and weather conditions.

To activate ESP®: when SPORT handling mode is activated or ESP® is deactivated, press button 1 briefly. The ⚠️ and ⚠️ warning lamps in the instrument cluster go out. The ON message appears in the multifunction display.

SPORT handling mode

WARNING
SPORT handling mode should not be switched on during normal driving. Switching on SPORT handling mode will result in the following:

• there is no limit to the engine torque.
• the system-based traction control is limited.

SPORT handling mode is designed for driving on closed tracks where the vehicle’s own natural oversteer and understeer characteristics are desired and requires a highly skilled and experienced driver able to handle these critical driving situations. You could lose control of your vehicle and cause an accident.

Please be aware of these limits when you switch on SPORT handling mode.

Do not switch on SPORT handling mode when a spare wheel is mounted.

WARNING
Switch off SPORT handling mode and immediately switch on ESP® if one of the previously stated conditions no longer applies. SPORT handling mode will otherwise only stabilize the vehicle to a limited degree if it begins to lurch or if a wheel spins.

SPORT handling mode raises the intervention threshold for stabilizing the vehicle. This allows for a sportier driving style on designated race circuits and may in certain situations improve the traction in comparison with ESP®.

When SPORT handling mode is activated:

• ESP® only improves driving stability to a limited degree.
• engine torque is only restricted to a limited degree, and the drive wheels are able to spin. The spinning wheels produce a cutting effect for better traction.
• traction control is still activated.
• ESP® still provides support when you brake firmly.

If SPORT handling mode is activated and one or more wheels start to spin, the ⚠️ warning lamp in the instrument cluster flashes. ESP® only stabilizes the vehicle to a limited degree.

To activate SPORT handling mode:
briefly press button 1.

The ⚠️ warning lamp in the instrument cluster lights up. The SPORT handling
mode message appears in the multifunction display.

- **To deactivate SPORT handling mode:**
  - briefly press button (1).
  - The [SPORT] warning lamp in the instrument cluster goes out. ESP® is activated.

**EBD (electronic brake force distribution)**

Observe the "Important safety notes" section (▶ page 56).
EBD monitors and controls the brake pressure on the rear wheels to improve driving stability while braking.

⚠️ **WARNING**

If the EBD malfunctions, the brake system will still function with full brake boost. However, the rear wheels could lock up during emergency braking situations, for example. You could lose control of the vehicle and cause an accident.
Adapt your driving style to the changed driving characteristics.

**ADAPTIVE BRAKE**

Observe the "Important safety notes" section (▶ page 54).
ADAPTIVE BRAKE enhances braking safety and offers increased braking comfort. In addition to the braking function, ADAPTIVE BRAKE also features the hill start assist function (▶ page 117). For further information, see Driving tips (▶ page 133).

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. The engine can be started by anyone with a valid SmartKey that is left inside the vehicle.

- **To activate with KEYLESS-GO:** switch the engine off and open the driver's door.
- **To activate with the SmartKey:** remove the SmartKey from the ignition lock.
- **To deactivate:** switch on the ignition.

ℹ️ The immobilizer is always deactivated when you start the engine.
In the event that the engine cannot be started when the starter battery is fully charged, the immobilizer may be faulty. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCEdes (in USA) or 1-800-387-0100 (in Canada).

**ATA (anti-theft alarm system)**

A visual and audible alarm is triggered if the alarm system is armed and you open:
- a door
- the trunk lid
- the hood
- Roadster: the glove box
- Roadster: a compartment in the center console
- the vehicle with the mechanical key
The alarm is not switched off, even if you close the open door that has triggered it, for example.

**Anti-theft systems**

**Immobilizer**

The immobilizer prevents your vehicle from being started without the correct SmartKey.
If the alarm stays on for more than 30 seconds, the mbrace\(^2\) system initiates a call to the Customer Assistance Center automatically. The emergency call system initiates the call provided that:
- you have subscribed to the mbrace service
- the mbrace service has been activated properly
- the required mobile phone, power supply and GPS are available.

To arm: lock the vehicle with the SmartKey.
The turn signal lamps flash three times and an acoustic warning sounds three times to indicate that the vehicle is locked. Indicator lamp \(\text{①}\) flashes to indicate that the alarm system is armed.

If the turn signal lamps do not flash three times and the acoustic warning does not sound three times, a door or the trunk lid may not be properly closed.
It may be necessary to close the affected door or the trunk lid.

To deactivate: unlock the vehicle with the SmartKey.
The turn signal lamps flash once and an acoustic warning sounds once to indicate that the anti-theft alarm system is switched off.

Unless you open a door or the trunk lid within 40 seconds of unlocking the vehicle:
- the vehicle will be locked again
- the anti-theft alarm system will be re-armed.

To stop the alarm: press the Start/Stop button in the center console. The SmartKey must be inside the vehicle.

or
Press the [\(\text{①}\)] or [\(\text{②}\)] button on the SmartKey.

or
Insert the SmartKey into the ignition lock. The alarm is switched off.

**Tow-away alarm**

An audible and visual alarm is triggered if your vehicle’s angle of inclination is altered while the tow-away alarm is armed. This occurs if the vehicle is jacked up on one side, for example.

If the alarm stays on for more than 30 seconds, the mbrace\(^3\) system initiates a call to the Customer Assistance Center automatically. The emergency call system initiates the call provided that:
- you have subscribed to the mbrace service
- the mbrace service has been activated properly
- the required mobile phone, power supply and GPS are available.

To arm: lock the vehicle with the SmartKey.
The tow-away alarm is armed after approximately 30 seconds.

To deactivate: unlock the vehicle with the SmartKey.
The tow-away alarm is deactivated automatically.

---

\(\text{①}\) TELEAID in Canada.

\(\text{②}\) TELEAID in Canada.
To prevent a false alarm, deactivate the tow-away alarm manually if your vehicle:

- is being transported
- is being loaded onto a ferry or car transporter, for example
- is parked on a movable surface, e.g. in a split-level garage

► **To deactivate:** use the Start/Stop button to set SmartKey position 0.

or

► Remove the SmartKey from the ignition lock.

► Press button ①. Indicator lamp ② lights up briefly.

► Lock the vehicle with the SmartKey. The tow-away alarm is deactivated. The tow-away alarm remains deactivated until the vehicle is unlocked and locked again.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (> page 21).

SmartKey

Key function

General notes

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user's authority to operate the equipment.
The Product label with FCC ID and IC certification number can be found in the battery case of the SmartKey.

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user's authority to operate the equipment.
The Product label with FCC ID and IC certification number can be found in the battery case of the SmartKey.

WARNING
If children are left unsupervised in the vehicle, they could:
1. open a door locked from inside the vehicle
2. start the vehicle using a key which has been left in the vehicle
3. release the parking brake
They could thereby endanger themselves and others. Never leave children unsupervised in the vehicle. Always take the key with you when leaving the vehicle, even if you are only leaving it for a short time.

| 1 | To lock the vehicle |
| 2 | To unlock the trunk lid |
| 3 | To unlock the vehicle |

When unlocking, the turn signals flash once. When locking, they flash three times.
When it is dark, the surround lighting also comes on if it is activated in the on-board computer (>
page 158).
You can also set an audible signal to confirm that the vehicle has been locked or unlocked. The audible signal can be activated and deactivated using the on-board computer (> page 159).

- **To unlock centrally:** press the button.

If you do not open the vehicle within approximately 40 seconds of unlocking:
  - the vehicle is locked again.
  - the anti-theft alarm system is armed again.
- **To lock centrally:** press the button.

### Changing the settings of the locking system

You can change the setting of the locking system in such a way that only the driver's door and the fuel filler flap are unlocked. This is useful if you frequently travel on your own.

- **To change the setting:** press and hold down the \( \) and \( \) buttons simultaneously for approximately six seconds until the battery check lamp (> page 66) flashes twice.

The SmartKey now functions as follows:

- **To unlock the driver’s door:** press the \( \) button once.
- **To unlock centrally:** press the \( \) button twice.
- **To lock centrally:** press the \( \) button.

### Restoring the factory settings

- Press the \( \) and \( \) buttons simultaneously for approximately six seconds until the battery check lamp flashes twice.

### Mechanical key

#### General notes

If the vehicle can no longer be locked or unlocked with the SmartKey, use the mechanical key.
If you use the mechanical key to unlock and open the driver's door, the anti-theft alarm system will be triggered (> page 59).
There are several ways to turn off the alarm:

- Press the \( \) or \( \) button on the SmartKey.
- Insert the SmartKey into the ignition lock.
- **To unlock the fuel filler flap:** insert the SmartKey into the ignition lock.

### Removing the mechanical key

- Press the \( \) and \( \) buttons simultaneously for approximately six seconds until the battery check lamp flashes twice.

### SmartKey battery

#### Important safety notes

It is advisable to have batteries replaced at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

**WARNING**

Batteries contain toxic substances.
Swallowing batteries can lead to serious health issues or death. Keep batteries out of the reach of children. Seek medical attention immediately if a battery is swallowed.

**WARNING**
The SmartKey batteries contain perchlorate material, which may require special handling and regard for the environment. Observe government disposal guidelines. California residents, see [www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm](http://www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm).

---

### Checking the battery

- Press the ` Aç` or ` Å` button. The SmartKey battery is working properly if battery check lamp ` 1` lights up briefly.

If battery check lamp ` 1` does not light up briefly during the test, the SmartKey battery is discharged.

- Changing the battery (page 66)
  
  The battery can be obtained from any authorized Mercedes-Benz Center.

  If the SmartKey battery is checked within the signal range of the vehicle, pressing the ` Aç` or ` Å` button locks or unlocks the vehicle.

---

### Changing the battery

- Take the mechanical key out of the SmartKey (page 65).

You require a CR 2025 3 V cell battery.

- Press mechanical key ` 2` into the opening in the SmartKey in the direction of the arrow until battery tray cover ` 1` opens. Do not hold the cover closed while doing so.

- Remove the cover of the battery tray.

- Repeatedly tap the SmartKey against your palm until battery ` 3` falls out.

- Insert the new battery with the positive terminal facing upwards. Use a lint-free cloth to do so.

- Insert the front tabs of the battery tray’s cover first, and then press to close it.

- Check the function of all SmartKey buttons on the vehicle.
# Problems with the SmartKey

Doors

Important safety notes

**WARNING**

When leaving the vehicle, always remove the SmartKey from the ignition lock. Always take the SmartKey with you and lock the vehicle. Do not leave children unsupervised in the vehicle, even if they are secured in a child restraint system, and do not give them access to an unlocked vehicle. A child's unsupervised access to a vehicle could result in an accident and/or serious personal injury. They could:

- injure themselves on vehicle parts
- be seriously or fatally injured by extreme heat or cold
- injure themselves or have an accident with vehicle equipment that may still be in operation even after the SmartKey has been removed from the ignition, such as the seat adjustment, steering wheel adjustment or memory function.

If children open a door, they could cause severe or even fatal injury to other persons; if they get out of the vehicle, they could injure themselves when doing so or be seriously or even fatally injured by any passing traffic.

Do not expose the child restraint system to direct sunlight. The child restraint system’s metal parts, for example, could become very hot, and a child could be burned on these parts.

**WARNING**

Do not carry heavy or hard objects in the passenger compartment or trunk unless they are firmly secured in place.

Unsecured or improperly positioned cargo increases a child’s risk of injury in the event of

- strong braking maneuvers
- sudden changes of direction
- an accident

Unlocking and opening the doors from the outside

**Coupe**

The doors swing upwards and out when opened. Therefore, make sure that there is sufficient clearance above the vehicle.

- Point the SmartKey towards door handle ①.
- Press the button on the SmartKey. Door handle ① moves out.
- Lift the door by door handle ① and swing it up as far as it will go.

**Closing the door**

- Pull the door downwards by the outer edge or the interior door handle. Swing the door down gently and allow it to engage in the lower position.
- Lock the vehicle with the SmartKey if necessary (› page 64).

**Roadster**

- Point the SmartKey towards the door handle.
- Press the button on the SmartKey. The door is unlocked and can be opened.
- Pull the door handle.
Unlocking and opening doors from inside

**Coupe**

You can only open a door from the inside if it is unlocked.

The vehicle locks the doors automatically, when you drive faster than 9 mph (15 km/h).

The doors are automatically unlocked after a journey if you switch off the engine.

⚠️ The doors swing upwards and out when opened. Therefore, make sure that there is sufficient clearance above the vehicle.

**To unlock the door manually:** press the button of central locking

or

Pull locking knob upwards.

**To open the door:** pull handle.

Swing the door upwards as far as it will go.

**To close the door:** pull the door down by handle.

Allow the door to engage in the lower position.

**To lock the door manually:** press the button of central locking

or

Push locking knob downwards.

**Roadster**

You can open a door from inside the vehicle even if it has been locked.

Only open the door when the traffic situation permits.

- Pull door handle.

If the door is locked, locking knob pops up. The door is unlocked and can be opened.

⚠️ When a door is opened, the side window on that side opens slightly. When the door is closed, the side window closes again.

⚠️ The side windows will not open/close if the battery is discharged or if the side windows have iced up. It will then not be possible to close the door. Do not attempt to force the door closed. You could otherwise damage the door or the side window.

**Centrally locking and unlocking the vehicle from the inside (Roadster)**

You can centrally lock or unlock the vehicle from the inside. This feature may be useful if, for example, you wish to unlock the front-passenger door from the inside or lock the vehicle before you pull away.

The central locking/unlocking button does not lock or unlock the fuel filler flap.

The central locking/unlocking button does not lock or unlock the fuel filler flap or the stowage compartments, such as the glove box.
To lock: press button ②.
If both doors are closed, the vehicle locks.
To unlock: press button ①.
You can open a door from inside the vehicle even if it has been locked. Only open the door when the traffic situation permits.
If the vehicle has been locked with the central locking button:
• and the SmartKey is set to its factory setting, the entire vehicle is unlocked if a door is opened from the inside
• and the SmartKey is set to an individual setting, only the door that is opened from inside the vehicle is unlocked.

To deactivate: press and hold button ① for about five seconds until a tone sounds.
To activate: press and hold button ② for about five seconds until a tone sounds.

If you press one of the two buttons and do not hear a tone, the relevant setting has already been selected.

Unlocking the driver’s door (mechanical key)
If the vehicle can no longer be unlocked with the SmartKey, use the mechanical key.
If you use the mechanical key to unlock and open the driver’s door, the anti-theft alarm system will be triggered (page 59).
• Take the mechanical key out of the SmartKey (page 65).
• Insert the mechanical key into the lock of the driver’s door as far as it will go.

Automatic locking mechanism (Roadster)
You can only open a door from the inside if it is unlocked.
The vehicle locks the doors automatically if you drive faster than 15 km/h.
The doors are automatically unlocked after a journey if you switch off the engine.
The vehicle locks automatically when the ignition is switched on and the wheels of the vehicle are moving at a speed of more than 9 mph (15 km/h). There is therefore a risk of being locked out when the vehicle is being pushed, towed or tested on a dynamometer.
Coupe

To unlock: insert the mechanical key into the lock of the driver's door as far as it will go.

To lock: lock the front-passenger door manually from the inside (page 70).

Leave the vehicle and close the driver's door.

Insert the mechanical key into the lock of the driver's door as far as it will go.

Turn the mechanical key clockwise to position 2.

The door is unlocked.

To open the door: press button 1.

The handle moves out slightly from the door.

Pull the handle out as far as it will go.

Swing the door upwards by the handle.

Roadster

Turn the mechanical key counterclockwise to position 1.

The door is unlocked.

Turn the mechanical key back and remove it.

To open the door: press button 1.

The handle moves out slightly from the door.

Pull the handle out as far as it will go.

Swing the door upwards by the handle.

Roadster

Turn the mechanical key counterclockwise to position 1.

The door is unlocked.

Turn the mechanical key back and remove it.

Insert the mechanical key into the SmartKey.

Locking the vehicle (mechanical key)

Coupe

If the vehicle can no longer be locked with the SmartKey, use the mechanical key.

To lock: lock the front-passenger door manually from the inside (page 70).

Leave the vehicle and close the driver's door.

Insert the mechanical key into the lock of the driver's door as far as it will go.

Turn the mechanical key counter-clockwise to position 3.

The door is locked.

Check that both doors are locked.

If you lock the vehicle as described above, the fuel filler flap is not locked. The anti-theft alarm system is not armed.

Roadster

If the vehicle can no longer be locked with the SmartKey, use the mechanical key.

Open the driver's door.

Close the front-passenger door and the trunk lid.

Press the locking button (page 70).

Check that the locking knob is in the lower position on the front-passenger door. Press down the locking knob by hand, if necessary.

Close the driver's door.
Take the mechanical key out of the SmartKey (page 65). Insert the mechanical key into the lock of the driver's door as far as it will go.

Turn the mechanical key clockwise as far as it will go to position 1. Turn the mechanical key back and remove it. Make sure that the doors and the trunk lid are locked. Insert the mechanical key into the SmartKey.

If you lock the vehicle as described above, the fuel filler flap is not locked. The anti-theft alarm system is not armed.

### Important safety notes

**WARNING**

When leaving the vehicle, always remove the SmartKey from the ignition lock. Always take the SmartKey with you and lock the vehicle. Do not leave children unsupervised in the vehicle, even if they are secured in a child restraint system, and do not give them access to an unlocked vehicle. A child's unsupervised access to a vehicle could result in an accident and/or serious personal injury. They could:

- injure themselves on vehicle parts
- be seriously or fatally injured by extreme heat or cold
- injure themselves or have an accident with vehicle equipment that may still be in operation even after the SmartKey has been removed from the ignition, such as the seat adjustment, steering wheel adjustment or memory function.

If children open a door, they could cause severe or even fatal injury to other persons; if they get out of the vehicle, they could injure themselves when doing so or be seriously or even fatally injured by any passing traffic. Do not expose the child restraint system to direct sunlight. The child restraint system's metal parts, for example, could become very hot, and a child could be burned on these parts.

**WARNING**

Make sure the trunk lid is closed when the engine is running and while driving. Among other dangers, deadly carbon monoxide (CO) gases may enter the vehicle interior resulting in unconsciousness and death.

The temperature in the trunk may be high. For this reason, do not store any temperature-sensitive objects in the trunk.
The trunk lid swings upwards when opened. Therefore, make sure that there is sufficient clearance above the trunk lid.

Coupe: to open the trunk lid fully, a minimum clearance of 5.5 ft (1.68 m) from the ground is required.

Roadster: to open the trunk lid fully, a minimum clearance of 5.7 ft (1.75 m) from the ground is required.

The trunk lid can be:

- opened automatically from outside
- opened automatically from inside
- locked separately
- unlocked with the mechanical key
- opened with the emergency release button

### Opening/closing the trunk

#### Opening and closing from outside the vehicle

**Opening**

- Press the button on the SmartKey. The trunk lid opens slightly.

- Reach into the gap and pull up the trunk lid.

**Closing**

⚠️ **WARNING**

To prevent possible personal injury, always keep hands and fingers away from the trunk opening when closing the trunk lid. Be especially careful when small children are around.

- Push the trunk lid down until it engages. Use handle to pull down the trunk lid if necessary.
- If necessary, lock the vehicle with the button on the SmartKey.

**Opening from inside the vehicle**

You can open the tailgate from the driver's seat when the vehicle is stationary.

- Press trunk lid remote control button (1). The trunk lid opens slightly.

**Locking the trunk separately**

You can lock the trunk separately. If you then unlock the vehicle centrally, the trunk remains locked and cannot be opened.

- Close the trunk lid.
- Take the mechanical key out of the SmartKey (page 65).
Insert the mechanical key fully into trunk lid lock ① in the rear compartment of the center console.
Turn the mechanical key clockwise as far as possible.
Remove the mechanical key.
Check that the trunk remains locked when you press on the trunk lid remote control button.

Unlocking the trunk (mechanical key)
If the trunk can no longer be unlocked with the SmartKey:
Take the mechanical key out of the SmartKey (page 65).

Insert the mechanical key fully into trunk lid lock ① in the center console in the vehicle interior.
Turn the mechanical key counter-clockwise as far as possible.
The trunk lid opens slightly.

Trunk emergency release
You can open the trunk lid from inside the vehicle with the emergency release button.
Briefly press emergency release button ①.
The trunk lid unlocks and opens slightly.
Push the trunk lid upwards to open it completely.

The trunk lid can be unlocked with the trunk lid emergency release when the vehicle is stationary or while driving.
Trunk lid emergency release light:
• emergency release button ① flashes for 30 minutes after the trunk lid is opened.
• emergency release button ① flashes for 60 minutes after the trunk lid is closed.
The trunk lid emergency release does not unlock the trunk lid if the battery is disconnected or discharged.
If the vehicle was locked centrally, opening the trunk lid with the trunk lid emergency release triggers the anti-theft alarm system.

Side windows
Important safety notes
WARNING
When opening and closing the side windows, make sure that nobody can be injured by the opening or closing procedure.
The side windows are equipped with automatic operation and anti-entrapment...
features. If, in automatic operation mode, a side window encounters an obstruction that blocks its path, the anti-entrapment feature will stop the side window and open it slightly. The side windows operate differently when the switch is pulled and held. These details can be found in the "Closing a blocked side window" section in this chapter.

The closing of the side windows can be immediately halted by releasing the switch or, if the switch was pulled past the resistance point and released, by pressing or pulling the respective switch.

If a side window encounters an obstruction that blocks its path when you are closing the side windows by pressing and holding the button on the SmartKey, the anti-entrapment feature will not operate.

**WARNING**

Do not keep any part of your body up against the window pane when opening a window. The downward motion of the pane may pull that part of your body down between the window pane and the door frame and trap it there. If there is a risk of entrapment, release the switch and pull it to close the window.

Observe the important safety notes in the "Children in the vehicle" section (page 51).

---

### Opening and closing the side windows

1. **Left**
2. **Right**

The switches for both side windows are located on the driver's door. There is also a switch for the front-passenger side window on the front-passenger door.

The switches on the driver's door take precedence.

- Select key position 2 using the Start/Stop button.
- **To open:** press the corresponding switch.
- **To close:** pull the corresponding switch.

If you press the switch beyond the point of resistance, an automatic opening/closing process is started in the corresponding direction. You can stop automatic operation by operating the switch again.

You can continue to operate the side windows after you switch off the engine. This function is available for up to five minutes or until the driver's or front-passenger door is opened.
Opening and closing all side windows (Roadster)

With the SmartKey

⚠️ WARNING
Make sure that nobody can become trapped as you close the side windows.
Proceed as follows if there is a risk of entrapment:
- release the button.
- press and hold the button until the side windows open again.

If the soft top is closed, you can use the SmartKey to simultaneously open or close all of the side windows:
- Make sure that the soft top is closed (> page 78).
- Point the tip of the SmartKey at the driver's door handle.
- To open all side windows: press and hold the button on the SmartKey until the side windows are fully open.
- To interrupt the opening procedure: release the button.
- To close all side windows: press and hold the button on the SmartKey until the side windows are fully closed.
- To interrupt the closing procedure: release the button.

Convenience opening (Coupe)

⚠️ WARNING
When closing the side windows, make sure there is no danger of anyone being harmed by the closing procedure.
Proceed as follows in a potentially dangerous situation:
- Release the button to interrupt the closing procedure.
- Press and hold the button to open. To continue the closing procedure after ensuring that nobody can be injured by the closing procedure, press and hold the button.

When you lock the vehicle, you can simultaneously close both side windows from outside.
- The SmartKey must be close to the driver’s door handle.
- Point the tip of the SmartKey at the driver's door handle.
- Lock the vehicle with the button.
- Press and hold the button until the side windows are fully closed.
- Make sure that all the side windows are closed.

Convenience closing (Coupe)

You can ventilate the vehicle before you start driving. To do so, open the side windows using the SmartKey.
- The SmartKey must be close to the driver’s door handle.
- Point the tip of the SmartKey at the driver's door handle.
- Unlock the vehicle by pressing the button.
- Press and hold the button until the side windows are in the desired position.
- To interrupt convenience opening: release the button.

Problems with the side windows

Problem: a side window cannot be closed because objects are preventing it from closing.
- Remove the objects.
- Close the side window.
Problem: a side window cannot be closed and you cannot see the cause.
**WARNING**
Closing the side windows with increased force or without the anti-entrapment feature could lead to serious or even fatal injury. Make sure that nobody can become trapped when closing the side windows.

If a side window is obstructed during closing and reopens again slightly:

- Immediately after the window blocks, pull the corresponding switch again until the side window has closed. The side window is closed with increased force.

If a side window is obstructed again during closing and reopens again slightly:

- Immediately after the window blocks, pull the corresponding switch again until the side window has closed. The side window is closed without the anti-entrapment feature.

**WARNING**
Pulling and holding the switch to close the door window immediately after it had been blocked two times will cause the door window to close without the anti-entrapment feature for as long as you hold the switch.

**Soft top (Roadster)**

**Important safety notes**

**WARNING**
Only drive with the soft top fully open or closed.

If the soft top does not open or close fully, the soft-top hydraulics are depressurized and the soft top is lowered:

- after about seven minutes if the ignition is switched on
- immediately if the ignition is switched off

A warning tone sounds shortly beforehand. The Top Lowering message appears in the multifunction display.

Lock the soft top again before driving on. Otherwise the unlocked soft top could open during the journey and cause you to lose control of your vehicle. You and/or other persons could be injured as a result.

You can open or close the soft top:

- if the vehicle is stationary or
- if the speed does not exceed 30 mph (50 km/h)

If there is a strong head wind, it may not be possible to close the soft top fully. In this case, reduce speed or stop in order to close the soft top fully.

For safety reasons, Mercedes-Benz recommends that you only open or close the soft top when the vehicle is stationary.

Never sit on the soft top when it is closed or store heavy objects on it. You will otherwise damage the soft top of the vehicle.

When opening and closing the soft top, make sure that:

- there is sufficient clearance above it, as the soft top swings upwards.
- there are no objects on the soft top or the soft-top covers to the side.
- the fabric is not dirty, wet or frozen
- the outside temperature is above -10 °C.

You could otherwise damage the soft top as well as other parts of the vehicle.

Make sure that the soft top is dry and clean before closing it. Otherwise, water or dirt could enter the vehicle interior or trunk.

**Opening and closing with the soft top switch**

**Important safety notes**

**WARNING**
Make sure nobody can be trapped or injured by moving parts, such as the soft-top linkage.
or soft-top compartment cover, when opening or closing the soft top.
Release the soft-top switch in the event of danger. The soft-top mechanism stops immediately.

⚠️ WARNING
The soft top stops moving during the opening or closing procedure if you drive faster than 30 mph (50 km/h). This could impair your rear view. At high speeds the soft top may be damaged.
Reduce your speed to below 30 mph (50 km/h) or stop in accordance with traffic conditions. Press the soft-top switch again in order to open or close the soft top fully.

Opening and closing
► When the vehicle is stationary, depress the brake pedal.
► Select key position 1 using the Start/Stop button.

► To open: pull soft-top switch 1 until the soft top is fully opened.
The Convertible Top in Operation message appears in the multifunction display.
If you drive faster than 30 mph (50 km/h) during the opening procedure, the opening procedure is stopped and the Open/Close Convertible Top Completely message is displayed in the multifunction display. Reduce speed back to under 30 mph (50 km/h) and pull the soft top switch again to fully open the soft top.

► To close: press and hold soft-top switch 1 until the soft top is fully closed.
The Convertible Top in Operation message appears in the multifunction display.
It you drive faster than 30 mph (50 km/h) during the closing procedure, the closing procedure is stopped and the Open/Close Convertible Top Completely message is displayed in the multifunction display.
Reduce speed back to under 30 mph (50 km/h) and push the soft top switch again to fully close the soft top.

Opening and closing using the SmartKey

Important safety notes
⚠️ WARNING
Make sure nobody can be trapped or injured by moving parts, such as the soft-top linkage or soft-top compartment cover, when opening or closing the soft top.
If there is a risk of entrapment, immediately release the (u) or (u) button on the SmartKey. The soft-top mechanism stops immediately.

Opening and closing
ℹ️ The SmartKey must be close to the driver’s door handle.
Point the tip of the SmartKey at the driver’s door handle.

**To open:** press and hold the button on the SmartKey until the soft top is fully opened.

The Convertible Top in Operation message appears in the multifunction display.

**To close:** press and hold the button on the SmartKey until the soft top is fully closed.

The Convertible Top in Operation message appears in the multifunction display. The soft top and the side windows close.

### Re-locking the soft top

⚠ **WARNING**

Stop the vehicle at a suitable location as soon as it is possible to do so safely and lock the soft top before driving on. You could otherwise endanger yourself and others.

The soft top is not locked if:

- the Convertible Top in Operation message appears in the multifunction display.
- you hear a warning tone for up to ten seconds when pulling away or while driving.

You can lock the soft top again if it is not locked fully.

- Stop the vehicle immediately, paying attention to road and traffic conditions.
- Select key position 2 using the Start/Stop button.
- Press the soft-top switch.

### Installing/removing the wind screen

⚠ **WARNING**

You could lose control of the vehicle and injure yourself or others if you operate the wind screen while driving.

Install or remove the wind screen only when the vehicle is stationary.

⚠ **WARNING**

If the wind screen is not properly engaged and the fastening levers are not folded outwards, it could become detached while driving. There is a risk of accident and injury.

Make sure that you push in the wind screen up to the locking point and then fold the fastening levers outwards.

Install or remove the wind screen only when the soft top is open. You could otherwise damage the wind screen or the vehicle interior.

⚠ Mercedes-Benz recommends that you only use wind screens which have been tested and approved for Mercedes-Benz vehicles. This helps to prevent damage to the vehicle.

The wind screen protects against wind when driving with the soft top open. It is secured between the roll bars.

The wind screen is located in a bag on the tank partition wall in the trunk.

- Open the trunk.

- Detach wind screen bag ① from the four press-studs ② on the tank partition wall.

- Remove the wind screen from the bag and attach the bag to the tank partition wall again.
To install: fold both fastening levers ② inwards.
- Push wind screen ① into the recess between the roll bars up to the locking point.
- Fold both fastening levers ② outwards.
- To remove: fold both fastening levers ② inwards in the direction of the arrow.
- Pull wind screen ① upward.
- Detach the wind screen bag, remove it from the trunk and put the wind screen back into it.
- Attach the wind screen bag to the tank partition wall in the trunk again.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (> page 21).

Correcting the driver's seat position

Correcting the driver's seat position

Observe the safety guidelines on seat adjustment (> page 85).

- Check whether you have adjusted seat 3 properly.

Electrical seat adjustment (> page 86)

When adjusting the seat, make sure that:

- you are as far away from the driver's air bag as possible.
- you are sitting in a normal upright position.
- you can fasten the seat belt properly.
- you have moved the backrest to an almost vertical position.
- you have set the seat cushion angle so that your thighs are gently supported.
- you can depress the pedals properly.

Observe the safety guidelines on steering wheel adjustment (> page 88).

- Check whether steering wheel 1 is adjusted properly.

Adjusting the steering wheel electrically (> page 88)

When adjusting the steering wheel, make sure that:

- you can hold the steering wheel with your arms slightly bent.
- you can move your legs freely.
- you can see all the displays in the instrument cluster clearly.

Observe the safety guidelines for seat belts (> page 47).

- Check whether you have fastened seat belt 2 properly (> page 49).

The seat belt should:

- fit snugly across your body
- be routed across the middle of your shoulder
- be routed in your pelvic area across the hip joints

- Before starting off, adjust the rear-view mirror and the exterior mirrors (> page 89) in such a way that you have a good view of road and traffic conditions.

- Vehicles with a memory function: save the seat, steering wheel and exterior mirror settings (> page 91).
**Important safety notes**

**WARNING**
In order to avoid possible loss of vehicle control, the following must be done before the vehicle is put into motion:
- seat adjustment
- steering wheel adjustment
- rear-view mirror adjustment
- fastening of seat belts

**WARNING**
In order to avoid possible loss of vehicle control, all seat, head restraint, steering wheel and rear view mirror adjustments, as well as fastening of seat belts, must be done before setting the vehicle in motion.

**WARNING**
Do not adjust the driver’s seat while driving. Adjusting the seat while driving could cause the driver to lose control of the vehicle. Never travel in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the seat belt would apply force at the abdomen or neck. This could cause serious or fatal injuries. The seat backrest and seat belts provide the best restraint when the wearer is in a position that is as upright as possible and seat belts are properly positioned on the body.

**WARNING**
Your seat belt must be adjusted so that you can correctly fasten your seat belt. Observe the following points:
- adjust the seat backrest until your arms are slightly angled when holding the steering wheel.
- adjust the seat to a comfortable seating position that still allows you to reach the accelerator/brake pedal safely. The position should be as far back as possible with the driver still able to operate the controls properly.
- adjust the head restraint so that it is as close to the head as possible and the center of the head restraint supports the back of the head at eye level.
- never place hands under the seat or near any moving parts while a seat is being adjusted.

Failure to do so could result in an accident and/or serious personal injury.

**WARNING**
The electrically adjustable seats can be operated at any time. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

**WARNING**
Children 12 years old and under must be seated and properly secured in an appropriately sized infant restraint, toddler restraint or booster seat recommended for the size and weight of the child. For additional information, see section "Children in the vehicle".

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

**WARNING**
To avoid damage to the seats and the seat heating, observe the following information:
- do not spill any liquids on the seats. If liquid is spilled on the seats, dry them as soon as possible.
- if the seat covers are damp or wet, do not switch on the seat heating. The seat heating should also not to be used to dry the seats.
• clean the seat covers as recommended; see the "Interior care" section.
• do not transport heavy loads on the seats. Do not place sharp objects on the seat cushions, e.g. knives, nails or tools. The seats should only be occupied by passengers, if possible.
• when the seat heating is in operation, do not cover the seats with insulating materials, e.g. blankets, coats, bags, seat covers, child seats or booster seats.

When you move the seats, make sure that there are no objects in the footwell or behind the seats. Otherwise, you could damage the seats and the objects.

### Adjusting the seats

1. Backrest angle
2. Seat fore-and-aft adjustment
3. Seat cushion angle
4. Seat height

You can store the seat settings using the memory function (› page 91).

### Adjusting the lumbar support

You can adjust the contour of the seat so as to provide optimum support for your back.

### Switching the seat heating on/off

#### Switching on/off

**WARNING**
Repeatedly setting the seat heating to level 3 may result in excessive seat temperatures. The health of passengers that have limited temperature sensitivity or a limited ability to react to excessively high temperatures may be affected or they may even suffer burn-like injuries. Therefore, do not use seat heating level 3 repeatedly.

The three red indicator lamps in the button indicate the heating level you have selected.

If the battery voltage is too low, the seat heating may switch off.
The system automatically switches down from level 3 to level 2 after approximately five minutes.
The system automatically switches down from level 2 to level 1 after approximately ten minutes.
The system automatically switches off approximately 20 minutes after it is set to level 1.
▶ Select key position 2 with the Start/Stop button.
▶ To switch on: press button 1 repeatedly until the desired heating level is set.
▶ To switch off: press button 1 repeatedly until all the indicator lamps go out.

Problems with the seat heating
The seat heating has switched off prematurely or cannot be switched on. The vehicle's electrical system voltage is too low because too many electrical consumers are switched on.
▶ Switch off electrical consumers that you do not need, such as the rear window defroster or interior lighting. Once the battery is sufficiently charged, the seat heating will switch back on automatically.

AIRSCARF (Roadster)

⚠️ WARNING
Very hot air can flow out of the AIRSCARF vents in the head restraints when AIRSCARF is in operation. This can cause burns on unprotected skin near the AIRSCARF vents. Make sure that you reduce the heater output in time.

The AIRSCARF function warms the head and neck area of vehicle occupants with warm air. The warm air flows out of the holes in the head restraints.
The three red indicator lamps in the button indicate the heating level you have selected.

▶ Make sure that the SmartKey is in position 2 in the ignition lock.
▶ To activate: press button 1. Three red indicator lamps in the button light up. The blower starts up after a preheating phase of seven seconds.
▶ Press button 1 repeatedly until the desired heating level is set.
▶ To switch off: press button 1 repeatedly until all the indicator lamps go out.

You can use the adjustable fins on the head restraint to adjust the height of the current of air blown out according to your height.
Make sure that there are no objects covering the intake grille on the back of the driver's seat backrest.
⚠️ The blower continues running for seven seconds to cool down the heating elements.
If the battery voltage is too low, AIRSCARF may switch off.

**Steering wheel**

**Important safety notes**

⚠️ **WARNING**

Do not adjust the steering wheel while driving. Adjusting the steering wheel while driving could cause the driver to lose control of the vehicle.

The electrical steering wheel adjustment feature can be operated at any time. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

**Adjusting the steering wheel**

1. To adjust the steering wheel position (fore-and-aft adjustment)
2. To adjust the steering wheel height

**Other topics:**

- EASY-ENTRY/EXIT feature (page 88)
- Storing settings (page 91)

---

**EASY-ENTRY/EXIT system**

**Important safety notes**

The EASY-ENTRY/EXIT feature makes getting in and out of your vehicle easier.

You can activate and deactivate the EASY-ENTRY/EXIT feature in the on-board computer (page 159).

⚠️ **WARNING**

You must make sure no one can become trapped or injured by the moving steering wheel when the easy-entry/exit feature is activated.

To stop steering wheel movement, move steering wheel adjustment stalk or press the memory position switch.

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could open the driver’s door and unintentionally activate the easy-entry/exit feature, which could result in an accident and/or serious personal injury.

**Position of the steering wheel when the EASY-ENTRY/EXIT feature is active**

The steering wheel swings upwards when you:

- remove the SmartKey from the ignition lock
- open the driver’s door with the KEYLESS-GO start function in position 1
- open the driver’s door and the SmartKey is in position 0 or 1 in the ignition lock

⚠️ The steering wheel only moves upwards if it has not already reached the upper end stop.
Position of the steering wheel for driving
The steering wheel is moved to the last selected position when:
• the driver’s door is closed.
• you press the Start/Stop button once.
When you close the driver’s door with the ignition switched on, the steering wheel is also automatically moved to the previously set position.
The last position of the steering wheel is stored after each manual setting or when you store the setting with the memory function (» page 91).

Crash-responsive EASY-EXIT feature
If the crash-responsive EASY-EXIT feature is triggered in an accident, the steering column will move upwards when the driver’s door is opened. This occurs irrespective of the position of the SmartKey in the ignition lock. This makes it easier to exit the vehicle and rescue the occupants.
The crash-responsive EASY-EXIT feature is only operational if the EASY-EXIT/ENTRY feature is activated in the on-board computer.

Mirrors

Rear-view mirror

Anti-glare mode: flick anti-glare switch 1 forwards or back.

Exterior mirrors

Adjusting the exterior mirrors

WARNING
Exercise care when using the passenger-side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your interior rear view mirror and glance over your shoulder before changing lanes.
The convex exterior mirrors provide a larger field of vision.
The exterior mirrors are automatically heated if the rear window defroster is switched on and the outside temperature is low.

Select key position 1 or 2 with the Start/Stop button.
Press button 1 for the left-hand exterior mirror or button 2 for the right-hand exterior mirror.
The indicator lamp in the corresponding button lights up in red.
The indicator lamp goes out again after some time. You can adjust the selected mirror using adjustment button 3 as long as the indicator lamp is lit.
Press adjustment button 3 up, down, to the right or to the left until the exterior mirror is set to a position that provides you with a good overview of traffic conditions.
Folding the exterior mirrors in or out electrically

Select key position 1 or 2 with the Start/Stop button.
Briefly press button ①.

Both exterior mirrors fold in or out.

Make sure that the exterior mirrors are always folded out fully while the vehicle is in motion, as they may otherwise vibrate.

If you are driving faster than 30 mph (47 km/h), you can no longer fold in the exterior mirrors.

Folding the exterior mirrors in or out automatically

If the "Fold in mirrors when locking" function is activated in the on-board computer (page 160):

- the exterior mirrors fold in automatically as soon as you lock the vehicle from the outside.
- the exterior mirrors fold out again automatically as soon as you unlock the vehicle and then open the driver's or front-passenger door.

The mirrors do not fold out if they have been folded in manually.

Exterior mirror out of position

If an exterior mirror has been pushed out of position, proceed as follows:

- **Vehicles without electrically folding exterior mirrors:** move the exterior mirror into the correct position manually.
- **Vehicles with electrically folding exterior mirrors:** press the mirror-folding button (page 90) repeatedly until you hear the mirror engage in position. The mirrors do not fold out if they have been folded in manually.

Setting the exterior mirrors

If the battery has been disconnected or completely discharged, the exterior mirrors must be reset. The exterior mirrors will otherwise not fold in when you select the "Fold in mirrors when locking" function in the on-board computer (page 160).
Select key position 1 with the Start/Stop button.
Briefly press button ①.

Automatic anti-glare mirrors

**WARNING**

If incident light from headlamps is prevented from striking the sensor in the rear-view mirror, for instance, by luggage piled too high in the vehicle, the mirror's automatic anti-glare function will not operate. Incident light could then blind you. This may distract you from the traffic conditions and, as a result, you may cause an accident.

The rear-view mirror and the exterior mirror on the driver's side automatically go into anti-glare mode if the ignition is switched on and incident light from headlamps strikes the sensor in the rear-view mirror.

The mirrors do not go into anti-glare mode if reverse gear is engaged.
Parking position for the exterior mirror on the front-passenger side

Setting and storing the parking position

You can position the front-passenger side exterior mirror in such a way that you can see the rear wheel on that side as soon as you engage reverse gear. You can store this position.

Select key position 2 with the Start/Stop button.

Press button 2 for the exterior mirror on the front-passenger side.

Engage reverse gear.

The exterior mirror on the front-passenger side moves to the preset parking position.

Use adjustment button 3 to adjust the exterior mirror to a position that allows you to see the rear wheel and the curb. The parking position is stored.

If you shift the transmission to another position, the exterior mirror on the front-passenger side returns to the driving position.

Calling up a stored parking position setting

Select key position 2 with the Start/Stop button.

Adjust the exterior mirror on the front-passenger side with the corresponding button (page 89).

Engage reverse gear.

The exterior mirror on the front-passenger side moves to the stored parking position.

The exterior mirror on the front-passenger side moves back to its original position:

- as soon as you exceed a speed of 6 mph (10 km/h)
- about ten seconds after you have disengaged reverse gear
- if you press button 1 for the exterior mirror on the driver's side

Memory function

Storing settings

WARNING
Do not activate the memory function while driving. Activating the memory function while driving could cause the driver to lose control of the vehicle.

With the memory function, you can store up to three different settings, e.g. for three different people.

The following settings are stored as a single memory preset:

- seat and backrest position
- driver's side: steering wheel position
- driver's side: position of the exterior mirrors on the driver's and front-passenger sides
Memory function

Select key position 2 with the Start/Stop button.

Adjust the seat (page 86).

On the driver's side, adjust the steering wheel (page 88) and the exterior mirrors (page 89).

Press memory button M and one of the storage position buttons 1, 2 or 3 within three seconds. The settings are stored in the selected preset position. A tone sounds when the settings have been completed.

Calling up a stored setting

Press and hold the relevant storage position button 1, 2 or 3 until the seat, steering wheel and exterior mirrors are in the stored position.

The setting procedure is interrupted as soon as you release the storage position button.

### Useful information

> This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

> Please read the information on qualified specialist workshops (> page 21).

### Exterior lighting

#### Important safety notes

For reasons of safety, Mercedes-Benz recommends that you drive with the lights switched on even during the daytime. In some countries, operation of the headlamps varies due to legal requirements and self-imposed obligations.

#### Information about driving abroad

**Converting to symmetrical low beam when driving abroad:** switch the headlamps to symmetrical low beam in countries in which traffic drives on the opposite side of the road to the country where the vehicle is registered. This prevents glare to oncoming traffic. Symmetrical lights do not illuminate as large an area of the edge of the road.

Have the headlamps converted at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, as close to the border as possible before driving in these countries.

**Converting to asymmetrical low beam after returning:** have the headlamps converted back to asymmetrical low beam at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, as soon as possible after crossing the border again.

### Light switch

#### Operation

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Left-hand standing lamps</td>
</tr>
<tr>
<td>2</td>
<td>Right-hand standing lamps</td>
</tr>
<tr>
<td>3</td>
<td>Parking lamps, license plate and instrument cluster lighting</td>
</tr>
<tr>
<td>4</td>
<td>Automatic headlamp mode/daytime running lamps</td>
</tr>
<tr>
<td>5</td>
<td>Low-beam/high-beam headlamps</td>
</tr>
</tbody>
</table>

The turn signals, high-beam headlamps and the high-beam flasher are operated using the combination switch (> page 96).

> Switch off the parking lamps and standing lamps when you leave the vehicle. This prevents the battery from discharging.

The exterior lighting (except the parking/standing lamps) switches off automatically if you:

- remove the SmartKey from the ignition lock
- open the driver’s door with the SmartKey in position 0.

If you hear a warning tone when you leave the vehicle, the lights may still be switched on.

> Turn the light switch to [AUTO].
Low-beam headlamps

To switch on the low-beam headlamps:
- Turn the SmartKey in the ignition lock to position 2 or start the engine.
- Turn the light switch to \( \text{\textbf{S}} \). The \( \text{\textbf{S}} \) indicator lamp in the instrument cluster lights up.

Daytime running lights

Daytime running lamps in Canada
The daytime running lamps function is required by law in Canada. It cannot therefore be deactivated.
- Turn the light switch to \( \text{\textbf{A}} \).
- With the engine running: depending on the ambient light, the daytime running lamps or the low-beam headlamps are switched on. When the low-beam headlamps are switched on, the \( \text{\textbf{S}} \) indicator lamp in the instrument cluster lights up.

When the engine is running and the vehicle is stationary: if you move the selector lever from a drive position to \( \text{P} \), the daytime running lamps/low-beam headlamps go out after three minutes.

When the engine is running, the vehicle is stationary and in high ambient light brightness: if you turn the light switch to \( \text{\textbf{D}} \), the daytime running lamps and the parking lamps are switched on.

If the engine is running and you turn the light switch to \( \text{\textbf{S}} \), the manual settings take precedence over the daytime running lamps.

Daytime running lamps in the USA
In the USA, the daytime running lamps are deactivated upon delivery from the factory.

To activate the daytime running lamps: activate the daytime running lamps function in the on-board computer (> page 157).

To switch on automatic headlamp mode:
- Turn the light switch to \( \text{\textbf{A}} \).
- With the engine running: depending on the ambient light, the daytime running lamps or the low-beam headlamps are switched on.
- When the low-beam headlamps are switched on, the \( \text{\textbf{S}} \) indicator lamp in the instrument cluster lights up.

WARNING
If the light switch is set to \( \text{\textbf{A}} \), the low-beam headlamps will not come on automatically if it is foggy. This could endanger you and others. Therefore, turn the light switch to \( \text{\textbf{S}} \) in fog.

The automatic headlamp feature is only an aid. The driver is responsible for the vehicle’s lighting at all times.

Automatic headlamp mode

To switch on automatic headlamp mode: turn the light switch to \( \text{\textbf{A}} \).

SmartKey in position 1 in the ignition lock: the parking lamps are switched on or off automatically depending on the brightness of the ambient light.

With the engine running: depending on the brightness of the ambient light, the daytime running lamps or the low-beam headlamps are switched on or off automatically.

When the low-beam headlamps are switched on, the \( \text{\textbf{S}} \) indicator lamp in the instrument cluster lights up.

4 Only if daytime running lamps have been activated via the on-board computer.
Combination switch

Turn signals

- High-beam headlamps
- Right turn signal
- High-beam flasher
- Left turn signal

- To indicate briefly: press the combination switch briefly to the pressure point in the direction of arrow ② or ④. The corresponding turn signal flashes three times.

- To indicate: press the combination switch beyond the pressure point in the direction of arrow ② or ④.

High-beam headlamps

- To switch on the high-beam headlamps: turn the SmartKey in the ignition lock to position 1 or 2 or start the engine.

- To switch off the high-beam headlamps: move the combination switch back to its normal position. The indicator lamp in the instrument cluster goes out.

High-beam flasher

- To switch on: turn the SmartKey in the ignition lock to position 1 or 2 or start the engine.

- To switch off: press button ①.

Hazard warning lamps

- To switch on the hazard warning lamps: press button ①. All turn signals flash. If you now switch on a turn signal using the combination switch, only the turn signal lamp on the corresponding side of the vehicle will flash.

- To switch off the hazard warning lamps: press button ①.

The indicator lamp in the instrument cluster lights up when the high-beam headlamps are switched on.

- To switch off the high-beam headlamps: move the combination switch back to its normal position. The indicator lamp in the instrument cluster goes out.
The hazard warning lamps are deactivated automatically if the vehicle returns to a speed of over 6 mph (10 km/h) after a full application of the brakes.

1 The hazard warning lamps still operate if the ignition is switched off.

**Headlamp cleaning system**

The headlamps are cleaned automatically if the "Wipe with washer fluid" function is operated ten times while the lights are on and the engine is running (page 99). When you switch off the ignition, the automatic headlamp cleaning system is reset and counting is resumed from 0.

**Headlamps fogged up on the inside**

The headlamps may fog up on the inside if there is high atmospheric humidity.

- Drive with the headlamps switched on. The level of moisture diminishes, depending on the length of the journey and the weather conditions (humidity and temperature).

If the level of moisture does not diminish:
- Have the headlamps checked at a qualified specialist workshop.

---

**Overview of interior lighting**

- Switches the automatic interior lighting control on/off
- Switches the right-hand reading lamp on/off
- Switches the interior lighting on/off
- Switches the left-hand reading lamp on/off

**Interior lighting control**

**Important notes**

In order to prevent the vehicle's battery from discharging, the interior lighting functions are automatically deactivated after some time except for when the SmartKey is in position 2 in the ignition lock.

**Automatic interior lighting control**

- To switch on/off: press the button. When the automatic interior lighting control is activated, the button is flush with the overhead control panel.

The interior lighting automatically switches on if you:
- unlock the vehicle
- open a door
- remove the SmartKey from the ignition lock

The interior light is activated for a short while when the SmartKey is removed from the
ignition lock. You can activate this delayed switch-off using the on-board computer (> page 159).

**Manual interior lighting control**

- **To switch the interior lighting on/off:** press the button.
- **To switch the reading lamps on/off:** press the button.

**Crash-responsive emergency lighting**

The interior lighting is activated automatically if the vehicle is involved in an accident.

- **To switch off the crash-responsive emergency lighting:** press the hazard warning lamp button.

or

- Lock and then unlock the vehicle using the key.

**Replacing bulbs**

**Important safety notes**

**Xenon bulbs**

If your vehicle is equipped with Xenon bulbs, you can recognize this by the following: the cone of light from the Xenon bulbs moves from the top to the bottom and back again when you start the engine. For this to be observed, the lights must be switched on before starting the engine.

⚠️ **DANGER**

Xenon bulbs carry a high voltage. You could get an electric shock and be seriously or even fatally injured if you touch the electric contacts on Xenon bulbs. Therefore, never remove the cover from Xenon bulbs. Do not change Xenon bulbs yourself, but have them replaced at a qualified specialist workshop which has the necessary specialist knowledge and tools to carry out the work required.

Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose. In particular, work relevant to safety or on safety-related systems must be carried out at a qualified specialist workshop.

Bulbs and lamps are an important aspect of vehicle safety. You must therefore make sure that these function correctly at all times. Have the headlamp setting checked regularly.

**Other bulbs**

There are bulbs other than the Xenon bulbs that you cannot replace. Replace only the bulbs listed (> page 99). Have the bulbs that you cannot replace yourself changed at a qualified specialist workshop.

Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose. In particular, work relevant to safety or on safety-related systems must be carried out at a qualified specialist workshop.

If you require assistance changing bulbs, consult a qualified specialist workshop.

Do not touch the glass tube of new bulbs with your bare hands. Even minor contamination can burn into the glass surface and reduce the service life of the bulbs. Always use a lint-free cloth or only touch the base of the bulb when installing.

Only use bulbs of the correct type.

If the new bulb still does not light up, consult a qualified specialist workshop.

Bulbs and lamps are an important aspect of vehicle safety. You must therefore make sure that these function correctly at all times. Have the headlamp setting checked regularly.

⚠️ **WARNING**

Bulbs and lamps can be very hot. You should therefore allow them to cool down before you change them. Otherwise, you could be burned if you touch them.
Keep bulbs out of the reach of children. Otherwise, they could damage the bulbs, for example, and injure themselves.

Never use a bulb which has been dropped. Such a bulb may break or even explode and injure you.

Halogen bulbs are pressurized and can explode when you change them, particularly if they are very hot. You should therefore wear eye protection and gloves when you are changing them.

Changing the front bulbs

You cannot replace the bulbs at the front yourself. Contact a qualified specialist workshop which has the necessary specialist knowledge and tools to carry out the work required. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

Changing the rear bulbs

License plate lamps

The only rear bulbs you can change are the W5W license plate lamp bulbs.

1 Switch off the lights.
2 Lever lamp housing (1) out of the frame using a screwdriver.
3 Unscrew the bulb holder from the lamp housing and pull out the bulb.

Windshield wipers

Switching the windshield wipers on/off

⚠️ WARNING
The windshield will not longer be wiped properly if the wiper blades are worn. This could prevent you from observing the traffic conditions, thereby causing an accident. Replace the wiper blades twice a year, ideally in spring and fall.

⚠️ Do not operate the windshield wipers when the windshield is dry, as this could damage the wiper blades. Moreover, dust that has collected on the windshield can scratch the glass if wiping takes place when the windshield is dry.

⚠️ If the windshield wipers leave smears on the windshield after the vehicle has been washed in an automatic car wash, wax or other residues may be the reason for this. Clean the windshield using washer fluid after washing the vehicle in an automatic car wash.
Combination switch

1 0 Windshield wipers off
2  ˙˙˙ Intermittent wipe, low
3  ˙˙˙˙˙ Intermittent wipe, high
4  ƒ Continuous wipe, slow
5  ƒƒ Continuous wipe, fast
6  ⨯ Single wipe / ⨯ To wipe the windshield using washer fluid

- Switch on the ignition.
- Turn the combination switch to the corresponding position.

⚠️ Intermittent wiping with rain sensor: due to optical influences and the windshield becoming dirty in dry weather conditions, the windshield wipers may be activated inadvertently. This could then damage the windshield wiper blades or scratch the windshield.

For this reason, you should always switch off the windshield wipers in dry weather.

In the [ ˙˙˙ ] or [ ˙˙˙˙˙ ] position, the appropriate wiping frequency is set automatically according to the intensity of the rain. In the [ ˙˙˙˙˙ ] position, the rain sensor is more sensitive than in the [ ˙˙˙ ] position, causing the windshield wipers to wipe more frequently.

---

Replacing the wiper blades

**Important safety notes**

⚠️ **WARNING**

The wiper arms could start moving and cause an injury if you leave the windshield wipers switched on.

Remove the key from the ignition lock before replacing the wiper blades.

⚠️ To avoid damaging the wiper blades, make sure that you touch only the wiper arm of the wiper.

⚠️ Never open the hood if a windshield wiper arm has been folded away from the windshield.

Never fold a windshield wiper arm without a wiper blade back onto the windshield. Hold the windshield wiper arm firmly when you change the wiper blade. If you release the windshield wiper arm without a wiper blade and it falls onto the windshield, the windshield may be damaged by the force of the impact.

Mercedes-Benz recommends that you have the wiper blades replaced by a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

### Replacing the wiper blades

#### Removing the wiper blades

**Moving the wiper blades to a vertical position**

- Switch off the engine.
- Remove your foot from the brake pedal.
- Set the windshield wipers to position [ 0 ].
- Press the Start/Stop button repeatedly until the windshield wipers start.

---

5 Rain sensor set to low sensitivity.

6 Rain sensor set to high sensitivity.
When the wiper arms have reached a vertical position, press the Start/Stop button.
Fold the wiper arm away from the windshield until it engages.
Set the wiper blade at right angles to the wiper arm.

Removing the wiper blades
- Remove the wiper blade from the retainer on the wiper arm in the direction of the arrow.

Installing the wiper blades
- Slide the new wiper blade into the retainer on the wiper arm in the opposite direction to the arrow.
- Turn the wiper blade parallel to the wiper arm.
- Fold the wiper arm back onto the windshield.

Problems with the windshield wipers

The windshield wipers are obstructed
Leaves or snow, for example, may be obstructing the windshield wiper movement. The wiper motor has been deactivated.
- Switch off the engine using the Start/Stop button and open the driver’s door.
- Remove the cause of the obstruction.
- Switch the windshield wipers back on.

The windshield wipers are inoperative
The windshield wiper drive is malfunctioning.
- Select another wiper speed on the combination switch.
- Have the windshield wipers checked at a qualified specialist workshop.

The spray nozzles are misaligned
The windshield washer fluid from the spray nozzles no longer hits the center of the windshield. The spray nozzles are misaligned.
- Have the spray nozzles adjusted at a qualified specialist workshop.

The wiper arms are on the windshield
The wiper arms have been moved by an external force.
- Select key position 2 (ignition) with the Start/Stop button.
The wiper arms move back down automatically.
Useful information .................................. 104
Overview of climate control systems .................................................. 104
Operating the climate control system .................................................. 106
Setting the air vents .............................................. 110
Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (page 21).

Important safety notes

**WARNING**
Severe conditions (e.g. strong air pollution) may require replacement of the filter before its scheduled replacement interval. A clogged filter will reduce the air volume to the interior and the windows could fog up, impairing visibility and endangering you and others. Have a blocked filter replaced at a Mercedes-Benz Center as soon as possible.

**WARNING**
Follow the recommended settings for heating and cooling given on the following pages. Otherwise, the windows could fog up, impairing visibility and endangering you and others.

The automatic climate control regulates the temperature and the humidity in the vehicle interior and filters undesirable substances out of the air.

Coupe: the automatic climate control is only operational if the engine is running. Optimum operation is achieved only when you drive with the side windows closed.

Roadster: the automatic climate control is only operational if the engine is running. The system only works optimally when the side windows and the roof are closed.

Coupe: ventilate the vehicle for a brief period during warm weather, e.g. using the convenience opening feature (page 77). This will speed up the cooling process and the desired vehicle interior temperature will be reached more quickly.

Roadster: ventilate the vehicle for a brief period during warm weather. This will speed up the cooling process and the desired vehicle interior temperature will be reached more quickly.

The integrated filter can filter out most particles of dust, and completely filters out pollen. A clogged filter reduces the amount of air supplied to the vehicle interior. For this reason, you should always observe the interval for replacing the filter, which is specified in the Maintenance Booklet. As it depends on environmental conditions, e.g. heavy air pollution, the interval may be shorter than stated in the Maintenance Booklet.
Control panel for 2-zone automatic climate control

Canada only
1. Sets the temperature, left (page 107)
2. Sets climate control to automatic (page 107)
3. Switches climate control on/off (page 106)
4. Switches the MONO function on/off
5. Activates/deactivates cooling with air dehumidification (page 106)
6. Defrosts the windshield (page 108)
7. Activates/deactivates air-recirculation mode (page 109)
8. Sets the temperature, right (page 107)
9. Switches the rear window defroster on/off (page 109)
10. Increases the airflow (page 108)
11. Reduces the airflow (page 108)
12. Display
13. Sets the air distribution (page 107)

USA only
1. Sets the temperature, left
2. Sets climate control to automatic (page 107)
3. Switches climate control on/off (page 106)
4. Switches maximum cooling MAX COOL on/off (page 108)
5. Activates/deactivates cooling with air dehumidification (page 106)
Operating the climate control system

Notes on using 2-zone automatic climate control
The following contains instructions and recommendations to enable you to get the most out of your automatic climate control.

- Activate climate control using the [AUTO] and [A/C] buttons. The indicator lamps in the [AUTO] and [A/C] buttons light up.
- Set the temperature to 72 °F (22 °C).
- Only use the "defrosting" function briefly until the windshield is clear again.
- Only use "air-recirculation" mode briefly, e.g. if there are unpleasant outside odors or when in a tunnel. The windows could otherwise fog up as in air-recirculation mode no fresh air is drawn into the vehicle.
- Use the MONO function if you want to adopt the temperature and air distribution settings from the driver's side for all climate zones. The indicator lamp in the [MONO] button lights up.

Operating the climate control system
Activating/deactivating climate control

WARNING
When the climate control system is deactivated, the outside air supply and circulation are also deactivated. Only choose this setting for a short time. Otherwise the windows could fog up, impairing visibility and endangering you and others.

Switch on climate control primarily using the [AUTO] button (page 107).

- Select key position 2 with the Start/Stop button.

To switch on: press the [AUTO] button. The indicator lamp in the [AUTO] button lights up. Airflow and air distribution are set to automatic mode.

or

- Press the [OFF] button. The indicator lamp in the [OFF] button goes out. The previously selected settings come into effect again.

To switch off: press the [OFF] button. The indicator lamp in the [OFF] button lights up.

Activating/deactivating the cooling with air dehumidification function

Important information
The cooling with air dehumidification function is only available when the engine is running. The air inside the vehicle is cooled and dehumidified according to the temperature selected.

WARNING
If you switch off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.
Condensation may drip from the underside of the vehicle when it is in cooling mode.

Activating/deactivating

- **To activate:** press the [A/C] button. The indicator lamp in the [A/C] button lights up.
- **To switch off:** press the [A/C] button. The indicator lamp in the [A/C] button goes out. The cooling with air dehumidification function has a delayed switch-off feature.

Problems with the cooling with air dehumidification function

When you press the [A/C] button, the indicator lamp in the button flashes three times or remains off. You can no longer switch on the cooling with air dehumidification function.
- Consult a qualified specialist workshop.

Setting climate control to automatic

**WARNING**

If you switch off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.

In automatic mode, the set temperature is controlled automatically. The system automatically regulates the temperature of the dispensed air, the airflow and the air distribution.

Automatic mode will achieve optimal operation if cooling with air dehumidification is also activated. If desired, cooling with air dehumidification can be deactivated.

- Select key position 2 with the Start/Stop button.
- Set the desired temperature.
- **To activate:** press the [AUTO] button. The indicator lamp in the [AUTO] button lights up. Automatic air distribution and airflow are activated.
- **To switch off:** press the [AUTO] button. The indicator lamp in the [AUTO] button goes out. Automatic air distribution and airflow are deactivated.

Setting the temperature

Different temperatures can be set for the driver’s and front-passenger sides.
- Select key position 2 with the Start/Stop button.
- **To increase/reduce:** turn controls 1 and 8 clockwise or counter-clockwise (> page 105). Only change the temperature setting in small increments. Start at 72 °F (22 °C).

Setting the air distribution

- Directs the airflow through the defroster vents
- Directs the airflow through the center and side air vents
- Directs the airflow through the footwell air vents
- Directs the airflow through the center and side air vents as well as the footwell air vents
- Directs the airflow to the entire vehicle interior
- Directs the airflow through the center and side air vents, as well as the defroster vents
- Directs the airflow through the footwell and defroster vents
Select key position 2 with the Start/Stop button.
Press the button repeatedly until the desired symbol appears in the display. The indicator lamp in the button goes out. Automatic control is deactivated and the air distribution is controlled according to the selected setting.

**Setting the airflow**
Select key position 2 with the Start/Stop button.
To increase/reduce: press the or button.

**Switching the mono function on/off**
The MONO function is only available in vehicles for Canada.
You can use the MONO function to adopt the temperature and air distribution settings on the driver’s side for the front passenger side.
Press the MONO button. The indicator lamp in the MONO button lights up or goes out.

**Defrosting the windshield**
You should only select the defrosting function until the windshield is clear again.
Select key position 2 with the Start/Stop button.
To activate: press the button. The indicator lamp in the button lights up.
The system automatically switches to the following functions:
- cooling with air dehumidification on
- high airflow
- high temperature

**Switching maximum cooling MAX COOL on/off**
The MAX COOL function is only available in vehicles for the USA.
MAX COOL is only operational when the engine is running.
When you activate MAX COOL, climate control switches to the following functions:
- maximum cooling
- maximum airflow
- air-recirculation mode on
To activate: press the button. The indicator lamp in the button lights up.
To deactivate: press the button again. The indicator lamp in the button goes out.
The previously selected settings come into effect again.
To deactivate MAX COOL press the OFF, AUTO, or button.
Defrosting the windows

Windows fogged up on the inside
- Activate the cooling with air dehumidification function.
- Activate automatic mode.
- If the windows continue to fog up, activate the defrosting function.

Windows fogged up on the outside
- Activate the windshield wipers.
- Press the button repeatedly until the or symbol appears in the display.

⚠️ You should only select this setting until the windshield is clear again.

Rear window defroster

Activating/deactivating

⚠️ WARNING
Any accumulation of snow and ice should be removed from the rear window before driving. Visibility could otherwise be impaired, endangering you and others.

The rear window defroster has a high current draw. You should therefore switch it off as soon as the window is clear. It otherwise switches off automatically after several minutes.

If the battery voltage is too low, the rear window defroster may switch off.

- Select SmartKey position 2 with the Start/Stop button.
- Press the button.

The indicator lamp in the button lights up or goes out.

Problems with the rear window defroster

The rear window defroster has deactivated prematurely or cannot be activated. The on-board voltage is too low because too many electrical consumers are switched on.

- Switch off any consumers that are not required, e.g. seat heating or interior lighting.

When the battery is sufficiently charged, the rear window defroster is activated again automatically.

Activating/deactivating air-recirculation mode

You can deactivate the flow of fresh air if unpleasant odors are entering the vehicle from outside. The air already inside the vehicle will then be recirculated.

⚠️ WARNING
Fogged windows impair visibility, endangering you and others. If the windows begin to fog on the inside, switching off the air recirculation mode immediately should clear interior window fogging. If interior window fogging persists, make sure the air conditioning is activated, or press the button.

- Select SmartKey position 2 with the Start/Stop button.
- **To activate:** press the button.

The indicator lamp in the button lights up.

- Air-recirculation mode is activated automatically at high outside temperatures. When air-recirculation mode is activated automatically, the indicator lamp in the button is not lit.

Outside air is added after about 30 minutes.
Setting the air vents

To switch off: press the button. The indicator lamp in the button goes out.

Air-recirculation mode deactivates automatically:
- after approximately five minutes if outside temperatures are less than about 41 °F (5 °C)
- after approximately five minutes if cooling with air dehumidification is deactivated
- after approximately 30 minutes if outside temperatures are over about 41 °F (5 °C)

Important safety notes

WARNING
When operating the climate control, the air that enters the passenger compartment through the air vents can be very hot or very cold (depending on the set temperature). This could cause burns or frostbite to unprotected skin in the immediate area of the air vents. Always keep sufficient distance between unprotected parts of the body and the air vents. If necessary, use the air distribution adjustment to direct the air to air vents in the vehicle interior that are not in the immediate area of unprotected skin.

In order to ensure the direct flow of fresh air through the air vents into the vehicle interior, please observe the following notes:
- keep the air inlet on the right-hand side of the hood free of blockages, such as ice, snow or leaves.
- never cover the air vents or air intake grilles in the vehicle interior.

For virtually draft-free ventilation, adjust the sliders of the air vents to the center position.

Setting the center air vents

1. To open the center air vent
2. To close the center air vent
3. Center air vent, right
4. Center air vent, left

To open the center air vent: turn the adjuster in center air vent 3 or 4 in the direction of the arrow to position 1.

To close the center air vent: turn the adjuster in center air vent 3 or 4 in the direction of the arrow to position 2.

Setting the side air vents

1. To open the side air vent
2. To close the side air vent
3. Side window defroster vent
4. Side air vent
To open the side air vent: turn the adjuster in side air vent \( \text{④} \) in the direction of the arrow to position \( \text{①} \).

To close the side air vent: turn the adjuster in side air vent \( \text{④} \) in the direction of the arrow to position \( \text{②} \).

Setting the AIRSCARF vents
(Roadster)

⚠️ WARNING
When operating the climate control, the air that enters the passenger compartment through the air vents can be very hot or very cold (depending on the set temperature). This could cause burns or frostbite to unprotected skin in the immediate area of the air vents. Always keep sufficient distance between unprotected parts of the body and the air vents. If necessary, use the air distribution adjustment to direct the air to air vents in the vehicle interior that are not in the immediate area of unprotected skin.

You can adjust the blower output of AIRSCARF vents \( \text{①} \) using the AIRSCARF button (⇒ page 87).

Driving and parking
Useful information

This Operator’s Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator’s Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (page 21).

Breaking-in notes

The first 1000 miles (1500 km)

The more you look after the engine when it is new, the more satisfied you will be with its performance in the future.

- Drive at varying vehicle speeds and engine speeds for the first 1000 miles (1500 km) for this reason.
- Do not drive faster than 85 mph (140 km/h) for the first 1000 miles (1500 km).
- Only allow the engine to reach a maximum engine speed of 4,500 rpm briefly.
- Avoid overstraining the vehicle during this period, e.g. driving at full throttle. Do not exceed ⅔ of the maximum permitted engine speed for each gear.
- Select the manual drive program M in good time.
- Do not carry out a RACE START.
- Do not manually shift to a lower gear to brake the vehicle.
- If possible, do not depress the accelerator pedal past the point of resistance (kickdown).
- Only select the shift range limits 3, 2 or 1 when driving slowly, e.g. in mountainous terrain.

After 1000 miles (1500 km), you can increase the engine speed gradually and bring the vehicle up to full speed.

You should also observe these breaking-in notes if your vehicle's engine or transmission has been replaced.

Always observe the respective speed restrictions.

Driving

Important safety notes

⚠️ WARNING
Do not keep any objects in the driver’s footwell. If you use a floormat or carpet in the driver’s footwell, make sure that they are correctly secured and that there is sufficient clearance for the pedals.

Do not place several floormats on top of one another.

The objects or floormats could otherwise get between the pedals in the event of sudden braking or acceleration. You may then no longer be able to brake, change gear or accelerate as intended. This may result in an accident and injury.

⚠️ WARNING
Do not change down for additional engine braking on a slippery road surface. This could cause the drive wheels to lose their grip and the vehicle could skid. This could cause you to lose control of your vehicle and cause an accident.

⚠️ WARNING
It is dangerous to shift the automatic transmission out of parking position P or neutral position N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear
when the engine is idling normally and when your right foot is firmly on the brake pedal.

Warm up the engine quickly. Do not use the engine's full performance until it has reached operating temperature. The operating temperature has been reached when the engine oil temperature display in the on-board computer's AMG menu no longer flashes.

Only shift into reverse gear when the vehicle is stationary.

Where possible, avoid spinning the drive wheels when pulling away on slippery roads. You could otherwise damage the drive train.

During a cold start, if the engine oil temperature is low (below 0 °C), maximum engine speed will be limited to protect the engine. To protect the engine and maintain smooth engine operation, avoid driving at full throttle when the engine is cold.

During a cold start, if the engine oil temperature is low (below 32 °F) (0 °C), maximum engine speed will be limited to protect the engine. To protect the engine and maintain smooth engine operation, avoid driving at full throttle when the engine is cold.

SmartKey positions

KEYLESS-GO start function

You can switch the engine on and off with the Start/Stop button. For this, the SmartKey must be inside the vehicle. The Start/Stop button is located in the center console and is illuminated when the vehicle is unlocked.

Pressing the Start/Stop button several times in succession corresponds to the different key positions in the ignition lock. This is only the case if you are not depressing the brake pedal.

If you depress the brake pedal and press the Start/Stop button, the engine starts immediately.

If there is a SmartKey in the ignition lock, this takes precedence over the KEYLESS-GO start function.

Position 0: if Start/Stop button ① has not yet been pressed, this corresponds to the SmartKey being removed from the ignition.

Position 1: press Start/Stop button ①.

You can now activate the windshield wipers, for example.

If you press Start/Stop button ① twice when in this position and the driver's door is open, the power supply is deactivated again.

If you press Start/Stop button ① once when in this position and the driver's door is open, the power supply is deactivated again.

SmartKey

You can also start the vehicle with the SmartKey in the ignition lock.

The ignition lock is located in the rear stowage space of the center console.
To remove the SmartKey

Power supply for some consumers, such as the windshield wipers

Ignition (power supply for all consumers) and drive position

To start the engine

The SmartKey can be turned in the ignition lock even if it is not the correct SmartKey for the vehicle. The ignition is not switched on. The engine cannot be started.

Starting the engine

Important safety notes

**WARNING**

Never leave the engine running in enclosed spaces. The exhaust gases contain toxic carbon monoxide. Breathing in exhaust fumes is a health hazard and can lead to unconsciousness or death.

**WARNING**

Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death. Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open at all times.

- Do not depress the accelerator pedal when starting the engine.

**Starting procedure with the Start/Stop button**

**WARNING**

As long as the SmartKey is in your vehicle, the vehicle can be started. Therefore, never leave children unattended in the vehicle, as they could otherwise accidentally start the engine.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

- The Start/Stop button can be used to start the vehicle without inserting the SmartKey into the ignition lock. You merely need to carry the SmartKey on your person.
  - Depress the brake pedal and keep it depressed.
  - Press the Start/Stop button once (page 115). The engine starts.

**Starting procedure with the SmartKey**

If the Start/Stop button is inoperative, you can also start the vehicle using the SmartKey in the ignition lock.

- Turn the SmartKey to position 3 in the ignition lock (page 115) and release it as soon as the engine is running.
Pulling away

AMG SPEEDSHIFT DCT 7-speed sports transmission

⚠️ WARNING
It is dangerous to shift the transmission out of park position P or neutral position N if the engine is running at anything more than idling speed. If you do not depress the brake pedal with force, the vehicle may accelerate forwards or backwards. This could cause you to lose control of your vehicle and cause a collision. Only shift the transmission into the drive position when you are firmly depressing the brake pedal.

ℹ️ It is only possible to shift the transmission from position P to the desired position if the engine is running and you depress the brake pedal. Only then is the parking lock released. If the brake pedal is not depressed, the E-SELECT lever can still be moved but the parking lock remains engaged.

▶ Depress the brake pedal and keep it depressed.
▶ Use the E-SELECT lever to shift the transmission to position D or R.
▶ Release the brake pedal.
▶ Carefully depress the accelerator pedal. The electric parking brake is automatically released (> page 130).

ℹ️ The vehicle locks centrally once you have pulled away. The locking knobs in the doors drop down.

ℹ️ The vehicle locks centrally once you have pulled away. The locking knobs in the doors drop down. The automatic door lock can also be deactivated (Roadster only).

Hill start assist

Hill start assist helps you when pulling away on uphill gradients. It holds the vehicle for a short time after you have removed your foot from the brake pedal. This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll.

⚠️ WARNING
Never leave the vehicle when it is being held by hill start assist. After approximately one second, hill start assist will no longer brake your vehicle and it could roll away.

▶ Take your foot off the brake pedal.

ℹ️ Once you have taken your foot off the brake pedal, the vehicle is held for around one second.

▶ Pull away.

Hill start assist does not function if:

• you are pulling away on a level road or a downhill gradient.
• the transmission is in position N.
• the vehicle is secured with the electric parking brake.
• ESP® is malfunctioning.
### Problems with the engine

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ▶ Solutions</th>
</tr>
</thead>
</table>
| The engine does not start. The starter motor can be heard. | • There is a malfunction in the engine electronics.  
• There is a malfunction in the fuel supply.  
▶ Before attempting to start the engine again, turn the SmartKey in the ignition back to position 0 or press the Start/Stop button repeatedly until all indicator lamps in the instrument cluster go out.  
▶ Try to start the engine again (▶ page 116). Avoid excessively long and frequent attempts to start the engine as these will drain the battery.  
If the engine does not start after several attempts:  
▶ Consult a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center. |
| The engine does not start. You cannot hear the starter motor. | The on-board voltage is too low because the battery is too weak or discharged.  
▶ Jump-start the vehicle (▶ page 243).  
If the engine does not start despite attempts to jump-start it:  
▶ Consult a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center. |
| The engine is not running smoothly and is misfiring. | There is a malfunction in the engine electronics or a mechanical component of the engine management system.  
▶ Only depress the accelerator pedal slightly.  
▶ Have the cause rectified immediately at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.  
Otherwise, non-combusted fuel may get into the catalytic converter and damage it. |
### Problem

<table>
<thead>
<tr>
<th>The coolant temperature gauge shows a value above 248 °F (120 °C).</th>
</tr>
</thead>
</table>

### Possible causes/consequences and Solutions

- The coolant level is too low. The coolant is too hot and the engine is no longer being cooled sufficiently.
- **Stop as soon as possible and allow the engine and the coolant to cool down.**
- **Check the coolant level (page 220).** Observe the warning notes as you do so and add coolant if necessary.

- If the coolant level is correct, the engine radiator fan may be faulty. The coolant is too hot and the engine is no longer being cooled sufficiently.
- **At coolant temperatures under 248 °F (120 °C), drive on to the nearest qualified specialist workshop, e.g. to an authorized Mercedes-Benz Center.**
- **Avoid heavy loads on the engine as you do so, e.g. driving in mountainous terrain and stop-and-go traffic.**

### Important safety notes

**WARNING**

It is dangerous to shift the transmission out of park position P or neutral position N if the engine is running at anything more than idling speed. If you do not depress the brake pedal with force, the vehicle may accelerate forwards or backwards. This could cause you to lose control of your vehicle and cause a collision. Only shift the transmission into the drive position when you are firmly depressing the brake pedal.

### E-SELECT selector lever

**Overview of transmission positions**

- **P** Park position with parking lock
- **R** Reverse gear
- **N** Neutral
- **D** Drive

**If the engine speed is too high or if the vehicle is rolling, do not shift the transmission directly from D to R, from R to D or directly to P.**

Do not open the driver’s door while the vehicle is in motion. At low speeds in transmission position D or R, park position P is otherwise engaged automatically.
The transmission could be damaged.

The E-SELECT lever always returns to its original position.

The current transmission position $P$, $R$, $N$ or $D$ appears in the transmission position display in the multifunction display.

If you wish to select a transmission position or to disengage park position $P$, the engine must be running.

**Engaging park position $P$**

- When the vehicle is stationary, depress the brake pedal.
- Press the $P$ button in the center console.

If you depress the brake pedal and push the E-SELECT lever forwards or back to the first point of resistance, park position $P$ is disengaged. The transmission shifts to neutral $N$.

To shift directly from $P$ to $R$:

- Depress the brake pedal and push the E-SELECT lever forwards past the first point of resistance.

To shift directly from $P$ to $D$:

- Depress the brake pedal and push the E-SELECT lever back past the first point of resistance.

**Engaging park position $P$ automatically**

Park position is engaged automatically in the following circumstances:

- if you switch off the engine using the Start/Stop button and open the driver's or front-passenger door.
- if you remove the SmartKey from the ignition lock.
- if you open the door while traveling at low speed in transmission position $D$ or $R$.

**Shifting to neutral $N$**

- When the vehicle is stationary, depress the brake pedal.
- Push the E-SELECT lever forwards or back to the first point of resistance.

If you use the E-SELECT lever to shift the transmission to $N$ before switching off the engine, the transmission remains in $N$ for approximately 30 minutes. If you open the driver's or front-passenger door during this period, the transmission automatically shifts to $P$.

If the SmartKey is in the ignition lock and you use the E-SELECT lever to shift the transmission to $N$ before switching off the engine, the transmission remains in $N$. This still applies if you open the driver's or front-passenger door. Further information is available in the "Car wash" section (> page 223).

**Engaging reverse gear $R$**

- When the vehicle is stationary, depress the brake pedal.
- Push the E-SELECT lever forward past the first point of resistance.

**Shifting to transmission position $D$**

- When the vehicle is stationary, depress the brake pedal.
- Push the E-SELECT lever back past the first point of resistance.
Transmission position and drive program display

Display in transmission positions P, R and N

1. Transmission position: currently selected transmission position is displayed in inverted colors
2. Drive program (C/S/S+/M)

In addition to drive program 2 being shown in the multifunction display, the currently selected drive program is indicated in red on the drive program selector switch.

Display when in transmission position D

1. Transmission position
2. Gear
3. Drive program (C/S/S+)

If you have restricted the shift range, the transmission position and the selected shift range, e.g. D3, are shown at position 1.

Display when in transmission position D and drive program M

1. Gear
2. Drive program

Transmission positions

**P** Park position
Do not shift the transmission into position P unless the vehicle is stationary. The parking lock should not be used as a brake when parking. In addition to engaging the parking lock, you must always apply the electric parking brake to secure the vehicle.

If the vehicle electronics are malfunctioning, the transmission may be locked in position P.

Have the vehicle electronics checked at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, immediately.

**R** Reverse gear
Only shift the transmission to R when the vehicle is stationary.
Neutral
No power is transmitted from the engine to the drive wheels.
Releasing the brakes will allow you to move the vehicle freely, e.g. to push it.
Do not shift the transmission to **N** while driving. The transmission could otherwise be damaged.
If ESP® is deactivated or faulty: only shift the transmission to position **N** if the vehicle is in danger of skidding, e.g. on icy roads.

Drive
The transmission shifts into drive programs C/S/S+ automatically. All forward gears are available.

Changing gear
The transmission shifts into individual gears automatically. This is determined by:
• drive position **D**
• the selected drive program (C/S/S+)
• the position of the accelerator pedal
• the road speed
• a shift range restriction, if selected
The shift points primarily depend on:
• the position of the accelerator pedal:
  little throttle: early upshifts; high throttle: late upshifts
• the driving dynamics
  A dynamic driving style with high longitudinal and lateral acceleration delays the shift points to higher engine speeds.

Driving tips

Double-clutch function
When shifting down, the double-clutch function is active regardless of the currently selected drive program. The double-clutch function reduces the load change reaction on the drive axle. The sound generated by the double-clutch function depends on the drive program selected.

Kickdown
Kickdown is not available in manual drive program **M**.
Use kickdown for maximum acceleration.
➢ Depress the accelerator pedal beyond the pressure point.
Depending on the selected drive program, the transmission shifts to the lowest gear allowing ideal acceleration.

Working on the vehicle

**WARNING**
When working on the vehicle, engage the electric parking brake and shift the automatic transmission into park position **P**. Otherwise, the vehicle could roll away and cause an accident and/or serious injuries.

Drive program selector
With the drive program selector switch, you can choose from a range of different transmission configurations or select the RACE START drive mode.
<table>
<thead>
<tr>
<th>Drive program</th>
<th>Characteristic</th>
</tr>
</thead>
<tbody>
<tr>
<td>C Controlled Efficiency</td>
<td>Comfort-oriented, optimum-economy engine and transmission settings</td>
</tr>
<tr>
<td>S Sport</td>
<td>Sporty engine and transmission settings</td>
</tr>
<tr>
<td>S+ SportPlus</td>
<td>Extremely sporty engine and transmission settings</td>
</tr>
<tr>
<td>M Manual</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Driving mode</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>RS RACE START</td>
<td>Optimal vehicle acceleration from a standstill</td>
</tr>
</tbody>
</table>

Turn drive program selector switch ① until the desired drive program is shown in the multifunction display.

RS cannot be selected during normal driving. For further information on RACE START, see (> page 123).

**Steering wheel paddle shifters**

In transmission position D, you can use the steering wheel paddle shifters to restrict or derestrict the transmission shift range. One of the automatic drive programs, C, S or S+, must be selected in order to do so.

In manual drive program M, you need to change gear yourself using the steering wheel paddle shifters. At low engine speeds, the transmission shifts down automatically.

**RACE START**

RACE START facilitates optimum vehicle acceleration from a standstill if the road surface offers suitable grip.

⚠️ **WARNING**

RACE START is only available when SPORT handling mode is activated. SPORT handling mode will only be able to stabilize the vehicle to a limited degree if the vehicle starts to skid or a wheel starts to spin. The vehicle is therefore harder to control at the threshold range. You could lose control of the vehicle and cause an accident.

RACE START must only be used on closed off circuits. Always adapt your driving style to suit the prevailing road and weather conditions.

**Conditions for activation**

You can activate RACE START if:

- the doors are closed.
- the engine is running and the engine and transmission are at operating temperature (> page 160).
- SPORT handling mode is switched on (> page 58).
- the steering wheel is in the straight-ahead position.
• the vehicle is stationary and the brake pedal is depressed (left foot).
• the transmission is set to D.

Activating RACE START

► Depress the brake pedal with your left foot and keep it depressed.
► Turn the drive program selector switch clockwise (page 122) until the RS indicator on the switch lights up in red. The RACE START Confirm: Paddle UP Cance: Paddle DOWN message appears in the multifunction display.

If the conditions for activation are not fulfilled, RACE START is canceled. The RACE START Not Possible message appears in the multifunction display.

► To cancel: pull the left-hand steering wheel paddle shifter (DOWN) (page 123). The multifunction display shows the RACE START Cance: message.
► To confirm: pull the right-hand steering wheel paddle shifter (UP) (page 123). The RACE START Available message appears in the multifunction display.

If you do not depress the accelerator pedal within a few seconds, RACE START is canceled. The multifunction display shows the RACE START Cance: message.
► Fully depress the accelerator pedal. The engine speed is increased. The RACE START Release brake to start message appears in the multifunction display.

If you do not release the brake pedal within a few seconds, RACE START is canceled. The multifunction display shows the RACE START Cance: message.
► Take your foot off the brake pedal while keeping the accelerator pedal fully depressed.

The RACE START Active message appears in the multifunction display.

RACE START is deactivated once a speed of approximately 50 km/h is reached. Drive program S+ is activated. SPORT handling mode remains switched on.

RACE START is immediately deactivated if you take your foot off the accelerator pedal during RACE START or if the conditions for activation are no longer met. The RACE START Not Possible or RACE START Canceled message appears in the multifunction display.

After using it several times in short succession, RACE START will be unavailable until a certain distance has been driven.

Automatic drive program

Drive program C is characterized by the following:
• comfort-oriented engine and transmission settings
• optimal fuel consumption resulting from the transmission shifting up sooner
• the vehicle pulling away more gently in forward and reverse gears, unless the accelerator pedal is depressed fully
• increased sensitivity; this improves driving stability on slippery road surfaces, for example
• the transmission shifting up sooner; this results in the vehicle being driven at lower engine speeds and the wheels being less likely to spin

Drive programs S and S+ are characterized by the following:
• sporty engine and transmission settings
• the transmission shifting up later and shifting down dynamically
as a result of the later transmission upshifts, the fuel consumption may be higher.

If a period of dynamic driving is followed by an extended phase with a constant accelerator pedal position, the vehicle shifts up to a higher gear. This optimizes fuel consumption.

If a gentle driving style is adopted in automatic drive programs C/S/S+, the drive program settings are adjusted to optimize fuel consumption. Depending on the operating conditions, the transmission shifts to a higher gear.

### Shift ranges

#### Introduction

In certain driving situations, it is recommended to restrict the shift range. The set shift range appears in the instrument cluster’s multifunction display (> page 121). The transmission only shifts to the gear displayed in the instrument cluster.

When the maximum engine speed is reached, the transmission shifts up a gear in the automatic programs C/S/S+. Gear restriction is correspondingly increased by one gear.

<table>
<thead>
<tr>
<th>Driving situation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>3</strong></td>
<td>The braking effect of the engine can be utilized in this position.</td>
</tr>
</tbody>
</table>
| **2**            | To use the braking effect of the engine on downhill gradients and for driving:  
|                  | • on steep mountain roads  
|                  | • in mountainous terrain  
|                  | • in arduous conditions |
| **1**            | To use the braking effect of the engine on extremely steep downhill gradients and on long downhill stretches |

#### Derestricting the shift range/shifting up

- Pull the right steering wheel paddle (UP). The shift range is derestricted. If you are driving in manual drive program M, the transmission shifts up to the next gear.

#### Restricting the shift range/shifting down

**WARNING**

Do not change down for additional engine braking on a slippery road surface. This could cause the drive wheels to lose their grip and the vehicle could skid.

- Pull the left steering wheel paddle (DOWN). The transmission shifts one gear down and restricts the shift range to this gear.

- If the engine speed in manual drive program M is too high, it is not possible to shift down. The two red segments in the instrument cluster flash if you pull the left-hand steering wheel paddle shifter (DOWN) (> page 126).

#### Clearing the shift range restriction

- Pull the right-hand steering wheel paddle shifter (UP) until the number for the gear disappears from the multifunction display.

  or

- Use the E-SELECT lever to shift the transmission to position D. The transmission shifts from the current shift range directly to D.

#### Selecting the ideal shift range

- Pull the left-hand steering wheel paddle shifter repeatedly until the function is activated.

Depending on the selected drive program, the transmission shifts to a gear which allows ideal acceleration and deceleration. To do this, the transmission shifts down one or more gears.
**Manual drive program**

In manual drive program M, you need to change gear yourself using the steering wheel paddle shifters (page 123). The transmission only shifts down automatically at low engine speeds depending on the respective gear.

⚠️ In manual drive program M, the transmission does not shift up automatically even when the engine limiting speed for the current gear is reached. When the engine limiting speed is reached, the fuel supply is cut to prevent the engine from overrevving. Always make sure that the engine speed does not reach the red area of the tachometer and observe the upshift indicator. There is otherwise a risk of engine damage.

- **To activate the manual drive program:** turn the drive program selector switch until M appears in the instrument cluster’s multifunction display. M lights up in red on the drive program selector switch.
- **To deactivate the manual drive program:** turn the drive program selector switch and select another drive program.

**Upshift indicator**

The upshift indicator is a four-stage display designed to assist you in sporty driving.

White segments 1 and yellow segment 2 light up in succession from left to right.

When red segments 3 light up and the "up" message appears in the multifunction display, the ideal shift point has been reached:

- Shift up using the right-hand steering wheel paddle shifter (UP) as quickly as possible. The vehicle shifts up to the next gear.

⚠️ If you continue to increase the engine speed without shifting up in time, the fuel supply is shut off to protect the engine. This results in abruptly reduced acceleration.

**Display for downshift override**

If the engine speed is too high, you cannot shift down with the left steering wheel paddle shifter. If you then pull the left steering wheel paddle shifter, both red segments 3 light up briefly.

**AMG button (SETUP)**

With the AMG button, you can call up and store a default drive program setting and the default suspension tuning.
> **To store**: press and hold AMG button ① until you hear a tone.
> **To call up**: press AMG button ①. The stored drive program is selected.
> **To display**: briefly press AMG button ①. The multifunction display shows the SETUP in the AMG menu (page 160).

---

**Refueling**

**Important safety notes**

⚠️ **WARNING**

Gasoline is highly flammable and poisonous. It burns violently and can cause serious personal injury.

- Never allow sparks, flames or smoking materials near gasoline.
- Turn off the engine before refueling. Whenever you are around gasoline, avoid inhaling fumes and any skin or clothing contact.
- Direct skin contact with fuels and the inhalation of fuel vapors are damaging to your health.

⚠️ **WARNING**

Overfilling of the fuel tank may create pressure in the system which could cause a gas discharge. This could cause the gasoline to spray back out when removing the fuel pump nozzle, which could cause personal injury.

⚠️ Do not use diesel to refuel vehicles with a gasoline engine. Even small amounts of diesel will cause damage to the injection system. Damage caused by adding diesel is not covered by the Limited Warranty.

⚠️ Do not switch on the ignition if you accidentally refuel with the wrong fuel. Otherwise, the fuel will enter the fuel lines. Notify a qualified specialist workshop and have the fuel tank and fuel lines drained completely.

### Gasoline (EN 228)

**Fuel grade**

⚠️ You should only refuel with unleaded premium-grade gasoline as this avoids damaging the catalytic converter.

If engine running problems are apparent, have the cause checked immediately and repaired. Excess unburned fuel can otherwise enter the catalytic converter, leading to overheating and possibly causing a fire.

ℹ️ Only refuel with premium-grade unleaded gasoline with a specified minimum octane number of 91 (average value of 96 RON/86 MON).

You will usually find information about the fuel grade on the pump. If you cannot find the label on the pump, ask the staff for assistance.

Further information can be found:
- in the "Technical data" section (page 280)
- at any Mercedes-Benz Service Center or
- online at [http://www.mbusa.com](http://www.mbusa.com)

### Refueling

#### Fuel filler flap

When you open or close the vehicle with the SmartKey, the fuel filler flap is automatically unlocked or locked.

The fuel filler flap is located to the rear on the right. The position of the fuel filler cap is displayed in the instrument cluster [-fill]. The arrow next to the filling pump indicates the side of the vehicle.

---

8 USA only.
Refueling

Opening

1. Switch off the engine.

2. When the engine is running and the fuel filler flap is open, the engine diagnostics warning lamp [ ] may light up.

   Further information can be found in the "Warning and indicator lamps in the instrument cluster" chapter (page 194).

3. Open the driver's door. This switches the ignition to position 0, which corresponds to having removed the SmartKey. The driver’s door can be closed again.

4. Press the fuel filler flap in the direction of arrow 1.

   The fuel filler flap opens slightly.

5. Open the fuel filler flap.

6. Turn the fuel filler cap counter-clockwise and remove it.

7. Insert the fuel filler cap into the holder bracket on the inside of filler flap 4.

8. Completely insert the fuel pump nozzle into the filler neck and refuel.

9. Only fill the tank until the pump nozzle switches off.

! Overfilling the fuel tank could damage the fuel system.

Closing

- Replace the fuel filler cap and turn it clockwise. The fuel filler cap audibly engages.

- Close the fuel filler flap.
### Problems with fuel and the fuel tank

### Parking

#### Important safety notes

**⚠️ WARNING**
Do not park this vehicle in areas where combustible materials can come into contact with the hot exhaust system. Combustible materials, such as grass, hay or leaves could be ignited by the hot exhaust system and cause a vehicle fire. Do not park the vehicle on dry grassland or harvested grain fields. Unintended vehicle movement can cause serious personal injury or damage to the vehicle or the vehicle drivetrain. To reduce such risks, always do the following before turning off the engine and leaving the vehicle:
- keep your right foot on the brake pedal.  
- engage the electric parking brake.  
- shift the transmission into park position P.  
- slowly release the brake pedal.  
- when parked on an incline, always turn the front wheels towards the road curb.

- turn the SmartKey in the ignition lock to position 0 and remove the SmartKey from the ignition lock, or press the Start/Stop button.  
- take the SmartKey with you and lock the vehicle when leaving.

⚠️ Do not open the driver’s door while the vehicle is in motion. At low speeds in transmission position D or R, park position P is otherwise engaged automatically. This can damage the transmission.

If you wish to maneuver the vehicle with the door open, proceed as follows:
- Bring the vehicle to a standstill.  
- Use the E-SELECT lever to shift the transmission to position N or press the P button on the center console.  
- Open the driver’s door.  
You can maneuver the vehicle with the driver’s door open.
Switching off the engine

Important safety notes

**WARNING**
If the engine is not running, there is no power assistance for the steering and brakes. Steering and braking then requires significantly greater effort.
As a result, you could cause an accident and injure yourself and others.
Therefore, do not switch off the engine while you are driving.

- Do not open the driver’s door while the vehicle is in motion. At low speeds in transmission position D or R, park position P is otherwise engaged automatically. This can damage the transmission.
- Observe the display messages in the instrument cluster.

**AMG SPEEDSHIFT DCT 7-gear sport transmission**

- Use the button on the center console to shift the transmission to P.

**Using the Start/Stop button**

- Press the Start/Stop button (page 115).
The engine stops and all the indicator lamps in the instrument cluster go out.
- Apply the electric parking brake.

- If you switch the engine off with the transmission in position R or D, the transmission automatically shifts to N.
If you move the E-SELECT lever to N before switching off the engine, the transmission remains in N for approximately 30 minutes.
If you open the driver’s or front-passenger door during this period, the transmission automatically shifts to P.

- The engine can be turned off while the vehicle is in motion by pressing and holding the Start/Stop button for three seconds.

**Using the SmartKey**

- Do not remove the SmartKey while the vehicle is in motion. At low speeds, park position P will otherwise be engaged automatically.
Do not open the driver’s door while the vehicle is in motion. At low speeds, transmission position P is engaged automatically.
This can damage the transmission.
- Turn the SmartKey to position 0 in the ignition lock and remove it.
The parking lock is activated.
- Apply the electric parking brake.

- If you use the E-SELECT lever to shift the transmission to N before switching off the engine, the transmission remains in N for approximately 30 minutes. If you open the driver’s or front-passenger door during this period, the transmission automatically shifts to P.
If the SmartKey is in the ignition lock and you use the E-SELECT lever to shift the transmission to N before switching off the engine, the transmission remains in N. This still applies if you open the driver’s or front-passenger door. Further information is available in the "Car wash" section (page 223).

**Electric parking brake**

**General information**

**WARNING**
When you leave the vehicle, you should always remove the SmartKey from the ignition and take it with you, remembering to lock the vehicle. Do not leave children unattended in the vehicle and do not give them access to the unlocked vehicle. The children could release the parking brake and/or shift the transmission out of park position P. In both cases this could cause an accident and/or serious injury.
Applying/releasing manually

To apply: press handle 1.
The red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster lights up.

The electric parking brake can also be applied when the SmartKey is in position 0.

Pull handle 1.
The red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster goes out.

The electric parking brake can only be released when the ignition is switched on using the Start/Stop button.

Releasing the electric parking brake automatically

The electric parking brake is released automatically when the following conditions are simultaneously fulfilled:

• the engine is running.
• the transmission is in position D or R.
• the hood is closed.
• your seat belt is fastened.
• you depress the accelerator pedal.

If the transmission is in position R, the trunk lid must be closed.

For the parking brake to be released automatically if your seat belt is not fastened, the following conditions must be fulfilled:

• the driver's door is closed.
• you have shifted out of P or you have previously driven faster than 2 mph (3 km/h).

Emergency braking

The vehicle can also be braked during an emergency by using the electric parking brake.

While driving, push handle 1 of the electric parking brake (> page 130).

The vehicle is braked as long as you keep the handle of the electric parking brake pressed. The longer the electric parking brake handle is depressed, the greater the braking force.

During braking:

• a warning tone sounds.
• the Release parking brake message appears.
• the red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster lights up.

When the vehicle has been braked to a standstill, the electric parking brake is engaged.

Parking the vehicle for a long period

If you leave the vehicle parked for longer than four weeks, the battery may be damaged by exhaustive discharging.

Connect the battery to the charge maintenance socket of a trickle charger.

You can obtain information about trickle chargers from a qualified specialist workshop.

If you leave the vehicle parked for longer than six weeks, the vehicle may suffer damage as a result of lack of use.
Driving tips

Visit a qualified specialist workshop and seek advice.

Important safety notes

**WARNING**

Please do not forget that your primary responsibility is to drive the vehicle. A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call.

If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when road, weather and traffic conditions permit. Some jurisdictions prohibit the driver from using a mobile telephone while driving a vehicle.

Only operate the COMAND (<sup>9</sup> Cockpit Management and Data System) if road, weather and traffic conditions permit. Otherwise, you may not be able to observe traffic conditions and could endanger yourself and others.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

**Drive sensibly – save fuel**

Observe the following tips to save fuel:

- The tires should always be inflated to the recommended tire pressure.
- Remove unnecessary loads.
- Warm up the engine at low engine speeds.
- Avoid frequent acceleration or braking.
- Have all maintenance work carried out according to the service intervals listed in the Maintenance Booklet or the service interval display.

Fuel consumption also increases when driving in cold weather, in stop-and-go traffic and in mountainous terrain.

**Drinking and driving**

**WARNING**

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.

The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

**Pedals**

**WARNING**

Make sure absolutely no objects are obstructing the pedals’ range of movement. Keep the driver’s footwell clear of all obstacles. If there are any floor mats or carpets in the footwell, make sure that the pedals still have sufficient clearance.

During sudden driving or braking maneuvers, the objects could get caught between the pedals. You could then no longer brake or accelerate. This could lead to accidents and injury.

**Rolling with the engine switched off**

**WARNING**

There is no power assistance for the steering and the brake when the engine is not running. Steering and braking requires significantly more effort and you could lose control of the vehicle and cause an accident as a result.
Do not turn off the engine while the vehicle is in motion.

Exhaust check

**WARNING**
Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated.

If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately.

If you must drive under these conditions, drive only with at least one window fully open at all times.

Certain engine systems are designed to keep the level of poisonous components in exhaust fumes within legal limits.

These systems only work at peak efficiency if they are serviced exactly in accordance with the manufacturer’s specifications. For this reason, all work on the engine may only be carried out by qualified and authorized Mercedes-Benz technicians.

The engine settings must not be changed under any circumstances. Furthermore, all specific service work must be carried out at regular intervals and in accordance with the Mercedes-Benz service requirements. Details can be found in the Maintenance Booklet.

Brakes

**Important safety notes**

**WARNING**
On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

**WARNING**
Make sure that you do not endanger other road users when you apply the brakes.

**Downhill gradients**

On long and steep gradients, you must reduce the load on the brakes by shifting early to a lower gear. This allows you to take advantage of the engine braking effect and helps avoid overheating and excessive wear of the brakes.

When you take advantage of the engine braking effect, a drive wheel may not turn for some time, e.g. on a slippery road surface. This could cause damage to the drive train. This type of damage is not covered by the Mercedes-Benz warranty.

**Heavy and light loads**

**WARNING**
Depressing the brake pedal constantly results in excessive and premature wear to the brake pads.

It may also cause the brakes to overheat, seriously impairing their effectiveness. It may then not be possible to stop the vehicle in sufficient time to avoid an accident.

If the brakes have been subjected to a heavy load, do not stop the vehicle immediately, but drive on for a short while. This allows the airflow to cool the brakes more quickly.

**Wet roads**

**WARNING**
After driving in heavy rain for some time without applying the brakes or through water deep enough to wet brake components, the first braking action may be somewhat reduced. You have to depress the brake pedal more firmly. Maintain a safe distance from vehicles in front.

After driving on a wet road or having the vehicle washed, brake firmly while paying
attention to the traffic conditions. This will warm up the brake discs, thereby drying them more quickly and protecting them against corrosion.

**Limited braking performance on salt-treated roads**

⚠️ **WARNING**
The layer of salt on the brake discs and the brake pads/linings may cause a delay in the braking effect, resulting in a significantly longer braking distance, which could lead to an accident.

To avoid this danger, you should:

- occasionally brake carefully, without putting other road users at risk, when you are driving on salted roads. This helps to remove any salt that may have started to build up on the brake discs and the brake pads/linings.
- maintain a greater distance to the vehicle ahead and drive with particular care.
- carefully apply the brakes at the end of a trip and immediately after commencing a new trip, so that salt residues are removed from the brake discs.

**Servicing the brakes**

⚠️ **WARNING**
If brake pads or brake fluid other than those recommended are used, the braking properties of the vehicle can be degraded to an extent that safe braking is substantially impaired. This could result in an accident.

⚠️ **WARNING**
Make sure that you do not endanger other road users when you apply the brakes.

⚠️ If the red brake warning lamp lights up in the instrument cluster and you hear a warning tone while the engine is running, the brake fluid level may be too low. Observe additional warning messages in the multifunction display.

The brake fluid level may be too low due to brake pad wear or leaking brake lines. Have the brake system checked immediately. This work should be carried out at an authorized Mercedes-Benz Center.

⚠️ As the ESP® system operates automatically, the engine and the ignition must be switched off (the SmartKey must be in position 0 or 1 in the ignition lock or the Start/Stop button must be in position 0 or 1) if:

- the electric parking brake is tested using a brake dynamometer.
- the vehicle is towed with one axle raised.

Braking triggered automatically by ESP® may seriously damage the brake system.

All checks and maintenance work on the brake system must be carried out at a qualified specialist workshop. Have this work carried out at an authorized Mercedes-Benz Center.

Have the brake pads replaced and the brake fluid renewed at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

If your brake system is subject only to moderate loads, you should test the functionality of your brakes at regular intervals by pressing firmly on the brake pedal at high speeds. This improves the grip of the brake pads.

You can find a description of Brake Assist (BAS) on (page 55).

**AMG high-performance composite brake system**

⚠️ **WARNING**
New vehicle brake pads and discs, and replacement brake pads and discs may take several hundred miles of driving until they provide optimum braking efficiency. Until that time, you may need to use increased brake pedal pressure while braking. Please be aware
of this and adjust your driving and braking accordingly during this break-in period. Excessive high-demand braking will cause correspondingly high brake wear. Please be attentive to the brake warning lamp in the instrument cluster and brake condition messages in the multifunction display. Especially for high performance driving, it is important to maintain and have the brake system checked regularly.

The AMG high-performance compound brake system and the AMG ceramic high-performance compound brake system are designed for high loads. This may lead to noise when braking. This will depend on:
- speed
- braking force
- environmental conditions, such as temperature and humidity

The wear of individual components of the brake system, such as the brake pads/linings or brake discs, depends on the individual driving style and operating conditions. For this reason, it is impossible to state a mileage that will be valid under all circumstances. An aggressive driving style will lead to high wear. You can obtain further information about this from your authorized Mercedes-Benz Center.

Driving on wet roads

Hydroplaning
If water has accumulated to a certain depth on the road surface, there is a danger of hydroplaning occurring, even if:
- you drive at low speeds.
- the tires have adequate tread depth.

For this reason, in the event of heavy rain or in conditions in which hydroplaning can occur, you must drive in the following manner:
- lower your speed.
- avoid ruts.
- brake carefully.

Driving on flooded roads

Do not drive through flooded areas. Check the depth of any water before driving through it. Drive slowly through standing water. Otherwise, water may enter the vehicle interior or the engine compartment. This can damage the electronic components in the engine or the automatic transmission. Water can also be drawn in by the engine’s air suction nozzles and this can cause engine damage.

Winter driving

Please bear the following in mind

WARNING
If the vehicle becomes trapped in snow, ensure that snow is kept away from the exhaust pipe and from around the vehicle as long as the engine is running. Otherwise, poisonous carbon monoxide (CO) may enter the vehicle, resulting in loss of consciousness and even death.

To assure sufficient fresh air ventilation, open a window slightly on the side of the vehicle not facing the wind.

At the onset of winter, have your vehicle winterproofed at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center. Observe the notes in the "Winter operation" section (page 252).
Summer tires

Observe the notes in the "Winter operation" section (page 252).

Slippery road surfaces

⚠️ WARNING

The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose. Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges.

⚠️ WARNING

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle's ABS will not prevent this type of loss of control.

Drive particularly carefully on slippery road surfaces. Avoid sudden acceleration, steering and braking maneuvers. Do not use cruise control.

If the vehicle threatens to skid or cannot be stopped when moving at low speed:

➤ Shift the transmission to position N.

ℹ️ For more information on driving with snow chains, see (page 252).

⚠️ WARNING

Make sure that you do not endanger other road users when you apply the brakes.

Driving systems

Cruise control

Important safety notes

Cruise control maintains a constant road speed for you. It brakes automatically in order to avoid exceeding the set speed. On long and steep downhill gradients, especially if the vehicle is laden, you must select shift range 1, 2 or 3 in good time. By doing so, you will make use of the braking effect of the engine, which relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

Use cruise control only if road and traffic conditions make it appropriate to maintain a steady speed for a prolonged period. You can set any road speed above 20 mph (30 km/h).

⚠️ WARNING

The cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must always remain responsible for the vehicle's speed and for safe brake operation.

Only use the cruise control if the road, traffic, and weather conditions make it advisable to travel at a constant speed.

- The use of the cruise control can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a constant speed.
- The use of the cruise control can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control.
- Deactivate the cruise control when driving in fog.

The "Resume" function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.

⚠️ WARNING

The cruise control brakes automatically so that the set speed is not exceeded.
Cruise control lever

1. To store the current speed or a higher speed
2. To store the current speed or a lower speed
3. To deactivate cruise control
4. To store the current speed or to call up the last stored speed

When you activate cruise control, the stored speed is shown in the lower section of the multifunction display.

Storing and maintaining the current speed

You can store the current speed if you are driving faster than 20 mph (30 km/h).

» Accelerate the vehicle to the desired speed.
» Briefly press the cruise control lever up 1 or down 2 to the pressure point.
» Remove your foot from the accelerator pedal.

Cruise control is activated. The vehicle automatically maintains the stored speed.

Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out. Cruise control maintains the stored speed on downhill gradients by automatically applying the brakes.

Storing the current speed or calling up the last stored speed

**WARNING**
The set speed stored in memory should only be set again if prevailing road conditions and legal speed limits permit. Possible acceleration or deceleration differences arising from returning to the preset speed could cause an accident and/or serious injury to you and others.

» Briefly pull the cruise control lever towards you 4.
» Remove your foot from the accelerator pedal.

The first time cruise control is activated, it stores the current speed or regulates the speed of the vehicle to the previously stored speed.

Setting a speed

**WARNING**
Keep in mind that it may take a brief moment until the vehicle has made the necessary adjustments.

Increase or decrease the set vehicle speed to a value that the prevailing road conditions and legal speed limits permit. Otherwise, sudden and unexpected acceleration or deceleration of the vehicle could cause an accident and/or serious injury to you and others.

» Press the cruise control lever to the pressure point, up 1 for a higher speed or down 2 for a lower speed.
» Keep the cruise control lever pressed until the desired speed is reached.
» Release the cruise control lever.

The new speed is stored.

Cruise control is not deactivated if you depress the accelerator pedal. For example, if you accelerate briefly to overtake, cruise control adjusts the
Making adjustments in 1 mph increments

Briefly press the cruise control lever to the pressure point, up for a higher speed or down for a lower speed. The last speed stored is increased or reduced.

Making adjustments in 10 mph increments

Briefly press the cruise control lever beyond the pressure point, up for a higher speed or down for a lower speed. The last speed stored is increased or reduced.

Deactivating cruise control

There are several ways to deactivate cruise control:

- Briefly press the cruise control lever forwards.

or

- Brake.

Cruise control is automatically deactivated if:

- you press the electric parking brake handle.
- you are driving below 20 mph (30 km/h).
- ESP® intervenes or you deactivate ESP®.
- you shift the transmission to N while the vehicle is in motion.

If cruise control is deactivated, you will hear a warning tone. The Cruise control Off message is displayed in the multifunction display for approximately five seconds.

i The last speed stored is cleared when you switch off the engine.

AMG adaptive sport suspension system

General notes

The electronically controlled damping system works continuously. This improves driving safety and ride comfort. The damping is tuned individually to each wheel and depends on:

- your driving style, e.g. sporty
- the road surface condition, e.g. bumps
- your individual selection of Sport, Sport + or Comfort

If you select Comfort or Sport + mode and restart the engine, the suspension setting reverts to Sport mode.

Sport mode

The firmer suspension tuning in Sport mode ensures even better contact with the road. Select this mode when employing a sporty driving style, e.g. on winding country roads.

Press button once. Indicator lamp lights up. You have selected Sport mode.

The AMG Suspension System SPORT message appears in the multifunction display.

Sport + mode

The very firm setting of the suspension tuning in Sport + mode ensures the best possible
contact with the road. Select this mode only when driving on race circuits.

If indicator lamps 3 and 4 are off:

- Press button 1 twice.
  Indicator lamps 3 and 4 light up. You have selected Sport + mode.
  The AMG Suspension System SPORT + message appears in the multifunction display.

If indicator lamp 4 lights up:

- Press button 1 once.
  The second indicator lamp 3 lights up. You have selected Sport + mode.
  The AMG Suspension System SPORT + message appears in the multifunction display.

**Comfort mode**

In comfort mode, the driving characteristics of your vehicle are more comfortable. Select this mode if you favor a more comfortable driving style, but also when driving fast on straight roads, e.g. freeways.

- Press button 1 repeatedly until indicator lamps 3 and 4 go out.
  You have selected Comfort mode.
  The AMG Suspension System COMFORT message appears in the multifunction display.

**Storing and calling up settings**

Once the suspension tuning and drive program have been selected, you can store and call up your settings using AMG button 2.

- **To store:** press AMG button 2 until you hear a tone.
- **To call up:** press AMG button 2.
  The stored suspension tuning and drive program are selected.

- **To display:** briefly press AMG button 2.
  Your selection appears in the multifunction display.

**PARKTRONIC**

**Important safety notes**

**WARNING**

The PARKTRONIC is a supplemental system. It is not intended to, nor does it replace, the need for extreme care. The responsibility during parking and other critical maneuvers always remains with the driver.

**WARNING**

Make sure no persons or animals are in or near the area in which you are parking/maneuvering. Otherwise, they could be injured.

PARKTRONIC is an electronic parking aid with ultrasonic sensors. It indicates visually and audibly the distance between your vehicle and an object.

PARKTRONIC is activated automatically when you:
- switch on the ignition
- release the electric parking brake

PARKTRONIC is deactivated at speeds above 11 mph (18 km/h). It is reactivated at lower speeds.

PARKTRONIC monitors the area around your vehicle using four sensors in the front bumper and four sensors in the rear bumper.
Range of the sensors

General notes
The sensors must be free of dirt, ice and slush. Otherwise, they may not function correctly. Clean the sensors regularly, taking care not to scratch or damage them (> page 228).

![Sensors in the front bumper, left-hand side (example)](image)

Front sensors
- Center: approximately 40in (approximately 100cm)
- Corners: approximately 24in (approximately 60cm)

Rear sensors
- Center: approximately 48in (approximately 120cm)
- Corners: approximately 32in (approximately 80cm)

When parking, pay particular attention to objects above or below the sensors, such as flower pots or trailer drawbars. PARKTRONIC does not detect such objects when they are in the immediate vicinity of the vehicle. You could damage the vehicle or the objects.

The sensors may not detect snow and other objects that absorb ultrasonic waves. Ultrasonic sources such as an automatic car wash, the compressed-air brakes on a truck or a pneumatic drill could cause PARKTRONIC to malfunction.

PARKTRONIC may not function correctly on uneven terrain.

Minimum distance
- Center: approximately 12in (approximately 30cm)
- Corners: approximately 12in (approximately 30cm)

If there is an obstacle within this range, the relevant warning displays light up and a warning tone sounds. If the distance falls below the minimum, the distance may no longer be shown.

Example: side view (Coupe)

Example: top view (Coupe)
**Warning displays**

The warning displays show the distance between the sensors and the obstacle. The warning display for the front area is located on the dashboard above the center air vents. The warning display for the rear area is in the rear compartment on the parcel shelf.

**Warning display for the front area**
- 1 Left-hand side of the vehicle
- 2 Right-hand side of the vehicle
- 3 Segments showing operational readiness

The warning display for each side of the vehicle is divided into five yellow and two red segments. PARKTRONIC is operational if yellow segments showing operational readiness light up.

The selector lever position determines which warning display is active while the engine is running:

<table>
<thead>
<tr>
<th>Transmission position</th>
<th>Warning display</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>R or N</td>
<td>Rear and front areas activated</td>
</tr>
<tr>
<td>P</td>
<td>No areas activated</td>
</tr>
</tbody>
</table>

One or more segments light up as the vehicle approaches an obstacle, depending on the vehicle’s distance from the obstacle.

From the:
- sixth segment onwards, you will hear an intermittent warning tone for approximately two seconds.
- seventh segment onwards, you will hear a warning tone for approximately two seconds. This indicates that you have now reached the minimum distance.

**Deactivating/activating PARKTRONIC**

- 1 Indicator lamp
- 2 To deactivate/activate PARKTRONIC

If indicator lamp lights up, PARKTRONIC is deactivated.

PARKTRONIC is automatically activated when you switch on the ignition and release the parking brake.
Problems with PARKTRONIC

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ► Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only the red segments in the PARKTRONIC warning displays are lit. You also hear a warning tone for approximately two seconds. PARKTRONIC is deactivated after approximately 20 seconds, and the indicator lamp in the PARKTRONIC button lights up.</td>
<td>PARKTRONIC has malfunctioned and has switched off. ► If problems persist, have PARKTRONIC checked at a qualified specialist workshop.</td>
</tr>
<tr>
<td>Only the red segments in the PARKTRONIC warning displays are lit. PARKTRONIC is deactivated after approximately 20 seconds.</td>
<td>The PARKTRONIC sensors are dirty or there is interference. ► Clean the PARKTRONIC sensors (► page 228). ► Switch the ignition back on. The problem may be caused by an external source of radio or ultrasound waves. ► See if PARKTRONIC functions in a different location.</td>
</tr>
</tbody>
</table>

Rear view camera

Important safety notes

The rear view camera is an optical parking aid. It shows the area behind your vehicle in the COMAND display.

⚠ WARNING

Make sure no persons or animals are in or near the area in which you are parking/maneuvering. Otherwise, they could be injured.

View through the camera

The area behind the vehicle is displayed as a mirror image, as in the rear-view mirror.
The rear view camera does not relieve you of the responsibility to take care. Take all necessary care and pay particular attention to the traffic conditions. The rear view camera may not show objects that:

- are very near to the rear bumper
- are underneath the rear bumper
You are responsible for safety at all times and must continue to pay attention to your immediate surroundings when parking and maneuvering. This includes the area behind, in front of, and next to the vehicle. You could otherwise put yourself and/or others in danger.

**WARNING**

The rear view camera does not work or does not work properly if:

- it is raining heavily or if it is snowing or foggy.
- it is night or if you are parking/maneuvering your vehicle in a very dark area.
- very bright white light is shining on the camera.
- the immediate vicinity is illuminated with fluorescent light (the display of the COMAND system can flicker).
- the temperature changes abruptly, for example if you drive out of the cold into a heated garage (condensation on the lens).
- the camera lens is dirty or covered.
- the rear of your vehicle is damaged.
In this case, have the position and the setting of the camera checked at a specialist workshop. Mercedes-Benz recommends that you consult a Mercedes-Benz Center for this purpose.

Do not use the rear view camera in these situations. You could otherwise injure yourself and other people and/or cause damage - including damage to your vehicle - while parking/maneuvering.

**Activating the rear view camera**

- Ensure that key position 2 has been selected with the Start/Stop button.
- Make sure that the "rear view camera" function is selected in COMAND (see the separate operating instructions for COMAND).
- Engage reverse gear.
  The COMAND display shows the area behind the vehicle.

You can also switch off the display of the area behind the vehicle in the COMAND display.

**Blind Spot Assist**

**Important safety notes**

Blind Spot Assist uses a radar sensor system to monitor the areas on both sides of your vehicle. It assists you from a speed of approximately 20 mph (30 km/h). A warning display in the exterior mirrors draws your attention to vehicles detected in the monitored area. If you then switch on the corresponding turn signal to change lane, you will also receive an optical and audible collision warning. For this purpose, Blind Spot Assist uses sensors in the rear bumper.

**WARNING**

Blind Spot Assist is only an aid designed to assist driving. It may fail to detect some vehicles and is no substitute for attentive driving.

Blind Spot Assist cannot detect road and traffic conditions. It may fail to detect narrow vehicles, such as motorcycles or bicycles, or may only detect them too late.

Monitoring may be affected by dirty sensors, strong spray or poor visibility caused by snow,
rain or mist, for example. In this case, vehicles are detected late or not at all.
Always pay attention to traffic conditions and your surroundings. Otherwise, you may fail to recognize dangers in time, cause an accident and injure yourself and others.

* USA only:
This device has been approved by the FCC as a “Vehicular Radar System”. The radar sensor is intended for use in an automotive radar system only. Removal, tampering, or altering of the device will void any warranties, and is not permitted by the FCC. Do not tamper with, alter, or use in any non-approved way.
Any unauthorized modification to this device could void the user’s authority to operate the equipment.

**Monitoring range of the sensors**
Blind Spot Assist monitors the area illustrated up to 10 ft (3 m) behind and directly next to your vehicle.

* WARNING
Blind Spot Assist monitors certain areas in the immediate vicinity of your vehicle. Vehicles that approach and drive past at high speeds are not detected. There is no display and no warning.
If the lanes are very wide, it may not be possible to monitor the complete width of the neighboring lane. For this reason, vehicles in the next lane may not be detected, especially if they are driving in a staggered formation. This may be the case if vehicles are driving at that edge of their lane which is furthest away from your vehicle.
Always pay attention to traffic conditions and your surroundings. Otherwise, you may fail to recognize dangers in time, cause an accident and injure yourself and others.

If the lanes are narrow, vehicles driving in the lane beyond the lane next to your vehicle may be indicated, especially if the vehicles are not driving in the middle of their lane. This may be the case if the vehicles are driving on the inner side of their lane.
Due to the nature of the system:
- warnings may be issued in error when driving close to crash barriers or similar solid lane borders.
- warnings may be interrupted when driving alongside particularly long vehicles, for example trucks, for a prolonged time.
The two sensors for Blind Spot Assist are integrated into the sides of the rear bumper. Make sure that the bumper is free from dirt, ice or slush around the sensors. The radar sensors must not be covered, e.g. by overhanging loads. Following a severe impact or in the event of damage to the bumpers, have the function of the radar sensors checked at a qualified specialist workshop. Blind Spot Assist may otherwise not work properly.
**Indicator and warning display**

Yellow indicator lamp/red warning lamp

When Blind Spot Assist is activated, indicator lamp ① lights up yellow in the exterior mirrors up to a vehicle speed of 20 mph (30 km/h). From a speed of approximately 20 mph (30 km/h) the indicator lamp goes out and Blind Spot Assist is operational.

If a vehicle is detected in the monitoring range of Blind Spot Assist from a speed of approximately 20 mph (30 km/h), warning lamp ① lights up red on the corresponding side. This warning is always given when a vehicle enters the blind spot monitoring range from behind or from the side. When you overtake a vehicle, the warning is only given if difference in speed is less than 7 mph (12 km/h).

The yellow indicator lamp goes out if reverse gear is engaged. In this event, Blind Spot Assist is no longer active.

The brightness of the indicator/warning lamps is adjusted automatically according to the ambient light.

**WARNING**

Blind Spot Assist is not active at speeds under approximately 20 mph (30 km/h). The indicator lamps in the exterior mirrors are yellow. Vehicles in the monitoring range are then not indicated.

Always pay attention to traffic conditions and your surroundings. Otherwise, you may fail to recognize dangers in time, cause an accident and injure yourself and others.

**Collision warning**

If a vehicle is detected in the monitoring range of Blind Spot Assist and you switch on the corresponding turn signal, a double warning tone sounds. Red warning lamp ① flashes. If the turn signal remains on, detected vehicles are indicated by the flashing of red warning lamp ①. There are no further warning tones.

**Switching on Blind Spot Assist**

- Make sure that Blind Spot Assist (> page 156) is activated in the on-board computer.
- Ensure that key position 2 has been selected with the Start/Stop button.

Warning lamps ① light up red in the exterior mirrors for approximately 1.5 seconds and then turn yellow.

Useful information

This Operator’s Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator’s Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (page 21).

Important safety notes

You will find an illustration of the instrument cluster in the “At a glance” section (page 27).

**WARNING**

A driver’s attention to the road and traffic conditions must always be his/her primary focus when driving.

For your safety and the safety of others, selecting features through the multifunction steering wheel should only be done by the driver when traffic and road conditions permit it to be done safely. Bear in mind that at a speed of just 30 mph (approximately 50 km/h ), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

**WARNING**

No messages will be displayed if either the instrument cluster or the multifunction display is inoperative.

As a result, you will not be able to see information about your driving conditions, such as:

- speed
- outside temperature
- warning/indicator lamps

- malfunction/warning messages
- failure of any systems

Driving characteristics may be impaired. If you must continue to drive, do so with added caution. Contact an authorized Mercedes-Benz Center as soon as possible.

**WARNING**

Malfunction and warning messages are only indicated for certain systems and are intentionally not very detailed. The malfunction and warning messages are simply a reminder with respect to the operation of certain systems. They do not replace the owner’s and/or driver’s responsibility to maintain the vehicle’s operating safety. Have all required maintenance and safety checks performed on the vehicle. Bring the vehicle to an authorized Mercedes-Benz Center to address the malfunction and warning messages.

Displays and operation

**Engine oil temperature display**

The engine oil temperature gauge is in the instrument cluster on the right-hand side. Under normal operating conditions, the temperature may rise to 140 °C. The transmission fluid temperature and the coolant temperature are displayed in the AMG menu (page 160).

**Tachometer**

The red band in the tachometer indicates the engine’s overrevving range.

Do not drive in the overrevving range, as this could damage the engine.

The fuel supply is interrupted to protect the engine when the red band is reached.
Outside temperature display

**WARNING**
The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose. Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges.

The outside temperature display is in the multifunction display (→ page 149). Changes in the outside temperature are displayed after a short delay.

Operating the on-board computer

The on-board computer is activated as soon as you turn the SmartKey to position 1 in the ignition lock. You can control the multifunction display and the settings in the on-board computer using the buttons on the multifunction steering wheel.

### Multifunction display

Values and settings as well as display messages are shown in the multifunction display.

### Press briefly:
- back, deactivates the Voice Control System and fades out display messages
- selects the standard display

### Press and hold:
- selects a submenu or scrolls through lists
- In the Audio menu, selects a stored station, an audio track or a video scene
- In the Tel menu (telephone), switches to the telephone book and selects a name or a telephone number

### Press briefly:
- selects a stored station, an audio track or a video scene using rapid scroll
- In the Tel menu (telephone), starts telephone book rapid scroll

### Press and hold:
- In the Audio menu, selects the previous/next station, selects an audio track or a video scene using rapid scroll
- In the Tel menu (telephone), switches to the phone book and starts dialing

### OK
- Confirms selection and hides display messages
- In the Tel menu (telephone), switches to the phone book and starts dialing
On-board computer and displays

1. Selector lever position/shift range and drive program
2. Description field
3. Menu bar
4. Status line with time and outside temperature

To display menu bar ③: press the ← or → button on the steering wheel.
### Menus and submenus

#### Menu overview

The number of menus shown depends on the optional equipment in the vehicle.
Trip menu

Standard display

Press and hold the % button on the steering wheel until the Trip menu with trip odometer 1 and odometer 2 is shown.

Trip computer "From start" or "From reset"

The values in the From Start submenu are calculated from the start of a journey whilst the values in the From Reset submenu are calculated from the last time the submenu was reset.

Press the or button on the steering wheel to select the Trip menu.

Press the or button to select From Start or From Reset.

Example: trip computer "From start"

1 Distance
2 Time
3 Average speed
4 Average fuel consumption

The From Start trip computer is automatically reset if:

- the ignition has been switched off for more than four hours.
- 999 hours have been exceeded.
- 9,999 miles have been exceeded.

If 9,999 hours or 99,999 kilometers are exceeded, the trip computer From Reset is automatically reset.

Calling up the range

Press the or button on the steering wheel to select the Trip menu.

Press or to select approximate range 1.

Approximate range 1 is calculated according to current driving style and the amount of fuel in the tank. If there is only a small amount of fuel left in the fuel tank, the display shows a vehicle being refueled instead of range 1.

Digital speedometer

Press the or button on the steering wheel to select the Trip menu.

Press the or button to select the digital speedometer.

1 Digital speedometer

Resetting values

You can reset the values of the following functions:

- trip odometer
- trip computer "From start"
- trip computer "From reset"
Press the \[ \text{Trip} \] menu.
- Press the \[ \text{Trip} \] or \[ \text{Trip} \] button to select the function that you wish to reset.
- Press \[ \text{OK} \].

Resetting the trip computer "From start" (example)
- Press the \[ \text{Trip} \] button to select \textbf{Yes} and press the \[ \text{OK} \] button to confirm.

Navigation system menu

Displaying navigation instructions
In the \textbf{Nav1} menu, the multifunction display shows navigation instructions. You can find further information in the separate COMAND operating instructions.
- Press the \[ \text{Trip} \] or \[ \text{Trip} \] button on the steering wheel to select the \textbf{Nav1} menu.

Route guidance inactive

Example: direction of travel display
- Direction of travel
- Current road

Route guidance active

No change of direction announced
1. Distance to the destination
2. Distance to the next change of direction
3. Current road
4. Symbol for "follow the road's course"

Change of direction announced without a lane recommendation
1. Road into which the change of direction leads
2. Distance to change of direction and visual distance display
3. Symbol for change of direction
When a change of direction has been announced, you will see visual distance display next to the symbol for change of direction. This decreases in size as you approach the announced change of direction.

Change of direction announced with a lane recommendation
Lane recommendations are only displayed if the relevant data is available on the digital map.
Road into which the change of direction leads
Distance to change of direction and visual distance display
Lane recommendation
Symbol for change of direction

On multi-lane roads, lane recommendation may be shown for the next change of direction. Lanes may be added during a change of direction.

Lane recommendation display (example)
① Uninterrupted lane
② New lane during a change of direction
③ Lane recommended for the change of direction

You can find further information on lane recommendation in the separate COMAND operating instructions.

Other status indicators of the navigation system
- ①: you have reached the destination.
- **New Route**... or **Calculating Route**: a new route is being calculated.
- **Off Map** or **Off Mapped Road**: the vehicle position is outside the area of the digital map (off-map position).
- **No Route**: no route could be calculated to the selected destination.

You can find further information on status indicators in the separate COMAND operating instructions.

Audio menu

Selecting a radio station
You can only change the waveband and store new stations using COMAND.
- Press the ▼ or ▲ button on the steering wheel to select the Audio menu.

Waveband
Station ②

- **To select a stored station**: briefly press the ▼ or ▲ button.
- **To select a station from the station list**: press and briefly hold the ▼ or ▲ button.
- **To select a station using the station search** (only if no station list is received): press and briefly hold the ▼ or ▲ button.

- SIRIUS XM satellite radio acts like a normal radio.

You can find further information on operating the satellite radio in the separate operating instructions.

Operating audio player or data carrier
Audio data from various audio devices or media can be played, depending on the equipment installed in the vehicle.
- Press the ▼ or ▲ button on the steering wheel to select the Audio menu.

① Waveband
② Station ①0

If the station has been stored, the memory position will also be displayed.
CD player display (example)

To select the next/previous track: briefly press the ▲ or ▼ button.

To select a track from the track list (rapid scrolling): press and hold the ▲ or ▼ button until the desired track has been reached.

If track information is stored on the audio device or medium, the multifunction display will show the number and name of the track. The current track does not appear in audio AUX mode (Auxiliary audio mode: external audio source connected).

Video DVD operation

To select the next or previous scene: briefly press the ▲ or ▼ button.

To select a scene from the scene list (rapid scrolling): press and hold the ▲ or ▼ button until the desired scene has been reached.

Telephone menu

Introduction

A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call. If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when weather, road and traffic conditions permit. Some jurisdictions prohibit the driver from using a mobile phone while driving a vehicle. Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

Functions and displays are dependent on the optional equipment installed in your vehicle. You can establish a Bluetooth® connection to COMAND (see the separate operating instructions).

Switch on the mobile phone and COMAND.

Press the ▼ or ▶ button on the steering wheel to select the Tel menu.

You will see one of the following display messages in the multifunction display:

- Please Enter PIN: the mobile phone has been placed in the mobile phone bracket and the PIN has not been entered.
- Enter the PIN using the mobile phone, Voice Control System or COMAND. The mobile phone will search for a network. In the meantime, the Phone No Service display message appears in the multifunction display.
- Phone ready or the name of the network provider: the mobile phone has found a network and is ready to receive.
- Phone No Service: there is no network available or the mobile phone is searching for a network.

Accepting a call

If someone calls you when you are in the Tel menu, a display message appears in the multifunction display, for example:
Press the 6 button on the steering wheel to accept an incoming call.

You can accept a call even if you are not in the Te1 menu.

Rejecting or ending a call
Press the 6 button on the steering wheel.

You can end or reject a call even if you are not in the Te1 menu.

Dialing a number from the phone book
If your mobile phone is able to receive calls, you can search for and dial a number from the phone book in COMAND at any time.

- Copy the phone book from the mobile phone to COMAND.
- Press the 6 or 9 button on the steering wheel to select the Te1 menu.
- Press the 9 or 9 button to call up the phone book.
- Press the ▲ or ▼ button to select the desired name.
  To scroll rapidly, press and hold the ▲ or ▼ button for longer than one second. After a short time, the rapid scroll speeds up.
  Rapid scrolling stops when you release the button or reach the end of the list.
  - If only one telephone number is stored for a name: press the ▶ or OK button to start dialing.
  - If there is more than one number for a particular name: press the ▶ or OK button to display the numbers.
  - Press the ▲ or ▼ button to select the number you want to dial.
  - Press the ▶ or OK button to start dialing.
  - If you do not want to make a call: press the 6 button.

Redialing
The on-board computer saves the last names or numbers dialed in the redial memory.

- Press the ▶ or ▼ button on the steering wheel to select the Te1 menu.
- Press the ▶ button to switch to the redial memory.
- Press the ▲ or ▼ button to select the desired name or number.
- Press the ▶ or OK button to start dialing.

Assistance menu
Activated/deactivating Blind Spot Assist
You can use the Blind Spot Asst. function to activate or deactivate Blind Spot Assist (page 143).

- Press the ▶ or ▼ button on the steering wheel to select the DriveAssist menu.
- Press OK.
  The current selection is displayed.
- To activate/deactivate: press OK again.
Service menu

In the Service menu, you can:
- call up display messages (page 164)
- check the tire pressure electronically (page 257)
- call up the service due date (page 222)

Settings menu

Introduction

In the Settings menu, you can:
- change the instrument cluster settings (page 157)
- change the light settings (page 157)
- change the vehicle settings (page 159)
- change the convenience settings (page 159)
- restore the factory settings (page 160)

Instrument cluster

Selecting the unit of measurement for distance

The Display unit Speed-/Odometer function allows you to choose whether certain displays appear in km/h or mph in the multifunction display.

The selected units apply to:
- the odometer and the trip odometer
- the trip computer
- the digital speedometer in the Trip menu
- the digital speedometer in the AMG menu
- the navigation instructions in the Navigation menu
- cruise control

- Press the ◀ or ► button on the steering wheel to select the Settings menu.
- Press the ◀ or ▲ button to select the INST. CLUSTER submenu.
- Press the OK button to confirm.
- Press the ◀ or ▲ button to select the Display unit Speed-/Odometer function.
  You will see the selected setting: km or miles.
- Press the OK button to save the setting.

Permanent display for outside temperature or additional speedometer

The Permanent display: Outside Temperature/Speedometer allows you to choose whether the multifunction display shows the outside temperature or the speed at the bottom right. The unit used in the additional speedometer depends on the display unit set (page 157).

- Press the ◀ or ► button on the steering wheel to select the Settings menu.
- Press the ◀ or ▲ button to select the INST. CLUSTER submenu.
- Press the OK button to confirm.
- Press the ◀ or ▲ button to select the Permanent display function.
  You will see the selected setting [km/h] or [mph] or outside temperature.
- Press the OK button to save the setting.

Lights

Switching the daytime running lights on/off

This function is not available in Canada.
If you have activated the **Daytime Running Lights** function and the light switch is in the **AUTO** or **A** position, the daytime running lamps are switched on automatically when the engine is running. If it is dark, the low-beam headlamps switch on automatically.

In the dark, the following also light up:
- the low-beam headlamps
- the standing lamps
- the tail lamps
- the license plate lamp
- the side marker lamps

Press the **<** or **>** button on the steering wheel to select the **Settings** menu.

Press the **▼** or **▲** button to select the **Lights** submenu.

Press the **OK** button to confirm.

Press the **▼** or **▲** button to select the **Daytime Running Lights** function.

You will see the selected setting: **Enabled** or **Disabled**.

Press the **OK** button to save the setting.

**Setting the brightness for the display and switches**

You can use the **Brightness display/switches** function to set the brightness of the multifunction display and the switches in the vehicle.

Press the **<** or **>** button on the steering wheel to select the **Settings** menu.

Press the **▼** or **▲** button to select the **Light** submenu.

Press the **OK** button to confirm.

Press the **▼** or **▲** button to select the **Brightness Display/Switches** function.

You see the selected setting **Level** with a value of between 0 and 100.

Press the **OK** button to save the setting.

Press the **▼** or **▲** button to increase or decrease the brightness.

**Activating/deactivating surround lighting and exterior lighting delayed switch-off**

The **Locator lighting** function allows you to set whether the exterior lighting should come on when it is dark:
- for 40 seconds after unlocking the vehicle with the SmartKey
- The exterior lighting switches off if you open the driver’s door.
- for 15 seconds after switching off the engine and closing the doors
- If the engine is switched off and then none of the doors are opened, or if an open door is not closed, the exterior lighting goes out after 60 seconds.

If you activate the **Locator Lighting** function, the following light up:
- the parking lamps
- the low-beam headlamps
- the license plate lamp
- the surround lighting in the exterior mirrors

Press the **<** or **>** button on the steering wheel to select the **Settings** menu.

Press the **▼** or **▲** button to select the **Light** submenu.

Press the **OK** button to confirm.

Press the **▼** or **▲** button to select the **Locator Lighting** function.

You will see the selected setting: **on** or **off**.

Press the **OK** button to save the setting.
Deactivating the delayed switch-off temporarily:

- Select key position 0 with the Start/Stop button before leaving the vehicle.
- Select key position 2 and then key position 0 again with the Start/Stop button. The delayed switch-off is deactivated.

Delayed switch-off is reactivated the next time you start the engine.

Activating/deactivating the interior lighting delayed switch-off

If you select key position 0 with the Start/Stop button when the Light. Delay function is activated, the interior lighting lights up for approximately 20 seconds if it is dark.

- Press the ← or → button on the steering wheel to select the Settings menu.
- Press the ▼ or ▲ button to select the Light submenu.
- Press the OK button to confirm.
- Press the ← or → button to select the Interior lighting delay sw. off function.

You will see the selected setting: Enabled or Disabled.

- Press the OK button to save the setting.

Vehicle

Activating/deactivating the automatic door locking mechanism

If you select the Automatic Door Lock: function, the vehicle is centrally locked above a speed of around 9 mph (15 km/h).

- For further information on the automatic locking feature, see ( page 71).
- Press the ← or → button on the steering wheel to select the Settings menu.
- Press the ▼ or ▲ button to select the Vehicle submenu.
- Press the OK button to confirm.

- Press the ▼ or ▲ button to select the Automatic door locks function.

You will see the selected setting: Enabled or Disabled.

- Press the OK button to save the setting.

Activating/deactivating the acoustic locking verification signal

You can use the Acoustic Lock function to determine whether there is an acoustic confirmation when locking and unlocking the vehicle.

- Press the ← or → button on the steering wheel to select the Settings menu.
- Press the ▼ or ▲ button to select the VEHICLE submenu.
- Press the OK button to confirm.
- Press the ← or → button to select the Acoustic Lock function.

You will see the selected setting: Activated or Deactivated.

- Press the OK button to save the setting.

Convenience

Activating/deactivating the EASY-ENTRY/EXIT feature

You can use the Easy Entry/Exit: function to activate or deactivate the EASY-ENTRY/EXIT feature ( page 88).
Press the \( \square \) or \( \triangleright \) button on the steering wheel to select the **Settings** menu.

Press the \( \triangledown \) or \( \triangleright \) button to select the **Convenience** submenu.

Press the \( \triangleright \) button to confirm.

Press the \( \triangledown \) or \( \triangleright \) button to select the **Easy Entry/Exit** feature.

You will see the selected setting: **on** or **off**.

Press the \( \triangleright \) button to save the setting.

**Switching the fold-in exterior mirrors with locking function on/off**

If you switch on the **Fold Mirrors in when Locking:** function, the exterior mirrors fold in when you lock the vehicle. If you unlock the vehicle and then open the driver’s or front-passenger door, the exterior mirrors fold out again.

If you have switched the function on and you fold the exterior mirrors in using the button on the door (\( > \) page 90), they will not fold out automatically. The exterior mirrors can then only be folded out using the button on the door.

Press the \( \square \) or \( \triangleright \) button on the steering wheel to select the **Settings** menu.

Press the \( \triangledown \) or \( \triangleright \) button to select the **Convenience** submenu.

Press the \( \triangleright \) button to confirm.

Press the \( \triangledown \) or \( \triangleright \) button to select the **Fold mirrors in when locking:** function.

You will see the selected setting: **on** or **off**.

Press the \( \triangleright \) button to save the setting.

**Resetting to factory settings**

For safety reasons, the **Daytime Running Lights:** function in the **Lights** submenu is only reset when the vehicle is stationary.

Press the \( \square \) or \( \triangleright \) button on the steering wheel to select the **Settings** menu.

Press the \( \triangledown \) or \( \triangleright \) button to select the **Factory Settings** submenu.

Press the \( \triangleright \) button to confirm.

The **Reset All Settings?** message appears.

Press the \( \triangledown \) or \( \triangleright \) button to select **Yes** or **No**.

Press the \( \triangleright \) button to confirm the selection.

If you have selected **Yes**, the multifunction display shows a confirmation message.

**AMG menu**

**AMG displays**

Press the \( \square \) or \( \triangleright \) button on the steering wheel to select the **AMG** menu.

- **Digital speedometer**
- **Engine oil temperature**
- **Coolant temperature**
- **Transmission fluid temperature**

If the engine oil temperature is below 80 °C or if the transmission fluid temperature is below 60 °C, the corresponding temperature gauge flashes. Avoid driving at full engine output during this time.

**SETUP**

**SETUP** displays the drive program, the AMG adaptive sport suspension system setting and the selected traction assist.
Press the \( \text{ } \) or \( \text{ } \) button on the steering wheel to select the AMG menu.

Press the \( \text{ } \) button repeatedly until SETUP is displayed.

or

Press the AMG button on the center console.

Drive program (C/S/S+/M)

ESP® mode (ON/Sport Handling Mode/OFF)

AMG adaptive sport suspension system setting (COMFORT/SPORT/SPORT+)

RACETIMER

Displaying and starting RACETIMER

WARNING

The RACETIMER feature is only for use on roads and in conditions where high speed driving is permitted. Racing on public roads is prohibited under all circumstances. The driver is and must always remain responsible for following posted speed limits.

You can use the RACETIMER to store lap times.

Press the \( \text{ } \) or \( \text{ } \) button on the steering wheel to select the AMG menu.

Press the \( \text{ } \) button repeatedly until the RACETIMER is shown.

If the RACETIMER is selected, the \( \text{ } \) and \( \text{ } \) buttons are inoperative.

Digital speedometer

RACETIMER

Lap

You can start the RACETIMER when the engine is running or if key position 2 is selected with the Start/Stop button.

To start: start the RACETIMER with \( \text{OK} \).

Displaying the intermediate time

Press the \( \text{ } \) or \( \text{ } \) button to select Interm. Time.

Press the \( \text{OK} \) button to confirm. The intermediate time is displayed for five seconds.

Starting a new lap

It is possible to store a maximum of sixteen laps.

Press \( \text{OK} \) to confirm New Lap.

RACETIMER

Fastest lap time (best lap)

Lap
**On-board computer and displays**

### Stopping the RACETIMER

- Press the button on the steering wheel.

- Press the button to confirm **YES**.

If you stop the vehicle and select key position 1 with the Start/Stop button, the RACETIMER interrupts timing. If you select key position 2 or 3 with the Start/Stop button and then press to select **START**, timing is continued.

### Resetting the current lap

- Stop the RACETIMER.

- Press or to select **Reset Lap**.

- Press to reset the lap time to "0".

### Deleting all laps

If you switch off the engine, the RACETIMER is reset to "0" after 30 seconds. All laps are deleted.

You cannot delete individual stored laps. If you have stopped 16 laps, the current lap does not have to be reset.

- Reset the current lap.

- Press to confirm **Reset**.

  **Reset Race Timer** appears in the multifunction display.

- Press the button to select **YES** and press the button to confirm. All laps are deleted.

### Overall statistics

This function is shown if you have stored at least one lap and stopped the RACETIMER.

- Press the or button on the steering wheel to select the **AMG** menu.

- Press the button repeatedly until the overall evaluation is shown.

  1. **RACETIMER overall evaluation**
  2. Total time driven
  3. Average speed
  4. Distance covered
  5. Top speed

### Lap statistics

This function is only available if you have stored at least two laps and have stopped the RACETIMER.

- Press the or button on the steering wheel to select the **AMG** menu.

- Press the button repeatedly until the lap evaluation is shown.

  Each lap is shown in a separate submenu. The fastest lap is indicated by flashing symbol (1).

- Press the button to confirm **Reset**.

  **Reset Race Timer** appears in the multifunction display.
Press the \( \uparrow \) or \( \downarrow \) button to select a different lap evaluation.
Display messages

Hiding display messages

⚠️ WARNING
All categories of messages contain important information which should be taken note of and, where a malfunction is indicated, addressed as soon as possible at an authorized Mercedes-Benz Center.
Failure to repair the condition noted may cause damage not covered by the Mercedes-Benz Limited Warranty, or result in property damage or personal injury.

Display messages appear in the multifunction display.

- Press the OK or button on the steering wheel to hide the display message.
  The display message is cleared.

The multifunction display shows high-priority display messages in red.

You cannot hide display messages of the highest priority. The multifunction display shows these messages continuously until the causes for the messages have been remedied.

Certain display messages are accompanied by an audible warning tone or a continuous tone. Please respond in accordance with the display messages and follow the additional notes in this Operator’s Manual.

Message memory

The on-board computer saves certain display messages. You can call up the display messages in the message memory.

- Press or on the steering wheel to select the Serv. menu.
  If there are display messages, the multifunction display shows 2 Messages, for example.
- Press the or button to select the entry, e.g. 2 Messages.
- Confirm with OK.
- Press the or button to scroll through the display messages.

When the ignition is switched off, all display messages are deleted apart from some high-priority display messages. Once the causes of the high-priority display messages have been rectified, the corresponding display messages are also deleted.

▶ Visit a qualified specialist workshop.  
If there is overvoltage or undervoltage:  
▶ Remove the cause for the overvoltage or undervoltage, e.g. by charging the battery or restarting the engine.  
▶ Switch the ignition off and on, and then engage or release the electric parking brake.  
If this does not release the electric parking brake:  
▶ Do not drive on.  
▶ Consult a qualified specialist workshop.
## Warning Lamp

The warning lamp (yellow) lights up. In addition, the indicator lamp (red) flashes for about 10 seconds after the electric parking brake has been engaged or released. It then goes out or remains lit.

The electric parking brake has overheated.

- Allow the vehicle to cool down. Do not engage or release the electric parking brake during this time.
- Prevent the vehicle from rolling away before you leave it.
- When the vehicle has cooled down: switch the ignition off and on again, then engage or release the electric parking brake.

### Parking Brake Inoperative

The warning lamp (yellow) lights up. In addition, the indicator lamp (red) flashes for about 10 seconds after the electric parking brake has been engaged or released. It then goes out or remains lit.

The electric parking brake is malfunctioning.

- Switch the ignition off and on, and then engage the electric parking brake.

If it is not possible to engage the electric parking brake:

- Shift the transmission to P using the button on the center console.
- Prevent the vehicle from rolling away before you leave it.
- Visit a qualified specialist workshop.

### Turn On the Ignition to Release the Parking Brake

The indicator lamp (red) flashes.

You attempted to release the electric parking brake while the ignition was switched off.

- Switch on the ignition.

#### Engine

**⚠️ WARNING**

Driving when your engine is overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns which can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Stop the vehicle in a safe location away from other traffic. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

**⚠️ WARNING**

Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts. You could be seriously burned.

**Tires**

⚠️ WARNING
Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You may lose control of the vehicle. Continued driving with a flat tire will cause excessive heat build-up and possibly a fire.

⚠️ WARNING
Follow recommended tire inflation pressures. Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated. Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

</tr>
</tbody>
</table>

**⚠️ Risk of accident**

- There is not enough brake fluid in the brake fluid reservoir.
  - Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
  - Consult a qualified specialist workshop immediately.
  - Observe the additional messages in the multifunction display (> page 165).

Do not add brake fluid. This will not rectify the malfunction.

**⚠️ Risk of accident**

- The electric parking brake is temporarily malfunctioning or defective.
  - Observe the additional display messages in the multifunction display.

**⚠️ WARNING**

- Driving with the brake warning lamp illuminated can result in an accident. Have your brake system checked immediately if the brake warning lamp stays on. Do not add brake fluid before checking the brake system.
- Overfilling the brake fluid reservoir can result in spilling brake fluid on hot engine parts and the brake fluid catching fire. You can be seriously burned.
## Seat belts

  The warning lamp goes out and the intermittent audible warning ceases. |
## Safety systems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image.png" alt="ABS warning lamp lit" /> The yellow ABS warning lamp is lit while the engine is running.</td>
<td><strong>⚠️ Risk of accident</strong>&lt;br&gt;ABS (Anti-lock Brake System) is deactivated due to a malfunction. Therefore ESP® (Electronic Stability Program), BAS (Brake Assist) and hill start assist are also deactivated, for example. The brake system continues to function normally, but without the functions listed above. The wheels could therefore lock if you brake hard, for example.&lt;br&gt;▶ Observe the additional messages in the multifunction display (▶ page 170).&lt;br&gt;▶ Drive on carefully.&lt;br&gt;▶ Visit a qualified specialist workshop.</td>
</tr>
<tr>
<td><img src="image.png" alt="ESP warning lamps lit" /> The yellow ESP® and ESP® OFF warning lamps and the yellow ABS warning lamp are lit while the engine is running.</td>
<td><strong>⚠️ Risk of accident</strong>&lt;br&gt;ABS and ESP® are faulty. Other systems, e.g. BAS and hill start assist, are unavailable due to a malfunction. The brake system continues to function normally, but without the functions listed above. The wheels could therefore lock if you brake hard, for example.&lt;br&gt;▶ Observe the additional messages in the multifunction display (▶ page 170).&lt;br&gt;▶ Drive on carefully.&lt;br&gt;▶ Visit a qualified specialist workshop.</td>
</tr>
<tr>
<td><img src="image.png" alt="ESP warning lamp flashing" /> The yellow ESP® warning lamp flashes while the vehicle is in motion.</td>
<td><strong>⚠️ Risk of accident</strong>&lt;br&gt;ESP® or traction control has intervened because there is a risk of skidding or at least one wheel has started to spin.&lt;br&gt;▶ When pulling away, only depress the accelerator pedal as far as necessary.&lt;br&gt;▶ Release the accelerator pedal while the vehicle is in motion.&lt;br&gt;▶ Adapt your driving style to suit the road and weather conditions.&lt;br&gt;▶ Do not deactivate ESP®.&lt;br&gt;For exceptions: (▶ page 56).</td>
</tr>
</tbody>
</table>
### Problem

| SPORT | The yellow SPORT handling mode warning lamp is lit while the engine is running. | **Risk of accident**
SPORT handling mode is activated. ESP® only stabilizes the vehicle in extreme situations. ESP® intervention may not be able to provide enough assistance in such situations, and the vehicle may start to skid.

- Reactivate ESP®.
- For exceptions: (> page 56). |

| ☢️ Off | The yellow ESP® and ESP® OFF warning lamps are lit while the engine is running. | **Risk of accident**
ESP® is not available due to a malfunction. ESP® will not stabilize the vehicle if it starts to skid or if a wheel starts to spin. The brake system continues to function normally, but without ESP®.

- Drive on carefully.
- Visit a qualified specialist workshop. |

| ☢️ | The red SRS warning lamp is lit while the engine is running. | **Risk of injury**
The restraint systems are malfunctioning. The air bags or ETDs may either be triggered unintentionally or, in the event of an accident, not be triggered at all.

- Visit a qualified specialist workshop immediately. |

### WARNING

In the event a malfunction of the SRS is indicated as outlined above, the SRS may not be operational.

For your safety, we strongly recommend that you contact an authorized Mercedes-Benz Center immediately to have the system checked. Otherwise the SRS may not be activated when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in injury.
### Engine

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| ⚠️ The yellow Check Engine warning lamp lights up while the engine is running. | There may be a malfunction, for example:  
- in the engine management  
- in the fuel injection system  
- in the exhaust system  
- in the ignition system  
The emission limit values may be exceeded and the engine may be running in emergency mode.  
➤ Have the vehicle checked as soon as possible at a qualified specialist workshop.  
⚠️ In some states/provinces, you are required by law to immediately visit a qualified specialist workshop as soon as the yellow Check Engine warning lamp lights up. If in doubt, check whether such legal regulations apply in the state/province in which you are currently driving. |
| ⚠️ The yellow Check Engine warning lamp lights up while the engine is running. The smoothness of the gear change is restricted. | The sub geartrain with the odd gears has failed. The transmission is in emergency mode.  
➤ Have the vehicle checked as soon as possible at a qualified specialist workshop. |
| ⚠️ The red engine oil temperature warning lamp comes on while the engine is running. A warning tone also sounds. | The engine oil temperature has exceeded 284 °F (140 °C). The engine is not being cooled sufficiently and may be damaged.  
➤ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions.  
➤ Allow the engine to cool down. |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| ![ ] The red engine oil temperature warning lamp comes on while the engine is running. The engine oil temperature is not displayed. | The engine control unit data transfer is malfunctioning.  

► Visit a qualified specialist workshop. |
| ![ ] The yellow reserve fuel warning lamp lights up while the engine is running. | The fuel level has dropped into the reserve range.  

► Refuel at the nearest gas station. |
| ![ ] The yellow reserve fuel warning lamp flashes while the engine is running. | The fuel system pressure is too low. The fuel filler cap is not closed correctly or the fuel system is leaking.  

► Check that the fuel filler cap is correctly closed.  

► **If the fuel filler cap is not correctly closed:** close the fuel filler cap.  

► **If the fuel filler cap is closed:** visit a qualified specialist workshop. |

**WARNING**

Driving when your engine is overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns which can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Stop the vehicle in a safe location away from other traffic. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

![ ] If the coolant temperature exceeds 248 °F (120 °C) do not continue driving. The engine will otherwise be damaged.
### Tires

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| ![Icon] USA only:  
The yellow tire pressure monitor warning lamp (pressure loss/malfunction) is lit. Canada only:  
The yellow tire pressure monitor warning lamp (pressure loss) is lit. | ![Warning] Risk of accident  
The tire pressure monitor has detected a loss of pressure in at least one of the tires.  
► Stop the vehicle without making any sudden steering or braking maneuvers. Pay attention to the traffic conditions as you do so.  
► Observe the additional display messages in the multifunction display.  
► Check the tire pressure. If necessary, correct the tire pressure (> page 257).  
► If necessary, change a wheel (> page 271). |
| ![Icon] USA only:  
The yellow tire pressure monitor warning lamp (pressure loss/malfunction) flashes for 60 seconds and then remains lit. | The tire pressure monitor is faulty.  
► Observe the additional display messages in the multifunction display.  
► Visit a qualified specialist workshop. |

#### WARNING

Each tire, including the spare (if provided), should be checked at least every two weeks when cold and inflated to the pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver's door B-pillar or, if available, the tire pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the Tire and Loading Information placard or the tire pressure label, you should determine the proper tire pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

USA only:

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately 1 minute and then remain continuously illuminated. This sequence will be repeated every time
the vehicle is started as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (page 21).

Stowage areas

Stowage space

Important safety notes

⚠️ WARNING
To help avoid personal injury during a collision or sudden maneuver, exercise care when storing objects in the vehicle. Put luggage or cargo in the trunk if possible.
Keep compartment lids closed. This will help to prevent stored objects from being thrown about and injuring vehicle occupants during
- braking
- vehicle maneuvers
- an accident

Stowage compartments in the front

Glove box

- To open: pull handle 1 and open glove box flap 2.
- To close: fold glove box flap 2 upwards until it engages.

The glove box can be locked and unlocked using the mechanical key, e.g. when leaving your vehicle at a workshop.

Roadster: the glove box can be locked and unlocked centrally using the SmartKey (page 64).

Depending on the vehicle's equipment, you will find an AUX IN jack or a Media Interface installed in the glove box. A Media Interface is a universal interface for portable audio equipment, e.g. for an iPod® or USB device (see the separate COMAND operating instructions).

There is a 12 V power socket located in the glove box.
Stowage compartment in the center console

To open: press down at the middle of the marking on lid 1.
To close: fold down cover 1.

Depending on the equipment installed, your vehicle is equipped with an ashtray or a stowage compartment.

Stowage compartment under the armrest

To open: press button 1 on the left or right and slide the armrest in the direction of the arrow. The armrest engages in two different detents.

Roadster: the stowage compartment can be locked and unlocked centrally using the SmartKey (page 64).

Stowage compartment in the rear center console

Press button 1.
The stowage compartment opens.

In the stowage compartment, you will find the ignition lock (page 115) and the trunk lid emergency release (page 75).

Stowage space in the rear

Stowage space on the rear wall between the seats

Ruffled pocket

Luggage nets

⚠️ WARNING
Parcel nets are intended for storing lightweight items only, such as road maps, mail, etc.

Heavy objects, objects with sharp edges, or fragile objects may not be transported in the parcel nets. In an accident, during hard
braking, or sudden maneuvers, they could be thrown around inside the vehicle and cause injury to vehicle occupants. Parcel nets cannot protect transported goods in the event of an accident.

There is a parcel net located in the front-passenger footwell.

Cup holders

**Important safety notes**

⚠ **WARNING**

In order to help prevent spilling liquids on vehicle occupants and/or vehicle equipment, only use containers that fit into the cup holder. Use lids on open containers and do not fill containers to a height where the contents, especially hot liquids, could spill during braking, vehicle maneuvers, or in an accident. Liquids spilled on vehicle occupants may cause serious personal injury. Liquids spilled on vehicle equipment may cause damage not covered by the Mercedes-Benz Limited Warranty.

When not in use, keep the cup holder closed. An open cup holder may cause injury to you or others when contacted during braking, vehicle maneuvers, or in an accident.

Keep in mind that objects placed in the cup holder may come loose during braking, vehicle maneuvers, or in an accident and be thrown around in the vehicle interior. Objects thrown around in the vehicle interior may cause an accident and/or serious personal injury.

---

Cup holder in the center console

Coupe (example)

Open the armrest (page 201).

Cupholders 1 are under the armrest.

Sun visors

**Overview of sun visors**

⚠ **WARNING**

Do not use the vanity mirror while driving. Keep the vanity mirrors in the sun visors closed while the vehicle is in motion. Reflected glare can endanger you and others.

Coupe (example)

1 Mirror light
2 Bracket
3 Retaining strip, e.g. for a car park ticket
4 Vanity mirror
5 Mirror cover
Vanity mirror in the sun visor

Mirror light ① only functions if the sun visor is clipped into retainer ② and mirror cover ⑤ has been folded up.

Glare from the side

Coupe (example)
- Fold down the sun visor.
- Pull the sun visor out of retainer ②.
- Swing the sun visor to the side.
- Slide the sun visor forwards and back as required.

Ashtray

Ashtray in the cockpit

① You can remove the ashtray insert and use the resulting compartment for stowage.

① The stowage space under the ashtray is not heat resistant. Before placing lit cigarettes in the ashtray, make sure that the ashtray is properly engaged. Otherwise, the stowage space could be damaged.

Cigarette lighter

⚠️ WARNING
When leaving the vehicle, always remove the SmartKey from the ignition lock. Always take the SmartKey with you and lock the vehicle. Do not leave children unattended in the vehicle, even if they are secured in a child restraint system, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury. The children could:
- injure themselves on parts of the vehicle
- be seriously or fatally injured through excessive exposure to extreme heat or cold
- injure themselves or cause an accident with vehicle equipment that can be operated even if the SmartKey is removed from the ignition lock or removed from the vehicle,
such as seat adjustment, steering wheel adjustment, or the memory function
If children open a door, they could injure other persons or get out of the vehicle and injure themselves or be injured by following traffic.
Do not expose the child restraint system to direct sunlight. The child restraint system’s metal parts, for example, could become very hot, and the child could be burned on these parts.

⚠️ WARNING
Never touch the heating element or sides of the lighter; they are extremely hot. Hold the knob only.
Make sure any children traveling with you do not injure themselves or start a fire with the hot cigarette lighter.

12 V sockets
Points to observe before use
The sockets can be used for accessories with a maximum current draw of 180 W (15 A), e.g. lamps or chargers for mobile phones.
If you use the sockets for long periods when the engine is switched off, the battery may discharge.

⚠️ You can also use the sockets when the ignition is switched off. An emergency cut-out ensures that the on-board voltage does not drop too low. If the on-board voltage is too low, the power to the sockets is automatically cut. This ensures that there is sufficient power to start the engine.

Socket in the glove box

Coupe (example)

- Select key position 2 with the Start/Stop button.
- Lightly press the center of cover ①. The ashtray opens.
- Press in cigarette lighter ②. Cigarette lighter ② will pop out automatically when the heating element is red-hot.

Open the glove box (>): page 200.
Lift up the cover of socket ①.

Socket on the center console

⚠️ If accessories are connected, make sure that a maximum current draw of 15 A is not exceeded. Otherwise, you will overload the fuse.
The system is called TELE AID in Canada.

USA only.
USA only.

important safety notes

A license agreement must exist in order to activate the mbrace service. Ensure that your system is activated and ready for use, and press the MB Info call button to register. If any of the steps mentioned is not carried out, the system may not be activated.

If you have questions about the activation, contact one of the following telephone assistance services:

- **USA**: Mercedes-Benz Customer Assistance Center under 1-800-FOR-MERCEDES (1-800-367-6372) or 1-888-990-9007
- **Canada**: Customer Service at 1-888-923-8367

Shortly after successfully registering with the mbrace service, a user ID and password will be sent to you by mail. You can use this password to log in to the mbrace section under "Owners Online" at http://www.mbusa.com.

The mbrace system is available if:

- it has been activated and is operational.
- the corresponding mobile phone network is available for transmitting data to the Customer Center.
- a service subscription is available.
- the starter battery is sufficiently charged.

Determining the location of the vehicle on a map is only possible if there is sufficient GPS reception and the vehicle position can be forwarded to the Customer Center.

The mbrace system

The mbrace system provides various services, e.g.:

- automatic and manual emergency call
- Roadside Assistance call
- MB Info call

To adjust the volume during an mbrace call, proceed as follows:

- Press the + or - button on the multifunction steering wheel.
- or
- Use the volume controller of COMAND.

You can find further information and a description of all available features under "Owners Online" at http://www.mbusa.com.

Self-diagnosis of the system

After you have switched on the ignition, the system carries out a self-diagnosis.
WARNING
A malfunction in the system has been detected if one of the following conditions occurs:

• the indicator lamp in the SOS button does not light up during the system self-diagnosis.
• the indicator lamp in the Roadside Assistance button does not light up during the system self-diagnosis.
• The indicator lamp in the information button does not light up during self-diagnosis of the system.
• the indicator lamp in the SOS button, Roadside Assistance button or information button continues to be lit red after the system self-test.

If a malfunction is indicated as outlined above, the system may not operate as expected. In the event of an emergency, assistance must be summoned by other means.

Have the system checked at the nearest authorized Mercedes-Benz Center or contact the following service hotlines:

• USA: Mercedes-Benz Customer Assistance Center under 1-800-FOR-MERcedes (1-800-367-6372) or 1-888-990-9007
• Canada: Customer Service at 1-888-923-8367

An emergency call is dialed automatically if an air bag or Emergency Tensioning Device is triggered.

An mbrace emergency call that has been initiated automatically cannot be terminated by the customer.

An emergency call can also be initiated manually.

As soon as the emergency call has been initiated, the indicator lamp in the SOS button flashes. The Connecting Call message appears on the multifunction display.

The audio output is muted.

Once a connection has been established, the Call Connected message appears on the multifunction display.

All important information on the emergency is transmitted, for example:

• current location of the vehicle (as determined by the GPS system)
• vehicle identification number
• information on the type of emergency

Shortly after the emergency call has been initiated, a voice connection is automatically established between the Mercedes-Benz Customer Assistance Center and the vehicle occupants. If the vehicle occupants respond, the Mercedes-Benz Customer Assistance Center attempts to get more information on the emergency.

If there is no response from the vehicle occupants, an ambulance is immediately sent to the vehicle.
WARNING
If the indicator lamp in the SOS button is flashing continuously and there was no voice connection to the Response Center established, then the mbrace system could not initiate an emergency call (e.g. the relevant cellular phone network is not available).

The message **Call Failed** appears in the multifunction display for approximately 10 seconds.

Should this occur, assistance must be summoned by other means.

**Making an emergency call**

- **To initiate an emergency call manually:** press cover ① briefly to open it.
- Press SOS button ② briefly. The indicator lamp in SOS button ② flashes until the emergency call is concluded.
- Wait for a voice connection to the Mercedes-Benz Customer Assistance Center.
- After the emergency call is ended, close cover ①.

**WARNING**
If you feel at any way in jeopardy when in the vehicle (e.g. smoke or fire in the vehicle, vehicle in a dangerous road location), please do not wait for voice contact after you have pressed the SOS button. Carefully leave the vehicle and move to a safe location. The Response Center will automatically contact local emergency officials with the vehicle's approximate location if they receive an automatic SOS signal and cannot make voice contact with the vehicle occupants.

**Roadside Assistance button**

- Press and hold Roadside Assistance button ① for more than two seconds. This initiates a call to the Mercedes-Benz Customer Assistance Center. The indicator lamp in Roadside Assistance button ① flashes while the call is active. The **Connecting** message appears in the multifunction display. The audio output is muted.

If a connection can be made, the **Call Connected** message appears in the multifunction display.

If a cellular phone network is available and there is sufficient GPS reception, the mbrace system transmits data to the Mercedes-Benz Customer Assistance Center, for example:

- current location of the vehicle
- vehicle identification number

The COMAND display shows that an mbrace call is active. During the call, you can change to the navigation menu by pressing the NAVI button on COMAND, for example.

Voice output is not available.
A voice connection is established between the Mercedes-Benz Customer Assistance Center and the vehicle occupants.

- Describe the type of assistance needed.

The Mercedes-Benz Customer Assistance Center either sends a qualified Mercedes-Benz technician or organizes for your vehicle to be transported to the nearest authorized Mercedes-Benz Center. You may be charged for services such as repair work and/or towing. Further details are available in your mbrace manual.

- The mbrace system failed to initiate a Roadside Assistance call if:
  - the indicator lamp in Roadside Assistance button 1 is flashing continuously.
  - no voice connection to the Mercedes-Benz Customer Assistance Center was established.

This may be because the corresponding mobile phone network is not available. The Call Failed message appears on the multifunction display.

- To end a call: press the  button on the multifunction steering wheel.

or

- Press the corresponding button for ending a phone call on COMAND.

MB Info call button

- Press and hold MB Info call button 1 for more than two seconds. This initiates a call to the Mercedes-Benz Customer Assistance Center. The indicator lamp in MB Info call button 1 flashes while the connection is being established. The Connecting Call message appears in the multifunction display and COMAND is muted.

If a connection can be made, the Call Connected message appears in the multifunction display.

If a cellular phone network is available and there is sufficient GPS reception, the mbrace system transmits data to the Mercedes-Benz Customer Assistance Center, for example:

- current location of the vehicle
- vehicle identification number

- The COMAND display shows that an mbrace call is active. During the call, you can change to the navigation menu by pressing the NAVI button on COMAND, for example.

Voice output is not available.

A voice connection is established between the Mercedes-Benz Customer Assistance Center and the vehicle occupants. You can obtain information on how to operate your vehicle’s systems, on the location of the nearest authorized Mercedes-Benz Center, and on further products and services offered by Mercedes-Benz USA.

Further details on the mbrace system can be found under http://www.mbusa.com15. Log in under "Owners Online".

- The mbrace system failed to initiate an MB Info call if:
  - the indicator lamp in MB Info call button 1 is flashing continuously.
  - no voice connection to the Mercedes-Benz Customer Assistance Center was established.

15 USA only.
This may be because the corresponding mobile phone network is not available. The \textit{Call Failed} message appears on the multifunction display.

- **To end a call**: press the \(\text{button}\) on the multifunction steering wheel.
  
or
  - Press the corresponding button for ending a phone call on COMAND.

**Call priority**

When service calls are active, e.g. Roadside Assistance or MB Info calls, an emergency call can still be initiated. In this case, an emergency call will take priority and override all other active calls.

The indicator lamp of the respective button flashes until the call is ended. An emergency call can only be terminated by the Mercedes-Benz Customer Assistance Center. All other calls can be ended by pressing the \(\text{button}\) on the multifunction steering wheel or the corresponding button for ending a telephone call on COMAND.

- If an mbrace call is initiated, audio output is muted. The mobile phone is no longer connected to COMAND. However, if you want to use your mobile phone, we recommend that you do this only when the vehicle is stationary and in a safe location.

**Downloading destinations in COMAND**

- Information on the components and operating principles of COMAND can be found in the separate COMAND operating instructions.

This service is part of the mbrace PLUS Package and cannot be purchased separately.

- You can only use the Destination Download function if the vehicle is equipped with a navigation system.

Destination Download gives you access to a database with over 15 million points of interest (POIs)/important destinations that can be downloaded onto the navigation system of your vehicle. If you know the destination, you can download the address or obtain the location of points of interest (POIs)/important destinations in the surrounding area.

You are prompted to confirm route guidance to the address entered. The system calculates the route and subsequently starts the route guidance with the address entered.

- If you select No, the address can be stored in the address book.

- The Destination Download function is available if the corresponding mobile phone network is available and data transfer is possible.

**Route Assistance**

This service is part of the mbrace PLUS Package and cannot be purchased separately.

- You can also use the Route Assistance function if your vehicle is not equipped with a navigation system.

Within the framework of this service, you receive a professional and reliable form of navigation support without having to leave your vehicle.

The customer service representative determines a suitable driving route based on your current vehicle position and the desired destination and guides you live through the current sections of the route.

**Search & Send**

"Search & Send" is a destination entry service. You can find further information on "Search & Send" in the separate COMAND operating instructions.
**Vehicle remote closing**

If you forget to lock your vehicle but are no longer in the vicinity of the vehicle, it can be locked for you by the Mercedes-Benz Customer Assistance Center.

The vehicle can be locked remotely up to four days after the ignition was last switched off.

- Contact the following service hotlines:
  - **USA**: Mercedes-Benz Customer Assistance Center under 1-800-FOR-MERcedes (1-800-367-6372) or 1-888-990-9007
  - **Canada**: Customer Service at 1-888-923-8367

You will be asked for your PIN.

The next time you are in your vehicle and switch on the ignition, the *Tele Aid Doors Locked Remotely* message appears in the multifunction display.

Alternatively, the vehicle can also be locked via the Internet or an iPhone in the "Owners Online" section using your ID number and password.

The vehicle valet locking feature is available when the relevant mobile phone network is available and data connection is possible.

**Service for recovering a stolen vehicle**

If your vehicle has been stolen:

- Notify the police.
  The police will issue a numbered incident report.

- This number will be forwarded to the Mercedes-Benz Customer Assistance Center together with your PIN.
  The Mercedes-Benz Customer Assistance Center then attempts to locate the mbrace system. The Mercedes-Benz Customer Assistance Center contacts you and the local law enforcement agency if the vehicle is located. However, only the law enforcement agency is informed of the location of the vehicle.

  - If the anti-theft alarm system is active for longer than 30 seconds, mbrace automatically informs the Mercedes-Benz Customer Assistance Center.

**Rear spoiler**

The rear spoiler improves the handling of the vehicle. It adapts the vehicle’s aerodynamics to the operating conditions, dependent on the speed of the vehicle.

The rear spoiler improves the handling of the vehicle. It adapts the vehicle’s aerodynamics to the operating conditions, dependent on the speed of the vehicle.
Extending and retracting the rear spoiler manually

You can extend and retract the rear spoiler manually for cleaning.

⚠️ **WARNING**
During manual retraction of the rear spoiler, make sure that nobody becomes trapped. If there is a danger of someone becoming trapped, release the rear spoiler button to pause retraction. The rear spoiler is then extended again.

Never leave children unsupervised in the vehicle. They could unintentionally retract the extended rear spoiler. Someone could then become trapped and seriously injured.

⚠️ Do not enter an automatic car wash with the rear spoiler extended. Otherwise, the rear spoiler may be damaged.

Only extend the rear spoiler in order to clean it by hand. Retract it again when you have finished cleaning it.

▷ Close the trunk lid.
▷ Select key position 2 with the Start/Stop button.

▷ **To extend**: press button 1.

The rear spoiler is extended.

Button 1 flashes until the rear spoiler has extended and then lights up in red.

▷ **To retract**: press and hold button 1 until the rear spoiler is completely retracted.

Button 1 flashes until the rear spoiler has retracted and then goes out.

**Rear Spoiler retracts manually**
appears in the display.

ℹ️ If you release button 1 while retracting the rear spoiler, it extends again automatically.
Problems with the rear spoiler

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ▶ Solutions</th>
</tr>
</thead>
</table>
| The rear spoiler stops before reaching the end position when retracting manually. | You have opened the trunk lid while manually retracting the rear spoiler.  
▶ Close the trunk lid.  
The rear spoiler extends or, if you press and hold the button (1), continues retracting. |
| The rear spoiler stops before reaching the end position when retracting/extending manually. | You have switched off the ignition.  
▶ Switch on the ignition again.  
▶ Press button (1) to extend/retract the rear spoiler.  
The rear spoiler extends/retracts. |
| The rear spoiler cannot be retracted again after manually extending it. | You have opened the trunk lid while manually extending the rear spoiler.  
▶ Close the trunk lid. |
| The rear spoiler does not extend or retract automatically. | The rear spoiler’s movement is blocked, e.g. by an object jammed between the body and the rear spoiler.  
▶ Remove the object. |

Garage door opener

Important safety notes

The HomeLink® garage door opener integrated in the rear-view mirror allows you to operate up to three different door and gate systems.

Certain garage door drives are incompatible with the integrated garage door opener. If you experience difficulties programming the integrated garage door opener, contact an authorized Mercedes-Benz Service center.

Alternatively, you can call the following telephone assistance services:
- **USA**: Mercedes-Benz Customer Assistance Center at 1-800-FOR-MERCEDES
- **Canada**: Customer Service at 1-800-387-0100

**WARNING**
Before programming the integrated remote control to a garage door opener or gate operator, make sure people and objects are out of the way of the device to prevent potential harm or damage. When programming a garage door opener, the door moves up or down. When programming a gate operator, the gate opens or closes.

Do not use the integrated remote control with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards.

When programming a garage door opener, park vehicle outside the garage.
Do not run the engine while programming the integrated remote control. Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death.

USA only:
this device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.
Any unauthorized modification to this device could void the user's authority to operate the equipment.
FCC ID: CB2HMIHL4

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.
Any unauthorized modification to this device could void the user's authority to operate the equipment.
IC: 279B-HMIHL4

Programming the integrated garage door opener on the rear-view mirror

Programming

WARNING
Only press the button on the integrated garage door opener if there are no persons or objects present within the sweep of the garage door. Persons could otherwise be injured as the door moves.

Integrated garage door opener on the rear-view mirror
Garage door remote control ⑤ is not part of the integrated garage door opener.
► Before programming for the first time, clear the memory of the integrated garage door opener (► page 215).
► Turn the SmartKey to position 2 in the ignition lock.
► Press and hold button ② or ④ on the integrated garage door opener.
Indicator lamp ① starts to flash yellow after a short period.
► Indicator lamp ① immediately flashes yellow the first time button ②, ③ or ④ is programmed. If the button selected has already been programmed, indicator lamp ① only starts flashing yellow after 10 seconds have elapsed.
► Release button ②, ③ or ④.
► Point remote control ⑤ at buttons ② and ④ on the rear-view mirror at a distance from 2 to 8 inches (5 to 20 cm)
The required distance between remote control ⑤ and the integrated garage door opener depends on the garage door drive system. You might require several attempts. You should test every position for at least 25 seconds before trying another position.
Press and hold button 6 on remote control 5 until indicator lamp 1 lights up green. The programming has been successful if indicator lamp 1 lights up or flashes green.

Release button 2, 3 or 4 on the integrated garage door opener and button 6 on garage door remote control 5.

If indicator lamp 1 lights up red:

- Repeat the programming operation for the corresponding button on the rear-view mirror. When doing so, vary the distance between remote control 5 and the rear-view mirror.

If the indicator lamp flashes green after successful programming, the garage door system is operating on a rolling code. After programming, you must synchronize the garage door opener integrated in the rear-view mirror with the receiver of the garage door system.

**Synchronizing the rolling code**

Your vehicle must be within range of the garage or gate opener drive. Make sure that neither your vehicle nor any persons/objects are present within the sweep of the door or gate.

Observe the safety notes when performing the rolling code synchronization (> page 212).

- Turn the SmartKey to position 2 in the ignition lock.
- Press the programming button of the door or gate drive (see the door or gate drive operating instructions, e.g. under "Programming of additional remote controls").

Usually, you now have 30 seconds to initiate the next step.

- Press the previously programmed button 2, 3 or 4 of the integrated garage door opener repeatedly until the door starts to move. The rolling code synchronization is then complete.

**Notes on programming the remote control**

Canadian radio frequency laws require a "break" (or interruption) of the transmission signals after broadcasting for a few seconds. Therefore, these signals may not last long enough for the integrated remote control. The signal is not recognized during programming. Comparable with Canadian law, some U.S. garage door openers are designed to "time-out" in the same manner.

Proceed as follows:

- if you live in Canada.
- if you have difficulties programming the garage door opener (regardless of where you live) when using the programming steps.

- Press and hold one of the buttons 2 to 4 on the integrated garage door opener. Indicator lamp 1 starts to flash yellow after a short period.
- Release the switch.
- Press button 6 of garage door remote control 5 for two seconds, then release it for two seconds.
- Press button 6 again for two seconds.
- Repeat this sequence on button 6 of remote control 5 until indicator lamp 1 lights up green. Repeat the process if indicator lamp 1 turns red.
- Continue with the other programming steps (see above).
Problems when programming

If you are experiencing problems programming the integrated garage door opener on the rear-view mirror, take note of the following instructions:

• Check remote control frequency of garage door drive remote control. This is usually located on the back of the remote control.
  The integrated garage door opener is compatible with devices that have units which operate in the frequency range of 280 to 390 MHz.
• Change the batteries in garage door remote control. This increases the likelihood that garage door remote control will send a strong and precise signal to the integrated garage door opener in the rear-view mirror.
• When programming, hold remote control at varying distances and angles from the button which you are programming. Try various angles at a distance of between 2 to 12 inches (5 to 30 cm) or at the same angle but at varying distances.
• If another remote control for the same garage door drive is available, repeat the same programming steps with this remote control. Before performing these steps, make sure that new batteries have been installed in garage door drive remote control.
• Note that some remote controls only transmit for a limited amount of time (the indicator lamp on the remote control goes out). Press button on remote control before transmission ends.
• Align the antenna cable of the garage door opener unit. This can improve signal reception/transmission.

Opening/closing the garage door

After it has been programmed, the integrated garage door opener performs the function of the garage door system remote control.

Please also read the operating instructions for the garage door system.

➤ Turn the SmartKey to position 2 in the ignition lock.
➤ Press one of the buttons 2, 3 or 4; whichever one is programmed to operate the garage door.
Garage door system with a fixed code: indicator lamp lights up green.
Garage door system with a rolling code: indicator lamp flashes green.

The transmitter will transmit a signal for as long as the button is pressed. The transmission is halted after a maximum of ten seconds and indicator lamp flashes yellow. Press button 2, 3 or 4 again if necessary.

Clearing the memory of the integrated garage door opener on the rear-view mirror

➤ Turn the SmartKey to position 2 in the ignition lock.
➤ Press buttons 2 and 4.
The indicator lamp lights up yellow.
➤ Press and hold buttons 2 and 4 until the indicator lamp turns green.

Make sure that you clear the memory of the integrated garage door opener before selling the vehicle.

Charge maintenance socket

The battery may drain if the vehicle is left stationary for long periods. In this case, Mercedes-Benz recommends attaching the trickle charger to the charge maintenance socket.
The charge maintenance socket is designed solely for connecting a trickle charger. A trickle charger can be obtained from an authorized Mercedes-Benz Center, for example.
Switch the ignition off.
Open the trunk lid.
Connect the cable provided in the trunk to the trickle charger.
Connect the trickle charger to charge maintenance socket. Consult the manufacturer’s operating instructions on how to do so.

A trickle charger connected to charge maintenance socket only maintains the current charge level of the vehicle’s electrical system battery. If the vehicle’s electrical system battery is discharged, it needs to be charged with a battery charger. You will find further information on charging the battery on page 240.

> Slide the seat backwards.
> **To install:** place the floormat in position.
> Press studs onto retainers.
> **To remove:** pull the floormat off retainers.
> Remove the floormat.

---

**Floor mat on the driver’s side**

**WARNING**
Whenever you are using a floormat, make sure there is enough clearance and that the floormat is securely fastened.
The floormat should always be securely fastened using the fastening equipment.
Before driving off, check that the floormat is securely in place and adjust it if necessary. A loose floormat could slip and hinder proper functioning of the pedals.
Do not place several floormats on top of each other as this may impair pedal movement.

Maintenance .......................................... 222
Care ....................................................... 223
Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (> page 21).

Engine compartment

Hood

Opening the hood

WARNING
Do not pull the release lever while the vehicle is in motion. Otherwise, the hood could be forced open by passing air flow. This could cause the hood to come loose and injure you and/or others.

WARNING
Do not open the hood when the engine is overheated. You could be seriously injured. Observe the coolant temperature gauge to determine whether the engine may be overheated. If you see flames or smoke coming from the engine compartment, move away from the vehicle. Wait until the engine has cooled. If necessary, call the fire department.

WARNING
There is a risk of injury if the hood is open, even if the engine is not running. Some engine components can become very hot. To avoid the risk of burns, only touch those components described in the Operator’s Manual and observe the relevant safety notes.

WARNING
To help prevent personal injury, stay clear of moving parts when the hood is open and the engine is running. The radiator fan may continue to run for approximately 30 seconds or may even restart after the engine has been turned off. Stay clear of fan blades.

WARNING
The engine is equipped with a transistorized ignition system. Because of the high voltage, it is dangerous to touch any components (ignition coils, spark plug sockets, diagnostic socket) of the ignition system:

- with the engine running
- while starting the engine
- when the ignition is switched on and the engine is turned manually

Make sure that the windshield wipers are switched off.

WARNING
The windshield wipers and wiper linkage could be set in motion. When the hood is open, you or others could be injured by the wiper linkage. Make sure that the windshield wipers are switched off. When using KEYLESS-GO, make sure that no ignition position is selected. All indicator lamps in the instrument cluster must be off.

Make sure that the windshield wipers are switched off.

Hood release lever in driver's footwell
Pull release lever ① for the hood. The hood is released.

Make sure that the windshield wipers are not folded away from the windshield. You could otherwise damage the windshield wipers or the hood.

Reach into the gap, pull hood catch handle ② up and lift the hood.

Closing the hood

**WARNING**
When closing the hood, use extreme caution not to catch hands or fingers. Be careful that you do not close the hood on anyone. Make sure the hood is securely engaged before driving off. Do not continue driving if the hood can no longer engage after an accident, for example. The hood could otherwise come loose while the vehicle is in motion and injure you and/or others.

Lower the hood and let it fall from a height of approximately 8 inches (20 cm).
Check that the hood has engaged properly. If the hood can be raised slightly, it is not properly engaged. Open it again and close it with a little more force.

---

### Engine oil

**Notes on the oil level**
Depending on the driving style, the vehicle consumes up to 0.9 US qts (0.8 l) of oil over a distance of 600 miles (1000 km). The oil consumption may be higher than this when the vehicle is new or if you frequently drive at high engine speeds.

**Checking the oil level using the oil dipstick**
When checking the oil level:

- park the vehicle on a level surface.
- the engine should be switched off for approximately five minutes if the engine is at normal operating temperature.

Unscrew and remove oil filler cap ① with the integrated dipstick.
Wipe the oil dipstick.
Screw oil filler cap ① back all the way to the stop.
Unscrew oil filler cap ① again and read the dipstick.
The oil level is correct if the level is between MIN mark ③ and MAX mark ②.
Add oil if necessary.
Adding engine oil

⚠️ Environmental note
When adding oil, take care not to spill any. If oil enters the soil or waterways, it is harmful to the environment.

⚠️ Use only engine oils and oil filters that have been approved for vehicles equipped with a service system. A list of the engine oils and oil filters tested and approved in accordance with the Mercedes-Benz Specifications for Service Products can be called up by visiting http://www.mbusa.com (USA only). More information about tested and approved engine oils and oil filters is available from any authorized Mercedes-Benz Center.

Damage to the engine or exhaust system is caused by the following:
- using engine oils and oil filters which have not been specifically approved for the service system.
- replacing the engine oil or oil filter after the replacement interval required by the service system has elapsed.
- using engine oil additives.

► Unscrew and remove oil filler cap 1 with the integrated dipstick.
► Add the amount of oil required.

⚠️ Do not add too much oil. If the oil level is above the "max" mark on the dipstick, too much oil has been added. This can lead to damage to the engine or the catalytic converter. Have excess oil siphoned off.

► Replace cap 1 on the filler neck and tighten clockwise. Ensure that the cap locks into place securely.

You will find further information about engine oil in the "Technical data" section (> page 282).

Checking and adding other service products

Checking the coolant level

⚠️ WARNING
In order to avoid any potentially serious burns:
- use extreme caution when opening the hood if there are any signs of steam or coolant leaking from the cooling system, or if the coolant temperature display indicates that the coolant is overheated.
- do not remove the pressure cap on the coolant reservoir if the coolant temperature is above 158 °F (70 °C). Allow the engine to cool down before removing the cap. The coolant reservoir contains hot fluid and is under pressure.
- using a rag, slowly turn the cap approximately 1/2 turn to relieve excess pressure. If opened immediately, scalding hot fluid and steam will be blown out under pressure.
- do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts.

Only check the coolant level when the vehicle is on a level surface and the engine has cooled down.

► Set the Start/Stop button to key position 2.
► Check the coolant temperature display in the "AMG" menu (> page 160). The coolant temperature must be below 158 °F (70 °C).
- Slowly turn cap 1 half a turn counter-clockwise and allow excess pressure to escape.
- Turn cap 1 further counter-clockwise and remove it.
  If the coolant is at the level of the marker bar in the filler neck when cold, there is enough coolant in coolant expansion tank 2.
  If the coolant is approximately 0.6 in (1.5 cm) above the marker bar in the filler neck when warm, there is enough coolant in coolant expansion tank 2.
- If necessary, add coolant that has been tested and approved by Mercedes-Benz.
- Replace cap 1 and turn it clockwise as far as it will go.

You will find further information about coolant in the "Technical data" section (page 283).

**Windshield washer system and headlamp cleaning system**

The washer fluid reservoir is used for both the windshield washer system and the headlamp cleaning system.

- Vehicle components and their service products must match. You should, therefore, only use products that have been tested and approved by Mercedes-Benz. Information on tested and approved products can be obtained at any authorized Mercedes-Benz Center or on the Internet at [http://www.mbusa.com](http://www.mbusa.com) (USA only).

**WARNING**

Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite and burn. You could be seriously burned.

- At temperatures below freezing: always fill the washer fluid reservoir with a mix of water and windshield washer concentrate (e.g. MB WinterFit). There is otherwise a risk of damaging the windshield washer system/headlamp cleaning system.
- Only use washer fluid concentrate which is suitable for plastic lenses. Unsuitable washer fluid concentrate could damage the plastic lenses of the headlamps.
- Do not add distilled or de-ionized water to the washer fluid container. Otherwise, the level sensor may be damaged.
- Add windshield washer concentrate, e.g. MB SummerFit, to the washer fluid all year round.

- Mix the windshield washer fluid in a container beforehand.
- **At temperatures above freezing:** fill the washer fluid reservoir with a mix of water and windshield washer concentrate (e.g. MB SummerFit).
- **At temperatures below freezing:** fill the washer fluid reservoir with a mix of water and windshield washer concentrate (e.g. MB WinterFit). Adapt the mixing ratio to the
outside temperature. For information on the mixing ratio (page 284).

- **To open**: pull cap ❼ upwards by the tab.
- **Add the premixed washer fluid**.
- **To close**: press cap ❼ onto the filler neck until it engages.

### Maintenance

#### Service interval display

#### Service messages

Information on the type of service and service intervals (see separate Maintenance Booklet).

You can obtain further information from an authorized Mercedes-Benz Center or at http://www.mbusa.com (USA only).

The service interval message informs you of the next service due date.

If a service due date has been exceeded, you also hear a warning tone.

The multifunction display shows a service message for several seconds, e.g.:

- **Next service A in .. days**
- **Service A due**
- **Service A overdue by .. days**

The letter indicates which service is due. A stands for a minor service and B for a major service. A number or another letter may be displayed after the letter. This figure indicates any necessary additional maintenance work to be performed.

You can obtain further information from an authorized Mercedes-Benz Center.

The service interval display does not take into account any periods of time during which the battery is disconnected.

Maintaining the time-dependent service schedule:

- Note down the service due date displayed in the multifunction display before disconnecting the battery.

or

- Subtract the battery disconnection periods from the service date shown on the display after reconnecting the battery.

ℹ️ The service interval display does not provide any information regarding the engine's oil level. Observe the notes on the engine oil level (page 219).

#### Hiding a service message

- Press the ④ or ⑤ button on the steering wheel.

#### Displaying service messages

- Switch on the ignition.

- Press the ④ or ⑥ button on the steering wheel to select the Serv. menu.

- Press the ⑥ or ⑦ button to select the ASSYST PLUS submenu and confirm with ⑤.

  The service due date appears in the multifunction display.

#### Please bear the following in mind

**Resetting the service interval display**

A qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, will reset the service interval display after the necessary service work has been carried out.

Further information, on maintenance for example, can be obtained at an authorized Mercedes-Benz Center or directly from Mercedes-Benz.

⚠️ If the service interval display has been reset unintentionally, have the setting corrected at a Mercedes-Benz Center.
Have service work carried out as described in the Maintenance Booklet. This may otherwise lead to increased wear and damage to the major assemblies or the vehicle.

**Driving abroad**
An extensive Mercedes-Benz Service network is also available in other countries. You can obtain further information from any authorized Mercedes-Benz Center.

### Care

*Notes on care*

Regular care of your vehicle is a condition for retaining the quality in the long term. Use care products and cleaning agents recommended and approved by Mercedes-Benz.

**WARNING**
Many cleaning products can be hazardous. Some are poisonous, others are flammable. Always follow the instructions on the particular container. Always open your vehicle's doors or windows when cleaning the inside.

Never use fluids or solvents that are not designed for cleaning your vehicle.
Always lock away cleaning products and keep them out of reach of children.

For cleaning your vehicle, do not use any of the following:
- dry, rough or hard cloths
- abrasive cleaning agents
- solvents
- cleaning agents containing solvents

Do not scrub.
Do not touch the surfaces or protective films with hard objects, e.g. a ring or ice scraper. You could otherwise scratch or damage the surfaces and protective film.

### Environmental note

Dispose of empty packaging and cleaning cloths in an environmentally responsible manner.

**WARNING**
Do not park the vehicle for an extended period right after cleaning it, particularly after having cleaned the wheels with wheel cleaner. Wheel cleaners could cause increased corrosion of the brake discs and brake pads/linings. For this reason, you should drive for a few minutes after cleaning. Braking heats the brake discs and brake pads, thus drying them. The vehicle can then be parked.

### Exterior care

**Automatic car wash**

**WARNING**
Braking efficiency is reduced after washing the vehicle. This could cause an accident. After the vehicle has been washed, brake firmly while paying attention to the traffic conditions. This will warm up the brake discs, thereby drying them more quickly. After washing the vehicle, drive particularly carefully until the brakes are dry and braking power has been fully restored.

You can wash the vehicle in an automatic car wash from the very start.

If the vehicle is very dirty, pre-wash it before cleaning it in an automatic car wash.

**WARNING**
Never clean your vehicle in a Touchless Automatic Car Wash as these use special cleaning agents. These cleaning agents can damage the paintwork or plastic parts.

**WARNING**
When washing your vehicle in a tow-through car wash, use the SmartKey instead of the Start/Stop button. Start the engine using the SmartKey. Move the transmission to N with the E-SELECT lever. Use the SmartKey to switch the engine off again and then turn the
SmartKey to position 2. Make sure that you then leave the SmartKey in position 2. You may otherwise damage the vehicle, the transmission or the car wash. Check the transmission position in the instrument cluster.

Use the E-SELECT lever to shift the transmission to N before switching the engine off. If you open the driver's or front-passenger door, the transmission remains in this position for up to 30 minutes if the SmartKey is in the ignition, even if the engine is switched off. If you do not shift the transmission to N using the E-SELECT lever beforehand, it shifts automatically to parking position P and locks the wheels if the driver's or front-passenger door is opened and the engine is switched off. This may damage the vehicle, the transmission or the car wash.

Observe the information on maneuvering (> page 129).

Before driving into an automatic car wash, make sure that it is suitable for the dimensions of the vehicle. In particular, make sure that:

- there is enough ground clearance between the vehicle underbody and the guide rails of the automatic car wash.
- the clearance width of the automatic car wash is sufficient, particularly the width of the guide rails.
- you enter the automatic car wash straight and in the center of the guide rails in order to avoid damaging the tires or wheel rims.

Fold in the exterior mirrors before the vehicle is washed. The exterior mirrors could otherwise be damaged.

Make sure that:

- the side windows are fully closed.
- the ventilation/heating is switched off (the OFF button has been pressed/the airflow control is set to position 0).
- that the windshield wiper switch is in position 0.

Otherwise, the vehicle might be damaged.

In portal car washes, the windshield wipers may be moved up the windshield by the cleaning brushes when the ignition is switched off.

Set the Start/Stop button to key position 2 to reset the windshield wipers to their original position.

Vehicles with a matte finish:

Do not use wash programs with a hot wax treatment under any circumstances.

After using an automatic car wash, wipe off wax and drying agents from the windshield and the wiper blades. This will prevent smears and reduce wiping noises caused by residue on the windshield.

**Power washers**

**WARNING**

Using power washers with circular-jet nozzles (dirt grinders) may cause damage to the vehicle, in particular to the tires.

Using damaged tires results in an increased risk of accident. A sudden loss of tire pressure while you are driving may cause you to lose control of your vehicle, cause an accident and injure yourself and others.

Maintain a minimum distance of 11.8 in (30 cm) between the vehicle and the power washer nozzle. Information about the correct distance is available from the equipment manufacturer.

Move the power washer nozzle around when cleaning your vehicle.
Do not aim directly at any of the following:

- tires
- door gaps, roof gaps, joints, etc.
- electrical components
- battery
- connectors
- lights
- seals
- trim elements
- ventilation slots

Damaged seals or electrical components can lead to leaks or failures.

Cleaning the wheels

Do not use acidic wheel cleaning products to remove brake dust. This could damage wheel bolts and brake components.

Do not park the vehicle for an extended period right after cleaning it, particularly after having cleaned the wheels with wheel cleaner. Wheel cleaners could cause increased corrosion of the brake discs and brake pads/linings. For this reason, you should drive for a few minutes after cleaning. Braking heats the brake discs and brake pads, thus drying them. The vehicle can then be parked.

Cleaning the paintwork

Scratches, corrosive deposits, areas affected by corrosion and damage caused by inadequate care cannot always be completely repaired. In such cases, visit a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

- Remove impurities immediately, where possible, whilst avoiding rubbing too hard.
- Soak insect remains with insect remover and rinse off the treated areas afterwards.
- Soak bird droppings with water and rinse off the treated areas afterwards.
- Remove coolant, brake fluid, tree resin, oils, fuels and greases by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Use tar remover to remove tar stains.
- Use silicone remover to remove wax.

Do not affix:

- stickers
- films
- magnetic plates or similar items to painted surfaces. You could otherwise damage the paintwork.

If water no longer forms "beads" on the paint surface, use the paint care products recommended and approved by Mercedes-Benz. This is the case approximately every three to five months, depending on the climate conditions and the care product used.

If dirt has penetrated the paint surface or the paint has become dull, the paint cleaner recommended and approved by Mercedes-Benz should be used.

Do not use these care products in the sun or on the hood while the hood is hot.

- Use a suitable touch-up stick, e.g. MB Touch-Up Stick, to correct smaller areas of paint damage quickly and provisionally.

Matte finish care

If your vehicle has a clear matte finish, observe the following instructions in order to avoid damage to the paintwork due to incorrect care.

These notes also apply to light alloy wheels with a clear matte finish.

Never polish the vehicle or the light alloy wheels. Polishing causes the finish to shine.
The following may cause the paint to become shiny and thus reduce the matte effect:

- Vigorous rubbing with unsuitable materials.
- Frequent use of car washes.
- Washing the vehicle in direct sunlight.

Never use paint cleaner, buffing or polishing products such as gloss preserver (wax). These products are only suitable for high-gloss surfaces. Their use on vehicles with matte finish leads to considerable surface damage (shiny, spotted areas).

If wax comes into contact with the painted surface by accident, remove it immediately with commercially available petroleum ether. Do so carefully and do not apply too much pressure to the painted surface. Ensure that no resinous, greasy or oily substances come into contact with the paint, as these can leave a residue. If such substances do come into contact with the painted surface accidentally, remove these immediately with commercially available petroleum ether. Do so carefully and do not apply too much pressure to the painted surface.

Tar stains or marks on the painted surface can be removed with a commercially available tar remover. Do so carefully and do not apply too much pressure to the painted surface.

Always have paintwork repairs carried out at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Do not use wash programs with a hot wax treatment under any circumstances.

The vehicle should preferably be washed by hand using a soft sponge, car shampoo and plenty of water.

Use only insect remover and car shampoo from the range of recommended and approved Mercedes-Benz care products.

Cleaning the Roadster soft top

- **Light soiling:** you can clean the soft top while it is dry or rinse it with clear water.

- **Normal to heavy soiling:** clean the soft top with a brush and clear water. Clean stains and other dirt with a brush and soft top cleaning agents that have been recommended and approved by Mercedes-Benz. Always brush from front to back, following the grain of the fabric.

Never use any of the following to clean the soft top:

- gasoline
- thinner
- tar or stain remover
- other organic solvents

Remove bird droppings immediately as they are corrosive and, therefore, can make the soft-top fabric leak. Do not use high-pressure cleaning equipment to clean the vehicle. Do not use sharp-edged equipment to remove ice and snow.

Frequent cleaning reduces the soft top's resistance to dirt.

To restore this resistance to dirt, clean the soft top using soft top cleaning agents that have been recommended and approved by Mercedes-Benz.

Incorrect cleaning and care, as well as aging, can cause the soft-top seams to leak. Have the soft-top seams sealed at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

Cover the soft top appropriately if you plan to leave the vehicle outside for a long period of time.

Cleaning the windows

**WARNING**

Switch the windshield wipers off before cleaning the windshield or wiper blades. Press the Start/Stop button repeatedly until all
indicator lamps in the instrument cluster have gone off. The windshield wipers could otherwise move and injure you.

| ! | Only fold the windshield wipers away from the windshield when vertical. Otherwise, you will damage the hood. |
| ! | Clean the inside and outside of the windows with a damp cloth and a cleaning agent that is recommended and approved by Mercedes-Benz. |
| ! | Do not use dry cloths, abrasive products, solvents or cleaning agents containing solvents to clean the inside of the windows. Do not use hard objects to clean the insides of the windows, e.g. an ice scraper or ring. There is otherwise a risk of damaging the windows. |
| ! | Clean the water drainage channels of the windshield and the rear window at regular intervals. Deposits such as leaves, petals and pollen may under certain circumstances prevent water from draining away. This can lead to corrosion damage and damage to electronic components. |

**Cleaning the wiper blades**

| ! | Switch off the engine. |
| ! | Take your foot off the brake pedal. |
| ! | Set the windshield wipers to the position on the combination switch. |
| ! | Press the Start/Stop button repeatedly until the windshield wipers start. |
| ! | When the wiper arms have reached a vertical position: press the Start/Stop button. |
| ! | Fold the wiper arm away from the windshield until it engages. |
| ! | Set the wiper blade at right angles to the wiper arm. |
| ! | Carefully clean the wiper blades with a damp cloth. |
| ! | Fold the windshield wiper arms back again before switching on the ignition. |
| ! | Hold the wiper arm securely when folding back. The windshield could be damaged if the wiper arm smacks against it suddenly. |

**Cleaning the exterior lighting**

| ! | Clean the plastic lenses of the exterior lighting using a wet sponge and a mild cleaning agent, e.g. Mercedes-Benz car shampoo or cleaning cloths. |
| ! | Only use cleaning agents or cleaning cloths which are suitable for plastic light lenses. Unsuitable cleaning agents or cleaning cloths could scratch or damage the plastic light lenses. |
Cleaning the sensors

Clean sensors of the driving systems with water, car shampoo and a soft cloth.

When cleaning the sensors with a power washer, maintain a distance between the vehicle and the nozzle of the power washer of at least 11.8 in (30 cm). Information about the correct distance is available from the equipment manufacturer.

Cleaning the rear view camera

Use clear water and a soft cloth to clean camera lens.

Do not clean the camera lens and the area around the rear view camera with a power washer.

Cleaning the exhaust pipes

Impurities combined with the effects of road grit and corrosive environmental factors may cause flash rust to form on the surface. You can restore the original shine of the exhaust tail pipe by cleaning it regularly, especially in winter and after washing.

Do not clean the exhaust tail pipes with alkaline-based cleaning agents, such as wheel cleaner.

Clean the exhaust tail pipes with a chrome care product tested and approved by Mercedes-Benz.

Interior care

Cleaning the display

For cleaning, do not use any of the following:
- alcohol-based thinner or gasoline
- abrasive cleaning agents
- commercially-available household cleaning agents

These may damage the display surface. Do not put pressure on the display surface when cleaning. This could lead to irreparable damage to the display.

Before cleaning the display, make sure that it is switched off and has cooled down.

Clean the display surface using a commercially available microfiber cloth and TFT/LCD display cleaner.

Dry the display surface using a dry microfiber cloth.

Cleaning the plastic trim

WARNING
When cleaning the steering wheel boss and dashboard, do not use cockpit sprays or cleaning agents containing solvents. Cleaning agents containing solvents cause the surface to become porous, and as a result, plastic
parts may break away and be thrown around the interior when an air bag is deployed, which may result in severe injuries.

Do not affix the following to plastic surfaces:
- stickers
- films
- scented oil bottles or similar items
You can otherwise damage the plastic.

Do not allow cosmetics, insect repellent or sunscreen to come into contact with the plastic trim. This maintains the high-quality look of the surfaces.

Wipe the plastic trim with a damp, lint-free cloth, e.g. a microfiber cloth.

Heavy soiling: use car care and cleaning products recommended and approved by Mercedes-Benz.

The surface may change color temporarily. Wait until the surface is dry again.

Cleaning genuine wood and trim elements

Do not use solvent-based cleaning agents such as tar remover, wheel cleaners, polishes or waxes. There is otherwise a risk of damaging the surface.

Do not use chrome polish on trim pieces. The trim pieces have a chrome look but are mostly made of anodized aluminum and can lose their shine if chrome polish is used. Use a damp, lint-free cloth instead when cleaning the trim pieces.

If the chrome-plated trim pieces are very dirty, you can use a chrome polish. If you are unsure as to whether the trim pieces are chrome-plated or not, consult an authorized Mercedes-Benz Center.

Wipe the wooden trim and trim pieces with a damp, lint-free cloth, e.g. a microfiber cloth.

Heavy soiling: use car care and cleaning products recommended and approved by Mercedes-Benz.

Cleaning the seat covers

Do not use microfiber cloths to clean genuine leather, artificial leather or Alcantara® covers. If used often, these can damage the cover.

Clean genuine leather covers with a damp cloth, then wipe the covers down with a dry cloth. Make sure that the leather does not become soaked. Only use leather care agents that have been tested and approved by Mercedes-Benz. You can obtain these from any authorized Mercedes-Benz Center.

Note that regular care is essential to ensure that the appearance and comfort of the covers is retained over time.

Cleaning the seat belts

Do not clean the seat belts using chemical cleaning agents. Do not dry the seat belts by warming them above 176 °F (80 °C) or placing them in direct sunlight.

WARNING
Do not bleach or dye seat belts as this may severely weaken them. In a crash, they may not be able to provide adequate protection.

Use clean, lukewarm water and soap solution.

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (> page 21).

Where will I find...?

First-aid kit

The first-aid kit is located in the left-hand stowage compartment in the trunk.

Open the trunk lid.

Turn fastener 2 in the direction of the arrow.

Open stowage compartment 1.

Open the Velcro fastener and remove the first aid kit.

Check the expiration date on the first-aid kit at least once a year. Replace the contents if necessary, and replace missing contents.

Vehicle tool kit

Wheel-change tool kit and jack

The wheel-change tool kit and the jack are located in the left-hand stowage space in the trunk.

Take out the jack and lug wrench 1 underneath it.

TIREFIT kit, wheel chock, alignment bolt and gloves

The TIREFIT kit, wheel chock, alignment bolt and gloves are located in the left-hand stowage compartment in the trunk.

Left-hand stowage space in trunk floor

1 Lug wrench

2 Towing eye

Pull the loop on the floor covering and fold the floor covering forward.

16 Not included in the scope of delivery in all countries.
Remove the jack from the left-hand stowage space in the trunk to allow the stowage compartment to be opened.

Turn fastener 2 in the direction of the arrow.

Open stowage compartment 1.

Remove the TIREFIT kit, wheel chock, alignment bolt and gloves.

---

**Flat tire**

**Preparing the vehicle**

Your vehicle is equipped with a TIREFIT kit.

- Stop the vehicle on solid, non-slippery and level ground, as far away as possible from traffic.
- Switch on the hazard warning lamps.
- Apply the electric parking brake manually (page 130).
- Bring the front wheels into the straight-ahead position.
- Shift the transmission to P using the button on the center console.
- Switch off the engine.
- Remove the SmartKey from the ignition lock.
- All occupants must get out of the vehicle. Make sure that they are not endangered as they do so.
- Make sure that no one is near the danger area while a wheel is being changed. Anyone who is not directly assisting in the wheel change should, for example, stand behind the barrier.
- Get out of the vehicle. Pay attention to traffic conditions when doing so.
- Close the driver’s door.

---

**TIREFIT kit**

**Using the TIREFIT kit**

⚠️ **WARNING**

TIREFIT is a limited repair device. TIREFIT cannot be used for cuts or punctures larger than approximately 0.16 in (4 mm) and tire damage caused by driving with extremely low tire inflation pressure, or on a flat tire, or a damaged wheel. Do not drive the vehicle under such circumstances. Contact the nearest authorized Mercedes-Benz Center for assistance or call Roadside Assistance.

⚠️ **WARNING**

Take care not to allow the contents of TIREFIT to come in contact with hair, eyes or clothing. TIREFIT is harmful if inhaled, swallowed or absorbed through the skin - causes skin, eye and respiratory irritation. Any contact with eyes or skin should be flushed immediately with plenty of water. If clothing comes in contact with TIREFIT, change clothing as soon as possible. In case of allergic reaction or rash, consult a physician immediately.

⚠️ **WARNING**

Keep TIREFIT away from children. If swallowed, rinse mouth immediately with plenty of water and drink plenty of water. Do not induce vomiting. Consult a doctor immediately. Keep away from open flame or heat source.

You can use the TIREFIT kit to seal small punctures, particularly those in the tire tread. You can use TIREFIT at outside temperatures down to -40 °C.
Do not remove any foreign objects which have penetrated the tire, e.g. screws or nails.

Take the TIREFIT kit out of the trunk (> page 232).

Open the TIREFIT kit and remove "max. 80 km/h" sticker 3.

Affix sticker 6 within the driver’s field of vision.

If TIREFIT leaks out, allow it to dry. It can then be removed like a layer of film.

If you get TIREFIT on your clothing, have it cleaned as soon as possible with perchloroethylene.

Comply with the manufacturer’s safety instructions on the tire inflation compressor label and on the tire sealant bottle.

You will also find operating instructions 3 in the lid of the TIREFIT kit.

Pull the cable and filler hose 9 out of the housing.

Unscrew flanged cap 5.

Unscrew the cap from tire sealant bottle 1. Make sure that the aluminum film is not damaged when doing so.

Screw tire sealant bottle 1 clockwise tightly onto flange seal 10. This pierces the aluminum film.

Remove the cap from the valve on the faulty tire.

Make sure that pressure release screw 7 is closed.

Remove the dust protection cap from filler hose 9.

Screw the end of filler hose 9 onto tire valve 11.

Make sure that on/off switch 2 on the tire inflation compressor is set to 0.

Insert connector 4 into the 12 V cigarette lighter socket (> page 203).

Select key position 2 with the Start/Stop button (> page 115).

The battery discharges during tire inflation compressor usage. For this
reason, you should start the engine unless you are inflating the tire in an enclosed space.

Press on/off switch ② on the tire inflation compressor to 1.

The tire inflation compressor is switched on. The tire is inflated.

First, TIREFIT is pumped into the tire. The pressure can briefly rise to approximately 500 kPa (5 bar/73 psi).

Do not switch off the tire inflation compressor during this phase.

Let the tire inflation compressor run for a maximum of ten minutes. Afterwards, a tire pressure of at least 180 kPa (1.8 bar/26 psi) must be achieved.

Switch the tire inflation compressor off briefly to read the correct value from pressure gauge ⑥.

Do not operate the tire inflation compressor for longer than ten minutes at a time without a break. It may otherwise overheat.

The tire inflation compressor can be operated again once it has cooled down.

Tire pressure of at least 180 kPa (1.8 bar/26 psi) is reached

If the tire pressure is at least 180 kPa (1.8 bar/26 psi):

Press on/off switch ② on the tire inflation compressor to 0.

The tire inflation compressor is switched off.

Remove connector ④ from the 12 V socket.

Remove filler hose ② from tire valve ⑪ and re-install the dust protection cap. Screw the valve cap onto the valve again. Leave tire sealant bottle ① attached to the flange ⑩.

Stow the TIREFIT kit in a safe and accessible place in the vehicle.

Pull away immediately.

After use, excess TIREFIT may run out of the filler hose. This could cause stains.

WARNING
Do not exceed a vehicle speed of 50 mph (80 km/h). A TIREFIT repair is not designed to operate at higher speeds.

In this case TIREFIT cannot seal the tire properly.

Do not drive any further.

Contact the nearest authorized Mercedes-Benz Center for assistance or call Roadside Assistance.

If, after five minutes, a pressure of 180 kPa (1.8 bar/26 psi) has not been achieved:

Switch off the tire inflation compressor, remove it and drive the vehicle approximately 30 ft (10 m) forward or back. This distributes the TIREFIT more evenly.

Leave tire sealant bottle ① attached to the flange.

Pump up the tire again.

WARNING
If after five minutes a pressure of 180 kPa (1.8 bar/26 psi) cannot be achieved, the tire is too badly damaged to be repaired reliably using TIREFIT.
The sticker must be attached on the instrument cluster where it will be easily seen by the driver.

Vehicle handling characteristics of a TIREFIT repaired tire may change. Adapt your driving accordingly.

- Stop after driving for approximately ten minutes and check the tire pressure with the tire inflation compressor.

- On tires that are equipped with a tire pressure sensor (tire pressure monitor), the use of sealant can lead to error messages and incorrect displays. Therefore, use pressure gauge 6 in the TIREFIT kit to check and correct the tire pressure.

**WARNING**
If tire inflation pressure has fallen below 130 kPa (1.3 bar/26 psi) do not continue to drive the vehicle.

Park your vehicle safely away from the roadway and contact the nearest authorized Mercedes-Benz Center or Roadside Assistance.

Have the damaged tire replaced.

- Correct the tire pressure if it is at least 130 kPa (1.3 bar/20 psi) (for the required values see the Tire and Loading Information placard on the driver's side B-pillar or the tire pressure table inside the fuel filler flap).

To increase the tire pressure: switch on the tire inflation compressor.

To reduce the tire pressure: open release screw 7.

- Drive to the nearest workshop and have the tire changed there.
- Have the tire sealant bottle replaced as soon as possible at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

**Environmental note**
Have the used tire sealant bottle disposed of professionally, e.g. at an authorized Mercedes-Benz Center.

- Have the TIREFIT kit replaced every four years at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

**Changing a wheel and mounting the spare wheel**

**Preparing the vehicle**

- Prepare the vehicle as described (page 233).
- Bring the wheels into the straight-ahead position.
- Take the following objects from the left-hand stowage compartment and the left-hand stowage space in the trunk:
  - the lug wrench
  - the folding wheel chock
  - the jack
  - the alignment bolt
- Secure the vehicle to prevent it from rolling away.

**Securing the vehicle to prevent it from rolling away**

**WARNING**
Only jack up the vehicle on level ground or on slight inclines/declines. The vehicle could otherwise fall off the jack and injure you or others.
If your vehicle is equipped with a wheel chock, it can be found in the vehicle tool kit (› page 232).

The folding wheel chock is an additional securing measure to prevent the vehicle from rolling away, for example when changing a wheel.

Fold both plates upwards ①.
Fold out lower plate ②.
Guide the lugs on the lower plate fully into the openings in base plate ③.

Securing the vehicle on level ground

On level ground: place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.

Securing the vehicle on slight downhill gradients

On downhill gradients: place chocks or other suitable items in front of the wheels of the front and rear axle.

Raising the vehicle

**WARNING**
When jacking up the vehicle, only use the jack which has been specifically approved by Mercedes-Benz for your vehicle. The jack is designed exclusively for jacking up the vehicle at the jacking points built into both sides of the vehicle. The jack saddle must be placed centrally under the jacking point. The jack must always be vertical when in use, especially on inclines or declines.

The jack is intended only for lifting the vehicle briefly for wheel changes. It is not suited for performing maintenance work under the vehicle. To help avoid personal injury, use the jack only to lift the vehicle during a wheel change. Never get beneath the vehicle while it is supported by the jack. Keep hands and feet away from the area under the lifted vehicle. Always lower the vehicle onto sufficient capacity jackstands before working under the vehicle.

Always firmly engage the parking brake and block the wheels with wheel chocks or other sizable objects before raising the vehicle with the jack. Do not disengage the parking brake while the vehicle is raised.
Make sure that the ground on which the vehicle is standing and where you place the jack is solid, level and not slippery. If necessary, use a large underlay. On slippery surfaces, such as tiled floors, you should use a non-slip underlay, for example a rubber mat. Do not use wooden blocks or similar objects as a jack underlay. Otherwise, the jack may not be able to achieve its load-bearing capacity if it is not at its full height. Never start the engine when the vehicle is raised. Also observe the notes on the jack.

**WARNING**
The jack is designed exclusively for jacking up the vehicle at the jacking points. The jack saddle must be placed centrally under the jacking point. If you do not position the jack correctly in the jacking point, the vehicle can fall off the jack and seriously or fatally injure you or others.

![Image of vehicle with jack](image)

- **Position jack ³ at jacking point ².**
- **Make sure that the base of the jack is positioned directly under jacking point ².**
- **Turn crank ⁴ clockwise until jack ³ sits completely on jacking point ² and the base of the jack lies evenly on the ground.**
- **Turn crank ⁴ until the tire is raised a maximum of 1.2 inches (3 cm) off the ground.**

**Using lug wrench ¹, loosen the bolts on the wheel you wish to change by about one full turn. Do not unscrew the wheel bolts completely.**

The mounting for the jack is centered between the front and rear wheel housings (arrow).

**WARNING**
The jack is designed exclusively for jacking up the vehicle at the jacking points. The jack...
Removing a wheel

- Unscrew the uppermost wheel bolt completely.
- Screw alignment bolt ⑤ into the thread instead of the wheel bolt.
- Unscrew the remaining wheel bolts fully.

⚠️ Do not place wheel bolts in sand or on a dirty surface. The bolt and wheel hub threads could otherwise be damaged when you screw them in.

⚠️ AMG ceramic high performance compound brake system:
When detaching or attaching the wheel, the wheel rim may hit against the ceramic brake disc and damage it. For this reason, you should proceed carefully. Request the assistance of a second person or use a second alignment bolt.

- Remove the wheel.

Mounting a new wheel

⚠️ WARNING
Always replace wheel bolts that are damaged or rusted. Never apply oil or grease to wheel bolts. Damaged wheel hub threads should be repaired immediately. Do not continue to drive under these circumstances! Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

Incorrect wheel bolts or improperly tightened wheel bolts can cause the wheel to come off. This could cause an accident. Make sure to use the correct wheel bolts.

⚠️ WARNING
Only use genuine Mercedes-Benz wheel bolts. Other wheel bolts may come loose. Do not tighten the wheel bolts when the vehicle is raised. Otherwise, the vehicle could fall off the jack.

- Clean the wheel and wheel hub contact surfaces.

⚠️ To prevent damage to the paintwork, hold the wheel securely against the wheel hub while screwing in the first wheel bolt.
Place the wheel onto the alignment bolt and push it on.

Tighten the wheel bolts until they are finger-tight.

Unscrew the alignment bolt.

Tighten the last wheel bolt until it is finger-tight.

Lowering the vehicle

Turn the crank of the jack counterclockwise until the vehicle is once again standing firmly on the ground.

Place the jack to one side.

Tighten the wheel bolts evenly in a crosswise pattern in the sequence indicated (1 to 5). The tightening torque must be 96 lb-ft (130 Nm).

Turn the jack back to the out-of-use position and stow it in the trunk again with the rest of the wheel-changing tools.

Battery

Important safety notes

In order for the battery to achieve the maximum possible service life, it must always be sufficiently charged.

Have the battery checked regularly at a qualified specialist workshop, such as an authorized Mercedes-Benz Center.

Adhere to the service intervals indicated in the Maintenance Booklet or ask a qualified specialist workshop, such as an authorized Mercedes-Benz Center.

Have the battery charge checked more frequently if you use the vehicle mainly for short trips or if you leave it standing idle for a lengthy period.

To prevent damage from corrosion, only replace the battery with one that has a central ventilation cover.

Only replace a battery with a battery that has been recommended by Mercedes-Benz.

Consult an authorized Mercedes-Benz Center if you wish to leave your vehicle parked for a long period of time.

WARNING

Comply with safety precautions and take protective measures when handling batteries.

Risk of explosion

Fire, naked flames and smoking are prohibited when handling the battery.

Avoid creating sparks.

Battery acid is caustic.

Avoid contact with the skin, eyes or clothing.
Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse acid splashes off with clean water. Consult a doctor if necessary.

Wear eye protection.

Keep children away.

Observe this Operator's Manual.

**Environmental note**

Batteries contain dangerous substances. It is against the law to dispose of them with the household rubbish. They must be collected separately and recycled to protect the environment.

Dispose of batteries in an environmentally friendly manner. Return discharged batteries to a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, or to a special collection point for old batteries.

**WARNING**

Failure to follow these instructions can result in severe injury or death.

Never lean over batteries while connecting. You might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking etc.

**WARNING**

Do not place any metal objects on the battery as this could result in a short circuit.

Use leak-proof batteries only to avoid the risk of acid burns in the event of an accident.

Take care that you do not become statically charged, e.g. by wearing synthetic clothing or rubbing against textiles. For this reason, you also should not pull or push the battery over carpets or other synthetic materials.

Never touch the battery first. First, touch the outside body of the vehicle in order to release any possible electrostatic charges.

Do not rub the battery with rags or cloths. The battery could explode if touched due to electrostatic charge or due to spark formation.

**WARNING**

Switch off the engine and ensure that no ignition position has been selected before detaching the battery terminals. All indicator lamps in the instrument cluster must be off. Otherwise, you may destroy electronic components such as the alternator.

Like other batteries, the vehicle battery may discharge over time if you do not use the vehicle. In this case have the battery checked at a qualified specialist workshop, such as an authorized Mercedes-Benz Center. You can also charge the battery with a charger recommended by Mercedes-Benz. Contact an authorized Mercedes-Benz Center for more information.

The battery, breather hose and cover of the positive terminal clamp must be installed securely during operation.
Mercedes-Benz recommends that you do not carry out work on batteries yourself, e.g. removing or charging. Always have this work performed at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

If the battery power supply has been interrupted, e.g. if the battery has been reconnected, you must reset the function for automatically folding the exterior mirrors in/out by folding the mirrors out once (▷ page 90).

### Installation location of the battery

Your vehicle is equipped with a battery in the engine compartment. It is installed on the front bulkhead on the right-hand side of the vehicle when viewed in the direction of travel.

- Shift the transmission to P with the button in the center console.
- Deactivate all electrical consumers, e.g. radio, automatic climate control, etc.
- Make sure that the ignition is switched off. All indicator lamps in the instrument cluster must be off.
- Open the hood (▷ page 218).

### Charging the battery

#### WARNING

Never charge a battery still installed in the vehicle unless a battery charger unit approved by Mercedes-Benz is being used. Gases may escape during charging and cause explosions that may result in paint damage, corrosion or personal injury.

A battery charger unit specially adapted for Mercedes-Benz vehicles and tested and approved by Mercedes-Benz is available as an accessory. It permits the charging of the battery in its installed position. Contact an authorized Mercedes-Benz Center for further information and availability.

Charge the battery in accordance with the separate instructions for the battery charger.

#### WARNING

There is a risk of acid burns during the charging process due to the gases which escape from the battery. Do not lean over the battery during the charging process.

#### WARNING

Battery acid is caustic. Avoid contact with the skin, eyes or clothing.

Only charge the installed battery with a battery charger which has been tested and approved by Mercedes-Benz. These battery chargers allow the battery to be charged while still installed.

Only use battery chargers with a maximum charging voltage of 14.8 V.

- Open the hood (▷ page 218).
- Read the battery charger's operating instructions before charging the battery.
- Connect the battery charger to the positive terminal and earth point in the same order as when connecting the donor battery in the jump-starting procedure (▷ page 243).

**Further related subjects:**

- charging the battery (▷ page 242)
- jump-starting (▷ page 243)
Jump-starting

**WARNING**
Failure to follow these directions will cause damage to the electronic components, and can lead to a battery explosion and severe injury or death.

Never lean over batteries while connecting or jump starting. You might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water, and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking, etc.

Attempting to jump start a frozen battery can result in it exploding, causing personal injury.

Read all instructions before proceeding.

Avoid repeated and lengthy starting attempts. Otherwise, non-combusted fuel may damage the catalytic converter and create a risk of fire.

Do not use a rapid charging device to start the vehicle.

Make sure the jumper cables are not damaged.

Make sure the jumper cables are not touching any other metal objects when they are connected to the battery.

If your vehicle's battery is discharged, the engine can be jump-started from another vehicle or from a second battery using jumper cables.

Observe the following points:

- The battery is not accessible in all vehicles. If the other vehicle's battery is not accessible, jump-start the vehicle using a second battery or a jump-starting device.
- You may only jump-start the vehicle when the engine and catalytic converter are cold.
- Do not start the engine if the battery is frozen. Let the battery thaw first.
- Jump-starting may only be performed from batteries with a nominal voltage of 12 V.
- Only use jumper cables which have a sufficient cross-section and insulated terminal clamps.
- Make sure that the jumper cables cannot come into contact with parts, such as the pulley or the fan. These parts move when the engine is started and while it is running.
- If the battery is fully discharged, leave the battery that is being used to jump-start connected for a few minutes before attempting to start. This charges the empty battery a little.

Jumper cables and further information about jump-starting can be obtained from any authorized Mercedes-Benz Center, for example.

- Make sure that the two vehicles do not touch.
- Press the electric parking brake handle.
- Shift the transmission to P with the button in the center console.
- Deactivate all electrical consumers, e.g. radio, automatic climate control, etc.
- Open the hood (page 218).
Position number 6 identifies the charged battery of the other vehicle or an equivalent jump-starting device.

- Slide cover 5 of positive terminal 1 in the direction of the arrow.
- Connect positive terminal 1 on your vehicle to positive terminal 2 of donor battery 6 using the jumper cable, beginning with your own battery.
- Start the engine of the donor vehicle and run it at idling speed.
- Connect negative terminal 3 of donor battery 6 to earth point 4 of your vehicle using the jumper cable, connecting the jumper cable to donor battery 6 first.
- Start the engine.
- First, remove the jumper cable from earth point 4 and negative terminal 3, then from positive terminal 1 and positive terminal 2, each time disconnecting from the battery on your own vehicle first.
- Slide cover 5 of the positive terminal in the opposite direction of the arrow.
- Have the battery checked at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

**Towing and tow-starting**

**Important safety notes**

If the vehicle can no longer be driven because of an accident or breakdown, you have the following options:

- transporting the vehicle

As a rule, you should have the vehicle transported.

- towing the vehicle with the rear axle raised
  Only tow the vehicle with the rear axle raised in exceptional cases.
- towing the vehicle with a tow rope or tow bar
  Only tow the vehicle in exceptional cases. The engine must be running if you tow the
vehicle with a tow rope or tow bar. Observe the following notes.

**WARNING**
If the brake system is malfunctioning, you must use a rigid tow bar to tow the vehicle. Before towing away, make sure that the steering can be moved and is not locked. If there is a malfunction in the power supply or the vehicle’s electrical system, you must not tow the vehicle.

**WARNING**
The following can occur if the vehicle is towed:
- the engine may not start.
- the on-board electronics may fail.
- the battery voltage may drop too much.
In these cases, the rear axle will be locked. As a result, you might lose control of the vehicle, cause an accident and injure yourself and others.

1. Use the SmartKey instead of the Start/Stop button when towing the vehicle. Start the engine and keep it running. Turn the SmartKey to position 2 in the ignition. Set the transmission to N using the E-SELECT lever. Make sure that you then leave the SmartKey in position 2. Check the transmission position in the instrument cluster.

2. Make sure that the electric parking brake is released. If the electric parking brake is faulty, visit a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

3. When towing, pull away slowly and smoothly. If the tractive power is too high, the vehicles could be damaged.

4. Only secure the tow rope or tow bar at the towing eyes. Otherwise, the vehicle could be damaged.

Do not use the towing eye for recovery, as this could damage the vehicle. If in doubt, recover the vehicle with a crane.

You may only tow the vehicle a maximum distance of 30 miles (50 km). A towing speed of 30 mph (50 km/h) must not be exceeded. For towing distances over 30 miles (50 km), the vehicle must loaded onto a transporter.

Do not tow with sling-type equipment. This could damage the vehicle.

Tow-starting the vehicle is not permitted. The transmission may otherwise be damaged.

Also observe the following notes:
- if the engine does not start, try jump-starting it (> page 243). Tow-starting the vehicle is not permitted.
- if it is not possible to jump-start the vehicle, have it transported to the nearest qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.
- if the transmission has been damaged, have the vehicle transported to the nearest qualified specialist workshop, e.g. an authorized Mercedes-Benz Center. Observe the display messages in the instrument cluster.

**Installing/removing the towing eye**

**Installing the towing eye**

▶ Take the towing eye and the wheel wrench17 out of the wheel-change tool kit (> page 232).

The bracket for the removable towing eye is in the bumper at the front. It is located under the cover.

17 Not included in the scope of delivery.
Pull out cover 1 forwards.
Take cover 1 off the opening.

Removing the towing eye
- Take the lug wrench 17 from the wheel-change tool kit (> page 232).
- Insert the lug wrench handle into the towing eye and turn it counter-clockwise.
- Unscrew the towing eye.
- Attach cover 1 to the bumper and press until it engages.
- Return the towing eye and the lug wrench to the wheel-change tool kit.

Towing the vehicle with the rear axle raised
When towing your vehicle with the rear axle raised, it is important that you observe the safety instructions (> page 244).
Only tow the vehicle with the rear axle raised in exceptional cases.

! The engine must be switched off (SmartKey in ignition lock in position 0 or position 1) if the vehicle is being towed with the rear axle raised or if the parking brake is being tested on a dynamometer. Intervention by ESP® could otherwise damage the brake system.

Switch on the hazard warning lamps (> page 96).
Make sure that the SmartKey is in position 2 in the ignition and that the engine is running throughout the towing procedure.
Move the transmission to N with the E-SELECT lever. Check the transmission position in the instrument cluster.

Towing a vehicle with both axles on the ground
When having your vehicle towed, observe the important safety notes (> page 244).
Switch on the hazard warning lamps (> page 96).

When towing with the hazard warning lamps switched on, use the combination switch as usual to signal a change of direction. In this case, only the turn signals for the desired direction flash. When the combination switch is reset, the hazard warning lamps start flashing again.
Insert the SmartKey into the ignition lock (> page 115).
Start the engine and leave the SmartKey in the ignition.
Move the transmission to N with the E-SELECT lever.
Check the transmission position in the instrument cluster display (> page 121).
Leave the engine running during the entire towing procedure.

Transporting the vehicle
The towing eye can be used to pull the vehicle onto a trailer or transporter for transporting purposes.

! Only lash the vehicle down by the wheels or wheel rims, not by parts of the vehicle.

17 Not included in the scope of delivery.
such as axle or steering components. Otherwise, the vehicle could be damaged.

- Start the engine.
- Make sure that the SmartKey is in position 2 in the ignition and that the engine is running during the entire loading operation.
- Move the transmission to N with the E-SELECT lever. Check the transmission position in the instrument cluster.

**As soon as the vehicle is loaded:**

- Prevent the vehicle from rolling away by applying the electric parking brake.
- Shift the transmission to P with the button in the center console.
- Turn the SmartKey to position 0 in the ignition lock and remove the SmartKey from the ignition lock.
- Secure the vehicle.

**Fuses**

**Important safety notes**

⚠️ **WARNING**

Only use fuses approved by Mercedes-Benz with the specified amperage for the system in question and do not attempt to repair or bridge a blown fuse. Using other than approved fuses or using repaired or bridged fuses may cause an overload leading to a fire, and/or cause damage to electrical components and/or systems. Have the cause determined and remedied by an authorized Mercedes-Benz Center.

❗ Only use fuses that have been approved for Mercedes-Benz vehicles and which have the correct fuse rating for the system concerned. Otherwise, components or systems could be damaged.

The fuses in your vehicle serve to close down faulty circuits. If a fuse blows, all the components on the circuit and their functions stop operating.

Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color and value. The fuse ratings are listed in the fuse allocation chart. An authorized Mercedes-Benz Center will be happy to advise you.

If a fuse has blown, contact a breakdown service or an authorized Mercedes-Benz Center.

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

**Before changing a fuse**

- Park the vehicle and apply the electric parking brake.
- Switch off all electrical consumers.
- Remove the SmartKey from the ignition lock.

The fuses are located in various fuse boxes:

- fuse box in the footwell on the front-passenger side
- fuse box in the rear

The “Relay and fuse information sheet” is located with the wheel-change toolkit in the trunk.

**Fuse box in the footwell**
To open: remove the carpet over the footrest.
Loosen screws on the floor panel using a suitable tool.
Remove the floor panel.
To close: install the floor panel again.
Screw in and tighten screws.
Put in the carpet and press to secure.

The floor panel must be installed properly, otherwise moisture or dirt could impair the function of the fuses.

Fuse box in the rear

Coupe

To open: open the trunk.
Fold cover in the center of the rear wall down in the direction of the arrow.
To close: fold cover up in the opposite direction to the arrow and press to secure.

The cover must be installed properly, otherwise moisture or dirt could impair the function of the fuses.

Roadster

To open: from the vehicle interior, lift up cover between the roll bars in the direction of the arrow.
To close: shut cover in the opposite direction to the arrow and press to secure.

The cover must be installed properly, otherwise moisture or dirt could impair the function of the fuses.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator’s Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (〉 page 21).

Important safety notes

Consult an authorized Mercedes-Benz Center if you require information on approved and recommended tires and wheels for summer and winter operation. Advice on purchasing and caring for tires is also available there.

⚠️ WARNING
Replace rims or tires with the same designation, manufacturer and type as shown on the original part. For further information contact an authorized Mercedes-Benz Center. If incorrectly sized rims and tires are mounted, the wheel brakes or suspension components can be damaged. Also, the operating clearance of the wheels and the tires may no longer be correct.

⚠️ WARNING
Worn, old tires can cause accidents. If the tire tread is worn to minimum tread depth, or if the tires have sustained damage, replace them.

When replacing rims, only use genuine Mercedes-Benz wheel bolts specified for the particular rim type. Failure to do so can result in the bolts loosening and possibly an accident.

Retreaded tires are not tested or recommended by Mercedes-Benz, since previous damage cannot always be recognized on retreads. The operating safety of the vehicle cannot be assured when such tires are used.

⚠️ WARNING
If you feel a sudden significant vibration or ride disturbance, or you suspect that possible damage to your vehicle has occurred, you should turn on the hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road. Inspect the tires and the vehicle underbody for possible damage. If the vehicle appears unsafe, have the vehicle towed to the nearest authorized Mercedes-Benz Center or tire dealer for repairs.

⚠️ WARNING
Further information about tires and wheels can be obtained from any authorized Mercedes-Benz Center.

Operation

Notes on driving

- If the vehicle is heavily laden, check the tire pressures and correct them if necessary.
- When parking your vehicle, make sure that the tires do not get deformed by the curb or other obstacles. If it is necessary to drive over curbs, speed humps or similar elevations, try to do so slowly and at an obtuse angle. Otherwise, the tires, particularly the sidewalls, can get damaged.
Notes on regularly inspecting wheels and tires

⚠️ **WARNING**

Regularly check the tires for damage. Damaged tires can cause tire inflation pressure loss. As a result, you could lose control of your vehicle. Worn, old tires can cause accidents. If the tire tread is worn to minimum tread depth, or if the tires have sustained damage, replace them.

- Regularly check the wheels and tires of your vehicle for damage (e.g. cuts, punctures, tears, bulges on tires and deformation or cracks or severe corrosion on wheels) at least once a month, as well as after driving off-road or on rough roads. Damaged wheels can cause a loss of tire pressure.
- Regularly check the tire tread depth and the condition of the tread across the whole width of the tire (▶ page 251). If necessary, turn the front wheels to full lock in order to inspect the inner side of the tire surface.
- All wheels must have a valve cap to protect the valve against dirt and moisture. Do not mount anything onto the valve (such as tire pressure monitoring systems) other than the standard valve cap or other valve caps approved by Mercedes-Benz for your vehicle.
- Regularly check the pressure of all the tires including the emergency spare wheel or the spare wheel, particularly prior to long trips, and correct the pressure as necessary (▶ page 253).

### Tire tread

⚠️ **WARNING**

Although the applicable federal motor vehicle safety laws consider a tire to be worn when the tread wear indicators (TWI) become visible at approximately \( \frac{1}{16} \) inch (1.6 mm), we recommend that you do not allow your tires to wear down to that level. As tread depth approaches \( \frac{1}{8} \) inch (3 mm), the adhesion properties on a wet road are sharply reduced. Depending upon the weather and/or road surface (conditions), the tire traction varies widely.

Do not use tires that are excessively worn as the tire traction on wet road surfaces decreases significantly when the tread depth is less than \( \frac{1}{8} \) inch (3 mm).

Tread wear indicators (TWI) are required by law. Six indicators are positioned on the tire tread. They become visible as soon as a tread depth of approximately \( \frac{1}{16} \) inch (1.6 mm) has been reached. If this is the case, the tire is so worn that it must be replaced.

The recommended tread depth for summer tires is at least \( \frac{1}{8} \) inch (3 mm). The recommended tread depth for winter tires is at least \( \frac{1}{6} \) inch (4 mm).

Bar marking 🔄 for tread wear is integrated into the tire tread.

---

### Notes on selecting, mounting and replacing tires

- Only mount tires and wheels of the same type and make.
- Only mount tires of the correct size onto the wheels.
- After mounting new tires, run them in at moderate speeds for the first 60 miles.
(100 km) as they only reach their full performance after this distance.
• Do not use tires that are excessively worn as the tire traction on wet road surfaces decreases significantly when the tread depth is less than $\frac{1}{8}$ inch (3 mm).
• Replace the tires after six years at the latest, regardless of wear. This also applies to the spare wheel/emergency spare wheel.

The service life of tires depends on the following factors amongst other things:
• driving style
• tire pressure
• mileage

Winter operation

General notes

Have your vehicle winterproofed at a qualified specialist workshop at the onset of winter. Observe the notes in the "Changing a wheel" section (page 271).

Driving with summer tires

At temperatures below 45 °F (+7 °C), the elasticity of summer tires and therefore also the traction and braking capability are reduced considerably — equip your vehicle with M+S tires. Using summer tires at very cold temperatures could cause tears to form, thereby damaging the tires permanently. Mercedes-Benz cannot accept responsibility for this type of damage.

Snow chains

There is not enough space for snow chains on some wheel sizes. Observe the information under "Tires and wheels" in the "Technical Data" section to avoid damage to the vehicle or the wheels.

For safety reasons, Mercedes-Benz recommends that you only use snow chains that have been specially approved for your vehicle by Mercedes-Benz, or are of a corresponding standard of quality.

• local regulations may restrict the use of snow chains. Observe the appropriate regulations if you wish to mount snow chains.

• only use snow chains when driving on roads completely covered by snow. Remove the snow chains as soon as possible when you come to a road that is not snow-covered.

• Do not exceed the maximum permissible speed of 30 mph (50 km/h).

• you may not mount snow chains to all wheel-tire combinations; see the information under "Wheels and tires" in the "Technical data" section.

M+S tires

**WARNING**

M+S tires with a tread depth of less than $\frac{1}{8}$ inch (4 mm) must be replaced. They are no longer suitable for winter operation.
WARNING
If you mount the spare wheel when driving with M+S tires, bear in mind that driving stability will be impaired due to unstable cornering characteristics caused by the different tire characteristics. Adapt your style of driving accordingly.

Have the spare wheel replaced by a normal wheel with an M+S tire at the nearest Mercedes-Benz Center.

At temperatures below 45 °F (+7 °C), use winter tires or all-season tires. Both types of tire are identified by the M+S marking.

Only winter tires bearing the snowflake symbol in addition to the M+S marking provide the best possible grip in wintry road conditions. Only these tires will allow driving safety systems such as ABS and ESP® to function optimally in winter, as these tires have been designed specifically for driving on snow.

Use M+S tires of the same make and tread on all wheels to maintain safe handling characteristics.

Always observe the maximum permissible speed specified for the M+S tires you have mounted.

When you have installed the M+S tires:
► Check the tire pressures (page 253).
► Restart the tire pressure monitor (page 259).

**Tire pressure**

**Tire pressure specifications**

WARNING
Follow recommended tire inflation pressures. Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated. Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver's door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

You will find a table of recommended tire pressures on the Tire and Loading Information placard on the B-pillar on the driver's side (page 259). You will find a table of tire pressures for various operating conditions on the inside of your vehicle's fuel filler flap.

To test tire pressure, use a suitable pressure gauge. The outer appearance of a tire does not permit any reliable conclusion about the tire pressure. On vehicles equipped with the electronic tire pressure monitoring system, the tire pressure can be checked using the on-board computer.

**WARNING**
Should the tire pressure drop repeatedly:
• check the tire for foreign bodies.
• check whether the wheel is losing air or the valve is leaking.
• make sure that only a valve cap approved by Mercedes-Benz is installed on the tire valve.

Tire pressures that are too low have a negative effect on vehicle safety, which could lead you to cause an accident.

Only correct tire pressures when the tires are cold. The tires are cold when the vehicle has been parked for at least three hours or driven for less than 1 mile (1.6 km). The tire temperature changes depending on the outside temperature, the vehicle speed and
the tire load. If the tire temperature changes by 18 °F (10 °C), the tire pressure changes by approximately 10 kPa (0.1 bar/1.5 psi). Take this into account when checking the pressure of warm tires and only correct the tire pressure if it is too low for the current operating conditions. If you check the tire pressure when the tires are warm, the resulting value will be higher than if the tires were cold. This is normal. Do not reduce the tire pressure to the value specified for cold tires. The tire pressure would otherwise be too low.

Observe the recommended tire pressure specifications for cold tires on the Tire and Loading Information placard on the B-pillar on the driver’s side.

The specifications given on the following Tire and Loading Information placard are examples. Tire pressure specifications are vehicle-specific and may deviate from the data shown here. The tire pressures applicable to your vehicle can be found on the Tire and Loading Information placard on your vehicle.

You will find recommended tire pressure specifications for cold tires and for a fully loaded vehicle on the Tire and Loading Information placard. The tire pressure information is applicable to all tires mounted at the factory.

### Important notes on tire pressure

#### WARNING

If the tire pressure drops repeatedly, check the tires for punctures from foreign objects and/or whether air is leaking from the valves or from around the rim.

The tire temperature and pressure increase when the vehicle is in motion. This is dependent on the driving speed and the load. If you wish to drive at high speeds of 100 mph (160 km/h) or higher when this is allowed, use the tire pressure table on the inside of the fuel filler flap to set the correct tire pressures when the wheels are cold. If the tire pressure is not set correctly, this can lead to an excessive build-up of heat and a sudden loss of pressure.

For more information, contact a qualified specialist workshop.

Driving comfort can be impaired if the tire pressure value recommended in the tire pressure table for speeds over 100 mph (160 km/h) is adopted. Make sure that the tire pressure for normal speeds is adopted again.

Additional specifications of tire pressure values for loads can also be found on the tire pressure table on the inside of the fuel filler flap.

Specifications shown in the examples of tire pressure tables are for illustration purposes only. Tire pressure specifications are vehicle-specific and may deviate from the data shown here. Tire pressure specifications applicable to your vehicle are located in your vehicle’s tire pressure table.

Unless stated otherwise, the tire pressures specified on the fuel filler flap apply to all tires approved for this vehicle.
Example: tire pressure table for all tires permitted for this vehicle by the factory

If a tire size precedes a tire pressure, the tire pressure information following is only valid for that tire size. The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ.

Example: tire pressure table with tire dimensions

Some tire pressure tables show only the rim diameters instead of the full tire size, e.g. R18. The rim diameter is part of the tire size and can be found on the tire sidewall (→ page 265).

Underinflated or overinflated tires

Underinflation

⚠️ WARNING
Follow recommended tire inflation pressures. Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Underinflated tires may:
- wear quickly and unevenly
- have an adverse effect on fuel consumption
- overheat, leading to tire defects
- have an adverse effect on handling characteristics

Overinflation

⚠️ WARNING
Follow recommended tire inflation pressures. Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Overinflated tires may:
- have an adverse effect on handling characteristics
- wear quickly and unevenly
• be more susceptible to damage
• have an adverse effect on ride comfort
• increase the braking distance

**Maximum tire pressure**

**WARNING**
Never exceed the maximum tire inflation pressure. Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

---

**Example: maximum permissible tire pressure**

1. The actual values for tires are vehicle-specific and may deviate from the values in the illustration.
2. Always observe the recommended tire pressure for your vehicle when adjusting the tire pressure (➤ page 253).

---

**Checking the tire pressures**

**Important safety notes**

**WARNING**
Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Check the tire pressures at least once a month.

Only check and correct tire pressures when the tires are cold (➤ page 253).

**Checking tire pressures manually**

To determine and set the correct tire pressure, proceed as follows:

- Remove the valve cap of the tire that is to be checked.
- Press the tire pressure gauge securely onto the valve.
- Read the tire pressure and compare it with the recommended value on the Tire and Loading Information placard on the B-pillar on the driver’s side of your vehicle.
- If necessary, increase the tire pressure to the recommended value (➤ page 253).
- If the tire pressure is too high, release air by pressing down the metal pin in the valve
using the tip of a pen, for example. Then check the tire pressure again using the tire pressure checker.

- Screw the valve cap onto the valve.
- Repeat these steps for the other tires.

**Tire pressure monitor**

**Important safety notes**

If a tire pressure monitor system is installed, the vehicle’s wheels have sensors that monitor the tire pressures in all four tires. The tire pressure monitor warns you if the pressure drops in one or more of the tires. The tire pressure monitor only functions if the correct wheel electronics units are installed on each wheel.

The tire pressure monitor has a yellow warning lamp in the instrument cluster for indicating pressure loss/malfunctions (USA) or pressure loss (Canada). Whether the warning lamp flashes or lights up indicates whether a tire pressure is too low or the tire pressure monitoring system is malfunctioning:

- if the warning lamp is lit continuously, the tire pressure on one or more tires is significantly too low. The tire pressure monitor is not malfunctioning.
- USA only: if the warning lamp flashes for 60 seconds and then remains lit constantly, the tire pressure monitor is malfunctioning.

**WARNING**

Each tire, including the spare (if provided), should be checked at least once a month when cold and inflated to the pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver’s door B-pillar or the tire pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the Tire and Loading Information placard or the tire pressure label, you should determine the proper tire pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

USA only:

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately 1 minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.
USA only:
If the tire pressure monitor is malfunctioning, it may take more than 10 minutes for the tire pressure warning lamp to inform you of the malfunction by flashing for 60 seconds and then remaining lit.

When the malfunction has been rectified, the tire pressure warning lamp goes out after a few minutes of driving.

Information on tire pressures is displayed in the multifunction display. After a few minutes of driving, the current tire pressure of each tire is shown in the multifunction display.

The operation of the tire pressure monitor can be affected by interference from radio transmitting equipment (e.g. radio headphones, two-way radios) that may be being operated in or near the vehicle.

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Checking tire pressure electronically

- Select key position 2 with the Start/Stop button (> page 115).
- Press the [ ] or [ ] button to select the Service menu.
- Press the [ ] or [ ] button to select TIRE PRESS.
- Press the [OK] button.

The current tire pressure for each wheel will be displayed in the multifunction display. If the vehicle is parked for longer than 20 minutes and you then drive at less than 25 km/h, the Tire pressures will be displayed after driving a few minutes message appears.

After a teach-in period, the tire pressure monitor automatically recognizes new wheels or new sensors. As long as a clear allocation of the tire pressure values to the individual wheels is not possible, the Tire Pressure Monitor Active display message is shown instead of the tire pressure display. The tire pressures are already being monitored.

Tire pressure monitor warning messages

If the tire pressure monitor detects a significant pressure loss on one or more tires, a warning message is shown in the multifunction display. A warning tone also sounds and the tire pressure warning lamp lights up in the instrument cluster.
Each tire that is affected by a significant loss of pressure is highlighted with a color. If the following message appears in the multifunction display: **Correct Tire Pressure**

- Check the tire pressure on all four wheels and correct it if necessary.

- If the wheel positions on the vehicle are interchanged, the tire pressures may be displayed for the wrong positions for a short time. This is rectified after a few minutes of driving, and the tire pressures are displayed for the correct positions.

**Restarting the tire pressure monitor**

When you restart the tire pressure monitor, all existing warning messages are deleted and the warning lamps go out. The monitor uses the currently set tire pressures as the specified values for monitoring.

In most cases, the tire pressure monitor will automatically detect the new reference values, e.g. if you have:

- changed the tire pressure
- changed the wheels or tires
- mounted new wheels or tires

If you are defining the new reference values manually:

- Use the table on the inside of the fuel filler flap to ensure that the tire pressure is set correctly in all four tires for the current operating conditions.

  Also observe the notes in the section on tire pressures (page 253).

- Select key position 2 with the Start/Stop button.

- Press the \( \downarrow \) or \( \uparrow \) button to select the **Service** menu.

- Press the \( \uparrow \) or \( \downarrow \) button to select **TIRE PRESS**.

- Press the **OK** button.

  The display shows either the current tire pressure for the individual tires or the **Tire pressures will be displayed after driving a few minutes** message.

  - Press the **\( \downarrow \) button**.

    The **Use Current Pressures as New Reference Values** message appears in the multifunction display.

  - Press the **OK** button.

    The **Tire Press. Monitor Restarted** message appears in the multifunction display.

    After a few minutes of driving, the current pressures are adopted as the new monitoring values.

**Canceling the restart**

- Press the **\( \leftrightarrow \) button**.

  or

- Press the **\( \uparrow \) button** to leave the menu.

**Loading the vehicle**

**Instruction labels for tires and loads**

**WARNING**

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver's door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Two instruction labels on your vehicle show the maximum possible load.

1. The Tire and Loading Information placard is on the B-pillar on the driver's side. The Tire and Loading Information placard shows the maximum permissible number of occupants and the maximum permissible vehicle load. It also contains details of the tire sizes and
corresponding pressures for tires installed at the factory.

(2) The vehicle identification plate is on the B-pillar on the driver’s side. The vehicle identification plate informs you of the gross vehicle weight rating. It is made up of the vehicle weight, all vehicle occupants, the fuel and the cargo. You can also find information about the maximum gross axle weight rating on the front and rear axle.

The maximum gross axle weight rating is the maximum weight that can be carried by one axle (front or rear axle). Never exceed the maximum load or the maximum gross axle weight rating for the front or rear axle.

The Tire and Loading Information placard gives you details on maximum permissible gross vehicle weight rating ①: “The gross weight of occupants and luggage must never exceed XXX kilograms or XXX pounds.”

The gross weight of all vehicle occupants, cargo, luggage and trailer load/nose weight (if applicable) must not exceed the specified value.

Number of seats

The specifications shown on the Tire and Loading Information placard in the illustration are examples. The number of seats is vehicle-specific and can differ from the details shown. The number of seats in your vehicle can be found on the Tire and Loading Information placard.

Maximum number of seats ① determines the maximum number of occupants allowed to travel in the vehicle. This information can be
found on the Tire and Loading Information placard.

**Determining the correct load limit**

**Step-by-step instructions**

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

- **Step 1**: Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle’s Tire and Loading Information placard.
- **Step 2**: Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- **Step 3**: Subtract the combined weight of the driver and passengers from XXX kilograms or XXX lbs.
- **Step 4**: The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs (1400 - 750 (5 x 150) = 650 lbs).
- **Step 5**: Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.
- **Step 6 (if applicable)**: If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle (➤ page 263).
Example: steps 1 to 3

The following table shows examples on how to calculate total load and cargo capacities with varying seating configurations and number and size of occupants. The following examples use a load limit of 1500 lbs (680 kg). This is for illustration purposes only. Make sure you are using the actual load limit for your vehicle stated on the vehicle’s Tire and Loading Information placard (> page 260).

<table>
<thead>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Step 3</th>
<th>Permissible cargo and trailer load/noseweight (maximum gross vehicle weight rating from the Tire and Loading Information placard minus the gross weight of all occupants)</th>
<th>Example 1</th>
<th>Example 2</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1500 lbs (680 kg) - 175 lbs (80 kg) = 1325 lbs (600 kg)</td>
<td></td>
<td>1500 lbs (680 kg) - 370 lbs (168 kg) = 1130 lbs (512 kg)</td>
</tr>
</tbody>
</table>

The higher the weight of all the occupants, the smaller the maximum load for luggage. Further information can be found under "Towing a trailer" (> page 263).

Vehicle identification plate

Even if you have calculated the total load carefully, you should still make sure that the gross vehicle weight rating and the gross axle weight rating are not exceeded. Details can be found on the vehicle identification plate on the B-pillar on the driver’s side of the vehicle (> page 259).
**Gross vehicle weight:** the gross weight of the vehicle, all passengers, cargo and trailer load/noseweight (if applicable) must not exceed the permissible gross vehicle weight.

**Gross axle weight rating:** the maximum permissible weight that can be carried by one axle (front or rear axle).

To ensure that your vehicle does not exceed the maximum permissible values (gross vehicle weight and maximum gross axle weight rating), have your loaded vehicle (including driver, occupants, cargo, and full trailer load if applicable) weighed on a suitable vehicle weighbridge.

**Trailer load/noseweight**

The trailer load/noseweight affects the gross weight of the vehicle. If a trailer is attached, the trailer load/noseweight is included in the load along with occupants and luggage. The trailer load/noseweight is usually approximately 10% of the gross weight of the trailer and its load.

Your Mercedes-Benz has been designed primarily to carry passengers and their luggage. Mercedes-Benz does not recommend towing a trailer with your vehicle.

**Maximum load rating**

**WARNING**

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver's door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Uniform Tire Quality Grading Standards are U.S. government specifications. Their purpose is to provide drivers with uniform reliable information on tire performance data. Tire manufacturers have to grade tires using three performance factors: tread wear ①, tire traction ②, and heat resistance ③. All tires sold in North America are provided with the corresponding quality class mark on the
sidewall of the tire, even though these regulations do not apply to Canada.

The actual values for tires are vehicle-specific and may deviate from the values in the illustration.

Where applicable, the tire grading information can be found on the tire sidewall between the tread shoulder and maximum tire width.

For example:

<table>
<thead>
<tr>
<th>Tread wear</th>
<th>Traction</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>AA</td>
<td>A</td>
</tr>
</tbody>
</table>

All passenger car tires must conform to the statutory safety requirements in addition to these grades.

### Tread wear

The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified U.S. government course. For example, a tire graded 150 would wear one and one-half times as well on the government test track as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm, due to variations in driving habits, service practices and differences in road characteristics and climate conditions.

### Traction

**WARNING**

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire's ability to stop on a wet surface as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

**WARNING**

If ice has formed on the road, tire traction will be substantially reduced. Under such weather conditions, drive, steer and brake with extreme caution.

The safe speed on a wet, snow covered or icy road is always lower than on dry road surfaces.

You should pay special attention to road conditions when temperatures are around freezing point.

Mercedes-Benz recommends a minimum tire tread depth of $1\frac{1}{16}$ in (4 mm) for all four winter tires (> page 252) to maintain normal driving characteristics in winter. Winter tires can reduce the braking distance on snow-covered surfaces in comparison with summer tires. The braking distance is still much further than on surfaces that are not icy or covered with snow. Take appropriate care when driving.

Avoid wheelspin. This can lead to damage to the drive train.

### Temperature

**WARNING**

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.

The temperature grades are A (the highest), B, and C. These represent the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor
laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Tire labeling

Tire labeling overview

The following markings are on the tire in addition to the tire name (sales designation) and the manufacturer's name:

1. Uniform Tire Quality Grading Standard (page 269)
2. DOT, Tire Identification Number (page 268)
3. Maximum tire load (page 263)
4. Maximum tire pressure (page 256)
5. Manufacturer
6. Tire material (page 268)
7. Tire size designation, load-bearing capacity and speed rating (page 265)
8. Load index (page 267)
9. Tire name

Tire data is vehicle-specific and may deviate from the data in the example.

General: depending on the manufacturer's standards, the size imprinted in the tire wall may not contain any letters or may contain one letter that precedes the size description. If there is no letter preceding the size description (as shown above): these are passenger vehicle tires according to European manufacturing standards. If "P" precedes the size description: these are passenger vehicle tires according to U.S. manufacturing standards. If "LT" precedes the size description: these are light truck tires according to U.S. manufacturing standards. If "T" precedes the size description: these are compact emergency spare wheels at high tire
pressure, to be used only temporarily in an emergency.

**Tire width:** tire width ① shows the nominal tire width in millimeters.

**Nominal aspect ratio:** aspect ratio ② is the ratio between the tire height and tire width and is shown as a percentage. The aspect ratio is calculated by dividing the tire width by the tire height.

**Tire code:** tire code ③ specifies the tire type. "R" represents radial tires; "D" represents diagonal tires; "B" represents diagonal radial tires.

Optionally, tires with a maximum speed of over 149 mph (240 km/h) may have "ZR" in the size description depending on the manufacturer (e.g. 245/40 ZR 18).

**Rim diameter:** rim diameter ④ is the diameter of the bead seat, not the diameter of the rim flange. The rim diameter is specified in inches (in).

**Load bearing index:** load bearing index ⑤ is a numerical code which specifies the maximum load-bearing capacity of a tire.

**Speed rating:** speed rating ⑥ specifies the approved maximum speed of the tire.

---

### WARNING

The tire load rating must always be at least half of the GAWR of your vehicle. Otherwise, sudden tire failure may be the result which could cause an accident and/or serious injury to you or others.

Always replace rims and tires with rims and tires having the same specifications (designation, manufacturer and type) as shown on the original part.

### WARNING

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

---

### Summer tires

<table>
<thead>
<tr>
<th>Index</th>
<th>Speed rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q</td>
<td>Up to 100 mph (160 km/h)</td>
</tr>
<tr>
<td>R</td>
<td>Up to 106 mph (170 km/h)</td>
</tr>
<tr>
<td>S</td>
<td>Up to 112 mph (180 km/h)</td>
</tr>
<tr>
<td>T</td>
<td>Up to 118 mph (190 km/h)</td>
</tr>
<tr>
<td>H</td>
<td>Up to 130 mph (210 km/h)</td>
</tr>
<tr>
<td>V</td>
<td>Up to 149 mph (240 km/h)</td>
</tr>
<tr>
<td>W</td>
<td>Up to 168 mph (270 km/h)</td>
</tr>
<tr>
<td>Y</td>
<td>Up to 186 mph (300 km/h)</td>
</tr>
<tr>
<td>ZR...Y</td>
<td>Up to 186 mph (300 km/h)</td>
</tr>
<tr>
<td>ZR...(Y)</td>
<td>Above 186 mph (300 km/h)</td>
</tr>
<tr>
<td>ZR</td>
<td>Above 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>
• Optionally, tires with a maximum speed of over 149 mph (240 km/h) may have "ZR" in the size description depending on the manufacturer (e.g. 245/40 ZR 18).

The service specifications consist of load bearing index ⑤ and speed rating ⑥.

• If the size description of your tire includes "ZR" and there are no service specifications, ask the tire manufacturer in order to find out the maximum speed.

  If a service specification is available, the maximum speed is limited according to the speed rating in the service specification. Example: 245/40 ZR 18 97 Y. In this example, "97 Y" is the service specification. The letter "Y" represents the speed rating, and the maximum speed of the tire is limited to 186 mph (300 km/h).

• Every tire that has a maximum speed above 186 mph (300 km/h) must have "ZR" in the size description and the service specification must be given in brackets. Example: 275/40 ZR 18 (99 Y). The speed rating "(Y)" shows that the maximum speed of the tire is above 186 mph (300 km/h). Ask the tire manufacturer about the maximum speed.

### All-weather tires and winter tires

<table>

<td>Up to 130 mph (210 km/h)</td>
</tr>
<tr>
<td>V M+S ⑤</td>
<td>Up to 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>

Not all tires that have the M+S identification offer the driving characteristics of winter tires. In addition to the M+S marking, winter tires also have the snowflake symbol on the tire wall. Tires with this identification fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow and have been especially developed for driving on snow.

The speed rating of tires mounted at the factory may be higher than the maximum speed that the electronic speed limiter permits.

Make sure that your tires have the required speed rating as specified in the "Tires" section (page 272), e.g. if you buy new tires.

Further information about reading tire data can be obtained from any qualified specialist workshop.

### Load index

Tire data is vehicle-specific and may deviate from the data in the example.

In addition to the load-bearing index, load index ① may be imprinted after the letters that identify speed rating ⑥(page 265) on the sidewall of the tire.

- If no specification is given: no text (as in the example above), represents a standard load (SL) tire
- XL or Extra Load: represents a reinforced tire
- Light Load: represents a light load tire
- C, D, E: represents a load range that depends on the maximum load that the tire can carry at a certain pressure
DOT, Tire Identification Number (TIN)

U.S. tire regulations prescribe that every manufacturer of new tires or retreader has to imprint a TIN in or on the sidewall of each tire produced.

The TIN is a unique identification number. The TIN enables tire manufacturers to inform purchasers of recalls and other safety-relevant matters. It makes it possible for the purchaser to easily identify the affected tires. The TIN is made up of manufacturer identification code, tire size, tire type code and manufacturing date.

For example, a tire that is marked with "3208" was manufactured in week 32 in 2008.

Tire characteristics

Tire data is vehicle-specific and may deviate from the data in the example.

This information describes the tire cord and the number of layers in sidewall and under tire tread.

Definition of terms for tires and loading

Tire ply composition and material used

Describes the number of plies or the number of layers of rubber-coated fabric in the tire tread and sidewall. These are made of steel, nylon, polyester and other materials.

Bar

Metric unit for tire pressure. There are 14.5038 pounds per square inch (psi) to 1 bar; there are 100 kilopascals (kPa) to 1 bar.

DOT (Department of Transportation)

DOT marked tires fulfill the requirements of the United States Department of Transportation.
Normal occupant weight

The number of occupants the vehicle is designed to seat, multiplied by 68 kilograms (150 lbs).

Uniform Tire Quality Grading Standards

A uniform standard to grade the quality of tires with regards to tread quality, tire traction and temperature characteristics. The quality grading assessment is made by the manufacturer following specifications from the U.S. government testing procedures. The ratings are molded into the sidewall of the tire.

Recommended tire pressure

The recommended tire pressure for your vehicle under normal driving conditions. You will find the recommendation on the Tire and Loading Information placard on the B-pillar on the driver’s side of your vehicle. The recommended tire pressure provides the best balance between handling characteristics, ride comfort and wear. Supplemental information pertaining to special driving situations can be found on the tire inflation pressure label on the inside of the fuel filler flap.

Increased vehicle weight due to optional equipment

This is the combined weight of all standard and optional equipment available for the vehicle, regardless of whether it is actually installed on the vehicle or not.

Rim

This is the part of the wheel on which the tire is mounted.

GAWR (Gross Axle Weight Rating)

The GAWR is the maximum gross axle weight rating. The actual load on an axle must never exceed the gross axle weight rating. The gross axle weight rating can be found on the vehicle identification plate on the B-pillar on the driver's side.

Speed rating

The speed rating is part of the tire identification. It specifies the speed range for which the tire is approved.

GVW (Gross Vehicle Weight)

The gross vehicle weight includes the weight of the vehicle including fuel, tools, the spare wheel, accessories installed, occupants, luggage and the drawbar noseweight, if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating (GVWR) as specified on the vehicle identification plate on the B-pillar on the driver's side.

GVWR (Gross Vehicle Weight Rating)

The GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, occupants, fuel, luggage and the drawbar noseweight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver's side.

Maximum loaded vehicle weight

The maximum weight is the sum of the curb weight of the vehicle, the weight of the accessories, the total load limit and the weight of the optional equipment installed at the factory.

</tbody>
</table>
**Weight of optional extras**

The combined weight of those optional extras that weigh more than the replaced standard part and more than 2.3 kilograms (5 lbs). These optional extras, such as high-performance brakes, level control, a roof rack or a high-voltage battery, are not included in the curb weight and the weight of the accessories.

**TIN (Tire Identification Number)**

This is a unique identifier which can be used by a tire manufacturer to identify tires, for example for a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer's identity code, tire size, tire type code and the manufacturing date.

**Load bearing index**

The load bearing index (also load index) is a code that contains the maximum load bearing capacity of a tire.

**Traction**

Traction is the result of friction between the tires and the road surface.

**Treadwear indicators**

Narrow bars (tread wear bars) that are distributed over the tire tread. If the tire tread is level with the bars, the wear limit of $\frac{1}{16}$ in (1.6 mm) has been reached.

**Occupant distribution**

The distribution of occupants in a vehicle at their designated seating positions.

**Total load limit**

Rated cargo and luggage load plus 68 kilograms (150 lbs) times the vehicle's designated seating capacity.

**Changing a wheel**

**Flat tire**

The "Roadside Assistance" section (see page 233) contains information and notes on how to deal with a flat tire. It also provides instructions on changing a wheel or mounting the spare wheel/emergency spare wheel.

**Interchanging the wheels**

**WARNING**

Rotate front and rear wheels only if the tires are of the same dimension. If your vehicle is equipped with mixed-size tires (different tire dimensions front vs. rear), tire rotation is not possible.

**WARNING**

Have the tightening torque checked after changing a wheel. Wheels could become loose if not tightened with a torque of 96 lb-ft (130 Nm). Only use genuine Mercedes-Benz wheel bolts specified for your vehicle's rims.

The wear patterns on the front and rear tires differ, depending on the operating conditions. Rotate the wheels before a clear wear pattern has formed on the tires. Front tires typically wear more on the shoulders and the rear tires in the center.

If your vehicle's tire configuration allows, you can rotate the wheels according to the intervals in the tire manufacturer's warranty book in your vehicle documents. If this is not available, the tires should then be replaced every 3000 to 6000 miles (5000 to 10,000 km), or earlier if the tire wear
requires this. Do not change the direction of wheel rotation.
Clean the contact surfaces of the wheel and the brake disc thoroughly every time a wheel is interchanged. Check the tire pressures.
For information on changing tires and mounting the spare wheel, see (> page 236).

⚠️ On vehicles equipped with a tire pressure monitor, electronic components are located in the wheel.
Tire-mounting tools should not be used near the valve. This could damage the electronic components.
Only have tires changed at a qualified specialist workshop.

Direction of rotation
Tires with a specified direction of rotation have additional benefits, e.g. if there is a risk of hydroplaning. You will only gain these benefits if the correct direction of rotation is maintained.
An arrow on the sidewall of the tire indicates its correct direction of rotation.
You may mount a spare wheel/emergency spare wheel against the direction of rotation. Observe the time restriction on use as well as the speed limitation specified on the spare wheel/emergency spare wheel.

Storing wheels
Store wheels that are not being used in a cool, dry and preferably dark place. Protect the tires from oil, grease, gasoline and diesel.

Cleaning the wheels
⚠️ WARNING
Do not use power washers with circular-jet nozzles (dirt grinders) to clean your vehicle, in particular the tires. You could otherwise damage the tires and cause an accident.

Wheel and tire combinations
Please bear the following in mind
⚠️ For safety reasons, Mercedes-Benz recommends that you only use tires and wheels which have been approved by Mercedes-Benz specifically for your vehicle.
These tires have been specially adapted for use with the control systems, such as ABS or ESP®, and are marked as follows:
- MO = Mercedes-Benz Original
- MOE = Mercedes-Benz Original Extended (tires featuring run-flat characteristics)
- MO1 = Mercedes-Benz Original (only certain AMG tires)
Mercedes-Benz Original Extended tires may only be used on wheels that have been specifically approved by Mercedes-Benz.
Only use tires, wheels or accessories tested and approved by Mercedes-Benz.
Certain characteristics, e.g. handling, vehicle noise emissions or fuel consumption, may otherwise be adversely affected. In addition, when driving with a load, tire dimension variations could cause the tires to come into contact with the bodywork and axle components. This could result in damage to the tires or the vehicle.
Mercedes-Benz accepts no liability for damage resulting from the use of tires, wheels or accessories other than those tested and approved.
Further information about tires, wheels and approved combinations can be obtained from any authorized Mercedes-Benz Center.

The Tire and Load Information placard with the recommended tire pressures is on the B-pillar on the driver's side. Further information about driving at high speeds or driving with vehicle loads that are lighter than the maximum vehicle load can be found in the tire pressure table on the inside of the fuel filler flap. Check tire
pressures regularly, and only when the tires are cold. Comply with the maintenance recommendations of the tire manufacturer. These are located in the vehicle document wallet.

For further information on the recommended tire inflation pressure and on tire pressures for specific driving conditions (page 253).

1 Notes on the vehicle equipment – always equip the vehicle:
   • with tires of the same size on a given axle (left/right)
   • with the same type of tires on all wheels at a given time (summer tires, winter tires)

1 The following pages contain information on approved wheel rims and tire sizes for equipping your vehicle with winter tires. Winter tires are not available ex factory as standard equipment or optional extras. If you wish to equip your vehicle with approved winter tires, you will also require, in certain circumstances, wheel rims of an appropriate size, as the sizes of approved winter tires can deviate from those of standard tires. This is dependent on the model and the equipment installed at the factory.

The tires and wheel rims, as well as further information, can be obtained at a qualified specialist workshop.

Useful information

This Operator's Manual describes all models and all standard and optional equipment of your vehicle available at the time of publication of the Operator's Manual. Country-specific differences are possible. Please note that your vehicle may not be equipped with all features described. This also applies to safety-related systems and functions.

Please read the information on qualified specialist workshops (> page 21).

Notes on technical data

The technical data was determined in accordance with EC Directives. All data applies to the vehicle's standard equipment. The data may therefore differ for vehicles with optional equipment. You can obtain further information from an authorized Mercedes-Benz Center.

You can find technical data on the Internet at: http://www.mercedes-benz.com

Environmental note

Daimler AG also supplies reconditioned major assemblies and parts which are of the same quality as new parts. They are covered by the same Limited Warranty entitlements as new parts.

Air bags and Emergency Tensioning Devices, as well as control units and sensors for these restraint systems may be installed in the following areas of your vehicle:

- doors
- door pillars
- door sills
- seats
- dashboard
- instrument cluster
- center console

Do not install accessories such as audio systems in these areas. Do not carry out repairs or welding. You could impair the operating efficiency of the restraint systems.

Have aftermarket accessories installed at a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

All Mercedes-Benz Centers maintain a supply of genuine Mercedes-Benz parts for necessary service and repair work. In addition, strategically located parts delivery centers provide quick and reliable parts service.

More than 300,000 different genuine Mercedes-Benz parts are available for Mercedes-Benz models.

Genuine Mercedes-Benz parts are subject to strict quality control. Each part has been specially developed, manufactured or selected for Mercedes-Benz vehicles and fine-tuned for them.

Only genuine Mercedes-Benz parts should therefore be used.

WARNING

Driving safety may be impaired if non-approved parts, tires and wheels or safety-relevant accessories are used.

This could lead to malfunctions in safety-relevant systems, e.g. the brake system. This could cause you to lose control of your vehicle and cause an accident.

For this reason, Mercedes-Benz recommends that you use genuine Mercedes-Benz parts or parts of equal quality. Only use tires, wheels and accessories that have been specifically approved for your vehicle.
Always specify the vehicle identification number (VIN) (► page 277) and the engine number (► page 278) when ordering genuine Mercedes-Benz parts.

**Warranty**

The Service and Warranty Information booklet contains detailed information about the warranties covering your vehicle. Your authorized Mercedes-Benz Center will exchange or repair any defective parts originally installed in the vehicle in accordance with the terms of the following warranties:

- New Vehicle Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Connecticut, Maine, Massachusetts, New York, Pennsylvania, Rhode Island and Vermont Emission Control System Warranty
- State warranty enforcement laws (Lemon Laws)

Replacement parts and accessories are covered by the Mercedes-Benz Parts and Accessories warranties. You can obtain information about this from any authorized Mercedes-Benz Center.

Should you lose your Service and Warranty Information booklet, have an authorized Mercedes-Benz Center arrange for a replacement. It will be mailed to you.
The data shown on the identification plate is example data. This data is different for every vehicle and can deviate from the data shown here. You can find the data applicable to your vehicle on the vehicle’s identification plate.

**Vehicle identification number (VIN)**

1. Emission control information plate, including the certification of both federal and Californian emissions standards
2. VIN (on the lower edge of the windshield)
3. Engine number (stamped into the crankcase)

**Service products and filling capacities**

**Important safety notes**

Service products include the following:
- fuels
- lubricants (e.g. engine oil, transmission oil)
- coolant
- brake fluid
- windshield washer fluid

Vehicle components and their respective lubricants must match. Therefore only use products tested and approved by Mercedes-Benz.

Information on tested and approved products can be obtained at a Mercedes-Benz Center.

**WARNING**

Comply with all valid regulations with respect to handling, storing and disposing of service fluids. Otherwise, you could endanger persons or the environment.

Keep service fluids out of the reach of children.
For health reasons, you should prevent service fluids from coming into direct contact with your skin or clothing.
If a service fluid is swallowed, contact a physician immediately.
### Filling capacities

### Fuel

#### Important safety notes

**WARNING**

Gasoline is highly flammable and poisonous. It burns violently and can cause serious personal injury.

Never allow sparks, flames or smoking materials near gasoline. Turn off the engine before refueling. Whenever you are around gasoline, avoid inhaling fumes and any skin or clothing contact.

Mixed with water or premixed washer fluid with antifreeze protection.
Direct skin contact with fuels and the inhalation of fuel vapors are damaging to your health.

Premium-grade unleaded gasoline

To ensure the longevity and full performance of the engine, only premium-grade unleaded gasoline must be used.
If premium-grade unleaded gasoline is unavailable and regular gasoline is used, observe the following precautions:
- only fill the fuel tank to half full with regular unleaded gasoline and add the rest as soon as possible with premium-grade unleaded gasoline.
- do not drive at the maximum speed.
- avoid sudden acceleration.
- when the vehicle is carrying a light cargo, e.g. two passengers without luggage, do not allow the engine to rev above 3000 rpm.
- when the vehicle is fully loaded or being operated in mountainous terrain, do not depress the accelerator pedal further than $\frac{2}{3}$ of the pedal travel.

Fuel requirements

Use only premium-grade unleaded gasoline. The octane number should be at least 91. Details can be found on the gas pump. The octane number is the average value of the Research Octane Number (RON) and the Motor Octane Number (MON): $(\text{RON} + \text{MON}) / 2$, also known as knock resistance. Reformulated Gasoline (RFG) and/or unleaded gasoline with additives can be used. The concentration of additives in the fuel must, however, remain below 10%, such as:
- Ethanol
- TAME
- ETBE
- IPA
- TBA

For MTBE, the concentration should not exceed 15%.
The concentration of methanol, including other additives, in gasoline must not exceed 3%.
Using mixtures of methanol and ethanol is not permitted. Gasohol, a mixture of 10% ethanol and 90% unleaded gasoline, can be used.
All of these mix fuels must fulfill the fuel requirements, e.g.:
- knock resistance
- boiling point
- vapor pressure

Additives in gasoline

One of the major problems in engine design is the creation of carbon deposits during the process of burning fuel. Mercedes-Benz recommends that you use fuel brands containing additives that prevent the build-up of carbon deposits.
If you use fuels without these additives over a longer period of time, carbon deposits may build up. These deposits form at the inlet valves and in the combustion chamber in particular.
This could lead to engine problems, e.g.:
- longer engine warm-up phase
- uneven idle
- engine noise
- misfiring
- loss of power

In areas where the availability of gasoline with relevant additives is not adequate, carbon deposits can form. In this case, Mercedes-Benz recommends the use of additives that have been approved for Mercedes-Benz vehicles.
Consult an authorized Mercedes-Benz Center for a list of approved products. Comply with the instructions for use on the product label.
Do not mix other fuel additives with fuel. This causes unnecessary costs and could damage the engine.
Do not refuel with low-grade fuel and do not use fuel additives that are not tested and approved for Mercedes-Benz vehicles. Damage to or malfunctions of the fuel system may otherwise occur.

**Engine oil**

**Please bear the following in mind**

The engine oils are matched to the performance of Mercedes-Benz engines and service intervals. You should therefore only use engine oils and oil filters that are approved for vehicles with maintenance systems.

For a list of approved engine oils and oil filters, consult an authorized Mercedes-Benz Center.

Never use engine oil or an oil filter of a specification other than is necessary to fulfill the prescribed service intervals. Do not change the engine oil or oil filter in order to achieve longer replacement intervals than those prescribed. You could otherwise cause engine damage or damage to the exhaust gas aftertreatment.

Follow the instructions in the service interval display regarding the oil change. Otherwise, you may damage the engine and the exhaust gas aftertreatment.

The table shows which engine oils have been approved for your vehicle.

| MB Sheet number | 229.521 |

MB approval is indicated on the oil containers.

**Additives**

Do not use any additives in the engine oil. This could damage the engine.

**Engine oil viscosity**

Viscosity describes the flow characteristics of a fluid. If an engine oil has a high viscosity, this means that it is thick; a low viscosity means that it is thin.

Select an engine oil with an SAE (viscosity) classification suitable for the prevailing outside temperatures. The following table shows the correct SAE classification to be used. The low-temperature characteristics of engine oils can deteriorate significantly, e.g. as a result of aging, soot and fuel deposits. It is therefore strongly recommended that you carry out regular oil changes using an approved engine oil with the appropriate SAE classification.

**Refrigerant of the air-conditioning system**

The automatic climate control is filled with R134a refrigerant and a special PAG lubricant.

Never use refrigerant R 12 (CFC) or mineral lubricants. Otherwise, you could damage the air-conditioning system.

**Brake fluid**

**WARNING**

The brake fluid constantly absorbs moisture from the air; this lowers its boiling point.

---

21 Restriction: use only SAE 0W-40/SAE 5W-40 engine oils.
If the boiling point of the brake fluid is too low, vapor pockets may form in the brake system when the brakes are applied hard (e.g. when driving downhill). This would impair braking efficiency.

You should have the brake fluid renewed at regular intervals. The brake fluid change intervals can be found in the Maintenance Booklet.

Only use brake fluid approved by Mercedes-Benz. Information about approved brake fluids can be obtained from any authorized Mercedes-Benz Center.

**Coolant**

**Important safety notes**

The coolant is a mixture of water and antifreeze/corrosion inhibitor. It performs the following tasks:

- anti-corrosion protection
- antifreeze protection
- raising the boiling point

The engine cooling system is filled at the factory with coolant which contains an antifreeze/corrosion inhibitor that ensures protection down to approximately -35 °F (-37 °C).

Only add coolant that has been premixed with the desired antifreeze protection. You could otherwise damage the engine.

Further information on coolants and on filling can be found in the Mercedes-Benz Specifications for Service Products, MB Approval 310.1, e.g. on the Internet at http://bevo.mercedes-benz.com. You can also consult an authorized Mercedes-Benz Center.

If the coolant has antifreeze protection down to -35 °F (-37 °C), the boiling point of the coolant in the pressurized system is approximately 266 °F (130 °C).

Your vehicle has a range of aluminum components. Aluminum components in the engine make it necessary to use anticorrosion/antifreeze coolant which has been specifically formulated to protect the aluminum parts. Using other antifreeze/corrosion inhibitors without these characteristics affects the service life. The coolant must be used throughout the year in order to maintain the necessary corrosion protection and provide protection from overheating. In the Maintenance Booklet, you can find information on the intervals for renewal.

The renewal interval is determined by the coolant type and the engine cooling system design. The renewal interval in the Maintenance Booklet is only valid if the coolant is renewed or replenished with Mercedes-Benz approved products.

Therefore, only use MB 325.0 antifreeze/corrosion inhibitor or another Mercedes-Benz approved product of the same specification.

Information on other products with the same specifications that are approved by Mercedes-Benz can be obtained at an authorized Mercedes-Benz Center or on the Internet at http://bevo.mercedes-benz.com.

The coolant is checked at every maintenance interval at an authorized Mercedes-Benz Center.

The antifreeze/corrosion inhibitor concentration in the engine cooling system should:

- be at least 50%. This will protect the engine cooling system against freezing down to approximately -35 °F (-37 °C).
- not exceed 55% (antifreeze protection to -49 °F [-45 °C]); otherwise, heat will not dissipate as effectively.

If the coolant level is too low, MB 325.0 antifreeze/corrosion inhibitor should be added. Have the engine cooling system checked for possible leaks.
The water in the engine cooling system must meet minimum requirements, which are usually satisfied by normal drinking water. If you are unsure about the water quality, contact an authorized Mercedes-Benz Center.

**Windshield/headlamp cleaning system**

**WARNING**
Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite and burn. You could be seriously burned.

Use MB SummerFit windshield washer concentrate at temperatures above freezing:
- Mix 1 part MB SummerFit to 100 parts water (1.34 fl oz[40 ml] to 1 gal[4.0 l] water).

Use freely available premixed windshield washer concentrate at temperatures below freezing:
- Mix 1 part MB SummerFit to 100 parts windshield washer concentrate (1.34 fl oz[40 ml] to 1 gal[4.0 l] windshield washer concentrate).

### Vehicle data, Roadster
