CLS
Mercedes-AMG Supplement

Mercedes-Benz
Symbols
In this Operator’s Manual, you will find the following symbols:

**DANGER** Danger due to not observing the warning notices
Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.
*N* Please observe the warning notices in this manual.

**ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes
Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.
*N* Observe environmental notes.

**NOTE** Damage to property due to failure to observe notes on material damage
Notes on material damage inform you of risks which may lead to your vehicle being damaged.
*N* Observe notes on material damage.

**WARNING** DANGER due to not observing the warning notices

Example

**WARNING** Risk of injury or fatal injuries if the front passenger airbag is enabled
If the front passenger front airbag is enabled, a child on the front passenger seat may be struck by the front passenger airbag during an accident.
NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG, DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the “Children in the vehicle” section.

Internet

As at 30.11.18
Welcome to the world of Mercedes-AMG

Before your first drive, read this Operator’s Manual carefully and familiarize yourself with your vehicle. For your own safety and a longer vehicle life, follow the instructions and warning notices in this Operator’s Manual. Disregarding them may lead to damage to the vehicle or personal injury.

Vehicle damage resulting from disregarding these instructions is not covered by the Mercedes-Benz Limited Warranty.

The equipment or model designation of your vehicle may vary according to:

- Model
- Order
- National version
- Availability

Mercedes-AMG reserves the right to introduce changes in the following areas:

- Design
- Equipment
- Technical features

The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The following are integral parts of the vehicle:

- Printed Operator's Manual
- Maintenance Booklet
- Equipment-dependent Supplements

Keep these documents in the vehicle at all times. If you sell the vehicle, always pass all of the documents on to the new owner.

Mercedes-Benz USA, LLC
Mercedes-Benz Canada, Inc.
A Daimler Company

Operator's Manual

This Supplement provides information on all the important functions of your AMG vehicle that are either not described or differ from the descriptions in the vehicle Operator’s Manual. This information supplements or replaces the corresponding sections in the vehicle Operator’s Manual. Under no circumstances does the Supplement replace the Operator’s Manual.

This Supplement describes all models, and standard and optional equipment for your vehicle, as available at the time of going to press. Country-specific differences are possible. Bear in mind that your vehicle may not feature all functions described here. This is also the case for systems and functions relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.

The original purchase contract documentation for your vehicle contains a list of all of the systems in your vehicle.

Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

The Operator’s Manual, the Supplement and the Maintenance Booklet are important documents and should be kept in the vehicle.

Operating safety

⚠️ WARNING Risk of accident due to malfunctions or system failures

If you do not have the prescribed service/maintenance work or any required repairs carried out, this could result in malfunctions or system failures.

Always have the prescribed service/maintenance work as well any required repairs carried out at a qualified specialist workshop.

⚠️ WARNING Risk of accident or injury due to incorrect modification of electronic components and parts

Modification to electronic components, their software or wiring could impair their function and/or the function of other networked component parts. In particular, systems relevant to safety could also be affected.

As a result, these may no longer function properly and/or jeopardize the operating safety of the vehicle.

Never tamper with the vehicle's wiring, electronic components or software.

You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

⚠️ WARNING Risk of fire due to flammable materials on hot parts of the exhaust system

Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.
When driving on unpaved roads or off-road, regularly check the vehicle underside.

- Remove trapped plants or other flammable material.
- If there is damage, consult a qualified specialist workshop immediately.

**NOTE** Damage to the vehicle

In the following situations, in particular, there is a risk of damage to the vehicle:

- The vehicle becomes grounded, e.g. on a high curb or an unpaved road
- The vehicle is driven too fast over an obstacle, e.g. a curb, speed bump or pot-hole
- A heavy object strikes the underbody or chassis components

In situations such as this, the body, the underbody, chassis components, wheels or tires could be damaged without the damage being visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may not absorb the loads that arise as intended.

If the underbody paneling is damaged, flammable materials such as leaves, grass or twigs can collect between the underbody and the underbody paneling. These materials may ignite if they come into contact with hot parts on the exhaust system.

- Have the vehicle checked and repaired immediately at a qualified specialist workshop.

or

- If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately in accordance with the traffic conditions, and contact a qualified specialist workshop.

**Qualified specialist workshop**

An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehicle. This particularly applies to safety-relevant works.

For the following, always have your vehicle checked at an authorized Mercedes-Benz Center:

- safety-relevant works
- service and maintenance work
- repair work
- modifications as well as installations and conversions
- work on electronic components

Mercedes-AMG recommends a Mercedes-Benz service center.

**Correct use of the vehicle**

If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.

When using the vehicle, observe the following information:

- the safety notes in this manual
• technical data for the vehicle
• traffic rules and regulations
• laws and safety standards pertaining to motor vehicles

Limited Warranty

**NOTE** Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.
This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

- Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

Driving

Breaking-in notes
To preserve the engine during the first 1,000 miles (1,500 km):
- Drive at varying road speeds and engine speeds.
- Do not drive faster than 85 mph (140 km/h).
- Only briefly allow the engine to reach a maximum engine speed of 4,500 rpm (4,500 rpm).
- Drive the vehicle in drive program A or E.
- Change gear before the tachometer needle is ⅔ of the way to the red area of the tachometer.
- Do not shift down a gear manually in order to brake.
- Avoid overstraining the vehicle, e.g. driving at full throttle.
- Do not depress the accelerator pedal past the pressure point (kickdown).
- Only increase the engine speed gradually and accelerate the vehicle to full speed after 1,000 miles (1,500 km).

This also applies when the engine or parts of the drivetrain have been replaced.
Please also observe the following breaking-in notes:
- In certain driving and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in process.
- Brakepads, brake discs and tires that are either new or have been replaced only achieve optimum braking effect and grip after several hundred kilometers of driving. Compensate for the reduced braking effect by applying greater force to the brake pedal.

Notes on the locking differential
After a breaking-in period of 2000 miles (3000 km) the oil on the locking differential should be changed in a qualified specialist workshop. This oil change prolongs the service life of the locking differential.

Operation of the ECO start/stop function
The engine is automatically switched off if the following conditions are met:
- you have selected drive program A or E.
- you brake the vehicle to a standstill in transmission position D or N.
- if all vehicle conditions for an automatic engine stop are met.

The symbol appears in the multifunction display when the vehicle is stationary.
The engine is restarted automatically if:
- you release the brake pedal in transmission position D when the HOLD function is not active.
- you shift from transmission position P.
- you engage transmission position D or R.
- you depress the accelerator pedal.
• you permanently activate manual gearshifting.
• an automatic engine start is necessary.

If the engine was switched off by the ECO start/stop function and you leave the vehicle, a warning tone sounds. The Vehicle Operational Switch the Ignition Off Before Exiting display message also appears in the multifunction display. If you do not switch off the ignition, the ignition is automatically switched off after one minute.

AMG Performance exhaust system
Function of the AMG Performance exhaust system
Changing the position of the exhaust gas flaps allows you to select the sound characteristics of the AMG Performance exhaust system:
• closed exhaust gas flaps: comfort characteristic
• open exhaust gas flaps: sporty characteristic

Operating the AMG Performance exhaust system
Press button 1. The sporty characteristic is selected when indicator lamp 2 lights up.

DYNAMIC SELECT switch
Function of the DYNAMIC SELECT switch
Use the DYNAMIC SELECT switch to change between the following drive programs:
• E (Eco): particularly economical driving style
• I (Individual): individual settings
• C (Comfort): comfortable and economical driving style
• S (Sport): sporty driving style
• S (Sport Plus): particularly sporty driving style

Mercedes-AMG recommends selecting the drive program C when in city traffic or stop-and-go traffic.

Depending on the drive program selected, the following vehicle characteristics will change:
• Drive
  - Engine and transmission management
  - Active Distance Assist DISTRONIC
• Suspension
Position of the exhaust flaps
Steering
Availability of the ECO start/stop function

You can also change the following vehicle characteristics using the buttons in the center console:
- ECO start/stop function
- Suspension
- Manual gearshifting

Displaying dynamic data

Multimedia system:

Vehicle ➔ DYNAMIC SELECT

Select Dyn. Data.

Dynamic data is displayed, e.g.:
- G-force values
- Torque distribution
- Boost
- Current power output
- Variable all-wheel drive

Automatic transmission

Manual gearshifting

WARNING Risk of skidding and of an accident due to shifting down on slippery road surfaces

If you shift down on slippery road surfaces to increase the engine braking effect, the drive wheels may lose traction.

Do not shift down on slippery road surfaces to increase the engine braking effect.

To activate/deactivate: press button 1.

If indicator lamp 2 is lit, manual gearshifting is activated. The current gear is displayed in the multifunction display.

To permanently shift the gears manually in drive program 10 using the steering wheel paddle shifters, select the M (Manual) setting for the transmission.
NOTE Damage to the engine due to shifting up too late

The automatic transmission does not shift up in manual mode even when the engine’s limiting speed is reached. The fuel supply is interrupted in order to prevent the engine from overrevving.

- Shift up before the engine speed reaches the red area in the tachometer.

To shift up: pull steering wheel paddle shifter 2.

To shift down: pull steering wheel paddle shifter 1.

If the engine speed is too high or too low, you cannot change gear using the steering wheel paddle shifters. In this case, segments 1 light up red.

Gearshift recommendation

The gearshift recommendation assists you in adopting an economical driving style.

If gearshift recommendation message 1 is shown on the multifunction display, shift to the recommended gear.

Gearshift recommendation is active only if you have activated manual gearshifting with the button on the center console.

Using kickdown

- Maximum acceleration: depress the accelerator pedal beyond the pressure point.

If you have activated manual gearshifting with the button in the center console, the transmission does not react to the kickdown.

Driving and parking
During kickdown, you cannot change gears using the steering wheel paddle shifters. The automatic transmission shifts up to the next gear when the maximum engine speed is reached to protect the engine from overrevving.

**Glide mode function**

With an anticipatory driving style, glide mode helps you to reduce fuel consumption.

Glide mode is characterized by the following:

- The combustion engine is disconnected from the drivetrain.
- The engine speed corresponds to the idle speed.
- The symbol appears in the multifunction display.

Glide mode is activated if the following conditions are met:

- The ECO start/stop function is activated.
- Drive program is selected.
- The speed is within a suitable range.
- The road’s course is suitable, e.g. no steep uphill or downhill inclines or tight bends.
- The condition of charge of the battery is sufficient.
- You are no longer depressing the accelerator or brake pedal.

Glide mode can also be activated if you have selected the “Eco” setting for the drive in the drive program.

Glide mode is deactivated again if one of the conditions is no longer met.

When Active Distance Assist DISTRONIC is active, glide mode is restricted.

### Driving and driving safety systems

#### Function of ESP® (Electronic Stability Program)

**WARNING** Risk of skidding if ESP® is malfunctioning

If ESP® is malfunctioning, ESP® cannot carry out vehicle stabilization. In addition, other driving safety systems are switched off.

- Drive on carefully.
- Have ESP® checked at a qualified specialist workshop.

You can select between the following modes of ESP®:

- ESP® on
- SPORT handling mode on
- ESP® off
Characteristics when ESP® is activated

ESP® monitors and improves driving stability and traction, particularly in the following situations:
- When pulling away on wet or slippery roadway.
- When braking.
- In strong side winds when you are driving faster than 43 mph (70 km/h).

ESP® can stabilize the vehicle by intervening in the following ways:
- One or more wheels are braked.
- The engine output is adapted according to the situation.

ESP® is activated every time the engine is started, regardless of whether ESP® was in SPORT handling mode or was deactivated before the engine was switched off.

ESP® is intervening if the ESP® warning lamp flashes in the instrument cluster:
- Do not deactivate ESP®.
- Only depress the accelerator pedal as far as is necessary.
- Adapt your driving style to suit the current road and weather conditions.

Characteristics of activated SPORT handling mode

**WARNING** Risk of skidding due to incorrect application of SPORT handling mode

When you activate SPORT handling mode, there is an increased risk of skidding and having an accident.
- Only activate SPORT handling mode in the circumstances described as follows.

Select SPORT handling mode when the vehicle’s own oversteering and understeering characteristics are desired, for example when driving on specially designated roads.

Only a highly qualified and experienced driver should drive in SPORT handling mode or with ESP® deactivated.

If SPORT handling mode is activated and one or more wheels start to spin, the ESP® warning lamp in the instrument cluster flashes. ESP® then only stabilizes the vehicle to a limited degree.

If SPORT handling mode is activated:
- ESP® only improves driving stability to a limited degree.
- ETS/4ETS traction control is still active.
- The engine’s torque is only restricted to a limited degree and the drive wheels can spin.
- The spinning of the wheels results in a cutting action for better traction on loose surfaces.
- ESP® continues to provide assistance when the brakes are firmly applied.

Characteristics when ESP® is deactivated

**WARNING** Risk of skidding if ESP® is deactivated

If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.
ESP® should only be deactivated in the following situations.

ESP® is deactivated if the ESP® OFF warning lamp lights up continuously in the instrument cluster:
- Driving stability will no longer be improved.
- Crosswind Assist is no longer active.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.

Even when ESP® is deactivated, you are still assisted by ESP® when braking hard.

In the following situations, it may be better to activate SPORT handling mode or deactivate ESP®:
- When using snow chains.
- In deep snow.
- On sand or gravel.
- Spinning the wheels results in a cutting action which provides better grip.

Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle if the vehicle starts to skid or a wheel starts to spin.

If the ESP® warning lamp lights up continuously, ESP® is not available due to a malfunction. Observe any information which may be displayed in the instrument cluster:
- Warning and indicator lamps
- Display messages

ETS/4ETS (Electronic Traction System)
ETS/4ETS traction control is part of ESP®. ETS/4ETS can improve the vehicle’s traction by intervening in the following ways:
- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

To activate SPORT handling mode: briefly press button 1. The ESP SPORT SPORT handling mode warning lamp in the instrument cluster lights up.
To deactivate SPORT handling mode: briefly press button 1. The ESP SPORT handling mode warning lamp in the instrument cluster goes out.

To deactivate ESP®: press button 1 until the ESP® warning lamp in the instrument cluster lights up. The ESP OFF warning lamp in the instrument cluster also lights up.

To activate ESP®: briefly press button 1. The ESP® and ESP OFF warning lamps in the instrument cluster go out.

Observe the information on warning lamps and display messages which may be shown in the instrument cluster.

AMG adaptive sport suspension system (air suspension)

Function of the AMG adaptive sport suspension system

The AMG adaptive sport suspension system is an air suspension system with variable damping for improved driving characteristics. The all-round level control system ensures the best possible suspension and constant ground clearance, even with a laden vehicle. When driving at speed, the vehicle is lowered automatically to improve driving safety and to reduce fuel consumption. You also have the option of manually adjusting the vehicle level.

The damping is tuned individually for each wheel and is affected by the following factors:
- the driving style, e.g. sporty
- the road condition, e.g. bumps
- the individual selection of "Sport", "Sport +", "Comfort" or "Economy"

AMG adaptive sport suspension system comprises:
- air suspension with variable spring rate and automatic level control
- speed-dependent lowering to reduce fuel consumption
- manually selectable high-level setting for greater ground clearance
- ADS PLUS (Adaptive Damping System with constant damping force adjustment)
- DYNAMIC SELECT switch and level button
- suspension tuning button
### Available suspension tuning

<table>
<thead>
<tr>
<th>Drive program</th>
<th>Characteristics</th>
</tr>
</thead>
</table>
| **C** (Comfort) | - The suspension tuning is comfortable.  
- The vehicle is set to the normal level.  
- When driving at speeds above 100 mph (160 km/h) the vehicle is lowered.  
- When driving at speeds below 87 mph (140 km/h), the vehicle is raised again. |
| **E** (Eco) | - The suspension tuning is comfortable.  
- The vehicle is set to the low level.  
- The vehicle is not lowered any further if you are traveling at higher speeds. |
| **S** (Sport) | - The suspension tuning is firmer.  
- The vehicle is set to the low level.  
- The vehicle is not lowered any further if you are traveling at higher speeds. |
| **S** (Sport Plus) | - The suspension tuning is even firmer.  
- The vehicle is set to the low level.  
- The vehicle is not lowered any further if you are traveling at higher speeds. |
Selecting Comfort mode

In "Comfort" mode, the driving characteristics of your vehicle are comfortable. Select this mode if you prefer a more comfortable driving style.

- Press button 1 repeatedly until indicator lamps 2 and 3 go out. The AMG Suspension System COMFORT message appears on the multifunction display.

Selecting Sport mode

"Sport" driving mode ensures a firmer suspension. Select this mode when employing a sporty driving style, e.g. on winding country roads.

- Press button 1 repeatedly until indicator lamp 3 lights up. The AMG Suspension System SPORT message appears on the multifunction display.

Selecting Sport Plus mode

"Sport Plus" driving mode ensures a very firm suspension.

- Press button 1 repeatedly until indicator lamps 2 and 3 light up. The AMG Suspension System SPORT + message appears on the multifunction display.

Setting the vehicle level

**WARNING** Risk of accident because vehicle level is too high

If you drive at a higher vehicle level, the driving characteristics may be impaired due to the higher vehicle center of gravity.

The vehicle can drift outwards, for example, when steering or cornering.

- Always choose a vehicle level which is suited to the driving style and the road surface conditions.

**WARNING** Risk of entrapment from vehicle lowering

When lowering the vehicle, people could become trapped if their limbs are between the vehicle body and the tires or underneath the vehicle.

- Make sure no one is underneath the vehicle or in the immediate vicinity of the wheel arches when you lower the vehicle.

**WARNING** Risk of entrapment from vehicle lowering

Vehicles with AIR BODY CONTROL or level control system: When you unload luggage or leave the vehicle, the vehicle first
rises slightly and then returns to the set level shortly afterwards.
You or anyone else in the vicinity of the wheel arches or the underbody could thus become trapped.
The vehicle can also be lowered after being locked.

Requirements:
- The vehicle has been started.
- The vehicle must not be moving faster than 40 mph (65 km/h).

Raising the vehicle

Press button 1.
The vehicle is raised to the high level.
Your selection is saved.
The vehicle is lowered again in the following situations:
- When driving faster than 62 mph (100 km/h).
- When driving between 50 mph (80 km/h) and 62 mph (100 km/h) for approximately three minutes.
- After selecting a drive program using the DYNAMIC SELECT switch.

The vehicle is adjusted to the height of the last active drive program.

Lowering the vehicle

Press button 1.
The vehicle is adjusted to the height of the last active drive program.
Notes on the Instrument Display and on-board computer

Additional notes regarding your Mercedes-AMG vehicle:

- **Vehicles with an Instrument Display (standard):** if you activate manual gearshifting, (→ page 11) the upshift bar will appear on the multifunction or the Head-up Display.
- **Warning and indicator lamps:** the vehicle is also equipped with ESP® OFF \(^{\text{3}}\) and ESP SPORT warning lamps (→ page 38).

Calling up displays on the Performance menu

On-board computer:

- **Performance**
- **To select a display:** swipe upwards or downwards on the left-hand Touch Control.

Displays on the Performance menu:

- Warm-up
- SETUP
- G-meter
- RACETIMER (vehicles without AMG TRACK PACE)
- Engine data
- Transmission oil temperature
- Charge-air pressure
- Engine oil temperature

If the engine or transmission is not at operating temperature, the multifunction display shows temperature 3 or 4 in blue. Avoid using the full engine power output during this time.

Example: warm-up
1. Digital speedometer
2. Gear display
3. Engine oil temperature

Example: SETUP
1. Drive system setting:
   - Reduced/Moderate/Sport/Dynamic/Race
2. Exhaust system:
   - Balanced/Powerful
3. ESP® status:
On/Off/SPORT handling mode

4 Transmission position: D/M
5 Suspension tuning: Comfort/Sport/Sport+

Example: G-meter

While the vehicle is in motion, the G-meter shows the forces that are exerted on the vehicle occupants both laterally and in the direction of travel. The maximum values appear in red in the coordinate system.

To reset the G-meter: press the left-hand Touch Control.
Select Yes.
Press the left-hand Touch Control.

If you press and hold the left-hand Touch Control, the function will be reset immediately.

Example: engine data

1 Current power output
2 Current torque

Displaying and starting RACETIMER in the Performance menu

On-board computer:

Performance

The RACETIMER function is available only in vehicles without AMG TRACK PACE.
The following functions are possible in RACETIMER:
- displaying and starting
- stopping
- starting a new lap
- displaying lap statistics
- resetting
RACETIMER is intended only for use on a designated race tracks. Do not use the function on public roads.

To select a display and start: swipe up or down on the left-hand Touch Control.
Press the left-hand Touch Control.
Select Start and press the left-hand Touch Control.
To stop: select Stop and press the left-hand Touch Control.

To start a new lap: after the first stored lap, press the left-hand Touch Control.
Select New Lap.
A maximum of 32 laps may be stored.

To stop: select Stop and press the left-hand Touch Control.

To display the lap statistics: after at least two stored laps, press the left-hand Touch Control.

Example: RACETIMER

1 Lap
2Elapsed time
3Average speed
4Distance covered

To reset: stop RACETIMER and press the left-hand Touch Control.
Select Reset and press the left-hand Touch Control.
All laps will be deleted.

Function of the Head-up Display

The Head-up Display projects into the driver’s field of vision:
- Information from the navigation system
- Information from the driver assistance systems
- Some warning messages
Mercedes-AMG display content

1 Protection from reaching the overrevving range
2 Current engine speed
3 Current speed
4 Currently selected gear, gearshift options with manual shifting
5 Detected instructions and traffic signs

Depending on the vehicle’s equipment, you can select further AMG displays in addition to the standard displays on the Display Content menu. If you select RACETIMER, the Head-up Display will show the lap and lap time.

In vehicles with AMG TRACK PACE, you can display further content depending on the setting, e.g.:
- speed and gear indicator
- lap and sector times
- acceleration and braking
- graphic track layouts

When you receive a call, the Incoming Call message will appear on the Head-up Display. In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated.

System limitations
The visibility is influenced by the following conditions:
- Seat position
- The positioning of the display image
- Light conditions
- Wet roads
- Objects on the display cover
- Polarization in sunglasses

In extreme sunlight, sections of the display may appear washed out. You can correct this by switching the Head-up Display off and on again.
With AMG TRACK PACE, the driving characteristics on race tracks can be analyzed and optimized. You can drive previously stored race tracks (e.g. Hockenheimring) or new tracks can be recorded and stored. The driven lap times are stored for every track. These can be analyzed and compared to other lap times to achieve the best possible race results. Additionally, acceleration and braking procedures can be measured and stored.

**Setting Track Race**

Multimedia system:

Vehicle ➔ TRACK PACE ➔ Track Race

**Recording a track**

▸ Select New track.
▸ At the desired starting point, select Start. The track recording starts at this point. During track recording, sectors can be set to determine intervals.

▸ To finish track recording, select Stop or cross the starting line again.
▸ Enter the weather and the track name.

**Searching by track name**

▸ Select All tracks.
▸ Select [🔎] Search.
▸ Enter the track name. Tracks with the searched name are displayed.

**Measuring the time on the track**

▸ Select Timekeeping.
▸ An overview of nearby tracks appears. The distance and direction to the starting line of the track is displayed.
▸ Select the desired track. If you have already driven on this track, you can select a driven time as a reference time.

Timekeeping begins automatically when the starting line has been crossed.

▸ Select a desired lap. The analysis is displayed.

**Displaying the analysis**

▸ Select Lap times. An overview of all the driven times appears.
▸ Select a track. The following data is displayed:
  • Lap and sector times
  • Average and top speed
  • Driver
  • Vehicle
  • Date
  • Weather

▸ When Zoom is selected, the track display can be switched from 2D to 3D.
The following values can be set for parameters 1 and 2, for example:

- Speed
- Longitudinal/lateral acceleration
- Steering angle
- Engine speed

Based on the analysis, you can check and optimize driving characteristics for any position on the track.

### Exporting tracks or races (USB)

- Select All tracks. An overview of all stored tracks and races appears.
- Highlight desired tracks or races.
- Select Options.
- Select Export.

The selected tracks or races can be exported to a USB storage device connected to the vehicle.

### Editing tracks and recordings

- Select All tracks.
- Highlight the desired track.
- Select Options.
- Select Rename or Delete.

or

- Select a track.

### Setting Drag Race

Multimedia system: Vehicle TRACK PACE Drag Race

#### Measuring acceleration

- Select Acceleration. Measurement begins when the vehicle accelerates. Measurement is incremental, in steps of 30 mph (50 km/h) up to a maximum of 150 mph (300 km/h) or up to the set top speed.

Measurement can be stopped early by selecting Stop or by stopping the vehicle.

#### Quarter-mile race

- Select Quarter mile. Timing runs until a mile has been traveled or to the set end distance.
Measurement can be stopped early by selecting **Stop** or by stopping the vehicle.

**Manual start for acceleration and quarter-mile race**
- Select **Acceleration** or **Quarter mile**.
- Select **Manual start**.
  Three red traffic lights appear one after the other. The reaction time measurement starts when they change to green at the same time. The reaction time is displayed as soon as you drive off. If you drive off too early, the message **False start**. will appear and acceleration or quarter mile measurement will be canceled.

**Measuring braking**
- Select **Braking**.
- Select **Starting**.
  Measurement is incremental, in steps of 30 mph (50 km/h) to a standstill. If the braking procedure is started e.g. at a speed of 99 mph (160 km/h), measurement starts as soon as 90 mph (150 km/h) has been reached.

**Storing and calling up measurement values**
When a measurement has been completed or canceled, the measured time can be stored.
- After a measurement, select **Save measurement**?.
  The stored measurements can be displayed via the **History** menu item.

**Editing measurements**
- Select **History**.
- Highlight the desired measurement.
- Select **options**.
- Select **Weather** or **Delete**.
  The measurements can be displayed by category, e.g. acceleration measurements, by applying a filter.

**Calling up the telemetry display**
Multimedia system:

- **Vehicle** ➔ **TRACK PACE** ➔ **telemetry**
  The telemetry display shows current vehicle data as a digital value and as a diagram. Up to four parameters can be selected that are to be shown in the display.
  For example:
  - Engine speed
  - Wheel angle
  - Speed
  - Steering angle
- Set the desired parameters.
- Set the time.
  The set parameters are evaluated in the diagram for the time set.

  The time can range from a minimum of 30 seconds to a maximum of 20 minutes.

**Configuring AMG TRACK PACE**

**Requirements**
To use the TRACK PACE app:
- The TRACK PACE app is installed on the mobile end device.
- The mobile end device is connected to the multimedia system via Wi-Fi.
Setting driver profiles

Select Driver profile.
Create a new driver profile.
or
Select an existing driver profile.
The driver profile is activated.

Tracks, laps and times driven are assigned to the active driver profile while driving. For an exact evaluation of your driving style, you should always drive with an active driver profile.

Displaying driver profile statistics

Select Driver profile.
Select the desired profile.
The following information is displayed for the selected driver profile:
- Driving time
- Track driven
- Number of Track Races, Drag Races and laps driven
- Maximum speed

Connecting a mobile device via the TRACK PACE app

The TRACK PACE app makes it possible to record videos and to synchronize them with stored tracks.

Select the TRACK PACE app.
Already authorized devices are displayed in the list.
Select Authorize new device.
Available devices are displayed.
Start the TRACK PACE app on the device to be connected and follow the instructions.
Confirm the authorization prompt.
Enter the code displayed on the device.
The device is authorized.
or
Select a device that is already authorized.
The device is de-authorized.

Setting the TRACK PACE display in the Head-up Display

Select HUD contents.
Activate ✓ or deactivate □ the desired contents.
The contents in the Head-up Display are adapted.

For further information on the Head-up Display, see (→ page 22) (→ page 23).

Setting acoustic feedback

Select Acoustic feedback.
The following settings are available:
- Loud
- Medium
- Quiet
- Off
Select a setting.

Activating/deactivating additional information

Activate ✓ or deactivate □ Display additional information.
When additional information is activated, popups provide information on the individual menus.

- Confirm popups with *OK* or select *Do not display*.

### Calling up information

- Select *Info*.
  - The following information is displayed:
    - Software version
    - Memory used
    - Total number of tracks saved
    - Total number of races driven
Flat tire

TIREFIT kit storage location

The TIREFIT kit is located under the trunk floor.

1 Tire sealant bottle
2 Tire inflation compressor
Overview of the tire-change tool kit

Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-change tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

You require the following tools, for instance, to change a wheel:
- Jack
- Chock
- Lug wrench
- Alignment bolt

The tire-change tool kit is located under the trunk floor.

Setting up the folding chock

Be sure to also observe the notes on changing a wheel in the Operator’s Manual of your vehicle.
To protect the vehicle body, the vehicle has covers installed next to the jack support points on the longitudinal member panels.

**WARNING** Risk of injury from incorrect positioning of the jack

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip with the vehicle raised.

- Only position the jack at the appropriate jacking point of the vehicle. The base of the jack must be positioned vertically under the jacking point of the vehicle.

**NOTE** Vehicle damage from the jack

If you do not position the jack correctly at the appropriate jack support point of the vehicle, the jack could tip over with the vehicle raised.

- The jack is designed exclusively for jacking up the vehicle at the jack support points.

Cover of jack support points
Operating fluids

Fuel

Information on fuel grades for Mercedes-AMG vehicles

Observe the information on operating fluids in the vehicle Operator’s Manual.

![NOTE](Image)

Damage caused by the wrong fuel

Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system.

- Only refuel with low-sulfur unleaded fuel.

This fuel may contain up to 10 vol.% ethanol. Your vehicle is suitable for use with E10 fuel.

Never refueling:

- Diesel
- Gasoline with more than 10 vol.% ethanol, e.g. E15, E85, E100

- Gasoline with more than 3 vol.% methanol, e.g. M15, M30, M85, M100
- Gasoline with additives containing metal

If you accidentally refuel with the wrong fuel:

- Do not switch the ignition on.
- Consult a qualified specialist workshop.

If the available fuel is not sufficiently low in sulfur, this can produce unpleasant odors.

Only refuel using unleaded premium grade gasoline with at least 91 AKI/95 RON.

As a temporary measure, if the recommended fuel is not available, you may also use unleaded regular gasoline which has at least the octane number specified in the instruction label in the fuel filler flap (see the vehicle Operator’s Manual).

Never refuel using gasoline with an even lower RON.

![NOTE](Image)

Premature wear caused by unleaded regular gasoline

Unleaded regular gasoline can cause the engine to wear more quickly and impair longevity and performance.

If unleaded premium grade gasoline is unavailable and you have to refuel using unleaded regular gasoline:

- Only fill the fuel tank to half full with unleaded regular gasoline and refill as soon as possible with unleaded premium grade gasoline.
- Do not drive at the maximum speed.
- Avoid sudden acceleration and engine speeds over 3,000 rpm.

Further information on fuel is available at the following locations:

- at gas stations
- at a qualified specialist workshop
- USA only: at http://www.mbusa.com
