Your Operator's Manual

Digital form inside the vehicle
Familiarize yourself with the contents of the Operator's Manual directly via your vehicle's multimedia system (Menu item "Vehicle").

Booklet inside the vehicle
In addition to the vehicle's Operator's Manual, you can obtain the complete multimedia system Supplement from your authorized Mercedes-Benz Center.

Digital form via the Internet
You can find the Operator's Manual on the Mercedes-Benz homepage.

Digital form as an App
The Mercedes-Benz Guides App is available for free on the Apple® App store or Google Play.

In this Operator’s Manual you will find the following symbols:

⚠️ WARNING
Warning notes make you aware of dangers which could pose a threat to your health or life, or to the health and life of others.

🚰 Environmental note
Environmental notes provide you with information on environmentally aware actions or disposal.

⚠️ Notes on material damage alert you to dangers that could lead to damage to your vehicle.

💡 Practical tips or further information that could be helpful to you.

- This symbol indicates an instruction that must be followed.
- Several of these symbols in succession indicate an instruction with several steps.

This symbol tells you where you can find more information about a topic.

This symbol indicates a warning or an instruction that is continued on the next page.

This text indicates a message on the multifunction display-multimedia display.

This symbol tells you that you can find further information in the Digital Operator’s Manual.

As at 27.03.2017
Welcome to the world of Mercedes-Benz

We urge you to read this Operator's Manual carefully and familiarize yourself with the vehicle before driving. For your own safety and a longer vehicle life, follow the instructions and warning notices in this Operator's Manual. Ignoring them could result in damage to the vehicle or personal injury to you or others. Vehicle damage caused by failure to follow instructions is not covered by the Mercedes-Benz Limited Warranty. The equipment or product designation of your vehicle may vary depending on:

- Model
- Order
- Country specification
- Availability

Mercedes-Benz therefore reserves the right to introduce changes in the following areas:

- Design
- Equipment
- Technical features

The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The following are integral components of the vehicle:

- Printed Operator's Manual
- Maintenance Booklet
- Equipment-dependent supplements

Keep these documents in the vehicle at all times. If you sell the vehicle, always pass all documents on to the new owner.

Your Operator's Manual:

Digital form inside the vehicle

The Digital Operator's Manual provides comprehensive and specifically adapted information on your vehicle's equipment and multimedia system. It contains informative animations, individual language settings and an intuitive search function.

Booklet inside the vehicle

In addition to this manual and the aforementioned digital media, you also have the option to obtain a comprehensive printed version of the Supplement for your multimedia system from your authorized Mercedes-Benz Center.

Digital form via the Internet

The Operator's Manual on the Internet provides easy access to all information regarding your vehicle and multimedia system. It also provides helpful animations, interesting background information and a wide array of search options.

Digital form as an app

Using the Mercedes-Benz Guides app, you can view all the information on your vehicle and multimedia system via mobile Internet or download it independently of network access. Available for smartphones or tablets.

Please note that the Mercedes-Benz Guides app may not yet be available in your country.

Introduction

There are three ways to access the topics of the Digital Operator's Manual:

- **Visual search**
  The visual search allows you to explore your vehicle "virtually". Starting from either the vehicle exterior view or interior view, you can access many of the different topics covered by the Digital Operator's Manual. To access the vehicle interior section, select the "Vehicle interior" view.

- **Keyword search**
  The keyword search allows you to search for a keyword by entering characters. Further information can be found in the Digital Operator's Manual in the "COMAND" section under the "Character entry (telephony)" keyword.

- **Contents**
  You can select individual sections in the contents.

The Digital Operator's Manual is deactivated for safety reasons while driving.

Operating the Digital Operator's Manual

General notes

Please observe the information about the operation of the controller (> page 209).

Content pages

The content pages can be accessed by means of a visual search, a keyword search or using the contents.

Operation

Calling up the Digital Operator's Manual

- Show the main function bar by sliding  the controller up.
- Select the Vehicle menu item by turning  and pressing  the controller. The vehicle menu is displayed.
- Select the Operator's Manual menu item by turning  and pressing  the controller.
- To scroll forward/back: turn  the controller.
- To select information text or save bookmarks: slide  the controller to the right 2.
- To select a link: slide  the controller down 3.
- To exit a content page: select the  symbol 4.
- To switch functions to the multimedia system: select  symbol 4 repeatedly until you exit the Digital Operator's Manual.
Protecting the environment

General notes

Environmental note

Daimler’s declared policy is one of comprehensive environmental protection. The objectives are for the natural resources that form the basis of our existence on this planet to be used sparingly and in a manner that takes the requirements of both nature and humanity into account.

You too can help to protect the environment by operating your vehicle in an environmentally responsible manner.

Fuel consumption and the rate of engine, transmission, brake and tire wear are affected by these factors:

- operating conditions of your vehicle
- your personal driving style

You can influence both factors. You should bear the following in mind:

Operating conditions:

- avoid short trips as these increase fuel consumption.
- always make sure that the tire pressures are correct.
- do not carry any unnecessary weight.
- remove roof racks once you no longer need them.
- a regularly serviced vehicle will contribute to environmental protection. You should therefore adhere to the service intervals.
- always have service work carried out at a qualified specialist workshop.

Personal driving style:

- do not depress the accelerator pedal when starting the engine.
- do not warm up the engine when the vehicle is stationary.
- drive carefully and maintain a safe distance from the vehicle in front.
- avoid frequent, sudden acceleration and braking.

- change gear in good time and use each gear only up to 2/3 of its maximum engine speed.
- switch off the engine in stationary traffic.
- keep an eye on the vehicle’s fuel consumption.

Environmental concerns and recommendations

Wherever the Operator’s Manual requires you to dispose of materials, first try to regenerate or re-use them. Observe the relevant environmental rules and regulations when disposing of materials. In this way you will help to protect the environment.

Genuine Mercedes-Benz parts

Environmental note

Daimler AG also supplies reconditioned major assemblies and parts which are of the same quality as new parts. They are covered by the same Limited Warranty entitlements as new parts.

Air bags and Emergency Tensioning Devices, as well as control units and sensors for these restraint systems, may be installed in the following areas of your vehicle:

- doors
- door pillars
- door sills
- seats
- cockpit
- instrument cluster
- center console

Do not install accessories such as audio systems in these areas. Do not carry out repairs or welding. You could impair the operating efficiency of the restraint systems. Have aftermarket accessories installed at a qualified specialist workshop.

You could jeopardize the operating safety of your vehicle if you use parts, tires and wheels as well as accessories relevant to safety which have not been approved by Mercedes-Benz. This could lead to malfunctions in safety-relevant
systems, e.g. the brake system. Use only genuine Mercedes-Benz parts or parts of equal quality. Only use tires, wheels and accessories that have been specifically approved for your vehicle.

Genuine Mercedes-Benz parts are subject to strict quality control. Every part has been specifically developed, manufactured or selected for and adapted to Mercedes-Benz vehicles. Therefore, only genuine Mercedes-Benz parts should be used.

More than 300,000 different genuine Mercedes-Benz parts are available for Mercedes-Benz models.

All authorized Mercedes-Benz Centers maintain a supply of genuine Mercedes-Benz parts for necessary service and repair work. In addition, strategically located parts delivery centers provide quick and reliable parts service.

Always specify the vehicle identification number (VIN) when ordering genuine Mercedes-Benz parts (> page 285).

Operator’s Manual

Vehicle equipment

This Operator’s Manual describes all models and all standard and optional equipment of your vehicle available at the time of this Operator’s Manual going to print. Country-specific differences are possible. Bear in mind that your vehicle may not feature all functions described here. This also applies to safety-relevant systems and functions. The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The original purchase agreement lists all systems installed in your vehicle.

Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

The Operator’s Manual and Maintenance Booklet are important documents and should be kept in the vehicle.

Service and vehicle operation

Warranty

The Limited Warranty for your vehicle applies in accordance with the warranty terms and conditions in the Service and Warranty Information booklet.

Your authorized Mercedes-Benz Center will replace and repair all factory-installed parts in accordance with the following warranty terms and conditions:

- New Vehicle Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Connecticut, Maine, Massachusetts, New York, Pennsylvania, Rhode Island and Vermont Emission Control System Warranty
- State warranty enforcement laws (lemon laws)

Replacement parts and accessories are covered by the Mercedes-Benz Parts and Accessories warranties. These are available at any authorized Mercedes-Benz Center.

Information for customers in California

Under California law you may be entitled to a replacement of your vehicle or a refund of the purchase price or lease price, if after a reasonable number of repair attempts Mercedes-Benz USA, LLC and/or its authorized repair or service facilities fail to fix one or more substantial defects or malfunctions in the vehicle that are covered by its express warranty.

During the period of 18 months from original delivery of the vehicle or the accumulation of 18,000 miles (approximately 29,000 km) on the odometer of the vehicle, whichever occurs first, a reasonable number of repair attempts is presumed for a retail buyer or lessee if one or more of the following occurs:

1. the same substantial defect or malfunction results in a condition that is likely to cause
death or serious bodily injury if the vehicle is driven, that defect or malfunction has been subject to repair two or more times, and you have directly notified Mercedes-Benz USA, LLC in writing of the need for its repair.

(2) the same substantial defect or malfunction of a less serious nature than category (1) has been subject to repair four or more times and you have directly notified Mercedes-Benz in writing of the need for its repair.

(3) the vehicle is out of service by reason of repair of the same or different substantial defects or malfunctions for a cumulative total of more than 30 calendar days.

Please send your written notice to:
Mercedes-Benz USA, LLC
Customer Assistance Center
One Mercedes Drive
Montvale, NJ 07645-0350

USA only:
Always have the Service and Warranty Booklet with you when you bring the vehicle to an authorized Mercedes-Benz Center. The service advisor will record every service for you in the Service and Warranty Booklet.

Canada only:
Have every service in a qualified specialist workshop confirmed in the service report.

Roadside Assistance
The Mercedes-Benz Roadside Assistance Program offers technical help in the event of a breakdown. Calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.

1-800-FOR-MERCedes (1-800-367-6372) (USA)
1-800-387-0100 (Canada)

For additional information, refer to the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty Booklet (Canada). You will find both in the vehicle document wallet.

Change of address or change of ownership
In the event of a change of address, please send us the "Notification of Address Change" in the Service and Warranty Booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) at the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service Center (Canada) at 1-800-387-0100. This will assist us in contacting you in a timely manner should the need arise.

If you sell your Mercedes, please leave all literature in the vehicle so that it is available to the next owner.

If you have purchased a used car, please send us the "Notification of Used Car Purchase" in the Service and Warranty Booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) at the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service (Canada) at 1-800-387-0100.

Vehicle operation outside the USA and Canada
When you are abroad with your vehicle, observe the following points:

- Service facilities or replacement parts may not be readily available.
- Lead-free fuel for vehicles with a catalytic converter may not be available. Leaded fuel can cause damage to the catalytic converter.
- The fuel may have a considerably lower octane number. Unsuitable fuel can cause engine damage.

Some Mercedes-Benz models are available for delivery in Europe through our European Delivery Program. For details, consult an authorized Mercedes-Benz Center or write to one of the following addresses.

In the USA
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada
Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

<tbody>
<tr>
<td><strong>Vehicle components which receive and/or transmit radio waves</strong></td>
</tr>
</tbody>
</table>

**USA:** "The wireless devices of this vehicle comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) These devices may not cause harmful interference, and 2) These devices must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment."

**Canada:** "The wireless devices of this vehicle comply with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) These devices may not cause interference, and (2) These devices must accept any interference, including interference that may cause undesired operation of the device."
Diagnostics connection
The diagnostics connection is only intended for the connection of diagnostic equipment at a qualified specialist workshop.

⚠️ WARNING
If you connect equipment to a diagnostics connection in the vehicle, it may affect the operation of vehicle systems. As a result, the operating safety of the vehicle could be affected. There is a risk of an accident.

Only connect equipment to a diagnostics connection in the vehicle, which is approved for your vehicle by Mercedes-Benz.

⚠️ WARNING
Objects in the driver’s footwell can restrict the pedal travel or obstruct a depressed pedal. The operating and road safety of the vehicle is jeopardized. There is a risk of an accident.

Make sure that all objects in the vehicle are stowed correctly, and that they cannot enter the driver’s footwell. Install the floor mats securely and as specified in order to ensure sufficient clearance for the pedals. Do not use loose floor mats and do not place floor mats on top of one another.

⚠️ If the engine is switched off and equipment on the diagnostics connection is used, the starter battery may discharge.

Connecting equipment to the diagnostics connection can lead to emissions monitoring information being reset, for example. This may lead to the vehicle failing to meet the requirements of the next emissions test during the main inspection.

Qualified specialist workshop
An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary specialist knowledge, tools and qualifications to correctly carry out the work required on your vehicle. This is especially the case for work relevant to safety.

Always have the following work carried out at an authorized Mercedes-Benz Center:
- work relevant to safety
- service and maintenance work
- repair work
- alterations, installation work and modifications
- work on electronic components

Correct use
If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.

Observe the following information when driving your vehicle:
- the safety notes in this manual
- the vehicle technical data
- traffic rules and regulations
- laws and safety standards pertaining to motor vehicles

Problems with your vehicle
If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and rectified. If the problem is not resolved to your satisfaction, please discuss the problem again with the authorized Mercedes-Benz Center or, if necessary, contact us at one of the following addresses.

In the USA
Customer Assistance Center
Mercedes-Benz USA, LLC
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada

Toronto, Ontario M4G 4C9

Reporting safety defects
USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590.

You can also obtain other information about motor vehicle safety at: http://www.safercar.gov

Data stored in the vehicle

### Limited Warranty

Observe the notes in this Operator's Manual regarding the correct operation of your vehicle and possible damage to the vehicle. Damage to the vehicle which is caused by violation of these notes is not covered by the Mercedes-Benz implied warranty or the new or used-vehicle warranty.

### QR codes for the rescue card

The QR codes are secured in the fuel filler flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle in a compact form, e.g. the routing of the electric cables.

You can find more information under www.mercedes-benz.de/qr-code.

### Data stored in the vehicle

#### Information from electronic control units

There are electronic control units installed in your vehicle. Some of these are necessary for your vehicle to operate safely, while some offer support during driving (driver assistance systems). In addition, your vehicle offers comfort and entertainment functions that are also made possible by electronic control units.

Electronic control units contain data storage systems that can temporarily or permanently save technical information concerning the vehicle's condition, component stress and maintenance requirements as well as technical events and malfunctions.

This information generally documents the condition of a component, a module, a system or the surroundings, for example:

- operating states of system components (e.g. fill levels, battery status, tire pressure)
- status messages concerning the vehicle or its individual components (e.g. wheel rpm/speed, deceleration, lateral acceleration, indication of whether seat belts are fastened)
- malfunctions and defects in important system components (e.g. lights, brakes)
- information about events leading to vehicle damage
- system responses in special driving situations (e.g. air bag deployment, intervention of stability control systems)
- ambient conditions (e.g. temperature, rain sensor)

In addition to performing the actual control unit function, these data are used by manufacturers to detect and rectify malfunctions and to optimize vehicle functions. Most of these data are volatile and processed only in the vehicle itself. Only a small part of the data is stored in event or malfunction memories.

When you use services, the technical data from the vehicle can be read out by service network employees or third parties. Services can include repair services, maintenance processes, warranty cases and quality assurance measures. The data is read out via the legally prescribed diagnostics connection in the vehicle. The relevant offices in the service network or third parties collect, process and use the data. These data document the vehicle's technical states,
are used to help in finding malfunctions and improving quality and are sent to the manufacturer where necessary. In addition, the manufacturer is subject to product liability. The manufacturer needs technical data from vehicles for this purpose. Malfunction memories in the vehicle can be reset by a service center during repair or service work.

You can incorporate data into the vehicle’s comfort and infotainment functions yourself as part of the selected equipment. These include, for example:

- multimedia data such as music, films or photos for playback in an integrated multimedia system
- address book data for use in conjunction with an integrated hands-free system or an integrated navigation system
- navigation destinations that have been entered
- data about using Internet services

These data can be saved locally in the vehicle or are located on a device that you have connected to the vehicle. If this data is saved in the vehicle, you can delete it at any time. These data are sent to third parties only at your request, particularly when you use online services in accordance with the settings that you have selected.

You can save and change comfort settings/customizations in the vehicle at any time. Depending on the piece of equipment in question, these can include, for example:

- seat and steering wheel position settings
- suspension and climate control settings
- custom settings such as interior lighting

If your vehicle is equipped appropriately, you can connect your smartphone or another mobile end device to the vehicle. You can control this by means of the control elements integrated in the vehicle. The smartphone’s picture and sound can be output via the multimedia system. Specific items of information are also sent to your smartphone.

Depending on the type of integration, this can include:

- general vehicle information
- position data

This allows the use of selected smartphone Apps, such as navigation or music player Apps. There is no additional interaction between the smartphone and the vehicle, particularly active access to vehicle data. The type of additional data processing is determined by the provider of the App being used. Whether you can configure settings for it and, if so, which ones, depends on the App and your smartphone’s operating system.

### Service provider

#### Wireless network connection

If your vehicle has a wireless network connection, data can be exchanged between your vehicle and other systems. The wireless network connection is enabled by either an in-vehicle transmitter and receiver or your own mobile end device (e.g. smartphone). Online functions can be used via this wireless network connection. These include online services and applications/Apps provided by the manufacturer or other providers.

### Services provided by the manufacturer

In the case of the manufacturer’s online services, the manufacturer describes the functions in a suitable place and the associated information subject to data protection legislation. Personal data can be used in order to provide online services. Data are exchanged via a secure connection (e.g. using the IT system specially provided for this purpose by the manufacturer). Collecting, processing and using personal data beyond the provision of services is permitted only on the basis of a statutory permit or declaration of consent.

You can usually activate and deactivate the services and functions (some of which are subject to charge). In many cases, this also applies to the vehicle’s entire data connection. However, this does not apply in particular to legally prescribed functions and services such as the "eCall" emergency call system.

### Services from third parties

If it is possible to use online services from other providers, these services are the responsibility of the provider in question and subject to that provider’s data protection conditions and terms of use. The manufacturer has no influence over the content exchanged here.
For this reason, please ask the service provider for information about the type, extent and purpose of the collection and use of personal data when services are provided by third parties.

**COMAND/mbrace**

If the vehicle is equipped with COMAND or mbrace, additional data about the vehicle’s operation, the use of the vehicle in certain situations, and the location of the vehicle may be compiled through COMAND or the mbrace system.

For additional information please refer to the COMAND User Manual or the Digital Operator’s Manual and/or the mbrace Terms and Conditions.

**Event data recorders**

This vehicle is equipped with an event data recorder (EDR). This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.

The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating
- Whether or not the driver and passenger safety belts were buckled/fastened
- How far (if at all) the driver was depressing the accelerator and/or brake pedal and
- How fast the vehicle was traveling

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. **NOTE:** EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g. name, gender, age and crash location) are recorded. However, other parties, such as law enforcement could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

Access to the vehicle and/or the EDR is needed to read data that is recorded by an EDR, and special equipment is required. In addition to the vehicle manufacturer, other parties that have the special equipment, such as law enforcement, can read the information by accessing the vehicle or the EDR.

EDR data may be used in civil and criminal matters as a tool in accident reconstruction, accident claims and vehicle safety. Since the Crash Data Retrieval CDR tool that is used to extract data from the EDR is commercially available, Mercedes-Benz USA, LLC (“MBUSA”) expressly disclaims any and all liability arising from the extraction of this information by unauthorized Mercedes-Benz personnel.

MBUSA will not share EDR data with others without the consent of the vehicle owners or, if the vehicle is leased, without the consent of the lessee. Exceptions to this representation include responses to subpoenas by law enforcement; by federal, state or local government; in connection with or arising out of litigation involving MBUSA or its subsidiaries and affiliates; or, as required by law.

Warning: The EDR is a component of the Restraint System Module. Tampering with, altering, modifying or removing the EDR component may result in a malfunction of the Restraint System Module and other systems.

State laws or regulations regarding EDRs that conflict with federal regulation are pre-empted. This means that in the event of such conflict, the federal regulation governs. As of February 2013, 13 states have enacted laws relating to EDRs.

**Mercedes me website**

**General information**

⚠️ **WARNING**

If you operate information systems and communication equipment integrated in the vehicle when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the traffic situation permits. If you are not sure that this is possible, park the vehicle paying attention
to traffic conditions and operate the equipment when the vehicle is stationary.

Mercedes me connect services may be limited to certain countries and certain devices. Daimler AG can restrict or discontinue the service.

The remote online services of Mercedes me connect:

- are not intended for use in the vehicle. These services must not be used while the vehicle is in motion.
- may contain data which is out of date or invalid. The displays in the vehicle apply at all times.

The remote online services and selected basic services can be used via the website https://www.mercedes.me or via the web application for your smartphone. They can be called up using many Internet-enabled end devices.

You must observe the legal requirements for the country in which you are currently driving when calling up the website via the multimedia system. Do not use the website while the vehicle is in motion.

Notes on data protection

⚠️ WARNING

The use of remote control functions can lead to security risks.

Remote control functions include, for example:
- Locking/unlocking the vehicle
- Activating auxiliary heating

A security risk could occur, for example by the activation of the auxiliary heating at an unsuitable location for the vehicle.

An unauthorized person with knowledge of your access data could take control of vehicle behavior and/or individual vehicle functions.

Take great care to protect your access data from unauthorized access.

Change your access data immediately if you suspect unauthorized access has taken place or that your access data has been compromised. In addition, consult an authorized Mercedes-Benz Center immediately.

Any person who has access to your access data can use the Mercedes me connect services.

Change of vehicle

If you sell your vehicle, you are obliged to delete the vehicle from your personal area on the Mercedes me website.

If you have bought a used vehicle, it is possible that the previous owner still has access to the Mercedes me connect services. Daimler AG or Mercedes me connect are not automatically informed about the change of owner.

For as long as the previous owner has a connection with the vehicle, they can use all of the Mercedes me connect services.

For example:
- locating the vehicle
- remotely operated vehicle functions
  e.g. locking and unlocking the vehicle

Active vehicle location is shown in the multimedia system display.

If in doubt, deactivate the function:
- on the Mercedes me connect website by switching off the function in the settings.
- via the Mercedes-Benz Customer Center. You can call up the Mercedes-Benz Customer Center by pressing the button in the overhead control unit. Have access for the previous owner deactivated.

Panic alarm

To activate: press the PANIC button 1 for at least one second. A visual and audible alarm is triggered if the alarm system is armed.

To deactivate: press the PANIC button 1 again.

or

Press the Start/Stop button. The SmartKey must be in the vehicle.

or

Insert the SmartKey into the ignition lock.

Occupant safety

Introduction to the restraint system

The restraint system can reduce the risk of vehicle occupants coming into contact with parts of the vehicle’s interior in the event of an accident. The restraint system can also reduce the forces to which vehicle occupants are subjected during an accident.

The restraint system comprises:

- Seatbelt system
- Airbags

The components of the restraint system work in conjunction with each other. They can only deploy their protective function if, at all times, all vehicle occupants:

- have fastened their seat belts correctly (► page 43)
- have the seat adjusted properly (► page 84)

Depending on the vehicle’s equipment, the head restraints must also be adjusted properly.

As the driver, you also have to make sure that the steering wheel is adjusted correctly. Observe the information relating to the correct driver’s seat position (► page 84).

You also have to make sure that an air bag can inflate properly if deployed (► page 45).

An air bag supplements a correctly worn seat belt. As an additional safety device, the air bag increases the level of protection for vehicle occupants in the event of an accident. For example, if, in the event of an accident, the protection offered by the seat belt is sufficient, the air bags are not deployed. When an accident occurs, only the air bags that increase protection in that particular accident situation are deployed. However, seat belts and air bags generally do not protect against objects penetrating the vehicle from the outside.

Information on restraint system operation can be found under "Triggering of the Emergency Tensioning Devices and airbags" (► page 52).

See “Children in the vehicle” for information on children traveling with you in the vehicle as well as on child restraint systems (► page 55).

Important safety notes

⚠️ WARNING

Modifications to the restraint system may cause it to no longer work as intended. The restraint system may then not perform its intended protective function and may fail in an accident or trigger unexpectedly, for example. This poses an increased risk of injury or even fatal injury.

Never modify parts of the restraint system. Never tamper with the wiring, the electronic components or their software.

If it is necessary to modify components of the restraint system to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details. USA only: for further information contact our Customer Assistance Center at 1-800 FOR-MERCEDES (1-800-367-6372).

Mercedes-Benz recommends that you only use driving aids which have been approved specifically for your vehicle by Mercedes-Benz.
**Restraint system warning lamp**

The functions of the restraint system are checked after the ignition is switched on and at regular intervals while the engine is running. Therefore, malfunctions can be detected in good time.

The " restraint system warning lamp on the instrument cluster lights up when the ignition is switched on. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are in operational readiness. A malfunction has occurred if the restraint system warning lamp:

- does not light up after the ignition is switched on
- does not go out after a few seconds with the engine running
- lights up again while the engine is running

**WARNING**

If the restraint system is malfunctioning, restraint system components may be triggered unintentionally or may not deploy as intended during an accident. This can affect for example the Emergency Tensioning Device or the air bag. This poses an increased risk of injury or even fatal injury.

Have the restraint system checked and repaired in a qualified specialist workshop as soon as possible.

**PASSENGER AIR BAG indicator lamp**

The indicator lamps display the status of the front-passenger front air bag.

- PASSENGER AIR BAG ON lights up for 60 seconds, subsequently both indicator lamps are off (PASSENGER AIR BAG ON and OFF): the front-passenger front air bag is able to deploy in the event of an accident.
- PASSENGER AIR BAG OFF lights up: the front-passenger front air bag is deactivated. It will then not be deployed in the event of an accident.

If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front-passenger front air bag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off. Depending on the person in the front-passenger seat, the front-passenger front air bag must either be deactivated or enabled; see the following points. You must make sure of this both before and during a journey.

- **Children in a child restraint system:** whether the front-passenger front air bag is enabled or deactivated depends on the installed child restraint system, and the age and size of the child. Therefore, be sure to observe the notes on the "Occupant Classification System (OCS)" (> page 48) and on "Children in the vehicle" (> page 55). There you will also find instructions on rearward and forward-facing child restraint systems on the front-passenger seat.

- **All other persons:** depending on the classification of the person in the front-passenger seat, the front-passenger front air bag is enabled or deactivated (> page 48). Be sure to observe the notes on "Seat belts" (> page 41) and "Air bags" (> page 45). There you can also find information on the correct seat position.

**Seat belts**

**Introduction**

Seat belts are the most effective means of restricting the movement of vehicle occupants in the event of an accident or the vehicle rolling over. This reduces the risk of vehicle occupants coming into contact with parts of the vehicle interior or being ejected from the vehicle. Furthermore, the seat belt helps to keep the vehicle...
occupant in the best position in relation to the air bag.
The seat belt system comprises:
- Seat belts
- Emergency Tensioning Devices and seat belt force limiters
If the seat belt is pulled quickly or sharply by the seat belt guide, the inertia reel locks. The belt strap cannot be extracted any further.
The Emergency Tensioning Device tightens the seat belt in an accident, pulling the belt close against the body. However it does not pull the vehicle occupant back in the direction of the backrest.
The Emergency Tensioning Device does not correct an incorrect seat position or the routing of an incorrectly fastened seat belt.
When triggered, a seat belt force limiter helps to reduce the force exerted by the seat belt on the vehicle occupant.
The seat belt force limiters are synchronized with the front air bags which absorb part of the deceleration force. This can reduce the force exerted on the vehicle occupants during an accident.

If the front-passenger seat is not occupied, do not engage the seat belt tongue in the buckle on the front-passenger seat. Otherwise, in the event of an accident the Emergency Tensioning Device and the side impact air bag, in addition to other systems, may be triggered and have to be replaced.

Important safety notes

The use of seat belts and child restraint systems is required by law in:
- all 50 states
- the U.S. territories
- the District of Columbia
- all Canadian provinces
Even where this is not required by law, all vehicle occupants should correctly fasten their seat belts before starting the journey.

⚠️ WARNING

If the seat belt is not worn correctly, it cannot perform its intended protective function. An incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction abruptly. This poses an increased risk of injury or even fatal injury.

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

The components of the restraint system work in conjunction with each other. They can only deploy their protective function if, at all times, all vehicle occupants:
- have fastened their seat belts correctly (page 43)
- have the seat adjusted properly (page 84)
Depending on the vehicle’s equipment, the head restraints must also be adjusted properly.

⚠️ WARNING

The seat belt does not offer the intended level of protection if you have not moved the backrest to an almost vertical position. When braking or in the event of an accident, you could slide underneath the seat belt and sustain abdomen or neck injuries, for example. This poses an increased risk of injury or even fatal injury.

Adjust the seat properly before beginning your journey. Always ensure that the backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the center of your shoulder.

⚠️ WARNING

Persons less than 5 ft (1.50 m) tall cannot wear the seat belt correctly without an additional and suitable restraint system. If the seat belt is not worn correctly, it cannot perform its intended protective function. An incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction abruptly. This poses an increased risk of injury or even fatal injury.

For this reason, always secure persons under 5 ft (1.50 m) tall in suitable additional restraint systems.
If a child younger than twelve years old and under 5 ft (1.50 m) in height is traveling in the vehicle:

- always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle. The child restraint system must be appropriate to the age, weight and size of the child.
- always observe the instructions and safety notes on "Children in the vehicle" (page 55) in addition to the child restraint system manufacturer's installation and operating instructions
- always observe the instructions and safety notes on the "Occupant classification system (OCS)" (page 48)

**WARNING**
The seat belts may not perform their intended protective function if:
- they are damaged, modified, extremely dirty, bleached or dyed
- the seat belt buckle is damaged or extremely dirty
- the Emergency Tensioning Devices, belt anchorages or inertia reels have been modified.

Seat belts may be damaged in an accident, although the damage may not be visible, e.g. due to splinters of glass. Modified or damaged seat belts may tear or fail, e.g. in an accident. Modified Emergency Tensioning Devices could accidentally trigger or fail to deploy when necessary. This poses an increased risk of injury or even fatal injury.

Never modify the seat belts, Emergency Tensioning Devices, belt anchorages and inertia reels. Make sure that the seat belts are undamaged, not worn out and clean. Following an accident, have the seat belts checked immediately at a qualified specialist workshop.

Only use seat belts that have been approved for your vehicle by Mercedes-Benz.

**AMG Performance seat:** this seat is designed for the standard three-point seat belt. If you install another multi-point seat belt, e.g. sport or racing seat belts, the restraint system cannot provide the best level of protection.

---

**WARNING**
If you feed seat belts through the opening in the seat backrest, the seat backrest may be damaged or may even break in the event of an accident. This poses an increased risk of injury or even fatal injury.

Only use the standard three-point seat belt. Never modify the seat belt system.

---

**Proper use of the seat belts**

Observe the safety notes on the seat belt (page 42).

All vehicle occupants must be wearing the seat belt correctly before beginning the journey. Also make sure that all vehicle occupants are always wearing the seat belt correctly while the vehicle is in motion.

When fastening the seat belt, always make sure that:

- the seat belt buckle tongue is inserted only into the belt buckle belonging to that seat
- the seat belt is pulled tight across your body
  - Avoid wearing bulky clothing, e.g. a winter coat.
- the seat belt is not twisted
  - Only then can the forces which occur be distributed over the area of the belt.
  - the shoulder section of the belt is routed across the center of your shoulder
  - The shoulder section of the seat belt should not touch your neck or be routed under your arm or behind your back.
- the lap belt is taut and passes across your lap as low down as possible
  - The lap belt must always be routed across your hip joints and not across your abdomen. This applies particularly to pregnant women. If necessary, push the lap belt down to your hip joint and pull it tight using the shoulder section of the belt.
- the seat belt is not routed across sharp, pointed or fragile objects
  - If you have such items located on or in your clothing, e.g. pens, keys or eyeglasses, store these in a suitable place.
- only one person is using a seat belt
  - Infants and children must never travel sitting on the lap of a vehicle occupant. In the event
of an accident, they could be crushed between the vehicle occupant and seat belt.
- objects are never secured with a seat belt if the seat belt is also being used by one of the vehicle’s occupants

Also ensure that there are never objects between a person and the seat, e.g. cushions.

Seat belts are only intended to secure and restrain vehicle occupants. Always observe the "Loading guidelines" for securing objects, luggage or loads (▶ page 217).

**Fastening seat belts**

Observe the safety notes on the seat belt (▶ page 42) and the notes on correct use of seat belts (▶ page 43).

Basic illustration

► Adjust the seat (▶ page 84).
   The seat backrest must be in an almost upright position.

► Pull the seat belt smoothly out of seat belt guide ③ and engage belt tongue ② into belt buckle ①.
   The seat belt on the driver’s seat and the front-passenger seat may be tightened automatically, see "Belt adjustment" (▶ page 44).

► If necessary, pull up on the shoulder section of the seat belt to tighten the belt across your body.

In order to attach the child restraint system securely in the vehicle, the seat belt on the front-passenger seat is equipped with a special seat belt retractor. Further information on the "Special seat belt retractor" (▶ page 56).

**Releasing seat belts**

1. Make sure that the seat belt is fully rolled up.
   Otherwise, the seat belt or belt tongue will be trapped in the door or in the seat mechanism. This could damage the door, the door trim panel and the seat belt. Damaged seat belts can no longer fulfill their protective function and must be replaced. Visit a qualified specialist workshop.

   ► Press the release button in the belt buckle, hold the belt tongue firmly and guide the belt back.

**Seat belt adjustment**

The belt adjustment is a convenience function integrated into PRE-SAFE®. With this function, the driver’s and front-passenger seat belts are adjusted to the upper body of the vehicle occupant.

The seat belt strap will slightly tighten if:
- the belt tongue is inserted into the buckle and
- the ignition is switched on

The seat belt adjustment will apply a certain tightening force if any slack is detected between the vehicle occupant and the seat belt. Do not grab hold of the seat belt.

You can switch the seat belt adjustment on and off using the multimedia system. Information on switching the seat belt adjustment on and off can be found in the Digital Operating Instructions.

**Belt warning for the driver and front passenger**

The ⬇️ seat belt warning lamp in the instrument cluster is a reminder that all vehicle occupants must wear their seat belts. It may light up continuously or flash. In addition, there may be a warning tone.

Regardless of whether the driver’s seat belt has already been fastened, the ⬇️ seat belt warning lamp lights up for six seconds each time the engine is started. If the doors are closed and the driver’s or front-passenger seat belt has not been fastened, the ⬇️ seat belt warning lamp lights up again after the six seconds. As soon as the driver’s and front-passenger seat belts are
fastened or a front door is opened again, the seat belt warning lamp goes out.
If the driver’s seat belt is not fastened after the engine is started, an additional warning tone will sound. The warning tone switches off after six seconds or once the driver’s seat belt is fastened.
If the vehicle’s speed exceeds 15 mph (25 km/h) once and the driver’s and front passenger seat belts are not fastened, a warning tone sounds. A warning tone also sounds with increasing intensity for 60 seconds or until the driver or front passenger have fastened their seat belts.
If the driver or front passenger unfasten their seat belts during the journey, the seat belt warning is activated again.

To avoid hazardous situations, always make sure that all of the vehicle's occupants:

- have fastened their seat belts correctly, including pregnant women
- are sitting correctly and maintain the greatest possible distance to the air bags
- follow the following instructions

Always make sure that there are no objects between the air bag and the vehicle’s occupants.

- Adjust the seats properly before beginning your journey. Always make sure that the seat is in an almost upright position. The center of the head restraint must support the head at about eye level.
The setting options are different depending on the seat model.
- Move the driver’s and front-passenger seats as far back as possible. The driver’s seat position must allow the vehicle to be driven safely.
- Only hold the steering wheel on the outside. This allows the air bag to be fully deployed.
- Always lean against the backrest while driving. Do not lean forward or lean against the door or side window. You may otherwise be in the deployment area of the air bags.
- Always keep your feet in the footwell in front of the seat. Do not put your feet on the dashboard, for example. Your feet may otherwise be in the deployment area of the air bag.
- For this reason, always secure persons less than 5 ft (1.50 m) tall in suitable restraint systems. Up to this height, the seat belt cannot be worn correctly.

If a child is traveling in your vehicle, also observe the following notes:

- Always secure children under twelve years of age and less than 5 ft (1.50 m) tall in suitable child restraint systems.
- Only secure a child in a rearward-facing child restraint system on the front-passenger seat when the front-passenger front air bag is deactivated. If the PASSENGER AIR BAG OFF indicator lamp is permanently lit, the front-passenger front air bag is deactivated (> page 41).
- Always observe the instructions and safety notes on the "Occupant Classification System (OCS)" (> page 48) and on "Children in the

Air bags
Introduction
The installation point of an air bag can be recognized by the AIRBAG marking.
An air bag complements the correctly fastened seat belt. It is no substitute for the seat belt. The air bag provides additional protection in applicable accident situations.
Not all air bags are deployed in an accident. The different air bag systems function independently from one another (> page 52).
However, no system available today can completely eliminate injuries and fatalities.
It is also not possible to rule out a risk of injury caused by an air bag due to the high speed at which the air bag must be deployed.

Important safety notes

⚠️ WARNING
If you do not sit in the correct seat position, the air bag cannot protect as intended and could even cause additional injury when deployed. This poses an increased risk of injury or even fatal injury.
vehicle\(^*\) (> page 55) in addition to the child restraint system manufacturer's installation and operating instructions.

**Objects in the vehicle interior may prevent an air bag from functioning correctly.** Before starting your journey and to avoid risks resulting from the speed of the air bag as it deploys, make sure that:

- there are no people, animals or objects between the vehicle occupants and an air bag
- there are no objects between the seat, door and B-pillar
- no accessories, such as cup holders, are attached to the vehicle within the deployment area of an air bag, e.g. to doors or side windows
- no heavy, sharp-edged or fragile objects are in the pockets of your clothing. Store such objects in a suitable place

⚠ **WARNING**

If you modify the air bag cover or affix objects such as stickers to it, the air bag can no longer function correctly. There is an increased risk of injury.

Never modify an air bag cover or affix objects to it.

⚠ **WARNING**

Sensors to control the air bags are located in the doors. Modifications or work not performed correctly to the doors or door paneling, as well as damaged doors, can lead to the function of the sensors being impaired. The air bags might therefore not function properly anymore. Consequently, the air bags cannot protect vehicle occupants as they are designed to do. There is an increased risk of injury.

Never modify the doors or parts of the doors. Always have work on the doors or door paneling carried out at a qualified specialist workshop.

**Front air bags**

⚠ Do not place heavy objects on the front-passenger seat. This could cause the system to identify the seat as being occupied. In the event of an accident, the restraint systems on the front-passenger side may be triggered and have to be replaced.

Driver's air bag (1) deploys in front of the steering wheel. Front-passenger front air bag (2) deploys in front of and above the glove box.

When deployed, the front air bags offer additional head and thorax protection for the occupants in the driver's and front-passenger seats.

The PASSENGER AIR BAG OFF indicator lamp informs you about the status of the front-passenger front air bag (> page 41).

The front-passenger front air bag will only deploy if:

- the system, based on the OCS weight sensor readings, detects that the front-passenger seat is occupied (> page 48). The PASSENGER AIR BAG OFF indicator lamp is not lit (> page 48)
- the restraint system control unit predicts a high accident severity

**Knee bags**

Driver's knee bag (1) deploys under the steering column and front-passenger knee bag (2) under the glove box. The driver's and front-passenger knee bags are triggered together with the front air bags.
The driver’s and front-passenger knee bags offer additional thigh, knee and lower leg protection.

**Side impact air bags**

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unsuitable seat covers can obstruct or prevent deployment of the air bags integrated into the seats. Consequently, the air bags cannot protect vehicle occupants as they are designed to do. In addition, the operation of the occupant classification system (OCS) could be adversely affected. This poses an increased risk of injury or even fatal injury. You should only use seat covers that have been approved for the respective seat by Mercedes-Benz.</td>
</tr>
</tbody>
</table>

Side impact air bags ① deploy next to the outer bolster of the seat backrest. When deployed, the side impact air bag offers additional thorax protection. However, it does not protect the:

- Head
- Neck
- Arms

Increased pelvis protection is also offered on vehicles with AMG Performance seat.

If the restraint system control unit detects a side impact, the side impact air bag is deployed on the side on which the impact occurs.

The side impact air bag on the front-passenger side deploys under the following conditions:

- the OCS system detects that the front-passenger seat is occupied or
- the seat belt buckle tongue is engaged in the belt buckle of the front-passenger seat

If the belt tongue is engaged in the belt buckle, the side impact air bag on the front-passenger side deploys if an appropriate accident situation occurs. In this case, deployment is independent of whether the front-passenger seat is occupied or not.

**Head air bags**

Head bags ① deploy in the area of the side windows at the front. When deployed, the head bag enhances the level of protection for the head. However, it does not protect the:

- chest
- arms

If the restraint system control unit detects a side impact, the head bag is deployed on the side on which the impact occurs.

If the system determines that they can offer additional protection to that provided by the seat belt, a head bag may be deployed in other accident situations (page 52).

The head bag on the front-passenger side deploys under the following conditions:

- the OCS system detects that the front-passenger seat is occupied or
- the seat belt buckle tongue is engaged in the belt buckle of the front-passenger seat

If the belt tongue is engaged in the belt buckle, the head bag on the front-passenger side deploys if an appropriate accident situation occurs. In this case, deployment is independent of whether the front-passenger seat is occupied or not.
Occupant Classification System (OCS)

Introduction

The Occupant Classification System (OCS) categorizes the person in the front-passenger seat. Depending on that result, the front-passenger front air bag and front-passenger knee bag are either enabled or deactivated.

The system does not deactivate:

- the side impact air bag
- the headbag
- the Emergency Tensioning Devices

In vehicles with the AMG Performance seat, the sidebag and the seat belt tensioner are deactivated in the following situation:

- OCS has not categorized the person on the front-passenger seat as an adult or a person of corresponding stature and
- the seat belt buckle tongue of the seat belt is not inserted into the front-passenger seat belt buckle

Requirements

To be classified correctly, the front passenger must sit:

- with the seat belt fastened correctly
- in an almost upright position with their back against the seat backrest
- with their feet resting on the floor, if possible

If the front passenger does not observe these conditions, OCS may produce a false classification, e.g. because the front passenger:

- transfers their weight by supporting themselves on a vehicle armrest
- sits in such a way that their weight is raised from the seat cushion

If you install a child restraint system on the front-passenger seat, be sure to observe the correct positioning of the child restraint system. Never place objects under or behind the child restraint system, e.g. a cushion. The entire base of the child restraint system must always rest on the seat cushion of the front-passenger seat.

The backrest of the forward-facing child restraint system must lie as flat as possible against the backrest of the front-passenger seat.

The child restraint system must not touch the roof or be subjected to a load by the head restraint. Adjust the angle of the seat backrest and the head restraint position accordingly. Only then can OCS be guaranteed to function correctly. Always observe the child restraint system manufacturer’s installation and operating instructions.

Occupant Classification System operation (OCS)

The indicator lamps inform you whether the front-passenger front air bag is deactivated or enabled.

- Press the Start/Stop button once or twice, or turn the SmartKey to position 1 or 2 in the ignition lock. The system carries out self-diagnostics.

The PASSENGER AIR BAG OFF and PASSENGER AIR BAG ON indicator lamps must light up simultaneously for approximately six seconds.

The indicator lamps display the status of the front-passenger front air bag.

- PASSENGER AIR BAG ON lights up for 60 seconds, subsequently both indicator lamps are off (PASSENGER AIR BAG ON and OFF): the front-passenger front air bag is able to deploy in the event of an accident.

- PASSENGER AIR BAG OFF lights up: the front-passenger front air bag is deactivated. It will then not be deployed in the event of an accident.

If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front-passenger front air bag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off.
If the status of the front-passenger front air bag changes while the vehicle is in motion, an air bag display message appears in the instrument cluster (page 183). When the front-passenger seat is occupied, always pay attention to the PASSENGER AIR BAG OFF indicator lamp. Be aware of the status of the front-passenger front air bag both before and during the journey.

**WARNING**
If the PASSENGER AIR BAG OFF indicator lamp is lit, the front-passenger front air bag is disabled. It will not be deployed in the event of an accident and cannot perform its intended protective function. A person in the front-passenger seat could then, for example, come into contact with the vehicle's interior, especially if the person is sitting too close to the dashboard. This poses an increased risk of injury or even fatal injury.

When the front-passenger seat is occupied, always ensure that:

- the classification of the person in the front-passenger seat is correct and the front-passenger front air bag is enabled or disabled in accordance with the person in the front-passenger seat
- the front-passenger seat has been moved back as far back as possible.
- the person is seated correctly.

Make sure, both before and during the journey, that the status of the front-passenger front air bag is correct.

**WARNING**
If you secure a child in a rearward-facing child restraint system on the front-passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front-passenger front air bag can deploy in the event of an accident. The child could be struck by the air bag. This poses an increased risk of injury or even fatal injury.

Make sure that the front-passenger front air bag has been deactivated. The PASSENGER AIR BAG OFF indicator lamp must be lit. NEVER use a rearward-facing child restraint on a seat protected by an ACTIVE FRONT AIR-

**BAG in front of it; DEATH or SERIOUS INJURY to the child can occur.**

If the PASSENGER AIR BAG OFF indicator lamp stays off, do not install a rearward-facing child restraint system on the front-passenger seat. You can find more information on OCS under "Problems with the Occupant Classification System" (page 51).

**WARNING**
If you secure a child in a forward-facing child restraint system on the front-passenger seat and you position the front-passenger seat too close to the dashboard, in the event of an accident, the child could:

- come into contact with the vehicle's interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example
- be struck by the air bag if the PASSENGER AIR BAG OFF indicator lamp is off

This poses an increased risk of injury or even fatal injury.

Move the front-passenger seat as far back as possible. Always make sure that the shoulder belt strap is correctly routed from the vehicle belt guide to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the vehicle belt guide. Always observe the child restraint system manufacturer's installation instructions.

If OCS determines that:

- The front-passenger seat is unoccupied, the PASSENGER AIR BAG OFF indicator lamp lights up after the system self-test and remains lit. This indicates that the front-passenger front air bag is deactivated.
- The front-passenger seat is occupied by a child of up to twelve months old, in a standard child restraint system, the PASSENGER AIR BAG OFF indicator lamp lights up after the system self-test and remains lit. This indicates that the front-passenger front air bag is deactivated.

But even in the case of a twelve-month-old child, in a standard child restraint system, the PASSENGER AIR BAG OFF indicator lamp can go out after the system self-test. This indi-
cates that the front-passenger front air bag is activated. The result of the classification is dependent on, among other factors, the child restraint system and the child's stature. Make sure that the conditions for a correct classification are met. If the PASSENGER AIR BAG OFF indicator lamp remains off, do not install a child restraint system on the front-passenger seat.

- The front-passenger seat is occupied by a person of smaller stature (e.g. a teenager or small adult), the PASSENGER AIR BAG OFF indicator lamp lights up and remains lit after the system self-test depending on the result of the classification or, alternatively, goes out.
  - If the PASSENGER AIR BAG OFF indicator lamp is off, move the front-passenger seat as far back as possible.
  - If the PASSENGER AIR BAG OFF indicator lamp is lit, a person of smaller stature should not use the front-passenger seat.

- The front-passenger seat is occupied by an adult or a person of adult stature, the PASSENGER AIR BAG OFF indicator lamp goes out after the system self-test. This indicates that the front-passenger front air bag is activated.

If children are traveling in the vehicle, be sure to observe the notes on "Children in the vehicle" (> page 55).

When the Occupant Classification System (OCS) is malfunctioning, the red \[ \text{ restrain} \] system warning lamp on the instrument cluster and the PASSENGER AIR BAG OFF indicator lamp light up simultaneously. The front-passenger front air bag is deactivated in this case and does not deploy during an accident. Have the Occupant Classification System (OCS) checked and repaired immediately at a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

If the front-passenger seat, the seat cover or the seat cushion are damaged, have the necessary repair work carried out at a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

For safety reasons, Mercedes-Benz recommends that you only use seat accessories that have been approved by Mercedes-Benz.

If the driver's air bag deploys, this does not mean that the front-passenger front air bag will also deploy. The Occupant Classification System (OCS) categorizes the occupant on the front-passenger seat. Depending on that result, the front-passenger front air bag is either enabled or deactivated.

### System self-test

**DANGER**

If both the PASSENGER AIR BAG OFF and PASSENGER AIR BAG ON indicator lamps do not light up during the system self-test, the system is malfunctioning. The front-passenger front air bag might be triggered unintentionally or might not be triggered at all in the event of an accident with high deceleration. This poses an increased risk of injury or even fatal injury.

In this case the front-passenger seat may not be used. Do not install a child restraint system on the front-passenger seat. Have the Occupant Classification System (OCS) checked and repaired immediately at a qualified specialist workshop.

**WARNING**

If the PASSENGER AIR BAG OFF indicator lamp remains lit after the system self-test, the front-passenger front air bag is disabled. It will not be deployed in the event of an accident. In this case, the front-passenger front air bag cannot perform its intended protective function, e.g. when a person is seated in the front-passenger seat.

That person could, for example, come into contact with the vehicle's interior, especially if the person is sitting too close to the dashboard. This poses an increased risk of injury or even fatal injury.

When the front-passenger seat is occupied, always ensure that:

- the classification of the person in the front-passenger seat is correct and the front-passenger front air bag is enabled or disa-
bled in accordance with the person in the front-passenger seat
- the person is seated properly with a correctly fastened seatbelt
- the front-passenger seat has been moved as far back as possible
If the PASSENGER AIR BAG OFF indicator lamp remains lit when it should not, the front-passenger seat may not be used. Do not install a child restraint system on the front-passenger seat. Have the Occupant Classification System (OCS) checked and repaired immediately at a qualified specialist workshop.

⚠️ WARNING
Objects between the seat surface and the child restraint system could affect OCS operation. This could result in the front-passenger air bag not functioning as intended during an accident. This poses an increased risk of injury or even fatal injury.
Do not place any objects between the seat surface and the child restraint system. The entire base of the child restraint system must always rest on the seat cushion of the front-passenger seat. The backrest of the forward-facing child restraint system must, as far as possible, be resting on the backrest of the front-passenger seat. Always comply with the child restraint system manufacturer’s installation instructions.

After the system self-test, the PASSENGER AIR BAG OFF or PASSENGER AIR BAG ON indicator lamp displays the status of the front-passenger front air bag (page 48). If the front-passenger front air bag is enabled, the PASSENGER AIR BAG ON indicator lamp lights up for 60 seconds and then goes out.
If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front-passenger front air bag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off. For more information about the OCS, see "Problems with the Occupant Classification System" (page 51).

Problems with the Occupant Classification System (OCS)

Be sure to observe the notes on "System self-test" (page 50).
Problem | Possible causes/consequences and ▶ Solutions
---|---
The PASSENGER AIR BAG OFF indicator lamp lights up and remains lit, even though the front-passenger seat is occupied by an adult or a person of a stature corresponding to that of an adult. | The classification of the person on the front-passenger seat is incorrect. ▶ Make sure the conditions for a correct classification of the person on the front-passenger seat are met (▶ page 48). ▶ If the PASSENGER AIR BAG OFF indicator lamp remains lit, the front-passenger seat may not be used. ▶ Have OCS checked as soon as possible at an authorized Mercedes-Benz Center.

The classification of the person on the front-passenger seat is incorrect. ▶ Make sure the conditions for a correct classification of the person on the front-passenger seat are met (▶ page 48). ▶ If the PASSENGER AIR BAG OFF indicator lamp remains lit, the front-passenger seat may not be used. ▶ Have OCS checked as soon as possible at an authorized Mercedes-Benz Center.

The PASSENGER AIR BAG OFF indicator lamp does not light up and/or does not stay on. The front-passenger seat is: • unoccupied • occupied by the weight of a child up to twelve months old in a child restraint system | OCS is malfunctioning. ▶ Make sure there is nothing between the seat cushion and the child seat. ▶ Make sure that the entire base of the child restraint system rests on the seat cushion of the front-passenger seat. The backrest of the forward-facing child restraint system must lie as flat as possible against the backrest of the front-passenger seat. If necessary, adjust the position of the front-passenger seat. ▶ When installing the child restraint system, make sure that the seat belt is tight. Do not pull the seat belt tight using the front-passenger seat adjustment. This could result in the seat belt and the child restraint system being pulled too tightly. ▶ Check for correct installation of the child restraint system. Make sure that the head restraint does not apply a load to the child restraint system. If necessary, adjust the head restraint accordingly. ▶ Make sure that no objects are applying additional weight onto the seat. ▶ If the PASSENGER AIR BAG OFF indicator lamp remains off and/or the PASSENGER AIR BAG ON indicator lamp lights up, do not install a child restraint system on the front-passenger seat. ▶ Have OCS checked as soon as possible at an authorized Mercedes-Benz Center.

### Deployment of Emergency Tensioning Devices and air bags

#### Important safety notes

⚠️ WARNING

The air bag parts are hot after an air bag has been deployed. There is a risk of injury. Do not touch the air bag parts. Have a deployed air bag replaced at a qualified specialist workshop as soon as possible.

⚠️ WARNING

A deployed air bag no longer offers any protection and cannot provide the intended protection in an accident. There is an increased risk of injury. Have the vehicle towed to a qualified specialist workshop in order to have a deployed air bag replaced.

Mercedes-Benz recommends that you have the vehicle transported to a qualified specialist workshop after an accident. Observe the notes on towing the vehicle away (▶ page 257).
For your own safety and that of your front passenger, it is important that you have deployed air bags replaced and faulty air bags repaired. This will help to make sure the air bags continue to perform their protective function for the vehicle occupants in the event of a crash.

**WARNING**

Emergency Tensioning Devices that have deployed pyrotechnically are no longer operational and are unable to perform their intended protective function. This poses an increased risk of injury or even fatal injury. Have pyrotechnically triggered Emergency Tensioning Devices replaced immediately at a qualified specialist workshop.

An electric motor is used by PRE-SAFE® to trigger the tightening of the seat belt in hazardous situations. This procedure is reversible.

If Emergency Tensioning Devices are triggered or air bags are deployed, you will hear a bang, and some powder may also be released. The restraint system warning lamp lights up. Only in rare cases will the bang affect your hearing. The powder that is released generally does not constitute a health hazard, but it may cause short-term breathing difficulties in people with asthma or other respiratory problems. Provided it is safe to do so, you should leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Air bags and pyrotechnic Emergency Tensioning Devices (ETDs) contain perchlorate material, which may require special handling and regard for the environment. National guidelines must be observed during disposal. In California, see [www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm](http://www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm).

**Method of operation**

During the first stage of a collision, the restraint system control unit evaluates important physical data relating to vehicle deceleration or acceleration, such as:

- duration
- direction
- intensity

Based on the evaluation of this data, the restraint system control unit triggers the Emergency Tensioning Devices during a frontal or rear collision.

An Emergency Tensioning Device can only be triggered, if:

- the ignition is switched on
- the components of the restraint system are operational. You can find further information under "Restraint system warning lamp" (> page 41)
- the seat belt buckle tongue has engaged in the belt buckle of the respective seat

If the restraint system control unit detects a more severe accident, further components of the restraint system are activated independently of each other in certain frontal collision situations:

- Front air bags as well as driver's and front-passenger knee bags
- Side impact air bag and head bag, if the system determines that deployment can offer additional protection to that provided by the seat belt

The front-passenger front air bag is activated or deactivated depending on the person on the front-passenger seat. The front-passenger front air bag can only deploy in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. Observe the information on the PASSENGER AIR BAG indicator lamps (> page 41).

Your vehicle has two-stage front air bags. In the first deployment stage, the front air bag is filled with propellant gas. The front air bag is fully deployed with the maximum amount of propellant gas if a second deployment threshold is reached within a few milliseconds.

The activation threshold of the Emergency Tensioning Devices and the air bags is determined by evaluating the rate of vehicle deceleration or acceleration which occurs at various points in the vehicle. This process is pre-emptive in nature. Deployment should take place in good time at the start of the collision.

The rate of vehicle deceleration or acceleration and the direction of the force are essentially determined by:

- the distribution of forces during the collision
- the collision angle
- the deformation characteristics of the vehicle
- the characteristics of the object with which the vehicle has collided

Factors which can only be seen and measured after a collision has occurred do not play a deci-
sive role in the deployment of an air bag. Nor do they provide an indication of air bag deployment.

The vehicle can be deformed considerably, without an air bag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of deceleration is not high. Conversely, air bags may be deployed even though the vehicle suffers only minor deformation. This is the case if, for example, very rigid vehicle parts such as longitudinal body members are hit, and sufficient deceleration occurs as a result.

If the restraint system control unit detects a side impact or if the vehicle rolls over, the applicable components of the restraint system are deployed independently of each other depending on the apparent type of accident.

- Side impact air bag on the side of impact, independently of the Emergency Tensioning Device and the use of the seat belt on the driver's seat
- The side impact air bag on the front-passenger side deploys under the following conditions:
  - the OCS system detects that the front-passenger seat is occupied or
  - the seat belt buckle tongue is engaged in the belt buckle of the front-passenger seat
- Head bag on the side of impact, independently of the use of the seat belt and independently of whether the front-passenger seat is occupied
- Emergency Tensioning Devices, if the system determines that deployment can offer additional protection in this situation
- Head bags on the driver's and front-passenger side in certain situations when the vehicle rolls over, if the system determines that deployment can offer additional protection to that provided by the seat belt

Not all air bags are deployed in an accident. The different air bag systems work independently of each other.

How the air bag system works is determined by the severity of the accident detected, especially the vehicle deceleration or acceleration and the apparent type of accident:

- Frontal collision
- Side impact
- Rollover

### PRE-SAFE® (anticipatory occupant protection system)

#### Introduction

In certain hazardous situations, PRE-SAFE® takes pre-emptive measures to protect the vehicle occupants.

#### Important safety notes

- Make sure that there are no objects in the footwell or behind the seats. There is a danger that the seats and/or objects could be damaged when PRE-SAFE® is activated.

Despite your vehicle being equipped with the PRE-SAFE® system, the possibility of personal injuries occurring as a result of an accident cannot be eliminated. Always adapt your driving style to suit the prevailing road and weather conditions and maintain a safe distance from the vehicle in front. Drive carefully.

#### Function

PRE-SAFE® intervenes:

- in emergency braking situations, e.g. when BAS is activated
- in critical driving situations, e.g. when physical limits are exceeded and the vehicle understeers or oversteers severely
- on vehicles with Distance Pilot DISTRONIC: when active, Brake Assist intervenes powerfully

PRE-SAFE® takes the following measures depending on the hazardous situation detected:

- the front seat belts are pre-tensioned.
- if the vehicle skids, the side windows are closed.
- vehicles with the memory function for the front-passenger seat: the front-passenger seat is adjusted if it is in an unfavorable position.

If the hazardous situation passes without resulting in an accident, PRE-SAFE® slackens the belt pre-tensioning. All settings made by PRE-SAFE® can then be reversed.
If the seat belt pre-tensioning is not reduced:

- Move the seat backrest or seat back slightly when the vehicle is stationary.

The seat belt pre-tensioning is reduced and the locking mechanism is released.

The seat-belt adjustment is an integral part of the PRE-SAFE® convenience function. Information about the convenience function can be found under "Belt adjustment" (page 44).

**Automatic measures after an accident**

Immediately after an accident, the following measures are implemented, depending on the type and severity of the impact:

- the hazard warning lamps are switched on
- the emergency lighting is activated
- the vehicle doors are unlocked
- the front side windows are lowered
- vehicles with a memory function: the electrically adjustable steering wheel is raised when the driver’s door is opened
- the engine is switched off and the fuel supply is switched off
- vehicles with mbrace: automatic emergency call

**Children in the vehicle**

**Important safety notes**

If a child younger than twelve years old and under 5 ft (1.50 m) in height is traveling in the vehicle:

- always secure the child in a child restraint system suitable for Mercedes-Benz vehicles. The child restraint system must be appropriate to the age, weight and size of the child
- be sure to observe the instructions and safety notes in this section in addition to the child restraint system manufacturer’s installation instructions
- be sure to observe the instructions and safety notes on the "Occupant classification system (OCS)" (page 48)

Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly. Particular attention must be paid to children.

Observe the safety notes on the seat belt (page 42) and the notes on correct use of seat belts (page 43).

A booster seat may be necessary to achieve proper seat belt positioning for children over 40 lbs (18 kg) until they reach a height where a
three-point seat belt can be properly fastened without a booster seat.

**Special seatbelt retractor**

**WARNING**
If the seat belt is released while driving, the child restraint system will no longer be secured properly. The special seat belt retractor is disabled and the inertia reel draws in a portion of the seat belt. The seat belt cannot be immediately refastened. There is an increased risk of injury, possibly even fatal.

Stop the vehicle immediately, paying attention to road and traffic conditions. Reactivate the special seat belt retractor and secure the child restraint system properly.

The seat belt on the front-passenger’s side is equipped with a special seat belt retractor. When activated, the special seat belt retractor ensures that the seat belt cannot slacken once the child seat is secured.

Installing a child restraint system:
- Make sure you observe the child restraint system manufacturer’s installation instructions.
- Pull the seat belt smoothly out of the seat belt guide.
- Engage seat belt tongue in belt buckle.

Activating the special seat belt retractor:
- Pull the seat belt out fully and let the inertia reel retract it again. While the seat belt is retracting, you should hear a ratcheting sound. The special seat belt retractor is enabled.
- Push the child restraint system down so that the seat belt is tight and does not loosen.

Removing the child restraint system and deactivating the special seat belt retractor:
- Make sure you observe the child restraint system manufacturer’s installation instructions.
- Press the release button of the seat belt buckle and route the seat belt tongue towards the seat belt guide. The special seat belt retractor is deactivated.

**Child restraint system**

The use of seat belts and child restraint systems is required by law in:
- all 50 states
- the U.S. territories
- the District of Columbia
- all Canadian provinces

**WARNING**
If the child restraint system is installed incorrectly on a suitable seat, it cannot protect as intended. The child cannot then be restrained in the event of an accident, heavy braking or sudden changes of direction. There is an increased risk of injury, possibly even fatal.

Make sure that you observe the child restraint system manufacturer’s installation instructions and the notes on use. Please ensure that the base of the child restraint system is always resting completely on the seat cushion. Never place objects, e.g. cushions, under or behind the child restraint system. Only use child restraint systems with the original cover designed for them. Only replace damaged covers with genuine covers.

**WARNING**
If the child restraint system is installed incorrectly or is not secured, it can come loose in the event of an accident, heavy braking or a sudden change in direction. The child restraint system could be thrown about, striking vehicle occupants. There is an increased risk of injury, possibly even fatal.

Always install child restraint systems properly, even if they are not being used. Make sure that you observe the child restraint system manufacturer’s installation instructions.

You will find further information on stowing objects, luggage or loads under "Loading guidelines" (> page 217).

**WARNING**
Child restraint systems or their securing systems which have been damaged or subjected to a load in an accident can no longer protect...
as intended. The child cannot then be restrained in the event of an accident, heavy braking or sudden changes of direction. There is an increased risk of injury, possibly even fatal.

Replace child restraint systems which have been damaged or subjected to a load in an accident as soon as possible. Have the securing systems on the child restraint system checked at a qualified specialist workshop, before you install a child restraint system again.

The securing system of child restraint systems is the seat belt system.

If you install a child restraint system on the front-passenger seat, be sure to observe the instructions and safety notes on the "Occupant Classification System (OCS)" (page 48). There you will also find information on deactivating the front-passenger front air bag.

All child restraint systems must meet the following standards:

- U.S. Federal Motor Vehicle Safety Standards 213 and 225
- Canadian Motor Vehicle Safety Standards 213 and 210.2

Confirmation that the child restraint system corresponds to the standards can be found on an instruction label on the child restraint system. This confirmation can also be found in the installation instructions that are included with the child restraint system.

Observe the warning labels in the vehicle interior and on the child restraint system.

| Child restraint system on the front-passenger seat |

**General notes**

If you install a child restraint system on the front-passenger seat, always observe the instructions and safety notes on the "Occupant Classification System (OCS)" (page 48).

You can thus avoid the risks that could arise as a result of:

- an incorrectly categorized person in the front-passenger seat
- the unintentional deactivation of the front-passenger front air bag
- the unsuitable positioning of the child restraint system, e.g. too close to the dashboard

**Rearward-facing child restraint system**

If it is absolutely necessary to install a rearward-facing child restraint system on the front-passenger seat, always make sure that the front-passenger front air bag is deactivated. Only if the PASSENGER AIR BAG OFF indicator lamp is permanently lit (page 41) is the front-passenger front air bag deactivated.

Always observe the child restraint system manufacturer’s installation and operating instructions.

**Forward-facing child restraint system**

If you secure a child in a forward-facing child restraint system on the front-passenger seat, always move the front-passenger seat as far back as possible. The entire base of the child restraint system must always rest on the seat cushion of the front-passenger seat. The backrest of the child restraint system must lie as flat as possible against the backrest of the front-passenger seat. The child restraint system must not touch the roof or be subjected to a load by the head restraint. Adjust the angle of the seat backrest and the head restraint position accordingly. Always make sure that the shoulder belt strap is correctly routed from the front-passenger seat belt guide to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forward and down from the front-passenger seat belt guide.

Always observe the child restraint system manufacturer’s installation and operating instructions.
Pets in the vehicle

**WARNING**

If you leave animals unattended or unsecured in the vehicle, they could press buttons or switches, for example. As a result, they could:

- activate vehicle equipment and become trapped, for example
- activate or deactivate systems, thereby endangering other road users

Unsecured animals could also be flung around the vehicle in the event of an accident or sudden steering or braking, thereby injuring vehicle occupants. There is a risk of an accident and injury.

Never leave animals unattended in the vehicle. Always secure animals properly during the journey, e.g. use a suitable animal transport box.

Driving safety systems

**Overview of driving safety systems**

In this section, you will find information about the following driving safety systems:

- **ABS** (Anti-lock Braking System) (> page 58)
- **BAS** (Brake Assist System) (> page 59)
- **Active Brake Assist (> page 59)
- **ESP®** (Electronic Stability Program) (> page 62)
- **EBD** (Electronic Brake force Distribution) (> page 64)
- **ADAPTIVE BRAKE (> page 64)

**Important safety notes**

If you fail to adapt your driving style or if you are inattentive, the driving safety systems can neither reduce the risk of an accident nor override the laws of physics. Driving safety systems are merely aids designed to assist driving. You are responsible for maintaining the distance to the vehicle in front, for vehicle speed, for braking in good time, and for staying in lane. Always adapt your driving style to suit the prevailing road and weather conditions and maintain a safe distance from the vehicle in front. Drive carefully.

The driving safety systems described only work as effectively as possible when there is adequate contact between the tires and the road surface. Please pay special attention to the notes on tires, recommended minimum tire tread depths, etc. (> page 261).

In wintry driving conditions, always use winter tires (M+S tires) and if necessary, snow chains. Only in this way will the driving safety systems described in this section work as effectively as possible.

**ABS (Anti-lock Braking System)**

**General information**

ABS regulates brake pressure in such a way that the wheels do not lock when you brake. This allows you to continue steering the vehicle when braking.

The **ABS warning lamp** in the instrument cluster lights up when the ignition is switched on. It goes out when the engine is running.

ABS works from a speed of about 5 mph (8 km/h), regardless of road-surface conditions. ABS works on slippery surfaces, even when you only brake gently.

**Important safety notes**

1. Observe the "Important safety notes" section (> page 58).

**WARNING**

If ABS is faulty, the wheels could lock when braking. The steerability and braking characteristics may be severely impaired. Additionally, further driving safety systems are deactivated. There is an increased danger of skidding and accidents.

Drive on carefully. Have ABS checked immediately at a qualified specialist workshop.

When ABS is malfunctioning, other systems, including driving safety systems, will also become inoperative. Observe the information on the ABS warning lamp (> page 200) and dis-
play messages which may be shown in the instrument cluster (page 175).

Brakes

► If ABS intervenes: continue to depress the brake pedal vigorously until the braking situation is over.
► To make a full brake application: depress the brake pedal with full force.
If ABS intervenes when braking, you will feel a pulsing in the brake pedal.
The pulsating brake pedal can be an indication of hazardous road conditions, and functions as a reminder to take extra care while driving.

BAS (Brake Assist System)

General information

BAS operates in emergency braking situations. If you depress the brake pedal quickly, BAS automatically boosts the braking force, thus shortening the stopping distance.

Important safety notes

Observe the "Important safety notes" section (page 58).

WARNING

If BAS is malfunctioning, the braking distance in an emergency braking situation is increased. There is a risk of an accident.
In an emergency braking situation, depress the brake pedal with full force. ABS prevents the wheels from locking.

Braking

► Keep the brake pedal firmly depressed until the emergency braking situation is over. ABS prevents the wheels from locking.
The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Active Brake Assist

General information

Observe the "Important safety notes" section (page 58).
Active Brake Assist consists of a distance warning function with an autonomous braking function and situation-dependent braking assistance.
Active Brake Assist can help you to minimize the risk of a collision with the vehicle traveling in front or reduce the effects of such a collision.
If Active Brake Assist detects that there is a risk of collision, you will be warned visually and acoustically. If you do not react to the visual and audible collision warning, autonomous braking can be initiated in critical situations. If you apply the brake yourself in a critical situation, Active Brake Assist supports you with situation-dependent braking assistance.

Important safety notes

In particular, the detection of obstacles can be impaired if:

- there is dirt on the sensors or anything else covering the sensors
- there is snow or heavy rain
- there is interference by other radar sources
- there are strong radar reflections, for example in parking garages
- a narrow vehicle is traveling in front, e.g. a motorbike
- a vehicle is traveling in front on a different line
- you are driving a new vehicle or servicing on the Active Brake Assist system has just been carried out

Observe the important safety notes in the "Breaking-in notes" section (page 109).
Following damage to the front end of the vehicle, have the configuration and operation of the radar sensor checked at a qualified specialist workshop. This also applies to collisions at slow speeds where there is no visible damage to the front of the vehicle.

Activating/deactivating

Active Brake Assist is automatically active after switching on the ignition.
You can activate or deactivate Active Brake Assist (> page 168) in the on-board computer. When deactivated, the distance warning function and the autonomous braking function are also deactivated.

If Active Brake Assist is deactivated, the symbol appears in the assistance graphic display.

**Distance warning function**

**General information**

The distance warning function can help you to minimize the risk of a front-end collision with a vehicle ahead or reduce the effects of such a collision. If the distance warning function detects that there is a risk of a collision, you will be warned visually and acoustically.

**Important safety notes**

Observe the "Important safety notes" section for driving safety systems (> page 58).

⚠️ **WARNING**

The distance warning function does not react:
- to people or animals
- to oncoming vehicles
- to crossing traffic
- when cornering

The distance warning function may not give warnings in all critical situations. There is a risk of an accident.

Always pay careful attention to the traffic situation and be ready to brake.

Always adapt your speed to suit the prevailing road and traffic conditions.

⚠️ **WARNING**

The distance warning function cannot always clearly identify objects and complex traffic situations.

In such cases, the distance warning function may:
- give an unnecessary warning
- not give a warning

There is a risk of an accident.

Always pay careful attention to the traffic situation and do not rely solely on the distance warning function.

**Function**

Starting at a speed of approximately 4 mph (7 km/h), the distance warning function warns you if you rapidly approach a vehicle in front. An intermittent warning tone will then sound, and the distance warning lamp will light up in the instrument cluster.

- Brake immediately in order to increase the distance from the vehicle in front.

or

- Take evasive action provided it is safe to do so.

Due to the nature of the system, particularly complicated but non-critical driving conditions may also cause the system to display a warning.

With the help of the radar sensor system, the distance warning function can detect obstacles that are in the path of your vehicle for an extended period of time.

Up to a speed of approximately 44 mph (70 km/h), the distance warning function can also react to stationary obstacles, such as stopped or parked vehicles.

**Autonomous braking function**

If the driver does not react to the distance warning signal in a critical situation, Active Brake Assist can assist the driver with the autonomous braking function.

The autonomous braking function:
- gives the driver more time to react to critical driving situations
- can help the driver to avoid an accident or
- reduces the effects of an accident

**Vehicles without Distance Pilot DISTRONIC:**

the autonomous braking function is available in the following speed ranges:
- 4 - 65 mph (7 - 105 km/h) for moving objects
- 4 - 31 mph (7 - 50 km/h) for stationary objects
Vehicles with Distance Pilot DISTRONIC: the autonomous braking function is available in the following speed ranges:

- 4 - 124 mph (7 - 200 km/h) for moving objects
- 4 - 31 mph (7 - 50 km/h) for stationary objects

Due to the nature of the system, particularly complicated but non-critical driving conditions may also cause the Autonomous Braking Function to intervene.

If the autonomous braking function requires a particularly high braking force, preventative passenger protection measures (PRE-SAFE®) are activated simultaneously (page 54).

**Situation-dependent braking assistance**

**General information**

- Observe the "Important safety notes" section (page 58).

With the help of the radar sensor system, Active Brake Assist can detect obstacles that are in the path of your vehicle for an extended period of time.

If Active Brake Assist detects a risk of collision with the vehicle in front, it calculates the brake pressure necessary to avoid a collision. If you apply the brakes forcefully, situation-dependent braking assistance adapts to the situation and automatically increases the brake pressure to a degree appropriate to the traffic situation.

Situation-dependent braking assistance provides braking assistance in hazardous situations at speeds above 4 mph (7 km/h). It uses radar sensor technology to assess the traffic situation.

Situation-dependent braking assistance is capable of reacting to moving objects that have already been detected as such at least once over the period of observation, up to vehicle speeds of around 155 mph (250 km/h).

Situation-dependent braking assistance reacts to stationary obstacles up to a speed of approximately 44 mph (70 km/h).

If situation-dependent braking assistance demands particularly high brake pressure, preventative passenger protection measures (PRE-SAFE®) are triggered simultaneously (page 54).

- Keep the brake pedal depressed until the emergency braking situation is over. ABS prevents the wheels from locking.

The brakes will work normally again if:

- you release the brake pedal
- there is no longer any danger of a collision
- no obstacle is detected in front of your vehicle

Situation-dependent braking assistance is then deactivated.

**Important safety notes**

- Observe the "Important safety notes" section for driving safety systems (page 58).

**WARNING**

Adaptive Brake Assist does not react:

- to people or animals
- to oncoming vehicles
- to crossing traffic
- when cornering

As a result, Adaptive Brake Assist may not intervene in all critical conditions. There is a risk of an accident.

Always pay careful attention to the traffic situation and be ready to brake.

**WARNING**

Adaptive Brake Assist cannot always clearly identify objects and complex traffic situations.

In such cases, Adaptive Brake Assist might:

- intervene unnecessarily
- not intervene

There is a risk of an accident.

Always pay careful attention to the traffic situation and be ready to brake. Terminate the intervention in a non-critical driving situation.

Due to the nature of the system, complex but non-critical driving conditions may also cause Active Brake Assist to intervene.

Even if Active Brake Assist is not available due to a malfunction in the radar sensor system, the brake system is still available with full brake boosting effect and BAS.
ESP® (Electronic Stability Program)

General notes

Observe the "Important safety notes" section (page 58).

ESP® monitors driving stability and traction, i.e. power transmission between the tires and the road surface.

If ESP® detects that the vehicle is deviating from the direction desired by the driver, one or more wheels are braked to stabilize the vehicle. The engine output is also modified to keep the vehicle on the desired course within physical limits. ESP® assists the driver when pulling away on wet or slippery roads. ESP® can also stabilize the vehicle during braking.

ETS (Electronic Traction System)

Observe the "Important safety notes" section (page 58).

ETS traction control is part of ESP®.

Traction control brakes the drive wheels individually if they spin. This enables you to pull away and accelerate on slippery surfaces, for example if the road surface is slippery on one side. In addition, more drive torque is transferred to the wheel or wheels with traction. Traction control remains active, even if you deactivate ESP®.

Important safety notes

Observe the "Important safety notes" section (page 58).

⚠ WARNING

If ESP® is malfunctioning, ESP® is unable to stabilize the vehicle. Additionally, further driving safety systems are deactivated. This increases the risk of skidding and an accident.

Drive on carefully. Have ESP® checked at a qualified specialist workshop.

ESP® is only deactivated if the [ ] warning lamp is lit continuously.

When SPORT handling mode is activated, the [SPORT] warning lamp lights up in the instrument panel.

When the [ ] and [ ] warning lamps light up continuously, ESP® is not available due to a malfunction.

Observe the information on warning lamps (page 200) and display messages which may be shown in the instrument cluster (page 175).

Only use wheels with the recommended tire sizes. Only then will ESP® function properly.

Characteristics of ESP®

General information

If the ESP® warning lamp goes out before beginning the journey, ESP® is automatically active.

If ESP® intervenes, the ESP® warning lamp flashes in the instrument cluster.

If ESP® intervenes:

- Do not deactivate ESP® under any circumstances.
- Only depress the accelerator pedal as far as necessary when pulling away.
- Adapt your driving style to suit the prevailing road and weather conditions.

ECO start/stop function

The ECO start/stop function switches the engine off automatically when the vehicle stops moving. The engine starts automatically when the driver wants to pull away again. ESP® remains in its previously selected status. Example: if ESP® was deactivated before the engine was switched off, ESP® remains deactivated when the engine is switched on again.

Deactivating/activating ESP®

Important safety notes

Observe the "Important safety notes" section (page 58).

You can select between the following states of ESP®:

- ESP® is activated
- SPORT handling mode is activated
- ESP® is deactivated
**WARNING**

If you deactivate ESP®, ESP® no longer stabilizes the vehicle. There is an increased risk of skidding and an accident.

Only deactivate ESP® in the situations described in the following.

---

**WARNING**

When SPORT handling mode is activated, there is a greater risk of skidding and accidents.

Only activate SPORT handling mode in the situations described in the following.

---

In the following situations, it may be better to activate SPORT handling mode or deactivate ESP®:

- when using snow chains
- in deep snow
- on sand or gravel
- on specially designated roads when the vehicle’s own oversteering and understeering characteristics are desired

Driving in SPORT handling mode or without ESP® requires an extremely qualified and experienced driver.

Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle if the vehicle starts to skid or a wheel starts to spin.

⚠ Avoid spinning the driven wheels for an extended period with ESP® deactivated. You could otherwise damage the drivetrain.

---

**Deactivating/activating ESP®**

- To activate SPORT handling mode: briefly press button ①.
  The [SPORT] handling mode warning lamp in the instrument cluster lights up. The SPORT handling mode message appears on the multifunction display.

- To deactivate SPORT handling mode: briefly press button ①.
  The [SPORT] handling mode warning lamp in the instrument cluster goes out. ESP® is activated.

- To activate ESP®: when SPORT handling mode is activated or ESP® is deactivated, press button ①.
  The [ESP® OFF] warning lamp in the instrument cluster goes out. The [ESP® ON] message appears on the multifunction display.

**Characteristics of activated SPORT handling mode**

If SPORT handling mode is activated and one or more wheels start to spin, the [ESP® OFF] warning lamp in the instrument cluster flashes. ESP® only stabilizes the vehicle to a limited degree.

When SPORT handling mode is activated:

- ESP® only improves driving stability to a limited degree
- traction control is still activated
- engine torque is no longer limited and the drive wheels are able to spin
  The spinning of the wheels results in a cut for better traction on loose surfaces.
- ESP® still provides support when you brake firmly

**Characteristics when ESP® is deactivated**

If ESP® is deactivated and one or more wheels start to spin, the [ESP® OFF] warning lamp in the instrument cluster flashes. In such situations, ESP® will not stabilize the vehicle.

If you deactivate ESP®:

- ESP® no longer improves driving stability
- engine torque is no longer limited and the drive wheels are able to spin
The spinning of the wheels results in a cut for better traction on loose surfaces.

- traction control is still activated
- Adaptive Brake Assist is unavailable
- Active Brake Assist is also not activated if you brake firmly with assistance from ESP®.
- PRE-SAFE® is unavailable
- PRE-SAFE® is also not activated if you brake firmly with assistance from ESP®.
- ESP® still provides support when you brake firmly.

**EBD (electronic brake force distribution)**

**General information**

EBD monitors and controls the brake pressure on the rear wheels to improve driving stability while braking.

**Important safety notes**

- Observe the "Important safety notes" section (page 58).

**WARNING**

If EBD is malfunctioning, the rear wheels can lock, e.g. under full braking. This increases the risk of skidding and an accident.

You should therefore adapt your driving style to the different handling characteristics. Have the brake system checked at a qualified specialist workshop.

Observe information regarding indicator and warning lamps (page 200) as well as display messages (page 177).

**ADAPTIVE BRAKE**

ADAPTIVE BRAKE enhances braking safety and offers increased braking comfort. In addition to the braking function, ADAPTIVE BRAKE also features the hill start assist function (page 112).

**Protection against theft**

**Immobilizer**

The immobilizer prevents your vehicle from being started without the correct SmartKey.

- **To activate with KEYLESS-GO start-function or KEYLESS-GO**: switch the ignition off and open the driver’s door.
- **To activate with the SmartKey**: remove the SmartKey from the ignition lock.
- **To deactivate**: switch on the ignition.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Anyone can start the engine if a valid SmartKey has been left inside the vehicle.

- The immobilizer is always deactivated when you start the engine.

In the event that the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCedes (in the USA) or 1-800-387-0100 (in Canada).

**ATA (anti-theft alarm system)**

- **To arm**: lock the vehicle with the SmartKey or KEYLESS-GO.
  
  Indicator lamp flashes. The alarm system is armed after approximately 15 seconds.
- **To disarm**: unlock the vehicle with the SmartKey or KEYLESS-GO.

or

- **With KEYLESS-GO start function or vehicles with KEYLESS-GO**: press the Start/Stop button.
  The SmartKey must be in the vehicle.

The SmartKey must be in the vehicle.

**Protection against theft**

**Immobilizer**

The immobilizer prevents your vehicle from being started without the correct SmartKey.

- **To activate with KEYLESS-GO start-function or KEYLESS-GO**: switch the ignition off and open the driver’s door.
- **To activate with the SmartKey**: remove the SmartKey from the ignition lock.
- **To deactivate**: switch on the ignition.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Anyone can start the engine if a valid SmartKey has been left inside the vehicle.

- The immobilizer is always deactivated when you start the engine.

In the event that the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCedes (in the USA) or 1-800-387-0100 (in Canada).

**ATA (anti-theft alarm system)**

- **To arm**: lock the vehicle with the SmartKey or KEYLESS-GO.
  
  Indicator lamp flashes. The alarm system is armed after approximately 15 seconds.
- **To disarm**: unlock the vehicle with the SmartKey or KEYLESS-GO.

or

- **With KEYLESS-GO start function or vehicles with KEYLESS-GO**: press the Start/Stop button.
  The SmartKey must be in the vehicle.

The SmartKey must be in the vehicle.
or
- Insert the SmartKey into the ignition lock.

A visual and audible alarm is triggered if the alarm system is armed and you open:
- a door
- the vehicle with the mechanical key
- the trunk lid
- the hood
- the glove box

**To turn the alarm off with the SmartKey:**
press the \( \text{[ ]} \) or \( \text{[ ]} \) button on the SmartKey.
The alarm is stopped.

or
- Insert the SmartKey into the ignition lock.
The alarm is stopped.

**To stop the alarm using KEYLESS-GO:**
grasp the outside door handle. The SmartKey must be outside the vehicle.
The alarm is stopped.

or
- Press the Start/Stop button. The SmartKey must be inside the vehicle.
The alarm is stopped.

The alarm is not switched off, even if you close the open door that triggered it, for example.

If the alarm continues for more than 30 seconds, the mbrace emergency call system automatically notifies the Customer Assistance Center. This is done either by text message or data connection.
The emergency call system sends a message or establishes a data connection provided that:
- you have subscribed to the mbrace service.
- the mbrace service has been activated properly.
- the necessary mobile phone network is available.
### SmartKey

#### Important safety notes

**WARNING**

If children are left unsupervised in the vehicle, they could:

- open the doors, thus endangering other people or road users.
- get out and disrupt traffic.
- operate the vehicle’s equipment.

Additionally, children could set the vehicle in motion if, for example, they:

- release the parking brake.
- shifting the automatic transmission out of park position P
- Start the engine.

There is a risk of an accident and injury.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children or animals unattended in the vehicle. Always keep the SmartKey out of reach of children.

**WARNING**

If you attach heavy or large objects to the SmartKey, the SmartKey could be unintentionally turned in the ignition lock. This could cause the engine to be switched off. There is a risk of an accident.

Do not attach any heavy or large objects to the SmartKey. Remove any bulky key rings before inserting the SmartKey into the ignition lock.

Keep the SmartKey away from strong magnetic fields. Otherwise, the remote control function could be affected.

Strong magnetic fields can occur in the vicinity of powerful electrical installations.

Do not keep the SmartKey:

- with electronic devices, e.g. a mobile phone or another SmartKey
- with metallic objects, e.g. coins or metal foil
- inside metallic objects, e.g. a metal case

This can affect the functionality of the SmartKey.

#### Vehicles with KEYLESS-GO start function:

Do not keep the SmartKey in the trunk. Otherwise, the SmartKey may not be detected, e.g. when starting the engine using the Start/Stop button.

A brief radio connection between the vehicle and the SmartKey determines whether a valid SmartKey is in, or in the direct vicinity of, the vehicle. This occurs, for example:

- when starting the engine
- while driving
- when using the trunk unlocking sensor
- when the external door handles are touched
- during convenience closing

#### SmartKey functions

- **Locks the vehicle**
- **Opens the trunk lid**
- **Unlocks the vehicle**

**To unlock centrally**: press the button.

If you do not open the vehicle within approximately 40 seconds of unlocking:

- the vehicle is locked again
- the anti-theft alarm system is armed again.

**To lock centrally**: press the button.

The SmartKey centrally locks and unlocks the doors, the glove box and the fuel filler flap.

The turn signals flash once when unlocking and three times when locking.

You can also set an audible signal to confirm that the vehicle has been locked. The audible signal can be activated and deactivated via the multimedia system; see the Digital Operator’s Manual.

When the locator lighting is activated via the multimedia system, it lights up when it is dark after the vehicle is unlocked with the SmartKey.
Information on activating and deactivating the locator lighting can be found in the Digital Operator’s Manual.

- **To open the trunk lid:** press and hold the button until the trunk lid opens.

**KEYLESS-GO**

**General notes**

Bear in mind that the engine can be started by any of the vehicle occupants if there is a SmartKey in the vehicle (> page 112).

**Locking/unlocking centrally**

You can start, lock or unlock the vehicle using KEYLESS-GO. To do this, you only need carry the SmartKey with you. You can combine the functions of KEYLESS-GO with those of a conventional SmartKey. Unlock the vehicle by using KEYLESS-GO, for instance, and lock it using the button on the SmartKey.

The driver’s door and the door at which the handle is used, must both be closed. The SmartKey must be outside the vehicle. When locking or unlocking with KEYLESS-GO, the distance between the SmartKey and the corresponding door handle must not be greater than 3 ft (1 m).

A check which periodically establishes a radio connection between the vehicle and the SmartKey determines whether a valid SmartKey is in the vehicle. This occurs, for example:

- when starting the engine
- while driving
- when using the remote trunk lid opening sensor
- when the external door handles are touched
- during convenience closing

- **To unlock the vehicle:** touch the inner surface of the door handle.
- **To lock the vehicle:** touch sensor surface 1 or 2.

Make sure that you do not touch the inner surface of the door handle.

- **Convenience closing feature:** touch recessed sensor surface 2 for an extended period.

Further information on the convenience closing feature (> page 78).

**Deactivating and activating**

If you do not intend to use the vehicle for a longer period of time, you can deactivate KEYLESS-GO. The SmartKey will then use very little power, thereby conserving battery power. For the purposes of activation/deactivation, the vehicle must not be nearby.

- **To deactivate:** press the button on the SmartKey twice in rapid succession.

The indicator light on the SmartKey flashes twice briefly then one long flash, then KEYLESS-GO is deactivated (> page 69).

- **To activate:** press any button on the SmartKey.

or

- Insert the SmartKey into the ignition lock. KEYLESS-GO and all of its associated features are available again.

**KEYLESS-GO start function**

Bear in mind that the engine can be started by any of the vehicle occupants if there is a SmartKey in the vehicle (> page 112).

**Changing the settings of the locking system**

You can change the settings of the locking system. This means that only the driver’s door, the glove compartment and the fuel filler flap are unlocked when the vehicle is unlocked. This is useful if you frequently travel on your own.

- **To change the setting:** press and hold down the and buttons simultaneously
for about six seconds until the battery indicator lamp flashes twice (> page 69).

If the setting of the locking system is changed within the signal range of the vehicle, pressing the ▼ or ▲ button:

- locks or
- unlocks the vehicle

The SmartKey now functions as follows:

➤ To unlock: press the ▲ button once.
➤ To unlock centrally: press the ▲ button twice.
➤ To lock: press the ▼ button.

The KEYLESS-GO functions can be changed as follows:

➤ To unlock the driver’s door: touch the inner surface of the door handle on the driver’s door.
➤ To unlock centrally: touch the inner surface of the front-passenger door handle.
➤ To lock centrally: touch the outer sensor surface on one of the door handles.

Restoring factory settings:

➤ Press the ▼ and ▲ buttons simultaneously for approximately six seconds until the battery check lamp flashes twice (> page 69).

### Mechanical key

#### General notes

If the vehicle can no longer be locked or unlocked with the SmartKey or KEYLESS-GO, use the mechanical key.

If you use the mechanical key to unlock and open the driver’s door, the anti-theft alarm system will be triggered. Switch off the alarm (> page 64).

If you unlock the vehicle using the mechanical key, the fuel filler flap will not be unlocked automatically.

➤ To unlock the fuel filler flap: insert the SmartKey into the ignition lock.

### Removing the mechanical key

➤ Push release catch ① in the direction of the arrow and at the same time remove mechanical key ② from the SmartKey.

For further information about:

- unlocking the driver’s door (> page 73)
- locking the vehicle (> page 73)

### Inserting the mechanical key

➤ Push mechanical key ② completely into the SmartKey until it engages and release catch ① is back in its basic position.

### SmartKey battery

#### Important safety notes

➤ **WARNING**

Batteries contain toxic and corrosive substances. If batteries are swallowed, it can result in severe health problems. There is a risk of fatal injury.

Keep batteries out of the reach of children. If a battery is swallowed, seek medical attention immediately.

➤ **Environmental note**

Batteries contain dangerous substances. It is against the law to dispose of them with the household rubbish. They must be collected separately.
and recycled to protect the environment.
Dispose of batteries in an environmentally friendly manner. Take discharged batteries to a qualified specialist workshop or a special collection point for used batteries.

The SmartKey batteries contain perchlorate material, which may require special handling and regard for the environment. National guidelines must be observed during disposal. In California, see [www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm](http://www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm). Mercedes-Benz recommends that you have the batteries replaced at a qualified specialist workshop.

**Checking the battery**

1. Press the \[ \] or \[ \] button.
   - The battery is working properly if battery check lamp \( \) lights up briefly.
   - The battery is discharged if battery check lamp \( \) does not light up briefly.
2. Change the battery (> page 69).
3. If the SmartKey battery is checked within the signal reception range of the vehicle, pressing the \[ \] or \[ \] button:
   - locks or
   - unlocks the vehicle

**Replacing the battery**

You require a CR 2025 3 V cell battery.
1. Take the mechanical key out of the SmartKey (> page 68).
2. Press mechanical key \( \) into the SmartKey opening in the direction of the arrow until battery compartment cover \( \) opens. Do not hold battery compartment cover \( \) closed while doing so.
3. Remove battery compartment cover \( \).
4. Repeatedly tap the SmartKey against your palm until battery \( \) falls out.
5. Insert the new battery with the positive terminal facing upwards. Use a lint-free cloth to do so.
6. Make sure that the surface of the battery is free of lint, grease and other contaminants.
7. Insert the front tabs of battery compartment cover \( \) into the housing first and then press to close it.
8. Insert mechanical key \( \) into the SmartKey (> page 68).
9. Check the function of all SmartKey buttons on the vehicle.
### Problems with the SmartKey

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| You can no longer lock or unlock the vehicle using the SmartKey. | The SmartKey battery is discharged or nearly discharged.  
  - Check the SmartKey battery (page 69) and replace it if necessary (page 69).  
  If this does not work:  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key. |
| | There is interference from a powerful source of radio waves.  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key. |
| | The SmartKey is faulty.  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key.  
  - Have the SmartKey checked at a qualified specialist workshop. |
| You can no longer lock or unlock the vehicle using KEYLESS-GO. | KEYLESS-GO was deactivated.  
  - Reactivate KEYLESS-GO (page 67). |
| | The SmartKey battery is discharged or nearly discharged.  
  - Check the SmartKey battery (page 69) and replace it if necessary (page 69).  
  If this does not work:  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key. |
| | There is interference from a powerful source of radio waves.  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key. |
| | KEYLESS-GO is malfunctioning.  
  - Lock/unlock the vehicle using the remote control function of the SmartKey.  
  - Have the vehicle and SmartKey checked at a qualified specialist workshop.  
  If the vehicle can also not be locked/unlocked using the remote control function:  
  - Unlock (page 73) or lock (page 73) the vehicle using the mechanical key.  
  - Have the vehicle and SmartKey checked at a qualified specialist workshop. |
### Possible causes/consequences and Solutions

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| The engine cannot be started using the Smart-Key. | The on-board voltage is too low.  
▶ Switch off non-essential consumers, e.g. seat heating or interior lighting, and try to start the engine again.  
If this does not work:  
▶ Check the starter battery and charge it if necessary (> page 254).  
or  
▶ Jump-start the vehicle (> page 254).  
or  
▶ Consult a qualified specialist workshop. |
| The engine cannot be started using the Start/Stop button. The Smart-Key is in the vehicle. | The vehicle is locked.  
▶ Unlock the vehicle and try to start the vehicle again.  
The SmartKey battery is discharged or nearly discharged.  
▶ Check the SmartKey battery (> page 69) and replace it if necessary (> page 69).  
If this does not work:  
▶ Start your vehicle with the SmartKey in the ignition lock.  
There is interference from a powerful source of radio waves.  
▶ Start your vehicle with the SmartKey in the ignition lock. |
| You have lost a Smart-Key. | ▶ Have the SmartKey deactivated at a qualified specialist workshop.  
▶ Report the loss immediately to the vehicle insurers.  
▶ If necessary, have the locks changed as well. |
| You have lost the mechanical key. | ▶ Report the loss immediately to the vehicle insurers.  
▶ If necessary, have the locks changed as well. |

### Important safety notes

**WARNING**

If children are left unsupervised in the vehicle, they could:
- open the doors, thus endangering other people or road users.
- get out and disrupt traffic.
- operate the vehicle’s equipment.

Additionally, children could set the vehicle in motion if, for example, they:
- release the parking brake.
- shifting the automatic transmission out of park position P
- Start the engine.

There is a risk of an accident and injury. 
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children or animals unattended in the vehicle. Always keep the SmartKey out of reach of children.

When a door is opened, the side window on that side opens slightly. When the door is closed, the side window closes again.
The side windows will not open/close if the battery is discharged or if the side windows have iced up. It will then not be possible to close the door. Do not attempt to force the door closed. You could otherwise damage the door or the side window.

Unlocking and opening doors from the inside

You can open a door from inside the vehicle even if it has been locked. If the vehicle has been locked with the SmartKey or with KEYLESS-GO, opening a door from the inside will trigger the anti-theft alarm system. Switch off the alarm (> page 64).

Pull door handle ②. If the door is locked, locking knob ① pops up. The door is unlocked and opens.

Centrally locking and unlocking the vehicle from the inside

You can centrally lock and unlock the vehicle from the inside. The buttons are on the driver’s door.

To unlock: press button ①.
To lock: press button ②.

If the front-passenger door is closed, the vehicle locks.

Meanwhile, the fuel filler flap will not be locked or unlocked.

You cannot unlock the vehicle centrally from the inside if the vehicle has been locked with the SmartKey or KEYLESS-GO.

The doors can be opened from the inside. If the vehicle has been locked with the SmartKey or with KEYLESS-GO, opening a door from the inside will trigger the anti-theft alarm system. Switch off the alarm (> page 64).

If a locked door is opened from the inside, the previous unlock status of the vehicle will be taken into consideration if:
- the vehicle was locked using the locking button for the central locking, or
- locked automatically

The vehicle will be fully unlocked if it had previously been fully unlocked. If only the driver’s door had been previously unlocked, only the door which has been opened from the inside is unlocked.

Automatic locking feature

To deactivate: press and hold button ① for approximately five seconds until a tone sounds.
To activate: press and hold button ② for approximately five seconds until a tone sounds.

If you press one of the two buttons and do not hear a tone, the relevant setting has already been selected.
The vehicle is locked automatically when the ignition is switched on and the wheels are turning.

You could therefore be locked out if:
- the vehicle is being pushed
- the vehicle is being towed
- the vehicle is on a roller dynamometer

ℹ️ You can activate and deactivate the automatic locking mechanism via the multimedia system (see the Digital Operator’s Manual).

## Unlocking/locking the driver’s door using the mechanical key

To completely lock the vehicle using the mechanical key:
- begin by pressing the button for locking the vehicle from the inside while the driver’s door is open
- then, proceed to lock the driver’s door using the mechanical key

- Insert the mechanical key as far as it will go into opening 1 in the protective cap.
- Pull and hold the door handle.
- Pull the protective cap on the mechanical key as straight as possible away from the vehicle until it releases.
- Release the door handle.

- To unlock: turn the mechanical key counterclockwise as far as it will go to key position 1.
- To lock: turn the mechanical key clockwise as far as it will go to key position 1.
- Carefully press the protective cap onto the lock cylinder until it engages and is seated firmly.

If you use the mechanical key to unlock and open the driver’s door, the anti-theft alarm system will be triggered. Switch off the alarm (> page 64).

### Trunk

#### Important safety notes

⚠️ WARNING

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the trunk lid is open when the engine is running, especially if the vehicle is in motion. There is a risk of poisoning.

Always switch off the engine before opening the trunk lid. Never drive with the trunk lid open.

⚠️ WARNING

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be flung around and thereby hit vehicle occupants. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.
Always store objects so that they cannot be flung around. Secure objects, luggage or loads against slipping or tipping before the journey.

⚠️ The trunk lid swings upwards when opened. Therefore, make sure that there is sufficient clearance above the trunk lid.

The opening dimensions of the trunk lid can be found in the "Vehicle data" section (> page 291).

If the rear spoiler has been extended manually, the height when opened is higher by this amount. If in doubt, retract the rear spoiler again manually before opening the trunk lid (> page 228).

Do not leave the SmartKey in the trunk. You could otherwise lock yourself out.

You should preferably place luggage or loads in the trunk. Observe the loading guidelines (> page 217).

Opening/closing from outside

Opening

- Press the button on the SmartKey. The trunk lid opens slightly.
- Lift the trunk lid.

Closing

- Pull the trunk lid down using recess 1 and let it drop into the lock.
- Lock the vehicle if necessary with the button on the SmartKey or with KEYLESS-GO (> page 67).

Unlocking with KEYLESS-GO

Important safety notes

⚠️ WARNING

The vehicle exhaust system can become very hot. If you use HANDS-FREE ACCESS, you could burn yourself by touching the exhaust system. There is a risk of injury. Always ensure that you make the kicking movement only within the detection range of the sensors.

If the SmartKey is within the rear detection range of KEYLESS-GO, the following situations, for example, could lead to the unintentional opening of the trunk lid:

- when using an automatic car wash
- when using a power washer

Make sure that the SmartKey is at least 10 ft (3 m) away from the vehicle.

General notes

**Vehicles with KEYLESS-GO without carbon package:** you can unlock the trunk lid without using your hands. This is useful if you have your hands full. To do this, make a kicking movement under the rear bumper with your foot.
Observe the following points:

- Carry your KEYLESS-GO key about your person. The SmartKey must be at the rear of the vehicle in the detection range of KEYLESS-GO.
- When making the kicking movement, make sure that you are standing firmly on the ground and that there is sufficient clearance to the rear of the vehicle. You could otherwise lose your balance, for example on ice.
- Always ensure that you only make the kicking movement within the detection range of sensors ①.
- Stand at least 12 in (30 cm) away from the rear area while doing so.
- Do not come into contact with the bumper while making the kicking movement. Otherwise, the sensors may not function correctly.
- Unlocking the trunk via the sensor does not function while the engine is being started.
- Dirt caused by road salt or snow around sensors ① may restrict functionality. Using the trunk unlocking function via the sensor with a prosthetic leg may restrict functionality.
- If a KEYLESS-GO SmartKey is within the rear detection range of KEYLESS-GO, the sensors could be triggered. As a result, the trunk lid could be opened unintentionally under the following conditions:
  - if you set something down or lift something behind the vehicle
  - if you polish the rear of the vehicle

Do not carry the KEYLESS-GO key about your person in these situations or in situations similar to these. This will prevent the trunk lid from being unlocked unintentionally.

**Operation**

- **To unlock**: kick into sensor detection range ① below the bumper with your foot. The trunk lid opens slightly.
- **To open**: lift the trunk lid.
- **If the trunk lid does not unlock after several attempts**: wait at least ten seconds then kick under the bumper once again.

If you hold your foot under the bumper for too long, the trunk lid does not unlock. Repeat the leg movement more quickly if this occurs.

**Unlocking from inside the vehicle**

**WARNING**

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the trunk lid is open when the engine is running, especially if the vehicle is in motion. There is a risk of poisoning.

Always switch off the engine before opening the trunk lid. Never drive with the trunk lid open.
You can unlock the trunk lid from the driver’s seat when the vehicle is stationary and unlocked.

- Press remote operating switch 1 for the trunk lid until the trunk lid is unlocked. The trunk lid opens slightly.

**Locking the trunk lid separately**

The "Locking the trunk lid separately" function is only available in certain countries.

You can lock the trunk lid separately. If you then unlock the vehicle centrally, the trunk lid remains locked and cannot be opened.

**To activate:** close the trunk lid.

**To deactivate:** open the glove box.

- Slide the switch to position 1. If the vehicle is unlocked centrally, the trunk lid remains locked.

You can also lock the glove box (> page 218).

- Slide the switch to position 2. If the vehicle is unlocked centrally, the trunk lid will also be unlocked.

**Trunk emergency release**

You can unlock the trunk lid from the inside with emergency release button 1.

- Press emergency release button 1 briefly. The trunk lid unlocks and opens.
- Push the trunk lid upwards to open it completely.

The trunk lid can be unlocked with emergency release button 1 when the vehicle is stationary or in motion.

Emergency release button 1:
- flashes for 30 minutes after the trunk lid is opened
- flashes for 60 minutes after the trunk lid is closed

Emergency release button 1 does not unlock the trunk lid if the battery is disconnected or discharged.

If the vehicle was locked centrally, opening the trunk lid with emergency release button 1 triggers the anti-theft alarm system.

**Side windows**

**Important safety notes**

**WARNING**

While opening the side windows, body parts could become trapped between the side window and the door frame as the side window moves. There is a risk of injury.

Make sure that nobody touches the side window during the opening procedure. If somebody becomes trapped, release the switch or pull the switch to close the side window again.
WARNING
While closing the side windows, body parts in the closing area could become trapped. There is a risk of injury.
When closing make sure that no parts of the body are in the closing area. If somebody becomes trapped, release the switch or press the switch to open the side window again.

WARNING
If children operate the side windows they could become trapped, particularly if they are left unsupervised. There is a risk of injury.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

Side window reversing feature
The side windows are equipped with an automatic reversing feature. If a solid object blocks or restricts a side window from traveling upwards during the automatic closing process, the side window opens again automatically. During the manual closing process, the side window only opens again automatically after the corresponding switch is released. The automatic reversing feature is only an aid and does not relieve you of the responsibility of paying attention when closing a side window.

WARNING
The reversing feature does not react:
- to soft, light and thin objects, e.g. small fingers
- while resetting
This means that the reversing feature cannot prevent someone being trapped in these situations. There is a risk of injury.
Make sure that no body parts are in close proximity during the closing procedure. If someone becomes trapped, press the switch to open the side window again.

Opening and closing the side windows
The switches for all side windows are located on the driver's door. There is also a switch on the front-passenger door for the corresponding side window.
The switch on the driver's door has priority.

1. Left
2. Right
- Switch on the power supply or switch on the ignition with the Start/Stop button.
- To open manually: press and hold the corresponding switch.
- To open fully: press the switch beyond the point of resistance and release it. Automatic operation is started.
- To close manually: pull the corresponding switch and hold it.
- To close fully: pull the switch beyond the point of resistance and release it. Automatic operation is started.
- To interrupt automatic operation: press/pull the corresponding switch again.
If you press the switch beyond the point of resistance and release, automatic operation is started in the corresponding direction. You can stop automatic operation by pressing/pulling the switch again.
You can still operate the side windows when you switch off the power supply or the ignition. This function remains active for five minutes or until you open a door.
**Convenience opening**

**General notes**
You can ventilate the vehicle before you start driving.
If the SmartKey is in close proximity to the vehicle, the convenience opening function is available.
To do so, open the side windows using the SmartKey.
The "convenience opening" feature is also available when the vehicle is unlocked.

**Convenience opening**
- After unlocking the vehicle, press and hold the button on the SmartKey until the side windows begin to open.
- When the vehicle is unlocked, press and hold the button until the side windows have reached the desired position.
- To interrupt convenience opening: release the button.

**Convenience closing feature**

**Important safety notes**

- **WARNING**
When using the convenience closing feature, parts of the body could be trapped in the closing area when a side window is being closed. There is a risk of injury.
Observe the complete closing procedure when the convenience closing feature is operating. Make sure that no body parts are in close proximity during the closing procedure.

When you lock the vehicle, you can close the windows at the same time.

**Using the SmartKey**
- Press and hold the button until the side windows are fully closed.
- Make sure that all the side windows are closed.
- To interrupt convenience closing: release the button.

**Using KEYLESS-GO**
The driver’s door and the door at which the handle is used, must both be closed. The SmartKey must be outside the vehicle. The gap between the SmartKey and the corresponding door handle should not be greater than 3 ft (1 m).

**Resetting the side windows**
If a side window can no longer be closed fully, you must reset it.
- Close all the doors.
- Switch on the power supply or switch on the ignition with the Start/Stop button.
- Pull the corresponding switch on the door control panel until the side window is completely closed (page 77).
- Hold the switch for an additional second.
If the side window opens again slightly:

- Immediately pull the corresponding switch on the door control panel until the side window is completely closed (> page 77).
- Hold the switch for an additional second.
- If the respective side window remains closed after the button is released, then it has been set correctly. If this is not the case, repeat the steps above.

### Problems with the side windows

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ▶ Solutions</th>
</tr>
</thead>
</table>
| A side window cannot be closed because it is blocked by objects, e.g. leaves in the window guide. | ▶ Remove the objects.  
▶ Close the side window. |
| A side window cannot be closed and you cannot see the cause. | If a side window is obstructed during closing and reopens again slightly:  
▶ Immediately after the window blocks, pull the corresponding switch again until the side window has closed.  
The side window is closed with increased force.  
If a side window is obstructed again during closing and reopens again slightly:  
▶ Immediately after the window blocks, pull the corresponding switch again until the side window has closed.  
The side window is closed without the automatic reversing feature. |
| The side windows cannot be opened or closed with convenience opening. | The SmartKey battery is discharged or nearly discharged.  
▶ Check the SmartKey battery (> page 69) and replace it if necessary (> page 69). |

If a side window will still not open or close due to a malfunction, consult a qualified specialist workshop.
Important safety notes

**WARNING**
If you do not fully open/close the soft top, the soft-top hydraulics depressurize after a short time. This causes the soft top to lower unexpectedly and may cause you or others to be trapped. There is a risk of injury.

Always open or close the soft top completely.

Never sit on the soft top or store heavy objects on it. You will otherwise damage the vehicle soft top and soft-top covers.

When opening and closing the soft top, make sure that:
- There is sufficient clearance above it, as the soft top swings upwards
- There are no objects on the soft top or the soft-top covers to the side
- The fabric is not dirty, wet or frozen
- The outside temperature is above -10 °C
You could otherwise damage the soft top as well as other parts of the vehicle.

Take the height of the vehicle into account when opening and closing the soft top (page 291). Make sure that the soft top is dry and clean before opening or closing it. Otherwise, water or dirt could enter the vehicle interior or trunk.

You can open or close the soft top:
- When the vehicle is stationary or
- When you do not exceed a speed of 31 mph (50 km/h) (max. 37 mph (60 km/h), to avoid interrupting the closing process while slightly exceeding this speed)

If there is a strong head wind, it may not be possible to close the soft top fully. In order to close the soft top fully, reduce your speed or stop the vehicle in accordance with the traffic conditions.

For safety reasons, Mercedes-Benz recommends that you only open or close the soft top when the vehicle is stationary.

If the soft top does not open or close fully, the soft-top hydraulics are depressurized and the soft top is lowered:
- After approximately 7 minutes when the ignition is switched on
- After about 20 seconds if the ignition is switched off
**Opening/closing using the SmartKey**

### Important safety notes

⚠ **WARNING**

When opening or closing the soft top, there is a risk that parts of the body could become trapped by moving parts such as the roof mechanism, the trunk lid, or the side windows. There is a risk of injury.

When opening or closing the roof, make sure that no parts of the body are in the vicinity of moving parts. Release the switch if somebody becomes trapped.

### Opening and closing

ℹ The SmartKey must be in close proximity to the vehicle.

**To open:** press and hold the button on the SmartKey until the soft top is completely open.

The multifunction display shows the opening process of the soft top.

When the soft top is fully opened, a tone sounds. The seat ventilation is switched on and the side windows open.

ℹ If you push and hold soft top switch ①, the side windows open.

**To close:** pull and hold soft top switch ① until the soft top is completely closed.

The multifunction display shows the closing process of the soft top.

When the soft top is fully closed, a tone sounds. The side windows close.

ℹ If you pull and hold soft top switch ①, the side windows close.

### Relocking the soft top

⚠ **WARNING**

If you do not lock the closed soft top, it may open during a journey. This could cause you to lose control of the vehicle. There is a risk of an accident.

Only drive with the soft top fully open or locked closed.
The soft top is not locked if:

- the Open/Close Convertible Top Completely message is shown in the multifunction display
- you hear a warning tone for up to ten seconds when pulling away or while driving

Lock the soft top again if it is not locked fully:

- Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions.
- Select SmartKey position 2 with the Start/Stop button (> page 110).
- Press the soft top switch (> page 80).

Installing/removing the draft stop

Important safety notes

⚠️ WARNING
If the wind screen is incorrectly installed, it could detach itself during a journey and endanger other road users. There is a risk of an accident and injury.

Install the wind screen as described. Do not place any objects on top of the installed wind screen.

- Install or remove the wind screen only when the soft top is open. You could otherwise damage the wind screen or the vehicle interior.
- Mercedes-Benz recommends that you only use wind screens which have been tested and approved for Mercedes-Benz vehicles. This helps to prevent damage to the vehicle.

Installing/removing

The wind screen protects against wind when driving with the soft top open. It is secured between the roll bars.

The wind screen is in wind screen bag 1 on the tank partition wall in the trunk.

- To install: fold both fastening levers 4 on wind screen 3 inwards in the direction of the arrow.
- Push wind screen 3 into the recess between the roll bars up to the locking point.
- Fold both fastening levers 4 on wind screen 3 outwards.
- To remove: fold both fastening levers 4 on wind screen 3 inwards in the direction of the arrow.
- Pull wind screen 3 upward.
- Detach the wind screen bag and remove it from the trunk and stow wind screen 3 in it.
- Attach the wind screen bag to the tank partition wall in the trunk again.

Correct driver's seat position

**WARNING**

You could lose control of your vehicle if you do the following while driving:
- adjust the driver’s seat, head restraint, steering wheel or mirrors
- fasten the seat belt

There is a risk of an accident.

Adjust the driver’s seat, head restraint, steering wheel and mirror and fasten your seat belt before starting the engine.

Further related subjects:
- Manual seat adjustment (page 85)
- Electrical seat adjustment (page 86)
- Fastening the seat belt correctly (page 44).
- Adjusting the rear-view mirror and exterior mirrors (page 92).
- Storing seat settings, steering wheel and exterior mirrors with the memory function (page 94).

Seats

**Important safety notes**

**WARNING**

Children could become trapped if they adjust the seats, particularly when unattended. There is a risk of injury.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

The seats can still be adjusted when there is no SmartKey in the ignition lock.

**WARNING**

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail. There is a risk of injury.

Make sure when adjusting a seat that no one has any body parts in the sweep of the seat.

Observe the safety notes on "Air bags" (page 45) and "Children in the vehicle" (page 55).
WARNING
You could lose control of your vehicle if you do the following while driving:

- adjust the driver’s seat, head restraint, steering wheel or mirrors
- fasten the seat belt
There is a risk of an accident.
Adjust the driver’s seat, head restraint, steering wheel and mirror and fasten your seat belt before starting the engine.

For safety reasons, seat fore-and-aft adjustment on electrically adjustable seats is only possible for a maximum of two seconds when the vehicle is in motion. The seat fore-and-aft adjustment can then no longer be set.

WARNING
If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured. Children in particular could accidentally press the electrical seat adjustment buttons and become trapped. There is a risk of injury.
While moving the seats, make sure that your hands or other body parts do not get under the lever assembly of the seat adjustment system.

WARNING
If head restraints are not adjusted correctly, they cannot provide protection as intended. There is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.
Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Using the fore-and-aft adjustment, adjust the head restraint so that it is as close as possible to your head.

WARNING
The seat belt does not offer the intended level of protection if you have not moved the backrest to an almost vertical position. When braking or in the event of an accident, you could slide underneath the seat belt and sustain abdomen or neck injuries, for example. This poses an increased risk of injury or even fatal injury.
Adjust the seat properly before beginning your journey. Always ensure that the backrest is in an almost vertical position and that the shoulder section of your seat belt is routed across the center of your shoulder.

To prevent damage to the seats and the seat heating, observe the following notes:

- Do not spill liquids onto the seats. Dry the seats as soon as possible if liquid does get spilled on the seats.
- If the seat covers are damp or wet, do not switch on the seat heating. Also, do not use the seat heating to dry the seats.
- Clean the seat covers as recommended; see keyword “Care”.
- Do not transport heavy loads on the seats. Do not place pointed objects on the seat cushions such as knives, nails or tools. Where possible, use the seats only for carrying passengers.
- When operating the seat heating, do not cover the seats with insulating materials, e.g. blankets, coats, bags, protective covers, child seats or booster seats.
- Make sure that there are no objects in the footwell under or behind the seats when moving the seats back. There is a risk that the seats and/or the objects could be damaged.

Adjusting the seats manually

General notes
The manually adjustable seat is only available in Canada.
**Adjusting the seat fore-and-aft position**

- Lift handle 1 and slide the seat forwards or backwards.
- Release lever 1 again. Make sure that you hear the seat engage in position.

**Backrest angle**

- Relieve the pressure on the backrest.
- Pull lever ③ up and adjust the backrest to the desired angle.
- Release lever ③ again. The seat backrest must audibly engage.

**Seat height**

- Pull up or push down lever ② repeatedly until the seat has reached the desired height.

For safety reasons, seat fore-and-aft adjustment on electrically adjustable seats is only possible for a maximum of two seconds when the vehicle is in motion. The seat fore-and-aft adjustment can then no longer be set.

- If after starting the journey no correct seat fore-and-aft adjustment has been made, there is a risk of accident and injury. Pull over and stop the vehicle safely as soon as possible and readjust the seat position.

**Further related subjects:**
- You can store the seat settings using the memory function (page 94).
- If PRE-SAFE® is triggered, the front-passenger seat will be moved to a better position if it was previously in an unfavorable position (page 54).

**Adjusting the head restraints**

- To raise: pull the head restraint up to the desired position.
- To lower: push the head restraint down to the desired position.

The head restraint can only be adjusted on manually and electrically adjustable seats, but not with AMG Performance Seats.

**Adjusting the lumbar support**

You can adjust the contour of the seat backrests individually to provide optimum support for your back.
Adjusting the AMG Performance Seat

General notes
To adjust the contour of the seat and for improved lateral support, you can individually adjust the front seats.
The AMG Performance seat is designed for the standard three-point seat belt. If you install another multi-point seat belt, e.g. sport or racing seat belts, the restraint system cannot provide the best level of protection.
For further information about the seat belt (-> page 43)

Adjusting the side bolsters of the seat cushion and the seat backrest

Driver's seat

Side bolsters of the seat cushion
- To narrow: press button ①.
- To broaden: press button ②.

Side bolsters of the seat backrest
- To narrow: press button ③.
- To broaden: press button ④.

Front-passenger seat

Side bolsters of the seat backrest
- To narrow: press button ①.
- To broaden: press button ②.

The side bolsters of the front-passenger seat cushion cannot be adjusted.

Seat heating and seat ventilation

Switching the seat heating on/off

WARNING
Repeatedly switching on the seat heating can cause the seat cushion and backrest pads to become very hot. The health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries. There is a risk of injury.
Therefore, do not switch the seat heating on repeatedly.

Heat accumulation can occur if the seat heating is switched on and there are objects or underlays placed on the seats, e.g. seat cushions or child seats.
This can lead to damage to the seat surface.
Make sure that no objects or underlays are placed on the seats when the seat heating is switched on.

The three red indicator lamps in buttons ① indicate the heating level you have selected. The system automatically switches down from level 3 to level 2 after approximately eight minutes.
The system automatically switches down from level 2 to level 1 after approximately ten minutes.
The system automatically switches off approximately 20 minutes after it is set to level 1.

- Select key position ① or ② with the Start/Stop button.
- **To switch on:** press button ① repeatedly until the desired heating level is set.
- **To switch off:** press button ① repeatedly until all the indicator lamps go out.

![Activating/deactivating seat ventilation]

The three blue indicator lamps in buttons ① indicate the blower setting you have selected.

- Turn the SmartKey to position ① or ② in the ignition lock (page 111).
- **To switch on:** press button ① repeatedly until the desired blower setting is set.
- **To switch off:** press button ① repeatedly until all the indicator lamps go out.

- Seat ventilation is only available for AMG Performance seats.
- If the battery voltage is too low, the seat ventilation may switch off.
- You can open the side windows using the "Convenience opening" feature (page 78). The seat ventilation of the driver’s seat automatically switches to the highest level.

### Problems with the seat heating or seat ventilation

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| The seat heating or seat ventilation has switched off prematurely or cannot be switched on. | The on-board voltage is too low because too many electrical consumers are switched on.
- Switch off electrical consumers that you do not need, such as the rear window defroster or interior lighting.
Once the battery is sufficiently charged, the seat heating or seat ventilation will switch back on automatically. |
**AIRSCARF (Roadster)**

**WARNING**
When AIRSCARF is switched on, very hot air can flow from the vents in the head restraints. This could result in burns in the immediate vicinity of the air vents. There is a risk of injury. Reduce the heater output before it becomes too hot.

The AIRSCARF function warms the head and neck area of vehicle occupants with warm air. The warm air flows out of the holes in the head restraints. The three red indicator lamps in the button indicate the heating level you have selected.

- Make sure that the SmartKey is in position 1 or 2 in the ignition lock.
- **To switch on:** press button 1. Three red indicator lamps in the button light up. The blower starts up after a preheating phase of seven seconds.
- Press button 1 repeatedly until the desired heating level is set.
- **To switch off:** press button 1 repeatedly until all the indicator lamps go out.

Make sure that no objects enter the front outlet. The blower continues running for seven seconds to cool down the heating elements. If the battery voltage is too low, AIRSCARF may switch off.

---

### Problems with AIRSCARF

<table>
<thead>

| AIRSCARF has switched off prematurely or will not switch on. | The on-board voltage is too low because too many electrical consumers are switched on.  
  - Switch off electrical consumers that you do not need, such as the rear window defroster or interior lighting.  
  - Switch on AIRSCARF again. |
Steering wheel

Important safety notes

⚠️ WARNING
You could lose control of your vehicle if you do the following while driving:
- adjust the driver’s seat, head restraint, steering wheel or mirrors
- fasten the seat belt

There is a risk of an accident.
Adjust the driver’s seat, head restraint, steering wheel and mirror and fasten your seat belt before starting the engine.

⚠️ WARNING
If the steering wheel is unlocked while the vehicle is in motion, it could change position unexpectedly. This could cause you to lose control of the vehicle. There is a risk of an accident.
Before starting off, make sure the steering wheel is locked. Never unlock the steering wheel while the vehicle is in motion.

⚠️ WARNING
Children could injure themselves if they adjust the steering wheel. There is a risk of injury.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.
The electrically adjustable steering wheel can still be adjusted when there is no SmartKey in the ignition lock.

Adjusting the steering wheel

1. Adjusts the steering wheel height
2. Adjusts the steering wheel position (fore-and-aft adjustment)

Further related subjects:
- EASY-ENTRY/EXIT feature (page 90)
- Storing settings (page 94)

EASY-ENTRY/EXIT feature

Important safety notes

⚠️ WARNING
When the EASY-ENTRY/EXIT feature adjusts the steering wheel, you and other vehicle occupants – particularly children – could become trapped. There is a risk of injury.
While the EASY-ENTRY/EXIT feature is making adjustments, make sure that no one has any body parts in the sweep of the steering wheel.
Move the steering wheel adjustment lever if there is a risk of entrapment by the steering wheel. The adjustment process is stopped.

Press one of the memory function position buttons. The adjustment process is stopped. This function is only available on vehicles with memory function.

⚠️ WARNING
If children activate the EASY-ENTRY/EXIT feature, they can become trapped, particularly when unattended. There is a risk of injury.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

⚠️ WARNING
If you drive off while the EASY-ENTRY/EXIT feature is making adjustments, you could lose control of the vehicle. There is a risk of an accident.
Always wait until the adjustment process is complete before driving off.

The EASY-ENTRY/EXIT feature makes getting in and out of your vehicle easier.
You can activate and deactivate the EASY-ENTRY/EXIT feature using the multimedia system (see the Digital Operator’s Manual)

Position of the steering wheel when the EASY-ENTRY/EXIT feature is active
The steering wheel swings up when you:
- remove the SmartKey from the ignition lock
- open the driver's door with the Start/Stop button in position [1]

ℹ️ The steering wheel only moves up if it has not already reached the upper stop.

Position of the steering wheel for driving
The steering wheel is moved to the previously set position if you:
- close the driver's door and
- press the Start/Stop button once
When you close the driver's door with the ignition switched on, the steering wheel is also automatically moved to the previously set position.
The last position of the steering wheel column is stored after each manual setting or when you store the setting with the memory function (> page 94).

Crash-responsive EASY-EXIT feature
If the crash-responsive EASY-EXIT feature is triggered in an accident, the steering column will move upwards in the following situations:
- when you open the driver's door
- when you remove the key
This makes it easier to exit the vehicle and rescue the occupants.

Mirrors
Rear-view mirror

Anti-glare mode: flick anti-glare lever [1] forwards or back.

Exterior mirrors

Important safety notes
⚠️ WARNING
You could lose control of your vehicle if you do the following while driving:
- adjust the driver's seat, head restraint, steering wheel or mirrors
- fasten the seat belt
There is a risk of an accident.
Adjust the driver's seat, head restraint, steering wheel and mirror and fasten your seat belt before starting the engine.

⚠️ WARNING
The exterior mirror on the front-passenger side reduces the size of the image. Visible objects are actually closer than they appear.
This means that you could misjudge the distance from road users traveling behind, e.g. when changing lane. There is a risk of an accident.

For this reason, always make sure of the actual distance from the road users traveling behind by glancing over your shoulder.

### Adjusting the exterior mirrors

- Exterior mirror on the front-passenger side: press button [2].
- Exterior mirror on the front-passenger side: press button [1].
  The indicator lamp lights up in the button that has been pressed.
  The indicator lamp goes out again after some time. You can adjust the selected mirror using button [3] as long as the indicator lamp is lit.
- Press button [3] up, down, or to the left or right until you have adjusted the exterior mirror to the correct position. You should have a good overview of traffic conditions.

The convex exterior mirrors provide a larger field of vision.

After the engine has been started, the exterior mirrors are automatically heated if the rear window heating is switched on and the outside temperature is low.

### Folding the exterior mirrors in or out electrically

- Briefly press button [4].
  Both exterior mirrors fold in or out.

  - Make sure that the exterior mirrors are always folded out fully while driving. They could otherwise vibrate.
  - If you are driving faster than 30 mph (48 km/h), you can no longer fold in the exterior mirrors.

### Resetting the exterior mirrors

If the battery has been disconnected or completely discharged, the exterior mirrors must be reset. The exterior mirrors will otherwise not fold in when you select the **Automatic Mirror Folding** function in the multimedia system.

- Select key position [1] with the Start/Stop button.
- Briefly press button [4].

### Folding the exterior mirrors in or out automatically

When the **Automatic Mirror Folding** function is activated in the multimedia system:

- the exterior mirrors fold in automatically as soon as you lock the vehicle from the outside
- the exterior mirrors fold out automatically again as soon as you unlock the vehicle

  - If the exterior mirrors have been folded in manually, they do not fold out.
Exterior mirror pushed out of position

If an exterior mirror has been pushed out of position, proceed as follows:

- Press and hold button ④ until you hear a click and the mirror engages audibly into position (> page 92).
  The mirror housing is engaged again and you can adjust the exterior mirrors as usual (> page 92).

Automatic anti-glare mirrors

**WARNING**

Electrolyte may escape if the glass in an automatic anti-glare mirror breaks. The electrolyte is harmful and causes irritation. It must not come into contact with your skin, eyes, respiratory organs or clothing or be swallowed. There is a risk of injury.

If you come into contact with the electrolyte, observe the following:

- Rinse off the electrolyte from your skin immediately with water.
- Immediately rinse the electrolyte out of your eyes thoroughly with clean water.
- If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting.
- If electrolyte comes into contact with your skin or hair or is swallowed, seek medical attention immediately.
- Immediately change out of clothing which has come into contact with electrolyte.
- If an allergic reaction occurs, seek medical attention immediately.

The rear-view mirror and the exterior mirror on the driver’s side automatically go into anti-glare mode if the following conditions are met simultaneously:

- the ignition is switched on
- incident light from headlamps strikes the sensor in the rear-view mirror

The mirrors do not go into anti-glare mode if reverse gear is engaged or if the interior lighting is switched on.

Parking position for the exterior mirror on the front-passenger side

Storing the parking position

You can position the front-passenger side exterior mirror in such a way that you can see the rear wheel on that side as soon as you engage reverse gear. You can store this position.

Using reverse gear

1. Memory button M
2. Button for the driver’s side exterior mirror
3. Button for the front-passenger side exterior mirror
4. Switch

- Select key position ② with the Start/Stop button.
- Press button ③.
- Start the engine.
- Engage reverse gear.
  The exterior mirror on the front-passenger side moves to the default setting parking position.
- Use button ④ to adjust the exterior mirror to a position that allows you to see the rear wheel and the curb.
  The parking position is stored.

If you shift the transmission to another position, the exterior mirror on the front-passenger side returns to the driving position after approximately ten seconds.

Using the memory button

You can store the parking position of the exterior mirror on the front-passenger side using memory button M ①. The reverse gear must not be engaged.
Select key position 2 with the Start/Stop button.

Press button 3.

Use button 4 to adjust the exterior mirror to a position that allows you to see the rear wheel and the curb.

Press memory button M 1 and one of the arrows on button 4 within three seconds. The parking position is stored if the exterior mirror does not move.

If the mirror moves out of position, repeat the steps.

Calling up a stored parking position setting

Select key position 2 with the Start/Stop button.

Adjust the exterior mirror on the front-passenger side using button 3.

Start the engine.

Engage reverse gear. The exterior mirror on the front-passenger side moves to the stored parking position.

The exterior mirror on the front-passenger side moves back to its original position:

- as soon as you exceed a speed of 9 mph (15 km/h)
- about ten seconds after you have disengaged reverse gear
- if you press button 2 for the exterior mirror on the driver’s side

Memory function

Important safety notes

**WARNING**

If you use the memory function on the driver’s side while driving, you could lose control of the vehicle as a result of the adjustments being made. There is a risk of an accident. Only use the memory function on the driver’s side when the vehicle is stationary.

**WARNING**

When the memory function adjusts the seat or steering wheel, you and other vehicle occupants – particularly children – could become trapped. There is a risk of injury. While the memory function is making adjustments, make sure that no one has any body parts in the sweep of the seat or steering wheel. If somebody becomes trapped, immediately release the memory function position button. The adjustment process is stopped.

**WARNING**

Children could become trapped if they activate the memory function, particularly when unattended. There is a risk of injury. When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

The memory function can be used at any time, even if the ignition is switched off.

Storing settings

With the memory function, you can store up to three different settings, e.g. for three different people. The following settings are stored as a single memory preset:

- seat and backrest position
- driver’s side: position of the exterior mirrors on the driver’s and front-passenger sides

Select key position 2 with the Start/Stop button.

Adjust the seat accordingly (page 86).
On the driver’s side, adjust the steering wheel (> page 90) and the exterior mirrors (> page 92).

Press memory button M and one of the storage position buttons 1, 2 or 3 within three seconds. The settings are stored in the selected preset position. A tone sounds when the settings have been completed.

Calling up a stored setting

Press and hold the corresponding storage position button 1, 2 or 3 until:

- Seat
- Steering wheel
- Exterior mirrors

are in the stored position.

The steering wheel and seat adjustment procedure is interrupted as soon as you release the storage position button. Exterior mirror adjustment continues.
Exterior lighting

General notes
For reasons of safety, Mercedes-Benz recommends that you drive with the lights switched on even during the daytime. In some countries, operation of the headlamps varies due to legal requirements and self-imposed obligations.

Setting the exterior lighting

Setting options
Exterior lighting can be set using the:
- light switch
- combination switch (→ page 97)

Light switch

Operation

1. Left-hand standing lamps
2. Right-hand standing lamps
3. Parking lamps, license plate and instrument cluster lighting
4. Automatic headlamp mode, controlled by the light sensor
5. Low-beam/high-beam headlamps
6. Rear fog lamp

If you hear a warning tone when you leave the vehicle, the lights may still be switched on.

▶ Turn the light switch to the AUTO position.

The exterior lighting, except the side/parking lamps, switches off automatically in the following situations:
- the engine is switched off with the Start/Stop button
- the driver’s door is opened

Automatic headlamp mode

⚠️ WARNING
When the light switch is set to AUTO, the low-beam headlamps may not be switched on automatically if there is fog, snow or other causes of poor visibility due to the weather conditions such as spray. There is a risk of an accident.

In such situations, turn the light switch to DAYTIME R.

The automatic headlamp mode is only an aid. The driver is responsible for the vehicle’s lighting at all times.

AUTO is the preferred light switch position.

The light setting is automatically selected according to the brightness of the ambient light, but not in the event of poor visibility due to weather conditions such as fog, snow or spray.

- If the Start/Stop button is pressed once: depending on the brightness of the ambient light, the parking lamps will switch on or off automatically.
- If you have switched on the Daytime Running Lights function via the on-board computer, the daytime running lamps or the parking lamps and low-beam headlamps will switch on or off automatically while the engine is running.

▶ To switch on automatic headlamp mode: turn the light switch to the AUTO position.

Canada only:
The daytime running lamps improve the visibility of your vehicle during the day. The daytime running lamps function is required by law in Canada. It cannot therefore be deactivated.

When the engine is running and the vehicle is stationary: if you move the selector lever from a driving position to position P, the daytime running lamps and low-beam headlamps go out after three minutes.

When the engine is running, the vehicle is stationary and in bright ambient light: if you turn the light switch to the 30E position, the daytime running lamps and parking lamps switch on.

If the engine is running and you turn the light switch to the DAYTIME R position, the manual settings take precedence over the daytime running lamps.

USA only:
The daytime running lamps improve the visibility of your vehicle during the day. Here, the Daytime Running Lights function must be switched on via the on-board computer (> page 169).

If the engine is running and you turn the light switch to the < or > position, the manual settings take precedence over the daytime running lamps.

**Low-beam headlamps**

**WARNING**

When the light switch is set to [auto], the low-beam headlamps may not be switched on automatically if there is fog, snow or other causes of poor visibility due to the weather conditions such as spray. There is a risk of an accident.

In such situations, turn the light switch to [sd].

When the ignition is switched on and the light switch is in the [sd] position, the parking lamps and low-beam headlamps are switched on even if the light sensor does not sense dark conditions. This is a particularly useful function in the event of rain and fog.

**To switch on the low-beam headlamps:**
- select key position [2] with the Start/Stop button or start the engine.
- Turn the light switch to the [sd] position.
  - The green [sd] indicator lamp in the instrument cluster lights up.

**Rear fog lamp**

The rear fog lamp improves visibility of your vehicle for the traffic behind in the event of thick fog. You must observe the legal requirements for the country in which you are currently driving when operating the rear fog lamp.

**To switch on the rear fog lamp:**
- select key position [2] with the Start/Stop button or start the engine.
- Turn the light switch to the [sd] or [auto] position.
  - Press the [on] button.
    - The yellow [on] indicator lamp in the instrument cluster lights up.
  - **To switch off the rear fog lamp:** press the [off] button.
    - The yellow [off] indicator lamp in the instrument cluster goes out.

**Parking lamps**

If the battery charge is very low, the parking lamps or standing lamps are automatically switched off to enable the next engine start. Always park your vehicle safely and in a well lit area, in accordance with the relevant legal stipulations. Avoid using the [doc] parking lamps over a period of several hours. If possible, switch on the right-hand [-pc] or left-hand [+pc] standing lamps.

**To switch on the parking lamps:** turn the light switch to the [doc] position.
  - The green [doc] indicator lamp in the instrument cluster lights up.

**Standing lamps**

Switching on the standing lamps ensures the corresponding side of the vehicle is illuminated.

**To switch on the standing lamps:** switch off the engine with the Start/Stop button.

**Combination switch**

- [1] High-beam headlamps
- [2] Turn signal, right
- [3] High-beam flasher
- [4] Turn signal, left
To indicate briefly: press the combination switch briefly to the pressure point in the direction of arrow ② or ④. The corresponding turn signal flashes three times.

To indicate: press the combination switch beyond the pressure point in the direction of arrow ② or ④.

To switch on the high-beam headlamps: select key position 2 with the Start/Stop button or start the engine.

Turn the light switch to the ① or ② position.

Press the combination switch beyond the pressure point in the direction of arrow ③. In the ④ position, the high-beam headlamps are only switched on when it is dark and the engine is running.

The ① indicator lamp in the instrument cluster lights up when the high-beam headlamps are switched on.

To switch off the high-beam headlamps: move the combination switch back to its normal position. The ① indicator lamp in the instrument cluster goes out.

Vehicles with Adaptive Highbeam Assist: when Adaptive Highbeam Assist is active, it controls switching on/off of the high-beam headlamps ( page 98).

To switch on the high-beam flasher: pull the combination switch in the direction of arrow ③.

To switch on the hazard warning lamps: press button ①.

All turn signals flash. If you now switch on a turn signal using the combination switch, only the turn signal lamp on the corresponding side of the vehicle will flash.

To switch off the hazard warning lamps: press button ①.

The hazard warning lamps automatically switch on if:
- an air bag is deployed or
- the vehicle decelerates rapidly from a speed of above 45 mph (70 km/h) and comes to a standstill

The hazard warning lamps switch off automatically if the vehicle reaches a speed of above 6 mph (10 km/h) again after a full brake application.

The hazard warning lamps still operate if the ignition is switched off.

Adaptive Highbeam Assist

General notes

You can use this function to set the headlamps to change between low beam and high beam automatically. The system recognizes vehicles with their lights on, either approaching from the opposite direction or traveling in front of your vehicle, and consequently switches the headlamps from high beam to low beam.

The system automatically adapts the low-beam headlamp range depending on the distance to the other vehicle. Once the system no longer detects any other vehicles, it reactivates the high-beam headlamps.

The system's optical sensor is located behind the windshield near the overhead control panel.

Important safety notes

WARNING

Adaptive Highbeam Assist does not recognize road users:
- who have no lights, e.g. pedestrians
- who have poor lighting, e.g. cyclists
- whose lighting is blocked, e.g. by a barrier
On very rare occasions, Adaptive Highbeam Assist may fail to recognize other road users that have lights, or may recognize them too late. In this, or in similar situations, the automatic high-beam headlamps will not be deactivated or will be activated regardless. There is a risk of an accident.

Always carefully observe the traffic conditions and switch off the high-beam headlamps in good time.

Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions. Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle’s lighting to the prevailing light, visibility and traffic conditions.

In particular, the detection of obstacles can be restricted if there is:

- poor visibility, e.g. due to fog, heavy rain or snow
- dirt on the sensors or the sensors are obscured

Switching Adaptive Highbeam Assist on/off

To switch on: turn the light switch to the AUTO position.

Press the combination switch beyond the pressure point in the direction of arrow 1. The indicator lamp in the multifunction display lights up when it is dark and the light sensor activates the low-beam headlamps.

If you are driving at speeds above approximately 16 mph (25 km/h):

The headlamp range is set automatically depending on the distance between the vehicle and other road users.

If you are driving at speeds above approximately 19 mph (30 km/h) and no other road users have been detected:

The high-beam headlamps are switched on automatically. The indicator lamp in the instrument cluster also lights up.

If you are driving at speeds below approximately 16 mph (25 km/h) or other road users have been detected or the roads are adequately lit:

The high-beam headlamps are switched off automatically. The indicator lamp in the instrument cluster goes out. The indicator lamp in the multifunction display remains lit.

To switch off: move the combination switch back to its normal position or move the light switch to another position. The indicator lamp in the instrument cluster goes out.

Headlamps fogged up on the inside

Certain climatic and physical conditions may cause moisture to form in the headlamp. This moisture does not affect the functionality of the headlamp.

Interior lighting

Overview

Interior lighting control

General notes

In order to avoid the vehicle battery discharging, the interior light functions are deactivated after some time, except for when the Start/Stop button is in key position 2.
Automatic interior lighting control

To switch on or off: press the button.
When the automatic interior lighting control is activated, the button is flush with the overhead control panel.

The interior lighting automatically switches on if you:
- unlock the vehicle
- open a door
- switch off the engine with the Start/Stop button

The interior lighting is activated for a short time when the engine is switched off with the Start/Stop button. This delayed switch-off can be adjusted via the multimedia system (see Digital Operator’s Manual).

Replacing bulbs

The front and rear light clusters of your vehicle are equipped with LED light bulbs. Do not replace the bulbs yourself. Contact a qualified specialist workshop which has the necessary specialist knowledge and tools to carry out the work required.

Lamps are an important aspect of vehicle safety. You must therefore make sure that these function correctly at all times. Have the headlamp setting checked regularly.

Windshield wipers

Switching the windshield wipers on/off

Do not operate the windshield wipers when the windshield is dry, as this could damage the wiper blades. Moreover, dust that has collected on the windshield can scratch the glass if wiping takes place when the windshield is dry.

If it is necessary to switch on the windshield wipers in dry weather conditions, always use washer fluid when operating the windshield wipers.

If the windshield wipers leave smears on the windshield after the vehicle has been washed in an automatic car wash, wax or other residues may be the reason for this. Clean the windshield using washer fluid after washing the vehicle in an automatic car wash.

Intermittent wiping with rain sensor: due to optical influences and the windshield becoming dirty in dry weather conditions, the windshield wipers may be activated inadvertently. This could then damage the windshield wiper blades or scratch the windshield.

For this reason, you should always switch off the windshield wipers in dry weather.

Windshield wiper off

Intermittent wipe, low (rain sensor set to low sensitivity)

Intermittent wipe, high (rain sensor set to high sensitivity)

Continuous wipe, slow

Continuous wipe, fast

Single wipe

Wipes with washer fluid

Switch on the ignition.

Turn the combination switch to the corresponding position.

In the or position, the appropriate wiping frequency is set automatically according to the intensity of the rain. In the position, the rain sensor is more sensitive than in the position, causing the windshield wiper to wipe more frequently.

The rain sensor is only an aid. The driver is responsible for ensuring unimpaired vision. Turn the switch to a suitable position, depending on the intensity of the precipitation, to ensure that a good view of the traffic conditions is maintained.

If the wiper blades are worn, the windshield will no longer be wiped properly. This could prevent you from observing the traffic conditions.

Worn or damaged wiper blades cause smearing. This can cause the rain sensor to malfunction.
Replacing the wiper blades

Important safety notes

⚠️ WARNING

If the windshield wipers begin to move while you are changing the wiper blades, you could be trapped by the wiper arm. There is a risk of injury.

Always switch off the windshield wipers and ignition before changing the wiper blades.

⚠️ Never open the hood if a windshield wiper arm has been folded away from the windshield.

Never fold a windshield wiper arm without a wiper blade back onto the windshield.

Hold the windshield wiper arm firmly when you change the wiper blade. If you release the windshield wiper arm without a wiper blade and it falls onto the windshield, the windshield may be damaged by the force of the impact.

Mercedes-Benz recommends that you have the wiper blades changed at a qualified specialist workshop.

⚠️ To avoid damaging the wiper blades, make sure that you touch only the wiper arm of the wiper.

Replacing the wiper blades

Adjusting the wiper blades so that they are vertical

▶ Switch off the engine.
▶ Remove your foot from the brake pedal.

▶ Set the windshield wiper to the [ ] position.
▶ Press the Start/Stop button repeatedly until the windshield wiper starts.
▶ When the wiper arms are in a vertical position to the hood, press the Start/Stop button.
▶ Fold the wiper arm away from the windshield.

Removing the wiper blades

▶ Set the wiper blade at right angles to the wiper arm.
▶ Remove the wiper blade from the retainer on the wiper arm in the direction of the arrow.

Installing the wiper blades

▶ Slide the new wiper blade into the retainer on the wiper arm in the opposite direction to the arrow.
▶ Turn the wiper blade parallel to the wiper arm.
▶ Fold the wiper arm back onto the windshield.
### Problems with the windshield wipers

</tbody>
</table>
Overview of climate control systems

General notes

Observe the settings recommended on the following pages. The windows could otherwise fog up.

To prevent the windows from fogging up:

- switch off climate control only briefly
- switch on air-recirculation mode only briefly
- switch on the cooling with air dehumidification function
- activate the "Windshield defrosting" function briefly, if required

Climate control regulates the temperature and air humidity in the vehicle interior. The interior filter cleans the air, thus improving the interior climate.

The cooling with air dehumidification function is only available when the engine is running. Optimum climate control is only achieved with the side windows closed.

Ventilate the vehicle for a brief period during warm weather, e.g. using the convenience opening feature (page 78). This will speed up the cooling process and the desired interior temperature will be reached more quickly.

The integrated filter filters out most particles of dust and soot and completely filters out pollen. It also reduces gaseous pollutants and odors. A clogged filter reduces the amount of air supplied to the vehicle interior. Depending on the operating conditions and environmental influences, the interval for replacing the filter may be shorter than specified.

It is possible that the blower may be activated automatically 60 minutes after the engine has been switched off depending on various factors, e.g. the outside temperature. The vehicle is then ventilated for 30 minutes to dry the climate control system.

Control panel for dual-zone automatic climate control

1. Sets the temperature, left (page 105)
2. Sets the air distribution (page 105)
3. Sets the airflow (page 106)
   - Activates/deactivates climate control (page 104)
4. Sets climate control to automatic (page 105)
5. Defrosts the windshield (page 106)
6. Calls up the climate control menu of the multimedia system (page 212)
7. Switches the rear window defroster on/off (page 107)
Operating the climate control systems

- Activates/deactivates synchronization (page 106)
- Activates/deactivates air-recirculation mode manually (page 107)
- Switches cooling with air dehumidification on/off (page 104)
- Sets the temperature, right (page 105)

Optimum use of 3-zone automatic climate control

Dual-zone automatic climate control

The following contains instructions and recommendations to enable you to get the most out of your dual-zone automatic climate control:

- Activate climate control using the \textit{Auto} rocker switch. The indicator lamp above the \textit{Auto} rocker switch lights up. The "Cooling with air dehumidification" function is not activated automatically in automatic mode. If necessary, activate this function (page 104).
- Set the temperature to 72 °F (22 °C).
- Only use the "Windshield defrosting" function briefly until the windshield is clear again.
- Only use air-recirculation mode briefly, e.g. if there are unpleasant outside odors or when in a tunnel. The windows could otherwise fog up, since no fresh air is drawn into the vehicle in air-recirculation mode.

ECO start/stop function

During automatic engine switch-off, the climate control system only operates at a reduced capacity. If you require the full climate control output, you can switch off the ECO start/stop function by pressing the ECO button (page 114).

Operating the climate control systems

Setting climate control

General notes

When the climate control is switched off, the air supply and air circulation are also switched off.

The windows could fog up. Therefore, switch off climate control only briefly.

Switch on climate control primarily using the \textit{Auto} rocker switch (page 105).

Activating/deactivating

- Select key position \textbf{2} with the Start/Stop button (page 111).
- To switch on: set the airflow to level 1 or higher using the \textbf{1} rocker switch.
- To switch off: set the airflow to level 0 using the \textbf{0} rocker switch.

Switching cooling with air dehumidification on/off

General notes

If you deactivate the "Cooling with air-dehumidification" function, the air inside the vehicle will not be cooled. The air inside the vehicle will also not be dehumidified. The windows can fog up more quickly. Therefore, deactivate the cooling with air-dehumidification function only briefly. The "Cooling with air dehumidification" function is only available when the engine is running. The air inside the vehicle is cooled and dehumidified according to the temperature selected.

Condensation may drip from the underside of the vehicle when it is in cooling mode. This is normal and not a sign that there is a malfunction.

Activating/deactivating

- Press the \textit{A/C} rocker switch up or down. The indicator lamp above the \textit{A/C} rocker switch lights up or goes out.
Problems with the "Cooling with air dehumidification" function

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ▶ Solutions</th>
</tr>
</thead>
</table>
| The indicator lamp over the [A/C] rocker switch flashes three times or remains off. The cooling with air dehumidification function cannot be activated via the multimedia system any longer (> page 212). | Cooling with air dehumidification has been deactivated due to a malfunction.  
▶ Visit a qualified specialist workshop. |

Setting climate control to automatic

General notes

In automatic mode, the set temperature is maintained automatically at a constant level. The system automatically regulates the temperature of the dispensed air, the airflow and the air distribution.

During automatic controlling, the "Cooling with air dehumidification" function is activated.

Automatic control

▶ Select key position 2 with the Start/Stop button (> page 111).
▶ To activate: press rocker switch [AUTO] up or down.  
The indicator lamp above the [AUTO] rocker switch lights up.
▶ Set the desired temperature using the  rocker switch.
▶ To switch to manual operation: press the [ ] rocker switch up or down.  
or  
▶ Press the upper or lower section of the [ ] rocker switch.  
The indicator lamp above the [AUTO] rocker switch goes out.

In automatic mode, if you adjust the airflow or air distribution manually, the indicator lamp above the [AUTO] rocker switch goes out. The function which has not been changed manually, however, continues to be controlled automatically. When the manually set function switches back to automatic mode, the indicator lamp above the [AUTO] rocker switch lights up again.

Setting the temperature

Different temperatures can be set for the driver's and front-passenger sides.
▶ Select key position 2 with the Start/Stop button (> page 111).
▶ To increase or reduce: press the  rocker switch up or down.

Only change the temperature setting in small increments. Start at 72 °F (22 °C).

Setting the air distribution

Air distribution settings

- [ ] Directs air through the defroster vents
- [ ] Directs air through the center and side air vents
- [ ] Directs air through the footwell air vents
- [ ] Directs air through the center, side and footwell vents
- [ ] Directs air through the defroster, center, side and footwell vents
- [ ] Directs air through the defroster and footwell vents

Setting

▶ Select key position 2 with the Start/Stop button (> page 111).
▶ Press the  rocker switch up or down.  
The various air distribution settings appear in the multimedia system.
Setting the airflow

- Select key position [2] with the Start/Stop button (page 111).
- To increase or reduce: press the  rocker switch up or down.
- To switch off: press the  rocker switch up or down.
  If necessary, the "Cooling with air dehumidification" function is activated. In this case, the indicator lamp above the  rocker switch remains switched off.

Activating/deactivating synchronization

-General notes
Climate control can be set centrally using the synchronization function. The temperature setting is adopted for the front-passenger side.

Activating/deactivating

- Press the  rocker switch up or down.
  The indicator lamp above the  rocker switch lights up or goes out.
  The synchronization function deactivates if the settings for the front-passenger side are changed.

Defrosting the windshield

-General notes
You can use this function to defrost the windshield or to clear a fogged up windshield and side windows.

- Switch off the "Windshield defrosting" function as soon as the windshield is clear again.

Activating/deactivating

- Select key position [2] with the Start/Stop button (page 111).
- To switch on: press the  rocker switch up or down.
  The indicator lamp above the  rocker switch lights up. The current climate control settings are deactivated.
  The climate control system switches to the following functions:
  - high airflow
  - high temperature

Defrosting the windows

-Windows fogged up on the inside

- Activate the "Cooling with air dehumidification" function with the  rocker switch.
- Switch on automatic mode using the  rocker switch.
- If the windows continue to fog up, activate the "Windshield defrosting" function using the  rocker switch.
  You should only select this setting until the windshield is clear again.

-Windows fogged up on the outside

- Activate the windshield wipers.
- Switch on automatic mode using the  rocker switch.
  If you clean the windows regularly, they do not fog up so quickly.

Rear window defroster

-General notes
The rear window defroster has a high current draw. You should therefore switch it off as soon as the rear window is clear. Otherwise, the rear window defroster switches off automatically after several minutes.

If the battery voltage is too low, the rear window defroster may switch off.
Activating/deactivating

- Select key position 2 with the Start/Stop button (>).
- Press the rocker switch up or down. The indicator lamp above the rocker switch lights up or goes out.

Problems with the rear window defroster

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and ► Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The rear window defroster has deactivated prematurely or cannot be activated.</td>
<td>The battery has not been sufficiently charged. ► Switch off any consumers that are not required, e.g. reading lamps, interior lighting or the seat heating. When the battery is sufficiently charged, the rear window defroster can be activated again.</td>
</tr>
</tbody>
</table>

Switching air-recirculation mode on/off

General notes

You can also temporarily deactivate the flow of fresh air manually if unpleasant odors are entering the vehicle from outside. The air already inside the vehicle will then be recirculated.

If you switch on air-recirculation mode, the windows can fog up more quickly, in particular at low temperatures. Only use air-recirculation mode briefly to prevent the windows from fogging up.

Activating/deactivating

- Select key position 2 with the Start/Stop button (>).
- To activate: press the rocker switch up or down. The indicator lamp above the rocker switch lights up.
Air-recirculation mode switches on automatically:
- at high outside temperatures
- in a tunnel (vehicles with a navigation system only)
The indicator lamp above the rocker switch is not lit when automatic air-recirculation mode is activated. Outside air is added after about 30 minutes.

To deactivate: press the rocker switch up or down. The indicator lamp above the rocker switch goes out.
Air-recirculation mode deactivates automatically:
- after approximately five minutes at outside temperatures below approximately 41 °F (5 °C)
- after approximately five minutes if cooling with air dehumidification is deactivated
- after approximately 30 minutes at outside temperatures above approximately 41 °F (5 °C) if the "Cooling with dehumidification" function is activated

Air vents

Important safety notes

⚠️ WARNING

Very hot or very cold air can flow from the air vents. This could result in burns or frostbite in the immediate vicinity of the air vents. There is a risk of injury.

Make sure that all vehicle occupants always maintain a sufficient distance to the air outlets. If necessary, redirect the airflow to another area of the vehicle interior.
In order to ensure the direct flow of fresh air through the air vents into the vehicle interior, please observe the following notes:

- keep the air inlet between the windshield and the hood free of blockages, such as ice, snow or leaves.
- never cover the air vents or air intake grilles in the vehicle interior.

### Setting the air vents

**Side air vent (example):**
- 1. Side window defroster vent
- 2. Side air vent, left
- 3. Control for left side air vent

► **To open or close:** turn thumbwheel 3 to the left or right as far as it will go.
► **To adjust the air direction:** hold side air vent 2 in the center and move it up or down or to the left or right.

### Adjusting the blower setting of the AIRSCARF vents

⚠️ **WARNING**

When AIRSCARF is switched on, very hot air can flow from the vents in the head restraints. This could result in burns in the immediate vicinity of the air vents. There is a risk of injury. Reduce the heater output before it becomes too hot.

The blower setting of AIRSCARF vent 1 can be adjusted using the AIRSCARF button (> page 89).
Notes on breaking-in a new vehicle

Important safety notes

The sensor system of some driving and driving safety systems adjusts automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in procedure.

New and replaced brake pads and discs only reach their optimum braking effect after several hundred kilometers of driving. Compensate for this by applying greater force to the brake pedal.

The first 1,000 miles (1,500 km)

The more you look after the engine when it is new, the more satisfied you will be with its performance in the future.

- You should therefore drive at varying vehicle and engine speeds for the first 1,000 miles (1,500 km).
- Ideally, for the first 1,000 miles (1,500 km), drive in program C.
- Do not drive faster than 85 mph (140 km/h) for the first 1,000 miles (1,500 km).
- Only briefly allow the engine to reach a maximum engine speed of 4,500 rpm briefly.
- Avoid heavy loads, e.g. driving at full throttle, during this period.
- Do not exceed ⅔ of the maximum permitted engine speed for each gear.
- Shift up into manual mode M and temporary manual drive program in good time.
- Do not carry out a RACE START.
- Do not manually shift to a lower gear to brake the vehicle.
- Try to avoid depressing the accelerator pedal beyond the pressure point (kickdown).

After 1,000 miles (1,500 km), you can increase the engine speed gradually and accelerate the vehicle to full speed.

You should also observe these notes on breaking in if the engine or parts of the drive train on your vehicle have been replaced.

Always observe the respective maximum permissible speed.

Driving

Important safety notes

⚠️ WARNING

Objects in the driver’s footwell can restrict the pedal travel or obstruct a depressed pedal. The operating and road safety of the vehicle is jeopardized. There is a risk of an accident.

Make sure that all objects in the vehicle are stowed correctly, and that they cannot enter the driver’s footwell. Install the floor mats securely and as specified in order to ensure sufficient clearance for the pedals. Do not use loose floor mats and do not place floor mats on top of one another.

⚠️ WARNING

Unsuitable footwear can hinder correct usage of the pedals, e.g.:

- shoes with thick soles
- shoes with high heels
- slippers

There is a risk of an accident.

Wear suitable footwear to ensure correct usage of the pedals.

⚠️ WARNING

If you switch off the ignition while driving, safety-relevant functions are only available with limitations, or not at all. This could affect, for example, the power steering and the brake boosting effect. You will require considerably more effort to steer and brake. There is a risk of an accident.

Do not switch off the ignition while driving.

⚠️ WARNING

If the parking brake has not been fully released when driving, the parking brake can:

- overheat and cause a fire
- lose its hold function.

There is a risk of fire and an accident. Release the parking brake fully before driving off.
Do not warm up the engine while stationary. Pull away immediately. Avoid high engine speeds and full throttle until the engine has reached its operating temperature.

In vehicles with automatic transmission, engage positions P and R only when the vehicle is stationary.

Where possible, avoid spinning the drive wheels when pulling away on slippery roads. You could otherwise damage the drive train.

During a cold start with low engine oil temperatures (below 32 °F (0 °C)), the maximum engine speed is restricted in order to protect the engine. To protect the engine and maintain smooth engine operation, avoid driving at full throttle when the engine is cold.

Do not keep the SmartKey:

- with electronic devices, e.g. a mobile phone or another SmartKey
- with metallic objects, e.g. coins or metal foil
- inside metallic objects, e.g. a metal case

This can affect the functionality of the SmartKey.

If you lock the vehicle with the SmartKey remote control or with KEYLESS-GO, after a short time:

- you will not be able to switch on the ignition with the Start/Stop button
- you will no longer be able to start the engine with the Start/Stop button until the vehicle is unlocked again

If you lock the vehicle centrally using the button on the driver's door (page 72), you can continue to start the engine with the Start/Stop button.

The engine can be switched off while the vehicle is in motion by pressing and holding the Start/Stop button for three seconds. This function operates independently of the ECO start/stop automatic engine switch-off function.

Key positions with the Start/Stop button

As soon as the ignition is switched on, all the indicator lamps in the instrument cluster light up. Further information on situations where an indicator lamp either fails to go out after starting the engine or lights up while driving (page 199).

If Start/Stop button 1 has not yet been pressed, this corresponds to the SmartKey being removed from the ignition.

To switch on the power supply: press Start/Stop button 1 once.

The power supply is switched on. You can now activate the windshield wipers, for example. If you press Start/Stop button 1 twice in this
key position, the power supply is switched off again.

▶ To switch on the ignition: press Start/Stop button 1 twice.
The ignition is switched on.
If you press Start/Stop button 1 once when in this position, the ignition is deactivated again.

![Start/Stop button USA](image)

- Start/Stop button USA
- Start/Stop button Canada

**SmartKey**
You can also start the vehicle with the SmartKey in the ignition lock.
The ignition lock is located in the rear stowage space of the center console.

![Ignition lock](image)

0 To remove the SmartKey
1 Power supply for some consumers, such as the windshield wipers
2 Ignition (power supply for all consumers) and drive position
3 To start the engine

The SmartKey can be turned in the ignition lock even if it is not the correct SmartKey for the vehicle. The ignition is not switched on. The engine cannot be started.

**Starting the engine**

**Important safety notes**

⚠️ **WARNING**
If children are left unsupervised in the vehicle, they could:
- open the doors, thus endangering other people or road users.
- get out and disrupt traffic.
- operate the vehicle's equipment.
Additionally, children could set the vehicle in motion if, for example, they:
- release the parking brake.
- shifting the automatic transmission out of park position P
- Start the engine.
There is a risk of an accident and injury.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children or animals unattended in the vehicle. Always keep the SmartKey out of reach of children.

⚠️ **WARNING**
Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases leads to poisoning. There is a risk of fatal injury. Therefore never leave the engine running in enclosed spaces without sufficient ventilation.

⚠️ **WARNING**
Flammable materials introduced through environmental influence or by animals can ignite if in contact with the exhaust system or parts of the engine that heat up. There is a risk of fire.
Carry out regular checks to make sure that there are no flammable foreign materials in the engine compartment or in the exhaust system.
General notes
The catalytic converter is preheated for up to 30 seconds after a cold start. The sound of the engine may change during this time.

AMG SPEEDSHIFT DCT 7-speed sport transmission

- Shift the transmission to position \(P\) (▷ page 117).
The transmission position indicator on the multifunction display shows \(P\) (▷ page 119).

You can start the engine in transmission position \(P\) and \(N\).

Starting procedure with the Start/Stop button

The Start/Stop button can be used to start the vehicle manually without inserting the SmartKey into the ignition lock. You merely need to carry the SmartKey on your person. This mode for starting the engine operates independently of the ECO start/stop automatic engine start function.

You can start the engine if a valid SmartKey is in the vehicle. Switch off the engine and always take the SmartKey with you when leaving the vehicle, even if you only leave it for a short time. Pay attention to the important safety notes.

- Depress the brake pedal and keep it depressed.
- Press the Start/Stop button once (▷ page 110).
The engine starts.

Starting procedure with the SmartKey

- Turn the SmartKey to position \(3\) in the ignition lock (▷ page 111) and release it as soon as the engine is running.

If the engine will not start:
- Remove the SmartKey from the ignition lock.
- Reinsert the SmartKey into the ignition lock after a short waiting period.

Pulling away

General notes

⚠️ WARNING
If the engine speed is above the idling speed and you engage transmission position \(D\) or \(R\), the vehicle could pull away suddenly. There is a risk of an accident.

When engaging transmission position \(D\) or \(R\), always firmly depress the brake pedal and do not simultaneously accelerate.

Depress the accelerator carefully when pulling away.
The vehicle locks centrally once you have pulled away. The locking knobs in the doors drop down. You can open the doors from the inside at any time.

You can also deactivate the automatic locking feature (▷ page 72).

It is only possible to shift the transmission from position \(P\) to the desired position if:

- the engine is running and
- you depress the brake pedal

If you do not depress the brake pedal, the E-SELECT lever can still be moved but the parking lock remains engaged.

Information on the automatic release of the electric parking brake (▷ page 130).

Hill start assist

Hill start assist helps you when pulling away forward or in reverse on an uphill gradient. It holds the vehicle for a short time after you have removed your foot from the brake pedal. This gives you enough time to move your foot from the brake pedal to the accelerator pedal and to depress it before the vehicle begins to roll.
**WARNING**

After a short time, hill start assist will no longer brake your vehicle and it could roll away. There is a risk of an accident and injury. Therefore, quickly move your foot from the brake pedal to the accelerator pedal. Never leave the vehicle when it is held by hill start assist.

Hill start assist is not active if:

- you are pulling away on a level road or on a downhill gradient
- the transmission is in position **N**
- the electric parking brake is applied
- ESP® is malfunctioning

**Rear axle steering**

**General notes**

Depending on the speed, rear axle steering adapts the track of the rear axle to the position of the front wheels. Together with the steering angle of the front wheels, this results in greater mobility and stability than on vehicles without rear axle steering.

Rear axle steering has the following characteristics:

- reduced steering effort and turning circle, resulting in reduced parking effort.
- improved driving stability, e.g. on curves.
- the vehicle has more direct steering. Control of the vehicle is thereby increased.

**ECO start/stop function**

**Introduction**

The ECO start/stop function switches the engine off automatically if the vehicle is stopped under certain conditions.

The engine starts automatically when the driver wants to pull away again. The ECO start/stop function thereby helps you to reduce the fuel consumption and emissions of your vehicle.

**Important safety notes**

**WARNING**

If the engine is switched off automatically and you exit the vehicle, the engine is restarted automatically. The vehicle may begin moving. There is a risk of accident and injury.

If you wish to exit the vehicle, always turn off the ignition and secure the vehicle against rolling away.

**General notes**

ECO start/stop display

If the engine has been switched off automatically by the ECO start/stop function, the ECO symbol is shown in the multifunction display.

The ECO start/stop function is only available in drive program **C**.

The ECO start/stop function is activated whenever you switch on the engine using the Smart-Key or the Start/Stop button. This is the case if:

- the ignition was switched off for more than four hours or
- the ECO start/stop function had been activated before the engine was switched off

**Automatic engine switch-off**

The ECO start/stop function switches the engine off automatically if:

- the ECO start/stop function is activated (page 114) and
- you brake the vehicle to a standstill in transmission position **D**

The ECO start/stop function is operational when:

- the indicator lamp in the ECO button is lit green
- the outside temperature and the atmospheric air pressure is within the range that is suitable for the system
the engine and the transmission are at a sufficient temperature for the ECO start/stop function
- the set temperature for the vehicle interior has been reached
- the battery is sufficiently charged
- the system detects that the windshield is not fogged up when the air-conditioning system is switched on
- the hood is closed
- the driver's door is closed and the driver's seat belt is fastened

All of the vehicle's systems remain active when the engine is stopped automatically.

The HOLD function can also be activated if the engine has been switched off automatically. It is then not necessary to continue applying the brakes during the automatic stop phase. When you depress the accelerator pedal, the engine starts automatically and the braking effect of the HOLD function is deactivated.

### Automatic engine start
The engine starts automatically if:
- you switch off the ECO start/stop function by pressing the ECO button
- switch to drive program RACE, S+ or S (page 116)
- you switch to manual mode M (page 121)
- in transmission position D, the brake pedal is released and the HOLD function is not active
- you depress the accelerator pedal
- you engage reverse gear R
- you move the transmission out of position P
- you unfasten your seat belt or open the driver's door
- the vehicle starts to roll
- the brake system requires this
- the temperature in the vehicle interior deviates from the set range
- the system detects moisture on the windshield when the air-conditioning system is switched on
- the battery's condition of charge is too low
- Shifting the transmission to position P does not start the engine.

### Deactivating or activating the ECO start/stop function

- To deactivate: press ECO button ①. Indicator lamp ② goes out.
- To activate: press ECO button ①. Indicator lamp ② lights up.

If indicator lamp ② is off, the ECO start/stop function has been deactivated manually or as the result of a malfunction. The engine will then not be switched off automatically when the vehicle stops.

The ECO start/stop function is deactivated, if:
- you switch to drive program RACE, S+ or S (page 116)
- you switch to manual mode M (page 121)

### AMG sports exhaust system
You can choose between different AMG sports exhaust system volumes using the position of the exhaust flap.

Each time you start the engine with the Smart-Key or the Start/Stop button, the quietest setting is activated.
Setting the volume:

- Press button ①.
  If you select the loudest setting, indicator lamp ③ lights up.

You can also adjust the position of the exhaust flap using the:
- DYNAMIC SELECT controller (page 116)
- Multimedia system

**Problems with the engine**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| The engine does not start.                   | The HOLD function or Distance Pilot DISTRONIC is activated.  
  - Deactivate the HOLD function (page 145) or Distance Pilot DISTRONIC (page 141).  
  - Try to start the engine again (page 111).                                          |
| The engine does not start. The starter motor can be heard. | • There is a malfunction in the engine electronics.  
  • There is a malfunction in the fuel supply.  
  Before attempting to start the engine again:  
  - Press the Start/Stop button repeatedly until all indicator lamps in the instrument cluster go out.  
  or  
  - Turn the SmartKey back to SmartKey position 0 in the ignition lock.  
  - Try to start the engine again (page 111). Avoid excessively long and frequent attempts to start the engine as these will drain the battery.  
  If the engine does not start after several attempts:  
  - Consult a qualified specialist workshop. |
| The engine does not start. You cannot hear the starter motor. | The on-board voltage is too low because the battery is too weak or discharged.  
  - Jump-start the vehicle (page 254).  
  If the engine does not start despite attempts to jump-start it:  
  - Consult a qualified specialist workshop. |
|                                              | The starter motor was exposed to a thermal load that was too high.  
  - Try to start the engine again (page 111).  
  If the engine still does not start:  
  - Consult a qualified specialist workshop. |
Problem | Possible causes/consequences and Solutions
--- | ---
The engine is not running smoothly and is misfiring. | There is a malfunction in the engine electronics or in a mechanical component of the engine management system.  
- Only depress the accelerator pedal slightly.  
- Otherwise, non-combusted fuel may get into the catalytic converter and damage it.  
- Have the cause rectified immediately at a qualified specialist workshop.

The coolant temperature display shows a value above 248 °F (120 °C). | The coolant level is too low. The coolant is too hot and the engine is no longer being cooled sufficiently.  
- Stop as soon as possible and allow the engine and the coolant to cool down.  
- Check the coolant level (› page 238). Observe the warning notes as you do so and add coolant if necessary.

---

**DYNAMIC SELECT controller**

**General information**

Select the drive program using the DYNAMIC SELECT controller.

**Available drive programs:**

<p>| | |</p>
<table>

<td>Individual settings</td>
</tr>
</tbody>
</table>

In urban traffic and stop-start traffic, drive program **C** is recommended.

Depending on the drive program selected the following vehicle characteristics will change:

- the drive (engine management)
- the transmission management
- ESP® (› page 62)
- the suspension (› page 147)
- the position of the exhaust flap (› page 114)

- the availability of the ECO start/stop function (› page 113)
- the availability of gliding mode (› page 120)

Further information for automatic drive program characteristics (› page 122).

Additionally, in drive program **I** you can configure the respective vehicle characteristics using the multimedia system. You can find information about this in the Digital Operator’s Manual. Each time you start the engine with the Smart-Key or the Start/Stop button, drive program **C** is activated. Further information about starting the engine (› page 111).

**Selecting the drive program**

- Turn DYNAMIC SELECT controller (1) until the desired drive program is selected.  
The selected drive program appears in the multifunction display. After five seconds the
display goes out and the symbol of the selected drive program appears. The drive program indicator on DYNAMIC SELECT controller lights up in red. In addition, the current drive program settings are displayed in the multimedia system display.

**Additional settings**

1. Manual mode (page 123)
2. ECO start/stop function (page 113)
3. Position of the exhaust flap (page 114)
4. Suspension (page 147)
5. ESP® (page 62)

When you press buttons 1 - 5 the corresponding setting is selected. The DYNAMIC SELECT controller setting is overwritten. These settings will also be maintained for manual mode and ESP® if you switch to drive program RACE (AMG GT C Roadster), S+, S or C using the DYNAMIC SELECT controller. If you switch to drive program I, all stored characteristics will be accepted. This is also the case if you have previously pressed one of buttons 1 - 5. If you then change the drive program using the DYNAMIC SELECT controller, the standard setting for the drive program is selected.

**E-SELECT selector lever**

**General notes**

1. If the engine speed is too high or the vehicle is in motion, do not shift the automatic transmission directly from D to R, from R to D or directly to P. Do not open the driver's door while the vehicle is in motion. At low speeds in transmission position D or R, otherwise park position P is engaged automatically. The transmission could be damaged.

2. If you want to engage a transmission position or to exit park position P, the engine must be running. The E-SELECT lever always returns to its original position. The current transmission position P, R, N or D is shown in the transmission position display in the multifunction display.

**Important safety notes**

**WARNING**

If the engine speed is above the idling speed and you engage transmission position D or R, the vehicle could pull away suddenly. There is a risk of an accident. When engaging transmission position D or R, always firmly depress the brake pedal and do not simultaneously accelerate.
Overview of transmission positions

- **P** Park position with parking lock
- **R** Reverse gear
- **N** Neutral
- **D** Drive

### Engaging park position P automatically

Park position **P** is engaged automatically in the following circumstances:
- if you switch off the engine using the Start/Stop button and open the driver’s or front-passenger door.
- if you remove the SmartKey from the ignition lock.
- if you open the driver’s door while traveling at low speeds in transmission position **h** or **k**.

Under certain conditions, the automatic transmission shifts automatically to transmission position **P** if the HOLD function or Distance Pilot DISTRONIC is activated. Observe the information on the HOLD function (page 114) and on Distance Pilot DISTRONIC (page 140).

### Engaging reverse gear R

- Make sure that the vehicle is stationary.
- Depress the brake pedal and keep it depressed.
- Push the E-SELECT lever forwards past the first point of resistance. The transmission position **R** is engaged.

If you engage reverse gear, the engine starts automatically (page 114).

### Shifting to neutral N

- Start the engine (page 112).
- Make sure that the vehicle is stationary.
- Depress the brake pedal and keep it depressed.
- Push the E-SELECT lever forwards or pull it back to the first point of resistance, depending on the current transmission position.

If you move the E-SELECT lever to **N** before switching off the engine, the transmission remains in **N** for approximately 30 minutes. If you open the driver’s or front-passenger door during this period, the transmission automatically shifts to park position **P**.

If you want the automatic transmission to remain in neutral **N**, e.g. when having the vehicle cleaned in an automatic car wash with a towing system:
- Insert the SmartKey into the ignition lock.
- Switch on the ignition.
Depress the brake pedal and keep it depressed.
Shift to neutral [N].
Release the brake pedal.
Release the electric parking brake.
Switch the ignition off.
Turn the SmartKey to position [2] and leave it in the ignition lock.

You can find further information under "Car wash" (> page 241).

**Shifting to transmission position D**

- Start the engine (> page 112).
- Make sure that the vehicle is stationary.
- Depress the brake pedal and keep it depressed.
- Push the E-SELECT lever back past the first point of resistance.
  
The automatic transmission shifts to [D].

If the vehicle is braked to a standstill with the transmission in position [D], the ECO start/stop function switches off the engine automatically (> page 113).

**Transmission position and drive program display**

The current transmission position and drive program appear in the multifunction display.

1 Drive program
2 Transmission position

Additionally, displays next to the E-SELECT lever show the current transmission position.

The displays light up if you:

- switch on the power supply with the Start/Stop button (> page 110) or
- insert the SmartKey into the ignition lock (> page 111).

The displays go out if you:

- switch off the power supply with the Start/Stop button (> page 110) or
- remove the SmartKey from the ignition lock (> page 111).

If the transmission position display in the multifunction display is not working, check on the display next to the E-SELECT lever whether the desired transmission position is engaged.

**AMG SPEEDSHIFT DCT 7-speed sports transmission**

Driving and parking
Neutral
Do not shift the transmission to [N] while driving. The automatic transmission could otherwise be damaged.
No power is transmitted from the engine to the drive wheels. Releasing the brakes will allow you to move the vehicle freely, e.g. to push it or tow it.
If ESP® is deactivated or faulty: shift the transmission to position [N] if the vehicle is in danger of skidding, e.g. on icy roads.
If you switch off the engine using the SmartKey or the Start/Stop button, the automatic transmission shifts to neutral [N] automatically.
Coasting in neutral [N] may cause damage to the drive train.

Drive
The automatic transmission changes gear automatically in the automatic drive programs (page 122). All forward gears are available.

Driving tips
Changing gear
The automatic transmission shifts through the individual gears automatically when it is in transmission position [D]. This automatic gear shifting behavior is determined by:
- the selected drive program (page 116)
- the position of the accelerator pedal
- the road speed

Accelerator pedal position
Your style of driving influences how the automatic transmission shifts gear:
- little throttle: early upshifts
- more throttle: late upshifts
A dynamic driving style with high longitudinal and lateral acceleration delays the shift points to higher engine speeds.

Double-clutch function
When shifting down, the double-clutch function is active regardless of the currently selected drive program. The double-clutch function reduces load change reactions and is conducive to a sporty driving style. The sound generated by the double-clutch function depends on the drive program selected.

Kickdown
Use kickdown for maximum acceleration:
- In the automatic drive programs, depress the accelerator pedal beyond the pressure point. Depending on the engine speed and the selected drive program, the automatic transmission shifts to the lowest gear permissible to give optimal acceleration.
- Ease off the accelerator pedal once the desired speed is reached. The automatic transmission shifts back up.
Kickdown is not available in manual mode [M].

Rocking the vehicle free
Rocking the vehicle free may help to free the vehicle if it has become stuck in slush or snow. To do so, shift back and forth repeatedly between transmission positions [D] and [R].
The vehicle’s transmission management restricts shifting between transmission positions [D] and [R] to speeds up to a maximum of 5 mph (9 km/h).
To shift back and forth between transmission positions [D] and [R], move the E-SELECT lever up and down beyond the pressure point.

Gliding mode
120 AMG SPEEDSHIFT DCT 7-speed sports transmission
Gliding mode is characterized by the following:

- the combustion engine is disconnected from the drive train.
- the engine speed corresponds to the idling speed.
- the C symbol disappears from the multifunction display and symbol 1 is displayed ( page 119).

Gliding mode can be activated under the following conditions:

- the speed is within a suitable range.
- the course of the road is suitable, e.g. there are no steep up or downhill gradients.
- you are no longer depressing the accelerator pedal.

Gliding mode is deactivated under the following conditions:

- you depress the accelerator pedal.
- you depress the brake pedal.
- you switch the transmission position using the E-SELECT lever ( page 117).
- you switch to drive program RACE (AMG GT C Roadster), S+ or S ( page 116).
- you switch to manual mode M ( page 121).
- you leave the suitable speed range.

If you have selected the "Comfort" setting for the drive (engine management) in drive program I, you can also activate gliding mode. You can find information about this in the Digital Operator's Manual.

### Press M button 1.

Indicator lamp 2 lights up. The letter M appears in the multifunction display. Manual mode M is activated.

<table>
<thead>
<tr>
<th>M Manual</th>
<th>Permanent manual gear-shifting</th>
</tr>
</thead>
</table>

Further information on manual mode M ( page 123).

In addition to manual mode M, you can also activate temporary manual drive program ( page 122).

Each time you start the engine using the Smart-Key or the Start/Stop button, drive program C is activated. Further information about starting the engine ( page 111).

### Steering wheel paddle shifters

Using steering wheel paddle shifters 1 and 2 you can:

- activate the temporary manual drive program and change gear yourself in automatic drive programs ( page 122)
- change gear yourself in manual mode M ( page 123)
- activate RACE START ( page 146)
Automatic drive program

Drive program C (Comfort)

Drive program C is characterized by the following:
- the vehicle delivers comfortable, economical handling characteristics.
- the vehicle pulls away more gently in forward and reverse gears, unless the accelerator pedal is depressed fully.
- the vehicle has improved driving stability, for example on slippery road surfaces.
- optimal fuel consumption resulting from the automatic transmission shifting up sooner. The vehicle is driven in the low engine speed range and the wheels are less likely to spin.
- gliding mode is available.
- the ECO start/stop function is available.

Drive program S (Sport)

Drive program S is characterized by the following:
- the vehicle exhibits sporty driving characteristics.
- the automatic transmission shifts up later. The fuel consumption possibly being higher as a result of the later automatic transmission shift points.
- the suspension exhibits stiff springing and damping settings.
- gliding mode is not available.
- the ECO start/stop function is not available.
- if a period of dynamic driving is followed by an extended phase with a constant accelerator pedal position, the vehicle shifts up to a higher gear. This optimizes fuel consumption.

Drive program S+ (Sport Plus)

Drive program S+ is characterized by the following:
- the vehicle exhibits particularly sporty driving characteristics.
- the automatic transmission shifts up later. The fuel consumption possibly being higher as a result of the later automatic transmission shift points.
- the suspension exhibits particularly hard springing and damping settings.
- gliding mode is not available.
- the ECO start/stop function is not available.
- if a period of dynamic driving is followed by an extended phase with a constant accelerator pedal position, the vehicle shifts up to a higher gear. This optimizes fuel consumption.

Drive program I (Individual)

In drive program I the following properties of the drive program can be selected:
- the drive (engine management)
- the transmission management
- ESP® (> page 62)
- the suspension (> page 147)
- the position of the exhaust flap (> page 114)

Information about configuring drive program I with the multimedia system can be found in the Digital Operator’s Manual.

Temporary manual drive program

General notes

In this drive program, you can briefly change gear yourself by using the steering wheel paddle shifters. The transmission must be in position D to do this.

You can activate the temporary manual drive program in the automatic drive program. The switching times correspond to the previously active automatic drive program.

In addition to temporary manual drive program you can also activate manual mode M (> page 123).

Activating

- Shift the transmission to position D.
- Pull the left-hand or right-hand steering wheel paddle shifter (> page 121).
Temporary manual drive program is activated. The last active drive program 1 and selected gear 2 appear in the multifunction display.
Shifting gears

If you pull on the left-hand or right-hand steering wheel paddle shifter, the automatic transmission switches to temporary manual drive program for a limited amount of time. Depending on which steering wheel paddle shifter is pulled, the automatic transmission immediately shifts into the next gear down or up, if permitted.

► To shift up: pull the right-hand steering wheel paddle shifter (> page 121).
  The automatic transmission shifts up to the next gear.
  If the maximum engine speed in the currently engaged gear is reached and you continue to accelerate, the automatic transmission automatically shifts up in order to prevent engine damage.
  The automatic transmission will not shift up to the next gear when the engine speed is very low.

► To shift down: pull on the left-hand steering wheel paddle shifter (> page 121).
  The automatic transmission shifts down to the next gear.
  If the engine were to exceed the maximum engine speed when shifting down, the automatic transmission protects against engine damage by not shifting down.
  Automatic down shifting occurs when coasting.
  When using kickdown, the automatic transmission automatically shifts to a lower gear.

Deactivating

If you have activated temporary manual drive program, it will remain active for a certain amount of time. Under certain conditions, the minimum amount of time is extended, e.g. in the case of lateral acceleration, during overrun mode or when driving on steep terrain.

When temporary manual drive program is deactivated, the automatic transmission shifts into the automatic drive program that was last selected.

You can also deactivate temporary manual drive program yourself:

► Pull on the right-hand steering wheel paddle shifter and hold it in place (> page 121).
  or
  ► Use the DYNAMIC SELECT controller to change the drive program (> page 116).
  Temporary manual drive program is deactivated. The automatic transmission switches into the automatic drive program that was last selected.

Manual mode

General notes

In manual mode M, you can permanently change gear yourself by using the steering wheel paddle shifters. The transmission must be in position D to do this.

The switching times correspond to the previously active automatic drive program.

The transmission only shifts down automatically at low engine speeds depending on the respective gear.

In addition to manual mode M, you can also activate temporary manual drive program (> page 122).

Activating

In manual mode M, you can change gear yourself using the steering wheel paddle shifters if the transmission is in position D. You can see the currently selected drive program and which gear is engaged in the multifunction display.

► Press the M button (> page 121).
  M is shown in the multifunction display and the indicator lamp on the M button lights up.

Shift recommendation

The gearshift recommendations assist you in adopting an economical driving style. The rec-
ommended gear is shown in the multifunction display.

- When the corresponding gearshift recommendation 1 appears in the multifunction display of the instrument cluster, shift to recommended gear 2.

Display for shift override

If the engine speed becomes too high or too low as a result of shifting gear, you cannot shift gear using the steering wheel paddle shifters. If you then pull the left-hand or right-hand steering wheel paddle shifter, segments 1 light up red briefly.

Downshifting

- Pull the left-hand steering wheel paddle shifter (page 121).
  In cases where it is permissible, the automatic transmission shifts down to the next gear.

- Maximum acceleration: pull the left-hand steering wheel paddle shifter until the transmission selects the optimum gear for the current speed.

If you slow down or stop without shifting down, the automatic transmission automatically shifts down.

Deactivating

- Press the M button (page 121).
  The indicator lamp in the button goes out.

RACE drive program (AMG GT C Roadster)

The RACE drive program is designed for maximum performance in terms of shift points and engine speeds. The engine and transmission should be at normal operating temperature for the RACE drive program (page 170). Use the RACE drive program on a closed-off race circuit.

The RACE drive program is characterized by the following:

- the vehicle exhibits driving characteristics suitable for the racetrack.
- all vehicle systems are set for maximum sportiness.
- for optimum performance, the transmission shifts up later and shifts down sooner.
- the multifunction display shows the manual gearshift program without upshift indicator (page 122).
- the gearshift recommendation gives you information for slowly warming up the drive assemblies and for adopting a fuel-efficient driving style (page 123). You can follow the gearshift recommendations at all times and shift gear accordingly using the steering wheel paddle shifters. On the basis of the gearshift recommendation, using the steering wheel paddle shifters, you can optimize the drive train and engine operating mode at any time.
  - if you have selected a gear manually, this will be maintained until the vehicle speed increases or decreases dramatically.
  - if you do not follow the gearshift recommendations, the automatic shift points may result in high fuel consumption.
  - the suspension exhibits particularly hard springing and damping settings.
  - the transmission shift and response times are significantly shorter with more aggressive gear changes. This is particularly the case when shifting up. The shift strategy is thus designed to interact dynamically with the high-revving engine.
  - gliding mode is not available.
  - the ECO start/stop function is not available.

### Refueling

#### Important safety notes

**WARNING**

Fuel is highly flammable. If you handle fuel incorrectly, there is a risk of fire and explosion. You must avoid fire, open flames, creating sparks and smoking. Switch off the engine and, if applicable, the auxiliary heating before refueling.

**WARNING**

Fuel is poisonous and hazardous to health. There is a risk of injury. You must make sure that fuel does not come into contact with your skin, eyes or clothing and that it is not swallowed. Do not inhale fuel vapors. Keep fuel away from children. If you or others come into contact with fuel, observe the following:

- Wash away fuel from skin immediately using soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical assistance without delay.

- If fuel is swallowed, seek medical assistance without delay. Do not induce vomiting.
- Immediately change out of clothing which has come into contact with fuel.

**WARNING**

Electrostatic buildup can create sparks and ignite fuel vapors. There is a risk of fire and explosion. Always touch the vehicle body before opening the fuel filler flap or touching the fuel pump nozzle. Any existing electrostatic buildup is thereby discharged.

Do not get into the vehicle again during the refueling process. Otherwise, electrostatic charge could build up again.

- Do not use diesel to refuel vehicles with a gasoline engine. Do not switch on the ignition if you accidentally refuel with the wrong fuel. Otherwise, the fuel will enter the fuel system. Even small amounts of the wrong fuel could result in damage to the fuel system and the engine. Notify a qualified specialist workshop and have the fuel tank and fuel lines drained completely.

- Overfilling the fuel tank could damage the fuel system.

- Take care not to spill any fuel on painted surfaces. You could otherwise damage the paintwork.
Use a filter when adding fuel from a fuel can. The fuel lines and/or the fuel injection system could otherwise be blocked by particles from the fuel can.

If you overfill the fuel tank, fuel could spray out when the fuel pump nozzle is removed. For further information on fuel and fuel quality (page 286).

Refueling

General information

Pay attention to the important safety notes (page 125). If you unlock/lock the vehicle from the outside, the fuel filler flap also unlocks/locks. The position of the fuel filler cap is displayed in the instrument cluster. The arrow next to the filling pump indicates the side of the vehicle.

Opening the fuel filler flap

![Image showing steps to open and insert the fuel filler flap]

1. To open the fuel filler flap
2. To insert the fuel filler cap
3. Tire pressure table
4. Instruction label for fuel type to be refueled

- Switch off the engine.
- Open the driver’s door.
  The vehicle electronics are now in key position [0]. This is the same as the SmartKey having been removed.
  or, if the SmartKey is inserted in the ignition lock:
  - Remove the SmartKey from the ignition lock.
  - Press the fuel filler flap in the direction of arrow 1.
  - The fuel filler flap swings up.
  - Turn the fuel filler cap counterclockwise and remove it.
  - Insert the fuel filler cap into the holder on the inside of fuel filler flap 2.
  - Completely insert the filler neck of the fuel pump nozzle into the tank, hook in place and refuel.
  - Only fill the tank until the pump nozzle switches off.

Do not add any more fuel after the pump stops filling for the first time. Otherwise, fuel may leak out.

Closing the fuel filler flap

- Replace the cap on the filler neck and turn clockwise until it engages audibly.
- Close the fuel filler flap.

Close the fuel filler flap before locking the vehicle.

If you are driving with the fuel filler cap open, the reserve fuel warning lamp flashes. A message appears in the multifunction display (page 188).
### Problems with fuel and the fuel tank

### Parking

#### Important safety notes

**WARNING**
Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system or exhaust gas flow. There is a risk of fire.

Park the vehicle so that no flammable materials come into contact with parts of the vehicle which are hot. Take particular care not to park on dry grassland or harvested grain fields.

**WARNING**
If you leave children unsupervised in the vehicle, they could set it in motion by, for example:
- release the parking brake.
- shift the automatic transmission out of the parking position P.
- start the engine.

In addition, they may operate vehicle equipment and become trapped. There is a risk of an accident and injury.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

If the engine speed is too high or the vehicle is in motion, do not shift the automatic transmission directly from D to R, from R to D or directly to P.

Do not open the driver’s door while the vehicle is in motion. At low speeds in transmission
position D or R, otherwise park position P is engaged automatically. The transmission could be damaged.

Always secure the vehicle correctly against rolling away. Otherwise, the vehicle or its drivetrain could be damaged.

To ensure that the vehicle is secured against rolling away unintentionally:
- the electric parking brake must be applied.
- the transmission must be in position P.
- the SmartKey must be removed from the ignition lock or the Start/Stop button must be pressed.
- the front wheels must be turned towards the curb on steep uphill or downhill gradients.
- the empty vehicle must be secured at the front axle with a wheel chock or similar, for example, on uphill or downhill gradients.
- a laden vehicle must also be secured at the rear axle with a wheel chock or similar, for example, on uphill or downhill gradients.

### Switching off the engine

**Important safety notes**

**WARNING**
The automatic transmission switches to neutral position N when you switch off the engine. The vehicle may roll away. There is a risk of an accident.

After switching off the engine, always switch to parking position P. Prevent the parked vehicle from rolling away by applying the parking brake.

**AMG SPEEDSHIFT DCT 7-speed sport transmission**

Do not remove the SmartKey while the vehicle is in motion. Otherwise, at low speeds, parking lock P will be activated automatically.

Do not open the driver's door while the vehicle is in motion. At low speeds, transmission position P is engaged automatically.

This could cause damage to the transmission and the parking lock.

- Apply the electric parking brake.
- Shift the transmission to P using the button on the center console.

### Using the Start/Stop button

- Press the Start/Stop button (▶ page 110)
  The engine stops and all the indicator lamps in the instrument cluster go out.

If the driver's door is closed, this is the same as key position 1. If the driver's door is open, this is the same as key position 0, i.e. the SmartKey having been removed.

If you switch the engine off with the transmission in position R or D, the transmission automatically shifts to N.

If you move the E-SELECT lever to N before switching off the engine, the transmission remains in N for 30 minutes.

If you open the driver's or front-passenger door during this period, the transmission automatically shifts to P and the electric parking brake is automatically applied.

The engine can be switched off in an emergency while the vehicle is in motion by pressing and holding the Start/Stop button for three seconds. This function operates independently of the ECO start/stop automatic engine switch-off function.

### Using the SmartKey

- Turn the SmartKey to key position 0 in the ignition lock and remove it. The immobilizer is activated.

If you move the E-SELECT lever to N before switching off the engine, the transmission remains in N for approximately 30 minutes.

If you open the driver's or front-passenger door during this time, the transmission shifts automatically to P.

The transmission remains in N if:
- the SmartKey is in the ignition lock and
- you use the E-SELECT lever to shift the transmission to N before switching the engine off

This still applies if you open the driver's or front-passenger door.

Further information on transmission position N when operating with a SmartKey is available under "Automatic car wash" (▶ page 241).
**Electric parking brake**

**General notes**

**WARNING**
If you leave children unsupervised in the vehicle, they could set it in motion by, for example:
- release the parking brake.
- shift the automatic transmission out of the parking position P.
- start the engine.

In addition, they may operate vehicle equipment and become trapped. There is a risk of an accident and injury.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

The function of the electric parking brake is dependent on the on-board voltage. If the on-board voltage is low or there is a malfunction in the system, it may not be possible to apply the released parking brake.

- If this is the case, only park the vehicle on level ground and secure it to prevent it rolling away.
- Shift the automatic transmission to position P.

It may not be possible to release an applied parking brake if the on-board voltage is low or there is a malfunction in the system. Contact a qualified specialist workshop.

The electric parking brake performs a function test at regular intervals while the engine is switched off. The sounds that can be heard while this is occurring are normal.

---

**Applying or releasing manually**

**To apply:** push handle ①.

When the electric parking brake is applied, the red [PARK] (USA only) or [P] (Canada only) indicator lamp lights up in the instrument cluster.

The electric parking brake can also be applied when the SmartKey is in position 0.

**To release:** pull handle ①.

The red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster goes out.

The electric parking brake can only be released:
- if the ignition is switched on using the Start/Stop button or
- the SmartKey is in SmartKey position 1 or 2 in the ignition lock (> page 111)

**Applying automatically**

The electric parking brake is automatically applied when the transmission is in position P and:
- the engine is switched off or
- the driver is not wearing a seat belt and the driver’s door is opened

To prevent the electric parking brake from being automatically applied, pull handle ①.

The electric parking brake is also applied automatically in the following cases if:
- Distance Pilot DISTRONIC brings the vehicle to a standstill or
- the HOLD function is keeping the vehicle stationary
In addition, at least one of the following conditions must be fulfilled:
- there is a system malfunction
- the power supply is insufficient
- the vehicle is stationary for a lengthy period

The red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster lights up.

The electric parking brake is not automatically engaged if the engine is switched off by the ECO start/stop function.

**Releasing automatically**

The electric parking brake is released when the following conditions are fulfilled:
- the engine is running
- the seat belt tongue is engaged in the belt buckle
- the transmission is in position [D] or [R] and you depress the accelerator pedal or shift from position [P] to [D] or [R]
- if the transmission is in position [R], the trunk lid must be closed

If the seat belt tongue is not engaged in the seat belt buckle, the following conditions must be fulfilled:
- the driver’s door and front-passenger door are closed
- you move the transmission out of position [P] or you have previously driven at a speed above 2 mph (3 km/h)
- if the transmission is in position [R], the trunk lid must be closed

When the electric parking brake is released, the red [PARK] (USA only) or [P] (Canada only) indicator lamp goes out in the instrument cluster.

**Emergency braking**

The vehicle can also be braked during an emergency by using the electric parking brake.

- While driving, push handle ① of the electric parking brake (page 129).

The vehicle is braked as long as you keep handle ① of the electric parking brake pressed. The longer electric parking brake handle ① is depressed, the greater the braking force.

During braking:
- a warning tone sounds
- the **Please Release Parking Brake** message appears
- the red [PARK] (USA only) or [P] (Canada only) indicator lamp in the instrument cluster flashes

When the vehicle has been braked to a standstill, the electric parking brake is engaged.

**Parking the vehicle for a long period**

**General notes**

If you leave the vehicle parked for longer than four weeks, the battery may be damaged by exhaustive discharging.

If you leave the vehicle parked for longer than six weeks, the vehicle may suffer damage as a result of lack of use.

- Visit a qualified specialist workshop and seek advice.

**Trickle charging the on-board electrical system battery**

The battery may drain if the vehicle is left stationary for long periods. In this case, Mercedes-Benz recommends attaching the trickle charger to 12 V socket ① in the trunk.

- A trickle charger and further information can be obtained from a qualified specialist workshop.
- Switch the ignition off.
- Open the trunk lid.
Connect the cable provided in the trunk to the trickle charger.

Connect the trickle charger to 12 V socket (1). Consult the manufacturer’s operating instructions on how to do so.

The trunk lid can be closed, even if a trickle charger is connected. Make sure that the connector for both the connector cables is outside of the vehicle.

The connector can then separate if the vehicle is moved, even if you forget to disconnect the connector cables. This prevents damaging the cables and the trickle charger.

A trickle charger connected to 12 V socket (1) only maintains the current charge level of the vehicle’s electrical system battery. If the vehicle’s electrical system battery is discharged, it needs to be charged with a battery charger.

If you make a call while driving, always use hands-free mode. Only operate the telephone when the traffic situation permits. If you are unsure, pull over to a safe location and stop before operating the telephone.

Bear in mind that at a speed of only 30 mph (approximately 50 km/h), the vehicle covers a distance of 44 ft (approximately 14 m) per second.

**Drive sensibly – save fuel**

Observe the following tips to save fuel:

- The tires should always be inflated to the recommended tire pressure.
- Remove unnecessary loads.
- Warm up the engine at low engine speeds.
- Avoid frequent acceleration or braking.
- Have all service and maintenance work carried out at the specified intervals.

Fuel consumption also increases when driving in cold weather, in stop-start traffic and in hilly terrain.

**Driving tips**

**General driving tips**

**Important safety notes**

⚠️ **WARNING**

If you switch off the ignition while driving, safety-relevant functions are only available with limitations, or not at all. This could affect, for example, the power steering and the brake boosting effect. You will require considerably more effort to steer and brake. There is a risk of an accident.

Do not switch off the ignition while driving.

⚠️ **WARNING**

If you operate mobile communication equipment when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the vehicle is stationary.

Observe the legal requirements for the country in which you are driving. Some jurisdictions prohibit the driver from using a mobile phone while driving a vehicle.

**Drinking and driving**

⚠️ **WARNING**

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.

The possibility of a serious or even fatal accident is greatly increased when you drink or take drugs and drive.

Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

**Emission control**

⚠️ **WARNING**

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases leads to poisoning. There is a risk of fatal injury. Therefore never leave the engine running in enclosed spaces without sufficient ventilation.
Certain engine systems are designed to keep the level of poisonous components in exhaust fumes within legal limits. These systems only work at peak efficiency if they are serviced exactly in accordance with the manufacturer’s specifications. Always have work on the engine carried out at a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose. In particular, work relevant to safety or on safety-related systems must be carried out at a qualified specialist workshop.

The engine settings must not be changed under any circumstances. Furthermore, all specific service work must be carried out at regular intervals and in accordance with the Mercedes-Benz service requirements.

You can obtain current information concerning the servicing of your vehicle at any time from a qualified specialist workshop. This could be an overview of the maintenance work or any additional maintenance work, for example.

### Heavy and light loads

**WARNING**

If you rest your foot on the brake pedal while driving, the braking system can overheat. This increases the stopping distance and can even cause the braking system to fail. There is a risk of an accident.

Never use the brake pedal as a footrest. Never depress the brake pedal and the accelerator pedal at the same time.

Depressing the brake pedal constantly results in excessive and premature wear to the brake pads.

If the brakes have been subjected to a heavy load, do not stop the vehicle immediately. Drive on for a short while. This allows the airflow to cool the brakes more quickly.

### Wet roads

If you have driven for a long time in heavy rain without braking, there may be a delayed reaction from the brakes when braking for the first time. This may also occur after the vehicle has been washed or driven through deep water.

You have to depress the brake pedal more firmly. Maintain a greater distance from the vehicle in front.

After driving on a wet road or having the vehicle washed, brake firmly while paying attention to the traffic conditions. This will warm up the brake discs, thereby drying them more quickly and protecting them against corrosion.

### Limited braking performance on salt-treated roads

If you drive on salted roads, a layer of salt residue may form on the brake discs and brake pads. This can result in a significantly longer braking distance.
Observe the following rules when driving on salt-treated roads:

- In order to prevent any salt build-up, apply the brakes occasionally while paying attention to the traffic conditions.
- Carefully depress the brake pedal and the beginning and end of a journey.
- Maintain a greater distance to the vehicle ahead.

### Servicing the brakes

The brake fluid level may be too low, if:

- if the red brake warning lamp lights up in the instrument cluster
- you hear a warning tone while the engine is running

Observe additional warning messages in the multifunction display.

The brake fluid level may be too low due to brake pad wear or leaking brake lines.

Have the brake system checked immediately. Consult a qualified specialist workshop to arrange this.

All checks and maintenance work on the brake system must be carried out at a qualified specialist workshop.

Have brake pads installed and brake fluid replaced at a qualified specialist workshop.

If the brake system has only been subject to moderate loads, you should test the functionality of your brakes at regular intervals.

Information on BAS (Brake Assist) (page 59).

For safety reasons, Mercedes-Benz recommends only installing the following brake disks and brake pads/linings:

- brake disks that have been approved by Mercedes-Benz
- brake pads/linings that have been approved by Mercedes-Benz or that are of an equivalent standard of quality

Other brake disks or brake pads/linings can compromise the safety of your vehicle.

Always replace all brake disks and brake pads/linings on an axle at the same time. Always install new brake pads/linings when replacing brake disks.

The vehicle is equipped with lightweight brake disks to which the wheel assembly with rim and threaded connection is matched.

The use of brake disks other than those approved by Mercedes-Benz can change the track width and is subject to approval, if applicable.

Shock-type loads when handling the brake disks, such as when changing wheels, can lead to a reduction in comfort when driving with lightweight brake disks. Avoid shock-type loads on the lightweight brake disks, particularly on the brake plate.

Mercedes-Benz recommends that you only use brake fluid that has been specially approved for your vehicle by Mercedes-Benz, or which corresponds to an equivalent quality standard. Brake fluid which has not been approved for Mercedes-Benz vehicles or which is not of an equivalent quality could affect your vehicle’s operating safety.

### AMG high-performance and ceramic brakes

The AMG brake systems are designed for heavy loads. This may lead to noise when braking. This will depend on:

- Speed
- Braking force
- Environmental conditions, such as temperature and humidity

The wear of individual components of the brake system, such as the brake pads/linings or brake discs, depends on the individual driving style and operating conditions.

For this reason, it is impossible to state a mileage that will be valid under all circumstances. An aggressive driving style will lead to high wear. You can obtain more information on this from a qualified specialist workshop.

New and replaced brake pads and discs only reach their optimum braking effect after several hundred kilometers of driving. Compensate for this by applying greater force to the brake pedal. Keep this in mind, and adapt your driving and braking accordingly during this break-in period.

Excessive heavy braking results in correspondingly high brake wear. Observe the brake wear warning lamp in the instrument cluster and note any brake status messages in the multifunction display. Especially for high performance driving, it is important to maintain and have the brake system checked regularly.
Driving on wet roads

Hydroplaning

If water has accumulated to a certain depth on the road surface, there is a danger of hydroplaning occurring, even if:

- you drive at low speeds
- the tires have adequate tread depth

For this reason, in the event of heavy rain or in conditions in which hydroplaning may occur, you must drive in the following manner:

- lower your speed
- avoid ruts
- avoid sudden steering movements
- brake carefully

Driving on flooded roads

Do not drive through flooded areas. Check the depth of any water before driving through it. Drive slowly through standing water. Otherwise, water may enter the vehicle interior or the engine compartment. This can damage the electronic components in the engine or the automatic transmission. Water can also be drawn in by the engine’s air suction nozzles and this can cause engine damage.

Winter driving

**WARNING**

If you shift down on a slippery road surface in an attempt to increase the engine’s braking effect, the drive wheels could lose their grip. There is an increased danger of skidding and accidents.

Do not shift down for additional engine braking on a slippery road surface.

**DANGER**

If the exhaust pipe is blocked or adequate ventilation is not possible, poisonous gases such as carbon monoxide (CO) may enter the vehicle. This is the case, e.g. if the vehicle becomes trapped in snow. There is a risk of fatal injury.

If you leave the engine or the auxiliary heating running, make sure the exhaust pipe and area around the vehicle are clear of snow. To ensure an adequate supply of fresh air, open a window on the side of the vehicle that is not facing into the wind.

Have your vehicle winter-proofed at a qualified specialist workshop at the onset of winter. Drive particularly carefully on slippery road surfaces. Avoid sudden acceleration, steering and braking maneuvers. Do not use cruise control.

If the vehicle threatens to skid or cannot be stopped when moving at low speed:

⇒ Shift the transmission to position N.

The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose. Changes in the outside temperature are displayed after a short delay.

Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges. The vehicle could skid if you fail to adapt your driving style. Always adapt your driving style and drive at a speed to suit the prevailing weather conditions.

You should pay special attention to road conditions when temperatures are around freezing point.

Further information on driving with snow chains (⇒ page 263).

Further information on driving with summer tires (⇒ page 263).

Observe the notes in the "Winter operation" section (⇒ page 263).

Driving systems

Cruise control

**General notes**

Cruise control maintains a constant road speed for you. It brakes automatically in order to avoid exceeding the set speed. Change into a lower gear in good time on long and steep downhill gradients. This is especially important if the vehicle is laden. By doing so, you will make use of the braking effect of the engine. This relieves the load on the brake system and prevents the
brakes from overheating and wearing too quickly.
Use cruise control only if road and traffic conditions make it appropriate to maintain a steady speed for a prolonged period. You can store any road speed above 20 mph (30 km/h).

**Cruise control lever**

1. Activates or increases speed
2. Activates at the current speed or last stored speed
3. Activates or reduces speed
4. Deactivates cruise control

When you activate cruise control, the stored speed is shown in the multifunction display for five seconds. In addition, the symbol appears in the multifunction display.

**Speedometer with segments:** when cruise control is activated, the segments from the stored speed to the end of the scale light up.

**Storing and maintaining the current speed**

You can store the current speed if you are driving faster than 20 mph (30 km/h).

- Accelerate the vehicle to the desired speed.
- Briefly press the cruise control lever up ① or down ②.
- Remove your foot from the accelerator pedal. Cruise control is activated. The vehicle automatically maintains the stored speed.

**Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient even out. Cruise control maintains the stored speed on downhill gradients by automatically applying the brakes.**

**Storing, maintaining and calling up a speed**

**WARNING**
If you call up the stored speed and it is lower than the current speed, the vehicle decelerates. If you do not know the stored speed, the vehicle could decelerate unexpectedly. There is a risk of an accident.

Pay attention to the road and traffic conditions before calling up the stored speed. If you do not know the stored speed, store the desired speed again.

- Briefly pull the cruise control lever towards you ①.
- Remove your foot from the accelerator pedal. The first time cruise control is activated, it stores the current speed or regulates the speed of the vehicle to the previously stored speed.
Setting a speed

Keep in mind that it may take a brief moment until the vehicle has accelerated or braked to the speed set.

- Press the cruise control lever up ① for a higher speed or down ② for a lower speed.
- To adjust the set speed in 1 mph increments (1 km/h increments): briefly press the cruise control lever up ① or down ② to the pressure point. Every time the cruise control lever is pressed up ① or down ② the last speed stored is increased or reduced.
- To adjust the set speed in 5 mph increments (10 km/h increments): briefly press the cruise control lever up ① or down ② beyond the pressure point. Every time the cruise control lever is pressed up ① or down ② the last speed stored is increased or reduced.

Cruise control is not deactivated if you depress the accelerator pedal. If you accelerate to overtake, cruise control adjusts the vehicle’s speed to the last speed stored after you have finished overtaking.

Deactivating cruise control

There are several ways to deactivate cruise control:

- Briefly press the cruise control lever forwards ①.
- Brake.

Cruise control is automatically deactivated under the following conditions:
- the electric parking brake is applied.
- you are driving slower than 20 mph (30 km/h).
- if ESP® intervenes or you deactivate ESP®.
- you shift the transmission to position [N] while driving.

If cruise control is deactivated, a warning tone sounds. You will see the Cruise Control Off message in the multifunction display for approximately five seconds.

When you switch off the engine, the last speed stored is cleared.

Distance Pilot DISTRONIC

General notes

Distance Pilot DISTRONIC regulates the speed and automatically helps you maintain the distance to the vehicle detected in front. Vehicles are detected with the aid of the radar sensor system. Distance Pilot DISTRONIC brakes automatically so that the set speed is not exceeded.

Change into a lower gear in good time on long and steep downhill gradients. This is especially important if the vehicle is laden. By doing so, you will make use of the braking effect of the engine. This relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

If Distance Pilot DISTRONIC detects that there is a risk of a collision, you will be warned visually and acoustically. Without your intervention, Distance Pilot DISTRONIC cannot prevent a collision. An intermittent warning tone will then sound and the distance warning lamp will light up in the instrument cluster. Brake immediately in order to increase the distance to the vehicle in front or take evasive action provided it is safe to do so.

Distance Pilot DISTRONIC operates in the range between 0 mph (0 km/h) and 120 mph (200 km/h).
Do not use Distance Pilot DISTRONIC while driving on roads with steep gradients. As Distance Pilot DISTRONIC transmits radar waves, it can resemble the radar detectors of the responsible authorities. You can refer to the relevant chapter in the Operator’s Manual if questions are asked about this.

USA only: This device has been approved by the FCC as a "Vehicular Radar System". The radar sensor is intended for use in an automotive radar system only. Removal, tampering, or altering of the device will void any warranties, and is not permitted by the FCC. Do not tamper with, alter, or use in any non-approved way. Any unauthorized modification to this device could void the user's authority to operate the equipment.

Canada only: This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. This device must accept any interference received, including interference that may cause undesired operation of the device.
Removal, tampering, or altering of the device will void any warranties, and is not permitted. Do not tamper with, alter, or use in any non-approved way. Any unauthorized modification to this device could void the user's authority to operate the equipment.

Important safety notes

**WARNING**
Distance Pilot DISTRONIC does not react to:
- people or animals
- stationary objects on the road, e.g. stopped or parked vehicles
- oncoming vehicles and crossing traffic
As a result, Distance Pilot DISTRONIC may neither give warnings nor intervene in such situations. There is a risk of an accident. Always pay careful attention to the traffic situation and be ready to brake.

**WARNING**
Distance Pilot DISTRONIC cannot always clearly identify other road users and complex traffic situations.
In such cases, Distance Pilot DISTRONIC may:
- give an unnecessary warning and then brake the vehicle
- neither give a warning nor intervene
- accelerate or brake unexpectedly
There is a risk of an accident.
Continue to drive carefully and be ready to brake, especially if Distance Pilot DISTRONIC warns you.

**WARNING**
DISTRONIC PLUS brakes your vehicle with up to 50% of the maximum possible deceleration. If this braking force is insufficient, DISTRONIC PLUS warns you visually and audibly. There is a risk of an accident.
In such cases, apply the brakes yourself and try to take evasive action.

When Distance Pilot DISTRONIC or the HOLD function is activated, the vehicle brakes automatically in certain situations. To avoid damage to the vehicle, deactivate Distance Pilot DISTRONIC and the HOLD function in the following or similar situations:
- when towing the vehicle
- in the car wash
If you fail to adapt your driving style, Distance Pilot DISTRONIC can neither reduce the risk of an accident nor override the laws of physics. Distance Pilot DISTRONIC cannot take into account road, weather or traffic conditions. Distance Pilot DISTRONIC is only an aid. You are responsible for the distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in your lane.
Do not use Distance Pilot DISTRONIC:
- in road and traffic conditions which do not allow you to maintain a constant speed, for example in heavy traffic or on winding roads
- on slippery road surfaces. Braking or accelerating could cause the drive wheels to lose traction and the vehicle could then skid
- when there is poor visibility, e.g. due to fog, heavy rain or snow
Distance Pilot DISTRONIC may not detect narrow vehicles driving in front, e.g. motorcycles, or vehicles driving on a different line. In particular, the detection of obstacles can be impaired if:
- there is dirt on the sensors or anything else covering the sensors
- there is snow or heavy rain
- there is interference by other radar sources
- there are strong radar reflections, for example, in parking garages
If Distance Pilot DISTRONIC no longer detects a vehicle in front, it may unexpectedly accelerate to the speed stored. This speed may:
- be too high if you are driving in a turning lane or an exit lane
- be so high in the right lane that you pass vehicles driving on the left (in countries where they drive on the right)
- be so high in the left lane that you pass vehicles driving on the right (right-hand drive countries)
If there is a change of drivers, advise the new driver of the speed stored.

Cruise control lever

1. Activates or increases speed
2. Activates or reduces speed
3. Deactivates Distance Pilot DISTRONIC
4. Activates at the current speed/last stored speed
5. Sets a specified minimum distance

Activating Distance Pilot DISTRONIC

Activation conditions
To activate Distance Pilot DISTRONIC, the following conditions must be fulfilled:
- the engine must be started. It may take up to two minutes of driving before Distance Pilot DISTRONIC is ready for use.
- the electric parking brake must be released.
- ESP® must be active, but not intervening.
- the transmission must be in position D.
- the driver’s door must be closed when you shift from P to D or your seat belt must be fastened.
- the front-passenger door and rear doors must be closed.

Activating

Briefly pull the cruise control lever towards you 3, up 1 or down 3. Distance Pilot DISTRONIC is activated.

To adjust the set speed in 1 mph increments (1 km/h increments): briefly press the cruise control lever up 1 to the pressure point for a higher speed, or down 3 for a lower speed.
Every time the cruise control lever is pressed up or down, the last speed stored is increased or reduced.
or
To adjust the set speed in 5 mph increments (10 km/h increments): briefly press the cruise control lever up 1 beyond the
pressure point for a higher speed, or down for a lower speed. Every time the cruise control lever is pressed up or down, the last speed stored is increased or reduced.

- Remove your foot from the accelerator pedal. Your vehicle adapts its speed to that of the vehicle in front, but only up to the desired stored speed.

If you do not fully release the accelerator pedal, the **Distance Pilot Suspended** message appears in the multifunction display. The set distance to a slower-moving vehicle in front will then not be maintained. You will be driving at the speed you determine by the position of the accelerator pedal.

You can also activate Distance Pilot DISTRONIC when stationary. The lowest speed that can be set is 20 mph (30 km/h).

- Briefly pull the cruise control lever towards you or press it up or down. Distance Pilot DISTRONIC is activated.

### Activating at the current speed/last stored speed

**WARNING**

If you call up the stored speed and it differs from the current speed, the vehicle accelerates or decelerates. If you do not know the stored speed, the vehicle could accelerate or brake unexpectedly. There is a risk of an accident.

Pay attention to the road and traffic conditions before calling up the stored speed. If you do not know the stored speed, store the desired speed again.

- Briefly pull the cruise control lever towards you.
- Remove your foot from the accelerator pedal. The first time Distance Pilot DISTRONIC is activated, it stores the current speed or regulates the speed of the vehicle to the previously stored speed.

### Driving with Distance Pilot DISTRONIC

#### Pulling away and driving

- If you want to pull away with Distance Pilot DISTRONIC: remove your foot from the brake pedal.
- Briefly pull cruise control lever towards you.
- Accelerate briefly.

Your vehicle pulls away and adapts its speed to that of the vehicle in front. If no vehicle is detected in front, your vehicle accelerates to the set speed.

The vehicle can also pull away when it is facing an unidentified obstacle or is driving on a different line from another vehicle. The vehicle then brakes automatically. There is a risk of an accident. Be ready to brake at all times.

If there is no vehicle in front, Distance Pilot DISTRONIC operates in the same way as cruise control.

If Distance Pilot DISTRONIC detects a slower-moving vehicle in front, it brakes your vehicle. In this way, the distance you have selected is maintained.

If Distance Pilot DISTRONIC detects a faster-moving vehicle in front, it increases the driving speed. However, the vehicle is only accelerated up to the speed you have stored.

#### Selecting the drive program

Distance Pilot DISTRONIC supports a sporty driving style when you have selected the S or S+ drive program. Acceleration behind the vehicle in front or to the set speed is then noticeably more dynamic. When you select the C drive program, the vehicle accelerates more gently. This setting is recommended in stop-and-start traffic.

Additional information on selecting the drive program (page 116).
Changing lanes
If you change to the overtaking lane, Distance Pilot DISTRONIC supports you if:
- you are driving at a speed greater than 45 mph (70 km/h)
- you switch on the appropriate turn signal
- Distance Pilot DISTRONIC does not currently detect a danger of collision
If these conditions are fulfilled, your vehicle is accelerated. Acceleration will be interrupted if changing lanes takes too long or if the distance between your vehicle and the vehicle in front becomes too small.

When you change lanes, Distance Pilot DISTRONIC monitors the left lane.

Stopping

**WARNING**
If you leave the vehicle when it is only being braked by Distance Pilot DISTRONIC, it could roll away if:
- there is a malfunction in the system or in the voltage supply.
- Distance Pilot DISTRONIC is switched off using the cruise control lever, e.g. by a vehicle occupant or from outside the vehicle
- the electrical system in the engine compartment, the battery or the fuses are tampered with.
- the battery is disconnected
- the vehicle is accelerated, e.g. by a vehicle occupant.

There is a risk of an accident.

Before leaving the vehicle, always deactivate Distance Pilot DISTRONIC and secure the vehicle against rolling away.

Further information on deactivating Distance Pilot DISTRONIC (page 141).
If Distance Pilot DISTRONIC detects that the vehicle in front is stopping, it brakes your vehicle to a stop.

Once your vehicle is stationary, it remains stationary and you do not need to depress the brake.

After a time, the electric parking brake secures the vehicle and relieves the service brake.

Depending on the specified minimum distance, your vehicle will come to a standstill at a sufficient distance behind the vehicle in front. The specified minimum distance is set using the control on the cruise control lever.

The electric parking brake secures the vehicle automatically if Distance Pilot DISTRONIC is activated when the vehicle is stationary and:
- the driver’s seat belt is not fastened and the driver’s door is open
- the engine is switched off, unless it is automatically switched off by the ECO start/stop function
- a system malfunction occurs
- the power supply is insufficient
If a malfunction occurs, the transmission may also shift to position P automatically.

Setting a speed

Press the cruise control lever up ① for a higher speed or down ② for a lower speed.

**To adjust the set speed in 1 mph increments (1 km/h increments):** briefly press the cruise control lever up ① or down ② to the pressure point.
Every time the cruise control lever is pressed up ① or down ② the last speed stored is increased or reduced.

**To adjust the set speed in 5 mph increments (10 km/h increments):** briefly press the cruise control lever up ① or down ② beyond the pressure point.
Every time the cruise control lever is pressed up ① or down ②, the last speed stored is increased or reduced.
If you accelerate to overtake, Distance Pilot DISTRONIC adjusts the vehicle’s speed to the last speed stored after you have finished overtaking.

Setting a specified minimum distance

You can set the specified minimum distance for Distance Pilot DISTRONIC by varying the time span between one and two seconds. With this function you can set the minimum distance that Distance Pilot DISTRONIC maintains to the vehicle in front, dependent on vehicle speed. You can see this distance in the multifunction display (> page 142).

Make sure that you maintain the minimum distance to the vehicle in front as required by law. Adjust the distance to the vehicle in front if necessary.

To increase: turn control ② in direction ③. Distance Pilot DISTRONIC then maintains a greater distance between your vehicle and the vehicle in front.

To decrease: turn control ② in direction ①. Distance Pilot DISTRONIC then maintains a shorter distance between your vehicle and the vehicle in front.

Deactivating Distance Pilot DISTRONIC

There are several ways to deactivate Distance Pilot DISTRONIC:

- Briefly press the cruise control lever forwards (1).

or

- Brake, unless the vehicle is stationary

When you deactivate Distance Pilot DISTRONIC, the Distance Pilot Off message appears in the multifunction display for approximately five seconds.

The last speed stored remains stored until you switch off the engine.

Distance Pilot DISTRONIC is not deactivated if you depress the accelerator pedal. Distance Pilot DISTRONIC is automatically deactivated if:

- you engage the electric parking brake or if the vehicle is automatically secured with the electric parking brake
- ESP® intervenes or you deactivate ESP®
- the transmission is in position P, R or N
- you pull the cruise control lever towards you in order to pull away and the front-passenger door or one of the rear doors is open
- the vehicle has skidded

If Distance Pilot DISTRONIC is deactivated, you will hear a warning tone. You will see the Distance Pilot Off message on the multifunction display for approximately five seconds.
Displays in the instrument cluster

Displays in the speedometer

If Distance Pilot DISTRONIC detects a vehicle in front, segments between speed of the vehicle in front ① and stored speed ② light up.

For design reasons, the speed displayed in the speedometer may differ slightly from the speed set for Distance Pilot DISTRONIC.

Display when Distance Pilot DISTRONIC is deactivated

On the on-board computer, you can select the assistance graphics display.

① Vehicle in front, if detected
② Distance indicator, current distance to the vehicle in front
③ Specified minimum distance to the vehicle in front; adjustable
④ Your vehicle

Select the Assistance Graphic function using the on-board computer (page 167).

Display when Distance Pilot DISTRONIC is activated

① Distance Pilot DISTRONIC active (text only appears when the cruise control lever is actuated)
② Vehicle in front, if detected
③ Specified minimum distance to the vehicle in front; adjustable
④ Your vehicle

Select the Assistance Graphic function using the on-board computer (page 167).

You will see the stored speed for approximately five seconds when you activate Distance Pilot DISTRONIC.

Tips for driving with Distance Pilot DISTRONIC

General notes

Pay particular attention in the following traffic situations:

- Cornering, going into and coming out of a bend
- Vehicles traveling on a different line
- Other vehicles changing lanes
- Narrow vehicles
- Obstructions and stationary vehicles
- Crossing vehicles

In such situations, brake if necessary. Distance Pilot DISTRONIC will then be deactivated.
Cornering, going into and coming out of a bend

The ability of Distance Pilot DISTRONIC to detect vehicles when cornering is limited. Your vehicle may brake unexpectedly or late.

Vehicles traveling on a different line

Distance Pilot DISTRONIC may not detect vehicles which are not driving in the middle of their lane. The distance to the vehicle in front will be too short.

Other vehicles changing lanes

Distance Pilot DISTRONIC has not detected the vehicle cutting in yet. The distance to this vehicle will be too short.

Narrow vehicles

Distance Pilot DISTRONIC has not yet detected the vehicle in front on the edge of the road because of its narrow width. The distance to the vehicle in front will be too short.

Obstructions and stationary vehicles

Distance Pilot DISTRONIC does not brake for obstacles or stationary vehicles. If, for example, the detected vehicle turns a corner and an obstacle or stationary vehicle is then revealed, Distance Pilot DISTRONIC will not brake for them.

Crossing vehicles

Distance Pilot DISTRONIC has not detected the vehicle cutting in yet. The distance to this vehicle will be too short.
Distance Pilot DISTRONIC may mistakenly detect vehicles that are crossing your lane. Activating Distance Pilot DISTRONIC at, for example, a traffic light with crossing traffic, could cause your vehicle to pull away at the wrong time.

### HOLD

**General notes**

The HOLD function can assist the driver in the following situations:

- when pulling away, especially on steep slopes
- when maneuvering on steep slopes
- when waiting in traffic

The vehicle is kept stationary without the driver having to depress the brake pedal. The braking effect is canceled and the HOLD function deactivated when you depress the accelerator pedal to pull away.

**Important safety notes**

⚠️ **WARNING**

If the vehicle is only braked using the HOLD function, the vehicle may roll away in the following situations when you leave the vehicle:

- if there is a malfunction in the system or in the voltage supply
- if the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant
- if the electrical system in the engine compartment, the battery or the fuses are tampered with or the battery is disconnected

There is a risk of an accident. Always deactivate the HOLD function and secure the vehicle against rolling away before you leave it.

⚠️ When Distance Pilot DISTRONIC or the HOLD function is activated, the vehicle brakes automatically in certain situations.

To avoid damage to the vehicle, deactivate Distance Pilot DISTRONIC and the HOLD function in the following or similar situations:

- when towing the vehicle
- in the car wash

Deactivate the HOLD function (> page 145).

### Activation conditions

You can activate the HOLD function if all of the following conditions are fulfilled:

- the vehicle is stationary.
- the engine is running or if it has been automatically switched off by the ECO start/stop function.
- the driver’s door is closed or your seat belt is fastened.
- the electric parking brake is released.
- the transmission is in position D, R or N.

### Activating the HOLD function

Make sure that the activation conditions are met.

Depress the brake pedal.

Quickly depress the brake pedal further until HOLD appears in the multifunction display. The HOLD function is activated. You can release the brake pedal.

If depressing the brake pedal the first time does not activate the HOLD function, wait briefly and then try again.
Deactivating the HOLD function

The HOLD function is deactivated if:

- you depress the accelerator and the transmission is in position D or R
- you shift the transmission to position P
- you apply the brakes again with a certain amount of pressure until the HOLD display disappears from the multifunction display
- you secure the vehicle using the electric parking brake

After a time, the electric parking brake secures the vehicle and relieves the service brake.

The electric parking brake secures the vehicle automatically if the HOLD function is activated when the vehicle is stationary and:

- the driver's seat belt is not fastened and the driver's door is open
- the engine is switched off, unless it is automatically switched off by the ECO start/stop function
- a system malfunction occurs
- the power supply is not sufficient

If the electric parking brake is not operational, a horn will sound at regular intervals. The HOLD function must then be deactivated.

If a malfunction occurs, the transmission may also be shifted to position P automatically. The Brake Immediately message may also appear in the multifunction display.

Immediately depress the brake firmly until the warning message in the multifunction display goes out.

The HOLD function is deactivated. If you turn off the engine, take off your seat belt or open the driver's door when the HOLD function is activated, a horn will sound at regular intervals. The sounding of the horn alerts you to the fact that the HOLD function is still activated. If you attempt to lock the vehicle, the tone becomes louder. The vehicle cannot be locked until you have deactivated the HOLD function.

After switching off the engine, it can only be started again once you have deactivated the HOLD function.

RACE START

Important safety notes

RACE START must not be used on normal roads. RACE START must only be activated and used on dedicated road circuits, outside of public road use.

RACE START enables optimal acceleration from a standing start. For this, a suitably high-grip road surface is required and the vehicle and tires must be in good working order.

WARNING

If you use RACE START, individual tires may start to spin and the vehicle could skid. Depending on the selected ESP® mode, there is an increased risk of skidding and having an accident. Make sure that no persons, animals or obstacles are within range of the vehicle.

Observe the safety notes on driving safety systems (> page 58).
Be sure to read the safety notes and information on ESP® (> page 62).

Observe the specific service requirements for racetrack mode operation (> page 240).

Activation conditions

You can activate RACE START under the following conditions:

- the doors are closed
- the engine is running and the engine and transmission are at operating temperature. This is the case when the oil temperature display in the multifunction display is shown in white (> page 170).
- ESP® is functioning correctly (> page 62)
- the steering wheel is in the straight-ahead position
- the vehicle is stationary and the brake pedal is depressed sufficiently (left foot)
- the transmission is in position D
- drive program S, S+ or RACE is selected (> page 116).
Activating RACE START (AMG GT S)

When manual mode (page 123) is active, the transmission automatically shifts up in the RACE START drive program. This function supports maximum acceleration with RACE START. After going through an accelerating process once from a stationary position, this function is automatically deactivated.

- Depress the brake pedal with your left foot and keep it depressed.
- Pull and hold both steering wheel paddle shifters.
  The RACE START Confirm: Paddle UP Cancel: Paddle DOWN message appears in the multifunction display.
- Release both steering wheel paddle shifters.
  If the activation conditions are no longer fulfilled, RACE START is canceled. The RACE START Not Possible See Operator’s Manual message appears on the multifunction display.

To cancel: pull the left-hand steering wheel paddle shifter (page 121).

or

To confirm: pull the right-hand steering wheel paddle shifter (page 121).
  The RACE START Available Depress gas pedal message appears on the multifunction display.

If you do not depress the accelerator pedal within a few seconds, RACE START is canceled. The RACE START Cancelled message appears on the multifunction display.

- Fully depress the accelerator pedal.
  The engine speed is increased.
  The RACE START Release brake to start message appears in the multifunction display.

If you do not release the brake pedal within a short time, RACE START will be canceled. The RACE START Cancelled message appears on the multifunction display.

- Take your foot off the brake, but keep the accelerator pedal depressed.
  The vehicle pulls away at maximum acceleration.
  The RACE START Active message appears in the multifunction display.

RACE START is deactivated when the vehicle reaches a speed of approximately 30 mph (Canada: 50 km/h).

RACE START is deactivated immediately if you release the accelerator pedal during RACE START or if any of the activation conditions are no longer fulfilled. The RACE START Not Possible See Operator’s Manual or RACE START Cancelled message appears in the multifunction display.

If RACE START is used repeatedly within a short period of time, it is only available again after the vehicle has been driven a certain distance.

Activating RACE START (AMG GT C)

When manual mode (page 123) is active, the transmission automatically shifts up in the RACE START drive program. This function supports maximum acceleration with RACE START. After going through an accelerating process once from a stationary position, this function is automatically deactivated.

- Depress the brake pedal with your left foot and keep it depressed.
- Fully depress the accelerator pedal.
  The engine speed is increased.
  The RACE START Release brake to start message appears in the multifunction display.

To adjust RACE START: pull the left-hand or right-hand steering wheel paddle shifter.
  - left-hand paddle shifter: to reduce engine speed
  - right-hand paddle shifter: to increase engine speed

The engine speed is adjusted.
The segments in the multifunction display flicker rapidly.

If you do not release the brake pedal within a short time, RACE START will be canceled. The RACE START Cancelled message appears on the multifunction display.

- Take your foot off the brake, but keep the accelerator pedal depressed.
  The vehicle pulls away at maximum acceleration.
  The RACE START Active message appears in the multifunction display.

RACE START is deactivated when the vehicle reaches a speed of approximately 30 mph (Canada: 50 km/h).

RACE START is deactivated immediately if you release the accelerator pedal during RACE START.
START or if any of the activation conditions are no longer fulfilled. The RACE START Not Possible See Operator’s Manual or RACE START Cancelled message appears in the multifunction display.

If RACE START is used repeatedly within a short period of time, it is only available again after the vehicle has been driven a certain distance.

AMG adaptive sport suspension system

General notes

The electronically controlled damping system works continuously. This improves driving safety and ride comfort. The damping is tuned individually to each wheel and depends on:
- your driving style, e.g. sporty
- the road surface condition, e.g. bumps
- your individual selection of Sport, Sport+ or Comfort

Each time you start the engine with the SmartKey or the Start/Stop button, Comfort mode is activated. Further information about starting the engine (› page 111).

Adjusting the suspension settings

1 Adjusts AMG adaptive sport suspension system
2 Right indicator lamp
3 Left indicator lamp

The suspension setting is adjusted using button 1 on the center console.

The suspension setting can also be adjusted using the DYNAMIC SELECT controller (› page 116).

Setting "Sport" mode

► Press button 1 repeatedly until indicator lamp 3 lights up.
You have selected Sport mode.

The AMG Suspension System SPORT message appears on the multifunction display.

The firmer setting of the suspension tuning in Sport mode ensures even better contact with the road. Select this mode when employing a sporty driving style, e.g. on winding country roads.

Setting "Sport +" mode

► Press button 1 repeatedly until indicator lamps 2 and 3 light up.
You have selected Sport + mode.

The AMG Suspension System SPORT + message appears on the multifunction display.

The very firm setting of the suspension setting in Sport + mode ensures the best possible contact with the road. Select this mode only when driving on race circuits.

Setting "Comfort" mode

► Press button 1 repeatedly until indicator lamps 2 and 3 go out.
You have selected Comfort mode.

The AMG Suspension System COMFORT message appears on the multifunction display.

In Comfort mode, the driving characteristics of your vehicle are more comfortable. Select this mode if you prefer a more comfortable driving style, but also when driving at speed on straight roads, e.g. highways.

Parking Assist PARKTRONIC

Important safety notes

Parking Assist PARKTRONIC is an electronic parking aid with ultrasound. It monitors the area around your vehicle using six sensors in the front bumper and four sensors in the rear bumper. Parking Assist PARKTRONIC shows you the distance between your vehicle and a detected obstacle visually and audibly.

Parking Assist PARKTRONIC is only an aid. It is not a replacement for your attention to your immediate surroundings. You are always
responsible for safe maneuvering, parking and exiting a parking space. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking or exiting parking spaces.

⚠️ When parking, pay particular attention to objects above or below the sensors, such as flower pots or trailer drawbars. Parking Assist PARKTRONIC does not detect such objects when they are in the immediate vicinity of the vehicle. You could damage the vehicle or the objects.

The sensors may not detect snow and other objects that absorb ultrasonic waves. Ultrasonic sources such as an automatic car wash, the compressed-air brakes of a truck or a pneumatic drill could cause Parking Assist PARKTRONIC to malfunction.

Parking Assist PARKTRONIC may not function correctly on uneven terrain.

Parking Assist PARKTRONIC is activated automatically when you:
- switch on the ignition
- shift the transmission to position D, R or N

Parking Assist PARKTRONIC is deactivated at speeds above approx. 11 mph (18 km/h). It is reactivated at lower speeds.

Range of the sensors

General notes

Parking Assist PARKTRONIC does not take into account obstacles located:
- below the detection range, e.g. people, animals or objects.
- above the detection range, e.g. overhanging loads, truck overhangs or loading ramps.

Range

General notes

Parking Assist PARKTRONIC does not take into account obstacles located:
- below the detection range, e.g. people, animals or objects.
- above the detection range, e.g. overhanging loads, truck overhangs or loading ramps.

Minimum distance

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Center</td>
<td>Approx. 8 in (approx. 20 cm)</td>
</tr>
<tr>
<td>Corners</td>
<td>Approx. 6 in (approx. 15 cm)</td>
</tr>
</tbody>
</table>
If there is an obstacle within this range, the relevant warning displays light up and a warning tone sounds. If the distance falls below the minimum, the distance may no longer be shown.

**Warning displays**

1. Segments on the left-hand side of the vehicle
2. Segments on the right-hand side of the vehicle
3. Segments showing operational readiness

The warning displays show the distance between the sensors and the obstacle. The warning display for the front area is in the instrument cluster. The warning display for the rear area is located on the cover behind the seats in the rear compartment.

The warning display for each side of the vehicle is divided into five yellow and two red segments. Parking Assist PARKTRONIC is operational if operational readiness indicator 3 lights up.

The selected transmission position and the direction in which the vehicle is rolling determine which warning display is active when the engine is running.

<table>
<thead>
<tr>
<th>Transmission position</th>
<th>Warning display</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>( R, N ) or the vehicle is rolling backwards</td>
<td>Rear and front areas activated</td>
</tr>
<tr>
<td>P</td>
<td>No areas activated</td>
</tr>
</tbody>
</table>

One or more segments light up as the vehicle approaches a detected obstacle, depending on the vehicle’s distance from the obstacle:

- sixth segment onwards, you will hear an intermittent warning tone for approximately two seconds.
- seventh segment onwards, you will hear a warning tone for approximately two seconds. This indicates that you have now reached the minimum distance.

**Deactivating or activating Parking Assist PARKTRONIC**

1. Indicator lamp
2. Deactivates or activates Parking Assist PARKTRONIC

If indicator lamp 1 lights up, Parking Assist PARKTRONIC is deactivated.

Parking Assist PARKTRONIC is automatically activated when you set the Start/Stop button to key position 2.
Problems with Parking Assist PARKTRONIC

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| Only the red segments in the Parking Assist PARKTRONIC warning displays are lit. You also hear a warning tone for approximately two seconds. Parking Assist PARKTRONIC is then deactivated and the indicator lamp on the PARKTRONIC button lights up. | Parking Assist PARKTRONIC has malfunctioned and has been deactivated.  
  ► If problems persist, have Parking Assist PARKTRONIC checked at a qualified specialist workshop.  

| Only the red segments in the Parking Assist PARKTRONIC warning displays are lit. Parking Assist PARKTRONIC is then deactivated. | The Parking Assist PARKTRONIC sensors are dirty or there is interference.  
  ► Clean the Parking Assist PARKTRONIC sensors (► page 245).  
  ► Switch the ignition back on.  

| The problem may be caused by an external source of radio or ultrasound waves.  
  ► Check to see if Parking Assist PARKTRONIC works at a different location. |

Rear view camera

General notes

Rear view camera ① is located in the rear bumper, underneath the trunk lid.  
Rear view camera ① is an optical parking and maneuvering aid. It shows the area behind your vehicle with guide lines in the multimedia system display.  
The area behind the vehicle is displayed as a mirror image, as in the rear view mirror.

Important safety notes

The rear view camera is only an aid. It is not a replacement for your attention to your immediate surroundings. You are always responsible for safe maneuvering and parking. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking in parking spaces.  
The rear view camera will not function or will function only to a limited extent if:  
• in heavy rain, snow or fog  
• at night or in very dark places  
• if the camera is exposed to very bright light  
• if the area is lit by fluorescent bulbs or LED lighting (the display may flicker)  
• if there is a sudden change in temperature, e.g. when driving into a heated garage in winter
• if the camera lens is dirty or obstructed. Observe the notes on cleaning (> page 245)
• if the rear of your vehicle is damaged. In this case, have the camera position and setting checked at a qualified specialist workshop

The field of vision and other functions of the reversing camera may be restricted due to additional accessories on the rear of the vehicle (e.g. license plate holder).
The guide lines in the multimedia system display show the distances to your vehicle. The distances only apply to road level.

Activating/deactivating the rear view camera

► To activate: ensure that SmartKey position 2 has been selected with the Start/Stop button.
► Make sure that the Activation by R gear function is selected in the multimedia system (see the Digital Owner’s Manual).
► Engage reverse gear.
  The area behind the vehicle is shown with guide lines in the multimedia system display.
  The image from the rear view camera is available throughout the maneuvering process.

To deactivate: the rear view camera deactivates if you shift the transmission to P or after driving forwards a short distance.

Messages in the multimedia system display

The rear view camera may show a distorted view of obstacles, show them incorrectly or not at all. Obstacles are not shown by the rear view camera in the following locations:
• very close to the rear bumper
• under the rear bumper

Objects not at ground level may appear to be further away than they actually are, e.g.:
• the bumper of a parked vehicle
• the drawbar of a trailer
• the ball coupling of a trailer tow hitch
• the rear section of an HGV
• a slanted post

Use the guidelines only for orientation.
Approach objects no further than the bottom-most guideline.

1 Yellow guide line at a distance of approximately 13 ft (4.0 m) from the rear of the vehicle
2 White guide line without steering input – vehicle width including the exterior mirrors (static)
3 Yellow guide line for the vehicle width including the exterior mirrors, at the current steering wheel angle (dynamic)
4 Yellow lane marking the course the tires will take at the current steering wheel angle (dynamic)

5 Yellow guide line at a distance of approximately 3 ft (1.0 m) from the rear of the vehicle
6 Vehicle center axle (marker assistance)
7 Bumper
8 Red guide line at a distance of approximately 12 in (0.30 m) from the rear of the vehicle

The guide lines are shown when the transmission is in position R.
The distance specifications only apply to objects that are at ground level.
Front warning display
Additional measurement operational readiness indicator for Parking Assist PARKTRONIC
Rear warning display

Vehicles with Parking Assist PARKTRONIC:
when Parking Assist PARKTRONIC is operational (> page 149), additional measurement operational readiness indicator ② appears in the multimedia system display. If the Parking Assist PARKTRONIC warning displays are active or light up, warning displays ① and ③ are also active or light up correspondingly in the multimedia system display.

"Reverse parking" function

Backing up straight into a parking space without steering input

1. White guide line without steering input – vehicle width including the exterior mirrors (static)
2. Yellow guide line for the vehicle width including the exterior mirrors, at the current steering wheel angle (dynamic)
3. Yellow guide line at a distance of approximately 3 ft (1.0 m) from the rear of the vehicle
4. Red guide line at a distance of approximately 12 in (0.30 m) from the rear of the vehicle
   ▶ Make sure that the rear view camera is switched on (> page 151). The lane and the guide lines are shown.
   ▶ With the help of white guide line ①, check whether the vehicle will fit into the parking space.
   ▶ Using white guide line ① as a guide, carefully back up until you reach the end position. Red guide line ④ is then at the end of parking space. The vehicle is almost parallel in the parking space.

Reverse perpendicular parking with steering input

1. Parking space marking
2. Yellow guide line for the vehicle width including the exterior mirrors, at the current steering wheel angle (dynamic)
   ▶ Drive past the parking space and bring the vehicle to a standstill.
   ▶ Make sure that the rear view camera is switched on (> page 151). The lane and the guide lines are shown.
   ▶ While the vehicle is at a standstill, turn the steering wheel in the direction of the parking space until yellow guide line ② reaches parking space marking ①.
   ▶ Maintain the steering input and reverse carefully.
Yellow guideline for the vehicle width including the exterior mirrors, at the current steering wheel angle (dynamic)

Stop the vehicle when it is almost exactly in front of the parking space. The white lane should be as close to parallel with the parking space marking as possible.

White guideline at the current steering input; Parking space marking

Turn the steering wheel to the center position while the vehicle is stationary.

Red guideline at a distance of approximately 12 in (0.30 m) from the rear of the vehicle
White guideline without steering input
End of parking space

Back up carefully until you have reached the final position. Red guide line 1 is then at the end of parking space 3. The vehicle is almost parallel in the parking space.

Wide-angle function

Symbol for the wide-angle view function
Your vehicle
Warning displays for Parking Assist PARKTRONIC

You can also use the rear view camera to select a wide-angle view. When Parking Assist PARKTRONIC is operational (> page 149), a symbol for your own vehicle appears in the multimedia system display. If the Parking Assist PARKTRONIC warning displays are active, warning displays 3 light up in the multimedia system display in yellow or red accordingly.

ATTENTION ASSIST

General notes

ATTENTION ASSIST helps you during long, monotonous journeys, such as on highways. It is active in the 37 mph (60 km/h) to 125 mph (200 km/h) range. If ATTENTION ASSIST detects typical indicators of fatigue or increasing lapses in concentration on the part of the driver, it suggests taking a break.

Important safety notes

ATTENTION ASSIST is only an aid to the driver. It might not always recognize fatigue or increasing inattentiveness in time or fail to recognize them at all. The system is not a substitute for a well-rested and attentive driver.
The functionality of ATTENTION ASSIST is restricted and warnings may be delayed or not occur at all:

- if the length of the journey is less than approximately 30 minutes
- if the road condition is poor, e.g. if the surface is uneven or if there are potholes
- if there is a strong side wind
- if you have adopted a sporty driving style with high cornering speeds or high rates of acceleration
- if you are predominantly driving slower than 37 mph (60 km/h) or faster than 125 mph (200 km/h)
- if the time has been set incorrectly
- in active driving situations, such as when you change lanes or change your speed

The ATTENTION ASSIST tiredness assessment is deleted and restarted when you continue the journey:

- when you switch off the engine
- when you take off your seat belt and open the driver’s door, e.g. for a change of drivers or to take a break

The following information is displayed:

- the length of the journey since the last break.
- the attention level determined by ATTENTION ASSIST (Attention Level), displayed in a bar display in five levels from high to low.
- if ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the System Suspended message appears. The bar display then changes what is shown, e.g. if you are driving at a speed below 37 mph (60 km/h) or above 125 mph (200 km/h).

**Activating ATTENTION ASSIST**

- Activate ATTENTION ASSIST using the on-board computer (> page 168). The system determines the attention level of the driver depending on the setting selected:
  - Selection of Standard: the sensitivity with which the system determines the attention level is set to normal.
  - Selection of Sensitive: the sensitivity is set higher. The attention level detected by ATTENTION ASSIST is adapted accordingly and the driver is warned earlier.

When ATTENTION ASSIST is deactivated, the symbol appears in the multifunction display in the Assistance display.

When ATTENTION ASSIST has been deactivated, it is automatically reactivated after the engine has been stopped. The sensitivity selected corresponds to the last selection activated (Standard or Sensitive).

**Warning in the multifunction display**

If fatigue or increasing lapses in concentration are detected, a warning appears in the multifunction display: ATTENTION ASSIST Take a Break!

In addition to the message shown in the multifunction display, you will then hear a warning tone.

- If necessary, take a break.
- Confirm the message by pressing the OK button on the steering wheel.

On long journeys, take regular breaks in good time to allow yourself to rest. If you do not take a break and ATTENTION ASSIST still detects increasing lapses in concentration, you will be warned again after 15 minutes at the earliest.
This will only happen if ATTENTION ASSIST still detects typical indicators of fatigue or increasing lapses in concentration. If a warning is output in the multifunction display, a service station search is performed in COMAND. You can select a service station and navigation to this service station will then begin. This function can be activated and deactivated in COMAND.

**Lane Tracking package**

**General notes**

The Lane Tracking package consists of Blind Spot Assist (> page 155) and Lane Keeping Assist (> page 157).

**Blind Spot Assist**

**General notes**

Blind Spot Assist monitors the areas on either side of the vehicle that are not visible to the driver with two lateral, rear-facing radar sensors. A warning display in the exterior mirrors draws your attention to vehicles detected in the monitored area. If you then switch on the corresponding turn signal to change lane, you will also receive an optical and audible warning. Blind Spot Assist supports you from a speed of approximately 20 mph (30 km/h).

**Important safety notes**

**WARNING**

Blind Spot Assist does not react to:

- vehicles overtaken too closely on the side, placing them in the blind spot area
- vehicles which approach with a large speed differential and overtake your vehicle

As a result, Blind Spot Assist may not give warnings in such situations. There is a risk of an accident.

Always observe the traffic conditions carefully, and maintain a safe lateral distance.

Blind Spot Assist is only an aid. It may fail to detect some vehicles and is no substitute for attentive driving. Always ensure that there is sufficient distance to the side for other road users and obstacles.

---

**USA only:**

This device has been approved by the FCC as a "Vehicular Radar System". The radar sensor is intended for use in an automotive radar system only. Removing, tampering with, or altering the device will void any warranties, and is not permitted by the FCC. Do not tamper with, alter, or use in any non-approved way.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

**Radar sensors**

The radar sensors for Blind Spot Assist are integrated into the rear bumper. Make sure that the bumpers are free from dirt, ice or slush. The sensors must not be covered, e.g. by overhanging loads. Following a severe impact or in the event of damage to the bumpers, have the function of the radar sensors checked at a qualified specialist workshop. Blind Spot Assist may no longer work properly.

**Monitoring area**

In particular, the detection of obstacles can be impaired if:

- there is dirt on the sensors or anything else covering the sensors
- there is poor visibility, e.g. due to fog, heavy rain, snow or spray
- there are narrow vehicles, e.g. motorcycles or bicycles
- the road has very wide lanes
- the road has narrow lanes
- you are not driving in the middle of the lane
- there are barriers or other road boundaries

Vehicles in the monitoring range are then not indicated.
At a distance of around 1.6 ft (0.5 m) from the vehicle, Blind Spot Assist monitors the area up to 10 ft (3 m) next to and behind your vehicle, as shown in the picture.

If the lanes are narrow, vehicles driving in the lane beyond the lane next to your vehicle may be indicated, especially if the vehicles are not driving in the middle of their lane. This may be the case if there are vehicles driving at the inner edge of their lanes.

Due to the nature of the system:

- warnings may be issued in error when driving close to crash barriers or similar solid lane borders
- warnings may be interrupted when driving alongside long vehicles, e.g. trucks, for a prolonged time

**Collision warning**

If a vehicle is detected in the monitoring range of Blind Spot Assist and you switch on the corresponding turn signal, a double warning tone sounds. The red warning lamp flashes on the relevant exterior mirror. If the turn signal remains on, detected vehicles are indicated by the flashing of the red warning lamp on the exterior mirror. There are no further warning tones.

**Activating Blind Spot Assist**

- Make sure that Blind Spot Assist is activated in the on-board computer (page 168).
- Select SmartKey position 2 with the Start/Stop button. Warning lamps in the exterior mirrors light up red for approximately 1.5 seconds and then turn yellow.
Lane Keeping Assist

General notes

Lane Keeping Assist monitors the area in front of your vehicle by means of multifunction camera which is attached behind the top of the windshield. Lane Keeping Assist detects lane markings on the road and can warn you before you leave your lane unintentionally.

This function is available in the range between 40 mph and 120 mph (60 km/h and 200 km/h). A warning may be given if a front wheel passes over a lane marking. It will warn you by means of intermittent vibration in the steering wheel for up to 1.5 seconds.

Important safety notes

⚠️ WARNING
Lane Keeping Assist cannot always clearly detect lane markings.
In such cases, Lane Keeping Assist can:

- give an unnecessary warning
- not give a warning
There is a risk of an accident.

Always pay particular attention to the traffic situation and keep within the lane, especially if Lane Keeping Assist alerts you.

⚠️ WARNING
The Lane Keeping Assist warning does not return the vehicle to the original lane. There is a risk of an accident.
You should always steer, brake or accelerate yourself, in particular if warned by Lane Keeping Assist.

If you fail to adapt your driving style, Lane Keeping Assist can neither reduce the risk of an accident nor override the laws of physics. Lane Keeping Assist cannot take into account the road, traffic and weather conditions. Lane Keeping Assist is merely an aid. You are responsible for the distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in your lane.

The Lane Keeping Assist does not keep the vehicle in the lane.

The system may be impaired or may not function if:

- there is poor visibility, e.g. due to insufficient illumination of the road, or due to snow, rain, fog or heavy spray
- there is glare, e.g. from oncoming traffic, the sun or reflection from other vehicles (e.g. if the road surface is wet)
- the windshield is dirty, fogged up, damaged or covered, for instance by a sticker, in the vicinity of the camera
- there are no or several unclear lane markings for one lane, e.g. roadworks
- the lane markings are worn away, dark or covered up, e.g. by dirt or snow
- the distance to the vehicle in front is too short and thus the lane markings cannot be detected
- the lane markings change quickly, e.g. lanes branch off, cross one another or merge
- the road is narrow and winding
- there are strong shadows cast on the road

Switching on Lane Keeping Assist

Activate Lane Keeping Assist using the onboard computer; to do so, select Standard or Adaptive (page 169).
If you drive at speeds above 40 mph (60 km/h) and lane markings are detected, the lines in the Assistance display are shown in green (page 167). Lane Keeping Assist is ready for use.

Standard

When Standard is selected, no warning vibration occurs if:

- you have switched on the turn signal. In this event, the warnings are suppressed for a certain period of time
- a driving safety system intervenes, such as ABS, BAS or ESP®
Adaptive

When Adaptive is selected, no warning vibration occurs if:

- you have switched on the turn signal. In this event, the warnings are suppressed for a certain period of time
- a driving safety system intervenes, e.g. ABS, BAS or ESP®
- you accelerate hard, e.g. kickdown.
- you brake hard
- you steer actively, e.g. swerve to avoid an obstacle or change lanes quickly
- you cut the corner on a sharp bend

In order that you are warned only when necessary and in good time if you cross the lane marking, the system detects certain conditions and warns you accordingly.

The warning vibration occurs earlier if:

- you approach the outer lane marking on a bend
- the road has very wide lanes, e.g. a freeway
- the system detects solid lane markings

The warning vibration occurs later if:

- the road has narrow lanes
- you cut the corner on a bend
Important safety notes

**WARNING**
If you operate information systems and communication equipment integrated in the vehicle when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the traffic situation permits. If you are not sure that this is possible, park the vehicle paying attention to traffic conditions and operate the equipment when the vehicle is stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

**WARNING**
If the instrument cluster has failed or malfunctioned, you may not recognize function restrictions in systems relevant to safety. The operating safety of your vehicle may be impaired. There is a risk of an accident.

Drive on carefully. Have the vehicle checked at a qualified specialist workshop immediately.

The on-board computer only shows messages or warnings from certain systems in the multifunction display. You should therefore make sure your vehicle is operating safely at all times. If the operating safety of your vehicle is impaired, pull over as soon as it is safe to do so. Contact a qualified specialist workshop.

For an overview, see the instrument panel illustration (page 34).

Displays and operation

**Speedometer with segments**
The segments in the speedometer indicate which speed range is available:
- Cruise control activated (page 134):

The segments light up from the stored speed to the type-tested maximum speed.
- Distance Pilot DISTRONIC is activated (page 136):
  One or two segments in the set speed range light up.
- Distance Pilot DISTRONIC detects a vehicle in front moving more slowly than the stored speed:
  The segments between the speed of the vehicle in front and the stored speed light up.

**Tachometer**

Do not drive in the overrevving range, as this could damage the engine.

The red band in the tachometer indicates the engine’s overrevving range.

The fuel supply is interrupted to protect the engine when the red band is reached.

**Outside temperature display**

You should pay special attention to road conditions when temperatures are around freezing point.

Bear in mind that the outside temperature display indicates the measured air temperature and not the road surface temperature.

The outside temperature display is in the multifunction display (page 161).

Changes in the outside temperature are displayed after a short delay.

**Coolant temperature gage**

**WARNING**

Opening the hood when the engine is overheated or when there is a fire in the engine compartment could expose you to hot gases or other service products. There is a risk of injury.

Let an overheated engine cool down before opening the hood. If there is a fire in the engine compartment, keep the hood closed and contact the fire department.
If the coolant temperature is too high, a display message is shown.
If the coolant temperature display is in the area marked in red, do not continue driving. Otherwise, the engine will be damaged.

The coolant temperature display is in the lower section of the tachometer (page 34).
Under normal operating conditions and with the specified coolant level, the coolant temperature display may rise to the red marking.

Operating the on-board computer

To activate the on-board computer: set the Start/Stop button to key position 1.
You can control the multifunction display and the settings in the on-board computer using the buttons on the multifunction steering wheel.

<tbody>
<tr>
<td>• Switches off the Voice Control System (see the Digital Operator’s Manual)</td>
</tr>
</tbody>
</table>

Press briefly:
• Back
• In the Radio or Media menu: de-selects the track or station list or list of available radio sources or media
• Hides display messages
• Exits the telephone book/redial memory

Press and hold:
• Calls up the standard display in the Trip menu
Right control panel

- Rejects or ends a call
- Exits the telephone book/redial memory
- Makes or accepts a call
- Switches to the redial memory
- Adjusts the volume
- Mute
- Switches on the Voice Control System (see the Digital Operator’s Manual)

Multifunction display

- Transmission position (page 119)
- Time
- Outside temperature (page 159)
- Display panel
- Additional speedometer (page 170)

Display panel 4 shows the selected menu or submenu and display messages.

Additional speedometer 5 displays the speed in the respective unit that is not shown in the multifunction display.

- Press and hold the button on the steering wheel until the Trip menu with trip odometer 1 and odometer 2 appears.

Menus and submenus

Menu overview

Press the button on the steering wheel to open the menu list.

Operating the on-board computer (page 160).

Depending on the vehicle equipment, you can select the following menu:

- Trip menu (page 161)
- Navi menu (navigation instructions) (page 163)
- Radio menu (page 164)
- Media menu (page 165)
- Telephone menu (page 166)
- Assistance Graphic menu (page 167)
- Service menu (page 168)
- Settings menu (page 168)
- AMG menu (page 170)

Trip menu

Standard display

- Parking Assist PARKTRONIC (page 147)
- Cruise control (page 134)
- Adaptive Highbeam Assist (page 98)
Calling up the range

Press the \([\uparrow]\) button on the steering wheel to open the menu list.

Press \([\downarrow]\) or \([\uparrow]\) on the steering wheel to select the Trip menu.

Press \([\downarrow]\) or \([\uparrow]\) to select the approximate Range.

The approximate range that can be covered depends on the fuel level and your current driving style. If there is only a small amount of fuel left in the fuel tank, a vehicle being refueled \([\infty]\) appears instead of approximate range.

Trip computer "From Start" or "From Reset"

Press the \([\uparrow]\) button on the steering wheel to open the menu list.

Press \([\downarrow]\) or \([\uparrow]\) on the steering wheel to select the Trip menu.

Confirm by pressing \([\text{OK}]\) on the steering wheel.

Press \([\downarrow]\) or \([\uparrow]\) to select From Start or From Reset.

The values in the From Start submenu are calculated from the start of a journey, while the values in the From Reset submenu are calculated from the last time the submenu was reset (> page 162).

In the following cases the trip computer is automatically reset From Start:
- the ignition has been switched off for more than four hours.
- 999 hours have been exceeded.
- 9,999 miles have been exceeded.

The From Reset trip computer is automatically reset if the value exceeds 9,999 hours or 99,999 miles.

Digital speedometer

Press \([\uparrow]\) on the steering wheel to open the menu list.

Press \([\downarrow]\) or \([\uparrow]\) on the steering wheel to select the Trip menu.

Confirm by pressing \([\text{OK}]\) on the steering wheel.

Press the \([\downarrow]\) or \([\uparrow]\) button to select the digital speedometer.

Resetting values

Press \([\uparrow]\) on the steering wheel to open the menu list.

Press \([\downarrow]\) or \([\uparrow]\) on the steering wheel to select the Trip menu.

Confirm by pressing \([\text{OK}]\) on the steering wheel.

Press the \([\downarrow]\) or \([\uparrow]\) button to select the function that you wish to reset.

Press the \([\text{OK}]\) button.

Press \([\downarrow]\) to select Yes and press \([\text{OK}]\) to confirm.

You can reset the values of the following functions:
- Trip odometer
- "From Start" trip computer
- "From Reset" trip computer
Navigation system menu

Displaying navigation instructions

In the Navi menu, the multifunction display shows navigation instructions. You can find further information on navigation instructions in the multimedia system in the Digital Operator’s Manual.

- Switch on the multimedia system.
- Press \( \text{\textbullet} \) on the steering wheel to open the menu list.
- Press \( \text{\textbullet} \) or \( \text{\textbullet} \) on the steering wheel to select the Navi menu.
- Confirm by pressing OK on the steering wheel.

Route guidance not active

Route guidance active

No change of direction announced

Distance to the next change of direction
Current road

Change of direction announced with a lane recommendation

Target of the change of direction
Distance to the change of direction
Change-of-direction symbol
Recommended lane and new lane during a change of direction (white)
Possible lane
Lane not recommended (dark gray)

On multilane roads, new lane recommendations can be displayed for the next change of direction if the digital map supports this data. During the change of direction, new lanes may be added.

Lane not recommended: you will not be able to complete the next change of direction if you stay in this lane.
Possible lane: you will only be able to complete the next change of direction in this lane.
Recommended lane: in this lane you will be able to complete the next change of direction and the one after that.
Change of direction without lane recommendation

1. Road into which the change of direction leads
2. Distance to change of direction and visual distance display
3. Change-of-direction symbol

When a change of direction is to be made, you will see symbol 3 for the change of direction and distance graphic 2. The distance indicator shortens towards the top of the display as you approach the point of the announced change of direction. The change of direction starts once distance display 2 reaches zero.

Change of direction with lane recommendation

1. Road into which the change of direction leads
2. Distance to change of direction and visual distance display
3. Change-of-direction symbol
4. Lane recommendation

Other status indicators of the navigation system

1. Additional information

Other possible additional information:
- **New Route...** or **Calculating Route...**
  A new route is calculated.
- **Road Not Mapped**
  The vehicle position is inside the area of the digital map but the road is not recognized, e.g. newly built streets, car parks or private land.
- **No Route**
  No route could be calculated to the selected destination.
- **You have reached the destination or an intermediate destination.**

Radio menu

1. Frequency range
2. Station with preset position
3. Name of artist
4. Name of track

The multifunction display shows station 2 with station frequency or station name. The preset
position is only displayed along with station ② if this has been stored.
You can store stations ② in the multimedia system.
► Switch on the multimedia system.
► Press \( \text{[home]} \) on the steering wheel to open the menu list.
► Press \( \downarrow \) or \( \uparrow \) on the steering wheel to select the Radio menu.
► Confirm by pressing \( \text{OK} \) on the steering wheel.
Currently set station ② appears in the multifunction display.
► To open the station list: press \( \downarrow \) or \( \uparrow \) briefly.
► To select a station in the station list: press \( \downarrow \) or \( \uparrow \) briefly.
► To select a station in the station list using rapid scroll: press and hold \( \downarrow \) or \( \uparrow \).
► To select the frequency range or station memory: press \( \text{OK} \) briefly.
► Press \( \downarrow \) or \( \uparrow \) to select the frequency range or station memory.
► Press \( \text{OK} \) to confirm your selection.

1 SIRIUS XM satellite radio functions like a normal radio.
Further information about radio operation can be found in the multimedia system in the Digital Operator's Manual.

Media menu

Changing the media source
You can change the media source and playback mode (audio or video) at any time in the Media menu.
► Switch on the multimedia system.
► Press \( \text{[home]} \) on the steering wheel to open the menu list.
► Press \( \downarrow \) or \( \uparrow \) on the steering wheel to select the Media menu.
► Confirm by pressing \( \text{OK} \) on the steering wheel.
► To open/close the media sources list: press \( \text{OK} \) briefly.
The list shows the following media sources, for example:

- Disc (CD/DVD) (DVD, COMAND only)
- SD card (COMAND)
- Media Register (COMAND)
- USB storage device
- Bluetooth® capable audio device

Please observe further information on media support and media operation in the multimedia system.

Operating an audio player or audio media

### Media source, e.g. name of USB memory stick
### Current title
### Name of artist
### Name of album
### Folder name

Audio data from various audio devices or media can be played, depending on the equipment installed in the vehicle.
► Switch on the multimedia system (see the Digital Operator’s Manual)
► Use \( \text{[home]} \) on the steering wheel to call up the list of menus.
► Press \( \downarrow \) or \( \uparrow \) on the steering wheel to select the Media menu.
► Confirm by pressing \( \text{OK} \) on the steering wheel.
► To select audio player or data carrier: press \( \text{OK} \) briefly, to open the list of media sources.
► Press \( \downarrow \) or \( \uparrow \) to select the corresponding audio player or media.
► Press \( \text{OK} \) to confirm.
► To open the track list: press \( \downarrow \) or \( \uparrow \) briefly.
To select to next or previous track in the track list: press [▼] or [▲] briefly.
To select a track from the track list using rapid scrolling: press and hold [▼] or [▲] until the desired track is reached.
If you press and hold the button, the speed of rapid scroll increases after a short time. Not all audio drives or data carriers support this function.

If the corresponding track information is stored on the audio drive or audio media, the multifunction display may display the following:
- track number
- track name
- artist
- album

Video DVD operation

Switch on the multimedia system.
Press [▲] on the steering wheel to call up the list of menus.
Press [▼] or [▲] on the steering wheel to select the Media menu.
Confirm by pressing [OK] on the steering wheel.
To select DVD single drive or data medium: press [OK] briefly, to open the list of media sources.
Press [▼] or [▲] to select the corresponding DVD single drive or disc.
Press [OK] to confirm.
To open the scene list: press [▼] or [▲] briefly.
To select the next or previous scene in the scene list: press [▼] or [▲] briefly.

To select a scene from the scene list using rapid scrolling: press and hold [▼] or [▲] until desired scene (1) is reached.
Press [OK] to confirm your selection.

Telephone menu

Introduction

WARNING
If you operate information systems and communication equipment integrated in the vehicle when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the traffic situation permits. If you are not sure that this is possible, park the vehicle paying attention to traffic conditions and operate the equipment when the vehicle is stationary.

When telephoning, you must observe the legal requirements for the country in which you are currently driving.

Switch on the mobile phone (see the manufacturer’s operating instructions).
Switch on the multimedia system (see the Digital Operator’s Manual).
Establish a Bluetooth® connection to the multimedia system (see the Digital Operator’s Manual).
Press the [▲] button on the steering wheel to call up the list of menus.
Press [▼] or [▲] on the steering wheel to select the Telephone menu.
Confirm by pressing [OK] on the steering wheel.

You will see one of the following display messages in the multifunction display:
- Phone READY or the name of the network provider: the mobile phone has found a network and is ready to receive.
- Phone No Service: there is no network available or the mobile phone is searching for a network.
Accepting a call

If someone calls you when you are in the Telephone menu, a display message appears in the multifunction display.

You can accept a call at any time, even if you are not in the Telephone menu.

► Press the button on the steering wheel to accept an incoming call.

Rejecting or ending a call

You can end or reject a call at any time even if you are not in the Telephone menu.

► Press the button on the steering wheel to reject or end a call.

Selecting an entry in the phone book

► Press on the steering wheel to open the menu list.
► Press or on the steering wheel to select the Telephone menu.
► Confirm by pressing OK on the steering wheel.
► Press the , , or OK button to switch to the phone book.
► Press or to select the names one after the other.

or

► To start rapid scrolling: press and hold or for longer than one second.

The names in the phone book are displayed quickly one after the other.

If you press and hold the or button for longer than five seconds, the name appears with the next or previous letter initial letter in the alphabet.

Rapid scrolling stops when you release the button or reach the end of the list.

► If only one telephone number is stored for a name: press the or OK button to start dialing.

or

► If there is more than one number for a particular name: press the or OK button to display the numbers.
► Press the or button to select the number you want to dial.
► Press the or OK button to start dialing.

or

► To exit the phone book: press the or button.

Redialing

The on-board computer saves the last names or numbers dialed in the redial memory.

► Press on the steering wheel to open the menu list.
► Press or on the steering wheel to select the Telephone menu.
► Confirm by pressing OK on the steering wheel.
► Press the button to switch to the redial memory.
► Press the or button to select the desired name or number.
► Press the or OK button to start dialing.

or

► To exit the redial memory: press the or button.

Assistance graphic menu

► Use on the steering wheel to call up the list of menus.
► Press the or button on the steering wheel to select the Assistance Graphic menu.
► Confirm by pressing OK on the steering wheel.

The multifunction display shows the Distance Pilot DISTRONIC distance display in the assistance graphic display.

The assistance graphic displays the status of and information from the following driving systems or driving safety systems:
• Distance Pilot DISTRONIC (▶ page 136)
• Distance warning function of Active Brake Assist (▶ page 59)
• Blind Spot Assist (▶ page 155)
• ATTENTION ASSIST (▶ page 153)
• Lane Keeping Assist (▶ page 157)

Press ▼ to display the ATTENTION ASSIST assessment.

### Service menu

Depending on the equipment installed in the vehicle, you have the following options in the Service menu:
- calling up display messages in message memory (▶ page 174)
- checking the tire pressure electronically (▶ page 268).
- calling up the service due date (▶ page 240).
- checking the engine oil level using the on-board computer (▶ page 236).

### Settings menu

#### Introduction

Depending on the equipment installed in the vehicle, you have the following options in the Settings menu:
- changing assistance settings (▶ page 168).
- changing the light settings (▶ page 169).
- changing the instrument cluster settings (▶ page 169).
- restoring the factory settings (▶ page 170).

### Assistance submenu

#### Activating/deactivating Active Brake Assist

- Press ▲ on the steering wheel to open the menu list.
- Press ▼ or ▲ on the steering wheel to select the Settings menu.
- Confirm by pressing OK on the steering wheel.
- Press ▼ or ▲ to select the DriveAssist submenu.
- Press OK to confirm.

Select Brake Assist with ▲ or ▼.
- Press OK to confirm.
The current selection appears.

To activate/deactivate: press the OK button again.
When Active Brake Assist is deactivated, the symbol appears in the Assistance Graphic menu of the multifunction display.

Further information on Active Brake Assist (▶ page 59).

#### Activating/deactivating Blind Spot Assist

- Press ▲ on the steering wheel to open the menu list.
- Press ▼ or ▲ on the steering wheel to select the Settings menu.
- Confirm by pressing OK on the steering wheel.
- Press ▼ or ▲ to select the DriveAssist submenu.
- Press OK to confirm.
- Press ▼ or ▲ to select Blind Spot Assist.
- Press OK to confirm.
- Press ▼ or ▲ to select the DriveAssist submenu.
- Press OK to confirm.

To activate/deactivate: press the OK button again.
When Blind Spot Assist is activated, gray radar waves propagating backwards appear next to the vehicle in the Assistance Graphic menu in the multifunction display.

For further information about Blind Spot Assist, see (▶ page 155).

#### Setting ATTENTION ASSIST

- Press ▲ on the steering wheel to open the menu list.
- Press ▼ or ▲ on the steering wheel to select the Settings menu.
- Confirm by pressing OK on the steering wheel.
- Press ▼ or ▲ to select the DriveAssist submenu.
- Press OK to confirm.
- Select Attention Assist with ▼ or ▲.
- Press OK to confirm.
Press \( \text{ } \) or \( \text{ } \) to select Off, Standard or Sensitive.
Press \( \text{OK} \) to confirm the selection.
When ATTENTION ASSIST is deactivated, the \( \text{ } \) symbol appears in the Assistance Graphic menu in the multifunction display.

For further information about ATTENTION ASSIST, see (\( \text{Y} \) page 153).

**Setting Lane Keeping Assist**
- Press the \( \text{ } \) button on the steering wheel to open the menu list.
- Press the \( \text{ } \) or \( \text{ } \) button on the steering wheel to select the Settings menu.
- Confirm by pressing \( \text{OK} \) on the steering wheel.
- Press \( \text{ } \) or \( \text{ } \) to select the Drive Assist menu.
- Press \( \text{OK} \) to confirm.
- Press \( \text{ } \) or \( \text{ } \) to select Lane Keeping Assist.
- Press \( \text{OK} \) to confirm.
- Press \( \text{ } \) or \( \text{ } \) to select Off, Standard or Adaptive.
- **To change the setting:** press \( \text{OK} \) again.

Further information about Lane Keeping Assist (\( \text{Y} \) page 157).

**Light submenu**

**Switching the daytime running lamps on/off**
This function is not available in Canada.
- Press \( \text{ } \) on the steering wheel to open the menu list.
- Press \( \text{ } \) or \( \text{ } \) on the steering wheel to select the Settings menu.
- Confirm by pressing \( \text{OK} \) on the steering wheel.
- Press \( \text{ } \) or \( \text{ } \) to select the Lights submenu.
- Press \( \text{OK} \) to confirm.
- Using \( \text{ } \) or \( \text{ } \), select the Daytime Running Lights function.
- If the Daytime Running Lights function has been switched on, the cone of light and the \( \text{ } \) symbol in the multifunction display are shown in white.
- Press the \( \text{OK} \) button to save the setting.

Further information about Daytime Running Lights (\( \text{Y} \) page 96).

**Instrument cluster submenu**

**Setting the brightness for the display and switches**
You can use the Brightness function to set the brightness of the multifunction display and the switches in the vehicle in increments.
- Press \( \text{ } \) on the steering wheel to open the menu list.
- Press \( \text{ } \) or \( \text{ } \) on the steering wheel to select the Settings menu.
- Confirm by pressing \( \text{OK} \) on the steering wheel.
- Press \( \text{ } \) or \( \text{ } \) to select the Instrument Cluster submenu.
- Press \( \text{OK} \) to confirm.
- Press \( \text{ } \) or \( \text{ } \) to select the Brightness function.
- Press \( \text{ } \) to confirm.
- You can see the selected setting \( \text{Level} \) with a value between 0 and 10. Level 0 corresponds to a dim light and level 10 corresponds to a bright light.
- Press \( \text{ } \) or \( \text{ } \) to change the brightness. The brightness is set simultaneously with the selection.
- Press \( \text{OK} \) or \( \) to save the setting.

**Selecting the distance unit**
The Display Unit Speed-/Odometer function allows you to choose whether certain displays appear in kilometers or miles in the multifunction display.
- Use \( \text{ } \) on the steering wheel to call up the list of menus.
- Press the \( \text{ } \) or \( \text{ } \) button on the steering wheel to select the Settings menu.
- Confirm by pressing \( \text{OK} \) on the steering wheel.
- Press the \( \text{ } \) or \( \text{ } \) button to select the Instrument Cluster submenu.
- Press \( \text{OK} \) to confirm.
- Press the \( \text{ } \) or \( \text{ } \) button to select the Display Unit Speed-/Odometer function.
You will see the selected setting: \( \text{km} \) or \( \text{Miles} \).
- Press the \( \text{OK} \) button to save the setting.
The selected unit of measurement for distance applies to:
- Digital speedometer in the Trip menu
- Odometer and the trip odometer
- Trip computer
- Range
- Navigation instructions in the Navi menu
- Cruise control
- Distance Pilot DISTRONIC
- ASSYST PLUS service interval display

Switching the additional speedometer on/off
If the additional speedometer is switched on, the speed is shown in the status bar in the multifunction display instead of the outside temperature.

The additional speedometer displays the speed in the respective unit that is not shown in the multifunction display.
- Press \[\text{on the steering wheel to open the menu list.}
- Press \[\text{or \[\text{on the steering wheel to select the Settings menu.}
- Confirm by pressing \[\text{on the steering wheel.}
- Press \[\text{or \[\text{to select the Instrument Cluster submenu.}
- Press \[\text{to confirm.}
- Press \[\text{or \[\text{to select the Additional Speedometer [km/h] function.}
  The current selection appears.
- \[\text{To switch on/off: press \[\text{again.}

Restoring the factory settings
- Press \[\text{on the steering wheel to open the menu list.}
- Press \[\text{or \[\text{on the steering wheel to select the Settings menu.}
- Confirm by pressing \[\text{on the steering wheel.}
- Press \[\text{or \[\text{to select the Factory Settings submenu.}
- Press \[\text{to confirm.}
  The Reset All Settings? function appears.
    ➤ Press \[ or \[ to select No or Yes.
    ➤ Press \[ to confirm the selection.
      If you have selected Yes, the multifunction display shows a confirmation message.

For safety reasons, the Daytime Running Lights function in the Lights submenu is only reset when the vehicle is stationary.

AMG menu

Warm-up

<table>
<thead>
<tr>
<th>Digital speedometer</th>
<th>Gear indicator</th>
<th>Charge-air pressure</th>
<th>Engine oil temperature</th>
<th>Transmission oil temperature</th>
</tr>
</thead>
</table>

1 40 mph
2 4
3 4
4 3
5 3

Use \[ on the steering wheel to call up the list of menus.
- Press the \[ or \[ button on the steering wheel to select the AMG menu.
- Confirm by pressing \[ on the steering wheel.

Engine and transmission oil temperatures: when the engine and transmission are at normal operating temperature, oil temperatures 4 and 5 are displayed in white in the multifunction display.

If the multifunction display shows oil temperature 4 or 5 in blue, the engine or the transmission are not yet at normal operating temperature. Avoid driving at full engine output during this time.
The G-Meter shows you the forces that are exerted on the driver during the journey, both laterally and in the direction of travel. The maximum values are indicated in red in the guideline system.

- Press [▲] on the steering wheel to open the menu list.
- Press the [▼] or [▲] button on the steering wheel to select the AMG menu.
- Confirm by pressing [OK] on the steering wheel.
- Press the [▲] button repeatedly until the G-Meter appears.
  The maximum values of the G-Meter are saved.
- To reset the G-Meter: press [OK] again.
- Using [▼] or [▲] select Yes on the steering wheel.
- Press [OK] to confirm.
  The maximum values of the G-Meter are deleted.

If the ignition remains switched off for longer than four hours, the G-Meter will be automatically reset.

Further information on the upshift indicator and gear indicator (> page 123).
**Race Timer**

**Displaying and starting RACETIMER**

1. **Lap**
2. **RACETIMER**

The RACETIMER is only intended for use on a closed race circuit. Do not use the function on public roads.

You can start the RACETIMER when the engine is running or if the key is in position 2 in the ignition lock.

- Use 
  to call up the list of menus.

- Press the or button on the steering wheel to select the AMG menu.

- Confirm by pressing Ok on the steering wheel.

- Press the or button repeatedly until the RACETIMER is shown.

- **To start:** press the Ok button to start the RACETIMER.

**Starting a new lap**

1. **Lap**
2. **RACETIMER**
3. **Quickest lap time**

- Press the or button to select New Lap.

- Press Ok to confirm.

A maximum of 32 laps may be stored.

**Stopping the RACETIMER**

- Press the or button to select Stop.

- Press Ok to confirm.

If you stop the vehicle and select key position 1, the RACETIMER interrupts timing. If you select key position 3 with the Start/Stop button and then press Ok Start to confirm, timing is continued.

**Continuing the RACETIMER**

- Press the or button to select Continue.

- Press Ok to confirm.
Resetting the RACETIMER

Press the \[\text{▼} \] or \[\text{▲} \] button to select \textit{Stop}. The RACETIMER is stopped.

Press the \[\text{▼} \] or \[\text{▲} \] button to select \textit{Reset}.

Press \textit{OK} to confirm. All laps are deleted.

Display messages

Introduction

General notes

Display messages appear in the multifunction display.
Display messages with graphic displays may be shown in simplified form in the Operator's Manual and may therefore differ from the multifunction display.
Please respond in accordance with the display messages and follow the additional notes in this Operator's Manual.
With certain display messages, you will also hear a warning tone.
You can hide the display messages. The display messages are then stored in the message memory. Rectify the cause of a display message as soon as possible.
When you stop and park the vehicle, please observe the notes on:

- HOLD function (> page 144)
- Parking (> page 127)

### Hiding display messages

- Press the OK or button on the steering wheel.
  The multifunction display hides the display message.

High-priority display messages are shown in red in the multifunction display. Some high-priority display messages cannot be hidden.

The multifunction display shows these messages continuously until the causes for the messages have been remedied.

### Message memory

The on-board computer saves certain display messages in the **message memory**. You can call up the display messages:

- Use button on the steering wheel to call up the list of menus.
- Press or on the steering wheel to select the Service menu.
- Confirm by pressing OK on the steering wheel.
- Press the or button to select the message memory.
  If there are no display messages, the **No Messages** display appears in the multifunction display.
  If there are display messages, the number of messages stored is shown.
- Press OK to confirm.
- Press the or button to scroll through the display messages.
## Safety systems

| Front Passenger Airbag Disabled See Operator's Manual | The front-passenger front air bag is deactivated during the journey, even though:  
- an adult  
or  
- a person of the corresponding stature is on the front-passenger seat  
If additional forces are applied to the seat, the system may interpret the occupant’s weight as lower than it actually is. |

**WARNING**  
The front-passenger air bag does not deploy during an accident. There is an increased risk of injury.  

- Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions.  
- Secure the vehicle against rolling away (▶ page 127).  
- Switch the ignition off.  
- Have the occupant on the front-passenger seat get out of the vehicle.  
- Keep the seat unoccupied, close the front-passenger door and switch on the ignition.  
- Observe the PASSENGER AIR BAG indicator lamps in the center console and the multifunction display and check the following:  
  Seat unoccupied and ignition switched on:  
  - a self-diagnosis is carried out. The PASSENGER AIR BAG OFF and PASSENGER AIR BAG ON indicator lamps must light up simultaneously for approximately six seconds  
  - the PASSENGER AIR BAG OFF indicator lamp must then light up and remain lit after the self-diagnosis. If the indicator lamp is on, OCS (Occupant Classification System) has disabled the front-passenger front air bag (▶ page 48)  
  - the display messages *Front Passenger Airbag Enabled See Operator’s Manual* or *Front Passenger Airbag Disabled See Operator’s Manual* must not appear in the multifunction display  
  
  - Wait for a period of at least 60 seconds until the necessary system checks have been completed.  
  - Make sure that the display messages do not appear in the multifunction display.  
If these conditions are fulfilled, the front-passenger seat can be occupied again. Whether the PASSENGER AIR BAG OFF indicator lamp remains lit or goes out depends on how OCS classifies the occupant. If the conditions are not fulfilled, the system is not operating correctly.  
- Visit a qualified specialist workshop immediately.

| ![Check Coolant Level](image) See Operator's Manual | The coolant level is too low.  
**Warning:** Avoid making long journeys with too little coolant in the engine cooling system. The engine will otherwise be damaged.  
▶ Add coolant, observing the warning notes before doing so (> page 238).  
▶ If coolant needs to be added more often than usual, have the engine coolant system checked at a qualified specialist workshop. |
| ![Coolant Too Hot](image) Stop Vehicle Turn Engine Off | The fan motor is malfunctioning.  
▶ At coolant temperatures below 248 °F (120 °C), drive to the nearest qualified specialist workshop.  
▶ Avoid heavy loads on the engine as you do so, e.g. driving in mountainous terrain and stop-and-go traffic. |

### Coolant Too Hot

- **Stop Vehicle Turn Engine Off**

The coolant is too hot.  
A warning tone also sounds.  

**WARNING**

Do not drive when your engine is overheated. This can cause some fluids which may have leaked into the engine compartment to catch fire.  
Steam from the overheated engine can also cause serious burns which can occur just by opening the hood.  
There is a risk of injury.  
▶ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions.  
▶ Secure the vehicle against rolling away (> page 127).  
▶ Wait until the engine has cooled down.  
▶ Make sure that the air supply to the engine radiator is not blocked, e.g. by snow, slush or ice.  
▶ Do not start the engine again until the display message goes out and the coolant temperature is below 248 °F (120 °C). Otherwise, the engine could be damaged.  
▶ Pay attention to the coolant temperature gauge.  
▶ If the temperature increases again, visit a qualified specialist workshop immediately.  

Under normal operating conditions and with the specified coolant level, the coolant temperature may rise to 248 °F (120 °C).

| See Operator's Manual | The battery is not being charged. A warning tone also sounds. Possible causes are:  
- a defective alternator  
- a torn poly-V-belt  
- a malfunction in the electronics  
⚠️ Do not continue driving. The engine could otherwise overheat.  
▶ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions.  
▶ Secure the vehicle against rolling away (› page 127).  
▶ Consult a qualified specialist workshop. |
| Stop Vehicle See Operator's Manual | The battery is no longer being charged and the condition of charge is too low. A warning tone also sounds.  
▶ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions.  
▶ Secure the vehicle against rolling away (› page 127).  
▶ Observe the instructions in the See Operator's Manual display message.  
▶ Consult a qualified specialist workshop. |
| Start Engine See Operator's Manual | The engine is off and the battery condition of charge is too low.  
▶ Switch off electrical consumers that you do not need, such as the rear window defroster and interior lighting.  
▶ Leave the engine running for a few minutes or drive a long distance. The battery is being charged. |
| Check Engine Oil Level (Add 1 quart) | The engine oil level has dropped to the minimum level.  
⚠️ Avoid long journeys with too little engine oil. The engine will otherwise be damaged.  
▶ Check the oil level when next refueling, at the latest (› page 235).  
▶ If necessary, add engine oil (› page 237).  
▶ Have the engine checked at a qualified specialist workshop if engine oil needs to be added more often than usual.  
Information on approved engine oils can be obtained from a qualified specialist workshop or on the Internet at http://bevo.mercedes-benz.com. |
| Engine Oil Level Low Stop Vehicle Turn Engine Off | The engine oil level is too low. There is a risk of engine damage.  
▶ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions.  
▶ Secure the vehicle against rolling away (› page 127).  
▶ Check the engine oil level (› page 235).  
▶ If necessary, add engine oil (› page 237). |

| Please Correct Tire Pressure | The tire pressure is too low in at least one of the tires, or the tire pressure difference between the wheels is too great.  
  ▶ Check the tire pressures at the next opportunity (▶ page 267).  
  ▶ If necessary, correct the tire pressure.  
  ▶ Restart the tire pressure monitor (▶ page 269). |
| Check Tires             | The tire pressure in one or more tires has dropped significantly. The wheel position is displayed in the multifunction display.  
  A warning tone also sounds.  

⚠️ **WARNING**

Tire pressures that are too low pose the following hazards:
• they may burst, especially as the load and vehicle speed increase.  
• they may wear excessively and/or unevenly, which may greatly impair tire traction.  
• the driving characteristics, as well as steering and braking, may be greatly impaired.  
There is a risk of an accident.
  ▶ Stop the vehicle without making any sudden steering or braking maneuvers. Pay attention to the traffic conditions as you do so.  
  ▶ Secure the vehicle against rolling away (▶ page 127).  
  ▶ Check the tires and, if necessary, follow the instructions for a flat tire (▶ page 249).  
  ▶ Check the tire pressure (▶ page 267).  
  ▶ If necessary, correct the tire pressure.

   ▶ Visit a qualified specialist workshop. |
### General notes

Some systems carry out a self-diagnosis when the ignition is switched on. Therefore, some indicator and warning lamps may light up or flash temporarily. This behavior is non-critical. These indicator and warning lamps only indicate a malfunction if they light up or flash after starting the engine or whilst driving.

### Safety

<td>The emission limit values may be exceeded and the engine may be in emergency mode.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Have the vehicle checked as soon as possible at a qualified specialist workshop.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In some states, you must immediately visit a qualified specialist workshop as soon as the yellow Check Engine warning lamp lights up. This is due to the legal requirements in effect in these states. If in doubt, check whether such legal regulations apply in the state in which you are currently driving.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The yellow reserve fuel warning lamp lights up while the engine is running. The fuel level has dropped into the reserve range.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Refuel at the nearest gas station.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The yellow reserve fuel warning lamp flashes while the vehicle is in motion. In addition, the Check Engine warning lamp may light up. The fuel filler cap is not closed correctly or the fuel system is leaking.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Check that the fuel filler cap is correctly closed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ If the fuel filler cap is not correctly closed: close the fuel filler cap.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ If the fuel filler cap is closed: visit a qualified specialist workshop.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The red coolant warning lamp lights up while the engine is running and the coolant temperature gauge is at the start of the scale. The temperature sensor for the coolant temperature gauge is defective. The coolant temperature is no longer being monitored. There is a risk of engine damage if the coolant temperature is too high.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Pull over and stop the vehicle safely and switch off the engine, paying attention to road and traffic conditions. Do not continue driving under any circumstances.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Secure the vehicle against rolling away (&gt; page 127).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>▶ Consult a qualified specialist workshop.</td>
</tr>
</tbody>
</table>
The red coolant warning lamp comes on while the engine is running.
The coolant level is too low.
If the coolant level is correct, the airflow to the engine radiator may be blocked or
the electric engine radiator fan may be malfunctioning.
The coolant is too hot and the engine is no longer being cooled sufficiently.
- Observe the additional display messages in the multifunction display.
- Pull over and stop the vehicle safely and switch off the engine, paying attention
to road and traffic conditions.
- Secure the vehicle against rolling away (page 127).
- Leave the vehicle and keep a safe distance from the vehicle until the engine has
cooled down.
- Check the coolant level and add coolant, observing the warning notes
(page 238).
- If you need to add coolant more often than usual, have the engine coolant sys-
tem checked.
- Make sure that the air supply to the engine radiator is not blocked, e.g. by snow,
slush or ice.
- Do not start the engine again until the coolant temperature is below 248 °F
(120 °C). Otherwise, the engine could be damaged.
- Drive to the nearest qualified specialist workshop.
- Avoid subjecting the engine to heavy loads, e.g. driving in mountainous terrain,
and stop-and-go traffic.

The red coolant warning lamp comes on while the engine is running. A warning
tone also sounds.
The coolant temperature has exceeded 248 °F (120 °C). The airflow to the engine
radiator may be blocked or the coolant level may be too low.

⚠️ WARNING
The engine is not being cooled sufficiently and may be damaged.
Do not drive when your engine is overheated. This can cause some fluids which
may have leaked into the engine compartment to catch fire.
Steam from the overheated engine can also cause serious burns which can occur
just by opening the hood.
There is a risk of injury.
- Observe the additional display messages in the multifunction display.
- Pull over and stop the vehicle safely and switch off the engine, paying attention
to road and traffic conditions.
- Secure the vehicle against rolling away (page 127).
- Leave the vehicle and keep a safe distance from the vehicle until the engine has
cooled down.
- Check the coolant level and add coolant, observing the warning notes
(page 238).
- If you need to add coolant more often than usual, have the engine coolant sys-
tem checked.

<tr>
<td>🚨 The yellow tire pressure monitor warning lamp (pressure loss/malfunction) is lit. The tire pressure monitor has detected a loss of pressure in at least one of the tires.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**WARNING**

Tire pressures that are too low pose the following hazards:

- they may burst, especially as the load and vehicle speed increase.
- they may wear excessively and/or unevenly, which may greatly impair tire traction.
- the driving characteristics, as well as steering and braking, may be greatly impaired.

There is a risk of an accident.

- Stop the vehicle without making any sudden steering or braking maneuvers. Pay attention to the traffic conditions as you do so.
- Secure the vehicle against rolling away (☞ page 127).
- Observe the additional display messages in the multifunction display.
- Check the tires and, if necessary, follow the instructions for a flat tire (☞ page 249).
- Check the tire pressure (☞ page 267).
- If necessary, correct the tire pressure.

| 🚨 The yellow tire pressure monitor warning lamp (pressure loss/malfunction) flashes for approximately one minute and then remains lit. The tire pressure monitor is faulty. |

**WARNING**

The system is possibly unable to recognize or register low tire pressure. There is a risk of an accident.

- Observe the additional display messages in the multifunction display.
- Visit a qualified specialist workshop immediately.

General notes

The multimedia system section in this Operator's Manual describes the basic principles for operation. More information can be found in the Digital Operator's Manual.

Important safety notes

⚠️ WARNING
If you operate information systems and communication equipment integrated in the vehicle when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the traffic situation permits. If you are not sure that this is possible, park the vehicle paying attention to traffic conditions and operate the equipment when the vehicle is stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

The multimedia system calculates the route to the destination without taking the following into account, for example:
- traffic lights
- stop and yield signs
- parking or stopping restrictions
- road narrowing
- other road and traffic rules and regulations

The multimedia system may give incorrect navigation recommendations if the actual street/traffic situation does not correspond with the digital map's data.

For example:
- a diverted route
- the road layout or the direction of a one-way street has been changed

For this reason, you must always observe road and traffic rules and regulations during your journey. Road and traffic rules and regulations always have priority over multimedia system driving recommendations.

Navigation announcements are intended to direct you while driving without diverting your attention from the road and driving.

Please always use this feature instead of consulting the map display for directions. Looking at the icons or map display can distract you from traffic conditions and driving, and increase the risk of an accident.

This equipment complies with FCC radiation exposure limits set forth for uncontrolled equipment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65. This equipment has very low levels of RF energy that is deemed to comply without maximum permissive exposure evaluation (MPE). However, it is recommended to install it at a distance of at least 8 inches (approx. 20 cm) between the radiation source and a person's body (not including limbs such as hands, wrists, feet and legs).

⚠️ WARNING

Modifications to electronic components, their software as well as wiring can impair their function and/or the function of other networked components. In particular, systems relevant to safety could also be affected. As a result, these may no longer function as intended and/or jeopardize the operating safety of the vehicle. There is an increased risk of an accident and injury.

Never tamper with the wiring as well as electronic components or their software. You should have all work to electrical and electronic equipment carried out at a qualified specialist workshop.

Function restrictions

For safety reasons, some functions are restricted or unavailable while the vehicle is in motion. You will notice this, for example, because either you will not be able to select certain menu items or a message will appear to this effect.
Operating system

Overview

General notes

Wearing polarized sunglasses may impair your ability to read the display.

The display has an automatic temperature-controlled switch-off feature. The brightness is automatically reduced if the temperature is too high. The display may temporarily switch off completely.

Cleaning instructions

! Do not touch the display. The display has a very sensitive high-gloss surface; there is a risk of scratching. If you have to clean the screen, however, use a mild cleaning agent and a soft, lint-free cloth.

The display must be switched off and have cooled down before you start cleaning. Do not apply pressure to the display surface when cleaning it, as this could cause irreversible damage to the display.

Switching the multimedia system on/off

Press the control knob which is located on the center console to the right of the controller.

Adjusts the volume

Turn the control knob which is located on the center console to the right of the controller.

The volume is adjusted:
• for the currently selected media source
• during traffic or navigation announcements
• in hands-free mode during a phone call

Switching the sound on or off

Press the button on the multifunction steering wheel.

If the audio output is switched off, the status line will show the symbol. If you switch the media source or change the volume, the sound is automatically switched on.

You will hear navigation messages even when the sound is muted (COMAND).

Functions

The multimedia system has the following functions:
• Radio mode
• Media mode with media search
• Sound system
• Navigation system (COMAND):
  • Communication functions
  • SIRIUS Weather (COMAND)
  • Vehicle functions with system settings
  • Favorites functions

Controller

The controller in the center console lets you:
• select menu items on the display
• enter characters
• select a destination on the map
• save entries

The controller can be:
• turned
• slid left or right
• slid forwards or back
• slid diagonally
• pressed briefly or pressed and held

Back button

You can use the button to exit a menu or to call up the display of the current operating mode.

To exit the menu: briefly press the button.

The multimedia system changes to the next higher menu level in the current operating mode.

To call up the highest level menu: press the button for longer than two seconds.
Touchpad

Switching the touchpad on/off

Multimedia system:
- Select Vehicle → System Settings → Touchpad → Activate Touchpad. The touchpad is switched on or off.

Operating the touchpad

Operating system

Character entry with handwriting recognition

Entering characters
- Use one finger to write characters on the surface. The character is entered in the input line. If the character that you have entered can be interpreted in different ways, these character suggestions are displayed.
- If character suggestions are shown, turn and press the controller.
- Resume the character entry on the touchpad.

Handwriting recognition

Example: COMAND
1 Active input line
2 Inserts a space
3 Character entered on the touchpad
4 Deletes characters

To display the menu: press the touchpad.

Example: COMAND
1 To exit the menu
2 To return to handwriting recognition
3 To use the phone book or text templates
4 To select the input line or changes the position of the cursor
To switch the language
To finish character entry

To select the input line: select [T].

Swipe up or down.

To move the cursor within the input line: select [T].

Swipe to the left or right.

To delete characters: swipe to the left if an input line is selected.

To confirm the entry: press the touchpad.

Switching the text reader function of the handwriting recognition on/off

Multimedia system:

Select Vehicle → System Settings → Touchpad → Read Out Handwriting Recognition.
The read-aloud function is switched on or off.

Quick access for audio

Changing the station/music track

Depending on the audio source that is currently activated, you can use this function to select the next station or music track.

Swipe upwards with two fingers on the touchpad.
The current audio source is displayed.

To select the previous or next station/music track: glide to the right or left.
The selected station/music track is played.

Switching the character entry between touchpad and controller

Requirement: an input line for text, numbers or characters has been selected.

To switch to the controller: press the controller.
Character entry using the controller is active.

To switch to the touchpad: press the touchpad with your finger.
Handwriting recognition on the touchpad is active.

Favorites

Calling up and exiting favorites

To call up: press the button on the controller or on the touchpad.
Select a favorite, e.g. Vehicle. The favorites are displayed.
To exit: press the button again.

Adding favorites

Adding predefined favorites

Example: favorites arranged in one row

1. Adds a new favorite
2. Renames a selected favorite
3. Moves a selected favorite
4. Deletes a selected favorite

Press the button.
The favorites are displayed.
Slide the controller.
The menu bar is shown.
Select Reassign.
The categories are displayed.
Select a category.
The favorites are displayed.
Select a favorite.
Add a favorite at the desired position.
If a favorite has already been added at this position, it will be overwritten.
Adding your own favorites

- Select Vehicle → Climate Control.
- Press and hold the button until the favorites are displayed.
- Add a favorite at the desired position. If a favorite has already been added at this position, it will be overwritten.

Climate control settings

General notes

You can adjust the climate control settings using the climate control bar or the climate control menu.

Important climate control functions can be set in the climate control bar:

- Temperature
- Airflow
- Air distribution

The climate control bar is visible in most displays.

You can find all available climate control functions in the climate control menu. You can use the climate control bar to switch to the climate control menu.

Overview

Climate control bar (COMAND)

1. Adjusts temperature, air distribution, displays the current settings
2. Calls up the climate control menu, displays the current cooling and climate mode settings
3. Adjusts airflow and temperature, displays the current settings

There may be fewer settings or none depending on your vehicle's equipment.

Calling up the climate control bar

Multimedia system:

- Select Vehicle.
  The vehicle menu is displayed.
- Slide the controller repeatedly until the climate control bar is activated.

Calling up the climate control menu

Multimedia system:

- Select Vehicle.
  The vehicle menu is displayed.
- Slide the controller repeatedly until the climate control bar is activated.
- To select from climate control bar: turn and press the controller.
  The menu for selecting the climate control function is activated.
- To select the climate control function: turn and press the controller.
  The selected climate control function appears.

Settings in the climate menu

Adjusting the climate mode settings

The climate mode determines the type of airflow. The setting is active when the air-conditioning system is set to AUTO (page 105).

- Call up the climate control menu (page 212).
- To select Climate Mode: turn and press the controller.
- To change the setting: turn the controller.
- To exit the menu: press the button.

The climate mode bar displays the current airflow setting: DIFFUSE, MEDIUM or FOCUS.

Settings in the bottom bar of the climate control menu

Switching cooling with air dehumidification on/off

- Call up the climate control menu (page 212).
- Slide the controller repeatedly until the bottom bar is activated.
To select A/C: turn and press the controller.

Switch cooling with air dehumidification on or off.

The current status of the cooling function is displayed in the climate control bar: A/C ON – activated, A/C OFF – deactivated.

Deactivating the cooling with air dehumidification function reduces fuel consumption.

Synchronizing the climate control settings

Use Sync (synchronization) to select the climate control setting for all zones together or separately.

Call up the climate control menu (page 212).

Slide the controller repeatedly until the bottom bar is activated.

To select Sync: turn and press the controller.

Switch the synchronization function on or off.

For further information on synchronizing climate control settings, see (page 106).

Navigation mode

Important safety notes

**WARNING**

If you operate information systems and communication equipment integrated in the vehicle when driving, you may be distracted from the traffic situation. You could also lose control of the vehicle. There is a risk of an accident.

Only operate this equipment when the traffic situation permits. If you are not sure that this is possible, park the vehicle paying attention to traffic conditions and operate the equipment when the vehicle is stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the navigation system.

General notes

Among other things, correct functioning of the navigation system depends on GPS reception. In certain situations, GPS reception may be impaired, there may be interference or there may be no reception at all, e.g. in tunnels or parking garages.

The following descriptions apply to navigation with COMAND. Further information can be found in the Digital Operator’s Manual.

Selecting a route type and route options

Multimedia system:

- Select Navigation.
- Select Route Settings.

If route guidance is active, first slide the controller and show the menu.

Select a route type.

Notes for route types:

- **Eco Route**
  Calculates an economic route.

- **Dynamic Traffic Route** *(only available in the USA)*
  Traffic reports on the route for the route guidance are taken into account.

- **Calculate Alternative Routes**
  Different routes are being calculated. Instead of Start, select the Continue menu item.

- To avoid/use route options: select Avoid Options.

Select a route option.

Notes for route options:

- **Use Toll Roads**
  The route calculation includes roads which require you to pay a usage fee (toll).

- **Use Carpool Lanes** *(only available in the USA)*
  Prerequisite: your vehicle meets the access conditions for carpool lanes.
  Carpool lanes will be included if the carpool lanes option is activated.

Entering an address

Multimedia system:

- Select Navigation.
- Select Destination → Address Entry.
If route guidance is active, first slide \( \odot \) the controller and show the menu.

Enter an address, e.g. as follows:
- City or ZIP code, street, house number
- Country, city or ZIP code
- City or ZIP code, center
- Street, city or ZIP code, intersection

\( \uparrow \) Select City.
The city in which the vehicle is currently located (current vehicle position) is at the top. Below this, you will see locations for which route guidance has already been carried out.

\( \uparrow \) Enter the city.
The \( \bigtriangleup \) symbol: the location is contained on the digital map multiple times.

\( \uparrow \) To switch to the list: slide the \( \oslash \) controller.

\( \uparrow \) Select the location.
If available, the ZIP code is shown. If there are different ZIP codes available for the location, the corresponding digits are displayed with an \( \times \).

\( \uparrow \) Enter the street and house number.
The address is in the menu.

Further options for destination entry:
- Keyword search
  The keyword search finds destinations using fragments of words.
- select the last destination
- select a contact
- select a POI
  You can search for a POI by location, name or telephone number.
- select destination on the map
- enter intermediate destination
  You can map the route to the destination yourself with up to four intermediate destinations.
- select destinations from Mercedes-Benz Apps
- select geo-coordinates

Calculating the route
Prerequisite: the address has been entered and is in the menu.

\( \uparrow \) Select Start or Continue.
The route is calculated with the selected route type and the selected route options.

If route guidance has already been activated, a prompt will appear asking whether you wish to end the current route guidance.

\( \uparrow \) Select Yes or Set as Intermediate Destination.
Yes cancels the current route guidance and starts route calculation to the new destination.
Set as Intermediate Destination adds the new destination in addition to the existing destination and opens the intermediate destinations list.

Connecting a mobile phone (COMAND)

Requirements
For telephony via the Bluetooth® interface, you require at least one Bluetooth®-capable mobile phone depending on use of one-telephone mode or two-telephone mode. The mobile phone must support Hands-Free Profile 1.0 or above.

In two-telephone mode you can use all the functions of the multimedia system with the main telephone. With the additional telephone, you can receive incoming calls.

Multimedia system:

\( \uparrow \) Select Vehicle → System Settings → Activate Bluetooth.

\( \uparrow \) Activate Bluetooth®.

Mobile phone:

\( \uparrow \) Activate Bluetooth® and, if necessary, Bluetooth® visibility for other devices (see the manufacturer’s operating instructions).

The Bluetooth® device names for all of one manufacturer’s products might be identical. To make it possible to clearly identify your mobile phone, change the device name (see the manufacturer’s operating instructions).

If the mobile phone supports the PBAP (Phone Book Access Profile) and MAP (Message Access Profile) Bluetooth® profiles, the following information will be transmitted after you connect:
- phone book
- call lists
- messages
Further information on suitable mobile phones can be obtained on the Internet at: http://www.mercedes-benz.com/connect.

In the USA, you can get in touch with the Mercedes-Benz Customer Assistance Center on 1-800-FOR-MERcedes (1-800-367-6372). In Canada, you can get in touch with the Customer Relations Center on 1-800-387-0100.

Searching for and authorizing a mobile phone

Before using your mobile phone with the multimedia system for the first time, you will need to search for the phone and then authorize (connect) it. Depending on the mobile phone, authorization either takes place by means of Secure Simple Pairing or by entering a passkey. The multimedia system automatically makes the procedure that is relevant for your mobile phone available. The mobile phone is always connected automatically after authorization. Further information on using a mobile phone with the multimedia system (see the Digital Operator’s Manual).

If the multimedia system does not detect your mobile phone, this may be due to particular security settings on your mobile phone (see the manufacturer’s operating instructions).

Only one mobile phone can be connected to the multimedia system at any one time.

Searching for a mobile phone

Multimedia system:

- Select Phone → Connect Device → Connect Another Device.
- One-telephone mode: select Main Phone.
- Two-telephone mode: select Additional Phone (Incoming Calls Only) when a mobile phone is already connected.
- Select Start Search.
- Select mobile phone.

Connecting a mobile phone

Authorization via Secure Simple Pairing

- The code on the multimedia system and mobile phone are the same: select Yes on the multimedia system.
- Confirm the code on the mobile phone, if required. Depending on the mobile phone used, confirm the connection to the multimedia system and for the PBAP and MAP Bluetooth profiles. The prompt to confirm may take up to two minutes to be displayed (see the manufacturer's operating instructions).

If the codes are different: select No on the multimedia system. The process is canceled. Repeat authorization.

Authorization via passkey entry (access code)

- Choose a one to sixteen-digit number combination as a passkey.
- Enter the passkey on the multimedia system.
- Press ok to confirm.
- Enter and confirm the passkey on the mobile phone. Depending on the mobile phone used, confirm the connection to the multimedia system and for the PBAP and MAP Bluetooth profiles. The prompt to confirm may take up to two minutes to be displayed (see the manufacturer’s operating instructions).

Media mode

General notes

If you wish to play external media sources, the appropriate media mode must already be turned on. Further information on media mode (see the Digital Operator’s Manual).

The following external media sources can be used:

- Apple devices (e.g. iPhone)
- USB devices (e.g. USB stick, MP3 player)
- CD/DVD (COMAND)
- SD cards (COMAND)
- Via devices connected by Bluetooth

Activating media mode

Multimedia system:

- Select Media → Devices. The available media sources will be shown.
- Select the media source. Playable files are played.
Inserting and removing the SD card (COMAND)

Important safety notes

**WARNING**

SD cards are small parts. They can be swallowed and cause choking. This poses an increased risk of injury or even fatal injury. Keep the SD card out of the reach of children. If a SD card is swallowed, seek medical attention immediately.

If you are no longer using the SD card, you should remove it and store it outside the vehicle. High temperatures can damage the card.

**Inserting an SD card**

The SD card slot is located in the stowage compartment under the armrest.

- Insert the SD card into the SD card slot until the SD card engages. The side with the contacts must face down.
- Select the media source (► page 215).

**Removing an SD card**

- Press the SD card.
  The SD card is ejected.
- Remove the SD card.

**Connecting USB devices**

There are two USB ports in the stowage space under the armrest.

- Connect the USB device to the USB port.
- Select the media source (► page 215).
The handling characteristics of a laden vehicle are dependent on the distribution of the load within the vehicle. For this reason, you should observe the following notes when transporting a load:

- Never exceed the maximum permissible gross vehicle mass or the gross axle weight rating for the vehicle (including occupants). The values are specified on the vehicle identification plate on the B-pillar of the driver’s door.
- The trunk is the preferred place to carry objects.
- Position heavy loads as far forwards as possible and as low down in the trunk as possible.
- The load must not protrude above the upper edge of the seat backrests.
- Secure the load with sufficiently strong and wear-resistant tie-downs. Pad sharp edges for protection.

**Stowage spaces**

**Important safety notes**

**WARNING**

If objects in the passenger compartment are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone brackets cannot always retain all objects they contain. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk.

Observe the loading guidelines (page 217).
Glove box

To open: pull handle ① and open glove box flap ②.
To close: fold glove box flap ② up until it engages.

The glove box can be locked and unlocked using the mechanical key.
To lock: insert the mechanical key into the lock and turn it to key position ②.
To unlock: insert the mechanical key into the lock and turn it to key position ①.

Stowage compartment under armrest

To open: press button ①. The stowage compartment opens from the rear.

Depending on the vehicle's equipment, the following may be in the stowage space:
- a multimedia connector unit with an SD card slot and two USB ports, for example, for use with an iPod®, iPhone® or MP3 player (see the Digital Operator’s Manual).

The ignition lock for starting the engine with the SmartKey is in the stowage compartment (> page 111).

Additional stowage space

Depending on the equipment, the following additional stowage areas are available in the vehicle:
- open stowage compartments in the doors
- stowage net in the front-passenger footwell
- a net on the rear wall behind the driver’s seat provides stowage space for small objects such as a reflective safety jacket

Reflective safety jackets can be stored in the door stowage compartments.

Observe the safety guidelines for stowage spaces (> page 217).
Features

Cup holder

Important safety notes

⚠️ **WARNING**
If objects in the passenger compartment are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone brackets cannot always retain all objects they contain. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk.

❗ Only use the cup holders for containers of the right size and which have lids. The drinks could otherwise spill.

Cup holder in the center console

- **To open**: slide cover ① forward until it engages.

The divider in the cup holder can be removed, e.g. for inserting smaller drinks cans.

- **To remove**: pull the divider up and remove it.
- **To install**: re-insert the divider and push it down until it engages.

You can remove the rubber mat of cup holder ② to clean it. Clean with clear, lukewarm water only.

Sun visors

Important safety notes

⚠️ **WARNING**
If the mirror cover of the vanity mirror is folded up when the vehicle is in motion, you could be blinded by incident light. There is a risk of an accident.

Always keep the mirror cover folded down while driving.

Sun visor (variant 1)

1️⃣ Mirror light
2️⃣ Retainer
3️⃣ Retaining clip, e.g. for a car park ticket
4️⃣ Vanity mirror
5️⃣ Mirror cover
Sun visor (variant 2)

1. Mirror light
2. Retainer
3. Retaining strip, e.g. for a parking lot ticket
4. Vanity mirror
5. Mirror cover

Vanity mirror in the sun visor

Mirror light 1 only functions if the sun visor is clipped into retainer 2 and mirror cover 5 has been folded up.

Moving the sun visor (sun visor variant 1 only)

► Fold down the sun visor.
► Slide the sun visor horizontally as desired.

Glare from the side

► Fold down sun visor 1.
► Pull sun visor 1 out of bracket 2.
► Swing sun visor 1 to the side.
► Slide sun visor 1 horizontally as required.

Ashtray

The stowage space under the ashtray is not heat resistant. Before placing lit cigarettes in the ashtray, make sure that the ashtray is properly engaged. Otherwise, the stowage space could be damaged.

You can place insert 4 into the cup holder on the left-hand or right-hand side.
► Slide cover 1 forwards until it engages.
► To open: lift up lid 2.
► To close: press lid 2 downwards.
► To remove: pull ashtray 3 up and out of insert 4.
► To insert: place ashtray 3 into insert 4.

Remove insert 4 to be able to use the entire cup holder. Store removed insert 4 and ashtray 3 in a suitable place. Observe the loading guidelines (► page 217).
Cigarette lighter

**WARNING**
You can burn yourself if you touch the hot heating element or the socket of the cigarette lighter.

In addition, flammable materials can ignite if:
- the hot cigarette lighter falls
- a child holds the hot cigarette lighter to objects, for example

There is a risk of fire and injury.

Always hold the cigarette lighter by the knob. Always make sure that the cigarette lighter is out of reach of children. Never leave children unsupervised in the vehicle.

Your attention must always be focused on the traffic conditions. Only use the cigarette lighter when road and traffic conditions permit.

- Select key position 2 with the Start/Stop button (> page 111).
- To open: slide cover 1 forward until it engages.
- Press in cigarette lighter 2. Cigarette lighter 2 will pop out automatically when the heating element is red-hot.
- To close: briefly press cover 1 at the front.

12 V sockets

**General notes**

- Select key position 1 with the Start/Stop button (> page 111).

The sockets can be used for accessories with a maximum draw of 180 W (15 A). Accessories include such items as chargers for mobile phones.

If you use the sockets for long periods when the engine is switched off, the battery may discharge.

An emergency cut-out ensures that the on-board voltage does not drop too low. If the on-board voltage is too low, the power to the sockets is automatically cut. This ensures that there is sufficient power to start the engine.

Socket in the trunk

- Lift up the cover of socket 1.

mbrace

**General notes**

The mbrace system is only available in the USA. A license agreement must be in place in order to activate the mbrace service. Make sure that your system is activated and operational. To register, press the Info call button. If any of the steps mentioned are not carried out, the system may not be activated.

If you have questions about the activation, contact one of the following telephone hotlines: Mercedes-Benz Customer Assistance Center at 1-800 FOR-MERCEDES (1-800-367-6372) or 1-866-990-9007.

Shortly after successfully registering with the mbrace service, a user ID and password will be sent to you by mail. You can use this password to log onto the mbrace area under “Owners Online” at http://www.mbusa.com.
The system is available if:
- it has been activated and is operational
- the corresponding mobile phone network is available for transmitting data to the Customer Center
- a service subscription is available

Determining the location of the vehicle on a map is only possible if:
- GPS reception is available
- the vehicle position can be forwarded to the Customer Assistance Center

The mbrace system

To adjust the volume during a call, proceed as follows:
- Press the [+] or [−] button on the multifunction steering wheel.
- Use the multimedia system volume control.

The system offers various services, e.g.:
- Automatic and manual emergency call
- Roadside Assistance call
- Info call

You can find information and a description of all available features under "Owners Online" at http://www.mbusa.com.

System self-test

After you have switched on the ignition, the system carries out a self-diagnosis.
A malfunction in the system has been detected if one of the following occurs:
- The indicator lamp in the SOS button does not come on during the system self-test.
- The indicator lamp in the ⚡ Roadside Assistance button does not light up during self-diagnosis of the system.
- The indicator lamp in the ⬊ Info call button does not light up during the system self-diagnosis.
- The indicator lamp in one or more of the following buttons continues to light up red after the system self-diagnosis:
  - SOS button
  - ⚡ Roadside Assistance call button
  - ⬊ Info call button

The Inoperative or the Service Not Activated message appears in the multifunction display after the system self-diagnosis.

If a malfunction is indicated as outlined above, the system may not operate as expected. In the event of an emergency, help will have to be summoned by other means.

Have the system checked at the nearest authorized Mercedes-Benz Center or call the following telephone assistance services:
Mercedes-Benz Customer Assistance Center at 1-800 FOR-MERCEDES (1-800-367-6372) or 1-866-990-9007.

Emergency call

Important safety notes

⚠️ WARNING
It can be dangerous to remain in the vehicle, even if you have pressed the SOS button in an emergency if:
- you see smoke inside or outside of the vehicle, e.g. if there is a fire after an accident
- the vehicle is on a dangerous section of road
- the vehicle is not visible or cannot easily be seen by other road users, particularly when dark or in poor visibility conditions

There is a risk of an accident and injury.

Leave the vehicle immediately in this or similar situations as soon as it is safe to do so.
Move to a safe location along with other vehicle occupants. In such situations, secure the vehicle in accordance with national regulations, e.g. with a warning triangle.

General notes

Observe the notes on system activation (> page 221).
The emergency call is triggered automatically if an air bag is deployed or an Emergency Ten-
sioning Device is triggered. You cannot end an automatically triggered emergency call yourself. An emergency call can also be initiated manually.

As soon as the emergency call has been initiated, the indicator lamp in the SOS button flashes. The Connecting Call message appears in the multifunction display. The audio output is muted.

Once the connection has been made, the Call Connected message appears in the multifunction display.

All important information on the emergency is transmitted, for example:

- Current location of the vehicle (as determined by the GPS system)
- Vehicle identification number
- Information on the severity of the accident

Shortly after the emergency call has been initiated, a voice connection is automatically established between the Customer Assistance Center and the vehicle occupants.

- If the vehicle occupants respond, the Mercedes-Benz Customer Assistance Center attempts to get more information on the emergency.
- If there is no response from the vehicle occupants, an ambulance is immediately sent to the vehicle.
- If the relevant mobile phone network is not available, no emergency call can be initiated.

The indicator lamp in the SOS button flashes continuously.

No voice connection can be established to the Mercedes-Benz Customer Assistance Center. The Call Failed message appears on the multifunction display and must be confirmed. In this case, summon assistance by other means.

### Making an emergency call

- **To initiate an emergency call manually:**
  press cover ① briefly to open.
- **Press and hold the SOS button for at least one second ②.**
  The indicator lamp in SOS button ② flashes until the emergency call is concluded.
- **Wait for a voice connection to the Mercedes-Benz Customer Assistance Center.**
- **After the emergency call, close cover ①.**

If the mobile phone network is unavailable, mbrace will not be able to make the emergency call. If you leave the vehicle immediately after pressing SOS button ②, you do not know if mbrace has successfully made the emergency call. In this case, always summon assistance by other means.

### Roadside assistance button

- **To call:** press Roadside Assistance button ①.
  This initiates a call to the Mercedes-Benz Customer Assistance Center.
  The indicator lamp in Roadside Assistance button ① flashes while the call is active. The Connecting Call message appears in the
multifunction display. The audio output is muted.

If a connection can be established, the **Call Connected** message appears in the multifunction display.

If a mobile phone network and GPS reception are available, the system transfers data to the Mercedes-Benz Customer Assistance Center, for example:

- Current location of the vehicle
- Vehicle identification number

The multimedia system display indicates that a call is active. During the call, you can change to the navigation menu by pressing the NAVI button on the multimedia system, for example.

Voice output is not available in this case.

A voice connection is established between the Mercedes-Benz Customer Assistance Center and the vehicle occupants.

From the remote malfunction diagnosis, the Mercedes-Benz Customer Assistance Center can ascertain the nature of the problem (> page 227).

The Mercedes-Benz Customer Assistance Center either sends a qualified Mercedes-Benz technician or makes arrangements for your vehicle to be transported to the nearest Mercedes-Benz Service Center.

You may be charged for services such as repair work and/or towing.

You can find more information in the separate mbrace manual.

The system has not been able to initiate a Roadside Assistance call, if:

- the indicator lamp for the Roadside Assistance call button is flashing continuously.
- no voice connection to the Mercedes-Benz Customer Assistance Center was established.

This can occur if the relevant mobile phone network is not available, for example.

The **Call Failed** message appears in the multifunction display.

**To end a call:** press the **button on the multifunction steering wheel.

or

Press the corresponding multimedia system button for ending a phone call.

---

**Info call button**

**To call:** press Info call button ①.

This initiates a call to the Mercedes-Benz Customer Assistance Center.

The indicator lamp in Info call button ① flashes while the connection is being made. The **Connecting Call** message appears in the multifunction display. The audio output is muted.

If a connection can be established, the **Call Connected** message appears in the multifunction display.

If a mobile phone network and GPS reception are available, the system transfers data to the Mercedes-Benz Customer Assistance Center, for example:

- Current location of the vehicle
- Vehicle identification number

The multimedia system display indicates that a call is active. During the call, you can change to the navigation menu by pressing the NAVI button on COMAND, for example.

Voice output is not available in this case.

A voice connection is established between the Mercedes-Benz Customer Assistance Center and the vehicle occupants.

You receive information about operating your vehicle, about the nearest Mercedes-Benz Service Center and about other products and services from Mercedes-Benz.

You can find further information on the mbrace system under "Owners Online" at [http://www.mbusa.com](http://www.mbusa.com).
The system was unable to initiate an Info call if:
- the indicator lamp in the Info call button is flashing continuously.
- no voice connection to the Mercedes-Benz Customer Assistance Center has been established.
This can occur if the relevant mobile phone network is not available, for example.
The Call Failed message appears in the multifunction display.

▶ To end a call: press the button on the multifunction steering wheel.
or
▶ Press the corresponding multimedia system button for ending a phone call.

Call priority

When service calls are active, e.g. Roadside Assistance or Info calls, an emergency call can still be initiated. In this case, an emergency call will take priority and override all other active calls.
The indicator lamp of the respective button flashes until the call is ended.
An emergency call can only be terminated by the Mercedes-Benz Customer Assistance Center.
All other calls can be ended by pressing:
- the button on the multifunction steering wheel
- the corresponding button in the multimedia system to end the voice call
When a call is initiated, the audio system is muted.
The mobile phone is no longer connected to the multimedia system.
However, if you want to use your mobile phone, do so only when the vehicle is stationary and in a safe location.

Downloading destinations in COMAND

Downloading destinations

Downloading destinations gives you access to a database with over 15 million points of interest (POIs). These can be downloaded on the navigation system in your vehicle. If you know the destination, the address can be downloaded. Alternatively, you can obtain the location of Points of Interest (POIs)/important destinations in the vicinity.

Furthermore, you can download routes with up to four way points.
You are prompted to confirm route guidance to the address entered.
▶ Select Yes by turning or sliding the controller and confirm with 7.
The system calculates the route and subsequently starts the route guidance with the address entered.
If you select No the address can be stored in the address book.

The destination download function is available if:
- the vehicle is equipped with a navigation system.
- the relevant mobile phone network is available and data transfer is possible.

Route Assistance

This service is part of the mbrace PLUS Package and cannot be purchased separately.
You can use the Route Assistance function even if the vehicle is not equipped with a navigation system.
Within the framework of this service, you receive a professional and reliable form of navigation support without having to leave your vehicle.
The customer service representative finds a suitable route depending on your vehicle’s current position and the desired destination. You will then be guided live through the current route section.

Search and Send

General notes

To use "Search & Send", your vehicle must be equipped with mbrace and a navigation system. Additionally, an mbrace service subscription must be completed.
"Search & Send" is a service for entering destinations in the navigation system. A destination address which is found on Google Maps® can be transferred via mbrace directly to your vehicle's navigation system.
Specifying and sending the destination address

- Go to the website http://maps.google.com and enter a destination address into the entry field.
- **To send the destination address to the e-mail address of your mbrace account:**
  - click on the corresponding button on the website.
  
  **Example:**
  - If you select "Send to vehicle" and then "Mercedes-Benz", the destination address will be sent to your vehicle.
  - When the "Send" dialog window appears:
    - Enter the e-mail address you specified when setting up your mbrace account into the corresponding field.
    - Click "Send".

Information on specific commands such as "Address entry" or "Send" can be found on the website.

Calling up a transmitted destination address

- Turn the SmartKey to position 2 in the ignition lock (page 111).
  - The transmitted destination address is loaded into the vehicle's navigation system.
  - A display message appears, asking whether navigation should be started.
  - Select **Yes** by turning or sliding the controller and confirm with .
  
  The system calculates the route and subsequently starts the route guidance with the address entered.

  - If you select **No** the address can be stored in the address book.
  - If you have sent more than one destination address, each individual destination must be confirmed separately.

Destination addresses are loaded in the same order as the order in which they were sent.

If you have multiple Mercedes-Benz vehicles with mbrace and active mbrace accounts:

- If multiple vehicles are registered under the same e-mail address, the destination will be sent to all the vehicles.

Vehicle remote opening

You can use the vehicle remote unlocking if you have unintentionally locked your vehicle and a replacement SmartKey is not available.

The vehicle can then be unlocked by the Mercedes-Benz Customer Assistance Center.

The vehicle can be immediately unlocked remotely within four days of the ignition being turned off. After this time, the remote unlocking may be delayed by 15 to 60 minutes. After 30 days, the vehicle can no longer be unlocked remotely.

The vehicle remote unlocking feature is available if the relevant mobile phone network is available and a data connection is possible.

- Contact the following service hotlines:
  - Mercedes-Benz Customer Assistance Center at 1-800 FOR-MERCEDES (1-800-367-6372) or 1-866-990-9007
  
  You will be asked for your password.

- Return to your vehicle at the time agreed upon with the Mercedes-Benz Customer Assistance Center.

Alternatively, the vehicle can be opened via:

- the Internet, under the "Owners Online" section
- telephone applications (e.g. for iPhone®, Android™)

To do this, you will need your identification number and password.

Vehicle remote closing

The vehicle remote closing feature can be used when you have forgotten to lock the vehicle and you are no longer nearby.

The vehicle can then be locked by the Mercedes-Benz Customer Assistance Center.

The vehicle can be immediately remotely locked within four days of the ignition being turned off. After this time, remote closing may be delayed by 15 to 60 minutes. After 30 days the vehicle can no longer be locked remotely.

The vehicle remote closing feature is available if the relevant mobile phone network is available and a data connection is possible.

- Contact the following service hotlines:
Mercedes-Benz Customer Assistance Center at 1-800 FOR-MERCEDES (1-800-367-6372) or 1-866-990-9007
You will be asked for your password.

The next time you are inside the vehicle and you switch on the ignition, the **Doors Locked Remotely** message appears in the multifunction display.

Alternatively, the vehicle can be locked via:
- the Internet, under the "Owners Online" section
- telephone applications (e.g. for iPhone®, Android™)

To do this, you will need your identification number and password.

**Stolen vehicle recovery service**

If your vehicle has been stolen:

- Notify the police.
  The police will issue a numbered incident report.
- Forward this number to the Mercedes-Benz Customer Assistance Center along with your PIN.
  The Mercedes-Benz Customer Assistance Center then tries to locate the system. The Mercedes-Benz Customer Assistance Center contacts you and the local law enforcement agency if the vehicle is located.
  However, only the law enforcement agency is informed of the location of the vehicle.

If the anti-theft alarm system is activated for longer than 30 seconds, mbrace automatically notifies the Mercedes-Benz Customer Assistance Center.

**Vehicle Health Check**

With the Vehicle Health Check, the Customer Assistance Center can provide improved support for problems with your vehicle. During an existing call, vehicle data is transferred to the Customer Assistance Center.

The customer service representative can use the received data to decide what kind of assistance is required. You are then, for example, guided to the nearest Mercedes-Benz Service Center or a recovery vehicle is called.

If vehicle data need to be transferred during an Info call or a Roadside Assistance call, this is initiated by the Customer Assistance Center.

The **Roadside Assistance Connected** message appears in the display. If the Vehicle Health Check can be started, the **Request for Vehicle Diagnostics Received** **Start vehicle diagnostics?** message appears in the display.

- Press the **Yes** button to confirm the message.
- If the **Vehicle Diagnostics Please Start Ignition** message appears: turn the SmartKey to key position 2 in the ignition lock (> page 111).
- If the **Please follow the instructions received by phone and move your vehicle to a safe position.** message appears: please follow the instructions received by phone and move your vehicle to a safe position.
  The message in the display disappears.
  The vehicle operating state check begins. During this procedure, you will see the **Vehicle Diagnostics Active** message.
  If you select **Cancel**, the Vehicle Health Check is canceled completely.

When the check is complete, the **Sending vehicle diagnostics data. (Voice connection may be interrupted during data transfer)** message appears. The vehicle data can now be sent.

- Press the **OK** button to confirm the message.
  The voice connection with the Customer Assistance Center is terminated.
  The **Vehicle Diagnostics: Transferring Data...** message appears.
  The vehicle data is sent to the Customer Assistance Center.

Depending on what the customer service representative agreed with you, the voice connection is re-established after the transfer is complete. If necessary, you will be contacted at a later time by another means, e.g. by e-mail or phone.

Another function of the Vehicle Health Check is the transfer of service data to the Customer Assistance Center. If a service is due, the display shows a message to this effect together with information about any special offers at your workshop.

This information can also be called up under "Owners Online" at [http://www.mbusa.com](http://www.mbusa.com). Information on the data stored in the vehicle (> page 29).
Information on Roadside Assistance (> page 26).

**Downloading routes**

Downloading routes allows you to transfer and save predefined routes in the navigation system.

A route can be prepared and sent either by a customer service representative or under "Owners Online" at [http://www.mbusa.com](http://www.mbusa.com).

Each route can include up to four waypoints.

Once a route has been received by the navigation system, you will see the **Do you want to start route guidance? Destination Received destination has been saved in "Previous destinations"** message on the multimedia system display.

The route is saved.

▶ **To start route guidance:** select **Yes**.

An overview of the route is shown in the display.

If you select **No**, the saved route can be called up later in the navigation menu.

▶ **Select Start**.

Route guidance starts.

Downloaded and saved routes can be called up again.

**Speed alert**

You can define the upper speed limit, which must not be exceeded by the vehicle.

If the vehicle exceeds the set speed, a message is sent to the Customer Assistance Center. The Customer Assistance Center then forwards this information to you.

You can select the way in which you receive this information beforehand. Possible options include text message, e-mail or an automated call.

The data you receive contains the following information:

- the location where the speed limit was exceeded
- the time at which the speed limit was exceeded
- the selected speed limit which was exceeded

**Geo fencing**

Geo fencing allows you to select areas which the vehicle should not enter or leave. You will be informed if the vehicle crosses the boundaries of the selected areas. You can select the way in which you receive this information beforehand. Possible options include text message, e-mail or an automated call.

The area can be determined as either a circle or a polygon with a maximum of ten corners. You can specify up to ten areas simultaneously. Different settings are possible for each area.

These settings can be called up under "Owners Online" at [http://www.mbusa.com](http://www.mbusa.com).

Alternatively, you can also trigger an Info call and notify the customer service representative that you wish to activate geo-fencing.

Currently inactive areas can be activated by text message.

**Triggering the vehicle alarm**

With this function, you can trigger the vehicle’s panic alarm via text message. An alarm sounds and the exterior lighting flashes. Depending on the setting, the panic alarm lasts five or ten seconds. Afterwards, the alarm switches off.

**Rear spoiler**

**Overview**

The rear spoiler improves the handling of the vehicle. It adapts the vehicle’s aerodynamics to the operating conditions, dependent on the speed of the vehicle.

Only use button ① to extend and retract the rear spoiler manually for cleaning.

Button ① is not used to operate the rear spoiler.
The rear spoiler is extended automatically if you drive faster than:
- 75 mph (120 km/h) in drive programs C, S and S+
- 44 mph (70 km/h) in drive program RACE
Button ① flashes until the rear spoiler has extended and then lights up in red.
The rear spoiler is retracted automatically when you drive slower than:
- 50 mph (80 km/h) in drive programs C, S and S+
- 19 mph (30 km/h) in drive program RACE
Button ① flashes until the rear spoiler has retracted and then goes out.

Extending and retracting the rear spoiler manually

**WARNING**

Body parts could become trapped if you manually extend/retract the rear spoiler. There is a risk of injury.

Make sure that nobody is within the range of movement of the rear spoiler.

If someone becomes trapped during retraction of the rear spoiler, release the button immediately. The rear spoiler then extends again.

Problems with the rear spoiler

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The rear spoiler stops before reaching the end position when retracting manually.</td>
<td>You have opened the trunk lid while manually retracting the rear spoiler. ▶ Close the trunk lid. The rear spoiler extends or, if you press and hold the [2] button, continues retracting.</td>
</tr>
<tr>
<td>The rear spoiler stops before reaching the end position when retracting/extending manually.</td>
<td>You have switched off the ignition. ▶ Switch the ignition back on. ▶ Press the [2] button. The rear spoiler extends/retracts.</td>
</tr>
</tbody>
</table>

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Never leave children unsupervised in the vehicle.

⚠️ Do not enter an automatic car wash with the rear spoiler extended. Otherwise, the rear spoiler may be damaged.

Only extend the rear spoiler in order to clean it by hand. Retract it again when you have finished cleaning it.

You can extend and retract the rear spoiler manually for cleaning.

- ▶ Close the trunk lid.
- ▶ Select key position [2] with the Start/Stop button (page 111).
- ▶ To extend: press button ①. The rear spoiler is extended. Button ① flashes until the rear spoiler has extended and then lights up in red.
- ▶ To retract: press and hold button ① until the rear spoiler is completely retracted. Button ① flashes until the rear spoiler has retracted and then goes out.

Rear Spoiler Retracts Manually appears in the display.

If you release button ① while retracting the rear spoiler, it extends again automatically.
Problem | Possible causes/consequences and Solutions
--- | ---
The rear spoiler cannot be retracted again after manually extending it. | You have opened the trunk lid while manually extending the rear spoiler.  
  ▶ Close the trunk lid.

The rear spoiler does not extend or retract automatically. | The rear spoiler's movement is blocked, e.g. by an object jammed between the body and the rear spoiler.  
  ▶ Remove the object.

Garage door opener

General notes

The HomeLink® garage door opener integrated in the rear-view mirror allows you to operate up to three different door and gate systems.
Use the integrated garage door opener only on garage doors that:
- have safety stop and reverse features and  
- meet current U.S. federal safety standards

Once programmed, the integrated garage door opener in the rear-view mirror will assume the function of the garage door system's remote control. Please also read the operating instructions for the garage door system.

When programming a garage door opener, park the vehicle outside the garage. Do not run the engine while programming.

Certain garage door drives are incompatible with the integrated garage door opener. If you have difficulty programming the integrated garage door opener, contact a Mercedes-Benz Service Center.

Alternatively, you can call the following telephone assistance services:
- **USA:** Mercedes-Benz Customer Assistance Center at 1-800 FOR-MERCEDES
- **Canada:** Customer Service at 1-800-387-0100
- **HomeLink® hotline** 1-800-355-3515 (free of charge)

More information on HomeLink® and/or compatible products is also available online at http://www.homelink.com.

Notes on the declaration of conformity (▶ page 27).

USA: FCC ID: CB2HMIHL4
Canada: IC: 279B-HMIHL4

Important safety notes

⚠️ **WARNING**

When you operate or program the garage door with the integrated garage door opener, persons in the range of movement of the garage door can become trapped or struck by the garage door. There is a risk of injury.

When using the integrated garage door opener, always make sure that nobody is within the range of movement of the garage door.

⚠️ **WARNING**

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases leads to poisoning. There is a risk of fatal injury. Therefore never leave the engine running in enclosed spaces without sufficient ventilation.

Programming

Programming the buttons

Pay attention to the "Important safety notes" (▶ page 230).
Garage door remote control is not included with the integrated garage door opener.

- Select SmartKey position 2 with the Start/Stop button (>
page 111).
- Select one of buttons 2 to 4 to use to control the garage door drive.

**To start programming mode:** press and hold one of buttons 2 to 4 on the integrated garage door opener.
The garage door opener is now in programming mode. After a short time, indicator lamp 1 lights up yellow.
Indicator lamp 1 lights up yellow as soon as button 2, 3 or 4 is stored for the first time. If the selected button has already been programmed, indicator lamp 1 will only light up yellow after ten seconds have elapsed.
- Release button 2, 3 or 4. Indicator lamp 1 flashes yellow.

**To program the remote control:** point garage door remote control towards buttons 2 to 4 on the rear-view mirror at a distance of 2 to 8 in (5 to 20 cm).
- Press and hold button 6 on remote control 5 until indicator lamp 1 lights up green. When indicator lamp 1 lights up green: programming is finished.

When indicator lamp 1 flashes green: programming was successful. The next step is to synchronize the rolling code (> page 231).
- Release button 3 on remote control 5 for the garage door drive system. If indicator lamp 1 lights up red: repeat the programming procedure for the corresponding button on the rear-view mirror. When doing so, vary the distance between remote control 5 and the rear-view mirror.
The required distance between remote control 5 and the integrated garage door opener depends on the garage door drive system. Several attempts might be necessary. You should test every position for at least 25 seconds before trying another position.

**Synchronizing the rolling code**
Pay attention to the "Important safety notes" (> page 230).
If the garage door system uses a rolling code, you will also have to synchronize the garage door system with the integrated garage door opener in the rear-view mirror. To do this you will need to use the programming button on the door drive control panel. The programming button may be located in different places depending on the manufacturer. It is usually located on the door drive unit on the garage ceiling. Familiarize yourself with the garage door drive operating instructions, e.g. under "Programming additional remote controls", before carrying out the following steps.
Your vehicle must be within reach of the garage door or gate opener drive. Make sure that neither your vehicle nor any persons/objects are present within the sweep of the door or gate.
- Select SmartKey position 2 with the Start/Stop button (> page 111).
- Get out of the vehicle.
- Press the programming button on the door drive unit.
You now have 30 seconds to initiate the next step.
- Get into the vehicle.
- Press previously programmed button 2, 3 or 4 on the integrated garage door opener repeatedly until the door closes. The rolling code synchronization is then complete.

**Notes on programming the remote control**
Canadian radio frequency laws require a "break" (or interruption) of the transmission signals after broadcasting for a few seconds. Therefore, these signals may not last long enough for the integrated garage door opener. The signal is not recognized during programming. Comparable with Canadian law, some U.S. garage door openers also feature a "break".
Proceed as follows:
- if you live in Canada.
- if you have difficulties programming the garage door opener (regardless of where you live) when following the programming steps.
- Press and hold one of buttons 2 to 4 on the integrated garage door opener. After a short time, indicator lamp 1 lights up yellow.
- Release the button. Indicator lamp 1 flashes yellow.
- Press button 6 of garage door remote control 5 for two seconds, then release it for two seconds.
- Press button 6 again for two seconds.
Repeat this sequence on button 6 of remote control 5 until indicator lamp 1 lights up green.
When indicator lamp 1 lights up green: programming is finished.
When indicator lamp 1 flashes green: programming was successful. The next step is to synchronize the rolling code.

Release button 6 of remote control 5 of the garage door drive.
When indicator lamp 1 lights up red: repeat the programming process for the corresponding button on the rear-view mirror. When doing so, vary the distance between remote control 5 and the rear-view mirror.
The required distance between remote control 5 and the integrated garage door opener depends on the garage door drive system. Several attempts might be necessary. You should test every position for at least 25 seconds before trying another position.

Problems when programming
If you are experiencing problems programming the integrated garage door opener on the rear-view mirror, take note of the following instructions:

- Check the transmitter frequency used by garage door drive remote control 5 and whether it is supported. The transmitter frequency can usually be found on the back of remote control 5 for the garage door drive.
The integrated garage door opener is compatible with devices that have units which operate in the frequency range of 280 to 433 MHz.

- Replace the batteries in garage door remote control 5. This increases the likelihood that garage door remote control 5 will transmit a strong and precise signal to the integrated garage door opener.
- When programming, hold remote control 5 at varying distances and angles from buttons 2 to 4 which you are programming. Try various angles at a distance between 2 and 8 inches (5 to 20 cm) or at the same angle but at varying distances.
- If a further remote control 5 is available for the same garage door drive, repeat the same programming steps with this remote control 5. Before performing these steps, make sure that new batteries have been installed in garage door drive remote control 5.

- Note that some remote controls only transmit for a limited amount of time (the indicator lamp on the remote control goes out). Press button 6 on remote control 5 again before transmission ends.
- Align the antenna cable of the garage door opener unit. This can improve signal reception/transmission.

Opening/closing the garage door
After it has been programmed, the integrated garage door opener performs the function of the garage door system remote control. Please also read the operating instructions for the garage door system.

- Select key position 2 with the Start/Stop button (page 111).
- Press button 2, 3 or 4 which you programmed to operate the garage door.
Garage door system with a fixed code: indicator lamp 1 lights up green.
Garage door system with a rolling code: indicator lamp 1 flashes green.
The transmitter will transmit a signal as long as the button is pressed. The transmission is halted after a maximum of ten seconds and indicator lamp 1 lights up yellow.

- Press button 2, 3 or 4 again if necessary.

Clearing the memory
Make sure that you clear the memory of the integrated garage door opener before selling the vehicle.

- Select key position 2 with the Start/Stop button (page 111).
- Press and hold buttons 2 and 4. Indicator lamp 1 initially lights up yellow and then green.
- Release buttons 2 and 4.
The memory of the integrated garage door opener in the rear-view mirror is cleared.

Floormats

⚠️ WARNING
Objects in the driver’s footwell can restrict the pedal travel or obstruct a depressed pedal.
The operating and road safety of the vehicle is jeopardized. There is a risk of an accident. Make sure that all objects in the vehicle are stowed correctly, and that they cannot enter the driver’s footwell. Install the floormats securely and as specified in order to ensure sufficient clearance for the pedals. Do not use loose floormats and do not place floormats on top of one another.

- Slide the driver’s seat backwards.
- **To install:** place the floormat in position. Press studs ① onto retainers ②.
- **To remove:** pull the floormat off retainers ②.
- Remove the floormat.
### Engine compartment

#### Hood

#### Important safety notes

**WARNING**
If the hood is unlatched, it may open up when the vehicle is in motion and block your view. There is a risk of an accident. Never unlatch the hood while driving. Before every trip, ensure that the hood is locked.

**WARNING**
When opening and closing the hood, it may suddenly fall into the closed position. There is a risk of injury to persons within range of movement of the hood. Open and close the hood only when no one is within its range of movement.

**WARNING**
Opening the hood when the engine is overheated or when there is a fire in the engine compartment could expose you to hot gases or other service products. There is a risk of injury. Let an overheated engine cool down before opening the hood. If there is a fire in the engine compartment, keep the hood closed and contact the fire department.

**WARNING**
The engine compartment contains moving components. Certain components, such as the radiator fan, may continue to run or start again suddenly when the ignition is off. There is a risk of injury. If you need to do any work inside the engine compartment:
- switch off the ignition
- never reach into the area where there is a risk of danger from moving components, such as the fan rotation area

**WARNING**
The ignition system and the fuel injection system work under high voltage. If you touch components which are under voltage, you could get an electric shock. There is a risk of injury. Never touch components of the ignition system or fuel injection system when the ignition is switched on.

**WARNING**
Opening the hood

**WARNING**
Certain components in the engine compartment, such as the engine, radiator and parts of the exhaust system, can become very hot. Working in the engine compartment poses a risk of injury. Where possible, let the engine cool down and touch only the components described in the following.

**WARNING**
When the hood is open and the windshield wipers are set in motion, you can be injured by the wiper linkage. There is a risk of injury. Always switch off the windshield wipers and the ignition before opening the hood.

Make sure that the windshield wipers are not folded away from the windshield. You could otherwise damage the windshield wipers or the hood.
Make sure that the windshield wipers are turned off.
Pull release lever ① on the hood. The hood is released.
Reach into the gap, pull hood catch handle ② up and lift the hood. If you lift the hood, the hood is opened and held open automatically by the gas-filled strut.

Closing the hood

WARNING
When opening and closing the hood, it may suddenly fall into the closed position. There is a risk of injury to persons within range of movement of the hood.
Open and close the hood only when no one is within its range of movement.

Lower the hood and let it fall from a height of approximately 8 in (20 cm).
Check that the hood has engaged properly. If the hood can be raised slightly, it is not properly engaged. Open it again and close it with a little more force.

Engine oil

Notes on the oil level
Depending on your driving style, the vehicle consumes up to 0.9 US qt (0.8 liters) of oil per 600 miles (1,000 km). The oil consumption may be higher than this when the vehicle is new or if you frequently drive at high engine speeds.
Depending on the engine, the oil dipstick may be in a different location.
It is only possible to correctly measure the oil level when:
- the engine is at normal operating temperature
- the vehicle is parked on a level surface
- the engine is left running in neutral for at least 30 seconds before switching off
This applies when checking the oil level using the oil dipstick or on-board computer.

Checking the oil level using the oil dipstick

WARNING
Certain components in the engine compartment, such as the engine, radiator and parts of the exhaust system, can become very hot. Working in the engine compartment poses a risk of injury.
Where possible, let the engine cool down and touch only the components described in the following.
It is only possible to correctly measure the oil level with the oil dipstick when the engine is at normal operating temperature and in a period of 2 to minutes after the engine has been switched off.
Pull oil dipstick ① out of the dipstick guide tube.
Wipe off oil dipstick ①.
Slowly slide oil dipstick ① into the guide tube to the stop, and take it out again. If the level is between MIN mark ③ and MAX mark ②, the oil level is correct.
If the oil level has dropped to MIN mark ③ or below, add 1.1 US qt (1.0 liter) engine oil.

Checking the oil level using the on-board computer

Calling up the oil level measurement
Select key position [2] with the Start/Stop button.
Use [ ] on the steering wheel to call up the list of menus.
Press the [▼] or [▲] button on the steering wheel to select the Service menu.
Confirm by pressing [OK] on the steering wheel.
Use [▼] or [▲] to select the Engine Oil Level submenu.
Press [OK] to confirm the selection.
The Measuring Engine Oil Level Accurate Only When Vehicle Is Level message appears in the multifunction display.
The measurement takes a few seconds. You will see a message in the multifunction display. The messages are explained in the following chapter.

Engine oil level display messages

<table>
<thead>
<tr>
<th>Display messages</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine Oil Level OK</td>
<td>The engine oil level is correct.</td>
</tr>
<tr>
<td>Check Engine Oil Level (Add 1 Liter)</td>
<td>The engine oil level is too low. Add 1.1 US qt (1.0 liter) of engine oil.</td>
</tr>
<tr>
<td>Reduce Engine Oil Level</td>
<td>The engine oil level is too high.</td>
</tr>
<tr>
<td></td>
<td>Have excess engine oil siphoned off.</td>
</tr>
<tr>
<td>For Engine Oil Level Ignition Must Be On</td>
<td>The ignition is switched off.</td>
</tr>
<tr>
<td>Need More Time to Check Engine Oil Level</td>
<td>The required waiting period was not observed.</td>
</tr>
<tr>
<td>Engine Oil Level Not Measurable with Engine Running</td>
<td>The engine is running; oil level measurement is not possible.</td>
</tr>
<tr>
<td></td>
<td>Switch off the engine.</td>
</tr>
<tr>
<td></td>
<td>Repeat the measurement. Observe the required waiting period.</td>
</tr>

Display messages | Possible causes/consequences and Solutions
--- | ---
**Engine Oil Level Correct Measurement Only if Vehicle Is on Level Ground** | The vehicle is not parked on a level surface. ▶ Park the vehicle on a level surface.

**Engine Oil Level Not Measurable** | Oil level measurement with the oil dipstick is possible. The measuring system is malfunctioning. ▶ Visit a qualified specialist workshop.

---

**Adding engine oil**

⚠️ **WARNING**
Certain components in the engine compartment, such as the engine, radiator and parts of the exhaust system, can become very hot. Working in the engine compartment poses a risk of injury.

Where possible, let the engine cool down and touch only the components described in the following.

⚠️ **WARNING**
If engine oil comes into contact with hot components in the engine compartment, it may ignite. There is a risk of fire and injury.

Make sure that engine oil is not spilled next to the filler neck. Let the engine cool down and thoroughly clean the engine oil off the components before starting the engine.

💡 **Environmental note**
When adding oil, take care not to spill any. If oil enters the soil or waterways, it is harmful to the environment.

⚠️ Use only engine oils and oil filters that are approved for vehicles with a service system. A list of the engine oils and oil filters that have been tested and approved in accordance with Mercedes-Benz Specifications for Service Products is available at any authorized Mercedes-Benz Center.

The following cause engine failure or damage to the exhaust system:
- Use of engine oils and oil filters that have not been expressly approved for the service system
- Replacement of engine oil and oil filter after the replacement interval specified by the service system has expired
- Use of engine oil additives

⚠️ Do not add too much oil. If the oil level is above the "max" mark on the dipstick, too much oil has been added. This can lead to damage to the engine or the catalytic converter. Have excess oil siphoned off.

Example: engine oil cap
▶ Turn cap (1) counter-clockwise and remove it.
▶ Add engine oil.
If the oil level is at or below the MIN mark on the oil dipstick, add 1.1 US qt (1.0 liter) of engine oil.
▶ Replace cap (1) on the filler neck and turn clockwise.
Ensure that the cap locks into place securely.
▶ Check the oil level again with the oil dipstick (▶ page 235).

Further information on engine oil (▶ page 289).
Additional service products

Checking coolant level

⚠️ WARNING
Certain components in the engine compartment, such as the engine, radiator and parts of the exhaust system, can become very hot. Working in the engine compartment poses a risk of injury. Where possible, let the engine cool down and touch only the components described in the following.

⚠️ WARNING
Opening the hood when the engine is overheated or when there is a fire in the engine compartment could expose you to hot gases or other service products. There is a risk of injury. Let an overheated engine cool down before opening the hood. If there is a fire in the engine compartment, keep the hood closed and contact the fire department.

⚠️ WARNING
The cooling system is pressurized, particularly when the motor is warm. If you open the cap, you could be scalded if hot coolant sprays out. There is a risk of injury. Let the engine cool down before you open the cap. Wear gloves and eye protection. Slowly open the cap to relieve pressure.

⚠️ Before starting your journey, make sure that all engine covers are installed. Otherwise, the engine can be damaged, e.g. through overheating.

Example

▶ Park the vehicle on a level surface. Only check the coolant level when the vehicle is on a level surface and the engine has cooled down.
▶ Select key position 2 with the Start/Stop button.
▶ Check the coolant temperature display in the instrument cluster. The coolant temperature must be below 158 °F (70 °C).
▶ Select key position 0 with the Start/Stop button.
▶ Remove engine cover 1 upwards on both sides.
▶ Slowly turn cap 2 half a turn counter-clockwise to allow excess pressure to escape.
▶ Turn cap 2 further counter-clockwise and remove it. If the coolant is at the level of the marker bar in the filler neck when cold, there is enough coolant in coolant expansion tank 3.
▶ If the coolant level is approximately 0.6 in (1.5 cm) above the marker bar in the filler neck when warm, there is enough coolant in coolant expansion tank 3.
▶ If necessary, add coolant that has been tested and approved by Mercedes-Benz.
Replace cap ② and turn it clockwise as far as it will go.
Replace engine cover ①.
For further information on coolant, see (> page 290).

Windshield washer system

**WARNING**
Certain components in the engine compartment, such as the engine, radiator and parts of the exhaust system, can become very hot. Working in the engine compartment poses a risk of injury.
Where possible, let the engine cool down and touch only the components described in the following.

**WARNING**
Windshield washer concentrate could ignite if it comes into contact with hot engine components or the exhaust system. There is a risk of fire and injury.
Make sure that no windshield washer concentrate is spilled next to the filler neck.

Example

- **To open:** pull cap ① upwards by the tab.
- **To close:** press cap ① onto the filler neck until it engages.

If the washer fluid level drops below the recommended minimum of 1 liter, a message appears in the multifunction display prompting you to add washer fluid (> page 196).
Further information on windshield washer fluid/antifreeze (> page 290).
Displaying service messages

- Switch on the ignition.
- Use \[\text{on}\] on the steering wheel to call up the list of menus.
- Press \[\text{on}\] or \[\text{on}\] on the steering wheel to select the Service menu and confirm with \[\text{OK}\].
- Press \[\text{on}\] or \[\text{on}\] on the steering wheel to select the ASSYST PLUS submenu and confirm with \[\text{OK}\].

The service due date appears in the multifunction display.

Information about Service

Resetting the ASSYST PLUS service interval display

If the ASSYST PLUS service interval display has been inadvertently reset, this setting can be corrected at a qualified specialist workshop.

Have service work carried out as described in the Maintenance Booklet. This may otherwise lead to increased wear and damage to the major assemblies or the vehicle.

A qualified specialist workshop, e.g. an authorized Mercedes-Benz Center, will reset the ASSYST PLUS service interval display after the service work has been carried out. You can also obtain further information on maintenance work, for example.

Special service requirements

The specified maintenance interval takes only the normal operation of the vehicle into account. Under arduous operating conditions or increased load on the vehicle, maintenance work must be carried out more frequently, for example:

- Regular city driving with frequent intermediate stops
- If the vehicle is primarily used to travel short distances
- Use in mountainous terrain or on poor road surfaces
- If the engine is often left idling for long periods
- In racetrack mode

Under these or similar conditions, have, for example, the air filter, engine oil and oil filter replaced or changed more frequently. Under arduous operating conditions, the tires must be checked more often. Further information can be obtained at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

In racetrack mode, the vehicle is subject to higher loads, meaning that additional maintenance work is required. If you plan race-track use, consult a qualified specialist workshop first. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.

Driving abroad

An extensive Mercedes-Benz Service network is also available in other countries. You can obtain further information from any authorized Mercedes-Benz Center.

Care

General notes

- Environmental note

Dispose of empty packaging and cleaning cloths in an environmentally responsible manner.

- When cleaning your car, do not use:
  - dry, coarse or hard cloths
  - abrasive cleaning agents
  - solvents
  - cleaning agents containing solvents

Do not scrub.

Do not touch the surfaces and films with hard objects, e.g. rings or ice scrapers. Otherwise, you may scratch or damage the surfaces and films.

- Do not park your vehicle for a long period of time directly after cleaning, particularly after cleaning the wheel rim with wheel cleaner.

Wheel cleaner can lead to the increased corrosion of the brake discs and pads. Therefore, drive for a few minutes after cleaning. By heating up the brakes, the brake discs and pads dry. The vehicle can then be parked for a long period of time.
Regular care of your vehicle is a condition for retaining the quality in the long term. Use care products and cleaning agents recommended and approved by Mercedes-Benz.

Washing the vehicle and cleaning the paintwork

Automatic car wash

**WARNING**
Braking efficiency is reduced after washing the vehicle. There is a risk of an accident. After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until full braking power is restored.

- When Active Brake Assist, Distance Pilot DISTRONIC or the HOLD function is activated, the vehicle brakes automatically in certain situations. To avoid damage to the vehicle, deactivate these systems in the following or similar situations:
  - when towing the vehicle
  - in the car wash

- Preferably use automatic car washes with adjustable high-pressure pre-cleaning. This corresponds with the specification for the Cabriolet program. In car washes that use high water pressures, there is a risk that a small amount of water may leak into the vehicle.

- Make sure that the vehicle is not subsequently treated with hot wax.

- Never clean your vehicle in a Touchless Automatic Car Wash as these use special cleaning agents. These cleaning agents can damage the paintwork or plastic parts. If you have your vehicle cleaned in a high-pressure automatic car wash, small amounts of water may enter the vehicle.

- If the SmartKey is within the rear detection range of KEYLESS-GO, the following situations, for example, could lead to the unintentional opening of the trunk lid:
  - when using an automatic car wash
  - when using a power washer

Make sure that the SmartKey is at least 10 ft (3 m) away from the vehicle.

- Make sure that:
  - the side windows are fully closed.
  - the blower for the ventilation/heating is switched off.
  - the windshield wiper switch is at position 0.
  - the rear view camera is switched off.

The vehicle may otherwise be damaged.

- When washing your vehicle in a tow-through car wash, use the SmartKey instead of the Start/Stop button.

Start the engine using the SmartKey. Set the transmission to N with the E-SELECT selector lever. Switch the engine off again with the SmartKey by turning the SmartKey to position 2. Make sure that you then leave the SmartKey in position 2. You may otherwise damage the vehicle, the transmission or the car wash.

Check the transmission position in the instrument cluster.

- Before switching off the engine, set the transmission to N using the E-SELECT selector lever. If you open the driver's door or front-passenger door, the transmission remains in this position for up to 30 minutes if the SmartKey is in the ignition, even if the engine is switched off. If you do not shift the transmission to N using the E-SELECT selector lever beforehand, it shifts automatically to parking position P and locks the wheels if the driver's door or front-passenger door is opened and the engine is switched off. This may damage the vehicle, the transmission or the car wash.

You can wash the vehicle in an automatic car wash from the very start. If the vehicle is very dirty, pre-wash it before cleaning it in an automatic car wash.

After using an automatic car wash, wipe off wax from the windshield and the wiper blades. This will prevent smears and reduce wiping noises caused by residue on the windshield.

Washing by hand

In some countries, washing by hand is only allowed at specially equipped washing bays. Observe the legal requirements in each country.
Do not use hot water and do not wash the vehicle in direct sunlight.

Use a soft sponge to clean.

Use a mild cleaning agent, such as a car shampoo approved by Mercedes-Benz.

Thoroughly hose down the vehicle with a gentle jet of water.

Do not point the water jet directly towards the air inlet.

Use plenty of water and rinse out the sponge frequently.

Rinse the vehicle with clean water and dry thoroughly with a chamois.

Do not let the cleaning agent dry on the paintwork.

Carefully remove all deposits of road salt as soon as possible when driving in winter.

Power washers

⚠️ WARNING

The water jet from a circular jet nozzle (dirt blasters) can cause invisible exterior damage to the tires or chassis components. Components damaged in this way may fail unexpectedly. There is a risk of an accident.

Do not use power washers with circular jet nozzles to clean the vehicle. Have damaged tires or chassis components replaced immediately.

Always maintain a distance of at least 11.8 in (30 cm) between the vehicle and the high-pressure cleaner nozzle. Information about the correct distance is available from the equipment manufacturer.

Move the power washer nozzle around when cleaning your vehicle.

Do not aim directly at any of the following:

- tires
- door gaps, joints etc.
- soft top
- wind deflector net
- electrical components
- battery
- plug-type couplings
- lights
- seals
- trim
- ventilation slots

Damaged seals or electrical components can lead to leaks or failures.

⚠️ Vehicles with decorative foil: parts of your vehicle are covered with decorative foil. Maintain a distance of at least 27.5 in (70 cm) between the foil-wrapped parts of the vehicle and the nozzle of the high pressure cleaner. Information about the correct distance is available from the equipment manufacturer. Move the power washer nozzle around when cleaning your vehicle.

The water temperature of the high-pressure cleaner must not exceed 140 °F (60 °C).

⚠️ If the SmartKey is within the rear detection range of KEYLESS-GO, the following situations, for example, could lead to the unintentional opening of the trunk lid:

- when using an automatic car wash
- when using a power washer

Make sure that the SmartKey is at least 10 ft (3 m) away from the vehicle.

Cleaning the paintwork

⚠️ Do not affix:

- stickers
- films
- magnetic plates or similar items to painted surfaces. You could otherwise damage the paintwork.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by inadequate care cannot always be completely repaired. In such cases, visit a qualified specialist workshop.

- Remove dirt immediately, where possible, while avoiding rubbing too hard.
- Soak insect remains with insect remover and rinse off the treated areas afterwards.
- Soak bird droppings with water and rinse off the treated areas afterwards.
- Remove coolant, brake fluid, tree resin, oils, fuels and greases by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Use tar remover to remove tar stains.
- Use silicone remover to remove wax.
If water no longer forms "beads" on the paint surface, use the paint care products recommended and approved by Mercedes-Benz. This is the case approximately every three to five months, depending on the climate conditions and the care product used.

If dirt has penetrated the paint surface or if the paint has become dull, the paint cleaner recommended and approved by Mercedes-Benz should be used.

Do not use these care products in the sun or on the hood while the hood is hot.

➢ Use a suitable touch-up stick, e.g. MB Touch-Up Stick, to repair slight damage to the paintwork quickly and provisionally.

### Matte finish care

➢ Never polish the vehicle or the light alloy wheels. Polishing causes the finish to shine.

➢ The following can give the paint a glossy appearance and thus reduce the matt effect:
  • Rubbing hard with unsuitable agents
  • Washing the vehicle in direct sunlight

➢ Never use paint cleaner, buffing or polishing products, or gloss preserver, e.g. wax, for the purpose of paintwork care. These products are only suitable for high-gloss surfaces. Their use on vehicles with matte paintwork leads to considerable surface damage or, more specifically, to shiny, spotted areas. Always have paintwork repairs carried out at a qualified specialist workshop.

➢ Only use automatic car washes which correspond to the latest technological standards. Never use wash programs which finish by treating the vehicle with hot wax.

Observe these notes if your vehicle has a clear matte finish. This will help you to avoid damage to the paintwork due to incorrect treatment. These notes also apply to light alloy wheels with a clear matte finish.

➢ Use only insect remover and car shampoo from the range of approved Mercedes-Benz care products.

### Cleaning the vehicle parts

#### Cleaning the wheels

⚠️ **WARNING**

The water jet from a circular jet nozzle (dirt blasters) can cause invisible exterior damage to the tires or chassis components. Components damaged in this way may fail unexpectedly. There is a risk of an accident.

Do not use power washers with circular jet nozzles to clean the vehicle. Have damaged tires or chassis components replaced immediately.

➢ Do not use acidic wheel cleaning products to remove brake dust. This could damage wheel bolts and brake components.

➢ Do not park your vehicle for a long period of time directly after cleaning, particularly after cleaning the wheel rim with wheel cleaner. Wheel cleaner can lead to the increased corrosion of the brake discs and pads. Therefore, drive for a few minutes after cleaning. By heating up the brakes, the brake discs and pads dry. The vehicle can then be parked for a long period of time.

#### Cleaning the windows

⚠️ **WARNING**

You could become trapped by the windshield wipers if they start moving while cleaning the windshield or wiper blades. There is a risk of injury.

Always switch off the windshield wipers and the ignition before cleaning the windshield or wiper blades.

➢ Do not use dry cloths, abrasive products, solvents or cleaning agents containing solvents to clean the inside of the windows. Do not touch the insides of the windows with hard objects, e.g. an ice scraper or ring. There is otherwise a risk of damaging the windows.

➢ Clean the water drainage channels of the windshield and the rear window at regular intervals. Deposits such as leaves, petals and pollen may under certain circumstances prevent water from draining away. This can lead
to corrosion damage and damage to electronic components.

- Clean the inside and outside of the windows with a damp cloth and a cleaning product that is recommended and approved by Mercedes-Benz.

**Cleaning the soft top**

- **Never use any of the following to clean the soft top:**
  - gasoline
  - thinner
  - tar or stain remover
  - other organic solvents

- **Remove bird droppings immediately, as they are corrosive and can therefore cause the soft-top fabric to leak.** Do not wash the vehicle with a power washer or in a car wash that uses power washers. Do not use sharp-edged equipment to remove ice and snow.

- **Light soiling:** you can clean the soft top while it is dry or rinse it with clear water.

- **Normal to heavy soiling:** clean the soft top with a brush and clear water. Clean stains and other dirt with a brush and soft top cleaning agents that have been recommended and approved by Mercedes-Benz. Always brush from front to back, following the grain of the fabric.

Frequent cleaning reduces the soft top’s resistance to dirt. To restore this resistance to dirt, clean the soft top using soft top cleaning agents that have been recommended and approved by Mercedes-Benz.

Incorrect cleaning and care, as well as aging, can cause the soft-top seams to leak. In the event of this happening, have the soft-top seams sealed at a qualified specialist workshop.

- **Cover the soft top appropriately if you plan to leave the vehicle outside for a long period of time.**

**Cleaning wiper blades**

- **WARNING**
  You could become trapped by the windshield wipers if they start moving while cleaning the windshield or wiper blades. There is a risk of injury.

Always switch off the windshield wipers and the ignition before cleaning the windshield or wiper blades.

- **Do not pull the wiper blade. Otherwise, the wiper blade could be damaged.**

- **Do not clean wiper blades too often and do not rub them too hard. Otherwise, the graphite coating could be damaged. This could cause wiper noise.**

- Hold the wiper arm securely when folding back. The windshield could be damaged if the wiper arm smacks against it suddenly.

- Fold the windshield wiper arms away from the windshield.

- Carefully clean the wiper blades with a damp cloth.

- Fold the windshield wiper arms back again before switching on the ignition.

**Cleaning the exterior lighting**

- **Only use cleaning agents or cleaning cloths which are suitable for plastic light lenses.** Unsuitable cleaning agents or cleaning cloths could scratch or damage the plastic light lenses.

- Clean the plastic lenses of the exterior lighting using a wet sponge and a mild cleaning agent, e.g. Mercedes-Benz car shampoo or cleaning cloths.

**Cleaning the mirror turn signals**

- **Only use cleaning agents or cleaning cloths that are suitable for plastic lenses.** Unsuitable cleaning agents or cleaning cloths could scratch or damage the plastic lenses of the mirror turn signals.

- Clean the plastic lenses of the mirror turn signals in the exterior mirror housing using a wet sponge and mild cleaning agent, e.g. Mercedes-Benz car shampoo or cleaning cloths.
Cleaning the sensors

If you clean the sensors with a power washer, make sure that you keep a distance of at least 11.8 in (30 cm) between the vehicle and the power washer nozzle. Information about the correct distance is available from the equipment manufacturer.

Cleaning the exhaust pipe

**WARNING**
The exhaust tail pipe and tail pipe trim can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself. There is a risk of injury.

Always be particularly careful around the exhaust tail pipe and the tail pipe trim. Allow these components to cool down before touching them.

Do not clean the exhaust pipe with acid-based cleaning agents, such as bathroom cleaner or wheel cleaner.

Vehicles with black exhaust pipes: black chromed screens should not be polished with a chrome polish. They will otherwise lose their black shine. For optimal care, the screens should be rubbed with a lightly oiled cloth after every car wash. Commercially available engine and care oils are suitable for this. For heavier soiling, you can apply a fine paintwork polish with a microfiber cloth. Remove the excess polish residue after polishing.

Clean the exhaust pipe with a chrome care product tested and approved by Mercedes-Benz.

Impurities combined with the effects of road grit and corrosive environmental factors may cause flash rust to form on the surface. You can restore the original shine of the exhaust pipe by cleaning it regularly, especially in winter and after washing.

Interior care

Cleaning the display

For cleaning, do not use any of the following:
- alcohol-based thinner or gasoline
- abrasive cleaning agents
- commercially-available household cleaning agents

These may damage the display surface. Do not put pressure on the display surface when cleaning. This could lead to irreparable damage to the display.
Before cleaning the display, make sure that it is switched off and has cooled down.

Clean the display surface using a commercially available microfiber cloth and TFT/LCD display cleaner.

Dry the display surface using a dry microfiber cloth.

Cleaning the plastic trim

**WARNING**

Care products and cleaning agents containing solvents cause surfaces in the cockpit to become porous. As a result, plastic parts may come loose in the event of air bag deployment. There is a risk of injury.

Do not use any care products and cleaning agents to clean the cockpit.

Never attach the following to plastic surfaces:

- stickers
- films
- perfume oil container or similar

You could otherwise damage the plastic.

Do not allow cosmetics, insect repellent or sunscreen to come into contact with the plastic trim. This maintains the high-quality look of the surfaces.

Wipe the plastic trim with a damp, lint-free cloth, e.g. a microfiber cloth.

**Heavy soiling:** use care and cleaning products recommended and approved by Mercedes-Benz.

Cleaning the steering wheel and gear or selector lever

Thoroughly wipe with a damp cloth or use leather care agents that have been recommended and approved by Mercedes-Benz.

Cleaning the trim elements

Do not use solvent-based cleaning agents such as tar remover, wheel cleaners, polishes or waxes. There is otherwise a risk of damaging the surface.

**WARNING**

Do not use chrome polish on trim pieces. The trim pieces have a chrome look but are mostly made of anodized aluminum and can lose their shine if chrome polish is used. Use a damp, lint-free cloth instead when cleaning the trim pieces.

If the chrome-plated trim pieces are very dirty, you can use a chrome polish. If you are unsure as to whether the trim pieces are chrome-plated or not, consult an authorized Mercedes-Benz Center.

Wipe the trim elements with a damp, lint-free cloth, e.g. a microfiber cloth.

**Heavy soiling:** use care and cleaning products recommended and approved by Mercedes-Benz.

Cleaning the seat covers

**General notes**

Do not use a microfiber cloth to clean covers made out of real leather, artificial leather or DINAMICA. If used often, these can damage the cover.

Note that regular care is essential to ensure that the appearance and comfort of the covers is retained over time.

**Genuine leather seat covers**

To retain the natural appearance of the leather, observe the following cleaning instructions:

- Clean genuine leather covers carefully with a damp cloth and then wipe the covers down with a dry cloth.
- Make sure that the leather does not become soaked. It may otherwise become rough and cracked.
- Only use leather care agents that have been tested and approved by Mercedes-Benz. You can obtain these from a qualified specialist workshop.

Leather is a natural product.

It exhibits natural surface characteristics, for example:

- differences in the texture
- marks caused by growth and injury
- slight nuances of color

These are characteristics of leather and not material defects.
Seat covers of other materials

1 Observe the following when cleaning:
   • clean artificial leather covers with a cloth moistened with a solution containing 1% detergent (e.g. dish washing liquid).
   • clean cloth covers with a microfiber cloth moistened with a solution containing 1% detergent (e.g. dish washing liquid). Rub carefully and always wipe entire seat sections to avoid leaving visible lines. Leave the seat to dry afterwards. Cleaning results depend on the type of dirt and how long it has been there.
   • clean DINAMICA covers with a damp cloth. Make sure that you wipe entire seat sections to avoid leaving visible lines.

Cleaning the seat belts

WARNING
Seat belts can become severely weakened if bleached or dyed. This could cause the seat belts to tear or fail, for instance, in the event of an accident. This poses an increased risk of injury or fatal injury.
Never bleach or dye the seat belts.

1 Do not clean the seat belts using chemical cleaning agents. Do not dry the seat belts by heating at temperatures above 176 °F (80 °C) or in direct sunlight.
1 Use clean, lukewarm water and soap solution.

Cleaning the carpets

1 Use the carpet and textile cleaning agents recommended and approved by Mercedes-Benz.
Where will I find...?

**Reflective safety jacket**

Removing/replacing the reflective safety jacket

The reflective safety jackets are located in front door stowage compartments ①.

- **To remove:** pull out the safety jacket bag containing the reflective safety jacket.
- Open the safety jacket bag and pull out the reflective safety jacket.
- **To stow:** fold the reflective safety jacket, roll it up and stow it in safety jacket bag.
- Replace the safety jacket bag into stowage compartment ①.

Remove a new reflective safety jacket from its packaging material before sliding it into the stowage compartment. The packaging material may otherwise cause it to slip out or make removing it difficult.

Observe the legal requirements in each country.

**Information on reflective safety jackets**

- ① Maximum number of washes
- ② Maximum wash temperature
- ③ Do not bleach
- ④ Do not iron
- ⑤ Do not use a laundry dryer
- ⑥ Do not dry-clean
- ⑦ This is a class 2 jacket

- The reflective safety jackets meet the requirements defined by the legal standard only:
  - if the correct size is used
  - if the reflective safety jackets are correctly fastened
- Before use, ensure that the reflective safety jackets are clean and intact. The special properties may otherwise be compromised.
- The reflective safety jackets should be stored in their original packaging in a dry place away from sources of heat and light.
- The maximum number of washes specified is not the only factor influencing the life span of the reflective safety jackets. Their life span also depends on use, care, storage, etc.
- The reflective safety jackets should be disposed of and replaced with new ones:
  - after 15 washes, and/or
  - if the reflective strips have become scratched, and/or
  - if the backing material and/or reflective strips have become soiled and cannot be cleaned off, and/or
  - if the fluorescence has faded e.g. due to the effects of sunlight
- Dispose of reflective safety jackets in an environmentally responsible manner. To do so, contact your local waste disposal company.

**Vehicle tool kit**

**General notes**

Apart from certain country-specific variations, the vehicles are not equipped with a tire-change tool kit.

Some tools for changing a wheel are specific to the vehicle. For more information on which tire changing tools are required and approved to perform a wheel change on your vehicle, consult a qualified specialist workshop.

Necessary tire-changing tools can include, for example:

- jack
- wheel chock
The vehicle tool kit is located on the left side of the trunk in the stowage compartment behind service flap 1 or in the stowage compartment under trunk floor 2.

The vehicle tool kit is located on the left side of the boot in the stowage compartment behind service flap 1 or in the stowage compartment under trunk floor 2.

The towing eye is on the left side of the trunk in the stowage compartment under trunk floor 2. To open the stowage compartment under trunk floor 2, pull the sewed-on tab.

Vehicles with a tire-change tool kit

The tire-change tool kit is located on the left side of the trunk in the stowage compartment under the trunk floor.

Example

1. Folding wheel chock
2. Alignment bolt
3. Lug wrench
4. Towing eye
5. Jack

Please note that there can be equipment- and country-specific deviations for vehicles with a tire-change tool kit.

Depending on the equipment, tools required for a wheel change, such as a jack or a lug wrench, are not available in all vehicles. Tools approved for your vehicle are available at a qualified specialist workshop.

Vehicles with a TIREFIT kit

The TIREFIT kit is located on the left side of the trunk in the stowage compartment behind the service flap.

Removing:

- Open the trunk lid.
- Turn the fastener on the service flap counterclockwise.
- Open the service flap.
- Use the TIREFIT kit (> page 250).

Flat tire

Preparing the vehicle

Your vehicle may be equipped with:

- a TIREFIT kit (> page 248)

Information on changing and mounting wheels (> page 279).

- Stop the vehicle on solid, non-slippery and level ground, as far away as possible from traffic.
- Switch on the hazard warning lamps.
- Secure the vehicle against rolling away (> page 127).
If possible, bring the front wheels into the straight-ahead position.
Switch off the engine.
With KEYLESS-GO start function or vehicles with KEYLESS-GO: open the driver's door.
The vehicle electronics are now in key position [0]. This is the same as the SmartKey having been removed.
or
Remove the SmartKey from the ignition lock.
Make sure that the passengers are not endangered as they do so. Make sure that no one is near the danger area while a wheel is being changed. Anyone who is not directly assisting in the wheel change should, for example, stand behind the barrier.
Get out of the vehicle. Pay attention to traffic conditions when doing so.
Close the driver’s door.

**TIREFIT kit**

**Important safety notes**

TIREFIT is a tire sealant.
You can use TIREFIT to seal punctures of up to 0.16 in (4 mm), particularly those in the tire tread. You can use TIREFIT at outside temperatures down to -4 °F (-20 °C).

**WARNING**

In the following situations, the tire sealant is unable to provide sufficient breakdown assistance, as it is unable to seal the tire properly:
- there are cuts or punctures in the tire larger than those mentioned above.
- the wheel rim is damaged.
- you have driven at very low tire pressures or on a flat tire.
There is a risk of an accident.
Do not drive the vehicle. Contact a qualified specialist workshop.

**WARNING**

The tire sealant is harmful and causes irritation. It must not come into contact with your skin, eyes or clothing or be swallowed. Do not inhale TIREFIT fumes. Keep tire sealant away from children. There is a risk of injury.
If you come into contact with the tire sealant, observe the following:
- Rinse off the tire sealant from your skin immediately with water.
- If the tire sealant comes into contact with your eyes, immediately rinse them thoroughly with clean water.
- If tire sealant is swallowed, immediately rinse your mouth out thoroughly and drink plenty of water. Do not induce vomiting, and seek medical attention immediately.
- Immediately change out of clothing which has come into contact with tire sealant.
- If an allergic reaction occurs, seek medical attention immediately.

Do not operate the tire inflation compressor for longer than ten minutes at a time without a break. It may otherwise overheat.
The tire inflation compressor can be operated again once it has cooled down.
Comply with the manufacturer’s safety instructions on the tire inflation compressor label and on the tire sealant bottle.

**Using the TIREFIT kit**

- Do not remove any foreign objects which have penetrated the tire, e.g. screws or nails.
- Remove the tire sealant bottle, the accompanying TIREFIT sticker and the tire inflation compressor from the stowage compartment in the trunk (page 248).
Affix part 1 of the TIREFIT sticker to the instrument cluster within the driver's field of vision.

Affix part 2 of the TIREFIT sticker near the valve on the wheel with the defective tire.

Insert connector 4 into cigarette lighter socket (page 221) or into another 12 V socket in your vehicle (page 221).

Switch on the ignition with the Start/Stop button.

or

Turn the SmartKey to position 1 in the ignition lock (page 111).

Press on/off switch 3 on the tire inflation compressor.

The tire inflation compressor is switched on. The tire is inflated.

First, tire sealant is pumped into the tire. The pressure may briefly rise to approximately 500 kPa (5 bar/73 psi).

Do not switch off the tire inflation compressor during this phase.

Let the tire inflation compressor run for a maximum of ten minutes. The tire should then have attained a pressure of at least 180 kPa (1.8 bar/26 psi).

If a pressure of 180 kPa (1.8 bar/26 psi) has been attained after five minutes, see "Tire pressure reached" (page 252).

If a tire pressure of 180 kPa (1.8 bar/26 psi) has not been attained after five minutes, see "Tire pressure not reached" (page 251).

If tire sealant has escaped, clean it off affected areas as quickly as possible. It is preferable to use clean water.

If your clothes are soiled with tire sealant, have them cleaned with perchloroethylene at a dry cleaner as soon as possible.

Tire pressure not reached

If a pressure of 180 kPa (1.8 bar/26 psi) has not been attained after five minutes:

Switch off the tire inflation compressor.

Unscrew the filler hose from the valve of the faulty tire.

Tire sealant may escape when the filler hose is unscrewed.

Very slowly drive forwards or reverse approximately 30 ft (10 m).

Pump up the tire again.

After a maximum of ten minutes, the tire pressure must be at least 180 kPa (1.8 bar/26 psi).
**WARNING**
If the required tire pressure is not reached after the specified time, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance. Damaged tires and a tire pressure that is too low can significantly impair the vehicle's braking and driving characteristics. There is a risk of accident.
Do not continue driving. Contact a qualified specialist workshop.

---

**Tire pressure reached**

**WARNING**
A tire temporarily sealed with tire sealant impairs the driving characteristics and is not suitable for higher speeds. There is a risk of accident.
You should therefore adapt your driving style accordingly and drive carefully. Do not exceed the specified maximum speed with a tire that has been repaired using tire sealant.

The maximum permissible speed for a tire sealed with tire sealant is 50 mph (80 km/h). The upper part of the TIREFIT sticker must be affixed to the instrument cluster in the driver’s field of vision.

⚠️ Residue from the tire sealant may come out of the filler hose after use. This could cause stains.
Therefore, place the filler hose in the plastic bag which contained the TIREFIT kit.

**Environmental note**
Have the used tire sealant bottle disposed of professionally, e.g. at a qualified specialist workshop.

If a tire pressure of 180 kPa (1.8 bar/26 psi) has been attained after five minutes:
🔹 Switch off the tire inflation compressor.
🔹 Unscrew the filler hose from the valve of the faulty tire.
  Tire sealant may escape when the filler hose is unscrewed.
🔹 Stow the tire sealant bottle and the tire inflation compressor.

🔹 Pull away immediately.
🔹 Stop after driving for approximately ten minutes and check the tire pressure with the tire inflation compressor.
  The tire pressure must now be at least 130 kPa (1.3 bar/19 psi).

**WARNING**
If the required tire pressure is not reached after driving for a short period, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance. Damaged tires and a tire pressure that is too low can significantly impair the vehicle's braking and driving characteristics. There is a risk of accident.
Do not continue driving. Contact a qualified specialist workshop.

ℹ️ In cases such as the one mentioned above, contact an authorized Mercedes-Benz Center. Or call 1-800-FOR-MERCEDES (in the USA) or 1-800-387-0100 (in Canada).
🔹 Correct the tire pressure if it is still at least 130 kPa (1.3 bar/19 psi). See the Tire and Loading Information placard on the driver’s side B-pillar or the tire pressure table in the fuel filler flap for values.
🔹 **To increase the tire pressure**: switch on the tire inflation compressor.

🔹 **To reduce the tire pressure**: depress pressure release button 1 next to pressure gauge 2.
🔹 When the tire pressure is correct, unscrew the filler hose from the valve of the sealed tire. Tire sealant may escape when the filler hose is unscrewed.
🔹 Screw the valve cap onto the tire valve of the sealed tire.
Pull the tire sealant bottle out of the tire inflation compressor. The filler hose remains attached to the tire sealant bottle.

Drive to the nearest qualified specialist workshop and have the tire changed there.

Have the tire sealant bottle replaced as soon as possible at a qualified specialist workshop.

Have the tire sealant bottle replaced every four years at a qualified specialist workshop.

**Battery (vehicle)**

**Important safety notes**

Special tools and expert knowledge are required when working on the battery, e.g. removal and installation. You should therefore have all work involving the battery carried out at a qualified specialist workshop.

**WARNING**

Work carried out incorrectly on the battery can lead, for example, to a short circuit and thus damage the vehicle electronics. This can lead to function restrictions applying to safety-relevant systems, e.g. the lighting system, the ABS (anti-lock braking system) or the ESP® (Electronic Stability Program). The operating safety of your vehicle may be restricted. You could lose control of the vehicle, for example:

- when braking
- in the event of abrupt steering maneuvers and/or when the vehicle’s speed is not adapted to the road conditions

There is a risk of an accident.

In the event of a short circuit or a similar incident, contact a qualified specialist workshop immediately. Do not drive any further. You should have all work involving the battery carried out at a qualified specialist workshop.

For further information about ABS (page 58) and ESP® (page 62).

**Environmental note**

Batteries contain dangerous substances. It is against the law to dispose of them with the household rubbish. They must be collected separately and recycled to protect the environment.

Dispose of batteries in an environmentally friendly manner. Take discharged batteries to a qualified specialist workshop or a special collection point for used batteries.

Have the battery regularly checked at a qualified specialist workshop.

For more information, please contact a qualified specialist workshop.

Always have work on batteries carried out at a qualified specialist workshop.

Should it, in exceptional circumstances, be absolutely necessary to disconnect the 12-volt battery yourself, please observe the following:

- Secure the vehicle to prevent it from rolling away.
- Switch off the ignition.
- Disconnect the negative terminal first and then the positive terminal.

The transmission is locked in position **P** after disconnecting the battery.

After the work has been done, install the battery and replace the cover of the positive terminal clamp firmly.

Comply with safety precautions and take protective measures when handling batteries.

**Risk of explosion.**

Fire, open flames and smoking are prohibited when handling the battery. Avoid creating sparks.
The electrolyte of the battery is corrosive. Avoid contact with skin, eyes or clothing. Wear suitable protective clothing, especially gloves, apron and face-guard. Immediately rinse electrolyte splashes off with clean water. Contact a physician if necessary. Wear eye protection.

Keep children away.

Observe this Operator's Manual.

For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz. These batteries provide increased impact protection to prevent vehicle occupants from suffering acid burns should the battery be damaged in the event of an accident. In order for the battery to achieve the maximum possible service life, it must always be sufficiently charged.

Like other batteries, the vehicle battery may discharge over time if you do not use the vehicle. In this case, have the battery disconnected at a qualified specialist workshop. You can also charge the battery with a special charger recommended by Mercedes-Benz. Contact a qualified specialist workshop for further information. Have the battery condition of charge checked more frequently if you use the vehicle mainly for short trips or if you leave it standing idle for a lengthy period. Consult a qualified specialist workshop if you wish to leave your vehicle parked for a long period of time. When you use the SmartKey in the ignition and you park the car, remove the SmartKey if you do not require any electrical consumers. The vehicle will then use very little energy, thus conserving battery power.

If the power supply has been interrupted, e.g. if you reconnect the battery, you will have to:

- reset the function for automatically folding the exterior mirrors in/out by folding the mirrors out once (▷ page 92)
- reset the side windows, see (▷ page 78)

Charging the battery

1. Only use battery chargers with a maximum charging voltage of 14.4 V.

2. Only charge the battery using the jump-starting connection point.

The jump-starting connection point is in the engine compartment (▷ page 254).

» Open the hood.

» Connect the battery charger to the positive terminal and ground point in the same order as when connecting the donor battery in the jump-starting procedure (▷ page 254).

Keep away from fire and open flames. Do not lean over a battery. Never charge the battery if it is still installed in the vehicle, unless you use a battery charger which has been tested and approved by Mercedes-Benz. A battery charger unit specially adapted for Mercedes-Benz vehicles and tested and approved by Mercedes-Benz is available as an accessory. It permits the charging of the battery in its installed position. Contact an authorized Mercedes-Benz Center for further information and availability. Read the battery charger's operating instructions before charging the battery.

Do not charge a battery which has been removed at low temperatures with a battery charger. Allow the battery to warm up gently first, if necessary. Otherwise, the service life can be shortened and the starting characteristics impaired, especially at low temperatures.

Jump-starting

» For the jump-starting procedure, use only the jump-starting connection point in the engine compartment, consisting of a positive terminal and a ground point.
Avoid repeated and lengthy starting attempts. Otherwise, the catalytic converter could be damaged by the non-combusted fuel.

- Do not start the vehicle using a rapid charging device.
  If your vehicle’s battery is discharged, the engine can be jump-started from another vehicle or from a donor battery using jumper cables.

The battery is not accessible in all vehicles. If the other vehicle’s battery is not accessible, jump-start the vehicle using a donor battery or a jump-starting device.

Observe the following during the jump-starting procedure:
- the jumper cables must not come into contact with parts that can move when the engine is running, such as the V-belt pulley or the fan.
- non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jumper cables are connected to the battery and the jump-starting connection point.
- only use jumper cables that are not damaged and have a sufficient cross-section and insulated terminal clamps.
- jump-starting may be performed only using batteries with a nominal voltage of 12 V.
- you may only jump-start the vehicle when the engine and exhaust system are cold.
- the vehicles must not touch each other.
- If the battery is fully discharged, leave the battery that is being used to jump-start connected for a few minutes before attempting to start. This charges the battery slightly.

- Secure the vehicle by applying the electric parking brake.
- Shift the transmission to position [P].
- Make sure the ignition and all electrical consumers are switched off.
  All indicator lamps in the instrument cluster must be off. When using the SmartKey, turn the SmartKey to position [0] in the ignition lock and remove it (=> page 111).
- Open the hood.

Right-hand-drive vehicle: the jump-starting connection points may be located on the other side of the vehicle.

Vehicles with a carbon-fiber engine cover

- To remove the cover: turn fasteners 1 a ¼ turn and remove.
All vehicles:

- Slide cover 5 of positive terminal 1 in the direction of the arrow.
- Connect positive terminal 1 on your vehicle to positive terminal 2 of donor battery 6 using the jumper cable. Always begin with positive terminal 1 on your own vehicle first.
- Start the engine of the donor vehicle and run it at idling speed.
- Connect negative terminal 3 of donor battery 6 to ground point 4 of your vehicle using the jumper cable. Begin with donor battery 6 first.
- Start the engine of your own vehicle.
- Let the engines run for several minutes.
- Before disconnecting the jumper cables, switch on an electrical consumer in your own vehicle, e.g. the rear window heating or the lighting.

**When the jump-starting procedure is finished:** first, remove the jumper cables from ground point 4 and from negative terminal 3 of the donor battery, and then from positive terminal 1 and positive terminal 2 of the donor battery. Begin each time at the contacts on your own vehicle first.

- After removing the jumper cables, close cover 5 of positive terminal 1.
- **Only for vehicles with a carbon-fiber engine cover:** insert the cover of the jump-starting connection point. Make sure all mountings for the fasteners are positioned precisely behind the corresponding recesses in the cover.
  
  Press the fasteners into the mountings. Turn the fasteners by ¼ of a turn to engage.
- Have the battery checked at a qualified specialist workshop.

Jump-starting is not considered to be a normal operating condition.

ℹ️ Jumper cables and further information regarding jump-starting can be obtained at a qualified specialist workshop.
Towing and tow-starting

Important safety notes

⚠️ WARNING
The rear axle locks when:
- the engine is not running
- the engine stalls while the vehicle is being towed
- there is a malfunction in the power supply or the vehicle's electrical system

There is a risk of an accident.
In the event of a breakdown, you should always have the vehicle transported.

⚠️ WARNING
If the brake system or power steering is malfunctioning and your vehicle is then towed away, significantly more effort may be required to steer and brake than is normally required. There is a risk of an accident.
In such cases, use a tow bar. Before towing, make sure that the steering moves freely.

⚠️ WARNING
When towing or tow-starting another vehicle and its weight is greater than the permissible gross weight of your vehicle, the:
- the towing eye could detach itself
- the vehicle/trailer combination could roll-over.

There is a risk of an accident.
When towing or tow-starting another vehicle, its weight should not be greater than the permissible gross weight of your vehicle.

Details on the permissible gross vehicle weight of your vehicle can be found on the vehicle identification plate (⇒ page 285).

⚠️ Use the SmartKey instead of the Start/Stop button when towing the vehicle.
Start the engine and keep it running. The SmartKey is in position 2 in the ignition lock.
Set the transmission to N using the E-SELECT selector lever. Make sure that you then leave the SmartKey in position 2.

Check the transmission position in the instrument cluster.

⚠️ Make sure that the electric parking brake is released. If the electric parking brake is faulty, visit a qualified specialist workshop.

⚠️ Secure the tow rope or tow bar to the towing eye only. Otherwise, the vehicle could become damaged.

⚠️ When Active Brake Assist, Distance Pilot DISTRONIC or the HOLD function is activated, the vehicle brakes automatically in certain situations.
To avoid damage to the vehicle, deactivate these systems in the following or similar situations:
- when towing the vehicle
- in the car wash

⚠️ Do not use the towing eyes for recovery purposes as this could damage the vehicle. If in doubt, recover the vehicle with a crane.

⚠️ When towing, pull away slowly and smoothly. If the tractive power is too high, the vehicles could be damaged.

⚠️ Shift the automatic transmission to position N and do not open the driver's or front-passenger door when towing the vehicle away. Otherwise, the automatic transmission may shift to position P which can cause damage to both vehicles.

⚠️ Do not tow with sling-type equipment. This could damage the vehicle.

⚠️ The vehicle can be towed a maximum of 30 miles (50km). The towing speed of 30 mph (50 km/h) must not be exceeded.
If the vehicle has to be towed more than 30 miles (50km), the entire vehicle must be raised and transported.

⚠️ Observe the transmission fluid temperature (AMG menu) in the on-board computer when towing. The transmission fluid temperature must not exceed 250 °F (120 °C). If this occurs, you must stop towing immediately.

⚠️ Tow-starting the vehicle is not permitted. The transmission may otherwise be damaged.
Also observe the following notes:

- If the engine does not start, try jump-starting it (page 254). Tow-starting the vehicle is not permitted.
- If it is not possible to jump-start the vehicle, have it transported to the nearest qualified specialist workshop, e.g., an authorized Mercedes-Benz Center.

If the vehicle can no longer be driven because of an accident or breakdown, you have the following options:

- transporting the vehicle
  As a rule, you should have the vehicle transported.
- towing the vehicle with a tow rope or tow bar
  Only tow the vehicle in exceptional cases. The engine must be running if you tow the vehicle with a tow rope or tow bar.

If the vehicle has suffered transmission damage, have it transported on a transporter or trailer. Observe the display messages in the instrument cluster.

The battery must be connected and charged. Otherwise, you:

- will not be able to switch on the ignition with the Start/Stop button
- cannot start the engine
- cannot release the electric parking brake
- cannot shift the automatic transmission to position N

Disarm the automatic locking feature before the vehicle is towed (page 72). You could otherwise be locked out when pushing or towing the vehicle.

### Installing/removing the towing eye

#### Installing the towing eye

The bracket for the screw-in towing eye is behind the radiator trim.

- Remove the towing eye from the vehicle tool kit (page 248).

### Removing the towing eye

- Pull out cover 1.
- Screw in the towing eye clockwise to the stop.

### Towing a vehicle with both axles on the ground

It is important that you observe the safety instructions when towing away your vehicle (page 257).

The automatic transmission automatically shifts to position P when you open the driver’s or front-passenger door or when you remove the SmartKey from the ignition lock. In order to ensure that the automatic transmission stays in position N when towing away the vehicle, you must observe the following points:

- Insert the SmartKey into the ignition lock. You must use the SmartKey instead of the Start/Stop button (page 111).
- Start the engine and leave it running during the entire towing procedure.
- Depress and hold the brake pedal.
- Move the transmission to position N with the E-SELECT lever.
- Check the transmission position using the indicator in the multifunction display (page 119).
- Release the brake pedal.
- Release the electric parking brake.
- Switch on the hazard warning lamps (page 98).
In order to signal a change of direction when towing the vehicle with the hazard warning lamps switched on, use the combination switch as usual. In this case, only the indicator lamps for the direction of travel flash. After resetting the combination switch, the hazard warning lamp starts flashing again.

Transporting the vehicle

⚠️ When the vehicle is loaded for transport, the front and rear axles must be stationary and on the same transportation vehicle. Positioning over the connection point of the transport vehicle is not permitted. The drive train may otherwise be damaged.

⚠️ You may only secure the vehicle by the wheels, not by parts of the vehicle such as axle or steering components. Otherwise, the vehicle could be damaged.

The towing eye can be used to pull the vehicle onto a trailer or transporter for transporting purposes.

- Insert the SmartKey into the ignition lock. You must use the SmartKey instead of the Start/Stop button (› page 111).
- Start the engine and leave it running during the entire loading operation.
- Move the transmission to position [N] with the E-SELECT lever.
- Check the transmission position using the indicator in the multifunction display (› page 119).

As soon as the vehicle has been loaded:

- Prevent the vehicle from rolling away by applying the electric parking brake.
- Shift the automatic transmission to position [P].
- Turn the SmartKey to key position [0] in the ignition lock and remove it.
- Secure the vehicle.

Tow-starting (emergency engine starting)

⚠️ Vehicles with automatic transmission must not be tow-started. You could otherwise damage the automatic transmission.

ℹ️ You can find information on "Jump-starting" under (› page 254).

Fuses

Important safety notes

⚠️ WARNING

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric cables could be overloaded. This could result in a fire. There is a risk of an accident and injury.

Always replace faulty fuses with the specified new fuses having the correct amperage.

Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color and value. The fuse ratings are listed in the fuse allocation chart.

The fuse allocation chart is on the fuse box in the trunk (› page 260).

If a newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

⚠️ Only use fuses that have been approved for Mercedes-Benz vehicles and which have the correct fuse rating for the system concerned. Otherwise, components or systems could be damaged.

⚠️ Make sure that no moisture can enter the fuse box when the cover is open.

⚠️ When closing the cover, make sure that it is lying correctly on the fuse box. Moisture seeping in or dirt could otherwise impair the operation of the fuses.
The fuses in your vehicle serve to close down faulty circuits. If a fuse blows, all the components on the circuit and their functions stop operating.

**Before changing a fuse**
- Switch off the engine.
- Switch off all electrical consumers.
- Open the driver’s door.
  The on-board electronics are now in key position [0]. This is the same as the key having been removed.

or, if the SmartKey is inserted in the ignition lock:
- Remove the SmartKey from the ignition lock.
- Secure the vehicle against rolling away (> page 127).

All indicator lamps in the instrument cluster must be off.

**Fuse box in the front-passenger foot-well**
- Open the front-passenger door.
- **To open:** remove the carpet over the footrest.
- **To close:** install the floor panel again.
- **To close:** screw in and tighten screws ①.
- Put in the carpet and press to secure.

**Fuse box in the rear**
- **To open:** from the vehicle interior, lift up cover ① between the roll bars in the direction of the arrow.
- **To close:** shut cover ① in the opposite direction to the arrow and press to secure.

The fuse allocation chart is located in the trunk behind the service flap. You can find the corresponding fuse rating and fuse type on the fuse allocation chart.
Important safety notes

**WARNING**

If wheels and tires of the wrong size are used, the wheel brakes or suspension components may be damaged. There is a risk of an accident.

Always replace wheels and tires with those that fulfill the specifications of the original part.

When replacing wheels, make sure to use the correct:
- designation
- model

When replacing tires, make sure to use the correct:
- designation
- manufacturer
- model

**WARNING**

A flat tire severely impairs the driving, steering and braking characteristics of the vehicle. There is a risk of accident.

Tires without run-flat characteristics:
- do not drive with a flat tire.
- immediately replace the flat tire with your emergency spare wheel or spare wheel, or consult a qualified specialist workshop.

Tires with run-flat characteristics:
- pay attention to the information and warning notices on MOExtended tires (tires with run-flat characteristics).

Information on the sizes and types of wheels and tires for your vehicle can be found under "Wheel/tire combinations" (› page 283).

Tire pressure information can be found:
- on the Tire and Loading Information placard on the B-pillar on the driver's side (› page 269)
- in the tire pressure table in the fuel filler flap (› page 126)
- in the "Tire pressure" section

Operation

Information on driving

Check the tire pressure when the vehicle is heavily laden and adjust prior to a trip.

While driving, pay attention to vibrations, noises and unusual handling characteristics, e.g. pulling to one side. This may indicate that the wheels or tires are damaged. If you suspect that a tire is defective, reduce your speed immediately. Stop the vehicle as soon as possible to check the wheels and tires for damage. Hidden tire damage could also be causing the unusual handling characteristics. If you find no signs of damage, have the tires and wheels checked at a qualified specialist workshop.

When parking your vehicle, make sure that the tires do not get deformed by the curb or other obstacles. If they cannot be avoided, drive over obstacles such as curbs slowly and at an obtuse angle. Otherwise, you may damage the wheels or tires.

Notes on high performance tires

**WARNING**

Due to the special tire tread in combination with the optimized rubber compound, there is an increased risk of hydroplaning and skidding on damp or wet road surfaces. In addition, tire traction is significantly reduced at low outside temperatures and low tire operating temperatures. There is a risk of an accident.

Activate ESP® and adapt your driving style. At outside temperatures below 50 °F (10 °C), use M+S tires.
Different driving styles may lead to high tire wear and the tires may reach the minimum tire tread depth after only a short time.

Regular checking of wheels and tires

**WARNING**

Damaged tires can cause tire inflation pressure loss. As a result, you could lose control of your vehicle. There is a risk of accident. Check the tires regularly for signs of damage and replace any damaged tires immediately.

Check wheels and tires for damage at least once a month. Check wheels and tires after driving off-road or on rough roads. Damaged wheels can cause a loss of tire pressure. Pay particular attention to damage such as:
- Cuts in the tires
- Punctures in the tires
- Tears in the tires
- Bulges on tires
- Deformation or severe corrosion on wheels

Regularly check the tire tread depth and the condition of the tread across the whole width of all tires (⇒ page 262). If necessary, turn the front wheels to full lock in order to inspect the inner side of the tire surface.

All wheels must have a valve cap to protect the valve against dirt and moisture. Do not mount anything onto the valve other than the standard valve cap or other valve caps approved by Mercedes-Benz for your vehicle. Do not use any other valve caps or systems, e.g. tire pressure monitoring systems.

Regularly check the pressure of all the tires particularly prior to long trips. Adjust the tire pressure as necessary (⇒ page 264).

The service life of tires depends, among other things, on the following factors:
- Driving style
- Tire pressure
- Distance covered

**Notes on tire tread**

**WARNING**

Insufficient tire tread will reduce tire traction. The tire is no longer able to dissipate water. This means that on wet road surfaces, the risk of hydroplaning increases, in particular where speed is not adapted to suit the driving conditions. There is a risk of accident.

If the tire pressure is too high or too low, tires may exhibit different levels of wear at different locations on the tire tread. Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tires.

Minimum tire tread depth for:
- Summer tires: ¼ in (3 mm)
- M+S tires: ⅛ in (4 mm)

For safety reasons, replace the tires before the legally prescribed limit for the minimum tire tread depth is reached.

Marking (1) shows where the bar indicator (arrow) for tread wear is integrated into the tire tread.

Treadwear indicators (TWI) are required by law. Six indicators are positioned on the tire tread. They are visible once a tread depth of approximately ⅛ in (1.6 mm) has been reached. If this is the case, the tire is so worn that it must be replaced.

Selecting, mounting and replacing tires

- Only mount tires and wheels of the same type and make.
Exception: it is permissible to mount a different type or make in the event of a flat tire.
• Only mount tires of the correct size onto the wheels.
• Break in new tires at moderate speeds for the first 60 miles (100 km). The new tires only reach their full performance after this distance.
• Do not drive with tires which have too little tread depth. This significantly reduces the traction on wet roads (hydroplaning).
• Replace the tires after six years at the latest, regardless of wear.

Winter operation

General notes
Have your vehicle winter-proofed at a qualified specialist workshop at the onset of winter. Observe the notes in the "Changing a wheel" section (> page 279).

Driving with summer tires
At temperatures below 45 °F (+7 °C), summer tires lose elasticity and therefore traction and braking power. Change the tires on your vehicle to M+S tires. Using summer tires at very cold temperatures could cause cracks to form, thereby damaging the tires permanently. Mercedes-Benz cannot accept responsibility for this type of damage.

M+S tires

WARNING
M+S tires with a tire tread depth of less than ½ in (4 mm) are not suitable for use in winter and do not provide sufficient traction. There is a risk of an accident.
M+S tires with a tread depth of less than ½ in (4 mm) must be replaced immediately.

At temperatures below 45 °F (+7 °C), use winter tires or all-season tires. Both types of tire are identified by the M+S marking.

Only winter tires bearing the snowflake symbol in addition to the M+S marking provide the best possible grip in wintry road conditions. Only these tires will allow driving safety systems such as ABS and ESP® to function optimally in winter. These tires have been developed specifically for driving in snow.
Use M+S tires of the same make and tread on all wheels to maintain safe handling characteristics.
Always observe the maximum permissible speed specified for the M+S tires you have mounted.

When you have mounted the M+S tires:
► Check the tire pressures (> page 264).
► Restart the tire pressure monitor (> page 269).

Snow chains

WARNING
If snow chains are installed to the front wheels, they may drag against the vehicle body or chassis components. This could cause damage to the vehicle or the tires. There is a risk of an accident.

To avoid hazardous situations:
• never install snow chains to the front wheels
• always install snow chains in pairs to the rear wheels.

For safety reasons, Mercedes-Benz recommends that you only use snow chains that have been specially approved for your vehicle by Mercedes-Benz, or are of a corresponding standard of quality. For more information, please contact a qualified specialist workshop.
If you intend to mount snow chains, please bear the following points in mind:
• Snow chains may not be mounted on all wheel/tire combinations. Permissible wheel/tire combinations (> page 283).
• Only use snow chains when driving on roads completely covered by snow. Remove the snow chains as soon as possible when you come to a road that is not snow-covered.
Tire pressure

Tire pressure specifications

Important safety notes

⚠️ WARNING
Underinflated or overinflated tires pose the following risks:

- the tires may burst, especially as the load and vehicle speed increase.
- the tires may wear excessively and/or unevenly, which may greatly impair tire traction.
- the driving characteristics, as well as steering and braking, may be greatly impaired.

There is a risk of an accident.

Follow recommended tire inflation pressures and check the pressure of all the tires including the spare wheel:

- monthly, at least
- if the load changes
- before beginning a long journey
- under different operating conditions, e.g. off-road driving

If necessary, correct the tire pressure.

The data on the Tire and Loading Information placard and tire pressure table shown here are examples. Tire pressure specifications are vehicle-specific and may deviate from the data shown here. The tire pressure specifications that are valid for your vehicle can be found on the Tire and Loading Information placard and tire pressure table on the vehicle.

General notes

The recommended tire pressures for the tires mounted at the factory can be found on the labels described here.

Further information on tire pressures can be obtained at a qualified specialist workshop.

Tire and Loading Information placard

Recommended tire pressures

The Tire and Loading Information placard is on the B-pillar on the driver’s side (> page 269).

The Tire and Loading Information placard contains the recommended tire pressures for cold tires. The recommended tire pressures are valid for the maximum permissible load and up to the maximum permissible vehicle speed.

Tire pressure table

The tire pressure table is on the inside of the fuel filler flap. It shows the tire pressure for all tires permitted at the factory for this vehicle; see illustration (example).

If a tire size precedes a tire pressure, the tire pressure information following is only valid for that tire size.
If the tire pressures have been set to the lower values for lighter loads and/or lower road speeds, the pressures should be reset to the higher values:

- if you want to drive with an increased load and/or
- if you want to drive at higher road speeds

The tire pressures for increased loads and/or higher road speeds, shown in the tire pressure table, may have a negative effect on driving comfort.

If the tire pressure is not set correctly, this can lead to an excessive build-up of heat and a sudden loss of pressure.

For more information, contact a qualified specialist workshop.

---

**Important notes on tire pressure**

**WARNING**

If the tire pressure drops repeatedly, the wheel, valve or tire may be damaged. Tire pressure that is too low may result in a tire blow-out. There is a risk of an accident.

- Check the tire for foreign objects.
- Check whether the wheel is losing air or the valve is leaking.

If you are unable to rectify the damage, contact a qualified specialist workshop.

---

**WARNING**

If you fit unsuitable accessories onto tire valves, the tire valves may be overloaded and malfunction, which can cause tire pressure loss. Due to their design, retrofitted tire pressure monitors keep the tire valve open. This can also result in tire pressure loss. There is a risk of an accident.

Only screw the standard valve cap or other valve caps approved by Mercedes-Benz for your vehicle onto the tire valve.

Use a suitable pressure gauge to check the tire pressure. The outer appearance of a tire does not permit any reliable conclusion about the tire pressure. On vehicles equipped with the electronic tire pressure monitor, the tire pressure can be checked in the on-board computer.

The tire temperature and pressure increase when the vehicle is in motion. This is dependent on the driving speed and the load.

Therefore, you should only correct tire pressures when the tires are cold.

The tires are cold:

- if the vehicle has been parked with the tires out of direct sunlight for at least three hours and
- if the vehicle has not been driven further than 1 mile (1.6 km)

The tire temperature changes depending on the outside temperature, the vehicle speed and the tire load. If the tire temperature changes by 18 °F (10 °C), the tire pressure changes by approximately 10 kPa (0.1 bar/1.5 psi). Take this into account when checking the pressure of warm tires. Only correct the tire pressure if it is too low for the current operating conditions. If you check the tire pressure when the tires are warm, the resulting value will be higher than if the tires were cold. This is normal. Do not reduce the tire pressure to the value specified for cold tires. The tire pressure would otherwise be too low.

Observe the recommended tire pressures for cold tires:

- on the Tire and Loading Information placard on the B-pillar on the driver’s side
- in the tire pressure table in the fuel filler flap (> page 126).
Underinflated or overinflated tires

Underinflated tires

**WARNING**

Tires with pressure that is too low can overheat and burst as a consequence. In addition, they also suffer from excessive and/or irregular wear, which can severely impair the braking properties and the driving characteristics. There is a risk of an accident.

Avoid tire pressures that are too low in all the tires, including the spare wheel.

Underinflated tires may:

- overheat, leading to tire defects
- adversely affect handling
- wear excessively and/or unevenly
- have an adverse effect on fuel consumption

Overinflated tires

**WARNING**

Tires with excessively high pressure can burst because they are damaged more easily by road debris, potholes etc. In addition, they also suffer from irregular wear, which can severely impair the braking properties and the driving characteristics. There is a risk of an accident.

Avoid tire pressures that are too high in all the tires, including the spare wheel.

Overinflated tires may:

- increase the braking distance
- adversely affect handling
- wear excessively and/or unevenly
- have an adverse effect on ride comfort
- be more susceptible to damage

Maximum tire pressures

Example: maximum permissible tire pressure

Never exceed the maximum permissible tire inflation pressure. Always observe the recommended tire pressure for your vehicle when adjusting the tire pressure (> page 264).

The actual values for tires are vehicle-specific and may deviate from the values in the illustration.

Checking the tire pressures

Important safety notes

Observe the notes on tire pressure (> page 264).

Information on air pressure for the tires on your vehicle can be found:

- on the vehicle’s Tire and Loading Information placard on the B-pillar
- in the tire pressure table in the fuel filler flap (> page 126)
- in the "Tire pressure" section

Checking tire pressures manually

To determine and set the correct tire pressure, proceed as follows:

- Remove the valve cap of the tire that is to be checked.
- Press the tire pressure gage securely onto the valve.
- Read the tire pressure and compare it to the recommended value on the Tire and Loading Information placard or the tire pressure table (> page 264).
If the tire pressure is too low, increase the tire pressure to the recommended value.

If the tire pressure is too high, release air. To do so, press down the metal pin in the valve, using the tip of a pen for example. Then check the tire pressure again using the tire pressure checker.

Screw the valve cap onto the valve.

Repeat these steps for the other tires.

---

**Tire pressure monitor**

**General notes**

If a tire pressure monitor is installed, the vehicle’s wheels have sensors that monitor the tire pressures in all four tires. The tire pressure monitor warns you if the pressure drops in one or more of the tires. The tire pressure monitor only functions if the corresponding sensors are installed in all wheels.

Information on tire pressures is displayed in the multifunction display. After a few minutes of driving, the current tire pressure of each tire is shown in the Service menu of the multifunction display; see illustration (example).

For information on the message display, refer to the "Checking the tire pressure electronically" section (> page 268).

**Important safety notes**

⚠️ **WARNING**

Each tire, including the spare (if provided), should be checked at least once every two weeks when cold and inflated to the pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver’s door B-pillar or the tire pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the Tire and Loading Information placard or, if available, the tire pressure label, you should determine the proper tire pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure telltale lights up, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the warning lamp will flash for approximately a minute and then remain continuously illuminated. This sequence will be repeated every time the vehicle is started as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to...
ensure that the replacement or alternate Tires and wheels allow the TPMS to continue to function properly.

It is the driver’s responsibility to set the tire pressure to that recommended for cold tires which is suitable for the operating situation (page 264). Note that the correct tire pressure for the current operating situation must first be taught-in to the tire pressure monitor. If a substantial loss of pressure occurs, the warning threshold for the warning message is aligned to the taught-in reference values. Restart the tire pressure monitor after adjusting the pressure of the cold tires (page 269). The current pressures are saved as new reference values. As a result, a warning message will appear if the tire pressure drops significantly.

The tire pressure monitor does not warn you of an incorrectly set tire pressure. Observe the notes on the recommended tire pressure (page 264).

The tire pressure monitor is not able to warn you of a sudden loss of pressure, e.g. if the tire is penetrated by a foreign object. In the event of a sudden loss of pressure, bring the vehicle to a halt by braking carefully. Avoid abrupt steering movements.

The tire pressure monitor has a yellow warning lamp in the instrument cluster for indicating pressure loss or a malfunction. Whether the warning lamp flashes or lights up indicates whether a tire pressure is too low or the tire pressure monitor is malfunctioning:
- if the warning lamp is lit continuously, the tire pressure on one or more tires is significantly too low. The tire pressure monitor is not malfunctioning.
- if the warning lamp flashes for around a minute and then remains lit constantly, the tire pressure monitor is malfunctioning.

In addition to the warning lamp, a message appears in the multifunction display. Observe the information on display messages (page 191).

It may take up to ten minutes for a malfunction of the tire pressure monitor to be indicated. A malfunction will be indicated by the tire pressure warning lamp flashing for approximately one minute and then remaining lit. When the malfunction has been rectified, the tire pressure warning lamp goes out after a few minutes of driving.

The tire pressure values indicated by the on-board computer may differ from those measured at a gas station with a pressure gage. The tire pressures shown by the on-board computer refer to those measured at sea level. At high altitudes, the tire pressure values indicated by a pressure gage are higher than those shown by the on-board computer. In this case, do not reduce the tire pressures.

The operation of the tire pressure monitor can be affected by interference from radio transmitting equipment (e.g. radio headphones, two-way radios) that may be being operated in or near the vehicle.

**Checking the tire pressure electronically**

1. Switch on the ignition (page 111).
2. Press ✔ on the steering wheel to call up the list of menus.
3. Press ▲ or ▼ on the steering wheel to select the Service menu.
4. Press OK.
5. Press ▲ or ▼ to select Tire Pressure.
6. Press OK.
   - The current tire pressure of each tire is shown in the multifunction display.

If the vehicle was parked for longer than 20 minutes, the Tire pressure will be displayed after driving a few minutes message appears.

After a teach-in process, the tire pressure monitor automatically detects new wheels or new sensors. As long as a clear allocation of the tire pressure value to the individual wheels is not possible, the Tire Pressure Monitor Active message is shown instead of the tire pressure display. The tire pressures are already being monitored.

**Tire pressure monitor warning messages**

If the tire pressure monitor detects a pressure loss in one or more tires, a warning message is shown in the multifunction display. The yellow tire pressure warning lamp then lights up.

- If the Please Correct Tire Pressure message appears in the multifunction display, the tire pressure in at least one tire is too low.
The tire pressure must be corrected when the opportunity arises.

- If the **Check Tires** message appears in the multifunction display, the tire pressure in at least one tire has dropped significantly. The tires must be checked.
- If the **Warning Tire Malfunction** message appears in the multifunction display, the tire pressure in at least one tire has dropped suddenly. The tires must be checked.

Observe the instructions and safety notes in the display messages in the "Tires" section (> page 191).

If the wheel positions on the vehicle are rotated, the tire pressures may be displayed for the wrong positions for a short time. This is rectified after a few minutes of driving, and the tire pressures are displayed for the correct positions.

**Restarting the tire pressure monitor**

When you restart the tire pressure monitor, all existing warning messages are deleted and the warning lamps go out. The monitor uses the currently set tire pressures as the reference values for monitoring. In most cases, the tire pressure monitor will automatically detect the new reference values after you have changed the tire pressure. However, you can also set reference values manually as described here. The tire pressure monitor then monitors the new tire pressure values.

- Set the tire pressure to the value recommended for the corresponding driving situation on the Tire and Loading Information placard on the driver's side B-pillar (> page 264).
- Make sure that the tire pressure is correct on all four wheels.
- Switch on the ignition (> page 111).
- Press [ ] on the steering wheel to call up the list of menus.
- Press [ ] or [ ] on the steering wheel to select the **Service** menu.
- Press [OK].
- Press [ ] or [ ] to select **Tire Pressure**.
- Press [OK].
- The current tire pressure for each wheel or the **Tire pressure will be displayed after driving a few minutes** message will be displayed in the multifunction display.

If you wish to confirm the restart:

- Press [OK].
- The **Tire Pressure Monitor Restarted** message appears in the multifunction display.

If you wish to cancel the restart:

- Press [ ].
- The tire pressure values stored at the last restart will continue to be monitored.

**Loading the vehicle**

**Instruction labels for tires and loads**

**WARNING**

Overloaded tires can overheat, causing a blowout. Overloaded tires can also impair the steering and driving characteristics and lead to brake failure. There is a risk of accident. Observe the load rating of the tires. The load rating must be at least half of the GAWR of your vehicle. Never overload the tires by exceeding the maximum load.

Two instruction labels on your vehicle show the maximum possible load.

1. The Tire and Loading Information placard is on the B-pillar on the driver's side. The Tire and Loading Information placard shows the permissible number of vehicle occupants and the maximum permissible load of the vehicle. It also contains details of the tire
sizes and corresponding pressures for tires mounted at the factory.

(2) The vehicle identification plate is on the B-piller on the driver's side. The vehicle identification plate informs you of the gross vehicle weight rating. It is made up of the vehicle weight, all vehicle occupants, the fuel and the cargo. You can also find information about the maximum gross axle weight rating on the front and rear axle.

The maximum gross axle weight rating is the maximum weight that can be carried by one axle (front or rear axle). Do not exceed the maximum gross vehicle weight or the maximum gross axle weight rating for the front or rear axle.

The specifications shown on the Tire and Loading Information placard in the illustration are examples. The maximum permissible load is vehicle-specific and may deviate from the data shown here. The maximum permissible load that applies for your vehicle can be found on your vehicle’s Tire and Loading Information placard.

Maximum number of seats \( \text{\textcircled{1}} \) indicates the maximum number of occupants allowed to travel in the vehicle. This information can be found on the Tire and Loading Information placard.

The specifications shown on the Tire and Loading Information placard in the illustration are examples. The number of seats is vehicle-specific and can differ from the details shown. The number of seats in your vehicle can be found on the Tire and Loading Information placard.

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

**Step 1:** Locate the statement "The combined weight of occupants and cargo should never exceed XXX kilograms or XXX lbs."

The gross weight of all vehicle occupants, load and luggage must not exceed the specified value.
example, if the "XXX" amount equals 1400 lbs and there will be five 150-lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs (1400 - 750 (5 x 150) = 650 lbs).

Step 5: Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

Example: steps 1 to 3

The following table shows examples of how to calculate total and cargo load capacities with varying seating configurations and different numbers and weights of vehicle occupants. The following examples use a load limit of 1500 lbs (680 kg). This is for illustration purposes only. Make sure you are using the actual load limit for your vehicle stated on your vehicle’s Tire and Loading Information placard (Page 269).

The higher the weight of all the vehicle occupants, the smaller the maximum load for luggage.

Step 1

</tbody>
</table>

### Gross weight of all occupants

- **Example 1**: 750 lbs (340 kg)
- **Example 2**: 540 lbs (245 kg)
- **Example 3**: 150 lbs (68 kg)

### Permissible load (maximum gross vehicle weight rating from the Tire and Loading Information placard minus the gross weight of all occupants)

- **Example 1**: $1500 \text{ lbs (680 kg)} - 750 \text{ lbs (340 kg)} = 750 \text{ lbs (340 kg)}$
- **Example 2**: $1500 \text{ lbs (680 kg)} - 540 \text{ lbs (245 kg)} = 960 \text{ lbs (435 kg)}$
- **Example 3**: $1500 \text{ lbs (680 kg)} - 150 \text{ lbs (68 kg)} = 1350 \text{ lbs (612 kg)}$

### Vehicle identification plate

Even if you have calculated the total load carefully, you should still make sure that the gross vehicle weight rating and the gross axle weight rating are not exceeded. Details can be found on the vehicle identification plate on the B-pillar on the driver’s side of the vehicle (> page 269).

**Gross vehicle weight**: the gross weight of the vehicle, all vehicle occupants, load and trailer load/nose weight (if applicable) must not exceed the gross vehicle weight rating.

**Gross Axle Weight Rating (GAWR)**: the maximum permissible load that can be carried by one axle (front or rear axle).

To ensure that your vehicle does not exceed the gross vehicle weight and maximum gross axle weight rating, have your loaded vehicle (including driver, vehicle occupants, load and full trailer load if applicable) weighed on a suitable vehicle weighbridge.

### All about wheels and tires

**Uniform Tire Quality Grading Standards**

**Overview of Tire Quality Grading Standards**

Uniform Tire Quality Grading Standards are U.S. government specifications. Their purpose is to provide drivers with uniform reliable information on tire performance data. Tire manufacturers have to grade tires using three performance fac-
tors: ① tread wear grade, ② traction grade and ③ temperature grade. These regulations do not apply to Canada. Nevertheless, all tires sold in North America are provided with the corresponding quality grading markings on the sidewall of the tire.

Quality grades can be found, where applicable, on the tire sidewall between tread shoulder and maximum section width.

Example:

- **Treadwear grade:** 200
- **Traction grade:** AA
- **Temperature grade:** A

All passenger car tires must conform to the statutory safety requirements in addition to these grades.

⚠️ The actual values for tires are vehicle-specific and may deviate from the values in the illustration.

### Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified U.S. government course. For example, a tire graded 150 would wear one and one-half times as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

### Traction

⚠️ **WARNING**

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

⚠️ Avoid wheelspin. This can lead to damage to the drive train.

The traction grades – from highest to lowest – are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

The safe speed on a wet, snow covered or icy road is always lower than on dry road surfaces. You should pay special attention to road conditions when temperatures are around freezing point.

Mercedes-Benz recommends a minimum tread depth of ⅛ in (4 mm) on all four winter tires. Observe the legally required minimum tire tread depth (> page 262). Winter tires can reduce the braking distance on snow-covered surfaces in comparison with summer tires. The braking distance is still much further than on surfaces that are not icy or covered with snow. Take appropriate care when driving.

Further information on winter tires (M+S tires) (> page 263).

### Temperature

⚠️ **WARNING**

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.
Tire labeling

Overview

Uniform Tire Quality Grading Standard (page 277)
DOT, Tire Identification Number (page 276)
Maximum tire load (page 276)
Maximum tire pressure (page 266)
Manufacturer
Tire material (page 277)
Tire size designation, load-bearing capacity and speed rating (page 274)
Load index (page 276)
Tire name

The markings described above are on the tire in addition to the tire name (sales designation) and the manufacturer’s name.

Tire data is vehicle-specific and may deviate from the data in the example.

Tire size designation, load-bearing capacity and speed rating

\[1 \text{ Tire width} \]
\[2 \text{ Nominal aspect ratio in \%} \]
\[3 \text{ Tire code} \]
\[4 \text{ Rim diameter} \]
\[5 \text{ Load bearing index} \]
\[6 \text{ Speed rating} \]

**General:** depending on the manufacturer’s standards, the size imprinted in the tire wall may not contain any letters or may contain one letter that precedes the size description. If there is no letter preceding the size description (as shown above): these are passenger vehicle tires according to European manufacturing standards. If "P" precedes the size description: these are passenger vehicle tires according to U.S. manufacturing standards. If "LT" precedes the size description: these are light truck tires according to U.S. manufacturing standards. If "T" precedes the size description: compact emergency wheels with high tire pressure that are only designed for temporary use in an emergency.

**Tire width:** tire width \(1\) shows the nominal tire width in millimeters.

**Height-width ratio:** aspect ratio \(2\) is the size ratio between the tire height and tire width and is shown in percent. The aspect ratio is calculated by dividing the tire width by the tire height.

**Tire code:** tire code \(3\) specifies the tire type. "R" represents radial tires; "D" represents diagonal tires; "B" represents diagonal radial tires. Optionally, tires with a maximum design speed of over 149 mph (240 km/h) may have "ZR" in
the size description, depending on the manufacturer (e.g. 245/40 ZR 18).

**Rim diameter**: rim diameter is the diameter of the bead seat, not the diameter of the rim flange. The rim diameter is specified in inches (in).

**Load-bearing index**: load-bearing index is a numerical code that specifies the maximum load-bearing capacity of a tire. Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle’s Tire and Loading Information placard on the B-pillar on the driver’s side (page 269).

Example:

Load-bearing index 91 indicates a maximum load of 1,356 lb (615 kg) that the tires can bear. For further information on the maximum tire load in kilograms and lbs, see (page 276). For further information on the load bearing index, see "Load index" (page 276).

**Speed rating**: speed rating specifies the approved maximum speed of the tire.

Tire data is vehicle-specific and may deviate from the data in the example.

Regardless of the speed rating, always observe the speed limits. Drive carefully and adapt your driving style to the traffic conditions.

### Summer tires

<table>
<thead>
<tr>
<th>Index</th>
<th>Speed rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q</td>
<td>up to 100 mph (160 km/h)</td>
</tr>
<tr>
<td>R</td>
<td>up to 106 mph (170 km/h)</td>
</tr>
<tr>
<td>S</td>
<td>up to 112 mph (180 km/h)</td>
</tr>
<tr>
<td>T</td>
<td>up to 118 mph (190 km/h)</td>

<tr>
<td>ZR</td>
<td>over 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>

- Optionally, tires with a maximum design speed of over 149 mph (240 km/h) may have "ZR" in the size description, depending on the manufacturer (e.g. 245/40 ZR 18). The service specification is made up of load-bearing index and speed rating.

- If the size description of your tire includes "ZR" and there are no service specifications, ask the tire manufacturer in order to find out the maximum design speed.

If a service specification is available, the maximum speed is limited according to the speed rating in the service specification. Example: 245/40 ZR 18 97 Y. In this example, "97 Y" is the service specification. The letter "Y" represents the speed rating. The maximum design speed of the tire is limited to 186 mph (300 km/h).

- The size description for all tires with maximum design speeds of over 186 mph (300 km/h) must include "ZR", and the service specification must be given in brackets. Example: 275/40 ZR 18 (99 Y). Speed rating "(Y)" indicates that the maximum design speed of the tire is over 186 mph (300 km/h). To find out the maximum design speed, ask the tire manufacturer.

### All-weather tires and winter tires

</tbody>
</table>

¹ Or M+S for winter tires.

- Not all tires with the M+S marking provide the driving characteristics of winter tires. In addition to the M+S marking, winter tires also have the snowflake symbol on the tire wall. Tires with this marking fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow. They have been especially developed for driving on snow.

An electronic speed limiter prevents your vehicle from exceeding a speed of 130 mph (210 km/h).
The speed rating of tires mounted at the factory may be higher than the maximum design speed permitted by the electronic speed limiter. Make sure that your tires have the required speed rating, e.g. when buying new tires. The required speed rating for your vehicle can be found in the "Tires" section (> page 283). Further information about reading tire data can be obtained from any qualified specialist workshop.

Load index

In addition to the load-bearing index, load index 1 may also be imprinted on the sidewall of the tire. You will find this after the letter that identifies the speed rating (> page 274).

- If no specification is given: no text (as in the example above), represents a standard load (SL) tire
- XL or Extra Load: represents a reinforced tire
- Light Load: represents a light load tire
- C, D, E: represents a load range that depends on the maximum load that the tire can carry at a certain pressure

The actual values for tires are vehicle-specific and may deviate from the data in the example.

Maximum load rating

Maximum tire load 1 is the maximum permissible weight for which the tire is approved. Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle’s Tire and Loading Information placard on the B-pillar on the driver’s side (> page 269).

DOT, Tire Identification Number (TIN)

US tire regulations stipulate that every tire manufacturer or retreader must imprint a TIN in or on the sidewall of each tire produced.

The TIN is a unique identification number. The TIN enables the tire manufacturers or retreaders to inform purchasers of recalls and other safety-relevant matters. It makes it possible for the purchaser to easily identify the affected tires. The TIN is made up of manufacturer identification code 2, tire size 3, tire type code 4 and manufacturing date 5.

DOT (Department of Transportation): tire symbol 1 marks that the tire complies with the
requirements of the U.S. Department of Trans-
portation.

**Manufacturer identification code:** manufacturer identification code ② provides details on
the tire manufacturer. New tires have a code with two symbols. Retreaded tires have a code
with four symbols.
For further information about retreaded tires, see (> page 283).

**Tire size:** identifier ③ describes the tire size.

**Tire type code:** tire type code ④ can be used by
the manufacturer as a code to describe specific
characteristics of the tire.

**Date of manufacture:** date of manufacture ⑤ provides information about the age of a tire. The
first and second positions represent the week of
manufacture, starting with "01" for the first cal-
endar week. Positions three and four represent
the year of manufacture. For example, a tire that
is marked "3214" was manufactured in week 32
in 2014.

*Tire data is vehicle-specific and may deviate
from the data in the example.

**Tire characteristics**

This information describes the type of tire cord
and the number of layers in sidewall ① and
under tire tread ②.
*Tire data is vehicle-specific and may deviate
from the data in the example.

**Definition of terms for tires and loading**

**Tire ply composition and material used**
Describes the number of plies or the number of
layers of rubber-coated fabric in the tire tread
and sidewall. These are made of steel, nylon,
polyester and other materials.

**Bar**
Metric unit for tire pressure. 14.5038 pounds
per square inch (psi) and 100 kilopascals (kPa)
are the equivalent of 1 bar.

**DOT (Department of Transportation)**
DOT-marked tires fulfill the requirements of the
U.S. Department of Transportation.

**Normal occupant weight**
The number of occupants for which the vehicle
is designed multiplied by 68 kilograms (150 lbs).

**Uniform Tire Quality Grading Standards**
A uniform standard to grade the quality of tires
with regards to tread quality, tire traction and
temperature characteristics. The quality grad-
ing assessment is made by the manufacturer
following specifications from the U.S. govern-
ment. The ratings are molded into the sidewall of
the tire.

**Recommended tire pressures**
The recommended tire pressure applies to the
tires mounted at the factory.
The Tire and Loading Information placard con-
tains the recommended tire pressures for cold
tires on a fully loaded vehicle and for the max-
imum permissible vehicle speed.
The tire pressure table contains the recommen-
ded pressures for cold tires for various operat-
ing conditions, i.e. differing load and speed con-
ditions.

**Increased vehicle weight due to optional
equipment**
The combined weight of all standard and
optional equipment available for the vehicle,
regardless of whether it is actually installed on
the vehicle or not.

**Rim**
This is the part of the wheel on which the tire is
mounted.

**GAWR (Gross Axle Weight Rating)**
The GAWR is the maximum gross axle weight
rating. The actual load on an axle must never
exceed the gross axle weight rating. The gross
axle weight rating can be found on the vehicle
identification plate on the B-pillar on the driver's
side.
Speed rating
The speed rating is part of the tire identification. It specifies the speed range for which the tire is approved.

GVW (Gross Vehicle Weight)
The gross vehicle weight includes the weight of the vehicle with fuel, tools, the spare wheel, accessories installed, vehicle occupants, luggage and the drawbar nose weight if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating GVWR as specified on the vehicle identification plate on the B-pillar on the driver’s side.

GVWR (Gross Vehicle Weight Rating)
The GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, vehicle occupants, fuel, luggage and the drawbar nose weight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver’s side.

Maximum loaded vehicle weight
The maximum weight is the sum of:
- the curb weight of the vehicle
- the weight of the accessories
- the load limit
- the weight of the factory installed optional equipment

Kilopascal (kPa)
Metric unit for tire pressure. 6.9 kPa corresponds to 1 psi. Another unit for tire pressure is bar. 100 kilopascals (kPa) are the equivalent of 1 bar.

Load index
In addition to the load-bearing index, the load index may also be imprinted on the sidewall of the tire. This specifies the load-bearing capacity of the tire more precisely.

Curb weight
The weight of a vehicle with standard equipment including the maximum capacity of fuel, oil and coolant. It also includes the air-conditioning system and optional equipment if these are installed in the vehicle, but does not include passengers or luggage.

Maximum load rating
The maximum tire load is the maximum permissible weight in kilograms or lbs for which a tire is approved.

Maximum permissible tire pressure
Maximum permissible tire pressure for one tire.

Maximum load on one tire
Maximum load on one tire. This is calculated by dividing the maximum axle load of one axle by two.

PSI (pounds per square inch)
A standard unit of measure for tire pressure.

Aspect ratio
Relationship between tire height and tire width in percent.

Tire pressure
This is pressure inside the tire applying an outward force to each square inch of the tire’s surface. The tire pressure is specified in pounds per square inch (psi), in kilopascal (kPa) or in bar. The tire pressure should only be corrected when the tires are cold.

Cold tire pressure
The tires are cold:
- if the vehicle has been parked with the tires out of direct sunlight for at least three hours and
- if the vehicle has not been driven further than 1 mile (1.6 km)

Tread
The part of the tire that comes into contact with the road.

Bead
The tire bead ensures that the tire sits securely on the wheel. There are several steel wires in the bead to prevent the tire from coming loose from the wheel rim.

Sidewall
The part of the tire between the tread and the bead.
Weight of optional extras
The combined weight of those optional extras that weigh more than the replaced standard parts and more than 5 lbs (2.3 kg). These optional extras, such as high-performance brakes, level control, a roof rack or a high-voltage battery, are not included in the curb weight and the weight of the accessories.

TIN (Tire Identification Number)
This is a unique identifier which can be used by a tire manufacturer to identify tires, for example for a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer’s identity code, tire size, tire type code and the manufacturing date.

Load bearing index
The load bearing index (also load index) is a code that contains the maximum load bearing capacity of a tire.

Traction
Traction is the result of friction between the tires and the road surface.

Treadwear indicators
Narrow bars (tread wear bars) that are distributed over the tire tread. If the tire tread is level with the bars, the wear limit of \( \frac{1}{16} \) in (1.6 mm) has been reached.

Occupant distribution
The distribution of occupants in a vehicle at their designated seating positions.

Total load limit
Nominal load and luggage load plus 68 kg (150 lbs) multiplied by the number of seats in the vehicle.

Changing a wheel

Flat tire
The "Breakdown assistance" section (> page 249) contains information and notes on how to deal with a flat tire.

Rotating the wheels

⚠️ WARNING
Interchanging the front and rear wheels may severely impair the driving characteristics if the wheels or tires have different dimensions. The wheel brakes or suspension components may also be damaged. There is a risk of accident.

Rotate front and rear wheels only if the wheels and tires are of the same dimensions.

On vehicles equipped with a tire pressure monitor, electronic components are located in the wheel.
Tire-mounting tools should not be used near the valve. This could damage the electronic components.
Only have tires changed at a qualified specialist workshop.
Always observe the instructions and safety notes in the "Mounting a wheel" section (> page 280).
The wear patterns on the front and rear tires differ, depending on the operating conditions. Rotate the wheels before a clear wear pattern has formed on the tires. Front tires typically wear more on the shoulders and the rear tires in the center.
On vehicles that have the same size front and rear wheels, you can rotate the wheels according to the intervals in the tire manufacturer’s warranty book in your vehicle documents. If no warranty book is available, the tires should be rotated every 3,000 to 6,000 miles (5,000 to 10,000 km). Depending on tire wear, this may be required earlier. Do not change the direction of wheel rotation.
Clean the contact surfaces of the wheel and the brake disc thoroughly every time a wheel is rotated. Check the tire pressure and reactivate the tire pressure monitor if necessary.

Direction of rotation

Tires with a specified direction of rotation have additional benefits, e.g. if there is a risk of hydroplaning. These advantages can only be gained if the tires are installed corresponding to the direction of rotation.
An arrow on the sidewall of the tire indicates its correct direction of rotation.

### Storing wheels

Store wheels that are not being used in a cool, dry and preferably dark place. Protect the tires from oil, grease, gasoline and diesel.

### Mounting a wheel

#### Preparing the vehicle

- Stop the vehicle on solid, non-slippery and level ground.
- Apply the electric parking brake manually.
- Bring the front wheels into the straight-ahead position.
- Shift the transmission to position \( P \).
- Switch off the engine.
- With KEYLESS-GO start function or vehicles with KEYLESS-GO: open the driver's door. The vehicle electronics are now in key position \( 0 \). This is the same as the SmartKey having been removed.

or

- Remove the SmartKey from the ignition lock.
- If included in the vehicle equipment, remove the tire-change tool kit from the vehicle.
- Safeguard the vehicle against rolling away.

#### Securing the vehicle to prevent it from rolling away

The folding wheel chock is an additional safety measure to prevent the vehicle from rolling away, for example when changing a wheel.

- Fold both plates up \( 1 \).
- Fold out lower plate \( 2 \).
- Guide the lugs on the lower plate fully into the openings in base plate \( 3 \).

- Place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.

### Raising the vehicle

### WARNING

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip over with the vehicle raised. There is a risk of injury.

Only position the jack at the appropriate jacking point of the vehicle. The base of the jack must be positioned vertically, directly under the jacking point of the vehicle.

- Only position the jack at the appropriate jacking point of the vehicle. Otherwise, you could damage the vehicle.

**Observe the following when raising the vehicle:**

- To raise the vehicle, only use the vehicle-specific jack that has been tested and approved by Mercedes-Benz. If used incorrectly, the jack could tip over with the vehicle raised.
- The jack is designed only to raise and hold the vehicle for a short time while a wheel is being changed. It must not be used for performing maintenance work under the vehicle.
- Avoid changing the wheel on uphill and downhill slopes.
Before raising the vehicle, secure it from rolling away by applying the parking brake and inserting wheel chocks. Do not disengage the parking brake while the vehicle is raised.

- The jack must be placed on a firm, flat and non-slip surface. On a loose surface, a large, flat, load-bearing underlay must be used. On a slippery surface, a non-slip underlay must be used, e.g. rubber mats.
- Do not use wooden blocks or similar objects as a jack underlay. Otherwise, the jack will not be able to achieve its load-bearing capacity due to the restricted height.
- Make sure that the distance between the underside of the tires and the ground does not exceed 1.2 in (3 cm).
- Do not place your hands or feet under the raised vehicle.
- Do not lie under the vehicle.
- Do not start the engine when the vehicle is raised.
- Do not open or close a door or the trunk lid when the vehicle is raised.
- Make sure that no persons are present in the vehicle when the vehicle is raised.

**Vehicles with hub caps:** The hub cap covers the wheel bolts. Before you can unscrew the wheel bolts, you must remove the hub cap.

- To remove: take socket ② and lug wrench ③ from the vehicle tool kit (> page 248).
- Position socket ② on hub cap ①.
- Position lug wrench ③ on socket ②.
- Using lug wrench ③, turn hub cap ① counter-clockwise and remove it.
- To install: before installing, check hub cap ① and the wheel area for soiling and clean if necessary.
- Put hub cap ① in position and turn until it is in the right position.

- Position socket ② on hub cap ①.
- Attach lug wrench ③ to socket ② and tighten hub cap ①.

  The tightening torque must be 18 lb-ft (25 Nm).

  Note that the hub cap should be tightened to the specified torque of 18 lb-ft (25 Nm). Mercedes-Benz recommends that you have the hub cap installed at a qualified specialist workshop.

- Using lug wrench ③, loosen the bolts on the wheel you wish to change by about one full turn. Do not unscrew the bolts completely.

The jacking point is centered between the front and rear wheel arches (arrow).
Position jack ⑤ at jacking point ④.

Make sure that the base of the jack is positioned directly under jacking point ④.

Turn crank ② clockwise until jack ⑤ sits completely on jacking point ④ and the base of the jack lies evenly on the ground.

Turn crank ③ until the tire is raised a maximum of 1.2 in (3 cm) off the ground.

Removing a wheel

AMG ceramic high performance composite brake system:
When detaching or attaching the wheel, the wheel rim may hit against the ceramic brake disc and damage it.
Proceed with caution and seek the assistance of a second person.

Do not place wheel bolts in sand or on a dirty surface. The bolt and wheel hub threads could otherwise be damaged when you screw them in.

When mounting/removing wheels, and for as long as the wheels are removed, avoid applying any external force on the brake disks. This could impair the level of comfort when braking.

Unscrew the uppermost wheel bolt completely.
Screw alignment bolt ① into the thread instead of the wheel bolt.
Unscrew the remaining wheel bolts fully.
Remove the wheel.

Mounting a new wheel

WARNING
Oiled or greased wheel bolts or damaged wheel bolts/hub threads can cause the wheel bolts to come loose. As a result, you could lose a wheel while driving. There is a risk of accident.

Never oil or grease wheel bolts. In the event of damage to the threads, contact a qualified specialist workshop immediately. Have the damaged wheel bolts or hub threads replaced/renewed. Do not continue driving.

WARNING
If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip over. There is a risk of injury.
Only tighten the wheel bolts or wheel nuts when the vehicle is on the ground.

Always pay attention to the instructions and safety notes in the "Changing a wheel" section (> page 279).
Only use wheel bolts that have been designed for the wheel and the vehicle. For safety reasons, Mercedes-Benz recommends that you only use wheel bolts which have been approved for Mercedes-Benz vehicles and the respective wheel.

AMG ceramic high performance composite brake system:
When detaching or attaching the wheel, the wheel rim may hit against the ceramic brake disc and damage it.
Proceed with caution and seek the assistance of a second person.

To prevent damage to the paintwork, hold the wheel securely against the wheel hub while screwing in the first wheel bolt.
Wheel bolt

- Clean the wheel and wheel hub contact surfaces.

- Slide the wheel to be mounted onto the alignment bolt and push it on.

- Tighten the wheel bolts until they are finger-tight.

- Unscrew the alignment bolt.

- Tighten the last wheel bolt until it is finger-tight.

**Lowering the vehicle**

**WARNING**

The wheels could work loose if the wheel nuts and bolts are not tightened to the specified tightening torque. There is a risk of accident. Have the tightening torque immediately checked at a qualified specialist workshop after a wheel is changed.

- Turn the crank of the jack counter-clockwise until the vehicle is once again standing firmly on the ground.

- Place the jack to one side.

- Tighten the wheel bolts evenly in a crosswise pattern in the sequence indicated (1 to 5). The specified tightening torque is **133 lb-ft (180 Nm)**.

- Turn the jack back to its initial position.

- Stow the jack and the rest of the vehicle tools in the trunk again.

- Check the tire pressure of the newly mounted wheel and adjust it if necessary.

Observe the recommended tire pressure (page 264).

When you are driving with the emergency spare wheel mounted, the tire pressure monitor cannot function reliably. Only restart the tire pressure monitor when the defective wheel has been replaced with a new wheel. All wheels mounted must be equipped with functioning sensors.

**Wheel and tire combinations**

You can obtain information regarding permitted wheel/tire combinations at a qualified specialist workshop.
For safety reasons, Mercedes-Benz recommends that you only use tires and wheels which have been approved by Mercedes-Benz specifically for your vehicle.

These tires have been specially adapted for use with the control systems, such as ABS or ESP®, and are marked as follows:

- **MO** = Mercedes-Benz Original
- **MOE** = Mercedes-Benz Original Extended (tires featuring run-flat characteristics)
- **MO1** = Mercedes-Benz Original (only certain AMG tires)

Mercedes-Benz Original Extended tires may only be used on wheels that have been specifically approved by Mercedes-Benz.

Only use tires, wheels or accessories tested and approved by Mercedes-Benz. Certain characteristics, e.g. handling, vehicle noise emissions or fuel consumption, may otherwise be adversely affected. In addition, when driving with a load, tire dimension variations could cause the tires to come into contact with the bodywork and axle components. This could result in damage to the tires or the vehicle.

Mercedes-Benz accepts no liability for damage resulting from the use of tires, wheels or accessories other than those tested and approved.

Information on tires, wheels and approved combinations can be obtained from any qualified specialist workshop.

Retreaded tires are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tires. As a result, Mercedes-Benz cannot guarantee vehicle safety if retreaded tires are mounted. Do not mount used tires if you have no information about their previous usage.

The recommended pressures for various operating conditions can be found:

- on the Tire and Loading Information placard on the B-pillar on the driver’s side
- in the tire pressure table in the fuel filler flap

Observe the notes on recommended tire pressures under various operating conditions (> page 264).

Check tire pressures regularly, and only when the tires are cold. Comply with the maintenance recommendations of the tire manufacturer in the vehicle document wallet.

Notes on equipping the vehicle:

- Always mount tires of the same size across an axle (left/right)
- Always mount the same type of tires on all wheels at a given time (summer tires, winter tires)

Exception: it is permissible to install a different type or make in the event of a flat tire.
Information regarding technical data

The data stated here specifically refers to a vehicle with standard equipment. Consult an authorized Mercedes-Benz Center for the data for all vehicle variants and trim levels.

Vehicle electronics

Tampering with the engine electronics

Only have work carried out on the engine electronics and its associated parts, such as control units, sensors, actuating components and connector leads, at a qualified specialist workshop. Vehicle components may otherwise wear more quickly and the vehicle’s operating permit may be invalidated.

Installing wireless devices and mobile phones

**WARNING**
The electromagnetic radiation from two-way radios can interfere with the vehicle electronics if two-way radios are manipulated or retrofitted incorrectly. This could jeopardize the operating safety of the vehicle. There is a risk of an accident.

You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

**WARNING**
If you incorrectly operate two-way radios in the vehicle, the electromagnetic radiation may interfere with the vehicle electronics, for example if:

- the two-way radio is not connected to an exterior antenna
- the exterior antenna is not correctly mounted or is not low-reflection

This could jeopardize the operating safety of the vehicle. There is a risk of an accident.

Have the low-reflection exterior antenna installed at a qualified specialist workshop. Always connect two-way specialist workshop.

The operating permit may be invalidated if the instructions for installation and use of two-way radios are not observed.

In particular, the following conditions must be complied with:

- only approved wavebands may be used.
- observe the maximum permissible output in these wavebands.
- only approved antenna positions may be used.

Excessive levels of electromagnetic radiation may cause damage to your health and the health of others. Using an exterior antenna takes into account current scientific discussions relating to the possible health hazards that may result from electromagnetic fields.

The following can be used in the vehicle without restrictions:

- two-way radios with a maximum transmission output of up to 100 mW
- mobile phones (2G/3G/4G)

Identification plates

Vehicle identification plate with vehicle identification number (VIN)

Open the driver’s door.
You will see vehicle identification plate ①.
Vehicle identification number (VIN)

Example: vehicle identification plate (USA only)
① VIN
② Vehicle model

Example: vehicle identification plate (Canada only)
① VIN
② Paint code

The data shown on the vehicle identification plate is used only as an example. This data is different for every vehicle and can deviate from the data shown here. You can find the data applicable to your vehicle on the vehicle identification plate.

Engine number

① Emission control information plate, including the certification of both federal and Californian emissions standards
② VIN (on the lower edge of the windshield)
③ Engine number (stamped into the crankcase)

Technical data

Service products and filling capacities

Important safety notes

⚠️ WARNING

Service products may be poisonous and hazardous to health. There is a risk of injury.

Comply with instructions on the use, storage and disposal of service products on the labels of the respective original containers. Always store service products sealed in their original containers. Always keep service products out of the reach of children.
Environmental note
Dispose of service products in an environmentally responsible manner.

Service products include the following:
- Fuels
- Lubricants (e.g. engine oil, transmission oil)
- Coolant
- Brake fluid
- Windshield washer fluid
- Climate control system refrigerant

Components and service products must match. Only use products recommended by Mercedes-Benz. Damage which is caused by the use of products which have not been recommended is not covered by the Mercedes-Benz warranty or goodwill gestures. They are listed in this Mercedes-Benz Operator’s Manual in the appropriate section.

Information on tested and approved products can be obtained at an authorized Mercedes-Benz Center or on the Internet at http://bevo.mercedes-benz.com.

You can recognize service products approved by Mercedes-Benz by the following inscription on the containers:
- MB-Freigabe (e.g. MB-Freigabe 229.51)
- MB-Approval (e.g. MB-Approval 229.51)

Other designations or recommendations indicate a level of quality or a specification in accordance with an MB Sheet Number (e.g. MB 229.5). They have not necessarily been approved by Mercedes-Benz.

Other identifications, for example:
- 0 W-30
- 5 W-30
- 5 W-40

Fuel

Important safety notes

⚠️ WARNING
Fuel is highly flammable. If you handle fuel incorrectly, there is a risk of fire and explosion.
You must avoid fire, open flames, creating sparks and smoking. Switch off the engine and, if applicable, the auxiliary heating before refueling.

⚠️ WARNING
Fuel is poisonous and hazardous to health. There is a risk of injury.
You must make sure that fuel does not come into contact with your skin, eyes or clothing and that it is not swallowed. Do not inhale fuel vapors. Keep fuel away from children.

If you or others come into contact with fuel, observe the following:
- Wash away fuel from skin immediately using soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical assistance without delay.
- If fuel is swallowed, seek medical assistance without delay. Do not induce vomiting.
- Immediately change out of clothing which has come into contact with fuel.

Gasoline

Fuel grade

⚠️ Do not use diesel to refuel vehicles with a gasoline engine. Do not switch on the ignition if you accidentally refuel with the wrong fuel. Otherwise, the fuel will enter the fuel system. Even small amounts of the wrong fuel could result in damage to the fuel system and the engine. Notify a qualified specialist workshop...
and have the fuel tank and fuel lines drained completely.

⚠️ Only refuel using unleaded premium grade gasoline with at least 91 AKI / 95 RON.

ℹ️ E10 fuel contains up to 10% bioethanol. Your vehicle is E10-compatible. You can refuel your vehicle using E10 fuel.

⚠️ Only use the fuel recommended. Operating the vehicle with other fuels can lead to damage to the fuel system, engine and exhaust system.

⚠️ Do not use the following:
- Gasoline with more than 10% ethanol
- E100 (100% ethanol)
- Gasoline with methanol
- M100 (100% methanol)
- Gasoline with metalliferous additives
- Diesel

Do not mix such fuels with the fuel recommended for your vehicle.

⚠️ To ensure the longevity and full performance of the engine, only premium-grade unleaded gasoline must be used.

If standard unleaded gasoline is unavailable and you have to refuel with unleaded gasoline of a lower grade, observe the following precautions:
- Only fill the fuel tank to half full with regular unleaded gasoline and fill the rest with premium-grade unleaded gasoline as soon as possible.
- Do not drive at the maximum speed.
- Avoid sudden acceleration and engine speeds over 3,000 rpm.

Reformulated Gasoline (RFG) and/or unleaded gasoline with additives can be used. The concentration of additives in the fuel, however, must not exceed 10%, for example:
- Ethanol
- TAME
- ETBE
- IPA
- TBA

For MTBE, the concentration should not exceed 15%.

The concentration of methanol in gasoline, including other additives, must not exceed 3%.

All of these blends must fulfill the fuel requirements, for example:
- knock resistance
- boiling point
- vapor pressure

You will usually find information about the fuel grade on the fuel pump. If you cannot find the label on the fuel pump, ask the gas station staff.

ℹ️ For further information, consult a qualified specialist workshop or visit http://www.mbusa.com (USA only).

Information on refueling (► page 126).

Additives

⚠️ Operating the engine with fuel additives added later can lead to engine failure. Do not mix fuel additives with fuel. This does not include additives for the removal and prevention of residue buildup. Gasoline must only be mixed with additives recommended by Mercedes-Benz. Comply with the instructions for use on the product label. More information about recommended additives can be obtained from any authorized Mercedes-Benz Center.

Mercedes-Benz recommends that you use branded fuels that have additives.

The fuel quality available in some countries may not be sufficient. Residue could build up in the fuel injection system as a result. In such cases, and in consultation with an authorized Mercedes-Benz Center, the fuel may be mixed with the cleaning additive recommended by Mercedes-Benz. You must observe the notes and mixing ratios specified on the container.
Engine oil

General notes

Do not use engine oil or an oil filter with specifications deviating from those expressly required for the prescribed service intervals. Do not change the engine oil or oil filter in order to set replacement intervals longer than those prescribed. This could otherwise cause damage to the engine or exhaust gas after-treatment.

Follow the instructions on the service interval display for changing the engine oil. This could otherwise cause damage to the engine or exhaust gas after-treatment.

When handling engine oil, observe the important safety notes on service products (> page 286).

The engine oils are matched to the performance of Mercedes-Benz engines and service intervals. You should therefore only use engine oils and oil filters that are approved for vehicles with maintenance systems.

For a list of approved engine oils and oil filters, consult an authorized Mercedes-Benz Center. Or visit the website http://bevo.mercedes-benz.com.

The table shows which engine oils have been approved for your vehicle.

<table>
<thead>
<tr>
<th>All models</th>
<th>MB-Freigabe or MB-Approval</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>229.5, 229.51</td>
</tr>
</tbody>
</table>

MB approval is indicated on the oil containers.

Filling capacities

The following values refer to an oil change including the oil filter.

<table>
<thead>
<tr>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>All models</td>
</tr>
<tr>
<td>7.4 US qt (7.0 l)</td>
</tr>
</tbody>
</table>

Additives

Do not use any additives in the engine oil. This could damage the engine.

Brake fluid

WARNING

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point of the brake fluid is too low, vapor pockets may form in the brake system when the brakes are applied hard. This would impair braking efficiency. There is a risk of an accident.

You should have the brake fluid renewed at the specified intervals.

Comply with the important safety notes for service products when handling brake fluid (> page 286).

Only use brake fluid approved by Mercedes-Benz in accordance with MB-Freigabe or MB-Approval 331.0.

Information about approved brake fluid can be obtained at any qualified specialist workshop or on the Internet at http://bevo.mercedes-benz.com.

Have the brake fluid regularly replaced at a qualified specialist workshop in accordance with the replacement intervals and the replacement confirmed in the service report.
Coolant

Important safety notes

⚠️ WARNING
If antifreeze comes into contact with hot components in the engine compartment, it may ignite. There is a risk of fire and injury.
Let the engine cool down before you add antifreeze. Make sure that antifreeze is not spilled next to the filler neck. Thoroughly clean the antifreeze from components before starting the engine.

❗ Only add coolant that has been premixed with the desired antifreeze protection. You could otherwise damage the engine.
Further information on coolants can be found in the Mercedes-Benz Specifications for Service Products, MB BeVo 310.1, e.g. on the Internet at http://bevo.mercedes-benz.com. Or contact a qualified specialist workshop.

⚠️ Always use a suitable coolant mixture, even in countries where high temperatures prevail. Otherwise, the engine cooling system is not sufficiently protected from corrosion and overheating.

⚠️ Have the coolant regularly replaced at a qualified specialist workshop and the replacement confirmed in the service report.

Comply with the important safety notes for service products when handling coolant (> page 286).
The coolant is a mixture of water and antifreeze/corrosion inhibitor. It performs the following tasks:
- anti-corrosion protection
- antifreeze protection
- raising the boiling point
If the coolant has antifreeze protection down to -35 °F (-37 °C), the boiling point of the coolant during operation is approximately 266 °F (130 °C).

The antifreeze concentrate/corrosion inhibitor concentration in the engine cooling system should:
- be at least 50%. This will protect the engine cooling system against freezing down to approximately -35 °F (-37 °C)
- not exceed 55% (antifreeze protection down to -49 °F [-45 °C]). Otherwise, heat will not be dissipated as effectively
Mercedes-Benz recommends an antifreeze/corrosion inhibitor concentrate in accordance with MB Specifications for Service Products 310.1.
The coolant is checked with every maintenance interval at a qualified specialist workshop.

❗ When the vehicle is first delivered, it is filled with a coolant mixture that ensures adequate antifreeze and anti-corrosion protection.

❗ The coolant is checked at specified intervals at a qualified specialist workshop.

Filling capacities

Windshield washer system

Important safety notes

⚠️ WARNING
Windshield washer concentrate could ignite if it comes into contact with hot engine components or the exhaust system. There is a risk of fire and injury.
Make sure that no windshield washer concentrate is spilled next to the filler neck.

❗ Only use washer fluid that is suitable for plastic lamp lenses, e.g. MB SummerFit or MB WinterFit. Unsuitable washer fluid could damage the plastic lenses of the headlamps.

❗ Only MB SummerFit and MB WinterFit washer fluid should be mixed together. The
spray nozzles may otherwise become blocked.

Do not use distilled or de-ionized water. Otherwise, the level sensor may give a false reading.

At temperatures above freezing:

► Fill the washer fluid reservoir with a mixture of water and windshield washer fluid, e.g. MB SummerFit.

Add 1 part MB SummerFit to 100 parts water.

At temperatures below freezing:

► Fill the washer fluid reservoir with a mixture of water and washer fluid, e.g. MB WinterFit.

For the correct mixing ratio refer to the information on the antifreeze reservoir.

Add windshield washer fluid, e.g. MB SummerFit or MB WinterFit, to the washer fluid all year round.

**Climate control system refrigerant**

**Important safety notes**

The instruction label regarding the refrigerant type used can be found on the radiator cross member. Further information can be found in the currently valid service information.

Service work, such as refilling with refrigerant or replacing component parts, may only be carried out by a qualified specialist workshop. All applicable regulations must be adhered to, SAE standard J639 included.

Always have work on the climate control system carried out at a qualified specialist workshop.

**Refrigerant instruction label**

Example: refrigerant instruction label

1. Warning symbol
2. Refrigerant filling capacity
3. Applicable standards
4. PAG oil part number
5. Type of refrigerant

Warning symbol 1 advises you about:

- Possible dangers
- Having service work carried out at a qualified specialist workshop

**Filling capacities**

Missing values were not available at time of going to print.

**Vehicle data**

**General notes**

Please note that for the specified vehicle data:

- The heights specified may vary as a result of:
  - tires
  - load
  - condition of the suspension
  - optional equipment
- optional equipment reduces the maximum payload
### Dimensions and weights

Missing values were not available at time of going to print.
