Thank you for purchasing a Mercedes-AMG

Before you first drive off, read this Operator's Manual carefully and familiarize yourself with your vehicle. For your own safety and a longer operating lifespan of the vehicle, follow the instructions and warning notices in this Operator's Manual. Disregarding them may lead to damage to the vehicle or injury to people. Damage to the vehicle resulting from the disregard of the instructions is not covered by the Mercedes-Benz Limited Warranty.

The standard equipment or product description of your vehicle may vary and depends on the following factors:

- Model
- Order
- National version
- Availability

Mercedes-AMG reserves the right to introduce changes in the following areas:

- Design
- Equipment

- Technical features

The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The following documents are integral parts of the vehicle:

- Printed Operator's Manual
- Maintenance Booklet
- Equipment-dependent Supplements

Keep these documents in the vehicle at all times. If you sell the vehicle, always pass all of the documents on to the new owner.

Mercedes-Benz USA, LLC
Mercedes-Benz Canada, Inc.
A Daimler Company

In this Operator’s Manual, you will find the following symbols:

⚠️ **DANGER** Danger due to not observing the warning notices
Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.
► Observe the warning notices.

🔥 **ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes
Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.
► Observe environmental notes.

⚠️ **NOTE** Damage to property due to failure to observe notes on material damage
Notes on material damage inform you of risks which may lead to your vehicle being damaged.

► Observe notes on material damage.

ℹ️ These symbols indicate useful instructions or further information that could be helpful to you.

Operator’s Manual

This Supplement provides information on all the important functions of your AMG vehicle that are either not described or differ from the descriptions in the vehicle Operator’s Manual. This information supplements or replaces the corresponding sections in the vehicle Operator’s Manual. Under no circumstances does the Supplement replace the Operator’s Manual.

This Supplement describes all models, and standard and optional equipment for your vehicle, as available at the time of going to press. Country-specific differences are possible. Bear in mind that your vehicle may not feature all functions described here. This is also the case for systems and functions relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.

The original purchase contract documentation for your vehicle contains a list of all of the systems in your vehicle.

Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

The Operator’s Manual, the Supplement and the Maintenance Booklet are important documents and should be kept in the vehicle.

Operating safety

WARNING Risk of accident due to malfunctions or system failures

If you do not have the prescribed service/maintenance work or any required repairs carried out, this could result in malfunctions or system failures.

- Always have the prescribed service/maintenance work as well any required repairs carried out at a qualified specialist workshop.

WARNING Risk of accident and injury as a result of incorrect modifications to electronic component parts

Modification to electronic components, their software or wiring could impair their function and/or the function of other networked component parts. In particular, systems relevant to safety could also be affected.

As a result, they may no longer function as intended and/or endanger the operating safety of the vehicle.

- Never tamper with the wiring and electronic component parts or their software.
- You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

Observe the "On-board electronics" section in "Technical data" in the vehicle Operator’s Manual.
WARNING Risk of fire due to flammable materials on hot parts of the exhaust system

Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.

- When driving on unpaved roads or off-road, regularly check the vehicle underside.
- Remove trapped plants or other flammable material.
- If there is damage, consult a qualified specialist workshop immediately.

NOTE Damage to the vehicle

In the following situations, in particular, there is a risk of damage to the vehicle:

- The vehicle is driven too fast over an obstacle, e.g. a curb, speed bump or pothole
- A heavy object strikes the underbody or chassis components

In situations such as this, the body, the underbody, chassis components, wheels or tires could be damaged without the damage being visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may not absorb the loads that arise as intended.

If the underbody paneling is damaged, flammable materials such as leaves, grass or twigs can collect between the underbody and the underbody paneling. These materials may ignite if they come into contact with hot parts on the exhaust system.

- Have the vehicle checked and repaired immediately at a qualified specialist workshop.

or

- If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately in accordance with the traffic conditions, and contact a qualified specialist workshop.

Qualified specialist workshop

An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehicle. This particularly applies to safety-relevant works.

For the following, always have your vehicle checked at an authorized Mercedes-Benz Center:

- safety-relevant works
- service and maintenance work
- repair work
- modifications as well as installations and conversions
- work on electronic components
Mercedes-AMG recommends a Mercedes-Benz service center.

**Correct use of the vehicle**

If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.

Observe the following information in particular when driving your vehicle:

- the safety notes in this manual
- technical data for the vehicle
- traffic rules and regulations
- laws and safety standards pertaining to motor vehicles

**Limited Warranty**

![NOTE](image)

Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.
To preserve the engine during the first 1,000 miles (1,500 km):

- drive at varying road speeds and engine speeds.
- do not drive faster than 85 mph (140 km/h).
- allow the engine to reach a maximum engine speed of 4,500 rpm (4,500 rpm) only briefly.
- drive the vehicle in drive program C.
- change gear before the tachometer needle is ¾ of the way to the red area of the tachometer.
- do not shift down a gear manually in order to brake.
- avoid overstraining the vehicle, e.g. driving at full throttle.
- do not depress the accelerator pedal past the pressure point (kickdown).
- only increase the engine speed gradually and accelerate the vehicle to full speed after 1,000 miles (1,500 km).

This also applies when the engine or parts of the drivetrain have been replaced. Please also observe the following breaking-in notes:

- In certain driving and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in process.
- Brakepads, brake discs and tires that are either new or have been replaced only achieve optimum braking effect and grip after several hundred kilometers of driving. Compensate for the reduced braking effect by applying greater force to the brake pedal.

Start the vehicle with the start/stop button and simultaneously pull one of steering wheel gearshift paddles 1 or 2.
- The idle speed is increased briefly when starting the engine.
- The exhaust gas flaps are opened (sporty characteristic) (→ page 11).

Observe the notes on starting the vehicle in the vehicle Operator’s Manual.
Operation of the ECO start/stop function

The engine is automatically switched off if the following conditions are met:

- If all vehicle conditions for an automatic engine stop are met.
- You brake the vehicle to a standstill in transmission position D or N.
- You depress the brake pedal when driving at speeds below 15 mph (20 km/h).

The engine is restarted automatically if:

- You release the brake pedal in transmission position D when the HOLD function is not active.
- You shift from transmission position P.
- You engage transmission position D or R.
- You depress the accelerator pedal.
- You permanently activate manual gearshifting.
- You pull the left-hand steering wheel gearshift paddle.
- An automatic engine start is necessary.

If the engine was switched off by the ECO start/stop function and you leave the vehicle, a warning tone sounds and the engine is not restarted. The Vehicle Ready to Drive Switch the Ignition Off Before Exiting display message also appears in the multifunction display. If you do not switch off the ignition, the ignition is automatically switched off after one minute.

AMG Performance exhaust system

Function of the AMG Performance exhaust system

Changing the position of the exhaust gas flaps allows you to select the sound characteristics of the AMG Performance exhaust system:

- Closed exhaust gas flaps: comfort characteristic (balanced)
- Open exhaust gas flaps: sporty characteristic (powerful)

Operating the AMG Performance exhaust system

- Pull rocker switch 1. The sporty characteristic (Powerful) is selected when indicator lamp 2 lights up.
This chapter describes the function of the DYNAMIC SELECT switch for the Mercedes-AMG GLE 53 4MATIC+. Use the DYNAMIC SELECT switch to change between the following drive programs:

- **(Slippery):** optimized pulling away and driving characteristics in wintry and slippery road conditions
- **(Individual):** individual settings
- **(Comfort):** comfortable and economical driving style
- **(Sand):** driving in less demanding off-road terrain, optimized for driving on sand
- **(Trail):** driving in less demanding off-road terrain, optimized for driving on unpaved roads and loose ground

Mercedes-AMG recommends selecting the drive program **(C)** when in city traffic or stop-and-go traffic.

Depending on the drive program selected, the following vehicle characteristics will change:

- **Drive:**
  - Engine and transmission management
  - Active Distance Assist DISTRONIC
- **AMG Dynamics:**
  - The agility functions are automatically selected depending on the drive program.
  - The steering, shift timing point, all-wheel drive and stabilization functions are adapted to the selected drive program.
- **Suspension:**
  - Vehicle level
  - Suspension tuning
- **Position of the exhaust gas flaps**
- **Availability of glide mode**

You can also change the following vehicle characteristics using the buttons in the center console:
- Position of the exhaust gas flaps
- Suspension

This chapter describes the function of the DYNAMIC SELECT switch for the Mercedes-AMG GLE 63 4MATIC+ and GLE 63 S 4MATIC+.

Use the DYNAMIC SELECT switch to change between the following drive programs:

- **(Slippery):** optimized pulling away and driving characteristics in wintry and slippery road conditions
- **(Individual):** individual settings
- **(Comfort):** comfortable and economical driving style
- **(Sport):** sporty driving style
- **(Sport +):** particularly sporty driving style
- **(Sand):** driving in less demanding off-road terrain, optimized for driving on sand
- **(Trail):** driving in less demanding off-road terrain, optimized for driving on unpaved roads and loose ground
(RACE): driving like on a race track (Mercedes-AMG GLE 63 S 4MATIC+)
(Sand): driving in less demanding off-road terrain, optimized for driving on sand
(Trail): driving in less demanding off-road terrain, optimized for driving on unpaved roads and loose ground

The (RACE) drive program may not be used on normal roads. (RACE) must only be activated and used on dedicated race circuits, not on public roads.

Mercedes-AMG recommends selecting the drive program (Sand) when in city traffic or stop-and-go traffic.

Depending on the drive program selected, the following vehicle characteristics will change:

- Drive:
  - Engine and transmission management
  - Active Distance Assist DISTRONIC
- AMG Dynamics:
  - The agility functions are automatically selected depending on the drive program.
- The steering, shift timing point and stabilization functions are adapted to the selected drive program.
- When ESP® is activated, agility function Pro is selected in drive program (RACE). The Master function is automatically selected when ESP® is deactivated.

You can change the following vehicle characteristics using the buttons in the center console:
- Position of the exhaust gas flaps
- Suspension
- 4MATIC+ all-wheel drive

The (RACE) drive program has the following properties:
- The vehicle exhibits driving characteristics suited for the racetrack.
- All vehicle systems are set for maximum sportiness.
- The suspension exhibits particularly firm springing and damping settings.
- Glide mode is not available.
- The sporty characteristic (Powerful) is activated when the exhaust system is activated.
To activate/deactivate: pull rocker switch 1.
If indicator lamp 2 is lit, manual gearshifting is activated. The current gear is displayed in the multifunction display.

To permanently shift the gears manually in drive program using the steering wheel gearshift paddles, select the M (Manual) setting for the transmission.

NOTE Damage to the engine due to shifting up too late
The automatic transmission does not shift up in manual mode even when the engine’s limiting speed is reached. The fuel supply is interrupted in order to prevent the engine from overrevving.
Shift up before the engine speed reaches the red area in the tachometer.

If the engine speed is too high or too low, you cannot change gear using the steering wheel gearshift paddles. In this case, segments light up red.

Gearshift recommendation
The gearshift recommendation assists you in adopting an economical driving style.

If gearshift recommendation message is shown on the multifunction display, shift to the recommended gear.
Using kickdown

Maximum acceleration: depress the accelerator pedal beyond the pressure point.

The automatic transmission shifts up to the next gear when the maximum engine speed is reached to protect the engine from overrevving.

If you have activated manual gearshifting with the button in the center console, the transmission does not react to the kickdown.

Glide mode function

With an anticipatory driving style, glide mode helps you to reduce fuel consumption.

Glide mode is characterized by the following:
- The combustion engine is switched off. All of the vehicle functions remain active.
- The symbol will appear on the multifunction display.

Glide mode is activated if the following conditions are met:
- The ECO start/stop function is switched on.
- Drive program is selected with the drive setting "Moderate" or "Reduced".
- The speed is within a suitable range.
- The road's course is suitable, e.g. no steep uphill or downhill inclines or tight bends.
- The charge level of the battery is sufficient.
- You are no longer depressing the accelerator or brake pedal.

Glide mode is deactivated again if one of the conditions is no longer met.

Driving and driving safety systems

Functions of ESP® (Electronic Stability Program)

⚠️ WARNING Risk of skidding if ESP® is malfunctioning

If ESP® is malfunctioning, ESP® cannot carry out vehicle stabilization. In addition, other driving safety systems are switched off.

- Drive on carefully.
- Have ESP® checked at a qualified specialist workshop.

You can select between the following modes of ESP®:
- ESP® ON
- ESP® SPORT
- ESP® OFF
Characteristics when ESP® is activated

ESP® monitors and improves driving stability and traction, particularly in the following situations:

- When pulling away on wet or slippery roadways.
- When braking.
- **Vehicles with trailer hitch:** in trailer operation from speeds of 40 mph (65 km/h), if the vehicle/trailer combination begins to sway from side to side.
- In strong side winds when you are driving faster than 47 mph (75 km/h).

ESP® can stabilize the vehicle by intervening in the following ways:

- One or more wheels are braked.
- The engine output is adapted according to the situation.

ESP® is activated every time the engine is started regardless of whether ESP® was in ESP® SPORT or deactivated before the engine was switched off.

If the ESP® warning lamp flashes in the instrument cluster, one or several vehicle wheels has reached its grip limit:

- Adapt the driving style to suit the prevailing road and weather conditions.
- Do not deactivate ESP® under any circumstances.
- Only depress the accelerator pedal as far as is necessary.

Characteristics when ESP® SPORT is activated

**WARNING** Risk of skidding if ESP® SPORT is used incorrectly

When you activate ESP® SPORT, there is an increased risk of skidding and having an accident.

- Activate ESP® SPORT only in the circumstances described below.

Select ESP® SPORT when the vehicle’s own oversteering and understeering characteristics are desired, e.g. on designated roads.

Driving with ESP® SPORT or with ESP® deactivated requires an extremely qualified and experienced driver.

If ESP® SPORT is activated and one or more wheels start to spin, the ESP® warning lamp on the instrument cluster flashes. ESP® then only stabilizes the vehicle to a limited degree.

ESP® SPORT also has the following characteristics:

- ESP® only improves driving stability to a limited degree.
- ETS/4ETS traction control is still active.
- The engine’s torque is only restricted to a limited degree and the drive wheels can spin. The spinning of the wheels results in a cutting action for better traction on loose surfaces.
- ESP® continues to provide assistance when the brakes are firmly applied.
• **Vehicles with trailer hitch:** stabilization of the vehicle/trailer combination is no longer active.
• Crosswind Assist is no longer active.

**Characteristics when ESP® is deactivated**

⚠️ **WARNING** Risk of skidding if ESP® is deactivated

If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.

🚨 ESP® should only be deactivated in the following situations.

When ESP® is deactivated, the ESP® OFF warning lamp and the ESP OFF message light up continuously in the instrument cluster.

Deactivating ESP® has the following effects:
• Driving stability will no longer be improved.
• The drive wheels could spin.
• ETS/4ETS traction control is still active.

• **Vehicles with trailer hitch:** stabilization of the vehicle/trailer combination is no longer active.
• Crosswind Assist is no longer active.

Even when ESP® is deactivated, you are still assisted by ESP® when braking hard.

It may be best to activate ESP® SPORT or deactivate ESP® in the following situations:
• When using snow chains.
• In deep snow.
• On sand or gravel.

⚠️ Spinning the wheels results in a cutting action, which enhances traction.

⚠️ Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle if the vehicle starts to skid or a wheel starts to spin.

If the ESP® warning lamp lights up continuously even when ESP® is activated, ESP® is not available due to a malfunction.

Observe any information which may be displayed in the instrument cluster:
• Warning and indicator lamps
• Display messages

**ETS/4ETS (Electronic Traction System)**

ETS/4ETS traction control is part of ESP®.

ETS/4ETS can improve the vehicle’s traction by intervening in the following ways:
• The drive wheels are braked individually if they spin.
• More drive torque is transferred to the wheel or wheels with traction.
Activating/deactivating ESP® (Electronic Stability Program)

To activate ESP® SPORT: briefly pull rocker switch 1. The  and ESP SPORT warning lamps in the instrument cluster go out.

To deactivate ESP® SPORT: briefly pull rocker switch 1. The  and ESP OFF warning lamps in the instrument cluster go out.

To deactivate ESP®: pull and hold rocker switch 1 until the  and ESP OFF warning lamps in the instrument cluster go out.

Mercedes-AMG GLE 63 S 4MATIC+: when you deactivate ESP® in the I (RACE) drive program, AMG Dynamics automatically switches to the Master level.

To activate ESP®: briefly pull rocker switch 1. The  warning lamp and the ESP OFF message go out in the instrument cluster.

Observe the information on warning lamps and display messages which may be shown in the instrument cluster.

AMG active adaptive sport suspension system

Function of the AMG active adaptive sport suspension system

The AMG active adaptive sport suspension system is an air suspension system with variable damping for improved driving characteristics. The all-round level control system ensures the best possible suspension and constant ground clearance, even with a laden vehicle. When driving at speed, the vehicle is lowered automatically to improve driving safety and to reduce fuel consumption. You also have the option of manually adjusting the vehicle level.

The damping is set individually for each wheel and is affected by the following factors:
- Driving style, e.g. sporty
- Road condition, e.g. bumps
- The individual selection of Sport, Sport + or Comfort
The AMG active adaptive sport suspension system includes the following components and functions:

- Air suspension with variable spring rate and automatic level control
- Speed-dependent lowering to reduce fuel consumption
- Manually selectable high-level setting for greater ground clearance
- ADS PLUS (Adaptive Damping System with constant damping force adjustment)
- DYNAMIC SELECT switch and level button
- Suspension setting button

Characteristics per drive program

</tr>
</tbody>
</table>

Differences between different vehicle levels compared to the normal level (0):
- **High level (±1):** approx. +2.2 in (+55 mm)
- **Low level (-1):** approx. -0.4 in (-10 mm)

In addition, you can select the mode in every drive program individually via the AMG active adaptive sport suspension system button in the center console. After a drive program is changed, the automatic suspension setting of the drive program is reactivated.

AMG active adaptive sport suspension system, selecting the suspension setting
In **COMFORT** mode, the driving characteristics of your vehicle are comfortable. Select this suspension setting if you prefer a comfortable driving style.
SPORT driving mode ensures a firmer suspension. Select this suspension setting when employing a sporty driving style, e.g. on winding country roads.

SPORT+ driving mode ensures a very firm suspension.

Pull rocker switch 1. The currently selected suspension setting is shown as a display message in the media display.

Setting the vehicle level

⚠️ WARNING Risk of accident because vehicle level is too high
If you drive at a higher vehicle level, the driving characteristics may be impaired due to the higher vehicle center of gravity. The vehicle can drift outwards, for example, when steering or cornering.
Always choose a vehicle level which is suited to the driving style and the road surface conditions.

⚠️ WARNING Risk of entrapment from vehicle lowering
When lowering the vehicle, people could become trapped if their limbs are between the vehicle body and the tires or underneath the vehicle.

Make sure no one is underneath the vehicle or in the immediate vicinity of the wheel arches when the vehicle is being lowered.

Requirements:
- The vehicle has been started.
- The vehicle must not be moving faster than 40 mph (65 km/h).
To raise the vehicle: push rocker switch 1 forwards.

To lower the vehicle: pull rocker switch 1.

The selected vehicle level appears in the media display.

When indicator lamp 2 lights up, then the set vehicle level does not correspond to the standard level of the selected drive program.

The vehicle sets itself to the standard level of the selected drive program when you switch drive programs.

The AMG steering-wheel buttons are two additional control elements on the steering wheel.

You can assign two vehicle functions of your choice to the left control element. You can change between the available functions by pressingly display buttons 2 repeatedly. The currently selected functions are displayed in display buttons 2.

The following functions are available:

- ESP® (→ page 15)
- AMG active adaptive sport suspension system (→ page 18)
- AMG Performance exhaust system (→ page 11)
- ECO start/stop function (→ page 11)
- Manual gearshifting (→ page 13)
- AMG Dynamics (→ page 12)

If you have assigned a function to one of display buttons 2, you can operate this function with corresponding button 1.

The assignment of display buttons 2 remains stored even after a new engine start, but the operating status of the respective function is reset to the basic setting.

You can change between the drive programs with stabilizer bar actuator 3. The selected drive program appears in display button 4. By pressing display button 4, you can directly access the drive program (Individual) (→ page 12).
Notes on the Instrument Display and on-board computer

Additional notes regarding your Mercedes-AMG vehicle:

- **Vehicles with an Instrument Display (standard):** if you activate manual gearshifting, (→ page 13) the upshift bar will appear on the multifunction or Head-up Display. In addition, transmission set-up [M] (manual) and the current gear will appear on the transmission position display of the multifunction display.

- Additional note regarding the indicator and warning lamps: the vehicle is also equipped with the ESP®, ESP® OFF and ESP® SPORT indicator and warning lamps (→ page 43).

You can select the following display content in vehicles with a Widescreen Cockpit:

- Tachometer with gear display
- Date and time
- Warm-up
- AMG TRACK PACE
- G-meter
- Engine data
- SETUP
- Trip computer
- Navigation
- Media
- Telephone

AMG TRACK PACE is displayed on the left-hand section of the display. The warm-up, engine data, SETUP and G-meter menus are displayed on the right-hand section of the display.

**Calling up displays on the Performance menu**

On-board computer:

- ➤ Performance

- **To select a display:** swipe upwards or downwards on the left-hand Touch Control.

Displays on the **Performance** menu:

- Warm-up
- Engine data
- SETUP
- G-meter
Warm-up (example)

1. Digital speedometer
2. Engine oil temperature
3. Transmission oil temperature
4. Boost pressure

If the engine or transmission is not at normal operating temperature, the multifunction display will show temperature 2 or 3 in blue. Avoid using the full engine power output during this time.

Engine data (example)

1. Current power output
2. Current torque

When current power output 1 or current torque 2 reaches the maximum value, the digital value will briefly be stationary. The bar display will continue.

SETUP in Mercedes-AMG vehicles (example)

1. Drive system setting: Reduced/Moderate/Sport
2. Transmission position: D/M
3. AMG DYNAMICS: Base/Advanced
4. Suspension tuning: Comfort/Sport/Sport+
5. Exhaust system: Balanced/Powerful
G-meter (example)

While the vehicle is in motion, the G-meter shows the forces that are exerted on the vehicle occupants both laterally and in the direction of travel. The maximum values are represented by red markings.

To reset the G-meter: press the left-hand Touch Control.
Select Yes.
Press the left-hand Touch Control.

Function of the Head-up Display

The Head-up Display projects information above the cockpit into the driver’s field of vision, e.g. the speed of the vehicle, information from the navigation system or driver assistance systems and some warning messages.

Depending on the vehicle’s equipment, different content can be shown in the three areas of the Head-up Display.

Mercedes-AMG display content

1. Protection from reaching the overrevving range
2. Detected instructions and traffic signs
3. Current speed
4. Currently selected gear, gearshift options with manual shifting
5. Current engine speed

Depending on the vehicle’s equipment, you can select further AMG displays in addition to the standard displays on the Display Content menu.

In vehicles with AMG TRACK PACE, you can display additional content:
- Speed and gear display
- Lap and sector times
- Acceleration and braking
- Track layout graphics

The content that can be displayed will vary depending on the settings.

When you receive a call, the Incoming Call message will appear on the Head-up Display.

In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated.
System limits

The visibility of the displays will be affected by the following conditions:

- Seat position
- Image position setting
- Ambient light
- Wet road
- Objects on the display cover
- Polarization in sunglasses

In extreme sunlight, sections of the display may appear washed out. You can correct this by switching the Head-up Display off and on again.
AMG TRACK PACE

General information

With AMG TRACK PACE, the driving characteristics on race tracks can be analyzed and optimized. You can drive previously stored race tracks (e.g. Hockenheimring), or new tracks can be recorded and stored. The driven lap times are stored for every track. These can be analyzed and compared to other lap times to achieve the best possible race results. Additionally, acceleration and braking procedures can be measured and stored.

Please note: Use AMG TRACK PACE only on closed-off routes outside the public traffic area. Adapt your driving style to your personal abilities and the environmental conditions. As the driver, you are solely responsible for driving your vehicle. Park your vehicle safely before operating the application.

Setting Track Race

Multimedia system:

TRACK PACE ▶ Track Race

Recording a new track

Select ↩ New track.
Select ▶ Start Record. at the desired starting point. The track recording starts at this point.

During track recording, sectors can be set to divide up the track.
Select ◐ Set Sector.
Select ◁ Stop Recording to end track recording or cross the starting line again.
Confirm the prompt with ✔.
Select the weather.
The temperature is determined automatically.
After ending, select ✔ to save the track.
Enter a name.

Press OK to confirm.
The track is saved under the name entered.

Searching by track name

Select ⚑ All Tracks.
Enter the track name. Tracks with the searched name are displayed.

Measuring time on a saved track

Select ☐ All Tracks.
Select the desired track.
Select ⚛.
Select Start Race if you are already stood at the starting line.

or
Select Navigate to for navigation to the starting line.
Timekeeping begins automatically when the starting line has been crossed.

When AR is selected, the track display can be switched from 2D to AR.
Select AR to end timekeeping.
Confirm the prompt with  OK.
Select the weather.
Select  Save Track  to save the times driven for this track.

**Showing displays during Track Race**
The following displays can be shown:
- Tire temperature
- Mini map
- Sector overview
- Engine data
- G-force display
- Lap overview

Select  Start Race.

Select  Setup.
Pull the desired display from the grid on the left or right edge of the media display. The displays are shown during the Track Race.

By selecting  on the active display, you can deactivate this.
Select  to return to the navigation map view.

**Displaying the analysis**
Select  All Tracks.
An overview of all the driven tracks appears.
Select a track.
Select a session.
The following data is displayed:
- Lap and sector times
- Average and maximum permissible speed
- Driver

- Vehicle
- Date
- Weather
Select  Compare to Rec. to use a different session as a reference value.
Select  to return to the overview.
Select  Diagram.
Set parameters $P_0$ and $P_0$. The analysis is displayed.
The following values can be set for parameters 1 and 2, for example:
- Speed
- Longitudinal/lateral acceleration
- Steering angle
- Engine speed
- Engine oil/tire temperature

Based on the analysis you can check and optimize driving characteristics for any position on the track.

Exporting tracks (USB)
- Select Tracks. An overview of all stored tracks appears.
- Select the desired track.
- Select options for the desired track.
- Select Export. The selected track can be exported to a USB storage device connected to the vehicle.
Editing tracks and recordings

- Select Tracks.
- Select the desired track.
- Select options for the desired track.
- Select Rename or Delete.

or

- Select a track.
- Highlight the desired recording.
- Select options.
- Select Export to... or Delete.

Setting Drag Race

Multimedia system:

- TRACK PACE Drag Race

Measuring acceleration

- Select Drag mode.
- Optional: set a target speed. Measurement stops as soon as the specified target speed has been reached.
- Select Acceleration.

Pull away start the measurement. Measurement begins when the vehicle accelerates. Measurement is incremental, in steps of 30 mph (50 km/h) to a maximum of 150 mph (270 km/h).

or

- Select Start.
  A countdown is activated. When the countdown has run out, the measurement starts. After pulling away, the reaction time is displayed. Measurement is incremental, in steps of 30 mph (50 km/h) to a maximum of 150 mph (270 km/h). Measurement can be stopped early by selecting Stop or stopping the vehicle.

Quarter-mile race

- Select Drag mode.
- Optional: set a target distance. Measurement stops as soon as the specified target distance has been reached.
- Select Quarter mile.

Pull away start the measurement. Measurement begins when the vehicle accelerates. Timing runs until the target distance or a maximum of one mile has been traveled.

or

- Select Start. Timing runs until the target distance or a maximum of one mile has been traveled. Measurement can be stopped early by selecting Stop or stopping the vehicle.

Measuring braking

- Select Drag mode.
- Select Braking.
- Select Start. Measurement is incremental, in steps of 5 mph (10 km/h) to a standstill. If the braking procedure is started e.g. at a speed of 58 mph (157 km/h), measurement starts as soon as 55 mph (150 km/h) has been reached.
Storing and calling up measurement values
If measurement is completed or canceled, a prompt appears asking whether the measurement should be saved.
Confirm the prompt with \[\checkmark\] to save.
The stored measurements can be displayed via the History menu item.

Calling up saved measurements
Select \[\checkmark\] History.
Select Acceleration, Quarter Mile or Braking.
Select the desired measurement.
The desired measurement is displayed in detail.
Delete the desired measurement.

Calling up the telemetry display
Multimedia system:
TRACK PACE ➤ Telemetry
The telemetry display shows current vehicle data as a digital value and as a diagram. Up to three parameters can be selected that are to be shown in the display.
For example:
- Engine speed
- Wheel angle
- Speed
- Steering angle

Set the desired parameters.
Set the time.
The set parameters are evaluated in the diagram for the time set.
The time can range from 30 seconds to a maximum of 20 minutes.

Connecting a mobile device via the TRACK PACE app
The TRACK PACE app makes it possible to record videos and to synchronize them with stored tracks.
Select TRACK PACE ➤ Options

Requirements
To connect a mobile device to the TRACK PACE app:
- The TRACK PACE app is installed on the mobile end device.
- The mobile end device is connected to the multimedia system via Wi-Fi.

Connecting a mobile device via the TRACK PACE app
Select TRACK PACE App.
Already authorized devices are displayed in the list.
Select AUTHORIZE NEW DEVICE.
Available devices are displayed.
Start the TRACK PACE app on the device to be connected and follow the instructions.
Confirm the authorization prompt.
Enter the code displayed on the device.
The device is authorized.
Select a device that is already authorized.
The device is de-authorized.
Setting the TRACK PACE display in the Head-up Display

► Select HUD Content.
► Activate or deactivate the desired contents. The contents in the Head-up Display are adapted.

For further information on the Head-up Display, see (→ page 25).

Setting acoustic feedback

► Select Acoustic feedback.
► A scale with values from 0 to 85 is shown.
► Select a setting.
Flat tire
TIREFIT kit storage location
The TIREFIT kit is located under the cargo compartment floor.

1 Tire sealant bottle
2 Tire inflation compressor
Overview of the tire-change tool kit

Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

Required tire-change tools may include, for example:

- Jack
- Chock
- Lug wrench
- Alignment bolt

Tire-change tool kit 1 is located under the cargo compartment floor.

The tire-change tool kit includes the following:

- Jack
- Lug wrench
- Wheel studs
- Extension attachment for wheel studs, if necessary (depending on vehicle version)
- Folding chock
- Ratchet wrench

Setting up the folding chock

Changing a wheel

Be sure to also observe the notes on changing a wheel in the Operator’s Manual of your vehicle.

Vehicles with AMG Driver's Package:
**WARNING Risk of accident caused by non-approved tire types**

If you use tire types that have not been adapted to changes made to the factory speed limit, this can have the following consequences:

- The tires do not exhibit the required quality characteristics and are not suitable for high speeds or the relevant driving dynamics.
- The tires wear unevenly and could, therefore, affect the roadworthiness of the vehicle.
- ABS, ESP® and cruise control operation are restricted.

This can jeopardize road safety.

▶ Only use tire types that have been approved for the maximum road speed set and the vehicle.

<table>
<thead>
<tr>
<th>NOTE Damage to the ceramic brake disk when changing a wheel</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Mercedes-AMG vehicles with ceramic brake disks:</strong> during removal and repositioning of the wheel, the wheel rim may strike the ceramic brake disk and damage it.</td>
</tr>
<tr>
<td>▶ Take particular care.</td>
</tr>
<tr>
<td>▶ Ask another person for assistance or use a second centering pin.</td>
</tr>
</tbody>
</table>

▶ When changing the wheel, avoid exerting any force on the brake discs. This can lead to impaired comfort during braking.

**Vehicles with AMG ceramic high-performance composite braking system:**
Operating fluids

Fuel

Notes on fuel grades for Mercedes-AMG vehicles
Observe the information on operating fluids in the vehicle Operator’s Manual.

**NOTE** Damage caused by the wrong fuel

Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system.

- Only refuel with low-sulfur unleaded fuel.

This fuel may contain up to 10% ethanol by volume. Your vehicle is suitable for use with E10 fuel.

Never refuel with one of the following fuels:
- Diesel
- Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100
- Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
- Gasoline with additives containing metal

If you have accidentally refueled with the wrong fuel:
- Do not switch the ignition on.
- Consult a qualified specialist workshop.

If the available fuel is not sufficiently low in sulfur, this can produce unpleasant odors.

Only refuel using unleaded premium grade gasoline with at least 91 AKI/95 RON.

As a temporary measure, if the recommended fuel is not available, you may also use unleaded regular gasoline which has at least the octane number specified in the information label in the fuel filler flap (see the vehicle Operator’s Manual).

Never refuel using gasoline with an even lower RON.

**NOTE** Premature wear through unleaded regular gasoline

Unleaded regular gasoline can cause the engine to wear more quickly and impair longevity and performance.

If unleaded premium grade gasoline is unavailable and you have to refuel using unleaded regular gasoline:
- Only fill the fuel tank to half full with unleaded regular gasoline and refill as soon as possible with unleaded premium grade gasoline.
- Do not drive at the maximum design speed.
- Avoid sudden acceleration engine speeds over 3000 rpm.

Further information on fuel is available at the following locations:
- At a gas station
- At a qualified specialist workshop
- On the https://www.mbusa.com (USA only)
### Tank content and fuel reserve

<table>
<thead>
<tr>
<th>Model</th>

Weights and loads

Please note that for the specified vehicle data:
- Items of optional equipment increase the curb weight and reduce the payload.
Roof load

All models

Maximum roof load 165.4 lb (75 kg)

Off-road driving vehicle data

Fording depth

⚠️ NOTE Damage caused by water when fording

Water can enter the engine compartment and vehicle interior in the following cases:
- The maximum permissible fording depth when driving through standing water is exceeded
- A bow wave forms during fording
- Water accumulates during fording of flowing water

Do not exceed the maximum permissible fording depth and drive slowly through the water.

The specified value indicates the maximum permissible fording depth for vehicles that are ready to drive and for slow driving through standing water.

Driving through flowing water reduces the permissible fording depth due to the accumulation of water.

Observe the notes on off-road driving and fording in the vehicle Operator’s Manual.

Approach/departure angle

The specified values are maximum values for vehicles that are ready to drive.

Observe the notes on driving in mountainous terrain.

<table>

</tbody>
</table>

Model

Fording depth

All models 19.7 in (50 cm)
Maximum gradient climbing ability
The vehicle’s gradient climbing ability depends on the weight distribution in the vehicle, the terrain conditions and the road surface conditions. The specified value applies in the following cases:
- The vehicle is ready to drive
- The road surface conditions and thus traction are good
A gradient climbing ability of 100% corresponds to an incline of 45°.
Observe the notes on driving in mountainous terrain in the vehicle Operator’s Manual.
Missing values were not available at the time of going to press.
