Observation of the chapter "Children in the vehicle".

Example

**WARNING** Risk of injury or fatal injuries if the front passenger airbag is enabled.

If the front passenger airbag is enabled, a child on the front passenger seat may be struck by the front passenger airbag during an accident.

NEVER use a rearward facing child restraint system on a seat protected by an ENABLED FRONT AIRBAG in front of it, this can result in DEATH or SERIOUS INJURY to the child.

_Example_
Thank you for purchasing a Mercedes-AMG

Before you first drive off, read this Operator’s Manual carefully and familiarize yourself with your vehicle. For your own safety and a longer operating lifespan of the vehicle, follow the instructions and warning notices in this Operator’s Manual. Disregarding them may lead to damage to the vehicle or injury to people. Damage to the vehicle resulting from the disregard of the instructions is not covered by the Mercedes-Benz Limited Warranty.

The standard equipment and product description of your vehicle may vary and depends on the following factors:

- Model
- Order
- National version
- Availability

Mercedes-AMG reserves the right to introduce changes in the following areas:

- Design
- Equipment

- Technical features

The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The following documents are integral parts of the vehicle:

- Digital Operator’s Manual
- Printed Operator’s Manual
- Maintenance Booklet
- Equipment-dependent Supplements

Keep these documents in the vehicle at all times. If you sell the vehicle, always pass all of the documents on to the new owner.

Calling up the Digital Operator’s Manual

Multimedia system:

Vehicle ➤ 1 Operator’s Manual

Select a menu item.

In addition, you can also call up the Operator’s Manual within a main function (e.g. via Media Info).

The Digital Operator’s Manual describes the function and operation of the vehicle and the multimedia system.

For safety reasons, the Digital Operator’s Manual is deactivated while driving.

The Digital Operator’s Manual contains the following menu items:

- **Search**: allows you to search precisely for keywords.
- **Quick start**: provides you with important information so that you can start using your vehicle immediately.
- **Tips**: provides tips on how to use your vehicle in certain situations.
- **Messages**: provides you with further information about the messages in the instrument cluster.
- **Bookmarks**: provides you with a list of all the bookmarks you have stored yourself.

Some sections of the Digital Operator's Manual, such as warnings, can be made visible by highlighting and pressing them.
Notes on small series certification
This vehicle has been produced and certified in a limited number of units in accordance with the specifications for small series certification. The scope of equipment and certification is based on these specifications, which may deviate from the requirements for large-scale production.

Protecting the environment

Environmental damage due to operating conditions and personal driving style

The pollutant emission of the vehicle is directly related to the way you operate the vehicle.
Operate your vehicle in an environmentally responsible manner to help protect the environment. Please observe the following recommendations on operating conditions and personal driving style.

Operating conditions:

- Make sure that the tire pressure is correct.
- Do not carry any unnecessary weight.
- Adhere to the service intervals. A regularly serviced vehicle will contribute to environmental protection.
- Always have maintenance work carried out at a qualified specialist workshop.

Personal driving style:

- Do not depress the accelerator pedal when starting the engine.
- Do not warm up the engine while the vehicle is stationary.
- Drive carefully and maintain a suitable distance from the vehicle in front.
- Avoid frequent, sudden acceleration and braking.
- Change gear in good time and use each gear only up to \( \frac{2}{3} \) of its maximum engine speed.

Switch off the engine in stationary traffic, e.g. by using the ECO start/stop function.
- Drive fuel-efficiently. Observe the ECO display for an economical driving style.

Environmental issues and recommendations
It is recommended that you re-use or recycle materials instead of just disposing of them.
The relevant environmental guidelines and regulations serve to protect the environment and must be strictly observed.

Genuine Mercedes-Benz parts

Environmental damage due to not using recycled reconditioned components

Mercedes-Benz AG offers recycled reconditioned components and parts with the same quality as new parts. The same entitlement from the Limited Warranty is valid as for new parts.
Use recycled reconditioned components and parts from Mercedes-Benz AG.

**NOTE** Impairment of the operating efficiency of the restraint systems from installing accessory parts or from repairs or welding

Airbags and Emergency Tensioning Devices, as well as control units and sensors for the restraint systems, may be installed in the following areas of your vehicle:
- Doors
- Door pillars
- Door sills
- Seats
- Cockpit
- Instrument cluster
- Center console
- Lateral roof frame

Do not install accessory parts such as audio systems in these areas.
Do not carry out repairs or welding.
Have aftermarket installation of accessories carried out at a qualified specialist workshop.

You could jeopardize the operating safety of your vehicle if you use parts, tires and wheels as well as accessories relevant to safety which have not been approved by Mercedes-Benz. Safety-relevant systems, e.g. the brake system, may malfunction. Only use Mercedes-Benz Genuine Parts or parts of equal quality. Only use tires, wheels and accessories that have been specifically approved for your vehicle model.

Mercedes-Benz Genuine Parts are subject to strict quality inspections. Each part has been specially developed, manufactured or selected for Mercedes-Benz vehicles and adapted to them. Therefore, only Mercedes-Benz Genuine-Parts should be used.

More than 300,000 different Mercedes-Benz Genuine Parts are available for Mercedes-Benz models.
All authorized Mercedes-Benz Centers maintain a supply of Mercedes-Benz Genuine Parts for necessary service and repair work. In addition, strategically located parts delivery centers provide for quick and reliable parts service.
Always specify the vehicle identification number (VIN) (→ page 317) when ordering Mercedes-Benz Genuine Parts.

**Operator’s Manual**

This Operator’s Manual describes all models and all standard and optional equipment available for your vehicle at the time of this Operator’s Manual going to press. Country-specific differences are possible. Note that your vehicle may not be equipped with all features described. This is also the case for systems and functions relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.
The original purchase agreement for your vehicle contains a list of all of the systems in your vehicle.

Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

The Operator’s Manual and Maintenance Booklet are important documents and should be kept in the vehicle.

**Service and vehicle operation**

**Vehicle operation outside the USA or Canada**

When you are abroad with your vehicle, observe the following points:

- Service points or replacement parts may not be available immediately.
- Unleaded fuel may not be available for vehicles with a catalytic converter. Leaded fuel may cause damage to the catalytic converter.
- The fuel may have an extremely low octane number. Unsuitable fuel can cause engine damage.

Some Mercedes-Benz models are available in Europe through our European Delivery Program. For more information, please consult an authorized Mercedes-Benz service center, or write to one of the following address:

**In the USA:**
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes-Benz Drive
Sandy Springs, GA 30328

**In Canada:**
Mercedes-Benz Canada, Inc.
European Delivery Department

Toronto, Ontario M4G 4C9

**Maintenance**

Your customer advisor confirms the service in the service report.

**Roadside Assistance**

The Mercedes-Benz Roadside Assistance Program offers technical help in the case of a breakdown. Your calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.

1-800-FOR-MERcedes (1-800-367-6372) (USA)
1-800-387-0100 (Canada)

You can find further information in the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty booklet (Canada). You will find both in the vehicle document wallet.

**Change of address or change of ownership**

In the event of a change of address, please send us the "Notification of address change" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) on the hotline number 1-800-FOR-MERcedes (1-800-367-6372) or Customer Service (Canada) on 1-800-387-0100. We
can then reach you in a timely fashion, if necessary.

If you sell your Mercedes, please leave all literature in the vehicle so that it is available to the next owner. If you have purchased a used vehicle, please send us the "Notice of Purchase of Used Car" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) at the hotline number 1-800-FOR-MERCEdes (1-800-367-6372) or Customer Service (Canada) at 1-800-387-0100.

Possible danger due to substances hazardous to health

**WARNING**

Operating, servicing and maintaining a passenger vehicle, pickup truck, van or off-road motor vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

---

**Operating safety**

**WARNING** Risk of accident due to malfunctions or system failures

To avoid malfunctions or system failures:

- Always have the prescribed service and maintenance work as well any required repairs carried out at a qualified specialist workshop.

---

**WARNING** Risk of accident or injury due to incorrect modifications on electronic component parts

Modification of electronic components, their software or wiring could impair their function and/or the function of other networked component parts or safety-relevant systems. This can endanger the operating safety of the vehicle.

- Never tamper with the wiring and electronic component parts or their software.
- You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

Observe the "On-board electronics" section in "Technical data".
**WARNING** Risk of fire due to flammable materials on hot parts of the exhaust system

Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.

- When driving on unpaved roads or off-road, regularly check the vehicle underside.
- Remove trapped plants or other flammable material, in particular.
- If there is damage, consult a qualified specialist workshop immediately.

**NOTE** Damage to the vehicle due to driving too fast and due to impacts to the vehicle underbody or suspension components

In the following situations, in particular, there is a risk of damage to the vehicle:

- The vehicle becomes grounded, e.g. on a high curb or an unpaved road
- The vehicle is driven too fast over an obstacle, e.g. a curb, speed bump or pothole
- A heavy object strikes the underbody or suspension components

In situations such as these, damage to the body, underbody, suspension components, wheels or tires may not be visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may no longer absorb the resulting force as intended. If the underbody paneling is damaged, flammable materials such as leaves, grass or twigs can collect between the underbody and the underbody paneling. These materials may ignite if they come into contact with hot parts of the exhaust system.

- Have the vehicle checked and repaired immediately at a qualified specialist workshop.
- If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately, while paying attention to road and traffic conditions, and contact a qualified specialist workshop.

**Declaration of conformity for wireless vehicle components**

**USA:** “Radio based devices of this vehicle comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) These devices may not cause harmful interference, and 2) These devices must accept any interference received, including interference that may cause undesired operation. Changes or modifications
not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.*

Canada: "This vehicle contains license-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's RSS(s). Operation is subject to the following two conditions: (1) These devices may not cause interference, and (2) These devices must accept any interference, including interference that may cause undesired operation of the device."

Diagnostics connection
The diagnostics connection is only intended for the connection of diagnostic devices at a qualified specialist workshop.

**WARNING** Risk of accident due to connecting devices to the diagnostics connection
If you connect devices to the diagnostics connection of the vehicle, the function of vehicle systems and operating safety may be impaired.

- Only connect the vehicle diagnostics connection to devices which have been tested with regard to their suitability and are considered safe.

**WARNING** Risk of accident due to objects in the driver's footwell
Objects in the driver's footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

**NOTE** Battery discharging from using devices connected to the diagnostics connection
Using devices at the diagnostics connection drains the battery.
- Check the charge level of the battery.
- If the charge level is low, charge the battery, e.g. by driving a considerable distance.

Connecting equipment to the diagnostics connection can lead to emissions monitoring information being reset, for example. This may lead to the vehicle failing to meet the requirements of the next emissions inspection during the main inspection.

Qualified specialist workshop
An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehi-
This particularly applies to safety-relevant works.

For the following, always have your vehicle checked at an authorized Mercedes-Benz Center:

- Safety-relevant works
- Service and maintenance work
- Repair work
- Modifications as well as installations and conversions
- Work on electronic components

Mercedes-AMG recommends a Mercedes-Benz service center.

**Correct use of the vehicle**

If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.

Observe the following information in particular when driving your vehicle:

- the safety notes in this manual
- technical data for the vehicle
- traffic rules and regulations
- laws and safety standards pertaining to motor vehicles

**Notes for persons with electronic medical aids**

Mercedes-Benz AG cannot, despite carefully developing vehicle systems, completely rule out the interaction of vehicle systems with electronic medical aids such as cardiac pacemakers.

In addition, there are components installed in the vehicle that, regardless of the operating status of the vehicle, can generate magnetic fields on a par with permanent magnets. These fields can, for example, be in found in the multimedia or sound system or also in the area of the seats, depending on the vehicle equipment.

For this reason, the following can occur in isolated cases, depending on the aids used:

- Aids malfunctioning
- Adverse health effects

Observe the notes and warnings of the manufacturer of the medical aids; if in doubt, contact the device manufacturer and/or your doctor. Mercedes-Benz AG recommends using only few electrical vehicle systems and/or maintaining a distance from the components if there is continuing uncertainty concerning the possibility of medical aids malfunctioning.

Only have repairs and maintenance work in the area of the following components carried out by a qualified specialist workshop:

- Vehicle components carrying live voltage
- Transmission antenna
- Multimedia system and sound system

If you have any queries or suggestions, consult a qualified specialist workshop.

**Problems with your vehicle**

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and recti-
fied. If the problem is not resolved to your satisfaction, please discuss the problem again with an authorized Mercedes-Benz Center or, if necessary, contact us at one of the following addresses:

In the USA:

Reporting safety defects

USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.
If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.
To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to the https://www.safercar.gov/; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590.; USA.
You can also obtain other information about motor vehicle safety from: https://www.safercar.gov

Canada only:
The following text is published as required of manufacturers under subsection 18.4 (4) of the Motor Vehicle Safety Regulations.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying Mercedes-Benz Canada Inc.
If Transport Canada received similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer or Mercedes-Benz Canada Inc.
To contact Transport Canada, you may call the Defect Investigations and Recalls Division toll-free in Canada at 1-800-333-0510 or 819-994-3328 in the Gatineau-Ottawa area or internationally; you may also go to the following websites for more information:
- English: https://www.tc.gc.ca/recalls
- French: https://www.tc.gc.ca/rappels
Limited Warranty

NOTE Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions. This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

QR code for rescue card

QR codes are attached in the fuel filler flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle in a compact form, e.g. the routing of the electric lines.

Further information can be obtained at https://www.mercedes-benz.de/qr-code.

Data storage

Electronic control units

Electronic control units are installed in your vehicle. Some of these are necessary for the safe operation of your vehicle, while some assist you when driving (driver assistance systems). In addition, your vehicle provides comfort and entertainment functions, which are also made possible by electronic control units.

Electronic control units contain data memories which can temporarily or permanently store technical information about the vehicle’s operating state, component loads, maintenance requirements and technical events or malfunctions.

In general, this information documents the state of a component part, a module, a system or the surroundings such as:

- Operating status of system components (e.g. fill levels, battery status, tire pressure)
- Status messages concerning the vehicle or its individual components (e.g. number of wheel revolutions/speed, longitudinal acceleration, lateral acceleration, display of fastened seat belts)
- Malfunctions or faults in important system components (e.g. lights, brakes)
- Information on events leading to vehicle damage
- System reactions in special driving situations (e.g. airbag deployment, intervention of stability control systems)
- Ambient conditions (e.g. temperature, rain sensor)

In addition to providing the actual control unit function, this data assists the manufacturer in detecting and rectifying malfunctions and optimizing vehicle functions. The majority of this
data is temporary and is only processed in the vehicle itself. Only a small portion of the data is stored in the event or fault memory.

When your vehicle is serviced, technical data from the vehicle can be read out by service network employees (e.g. workshops, manufacturers) or third parties (e.g. breakdown services). Services include, for example, repair services, maintenance processes, warranty claims and quality assurance measures. The read out is performed via the legally prescribed port for the diagnostics connection in the vehicle. The respective service network locations or third parties collect, process and use the data. They document technical statuses of the vehicle, assist in finding faults and improving quality and are transmitted to the manufacturer, if necessary. Furthermore, the manufacturer is subject to product liability. For this, the manufacturer requires technical data from vehicles.

Fault memories in the vehicle can be reset by a service outlet as part of repair or maintenance work.

Depending on the selected equipment, you can import data into vehicle convenience and information functions yourself.

This includes, for example:
- Multimedia data such as music, films or photos for playback in an integrated multimedia system
- Address book data for use in connection with an integrated hands-free system or an integrated navigation system
- Entered navigation destinations
- Data about the use of Internet services

This data can be saved locally in the vehicle or it is located on a device which you have connected to the vehicle (e.g. a smartphone, USB flash drive or MP3 player). If this data is stored in the vehicle, you can delete it at any time. This data is sent to third parties only at your request, particularly when you use online services in accordance with the settings that you have selected.

You can store or change convenience settings/individualization in the vehicle at any time.

Depending on the equipment, this includes, for example:
- Settings for the seat and steering wheel positions
- Suspension and climate control settings
- Customizations such as interior lighting

If your vehicle is accordingly equipped, you can connect your smartphone or another mobile end device to the vehicle. You can control this by means of the control elements integrated in the vehicle. Images and audio from the smartphone can be output via the multimedia system. Certain information is simultaneously transferred to your smartphone.

Depending on the type of integration, this can include:
- General vehicle data
- Position data

This allows you to use selected apps on your smartphone, such as navigation or music playback. There is no further interaction between the smartphone and the vehicle; in particular, vehicle data is not directly accessible. Which type of
further data processing occurs is determined by the provider of the specific app used. Which settings you can make, if any, depends on the specific app and the operating system of your smartphone.

Online services

Wireless network connection
If your vehicle has a wireless network connection, it enables data to be exchanged between your vehicle and additional systems. The wireless network connection is enabled via the vehicle’s transmission and reception unit or via connected mobile end devices (e.g. smartphones). Online functions can be used via the wireless network connection. This includes online services and applications/apps provided by the manufacturer or other providers.

Manufacturer’s services
Regarding online services of the manufacturer, the individual functions are described by the manufacturer in a suitable place (e.g. Operator’s Manual, website of the manufacturer) along with the relevant data protection information. Personal data may be used for the provision of online services. Data is exchanged via a secure connection, e.g. the manufacturer’s designated IT systems. Personal data is collected, processed and used via the provision of services exclusively on the basis of legal permissions or with prior consent.

The services and functions (sometimes subject to a fee) can usually be activated or deactivated. In some cases, this also applies to the entire vehicle’s data connection. This excludes, in particular, legally prescribed functions and services.

Third party services
If it is possible to use online services from other providers, these services are the responsibility of the provider in question and subject to that provider’s data protection conditions and terms of use. The manufacturer has no influence on the content exchanged.

For this reason, please ask the service provider for information about the type, extent and purpose of the collection and use of personal data when services are provided by third parties.

Multimedia system/Mercedes me connect
If the vehicle is equipped with the multimedia system or Mercedes me connect, additional data about the vehicle’s operation, the use of the vehicle in certain situations, and the location of the vehicle may be compiled by the multimedia system or Mercedes me connect.

For additional information please refer to the chapter “Multimedia system” and/or the Mercedes me connect Terms and Conditions.

Event data recorders
USA only:
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an airbag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.
The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating
- Whether or not the driver and front passenger seat belts were buckled/fastened
- How far (if at all) the driver was depressing the accelerator and/or brake pedal and
- How fast the vehicle was traveling

This data can help provide a better understanding of the circumstances in which accidents and injuries occur. NOTE: EDR data is recorded by your vehicle only if a non-trivial crash situation occurs; no data is recorded by the EDR under normal driving conditions and no personal data (e.g. name, gender, age and accident location) is recorded. However, other parties, such as law enforcement, could combine EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties that have the special equipment, such as law enforcement, can read the information by accessing the vehicle or the EDR.

EDR data may be used in civil and criminal matters as a tool in accident reconstruction, accident claims and vehicle safety. Since the Crash Data Retrieval (CDR) tool that is used to extract data from the EDR is commercially available, Mercedes-Benz USA, LLC (“MBUSA”) expressly disclaims any and all liability arising from the extraction of this information by unauthorized Mercedes-Benz personnel.

MBUSA will not share EDR data with others without the consent of the vehicle owner or, if the vehicle is leased, without the consent of the lessee. Exceptions to this representation include responses to subpoenas by law enforcement; by federal, state or local government; in connection with or arising out of litigation involving MBUSA or its subsidiaries and affiliates; or, as required by law.

Warning: The EDR is a component of the Restraint System Module. Tampering with, altering, modifying or removing the EDR component may result in a malfunction of the Restraint System Module and other systems.

State laws or regulations regarding EDRs that conflict with federal regulation are pre-empted. This means that in the event of such conflict, the federal regulation governs. As of December 2016, 17 states have enacted laws relating to EDRs.

Restraint system

Protection provided by the restraint system

The restraint system includes the following components:
- Seatbelt system
- Airbags
- Child restraint system

The restraint system can help prevent the vehicle occupants from coming into contact with parts of the vehicle interior in the event of an accident. In the event of an accident, the restraint system can also reduce the forces to which the vehicle occupants are subjected.

A seatbelt can only provide the best level of protection if it is worn correctly. Depending on the detected accident situation, Emergency Tensioning Devices and/or airbags supplement the protection offered by a correctly worn seat belt.

Emergency Tensioning Devices and/or airbags are not deployed in every accident.

In order for the restraint system to provide the intended level of protection, each vehicle occupant must observe the following information:
- Fasten seat belts correctly.
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.
- Always secure persons under 5 ft (1.50 m) tall in an additional restraint system suitable for Mercedes-Benz vehicles.

However, no system available today can completely eliminate injuries and fatalities in every accident situation. In particular, the seat belt and airbag generally do not protect against objects penetrating the vehicle from the outside. It is also not possible to completely rule out the risk of injury caused by the airbag deploying.

Reduced restraint system protection

**WARNING** Risk of injury or death due to modifications to the restraint system

Vehicle occupants may no longer be protected as intended if alterations are made to the restraint system.
- Never alter the parts of the restraint system.
- Never tamper with the wiring or any electronic component parts or their software.

If it is necessary to modify the vehicle to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details.
USA only: for details, contact our Customer Assistance Center on 1-800-FOR-MERcedes (1-800-367-6372).

Restraint system functionality

When the ignition is switched on, a self-test is performed, during which the "restraint sys-
tem warning lamp lights up. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are then functional.

**Malfunctioning restraint system**

A malfunction has occurred in the restraint system if:

- The restraint system warning lamp does not light up when the ignition is switched on
- The restraint system warning lamp lights up continuously or repeatedly during a journey

⚠️ **WARNING** Risk of injury due to malfunctions in the restraint system

Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.

- Have the restraint system checked and repaired immediately at a qualified specialist workshop.

**Function of the restraint system in an accident**

How the restraint system works is determined by the severity of the impact detected and the type of accident anticipated:

- Frontal impact
- Rear impact
- Side impact
- Rollover

The activation thresholds for the components of the restraint system are determined based on the evaluation of the sensor values measured at various points in the vehicle. This process is preemptive in nature. The triggering/deployment of the components of the restraint system must take place in good time at the start of the collision.

Factors which can only be seen and measured after a collision has occurred do not play a decisive role in the deployment of an airbag. Nor do they provide an indication of airbag deployment. The vehicle may be deformed significantly without an airbag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of vehicle deceleration is not high. Conversely, an airbag may be deployed even though the vehicle suffers only minor deformation. If very rigid vehicle parts such as longitudinal members are hit, this may result in sufficiently high levels of vehicle deceleration.

Depending on the detected deployment situation, the components of the restraint system can be activated or deployed independently of each other:

- Emergency Tensioning Device: frontal impact, rear impact, side impact, rollover
- Driver’s airbag, front passenger airbag: frontal impact
- Knee airbag: frontal impact
- Side airbag: side impact
- Window curtain airbag: side impact, rollover, frontal impact

The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. If the front passenger seat
is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (→ page 41).

**WARNING** Risk of burns from hot air bag components

The air bag parts are hot after an air bag has been deployed.

- Do not touch the air bag parts.
- Have a deployed air bag replaced at a qualified specialist workshop as soon as possible.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident. Take this into account, particularly if an Emergency Tensioning Device is triggered or an airbag deployed.

If the Emergency Tensioning Devices are triggered or an airbag is deployed, you will hear a bang, and a small amount of powder may also be released:

- The bang will not generally affect your hearing.
- In general, the powder released is not hazardous to health but may cause short-term breathing difficulties to persons suffering from asthma or other pulmonary conditions. Provided it is safe to do so, leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Airbags and pyrotechnic Emergency Tensioning Devices contain perchlorate material, which may require special handling or environmental protection measures. National guidelines regarding waste disposal must be observed. In California, see https://dtsc.ca.gov/. Using the search function, you will find information on perchlorate, for example.

**Seat belts**

**Protection provided by the seat belt**

Always fasten your seat belt correctly before starting a journey. A seat belt can only provide the best level of protection if it is worn correctly.

**WARNING** Risk of injury or death due to incorrectly fastened seat belt

If the seat belt is not worn correctly, it cannot perform its intended protective function. In addition, an incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction suddenly.

- Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

Always observe the instructions about the correct driver's seat position and adjusting the seat (→ page 66).

In order for the correctly worn seat belt to provide the intended level of protection, each vehicle occupant must observe the following information:

- The seat belt must not be twisted and must fit tightly and snugly across the body.
• The seat belt must be routed across the center of the shoulder and as low down across the hips as possible.
• The shoulder section of the seat belt should not touch your neck nor be routed under your arm or behind your back.
• Avoid wearing bulky clothing, e.g. a winter coat.
• Push the lap belt down as far as possible across your hips and pull tight with the shoulder section of the belt. Never route the lap belt across your abdomen.
Pregnant women must also take particular care with this.
• Never route the seat belt across sharp, pointed, abrasive or fragile objects.
• Only one person should use each seat belt at any one time. Never allow babies and children to travel sitting on the lap of another vehicle occupant.
• Never secure objects with a seat belt if the seat belt is also being used by one of the vehicle's occupants. Always observe the instructions for loading the vehicle when securing objects, luggage or loads (→ page 74).
Also ensure that no objects, e.g. a cushion, are ever placed between a person and the seat.
The seat belt on the front passenger side is equipped with a special seat belt retractor.
Activate or deactivate the child seat safety feature of the seat belt (→ page 48).
If children are traveling in the vehicle, be sure to observe the instructions and safety notes on "Children in the vehicle" (→ page 45).

**Limitations of the protection provided by the seat belt**

---

**WARNING** Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.
You could slip beneath the seat belt and injure yourself.

---

**WARNING** Risk of injury or death when additional restraint systems are not used for persons with a smaller stature

Persons under 5 ft (1.50 m) tall cannot wear the seat belt correctly without a suitable additional restraint system.

**Always secure persons under 5 ft (1.50 m) tall in a suitable restraint system.**

---

**Adjust the seat properly before commencing your journey.**

**Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.**
**WARNING** Risk of injury or death due to damaged or modified seat belts

Seat belts cannot provide protection in the following situations:

- The seat belt is damaged, has been modified, is extremely dirty, bleached or dyed
- The seat belt buckle is damaged or extremely dirty
- Modifications have been made to the Emergency Tensioning Device, seat belt anchorage or seat belt retractor

Seat belts may sustain non-visible damage in an accident, e.g. due to glass splinters.

Modified or damaged seat belts could tear or fail in the event of an accident, for example. Modified Emergency Tensioning Devices could accidentally trigger or fail to function as intended.

▶ Never modify the seat belt system, for example the seat belt, seat belt buckle, Emergency Tensioning Device, seat belt anchorage and seat belt retractor.

▶ Make sure that the seat belts are undamaged, not worn and clean.

▶ Always have the seat belts checked immediately after an accident at a qualified specialist workshop.

Only use seat belts which have been approved for your vehicle by Mercedes-Benz.

**Vehicles with AMG Performance seats**

The AMG Performance seat is designed for the standard three-point seat belt. If you install a different multipoint seat belt, e.g. sport or racing seat belts, the restraint system cannot provide the intended level of protection.

▶ ▶ ▶

**WARNING** Risk of injury or fatal injury due to modified seat belt systems

If you feed seat belts through the opening in the seat backrest, the seat backrest may be damaged or may even break in the event of an accident.

▶ Only use the standard three-point seat belt.

### All vehicles

**WARNING** Risk of injury or death from deployed pyrotechnic Emergency Tensioning Devices

Pyrotechnic Emergency Tensioning Devices that have been deployed are no longer operational and are unable to perform their intended protective function.

▶ Therefore, have deployed pyrotechnic Emergency Tensioning Devices immediately replaced at a qualified specialist workshop.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident.
NOTE Damage caused by trapping the seat belt

If an unused seat belt is not fully retracted, it may become trapped in the door or in the seat mechanism.

Always ensure that an unused seat belt is fully retracted.

Fastening seat belts

If the seat belt is pulled quickly or sharply, the seat belt retractor locks. The seat belt strap cannot be pulled out any further.

Vehicles with automatic front passenger airbag shutoff:

Always engage seat belt tongue 2 of the seat belt into seat belt buckle 1 of the corresponding seat.

NOTE Deployment of the Emergency Tensioning Device and side air bag when the front passenger seat is unoccupied

If the seat belt tongue is engaged in the seat belt buckle of the unoccupied front passenger seat, the Emergency Tensioning Device and the side air bag may also deploy in the event of an accident along with other systems.

Only one person should use each seat belt at any one time.

Vehicles without automatic front passenger airbag shutoff:

NOTE Deployment of the Emergency Tensioning Device when the front-passenger seat is unoccupied

If the seat belt tongue is engaged in the seat belt buckle of the unoccupied front-passenger seat, the Emergency Tensioning Device may also deploy in the event of an accident along with other systems.
Only one person should use each seat belt at any one time.

**Seat belt adjustment function**

**Vehicles with PRE-SAFE®:** If the seat belt is not pulled tightly across your body, the seat belt adjustment may automatically apply a certain tightening force. Do not hold the seat belt tightly while it is adjusting.

You can activate and deactivate the seat belt adjustment function using the multimedia system (→ page 36).

**Releasing seat belts**

Press the release button in the seat belt buckle and guide the seat belt back with the seat belt tongue.

**Activating/deactivating seat belt adjustment via the multimedia system**

Multimedia system:

Vehicle ➔ Vehicle Settings ➔ Belt Adjustment

Activate ✔ or deactivate ✗ the function.

**Seat belt warning function for the driver and front passenger**

The ⚖ seat belt warning lamp in the instrument display is a reminder that all vehicle occupants must wear their seat belts correctly.

The ⚖ seat belt warning lamp lights up for six seconds every time the vehicle is started.

In addition, a warning tone may sound.

When the driver’s and front passenger’s doors are closed and the driver and front passenger have fastened their seat belts, the seat belt warning goes out.

In the following cases, the seat belt warning lights up during a journey if:

- The vehicle speed exceeds 15 mph (25 km/h) and the driver’s or front passenger seat belt is not fastened.
- The driver or front passenger unfastens their seat belt while the vehicle is in motion.

**Airbags**

**Overview of airbags**

1. Driver’s airbag
2. Front passenger airbag
3. Passenger knee airbag
4. Side airbags
5. Curtain airbags
6. Knee bolsters
Front passenger knee airbag
Window curtain airbag
Side airbag
Driver’s knee airbag

The installation location of an airbag is identified by the AIRBAG symbol.

When enabled, an airbag can provide additional protection for the respective vehicle occupant.

Potential protection provided by each airbag:
- Knee airbag: thigh, knee and lower leg
- Driver’s airbag, front passenger airbag: head and ribcage
- Side airbag: ribcage
- Window curtain airbag: head

**WARNING Risk of injury or fatal injuries if the front passenger airbag is enabled**

If the front passenger airbag is enabled, a child on the front passenger seat may be struck by the front passenger airbag during an accident.

NEVER use a rearward facing child restraint system on a seat protected by an ENABLED FRONT AIRBAG in front of it, this can result in DEATH or SERIOUS INJURY to the child.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 49). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat.

**Information on automatic front passenger airbag shutoff**
The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (→ page 41).

**NOTE Important points to remember if the front passenger seat is unoccupied**

In an accident, the components of the restraint system may deploy unnecessarily on the front passenger side if:
- There are heavy objects on the front passenger seat.
- The seat belt tongue is engaged in the seat belt buckle of the front passenger seat and the front passenger seat is unoccupied.

- Stow objects in a suitable place.
- Only one person should use each seat belt at any one time.

Depending on the detected accident situation, the window curtain airbag on the front passenger side may deploy. The airbag is deployed regardless of whether the front passenger seat is occupied.
**Protection provided by the airbags**

Depending on the accident situation, an airbag may supplement the protection provided by a correctly fastened seat belt.

**WARNING Risk of injury or death due to an incorrect seat position**

If you deviate from the correct seat position, the airbag cannot perform its intended protective function.

Each vehicle occupant must make sure of the following:

- Fasten seat belts correctly. Pregnant women must take particular care to ensure that the lap belt never lies across the abdomen.
- Adopt the correct seat position and keep as far away as possible from the airbags.
- Observe the following information.
- Always make sure that there are no objects between the airbag and vehicle occupant.

To avoid the risks resulting from the deployment of an airbag, each vehicle occupant must observe the following information in particular:

- Before starting your journey, adjust your seat correctly; the driver’s seat and front passenger seat should be moved as far back as possible.

When doing so, always observe the information on the correct driver’s seat position (→ page 66).

- Only hold the steering wheel by the steering wheel rim. This allows the airbag to be fully deployed.

- Always lean against the seat backrest when the vehicle is in motion. Do not lean forwards or against the door or side window. You may otherwise be in the deployment area of the airbags.

- Always keep your feet on the floor. Do not put your feet on the cockpit, for example. Your feet may otherwise be in the deployment area of the airbag.

- If children are traveling in the vehicle, observe the additional notes (→ page 45).

- Always stow and secure objects correctly.

Objects in the vehicle interior may prevent an airbag from functioning correctly. Each vehicle occupant must always make sure of the following in particular:

- There are no people, animals or objects between the vehicle occupants and an airbag.
- There are no objects between the seat, door and door pillar (B-pillar).
- There are no hard objects, e.g. coat hangers, hanging on the grab handles or coat hooks.
- There are no accessory parts, such as mobile navigation devices, mobile phones or cup holders, attached to the vehicle within the deployment area of an airbag, e.g. on the cockpit, on the door, on the side window or on the side wall trim.

In addition, no connecting cables, tensioning straps or retaining straps must be routed or attached to the vehicle within the deployment area of an airbag. Always comply with the accessory manufacturer’s installation instructions.
instructions and, in particular, the notes on suitable places for installation.

- There are no heavy, sharp-edged or fragile objects in the pockets of your clothing. Store such objects in a suitable place.

**Limited protection provided by airbags**

**WARNING** Risk of injury due to modifications to the cover of an airbag

If you modify the cover of an airbag or affix objects such as stickers to it, the airbag may no longer function correctly.

- Never modify the cover of an airbag and do not affix objects to it.

The installation location of an airbag is identified by the AIRBAG symbol (→ page 36).

**WARNING** Risk of injury or death due to the use of unsuitable seat covers

Due to unsuitable seat covers, the airbags cannot protect vehicle occupants as intended.

In addition, the operation of the automatic front passenger airbag shutoff could be restricted.

- You should only use seat covers that have been approved for the corresponding seats by Mercedes-Benz.

**WARNING** Risk of injury due to malfunctioning sensors in the door

The function of the airbags can be impaired due to modifications or incorrect work performed on the doors or door trim, or if the doors are damaged.

- Never modify the doors or parts of the doors.

**WARNING** Risk of injury due to deployed airbag

A deployed airbag no longer offers any protection.

- Have the vehicle towed to a qualified specialist workshop in order to have the deployed airbag replaced.

Have deployed airbags replaced immediately.

**Status of the front passenger front airbag**

**Function of the automatic front passenger airbag shutoff**

The automatic front passenger front airbag shutoff is able to detect whether the front passenger seat is occupied by a person or a child restraint system. The front passenger airbag and front passenger knee airbag are enabled or disabled accordingly.

- Always have work on the doors or door trim carried out at a qualified specialist workshop.
When installing a child restraint system on the front passenger seat, always make sure of the following:

- Ensure that the child restraint system is positioned correctly (→ page 44).
- Always comply with the child restraint system manufacturer’s installation instructions.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Fully retract the seat cushion length adjustment.

- The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- The child restraint system must not touch the roof or be put under strain by the head restraints. Adjust the seat backrest inclination and the head restraint setting accordingly.

A person on the front passenger seat must observe the following information:

- Fasten seat belts correctly (→ page 32).
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.

The front passenger airbag may otherwise be disabled by mistake, for example, in the following situations:

- The front passenger transfers their weight by supporting themselves on a vehicle armrest.
The front passenger sits in such a way that their weight is raised from the sitting surface.

WARNING Risk of injury or death due to a disabled front passenger airbag

The front passenger airbag is disabled when the PASSENGER AIR BAG OFF indicator lamp is lit.

A person in the front passenger seat could then, for example, come into contact with the vehicle interior, especially if the person is sitting too close to the cockpit.

If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The front passenger seat has been moved as far back as possible.
- The person is seated correctly.

Both before and during the journey, ensure that the status of the front passenger airbag is correct.

If the front passenger seat is occupied, the classification of the person or child restraint system on the front passenger seat takes place after the front passenger airbag shutoff self-test. The PASSENGER AIR BAG indicator lamps display the status of the front passenger airbag.

Always observe the notes on the function of the PASSENGER AIR BAG indicator lamps (page 41).

Function of the PASSENGER AIR BAG indicator lamps

Self-test of automatic front passenger airbag shutoff

When the ignition is switched on, a self-test is performed during which the two PASSENGER AIR BAG ON and OFF indicator lamps light up simultaneously.
The status of the front passenger airbag is displayed via the PASSENGER AIR BAG indicator lamps after the self-test:

- **ON is lit:** the front passenger airbag may deploy during an accident.
  The indicator lamp goes out after approximately 60 seconds.
- **ON and OFF are not lit:** the front passenger airbag may deploy during an accident.
- **OFF is lit:** the front passenger airbag is disabled. It will then not be deployed in the event of an accident.

If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front passenger airbag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off.

If the PASSENGER AIR BAG OFF indicator lamp and the \[\text{restraint system warning lamp}\] light up simultaneously, the front passenger seat may not be used. Also in this case, do not install a child restraint system on the front passenger seat. Have the automatic front passenger airbag shutoff checked and repaired immediately at a qualified specialist workshop.

**Status display**

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation.

**After installing a rearward-facing child restraint system on the front passenger seat:** PASSENGER AIR BAG OFF must be lit continuously.

**WARNING** Risk of injury or death when using a rearward-facing child restraint system while the front passenger airbag is enabled

If you secure a child in a rearward-facing child restraint system on the front passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag can deploy in the event of an accident. The child could be struck by the airbag.

Always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 49).

Depending on the child restraint system and the stature of the child, the PASSENGER AIR BAG OFF indicator lamp may be off. In this case, do not install the rearward-facing child restraint system on the front passenger seat.

**After installing a forward-facing child restraint system on the front passenger seat:** depending on the child restraint system and the stature of the child, PASSENGER AIR BAG OFF may be lit continuously or be off. Always observe the following information.
WARNING Risk of injury or death due to incorrect positioning of the child restraint system
If you secure a child in a forward-facing child restraint system on the front passenger seat that is positioned too close to the cockpit, in the event of an accident, the child could:

- come into contact with the vehicle interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example
- be struck by the airbag if the PASSENGER AIR BAG OFF indicator lamp is off.

Always move the front passenger seat as far back as possible. Always make sure that the shoulder belt strap is correctly routed from the seat belt guide on the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt guide.

Always comply with the child restraint system manufacturer's installation instructions.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 49).

If a person is sitting on the front passenger seat: PASSENGER AIR BAG OFF may be lit continuously or be off, depending on the person’s stature.

A person on the front passenger seat must always observe the following information:

- If the front passenger seat is occupied by an adult or a person with a stature corresponding to that of an adult, the PASSENGER AIR BAG OFF indicator lamp must be off. This indicates that the front passenger airbag is enabled.

If the PASSENGER AIR BAG OFF indicator lamp is lit continuously, an adult or person with a build corresponding to that of an adult should not use the front passenger seat.

- If the front passenger seat is occupied by a person of smaller stature (e.g. a teenager or small adult), the PASSENGER AIR BAG OFF indicator lamp either lights up continuously or remains off, depending on the classification.
  - If the PASSENGER AIR BAG OFF indicator lamp is off: move the front passenger seat as far back as possible.
  - If the PASSENGER AIR BAG OFF indicator lamp is lit continuously: the person of smaller stature should not use the front passenger seat.

WARNING Risk of injury or death when the PASSENGER AIR BAG OFF indicator lamp is lit
If the PASSENGER AIR BAG OFF indicator lamp remains lit after the self-test, the front passenger airbag is disabled.
If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The person is seated properly with a correctly fastened seat belt.

Be sure to also observe the following further related subjects:

- Securing the child restraint system on the front passenger seat (→ page 49)

**PRE-SAFE® system**

**PRE-SAFE® (anticipatory occupant protection)**

PRE-SAFE® is able to detect certain critical driving situations and implement pre-emptive measures to protect the vehicle occupants.

PRE-SAFE® can implement the following measures independently of each other:

- Tightening the seat belts on the driver's seat and front passenger seat.
- Closing the side windows.
- **Vehicles with memory function**: Move the front passenger seat to a more favorable seat position.
- **PRE-SAFE® Sound**: provided that the multi-media system is switched on, generates a brief noise signal to stimulate the innate protective mechanism of a person’s hearing.

NOTE Damage caused by objects in the footwell or behind the seat

The automatic adjustment of the seat position may result in damage to the seat and/or the object.

- Stow objects in a suitable place.

**Reversing the PRE-SAFE® system measures**

If an accident did not occur, the pre-emptive measures that were taken are reversed.

You will need to perform certain settings yourself.

- If the seat belt pre-tensioning is not reduced, move the seat backrest back slightly. The locking mechanism releases.

**Safely transporting children in the vehicle**

Always observe when children are traveling in the vehicle

Also strictly observe the safety notes for the specific situation. In this way you can recognize potential risks and avoid dangers if children are traveling in the vehicle (→ page 45).

**Be diligent**

Bear in mind that negligence when securing a child in the child restraint system may have serious consequences. Always be diligent in securing a child carefully before every journey.
To improve protection for children younger than twelve years old or under 5 ft (1.50 m) in height, Mercedes-Benz recommends you observe the following information:

- Always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle.
- The child restraint system must be appropriate to the age, weight and size of the child.
- The vehicle seat must be suitable for installing a child restraint system.

The generic term child restraint system

The generic term child restraint system is used in this Operator's Manual. A child restraint system is, for example:

- A baby car seat
- A rearward-facing child seat
- A forward-facing child seat
- A child booster seat with a backrest and seat belt guide

The child restraint system must be appropriate to the age, weight and size of the child.

Observe laws and legal requirements

Always observe the legal requirements when using a child restraint system in the vehicle.

Observe standards for child restraint systems

All child restraint systems must meet the following standards:

- U.S. Federal Motor Vehicle Safety Standards 213 and 225
- Canadian Motor Vehicle Safety Standards 213 and 210.2

Confirmation that the child restraint system complies with the standards can be found on an instruction label on the child restraint system. This confirmation can also be found in the installation instructions that are included with the child restraint system.

Detecting risks, avoiding danger

Securing systems for child restraint systems in the vehicle

Only use the following securing systems for child restraint systems:

- The vehicle's seat belt system

A booster seat may be necessary to achieve proper seat belt positioning for children over 40 lbs (18 kg) in weight or until they reach a height where a three-point seat belt can be installed properly without a booster seat. Mercedes-Benz recommends a suitable child booster seat with a backrest and seat belt guide.

Advantage of a rearward-facing child restraint system

It is preferable to transport a baby or a small child in a suitable rearward-facing child restraint system. In this case, the child sits in the opposite direction to the direction of travel and faces backwards.

Babies and small children have comparatively weak neck muscles in relation to the size and weight of their head. The risk of injury to the cer-
vical spine during an accident can be reduced in a rearward-facing child restraint system.

Always secure a child restraint system correctly

**WARNING** Risk of injury or death due to incorrect installation of the child restraint system

The child can then not be protected or restrained as intended.
- Be sure to comply with the manufacturer’s installation instructions for the child restraint system and its correct use.
- Make sure that the entire base of the child restraint system always rests on the sitting surface of the seat.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Use child restraint systems only with the original cover designed for them.

Always replace damaged covers with genuine covers.

**WARNING** Risk of injury or death due to unsecured child restraint systems in the vehicle

If the child restraint system is incorrectly installed or not secured, it can come loose. The child restraint system could be flung around and hit vehicle occupants.
- Always install child restraint systems correctly, even when not in use.
- Always comply with the child restraint system manufacturer’s installation instructions.
- Always observe the child restraint system manufacturer’s installation and operating instructions as well as the vehicle-specific information:
  - Securing the child restraint system with the seat belt on the front passenger seat (→ page 50). Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 49).

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (→ page 41).

- Observe the warning labels in the vehicle interior and on the child restraint system.

Do not modify the child restraint system

**WARNING** Risk of injury due to modifications to the child restraint system

The child restraint system can no longer function properly. This poses an increased risk of injury.
- Never modify a child restraint system.
- Only affix accessories which have been specially approved for this child restraint system by the child restraint system’s manufacturer.
Only use child restraint systems which are in proper working condition

**WARNING** Risk of injury or death caused by the use of damaged child restraint systems

Child restraint systems or their retaining systems that have been subjected to stress in an accident may not be able to perform their intended protective function. It may be the case that the child cannot be properly restrained.

- Always immediately replace child restraint systems that have been damaged or involved in an accident.
- Have the securing systems for the child restraint systems checked at a qualified specialist workshop before installing a child restraint system again.

Avoid direct sunlight

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.

Observe when stopping or parking

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

- Never leave children unattended in the vehicle.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

Keep the vehicle SmartKey out of reach of children.

**WARNING** Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If people – particularly children – are exposed to extreme temperatures over an extended period of time, there is a risk of serious or even fatal injury.

- Never leave anyone – particularly children – unattended in the vehicle.
- Never leave animals in the vehicle unattended.

**Overview of suitable seats in the vehicle for installing a child restraint system**

Front passenger seat, securing system:

- Vehicle seat belt

Observe the specific instructions for the rearward-facing and forward-facing child restraint systems. If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (→ page 41).

Observe the notes on automatic front passenger airbag shutoff (→ page 39)

- Stop the vehicle immediately in accordance with the traffic conditions.
- Activate the special seat belt retractor again and correctly secure the child restraint system.

When enabled, the special seat belt retractor ensures that the seat belt of the front passenger seat does not slacken once the child restraint system is secured.

The seat belt on the front passenger side is equipped with a special seat belt retractor.

**Activating or deactivating the special seat belt retractor of the seat belt**

**WARNING** Risk of injury or death if a seat belt is unfastened while the vehicle is in motion

If the seat belt is released while the vehicle is in motion, the child safety lock is deactivated and the child restraint system is no longer correctly secured. The seat belt is retracted slightly by the inertia reel and cannot be immediately fastened again.

**To install a child restraint system:** when installing a child restraint system, always observe the manufacturer's installation and operating instructions as well as the information in this Operator's Manual.

- Pull the seat belt smoothly from the seat belt outlet.
- Engage the seat belt tongue in the seat belt buckle.
To activate the special seat belt retractor: pull the seat belt out fully and let the inertia reel retract it again. When the special seat belt retractor is activated, you will hear a ratcheting sound.

Push the child restraint system down until the seat belt sits tightly.

To deactivate the special seat belt retractor: press the release button of the seat belt buckle.

Hold the seat belt tongue and guide back to the seat belt outlet.

Securing the child restraint system with the seat belt

Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat

**WARNING** Risk of injury or fatal injury when using a child restraint system while the front passenger airbag is enabled

If you secure a child in a child restraint system on the front passenger seat and the PASSENGER AIR BAG ON indicator lamp is lit, the front passenger airbag can deploy in the event of an accident.

The child could be struck by the airbag.

In this case, always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT airbag, DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 50).

Always observe the status of the front passenger airbag on the PASSENGER AIR BAG OFF indicator lamp:

- When using a rearward-facing child restraint system on the front passenger seat, the front passenger airbag must always be disabled. This is only the case if the PASSENGER AIR BAG OFF indicator lamp is lit continuously (→ page 41).
- If the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag is enabled. The front passenger airbag may deploy during an accident.
Securing the child restraint system with the seat belt on the front passenger seat

When installing a belt-secured child restraint system on the front passenger seat, always observe the following:

☑ Observe the notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 49).

☑ Observe the child restraint system manufacturer's installation and operating instructions.

☑ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.

☑ For certain child restraint systems in weight category II or III, there may be restrictions on the maximum size setting, e.g. due to possible contact with the roof.

☑ The child restraint system must not be put under load between the roof and the seat cushion and/or be installed facing the wrong direction.

☑ The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.

☑ Never place objects (e.g. cushions) under or behind the child restraint system.

The seat belt on the front passenger side is equipped with a special seat belt retractor.

When enabled, the special seat belt retractor ensures that the seat belt does not slacken once the child seat is secured (→ page 48).

► Set the front passenger seat as far back as possible and move the seat into the highest position if possible.

► Set the seat backrest to the most vertical position possible.

► Install the child restraint system.

The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.

► Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system.

The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.

► If necessary, adjust the front passenger seat accordingly.

Notes on pets in the vehicle

⚠️ WARNING Risk of accident and injury due to animals left unsecured or unattended in the vehicle

If you leave animals in the vehicle unattended or unsecured, they could possibly press buttons or switches.

An animal may:

- Activate vehicle equipment and become trapped, for example
- Switch systems on or off and endanger other road users
Unsecured animals may be thrown around in the vehicle in the event of an accident or sudden steering and braking maneuvers and injure vehicle occupants in the process.

- Never leave animals in the vehicle unattended.
- Always correctly secure animals while driving, e.g. using a suitable animal carrier.
WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.

NOTE Damage to the SmartKey caused by magnetic fields

Keep the SmartKey away from strong magnetic fields.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.

NOTE Damage to the SmartKey caused by magnetic fields

Keep the SmartKey away from strong magnetic fields.

1 Panic alarm
2 Locks
3 Opens the tailgate
4 Unlocks
5 Battery check lamp

If indicator lamp 5 does not light up after pressing the [ ] or [ ] button, the battery is weak or possibly discharged. Replace the battery as soon as possible.

Replacing the SmartKey battery (→ page 54).

The SmartKey locks and unlocks the following components:
- The doors
- The fuel filler flap
- The tailgate

If the vehicle is not opened within approximately 40 seconds after unlocking, it locks again. Anti-theft protection is armed again.
Do not keep the SmartKey together with electronic devices or metal objects. This can affect the SmartKey's functionality.
Activating/deactivating the acoustic locking
verification signal

Multimedia system:

- Vehicle ➜ Vehicle Settings
- Acoustic Lock
- Activate ✔ or deactivate ❌ the function.

Activating/deactivating the panic alarm

Requirements:
- The ignition is switched off.

To activate:
- Press button 1 for approximately one second.
A visual and audible alarm is triggered.

To deactivate:
- Briefly press button 1 again.
- Press the start/stop button on the cockpit
  (the SmartKey is inside the vehicle).

Changing the unlocking settings

Possible unlocking functions of the SmartKey:
- Central unlocking
- Unlocking the driver’s door and fuel filler flap

To switch between settings:
- Press the Ü and ß buttons simultaneously for
  approximately six seconds until the indicator
  lamp flashes twice.

Options if the unlocking function for the driver’s
  door and fuel filler flap has been selected:
- To unlock the vehicle centrally: press the Ü button twice.
- Vehicles with KEYLESS-GO: if you touch
  the inner surface of the door handle on the
  driver’s door, only the driver’s door and fuel
  filler flap are unlocked.

Deactivating the SmartKey functions

If you do not use the vehicle or a SmartKey for
an extended period of time, you can reduce the
energy consumption of the respective SmartKey.
To do so, deactivate the SmartKey functions.

To deactivate:
- Press the & button on the
  SmartKey twice in quick succession.
  The SmartKey indicator lamp flashes twice
  briefly and lights up once.

To activate:
- Press any button on the SmartKey.

When the vehicle is started with the Smart-
Key in the marked space of the center con-
sole, the SmartKey functions are automati-
cally activated (→ page 95).
Removing/inserting the emergency key

To remove: push release catch 1 in the direction of the arrow and simultaneously pull emergency key 2 completely out of the SmartKey.

To insert: push emergency key 2 fully into the SmartKey until it engages. Release catch 1 must then be back in the basic position.

Replacing the SmartKey battery

**DANGER** Serious damage to health caused by swallowing batteries

Batteries contain toxic and corrosive substances. Swallowing batteries may cause serious damage to health.

There is a risk of fatal injury.

- Keep batteries out of the reach of children.
- If batteries are swallowed, seek medical attention immediately.

**ENVIRONMENTAL NOTE** Environmental damage due to improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

---

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

**Requirements:**

- You require a CR 2025 3 V cell battery.

Mercedes-Benz recommends that you have the battery replaced at a qualified specialist workshop.

- Remove the emergency key (→ page 54).
Press emergency key 2 into the opening in the SmartKey in the direction of the arrow until battery compartment cover 1 opens. When doing so, do not hold battery compartment cover 1 shut.

Remove battery compartment cover 1.

Repeatedly tap the SmartKey against your palm until battery 3 falls out of the SmartKey.

Insert the new battery with the positive pole facing upwards. Use a lint-free cloth to do so.

Make sure that the surface of the battery is free of lint, grease and other impurities.

Insert the front tabs of battery compartment cover 1 into the housing and then press to close it.

Insert emergency key 2 into the SmartKey.

Problems with the SmartKey

You can no longer lock or unlock the vehicle
Possible causes:
- The SmartKey battery is weak or discharged.
- The SmartKey is faulty.
- The check the battery using the indicator lamp (→ page 52).
- Replace the SmartKey battery, if necessary (→ page 54).
- Use the emergency key to lock or unlock (→ page 54).
- Have the SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source
The SmartKey function is impaired by, for example:
- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

Make sure that there is a sufficient distance between the SmartKey and the potential source of interference.

You have lost a SmartKey
- Have the SmartKey deactivated at a qualified specialist workshop.
- If necessary, have the mechanical lock replaced as well.
Unlocking and opening doors from the inside

Pull door handle. Locking pin pops up when the door is unlocked.

Centrally locking and unlocking the vehicle from the inside

To unlock: press button 1.
To lock: press button 2.

This does not lock or unlock the fuel filler flap.

The vehicle is not unlocked:
- If you have locked the vehicle using the SmartKey.
- If you have locked the vehicle using KEY-LESS-GO.

Locking/unlocking the vehicle with KEY-LESS-GO

Requirements:
- The SmartKey is outside the vehicle.
- The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The driver’s door and the door at which the door handle is used are closed.
To unlock the vehicle: touch the inner surface of the door handle.

To lock the vehicle: touch sensor surface 1 or 2.

Convenience closing: touch recessed sensor surface 2 until the closing process has been completed.

If you open the tailgate from outside, it is automatically unlocked.

Problems with KEYLESS-GO

You can no longer lock or unlock the vehicle using KEYLESS-GO.

Possible causes:
- The SmartKey functions have been deactivated.
- The SmartKey battery is weak or discharged.
- The SmartKey is faulty.
- Activate the key functions (→ page 53).
- Check the battery using the indicator lamp (→ page 52).
- Replace the SmartKey battery, if necessary (→ page 54).
- Use the emergency key to lock or unlock (→ page 58).
- Have the vehicle and SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source

The KEYLESS-GO function is impaired by, for example:
- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

Make sure that there is a sufficient distance between the SmartKey and the potential source of interference.

Activating/deactivating the automatic locking feature

The vehicle is locked automatically when the ignition is switched on and the wheels are turning faster than walking pace.

Further information on convenience closing (→ page 62).
In the following situations, there is a danger of being locked out when the function is activated:

- While the vehicle is being tow started/pushed.
- If the vehicle is being tested on a roller dynamometer.

### Locking/unlocking the driver's door with the emergency key

- **To activate:** press and hold button 2 for approximately five seconds until an acoustic signal sounds.
- **To deactivate:** press and hold button 1 for approximately five seconds until an acoustic signal sounds.

1. If you wish to lock the vehicle entirely using the emergency key, first press the button for locking from the inside while the driver's door is open. Then proceed to lock the driver's door using the emergency key.

   - Remove the emergency key (→ page 54).
   - Insert the emergency key as far as it will go into opening 1 in the cover.
   - Pull and hold the door handle.
   - Pull the cover on the emergency key as straight as possible away from the vehicle until it releases.
   - Release the door handle.
To unlock: turn the emergency key counterclockwise to position 1.

To lock: turn the emergency key clockwise to position 1.

Carefully press the cover onto the lock cylinder until it engages and is seated firmly.

**Cargo compartment**

**Opening the tailgate**

⚠️ **DANGER** Risk of exhaust gas poisoning

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.

- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

⚠️ **NOTE** Damage to the tailgate caused by obstacles above the vehicle

The tailgate swings rearwards and upwards when it is opened.

- Make sure that there is sufficient space behind and above the tailgate.

Press remote operating switch 1 for the tailgate.

Press the button on the SmartKey. The tailgate will open slightly.
Closing the tailgate

**WARNING** Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

Observe the notes on loading the vehicle.

**Releasing the tailgate in an emergency**

**Requirements:**
- The warning triangle has been removed from the warning triangle holder.
- Climb into the cargo compartment from the vehicle interior.

- Press carpet 1 down.
- Pull the cable behind carpet 1 until the tailgate unlocks.

**Side windows**

**Opening and closing the side windows**

**WARNING** Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.
When opening, make sure that nobody is touching the side window.

If someone is trapped, release the button immediately or pull it in order to close the side window again.

**WARNING** Risk of becoming trapped when closing a side window

When closing a side window, body parts could be trapped in the closing area in the process.

- When closing, make sure that no body parts are in the closing area.
- If someone is trapped, release the button immediately or press the button in order to reopen the side window.

**WARNING** Risk of becoming trapped when children operate the side windows

Children could become trapped if they operate the side windows, particularly when unattended.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

**Requirements:**
- The power supply or the ignition is switched on.

To start automatic operation: press the button beyond the point of resistance or pull and release it.

1. To close
2. To open

The buttons on the driver's door take precedence.
To interrupt automatic operation: press or pull the \( \text{[W]} \) button again.

When the vehicle is switched off, you can continue to operate the side windows.

**Automatic reversing function of the side windows**
If an obstacle impedes a side window during the closing process, the side window will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.

**WARNING** Risk of becoming trapped despite there being reversing protection on the side window

The reversing function does not react:
- To soft, light and thin objects, e.g. fingers.
- During resetting.

The reversing function cannot prevent someone from becoming trapped in these situations.
- During the closing process, make sure that no body parts are in the closing area.
- If someone becomes trapped, press the \( \text{[W]} \) button to open the side window again.

**Convenience opening (ventilating the vehicle before starting a journey)**

**WARNING** Risk of entrapment when opening a side window

When opening a side window, parts of the body could become trapped between the side window and window frame.
- When opening, make sure that nobody is touching the side window.
- Release the button immediately if somebody becomes trapped.

**Convenience closing (closing the vehicle from outside)**

**WARNING** Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side windows.
- When the convenience closing feature is operating, monitor the entire closing area.
Press and hold the \( \mathcal{O} \) button on the SmartKey.

The following functions are performed:
- The vehicle is locked.
- The side windows are closed.

To interrupt convenience closing: release the \( \mathcal{O} \) button.

Convenience closing also functions with KEYLESS-GO (→ page 56).

**Problems with the side windows**

**WARNING** Risk of becoming trapped or fatally injured if reversing protection is not activated

If you close a side window again immediately after it has been blocked, the side window will close with increased or maximum force. The reversing function is then not active and body parts may become trapped.

A side window cannot be closed and you cannot see the cause.

- Check to see whether any objects are in the window guide.
- Adjust the side windows.

Adjusting the side windows

If a side window is obstructed during closing and reopens again immediately:
- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (re-adjustment).
  The side window will be closed without the automatic reversing function.

If the side window is obstructed again and reopens again immediately:
- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (follow-up adjustment).
  The side window will be closed without the automatic reversing function.

The side windows cannot be opened or closed using the convenience opening feature.

Possible cause:
- The SmartKey battery is weak or discharged.

- Check the battery using the indicator lamp (→ page 52).
- Replace the SmartKey battery, if necessary (→ page 54).

Anti-theft protection

Function of the immobilizer

The immobilizer prevents your vehicle from being started without the correct SmartKey.
The immobilizer is automatically activated when the ignition is switched off and deactivated when the ignition is switched on.

When leaving the vehicle, always take the Smart-Key with you and lock the vehicle. Anyone can start the engine if a valid Smart-Key has been left inside the vehicle.

In the event the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERcedes (in the USA) or 1-800-387-0100 (in Canada).

ATA (anti-theft alarm system)

Function of the ATA system

If the ATA system is armed, a visual and audible alarm is triggered in the following situations:

- When a door is opened
- When the tailgate is opened
- When the hood is opened

The ATA system is armed automatically after approximately ten seconds in the following situations:

- After locking the vehicle with the Smart-Key
- After locking the vehicle using KEYLESS-GO

Indicator lamp \( \mathbf{i} \) flashes when the ATA system is armed.

The ATA system is deactivated automatically in the following situations:

- After unlocking the vehicle with the Smart-Key
- After unlocking the vehicle using KEYLESS-GO
- After starting the vehicle with the SmartKey (→ page 95)

When the Mercedes-Benz emergency call system is active and the alarm stays on for more than 30 seconds, a message is automatically sent to the Customer Assistance Center (→ page 229).

In the case of severe battery discharging, the anti-theft alarm system is automatically deactivated to facilitate the next engine start.

Deactivating the ATA

- Press the \( \mathbf{\text{3}} \), \( \mathbf{\text{a}} \) or \( \mathbf{\text{p}} \) button on the Smart-Key.
- Start the vehicle with the SmartKey (→ page 95).
Deactivating the alarm using KEYLESS-GO

- Grasp the outside door handle with the SmartKey outside the vehicle.
Notes on the correct driver’s seat position

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:
- If you adjust the driver’s seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver’s seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

Ensure the following when adjusting steering wheel **1**, seat belt **2** and driver’s seat **3**:
- You are sitting as far away from the driver’s airbag as possible, taking the following points into consideration
- You are sitting in an upright position
- Your thighs are slightly supported by the seat cushion
- Your legs are not fully extended and you can depress the pedals properly
- The back of your head is supported at eye level by the center of the head restraint
- You can hold the steering wheel with your arms slightly bent
- You can move your legs freely
- You can see all the displays on the instrument cluster clearly
- You have a good overview of the traffic conditions
- Your seat belt sits snugly against your body and passes across the center of your shoulder and across your hips in the pelvic area

Seats

**WARNING** Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Never leave children unattended in the vehicle.

**WARNING** Risk of becoming trapped when adjusting the seat

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.
When adjusting a seat, make sure that no one has any part of their body within the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

**WARNING** Risk of accident due to the driver's seat not being engaged

The driver's seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.
Always make sure that the driver's seat is engaged before starting the vehicle.

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:
- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver's seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

**WARNING** Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.
Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.
While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

**WARNING** Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.
Always drive with the head restraints installed.

Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

**WARNING** Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position. You could slip beneath the seat belt and injure yourself.

- Adjust the seat properly before commencing your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.

**To adjust the seat fore-and-aft position:**
- lift lever 1 and slide the seat into the desired position.
- Make sure that the seat is engaged.

**To adjust the seat height:**
- push or pull lever 2 until the desired position has been reached.

**To adjust the seat backrest inclination:**
- lift lever 3 and set the seat to the desired angle.
- Ensure that the seat backrest is engaged.

Firmer

Using buttons 1 to 4, adjust the contour of the backrest individually to suit your back.

Adjusting the AMG Performance seat

To adjust the contour of the seat and for improved lateral support, you can adjust the front seats individually. On the front passenger seat, you can adjust only the seat side bolsters of the seat backrest. The AMG Performance seat is designed for the standard three-point seat belt. If you install a different multipoint seat belt, e.g. a sport or racing seat belt, the restraint system will not be able to provide the intended level of protection.
To adjust the seat side bolsters of the seat cushion: press button 1 (narrower) or 2 (wider).

To adjust the seat side bolsters of the seat backrest: press button 3 (narrower) or 4 (wider).

Switching seat heating on/off

**WARNING** Risk of burns due to repeatedly switching on the seat heating

Repeatedly switching on the seat heating can cause the seat cushion and seat backrest padding to become very hot.

In particular, the health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries.

Do not repeatedly switch on the seat heating.

To protect against overheating, the seat heating may be temporarily deactivated after it is switched on repeatedly.

**NOTE** Damage to the seats caused by objects or documents when the seat heating is switched on

When the seat heating is switched on, overheating may occur due to objects or documents placed on the seats, e.g. seat cushions or child seats. This could cause damage to the seat surface.

Make sure that no objects or documents are on the seats when the seat heating is switched on.

Requirements:
- The power supply is switched on.

Make sure that no objects or documents are on the seats when the seat heating is switched on.

Requirements:
- The power supply is switched on.
Press button 1 repeatedly until the desired heating level is set. Depending on the heating level, up to three indicator lamps will light up. If all indicator lamps are off, the seat heating is switched off.

The seat heating will automatically switch down from the three heating levels after 5, 10 and 20 minutes until the seat heating switches off.

**Steering wheel**

**Adjusting the steering wheel electrically**

The steering wheel can be adjusted when the power supply is disconnected.

1. To adjust the distance to the steering wheel
2. To adjust the height

Save the settings with the memory function (→ page 73).

---

**Easy entry and exit feature**

**Using the easy entry and exit feature**

**WARNING** Risk of accident when pulling away during the adjustment process for the easy exit feature

You could lose control of the vehicle.

Always wait until the adjustment process is complete before pulling away.

**WARNING** Risk of becoming trapped during adjustment of the easy entry and exit feature

You and other vehicle occupants could become trapped.

Ensure that no one has any body parts in the range of movement of the steering wheel.

Move the adjustment lever of the steering wheel if there is a risk of becoming trapped by the steering wheel.

The adjustment process is stopped.
**WARNING** Risk of becoming trapped if children activate the easy entry and exit feature.

Children could become trapped if they activate the easy entry- and exit feature, particularly when unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

**Vehicles with memory function:** you can stop the adjustment process by pressing one of the memory function position switches.

If the easy entry and exit feature is active, the steering wheel will move upwards or towards the dashboard when:
- You switch the ignition off.
- You open the driver's door.

The steering wheel will move upwards and towards the dashboard only if it has not already reached the steering limitation.

The steering wheel will move back to the last drive position when:
- You close the driver's door with the ignition switched on.
- You press the start/stop button once.

The last drive position will be saved when:
- You switch the ignition off.
- You save the setting with the memory function.

If you press one of the memory function memory position switches, the adjustment process will be stopped.

**Setting the easy entry and exit feature**

Multimedia system:

- Vehicle ➔ Vehicle Settings
- Easy Entry/Exit
- Activate ✔ or deactivate ❌ the function.

**Memory function**

**Function of the memory function**

**WARNING** Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- Only use the memory function on the driver's side when the vehicle is stationary.

**WARNING** Risk of entrapment when adjusting the seat with the memory function

When the memory function adjusts the seat or steering wheel, you and other vehicle occupants – particularly children – could become trapped.

- During the adjusting process of the memory function, ensure that no body...
parts are in the sweep of the seat or the steering wheel.

- If somebody becomes trapped, immediately release the memory function position button. The adjustment process is stopped.

**WARNING** Risk of entrapment if the memory function is activated by children

Children could become trapped if they activate the memory function, particularly when unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

You can use the memory function when the ignition is switched off. Seat adjustments for up to three people can be stored and called up using the memory function.

You can save settings for the following systems:

- Seat and backrest
- Driver's side: steering wheel
- Driver's side: outside mirrors on the driver's and front passenger sides

### Operating the memory function

#### Storing

- Set the desired position for all systems.
To call up: press and hold preset position button 1, 2 or 3 until all the systems are in the stored position.

Stowage areas

Notes on loading the vehicle

**DANGER** Risk of exhaust gas poisoning
Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.
- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

**WARNING** Risk of injury from unsecured items in the vehicle
If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.
There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.
- Always stow objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

**WARNING** Risk of injury due to objects being stowed incorrectly
If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open storage spaces and mobile phone receptacles cannot always retain all objects within.
There is a risk of injury, particularly in the event of sudden braking or abrupt changes in direction.
- Always store objects such that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from storage spaces, parcel nets or storage nets.
- Close the lockable storage spaces before starting a journey.
- Stow and secure objects that are heavy, hard, pointed, sharp-edged, fragile or too large in the cargo compartment.

The rear fender supports in the trunk are not suitable for securing objects; doing so may damage the rear fender supports. Make sure that the rear fender supports in the trunk are kept free from objects.

**WARNING** - Risk of accident or injury when using the cup holder while the vehicle is moving
The cup holder cannot secure containers while the vehicle is moving.
If you use a cup holder while the vehicle is moving, the container may be flung around and liquids may be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- Only use the cup holder when the vehicle is stationary.
- Only use the cup holder for containers of the right size.
- Close the container, particularly if the liquid is hot.

**WARNING - Risk of fire and injury from hot cigarette lighter**

You can burn yourself if you touch the hot heating element or the socket of the cigarette lighter.

In addition, flammable materials may ignite if:

- you drop the hot cigarette lighter
- a child holds the hot cigarette lighter to objects, for example

- Always hold the cigarette lighter by the knob.
- Always make sure that the cigarette lighter is out of reach of children.
- Never leave children unattended in the vehicle.

**WARNING** Risk of burns from the tailpipe and tailpipe trims

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.
- Allow vehicle parts to cool down before touching them.

The driving characteristics of your vehicle are dependent on the distribution of the load within the vehicle. You should bear the following in mind when loading the vehicle:

- Never exceed the permissible gross mass or the gross axle weight rating for the vehicle (including occupants). The values are specified on the vehicle identification plate on the vehicle’s B-pillar.
- Position heavy loads as far forwards as possible and as low down in the cargo compartment as possible.
- The load must not protrude above the upper edge of the seat backrests.

**NOTE** Damage to the stowage compartment under the ashtray due to intense heat

The stowage compartment under the ashtray is not heat resistant and could be damaged if you rest a lit cigarette on it.

- Make sure that the ashtray is fully engaged.
Always attach the partition net when transporting objects in the cargo compartment.

Always place the load behind unoccupied seats if possible.

Secure the load with sufficiently tear-resistant and wear-resistant tie downs. Pad sharp edges for protection.

### Stowage spaces in the vehicle interior

#### Overview of the front stowage compartments

1. **Glove box**
2. **Storage compartment beneath the armrest with a multimedia connection unit, an SD card slot and the ignition lock**

   Depending on the vehicle’s equipment, there may be a 12 V socket in the stowage compartment.

### Attaching/removing the partitioning net

**WARNING** Risk of injury or death due to poorly secured objects

The partitioning net alone cannot secure or restrain heavy objects, items of luggage or heavy loads.

You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

- Always stow objects in such a way that they cannot be thrown around.
- Secure objects, luggage or loads against slipping or tipping over, e.g. by using tie downs, even if you are using the partitioning net.

For safety reasons, always use a partitioning net when transporting a load.

Damaged partitioning nets can no longer fulfill their functions and must be replaced. Visit a qualified specialist workshop.
To attach and tighten: push the seats as far forward as possible.
From the vehicle interior, insert hooks 1 into upper holders 2 and turn back by 90°. Upper tensioning hook 3 will tension the partitioning net automatically.

Attach hooks 4 to lower holders 5.
After driving a short distance, check the tension in the partitioning net.

To loosen and detach: turn back hooks 1 by 90° and detach from upper holders 2.
Detach hooks 4 from lower holders 5.

Sockets

Using the 12 V socket

Requirements:
- Only devices up to a maximum of 180 W (15 A) are permissible.

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:
- In the storage compartment in the front center console
- In the storage compartment under the front armrest
- In the cargo compartment

Using the 12 V socket
Requirements:
- Only devices up to a maximum of 180 W (15 A) are permissible.

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:
- In the storage compartment in the front center console
- In the storage compartment under the front armrest
- In the cargo compartment
USB ports in the vehicle

Depending on the vehicle equipment, the vehicle has the following USB ports:
- In the center console in the front
- In the storage compartment in the armrest

You can charge a USB device, such as a mobile phone, at the USB ports using a suitable charging cable.

The devices can be charged with 5 V (2.1 A) and when the ignition is switched on.

Installing/removing the floor mats

⚠️ WARNING Risk of accident due to objects in the driver’s footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal.
This jeopardizes the operating and road safety of the vehicle.

► Stow all objects in the vehicle securely so that they cannot get into the driver’s footwell.
► Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
► Do not use loose floor mats and do not place floor mats on top of one another.

Example: 12 V socket in the storage compartment in the front center console

- Fold up socket cap 1.
- Insert the plug of the device.
To install: slide the corresponding seat backwards and lay the floor mat in the foot-well.
Press studs 1 onto holders 2.
Adjust the corresponding seat.
To remove: slide the corresponding seat backwards and pull the floor mat off holders 2.

Remove the floor mat.
Exterior lighting

Information about lighting systems and your responsibility

The various lighting systems of the vehicle are only aids. The driver of the vehicle is responsible for correct vehicle illumination in accordance with the prevailing light and visibility conditions, legal requirements and traffic situation.

Light switch

Operating the light switch

1  Left-hand standing lamps
2  Right-hand standing lamps
3  Parking lamps and license plate lamp
4  Automatic driving lights (preferred light switch position)
5  Low beam/high beam
6  Switches the rear fog lamp on/off

When low beam is activated, the indicator lamp for the parking lamps [30C] will be deactivated and replaced by the low-beam indicator lamp [30].

Always park your vehicle safely using sufficient lighting, in accordance with the relevant legal stipulations.

NOTE Battery discharging by operating the standing lights

Operating the standing lights over a period of hours puts a strain on the battery.

In the event of severe battery discharging, the standing lamps or parking lamps will be switched off automatically to facilitate the next engine start.
The exterior lighting (except standing and parking lamps) will switch off automatically when the driver’s door is opened.

- Observe the notes on surround lighting (→ page 84).

**Automatic driving lights function**

The parking lamps, low beam and daytime running lamps are switched on automatically depending on the ignition status and the ambient light.

⚠️ **WARNING** Risk of accident when the low beam is switched off in poor visibility

When the light switch is set to **AUTO**, the low beam may not be switched on automatically if there is fog, snow or other causes of poor visibility such as spray.

- In such cases, turn the light switch to **$D$**.

The automatic driving lights are only an aid. You are responsible for vehicle lighting.

Switching the rear fog lights on or off

**Requirements:**
- The light switch is in the **$D$** or **AUTO** position.

- Press the **$O$** button.

Please observe the country-specific laws on the use of rear fog lamps.

---

Operating the combination switch for the lights

1. High beam
2. Turn signal light, right
3. Headlamp flashing
4. Turn signal light, left

- Use the combination switch to activate the desired function.
High beam

- **To switch on:** turn the light switch to the \( \text{SD} \) or \( \text{AUTO} \) position.
- Push the combination switch beyond the point of resistance in the direction of arrow 1.
- When the high beam is activated, the \( \text{SD} \) indicator lamp for low beam is deactivated and replaced by the \( \text{H} \) indicator lamp for high beam.
- **To switch off:** move the combination switch back to its starting position.

Headlamp flashing

- Pull the combination switch in the direction of arrow 3.

Turn signal light

- **To indicate briefly:** push the combination switch briefly to the point of resistance in the direction of arrow 2 or 4.
- The corresponding turn signal light will flash three times.

To indicate permanently: push the combination switch beyond the point of resistance in the direction of arrow 2 or 4.

Activating/deactivating the hazard warning lights

- Press button 1.

The hazard warning lights will switch on automatically if:
- The airbag has been deployed.

Adaptive Highbeam Assist

Adaptive Highbeam Assist function

**WARNING** Risk of accident despite Adaptive Highbeam Assist

Adaptive Highbeam Assist does not react to:
- Road users without lights, e.g. pedestrians
- Road users with poor lighting, e.g. cyclists
- Road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist may fail to recognize other road users with their own lighting, or may recognize them too late.
In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.

Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions. Detection may be restricted in the following cases:
- In poor visibility, e.g. fog, heavy rain or snow
- If there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle’s lighting to the prevailing light, visibility and traffic conditions.

The high beam will switch off automatically in the following cases:
- At speeds below 16 mph (25 km/h)
- If other road users are detected
- If street lighting is sufficient

The system's optical sensor is located behind the windshield near the overhead control panel.

Switching Adaptive Highbeam Assist on/off

To switch on: turn the light switch to the AUTO position.

Switch on the high beam using the combination switch.

If Adaptive Highbeam Assist is activated, the indicator lamp will light up on the multifunction display.

To switch off: switch off the high beam using the combination switch.

Adaptive Highbeam Assist automatically switches between the following types of light:
- Low beam
- High beam

At speeds greater than 19 mph (30 km/h):
- If no other road users are detected, the high beam will be switched on automatically.

Windshield wiper and windshield washer system

Switching the windshield wipers on/off

1 Windshield wipers off
2 ••• Intermittent wiping, normal
3 •••• Intermittent wiping, frequent
4  ➔ Continuous wiping, slow
5  ➔ Continuous wiping, fast

- Turn the combination switch to the correct position 1 - 5.
- **Single wipe/washing**: push the button on the combination switch in the direction of arrow 1.
  - Single wipe
  - Wipes with washer fluid

Changing the windshield wiper blades

**WARNING** Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and the ignition before changing the wiper blades.

Moving the wiper arms to the change position

- Switch the ignition on and switch off again immediately.
- Within around 15 seconds, press the button on the combination switch for approximately three seconds (→ page 85). The wiper arms will move into the change position.

Removing the wiper blades

- Fold the wiper arms away from the windshield.
Set the wiper blade at an angle.
Pull the wiper blade out of the holder on the wiper arm in the direction of the arrow.

**Installing the wiper blades**
- Push the new wiper blade into the holder on the wiper arm against the direction of the arrow.
- Turn the wiper blade parallel to the wiper arm.
- Fold the wiper arm onto the windshield.

### Mirrors

**Operating the outside mirrors**

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:
- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver's seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

---

### Mirrors

**WARNING** Risk of accident due to misjudgment of distance when using the front-passenger mirror

The outside mirror on the front passenger side reflects objects on a smaller scale.
Therefore, always look over your shoulder in order to ensure that you are aware of the actual distance between you and the road users driving behind you.
Folding the outside mirrors in/out

Briefly press button 2.

Resetting the outside mirrors

If the battery has been disconnected or completely discharged, the outside mirrors must be reset. Only then will the automatic mirror folding function work properly.

Briefly press button 2.

Adjusting the outside mirrors

- Press button 1 or 3 to select the outside mirror to be adjusted.
- Press button 4 to adjust the position of the mirror glass.

Engaging the outside mirrors

- Vehicles without electrically folding outside mirrors: manually move the outside mirror into the correct position.
- Vehicles with electrically folding outside mirrors: press and hold button 2. You will hear a click and the mirror will audibly click into place. The outside mirror will now be set to the correct position.

Automatic anti-glare mirrors function

**WARNING** Risk of acid burns and poisoning due to the anti-glare mirror electrolyte

Electrolyte may escape if the glass in an automatic anti-glare mirror breaks.

The electrolyte is hazardous to health and causes irritation. It must not come into contact with your skin, eyes, respiratory organs or clothing or be swallowed.

- If you come into contact with electrolyte, observe the following:
  - Immediately rinse the electrolyte from your skin with water and seek medical attention.
  - If electrolyte comes into contact with your eyes, immediately rinse them thoroughly with clean water and seek medical attention.
  - If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting. Seek medical attention immediately.
  - Immediately change out of clothing which has been contaminated with electrolyte.
  - If an allergic reaction occurs, seek medical attention immediately.
The inside rearview mirror and the outside mirror on the driver’s side will automatically go into anti-glare mode if light from a headlamp hits the sensor on the inside rearview mirror.

**System limits**
The system will not go into anti-glare mode if:
- The engine is switched off.
- Reverse gear is engaged.
- The interior lighting is switched on.

**Front-passenger outside mirror parking position function**
The parking position makes parking easier. The front-passenger outside mirror will swivel downwards in the direction of the rear wheel on the front passenger’s side when:
- The parking position is stored (→ page 88).
- The front-passenger mirror is selected.
- Reverse gear is engaged.

The front-passenger outside mirror will move back to its original position when:
- You shift the transmission to another transmission position.
- You are traveling at a speed greater than 9 mph (15 km/h).
- You press the button for the outside mirror on the driver’s side.

**Storing the parking position of the front-passenger outside mirror using reverse gear**

**Storing**

Select the front-passenger outside mirror using button 2.

Engage reverse gear.

Move the front-passenger outside mirror into the desired parking position using button 1.
Calling up

- Select the front-passenger outside mirror using button 2.
- Engage reverse gear.
  The front-passenger outside mirror will move into the stored parking position.

Overview of climate control systems

Notes on climate control

An interior air filter in combination with the pre-filter in the engine compartment must always be used so that the air conditioning system, pollution level monitoring and the air filtration work correctly. Make sure that the filter is installed correctly and the filter housing in the engine compartment is closed correctly using the cap and always tightly sealed when in operation. Use filters recommended and approved by Mercedes-Benz. Always have service work carried out at a qualified specialist workshop.

Overview of the control panel for 3-zone automatic climate control

The indicator lamps in the \textit{\textbf{\textcolor{red}{A}}} \textit{\textbf{\textcolor{red}{M}}}  \textit{\textbf{\textcolor{red}{G}}}  \textit{\textbf{\textcolor{red}{W}}}  and \textit{\textbf{\textcolor{red}{W}}} buttons indicate that the corresponding function is activated.

Operating the climate control system

Operating the climate control system

Switching climate control on/off

To switch on: set the airflow to level 1 or higher using the \textbf{\textcolor{red}{H}} button.

To switch off: set the airflow to level 0 using the \textbf{\textcolor{red}{H}} button.

If climate control is switched off, the windows may fog up more quickly. Switch off climate control only briefly.

Switching the A/C function on/off using the air conditioning control panel

The A/C function heats, cools and dehumidifies the vehicle’s interior air.
Press the \( \text{A/C} \) button.
Switch off the A/C function only briefly; otherwise, the windows may fog up more quickly.
Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a malfunction.

Setting climate control to automatic mode
In automatic mode, the set temperature is controlled and maintained at a constant level by the air supply.

- Press the \( \text{AUTO} \) button.
- To switch to manual mode: press the \( \text{MAN} \) or \( \text{OFF} \) button.

Climate style
Climate style function
The following climate styles are available in automatic mode:
- **FOCUS**: high airflow, slightly cooler setting
- **MEDIUM**: medium airflow, standard setting
- **DIFFUSE**: low airflow, slightly warmer and draft-free setting

Adjusting the climate mode settings
Multimedia system:

- Vehicle \( \heart \) Climate Control
- Climate Mode
- Select FOCUS, MEDIUM or DIFFUSE.

To feel the effect of the climate style, the \( \text{AUTO} \) function must be active (\( \rightarrow \) page 91).

Activating/deactivating the climate control synchronization function via the air conditioning control panel
Climate control can be set centrally using the synchronization function. The temperature and air distribution settings for the driver’s side will be adopted automatically for the front passenger side.

- Press the \( \text{SYNC} \) button.

The synchronization function will be deactivated if the settings for one of the other climate control zones are changed.

Removing condensation from the windows
Windows fogged up on the inside

- Press the \( \text{A/C} \) button.
- Press the \( \text{OFF} \) button.
- If the windows continue to fog up: press the \( \text{MAN} \) button.

Windows fogged up on the outside

- Switch on the windshield wipers.
- Press the \( \text{AUTO} \) button.

Switching air-recirculation mode on/off

- Press the \( \text{REC} \) button.

The interior air will be recirculated.

Air-recirculation mode automatically switches to fresh air mode after some time.

- If air-recirculation mode is switched on, the windows may fog up more quickly. Switch on air-recirculation mode only briefly.
Air vents

Adjusting the air vents

**WARNING** Risk of burns and frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.

- Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.
- If necessary, direct the airflow to another area of the vehicle interior.

To guarantee the flow of fresh air through the air vents into the vehicle interior, comply with the following:

- Always keep the vents and vent grilles in the vehicle interior free.
- Keep the air inlet free of residue build-up (→ page 263).

To open or close: turn controller 1 to the left or right.

To adjust the airflow direction (center air vent): hold air vent 2 by the slats in the center and move it up or down or to the left or right.

To adjust the airflow direction of a side air vent, hold controller 1 and move it up or down or to the left or right.
Driving
Switching on the power supply or the ignition (without engine start)

⚠️ WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.

Requirements:
- The SmartKey is in the vehicle and is recognized.
- The brake pedal is not depressed.

To switch on the power supply: press button 🔄 once.
You can activate the windshield wipers, for example.

The power supply is switched off again if the following conditions are met:
- You open the driver’s door.
- You press button 🔄 twice more.
To switch on the ignition: press button 1 twice. The indicator lamps in the instrument cluster light up.

The ignition is switched off again if one of the following conditions is met:

- You do not start the vehicle within 15 minutes and the transmission is in position P or the electric parking brake is applied.
- You press button 1 once.

You can also switch on the power supply or the ignition with the SmartKey in the ignition lock (→ page 95).

Starting the vehicle

Starting the vehicle with the start/stop button

**DANGER** Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

**WARNING** Risk of fire due to flammable material in the engine compartment or the exhaust system

Flammable materials may ignite.

Therefore, check regularly that there are no flammable materials in the engine compartment or on the exhaust system.

Requirements:

- The SmartKey is in the vehicle and is recognized.
- Shift the transmission to position P or N.
- Depress the brake pedal and press button 1 once.
- If the vehicle does not start: switch off non-essential consumers and press button 1 once.
- If the vehicle still does not start and the Key Not Detected display message also appears in the multifunction display: start the vehicle with the SmartKey (→ page 95).

You can switch off the engine while driving by pressing button 1 for about three seconds or by pressing button 1 three times within three seconds. Be sure to observe the safety notes under "Driving tips" (→ page 96).
Function of Emotion Start

Start the vehicle with the start/stop button (→ page 94) and simultaneously pull one of steering wheel gearshift paddles 1 or 2.
- The idle speed is increased briefly when starting the engine.
- The exhaust gas flaps are opened (sporty characteristic) (→ page 101).

Starting the vehicle using the SmartKey
You can also start the vehicle with the SmartKey in the ignition lock. The ignition lock is in the rear storage space in the center console.

- Insert the SmartKey into the ignition lock and turn to key position 3.
- If the vehicle does not start:
  - Switch off consumers that are not required.
  - Remove the SmartKey from the ignition lock.
  - Insert the SmartKey into the ignition lock again after a short waiting period.
  - Turn the SmartKey to key position 2. The indicator lamps in the instrument cluster light up.
  - Turn the SmartKey to key position 3.

You can also switch on the power supply or the ignition with the SmartKey. To do so, turn the SmartKey to key position 1 or 2.

- Shift the transmission to position P or N.
- Depress the brake pedal.

Breaking-in notes
To preserve the engine during the first 1,000 miles (1,500 km):
- drive at varying road speeds and engine speeds.
- do not drive faster than 85 mph (140 km/h).
- allow the engine to reach a maximum engine speed of 4,500 rpm (4,500 rpm) only briefly.
- drive the vehicle in drive program C.
- change gear before the tachometer needle is ⅔ of the way to the red area of the tachometer.
- do not shift down a gear manually in order to brake.
- avoid overstraining the vehicle, e.g. driving at full throttle.
- do not depress the accelerator pedal past the pressure point (kickdown).
- only increase the engine speed gradually and accelerate the vehicle to full speed after 1,000 miles (1,500 km).

This also applies when the engine or parts of the drivetrain have been replaced.

Please also observe the following breaking-in notes:
- In certain driving and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in process.
- Brakepads, brake discs and tires that are either new or have been replaced only achieve optimum braking effect and grip after several hundred kilometers of driving. Compensate for the reduced braking effect by applying greater force to the brake pedal.

</thead>
<tbody>
<tr>
<td>If you switch off the ignition while driving, safety functions are restricted or no longer available.</td>
<td></td>
</tr>
</tbody>
</table>
You will need to use considerably more force to steer and brake, for example.

- Do not switch off the ignition while driving.

**DANGER** Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

**WARNING** Risk of skidding and of an accident due to shifting down on slippery road surfaces

If you shift down on slippery road surfaces to increase the engine braking effect, the drive wheels may lose traction.

- Do not shift down on slippery road surfaces to increase the engine braking effect.

**DANGER** Risk of fatal injury due to poisonous exhaust gases

If the tailpipe is blocked or sufficient ventilation is not possible, poisonous exhaust gases such as carbon monoxide may enter the vehicle. This is the case when the vehicle becomes stuck in snow, for example.

- Keep the tailpipe and the area around the vehicle free from snow when the engine or the stationary heater are running.
- Open a window on the side of the vehicle facing away from the wind to ensure an adequate supply of fresh air.

**WARNING** Risk of accident and injury due to being under the influence of alcohol and drugs while driving

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.

The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

- Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

**WARNING** Risk of accident due to the brake system overheating

If you leave your foot on the brake pedal when driving, the brake system may overheat.

This increases the braking distance and the brake system may even fail.
Never use the brake pedal as a footrest.

Do not depress the brake pedal and the accelerator pedal at the same time while driving.

**WARNING** Risk of accident due to incorrect gear shifting

If the engine speed is higher than the idle speed and you engage the transmission position D or R, the vehicle may accelerate sharply.

If you engage the transmission position D or R when the vehicle is at a standstill, always depress the brake pedal firmly and do not accelerate at the same time.

**NOTE** Engine damage due to excessively high engine speeds

The engine will be damaged if you drive with the engine in the overrevving range.

Do not drive with the engine in the overrevving range.

**NOTE** Wearing out the brake linings by continuously depressing the brake pedal

Do not depress the brake pedal continuously whilst driving.

To use the braking effect of the engine, shift to a lower gear in good time.

**NOTE** Damage to the drivetrain and engine when pulling away

Do not warm up the engine while the vehicle is stationary. Pull away immediately.

Avoid high engine speeds and driving at full throttle until the engine has reached its operating temperature.

**NOTE** Damage to the catalytic converter due to non-combusted fuel

The engine is not running smoothly and is misfiring.

Non-combusted fuel may get into the catalytic converter.

Only depress the accelerator pedal slightly.

Have the cause rectified immediately at a qualified specialist workshop.

**Notes on driving on salt-treated roads**

The braking effect is limited on salt-treated roads.

Therefore, observe the following notes:

- Due to salt build-up on the brake discs and brakepads, the braking distance can increase considerably or result in braking only on one side
- Maintain a much greater safe distance to the vehicle in front
To remove salt build-up:
- Brake occasionally while paying attention to the traffic conditions
- Carefully depress the brake pedal at the end of the journey and when starting the next journey

Notes on hydroplaning
Hydroplaning can take place once a certain amount of water has accumulated on the road surface.
Observe the following notes during heavy precipitation or in conditions in which hydroplaning may occur:
- Reduce speed
- Avoid tire ruts
- Avoid sudden steering movements
- Brake carefully

Also observe the notes on regularly checking wheels and tires (→ page 287).

Notes on driving through water on the road surface
Water which has entered into the vehicle can damage the engine, electrics and transmission. Water can also enter the air intake of the engine and cause engine damage.
Observe the following if you must drive through water:
- The water, when calm, may only reach the lower edge of the vehicle body.
- Drive at walking pace at most, otherwise water can enter the vehicle interior or engine compartment.
- Vehicles traveling in front, or oncoming vehicles, can create waves which may exceed the maximum permissible depth of the water.

The braking effect of the brakes is reduced after fording. Brake carefully while paying attention to the traffic conditions until braking power has been fully restored.

Information on the AMG ceramic high-performance composite brake system
The brake system is designed for heavy loads. This may lead to noise when braking. This effect can also occur after washing the vehicle.
The noise depends on the following factors:
- Speed
- Brake force
- Environmental conditions, e.g. temperature and air humidity

Have the brake system checked at a qualified specialist workshop after it has been subjected to extreme loads.

ECO start/stop function
Operation of the ECO start/stop function
The engine is switched off automatically in the following situations if all vehicle conditions for an automatic engine stop are met:
- you brake the vehicle to a standstill in transmission position D or N.
If you switch on the HOLD function in transmission position \textbf{D} or \textbf{N}, the engine will automatically stop in the following situations:

- you stop behind a vehicle that is pulling away.
- you stop at a stop sign when there is no vehicle in front of you.
- you turn the steering wheel hard at a low speed.

\textbf{i} In transmission position \textbf{R}, the engine is not switched off automatically even when the HOLD function is switched on.

The engine is restarted automatically if:

- you release the brake pedal in transmission position \textbf{D} when the HOLD function is not active and the vehicle does not start to move.
- you shift from transmission position \textbf{P}.
- you release the brake pedal and the vehicle starts to move on a gentle downhill gradient at a speed below 3 mph (5 km/h).
- you depress the accelerator pedal.
- you permanently activate manual gearshift-ing.
- you pull the left-hand steering wheel gear-shift paddle.
- an automatic engine start is required by the vehicle.

If the engine was switched off by the ECO start/ stop function and you leave the vehicle, a warning tone sounds. In addition, the \textbf{Vehicle Ready to Drive Switch the Ignition Off Before Exiting} message appears in the multifunction display. If you do not switch off the ignition, the ignition is automatically switched off after one minute.

\textbf{Deactivating or activating the ECO start/ stop function}

\begin{itemize}
  \item Press display button \textbf{1}.
  \item The display button indicates current status \textbf{2} of the ECO start/stop function:
    \begin{itemize}
      \item \textbf{OFF} (red): deactivated
      \item \textbf{ } (green): activated
      \item \textbf{ } (yellow): inactive
    \end{itemize}
\end{itemize}
AMG Performance exhaust system

Function of the AMG Performance exhaust system
Changing the position of the exhaust gas flaps allows you to select the sound characteristics of the AMG Performance exhaust system:
- Closed exhaust gas flaps: comfort characteristic (balanced)
- Open exhaust gas flaps: sporty characteristic (powerful)

Operating the AMG Performance exhaust system

Press display button 1. The display button indicates the currently selected sound characteristic 2:
- Button symbol (blue): balanced

Race track operation
Information on racetrack operation

Racetrack operation is understood as the operation of the vehicle in extreme situations when it is used on race tracks or closed-off tracks.

Your vehicle may be used on both public roads and race tracks. The vehicle operating loads differ depending on use, which require differing maintenance intervals.

When the vehicle is operated on a racetrack, the component parts are subject to higher loads than on the road.

To account for these loads, the following measures in particular are taken as part of the maintenance intervals:
- Checking and replacing individual components
- Overhauling complete assemblies after specific periods of use
Additional checks must always be carried out on the vehicle before and after each use on a race-track.

**NOTE** Damage to component parts through a rise in temperature after operation on a racetrack

If the vehicle is switched off directly after operation on a racetrack, heat caused when the vehicle is stationary may continue to raise the temperature of the component parts. In exceptional cases, the component parts may become permanently damaged.

Do not switch off the vehicle immediately. Carry out cool down laps at low speed with minimal brake application. Assemblies under load, such as the engine and the braking system, cool down faster this way.

Do not open the hood when the fan is in run-on mode, which is clearly audible and can last up to 30 minutes. Doing so ensures that the cooling air is optimally distributed.

Always allow a Track-Check to be carried out at an authorized Mercedes-Benz Center before and after use on the racetrack.

Motorsport equipment is only intended for use where road traffic regulations do not apply. This also applies to modifications to both the suspension and aerodynamic component parts.

You can obtain further information on servicing your vehicle at an authorized Mercedes-Benz Center.

**Brake system**

**Notes on the brake system**

The brake system of your vehicle is designed for heavy loads. Therefore, there may be noise when braking. The loads in the entire brake system which occur when driving on a racetrack are significantly greater than those during normal operation.

The increased brake forces and temperatures when driving on a racetrack inherently lead to increased wear of the brake system.

Check the condition and geometry of the brake cover plate before using the vehicle on a racetrack.

The following vehicle assemblies are affected in particular:
- Brake system
- Wheels and tires
- Suspension
- Aerodynamic components

**Notes on the characteristics of individual vehicle assemblies**

Due to specific vehicle operating loads in race-track operation, additional requirements must be observed.
Observe the information on the cooling of components which are subject to loads when operated on a racetrack (→ page 101).

**Braking with ABS**
Repeated hard braking within the ABS control range causes higher temperatures in the brake system than controlled braking shortly before the ABS control limit.

**Brakepad wear**
The inner and outer brakepads may also suffer "tapered wear". This could lead to poor pedal feel. Therefore, you must also check the condition of the brakepads before and after use on a racetrack as part of a standard check for wear.

**Brake discs**
Observe the information on the cooling of components which are subject to strain in racetrack operation (→ page 101).

An AMG ceramic high-performance composite braking system is installed in your vehicle. The assessment of wear must therefore be carried out using a special measurement procedure. The brakes are measured using the current condition of the ceramic composite material as a criteria for assessing the wear instead of assessing the residual thickness.

The following are combinations used to measure the wear of carbon-ceramic brake discs:
- Visual assessment of the brake disc for mechanical damage
- Wear measurement using the indicator field method; alternatively using the Proceq Carbonoteq® measuring device (e.g. in the AMG Performance Center or at AMG Trackdays)

The ventilation holes on the friction ring of the brake discs could become blocked by brake dust. Therefore, check the ventilation holes before using the vehicle on a racetrack and clean them if necessary.

**Brake fluid**
Check the following properties of the brake fluid before each use on a racetrack:
- Boiling point
- Fill level

When driving on a racetrack, make sure that the brake fluid is not more than 12 months old.

**Brake caliper, brake hoses and brake lines**
Check the following for damage each time before driving the vehicle on a racetrack:
- The dust boots on the brake calipers
- The brake hoses and brake lines

Replace them if necessary.

**Brake cooling**
Special air deflectors and channels are installed on the front and rear axles so that the brakes are cooled sufficiently. They supply the brake discs with cooling air. Check that they are in perfect condition and correctly installed each time before driving the vehicle on a racetrack. Excessive wear can be caused by driving over curbs, for instance. For this reason, regularly check they are all complete and installed securely.

In addition, check that the air guide plates are seated securely and clean before and after driving the vehicle on a racetrack.

Observe the information on the cooling of components which are subject to loads when driving on a racetrack (→ page 101).
Wheels and tires

Notes on wheels

NOTE Restrictions relating to suspension settings and driving characteristics

The handling and braking characteristics of the vehicle may be adversely affected if you use tires which deviate from the specifications in terms of the following values:

- Diameter
- Wheel offset
- Width

- Only use the wheels provided by Mercedes-AMG for use on a racetrack.
- Only use wheels with approved geometry.

Do not use slick tires. Suspension and body components may otherwise be subjected to excessively high loads.

Observe the following notes on changing a wheel:

- Change the wheels after 9320 miles (15,000 km) on a racetrack at the latest.
- To ensure concentricity and lateral trueness, check the wheel contact surface for damage when changing a wheel. These should also be measured in the event of imbalance.

The wheel bolts are subjected to high wear when used on a racetrack. To ensure the wheels are bolted securely on a permanent basis, replace the wheel bolts in the following situations:

- After approximately 620 miles (1000 km) on a racetrack.
- After ten bolting procedures at the latest.

Notes on tires

WARNING Risk of injury through damaged tires

Damaged tires can cause tire pressure loss.

Check the tires regularly for signs of damage and replace any damaged tires immediately.

Check the tires for damage and the correct tire tread depth both before and after use on a racetrack. Only then is it safe to drive on a racetrack and on public roads.

As a result of the driving style and at high ambient temperatures, when driving on a racetrack it may be necessary to compensate for the increase in pressure in warm tires by releasing air. Even for warm tires, the specified tire pressure may only be exceeded by max. 0.5 bar.

After the tires have cooled down again, you must readjust the tire pressure in accordance with the specifications in order to drive on public roads.

Suspension

Suspension settings

The factory setting provides a good compromise for driving on public roads and on a racetrack.
Vehicle measurements

Even small changes to the suspension settings alter the driving characteristics of the vehicle. To ensure optimal driving characteristics, the specified values and tolerances of the individual suspension settings must be complied with. The driving characteristics of the vehicle may otherwise be undesirable.

Vehicle measurements are required in the following situations:

- The vehicle height has changed in relation to the optimized setting.
- The vehicle is frequently subjected to very high loads, e.g. when driving over curbs.

Therefore, check the vehicle height at regular intervals and, if necessary, perform vehicle measurements.

Notes on suspension components

Despite regular checks, and regardless of whether the relevant suspension components are in good condition, the following components must be replaced after a certain amount of use on the racetrack:

- Wheel bolts (→ page 104)
- Wheel hubs including the wheel bearings

Adjusting the camber

You can have the camber adjusted incrementally to suit your requirements or to correspond to the respective track profile.

**NOTE** Adjusting the toe due to camber adjustment

Adjusting the camber alters the toe adjustment.

An adjusted toe leads to, among other things, uneven tire wear.

- Check the axle alignment and, if necessary, carry out corrections after every adjustment to the camber.

Notes on adjusting the wheel load

You can have the wheel load distribution on the front or rear axle adjusted to suit your requirements or to correspond to the corresponding track profile at a qualified specialist workshop.

- Only the basic setting may be used for the vehicle level and wheel load when driving on normal roads. A modified setting may only be used when you are not driving on public roads.

**WARNING** Risk of an accident when the vehicle level is changed

It changes the suspension geometry and therefore the handling characteristics.

To do this, consult a qualified specialist workshop.

The camber may only be altered for use on private land, for example race circuits. For use on public roads, the camber must be reverted back to the factory setting.
You could lose control of the vehicle.

- Consult a qualified specialist workshop.

**WARNING** Risk of an accident due to an adjusted limiting ring

It could come into contact with adjacent component parts or the tire and cause damage to them.
- Never adjust the limiting ring.

**Notes on adjusting the anti-roll characteristics**

You can have the torsion bar effect on the front or rear axle adjusted to suit your requirements or to the corresponding track profile and weather conditions at a qualified specialist workshop.

- The anti-roll characteristics may only be used in the position set at the factory when driving on normal roads. A modified setting may only be used when you are not driving on public roads.

**Aerodynamic components**

**Fixed double rear wing**

The vehicle is delivered ex works with the flat wing positions. The two wings can be moved into steeper positions to ensure optimum coordination of the rear axle power output on the race track. An automatically extending flap is integrated in the upper wing. This increases the power output for certain driving situations, e.g. during cornering or braking.

Observe the information about adjusting the double rear wing and the permitted tightening torque (→ page 132).

**Adjustable front diffuser**

The front diffuser can be fully extended for race-track mode. The extended position of the front diffuser changes the pressure distribution across the underbody and thus increases the power output to the maximum level.

Observe the notes on the function of the front diffuser and how it is adjusted (→ page 133).

**Notes on engine oil**

Check the engine oil level before operating in racetrack mode.

**DYNAMIC SELECT switch**

**Function of the DYNAMIC SELECT switch**

Use the DYNAMIC SELECT switch to change between the following drive programs:

- **Slippery**: optimized pulling away and driving characteristics in wintry and slippery road conditions
- **Individual**: individual settings
• **Comfort**: comfortable and economical driving characteristics
• **Sport**: sporty driving characteristics
• **Sport Plus**: particularly sporty driving characteristics
• **RACE**: racetrack-oriented driving characteristics

In the drive program **Comfort**, torque and engine output may be reduced. Observe the message that appears in the multifunction display.

The **RACE** drive program may not be used on normal roads. **RACE** must only be activated and used on dedicated race circuits, not on public roads.

Mercedes-AMG recommends selecting the drive program **Comfort** when in city traffic or stop-and-go traffic.

Depending on the drive program selected, the following vehicle characteristics will change:

- Drive
  - Engine and transmission management
- AMG Dynamics
  - The four agility functions Basic, Advanced, Pro and Master are automatically selected depending on the drive program.
  - The steering, shift timing point and stabilization functions are adapted to the selected drive program.
  - When ESP® is activated, agility function Pro is selected in drive program **RACE**. The Master function is automatically selected when ESP® is deactivated.
- Position of the exhaust gas flaps
- Suspension
- Steering
- Availability of Glide mode
- The **RACE** drive program has the following properties:
  - The vehicle exhibits driving characteristics suited for the racetrack.
  - All vehicle systems are set for maximum sportiness.
- The automatic transmission shifts up later.
- The suspension exhibits particularly firm springing and damping settings.
- Glide mode is not available.
- The sporty sound characteristic of the exhaust system is activated.

You can call up vehicle characteristics via the Performance menu in the on-board computer.

You can adjust the agility functions of AMG Dynamics using the AMG steering-wheel buttons.

You can also change the following vehicle characteristics using the buttons in the center console:

- Position of the exhaust gas flaps
- Suspension
Selecting the drive program

- Press DYNAMIC SELECT switch 1 forwards or backwards.
  The selected drive program appears in the display 2 and in the multifunction display in the instrument cluster.

Configuring drive program I

Multimedia system:
- Vehicle ➤ DYNAMIC SELECT
- Individual
- Select the individual setting.

Switching the operation feedback for drive programs on or off

Multimedia system:
- Vehicle ➤ DYNAMIC SELECT
- Switch Notification for User on ☑ or off ☐.
  When this function is active, a corresponding message is shown in the media display when a drive program is selected with the DYNAMIC SELECT switch.

Displaying vehicle data

Multimedia system:
- Vehicle ➤ DYNAMIC SELECT
- Select Vehicle Data.
  The vehicle data is displayed.

Displaying engine data

Multimedia system:
- Vehicle ➤ DYNAMIC SELECT
- Select Engine Data.

The actual (maximum) values that can be achieved for engine output and engine torque may deviate from the certified values within the country-specific guidelines for permissible tolerances (basis: UN-ECE No. 85 or country-specific guidelines).

Factors that can influence this are, for example:
- Sea level
- Fuel grade
- Outside temperature
- Operating temperature of the engine

The values displayed serve only as orientation. The values for engine output and engine torque shown in the media display may deviate from the actual values.
Automatic transmission
E-SELECT selector lever

Function of the E-SELECT selector lever

**WARNING** Risk of accident due to incorrect gearshifting
If the engine speed is higher than the idle speed and you engage the transmission position **D** or **R**, the vehicle may accelerate sharply.

- If you engage the transmission position **D** or **R** when the vehicle is at a standstill, always depress the brake pedal firmly and do not accelerate at the same time.

**WARNING** Risk of accident and injury due to children left unattended in the vehicle
If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

Use the E-SELECT selector lever to change the transmission position. The current transmission position is displayed in the multifunction display.

Keep the vehicle SmartKey out of reach of children.

| P | Park position |
| R | Reverse gear |
| N | Neutral |
| D | Drive position |
Engaging reverse gear R

Depress the brake pedal and push the E-SELECT selector lever upwards past the first point of resistance.

Engaging neutral N

Depress the brake pedal and push the E-SELECT selector lever up or down to the first point of resistance.

Subsequently releasing the brake pedal will allow you to move the vehicle freely, e.g. to push it or tow it away.

If you want the automatic transmission to remain in neutral \( N \) even if the ignition is switched off:

- Start the vehicle.
- Depress the brake pedal and engage neutral \( N \).
- Release the brake pedal.
- Switch the ignition off.

If you then exit the vehicle leaving the SmartKey in the vehicle, the automatic transmission remains in neutral \( N \).

Engaging park position P

Observe the notes on parking the vehicle (→ page 115).

Depress the brake pedal until the vehicle is stationary.

When the vehicle is stationary, press button \( P \).

Park position is only engaged when the transmission position display \( P \) is shown in the multifunction display. If no transmission position display \( P \) appears, secure the vehicle to prevent it from rolling away.

Park position \( P \) is engaged automatically if one of the following conditions is met:

- You switch off the ignition when the vehicle is stationary and the transmission is in position \( D \) or \( R \).
- You open the driver’s door when the vehicle is stationary or when driving at a very low speed and the transmission is in position \( D \) or \( R \).
- To maneuver with an open driver’s door, open the driver’s door while stationary and engage transmission position \( D \) or \( R \) again.

Engaging drive position D

Depress the brake pedal and pull the E-SELECT selector lever back past the first point of resistance.

When the automatic transmission is in transmission position \( D \), it shifts the gears automatically. This depends on the following factors:

- the selected drive program
- the position of the accelerator pedal
- the driving speed

Notes on the double-clutch function

The double-clutch function is active when changing down in all drive programs. The double-clutch function reduces load change reactions and supports sporty driving. The acoustic perception of the double-clutch function changes depending on the drive program.
Rocking the vehicle free

Rocking the vehicle free can help to free a vehicle that has become trapped in slush or snow. To rock the vehicle free, move the E-SELECT selector lever upwards and downwards past the point of resistance in order to switch between transmission positions \( D \) and \( R \) (page 109). The maximum design speed when switching between \( D \) and \( R \) is 6 mph (9 km/h).

Manual gearshifting

To activate/deactivate: press display button 1.

The display switch displays the currently selected transmission position 2:
- M (red): manual gearshifting
- D (blue): automatic transmission

To permanently shift the gears manually in drive program E using the steering wheel gearshift paddles, select the M (Manual) setting for the transmission.

**NOTE** Damage to the engine due to shifting up too late

The automatic transmission does not shift up in manual mode even when the engine’s limiting speed is reached. The fuel supply is interrupted in order to prevent the engine from overrevving.

Shift up before the engine speed reaches the red area in the tachometer.
To shift up: pull steering wheel gearshift paddle 2.
To shift down: pull steering wheel gearshift paddle 1.

If the engine speed is too high or too low, you cannot change gear using the steering wheel gearshift paddles. In this case, segments 1 light up red.

Gearshift recommendation
The gearshift recommendation assists you in adopting an economical driving style.

If gearshift recommendation message 1 is shown on the multifunction display, shift to the recommended gear.

Glide mode function
With an anticipatory driving style, glide mode helps you to reduce fuel consumption.

Glide mode is characterized by the following:
- The combustion engine is disconnected from the drivetrain and the vehicle continues to roll.
- The symbol appears in the multifunction display.

Glide mode is activated if the following conditions are met:
- The ECO start/stop function is switched on.
- Drive program is selected with the drive setting "Moderate" or "Reduced".
- The speed is within a suitable range.
- The road's course is suitable, e.g. no steep uphill or downhill inclines or tight curves.

Using kickdown
Maximum acceleration: depress the accelerator pedal beyond the pressure point.

The automatic transmission shifts up to the next gear when the maximum engine speed is reached to protect the engine from overrevving.

If you have activated manual gearshifting with the button in the center console, the transmission does not react to the kickdown.
• You are no longer depressing the accelerator or brake pedal.

Glide mode is deactivated again if one of the conditions is no longer met.

### Refueling

**Refueling the vehicle**

| **WARNING** Risk of fire or explosion from fuel |
| Fuels are highly flammable. |
| ▶ Fire, open flames, smoking and creation of sparks must be avoided. |
| ▶ Switch off the ignition and, if available, the stationary heater, before and while refueling the vehicle. |

| **WARNING** Risk of injury from fuels |
| Fuels are poisonous and hazardous to your health. |

| ▶ Do not swallow fuel or let it come into contact with skin, eyes or clothing. |
| ▶ Do not inhale fuel vapor. |
| ▶ Keep children away from fuel. |
| ▶ Keep doors and windows closed during the refueling process. |

If you or other people come into contact with fuel, observe the following:

| ▶ Immediately rinse fuel off your skin with soap and water. |
| ▶ If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical attention immediately. |
| ▶ If you swallow fuel, seek medical attention immediately. Do not induce vomiting. |
| ▶ Change immediately out of clothing that has come into contact with fuel. |

| **WARNING** Risk of fire and explosion due to electrostatic charge |
| Electrostatic charge can ignite fuel vapor. |
| ▶ Before you open the fuel filler cap or take hold of the pump nozzle, touch the metallic vehicle body. |
| ▶ To avoid creating another electrostatic charge, do not get into the vehicle again during the refueling process. |

| **NOTE** Damage caused by the wrong fuel |
| Vehiciles with a gasoline engine: |
| Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system. |
| ▶ Only refuel with low-sulfur unleaded fuel. |

This fuel may contain up to 10% ethanol. Your vehicle is suitable for use with E10 fuel.
Never refuel with one of the following fuels:
- Diesel
- Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100
- Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
- Gasoline with additives containing metal

If you have accidentally refueled with the wrong fuel:
- Do not switch the ignition on.
- Consult a qualified specialist workshop.

NOTE Do not use diesel to refuel vehicles with a gasoline engine

If you have accidentally refueled with the wrong fuel:
- Do not switch the ignition on. Otherwise fuel can enter the engine.

Even small amounts of the wrong fuel could result in damage to the fuel system and the engine. The repair costs are high.
- Consult a qualified specialist workshop.
- Have the fuel tank and fuel lines drained completely.

NOTE Damage to the fuel system caused by overfilled fuel tanks
- Only fill the fuel tank until the pump nozzle switches off.

Requirements:
- The vehicle is unlocked.
- Do not get into the vehicle again during the refueling process. Otherwise, electrostatic charge could build up again.

Observe the notes on operating fluids and fuel. Only refuel with fuel that has at least the octane number specified in the information label in the fuel filler flap. Otherwise, engine output can be reduced and fuel consumption increased.

Press on the back area of fuel filler flap 1.
- Turn the fuel filler cap counter-clockwise and remove it.
Insert the fuel filler cap from above into bracket 2.

Completely insert the pump nozzle into the tank filler neck, hook in place and refuel.

Only fill the fuel tank until the pump nozzle switches off.

Replace the cap on the filler neck and turn clockwise until it engages audibly.

Close fuel filler flap 1.

Close the fuel filler flap before locking the vehicle.

Parking

Parking the vehicle

**WARNING** Risk of accident and injury caused by an insufficiently secured vehicle rolling away

If the vehicle is not securely parked sufficiently, it can roll away in an uncontrolled way even at a slight downhill gradient.

**WARNING** Risk of fire caused by hot exhaust system parts

Flammable materials such as leaves, grass or twigs may ignite.

- Park the vehicle so that no flammable material can come into contact with hot vehicle components.
- In particular, do not park on dry grassland or harvested grain fields.

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.

**NOTE** Damage to the vehicle due to it rolling away

Always secure the vehicle against rolling away.

Bring the vehicle to a standstill by applying the brake pedal.

On gradients, turn the front wheels so that the vehicle will roll towards the curb if it starts moving.

Apply the electric parking brake.

Engage transmission position P in a stationary vehicle with the brake pedal applied (→ page 110).

Switch off the engine and the ignition by pressing button 1.

Release the service brake slowly.

Get out of the vehicle and lock it.

---

**Garage door opener**

**Programming buttons for the garage door opener**

**DANGER** Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

**WARNING** Risk of injury when opening or closing a door with the garage door opener

When you operate or program the door with the integrated garage door opener, persons in the range of movement of the door may become trapped or be struck by the door.

Always make sure that nobody is within the range of movement of the door.

Only operate the following doors using the garage door opener:

- Doors with a safety stop and reversing feature.
- Doors which conform to the current U.S. safety standards.
Requirements:

- The vehicle has been parked outside the garage and outside the range of movement of the door.
- The engine is switched off.
- The ignition is switched on.

The garage door opener function is always available when the ignition is switched on.

Check if the transmitter frequency of the remote control has the frequency range of 280 to 868 MHz.

Radio equipment approval number:

- NZLMUAHL5 (USA)
- 4112A-MUAHL5 (Canada)

Press and hold button 2, 3 or 4 that you wish to program.

Indicator lamp 1 flashes yellow.

It can take up to 20 seconds before the indicator lamp flashes yellow.

Release the previously pressed button. Indicator lamp 1 continues to flash yellow.

Point remote control 5 from a distance of 0.4 in (1 cm) to 3 in (8 cm) towards button 2, 3 or 4.

Press and hold button 6 of remote control 5 until one of the following signals appears:

- Indicator lamp 1 lights up green continuously. Programming is complete.
- Indicator lamp 1 flashes green. Programming was successful. Additionally, synchronization of the rolling code with the door system must also be carried out.

If indicator lamp 1 does not light up or flash green: repeat the procedure.

Release all of the buttons.

The remote control for the door drive is not included in the scope of delivery of the garage door opener.

Synchronizing the rolling code

Requirements:

- The door system uses a rolling code.
- The vehicle must be within range of the garage door or door drive.
- The vehicle as well as persons and objects are located outside the range of movement of the door.

Press the programming button on the door drive unit. Initiate the next step within approximately 30 seconds.
Press previously programmed button 2, 3 or 4 repeatedly until the door closes. When the door closes, programming is completed.

Please also read the operating instructions for the door drive.

Troubleshooting when programming the remote control

- Check if the transmitter frequency of remote control 5 is supported.
- Replace the batteries in remote control 5.
- Hold remote control 5 at various angles from a distance of 0.4 in (1 cm) to 3 in (8 cm) front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- Hold remote control 5 at the same angles at various distances in front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.

On remote controls that transmit only for a limited period, press button 6 on remote control 5 again before transmission ends.

- Align the antenna line of the door opener unit with the remote control.

Support and additional information on programming:
- on the toll free HomeLink® Hotline on 1-800-355-3515
- on the Internet at https://www.homelink.com/mercedes

Opening or closing the garage door

Requirements:
- The corresponding button is programmed to operate the door.

- Press and hold buttons 2, 3 or 4 until the door opens or closes.
- If indicator lamp 1 flashes yellow after approximately 20 seconds: press and hold the previously pressed button again until the door opens or closes.

Clearing the garage door opener memory

- Press and hold buttons 2 and 4.
  - Indicator lamp 1 lights up yellow.
  - If indicator lamp 1 flashes green: release buttons 2 and 4. The entire memory has been deleted.

Electric parking brake

Function of the electric parking brake (applying automatically)

WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.
In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.

The electric parking brake is applied if the transmission is in position [P] and one of the following conditions is fulfilled:
- The engine is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.

To prevent application: pull the handle of the electric parking brake.

In the following situations, the electric parking brake is also applied:
- The HOLD function is keeping the vehicle stationary.

This is the case if one of the following conditions is also fulfilled:
- The engine is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.
- There is a system malfunction.
- The power supply is insufficient.
- The vehicle is stationary for a lengthy period.

When the electric parking brake is applied, the red [PARK] (USA) or [EP] (Canada) indicator lamp lights up in the instrument cluster.

The electric parking brake is not automatically applied if the engine is switched off by the ECO start/stop function.

#### Electric parking brake function (releasing automatically)

The electric parking brake is released when the following conditions are fulfilled:
- The driver’s door is closed.
- The engine is running.
- The transmission is in position [D] or [R] and you depress the accelerator pedal or you shift from transmission position [P] to [D] or [R] when on level ground with the driver’s door closed.
- If the transmission is in position [R], the tailgate must be closed.
- The seat belt tongue is inserted into the seat belt buckle of the driver’s seat.

If the seat belt tongue is not inserted into the seat belt buckle of the driver’s seat, one of the following conditions must be fulfilled:
- You shift from transmission position [P].
- You have previously driven at speeds greater than 2 mph (3 km/h).
When the electric parking brake is released, the red \( \text{PARK} \) (USA) or \( \text{P} \) (Canada) indicator lamp in the instrument cluster goes out.

**Applying/releasing the electric parking brake manually**

**Applying**

- Push handle 1.
  - The red \( \text{PARK} \) (USA) or \( \text{P} \) (Canada) indicator lamp lights up in the instrument cluster.

- The electric parking brake is only securely applied if the indicator lamp is lit continuously.

**Releasing**

- Switch on the ignition.
- Pull handle 1.
  - The red \( \text{PARK} \) (USA) or \( \text{P} \) (Canada) indicator lamp in the instrument cluster goes out.

**Emergency braking**

- Press and hold handle 1.
  - As long as the vehicle is driving, the **Please Release Parking Brake** message is displayed and the red \( \text{P} \) indicator lamp flashes.
  - When the vehicle has been braked to a standstill, the electric parking brake is applied. The red \( \text{PARK} \) (USA) or \( \text{P} \) (Canada) indicator lamp lights up in the instrument cluster.

---

**Notes on parking the vehicle for an extended period**

If you leave the vehicle parked for longer than six weeks, it may suffer damage through disuse. The 12 V battery may also be impaired or damaged by heavy discharging.

Further information can be obtained at a qualified specialist workshop.

---

**Driving and driving safety systems**

**Driving systems and your responsibility**

Your vehicle is equipped with driving systems which assist you in driving, parking and maneuvering the vehicle. The driving systems are only aids. They are not a substitute for your attention to the surroundings and do not relieve you of your responsibility pertaining to road traffic law. The driver is always responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane. Pay attention to the traffic conditions at all times and intervene when necessary. Be
aware of the limitations regarding the safe use of these systems. Driving systems can neither reduce the risk of accident if you fail to adapt your driving style nor override the laws of physics. They cannot always take into account road, weather or traffic conditions.

**Information on vehicle sensors and cameras**

- 1 Multifunction camera
- 2 Front camera
- 3 Rear view camera

Depending on the vehicle’s equipment, the radar sensors are integrated behind the bumpers and/or behind the radiator grill.

Some driving and driving safety systems use cameras and sensors to monitor the area in front of, behind or next to the vehicle. Keep the areas around the sensors and cameras free of dirt, ice or slush (→ page 266). The cameras and sensors must not be covered, for example by bicycle racks, overhanging loads, stickers, foil or foils to protect against stone chipping. Additional license plate bracket can impair the function of the ultrasonic sensors, in particular.

In the event of damage or a severe impact in the area of the sensors, have the function of the sensors checked at a qualified specialist workshop. Have damage or stone chipping in the area of the cameras repaired at a qualified specialist workshop. If the sensors or cameras are damaged, some driving systems and driving safety systems may no longer function properly.

**Overview of driving systems and driving safety systems**

- ABS (Anti-lock Braking System) (→ page 122)
- BAS (Brake Assist System) (→ page 122)
Function of ABS
The Anti-lock Brake System (ABS) regulates the brake pressure in critical driving situations:
- During braking, e.g. at full brake application or insufficient tire traction, the wheels are prevented from locking.
- Vehicle steerability while braking is ensured. If ABS intervenes when braking, you will feel a pulsing in the brake pedal. The pulsating brake pedal can be an indication of hazardous road conditions and can serve as a reminder to take extra care while driving.

Function of BAS
The Brake Assist System (BAS) supports your emergency braking situation with additional brake force.
If you depress the brake pedal quickly, BAS is activated:
- BAS automatically boosts the brake pressure.
- BAS can shorten the braking distance.
- ABS prevents the wheels from locking. The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Functions of ESP®

**WARNING** Risk of skidding if ESP® is malfunctioning
If ESP® is malfunctioning, ESP® cannot carry out vehicle stabilization. In addition, other driving safety systems are switched off.
- Drive on carefully.
- Have ESP® checked at a qualified specialist workshop.

You can select between the following modes of the Electronic Stability Program (ESP®):
- ESP® ON
- ESP® SPORT
- ESP® OFF
Characteristics when ESP® is activated

ESP® monitors and improves driving stability and traction, particularly in the following situations:

- When pulling away on a wet or slippery road.
- When braking.

ESP® can stabilize the vehicle by intervening in the following ways:

- One or more wheels are braked.
- The engine output is adapted according to the situation.

ESP® is activated every time the engine is started regardless of whether ESP® was in ESP® SPORT or deactivated before the engine was switched off.

If the ESP® warning lamp flashes in the instrument cluster, one or several vehicle wheels has reached its grip limit:

- Adapt the driving style to suit the prevailing road and weather conditions.
- Do not deactivate ESP® under any circumstances.

- Only depress the accelerator pedal as far as is necessary.

Characteristics of ESP® SPORT

**WARNING Risk of skidding if ESP® SPORT is used incorrectly**

When you activate ESP® SPORT, there is an increased risk of skidding and having an accident.

- Activate ESP® SPORT only in the circumstances described below.

When ESP® SPORT is activated, the and warning lamps light up continuously in the instrument cluster.

Select ESP® SPORT when the vehicle’s own oversteering and understeering characteristics are desired, e.g. on designated roads.

Driving with ESP® SPORT or with ESP® deactivated requires an extremely qualified and experienced driver.

If ESP® SPORT is activated and one or more wheels start to spin, the ESP® warning lamp on the instrument cluster flashes. ESP® then only stabilizes the vehicle to a limited degree.

ESP® SPORT also has the following characteristics:

- ESP® only improves driving stability to a limited degree.
- ETS/4ETS traction control is still active.
- The engine’s torque is only restricted to a limited degree and the drive wheels can spin. The spinning of the wheels results in a cutting action for better traction on loose surfaces.
- ESP® continues to provide assistance when the brakes are firmly applied.
Characteristics when ESP® is deactivated

**WARNING** Risk of skidding if ESP® is deactivated

If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.

ESP® should only be deactivated in the following situations.

When ESP® is deactivated, the  and  warning lamps light up continuously in the instrument cluster.

Deactivating ESP® has the following effects:
- Driving stability will no longer be improved.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.

Even when ESP® is deactivated, you are still assisted by ESP® when braking hard.

It may be best to activate ESP® SPORT or deactivate ESP® in the following situations:
- When using snow chains.
- In deep snow.
- On sand or gravel.

Spinning the wheels results in a cutting action, which enhances traction.

Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle if the vehicle starts to skid or a wheel starts to spin.

If the  ESP® warning lamp lights up continuously even when ESP® is activated, ESP® is not available due to a malfunction.

Observe any information which may be displayed in the instrument cluster:
- Indicator and warning lamps (→ page 365)
- Display messages (→ page 328)

**ETS/4ETS (Electronic Traction System)**

ETS/4ETS traction control is part of ESP®.

ETS/4ETS can improve the vehicle’s traction by intervening in the following ways:
- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

Activating/deactivating ESP® (Electronic Stability Program)
To activate ESP® SPORT: press and hold display button 1 until the road in button symbol 2 lights up yellow. The ESP® and ESP SPORT® warning lamps appear in the instrument cluster.

To deactivate ESP®: press and hold display button 1 until the road in button symbol 2 lights up red. The ESP® and ESP OFF® warning lamps appear in the instrument cluster.

When you deactivate ESP® in the I drive program, AMG Dynamics automatically switches to the Master level.

To activate ESP®: press and hold display button 1 until the road in button symbol 2 lights up blue. The ESP®, ESP SPORT® and ESP OFF® warning lamps go out.

When the ESP® symbol is shown with a red ! on the display button, ESP® is malfunctioning. Observe the information on warning lamps and display messages which may be shown in the instrument cluster.

Function of ESP® Crosswind Assist
ESP® Crosswind Assist detects sudden gusts of side wind and helps the driver to keep the vehicle in the lane:
• ESP® Crosswind Assist is active at vehicle speeds between approx. 47 mph (75 km/h) and 125 mph (200 km/h) when driving straight ahead or cornering slightly.
• The vehicle is stabilized by means of individual brake application on one side.

Function of EBD
Electronic Breakforce Distribution (EBD) is characterized by the following:
• Monitoring and regulating the brake pressure on the rear wheels.
• Improved driving stability when braking, especially on bends.

Speed control cruise control

Function of cruise control
Cruise control regulates the speed to the value selected by the driver.

If you accelerate to overtake, for example, the stored speed is not deleted. If you remove your foot from the accelerator pedal after overtaking, cruise control will resume speed regulation back to the stored speed.

Cruise control is operated using the corresponding steering wheel buttons. You can store any speed above 19 mph (30 km/h) up to the maximum design speed.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 120).

Displays on the multifunction display
• (gray): cruise control is selected but not yet activated.
• (green): cruise control is active.

A stored speed appears along with the display.
The segments between the stored speed and the end of the segment display light up in the speedometer.

**System limits**
Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out. Change into a lower gear in good time on long and steep downhill gradients. Take particular note of this when driving a laden vehicle. By doing so, you will make use of the braking effect of the engine. This relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

Do not use cruise control in the following situations:

- In traffic situations which require frequent changes of speed, e.g. in heavy traffic, on winding roads.
- On slippery roads. Accelerating can cause the drive wheels to lose traction and the vehicle could then skid.
- If you are driving when visibility is poor.

**Operating cruise control**

**WARNING** Risk of accident due to stored speed

If you call up the stored speed and this is lower than your current speed, the vehicle decelerates.

Take into account the traffic situation before calling up the stored speed.

**Requirements:**

- ESP® must be activated, but not intervening.
- The vehicle speed is at least 15 mph (20 km/h).
- The transmission is in position D.

**Operating cruise control**

Press the rocker switches on the steering wheel control panel up or down to the desired position.

**Activating cruise control**

Select with the right rocker switch.

**Activating cruise control**
Press rocker switch \( \uparrow \) up \( \text{SET+} \) or down \( \text{SET-} \). The current speed is stored and maintained by the vehicle.

or

Select \( \text{RES/} \) with the left rocker switch. The last stored speed is called up and maintained by the vehicle.

If the last stored speed has previously been deleted, the current vehicle speed is stored. When you switch off the vehicle, the last speed stored is cleared.

**Increasing or decreasing the stored speed**

- 1 mph (1 km/h): press rocker switch \( \uparrow \) up \( \text{SET+} \) or down \( \text{SET-} \) to the pressure point.

or

- 5 mph (10 km/h): press rocker switch \( \uparrow \) up \( \text{SET+} \) or down \( \text{SET-} \) beyond the pressure point.

or

Accelerate the vehicle to the desired speed and press rocker switch \( \uparrow \) up \( \text{SET+} \).

**Deactivating cruise control**

Select \( \text{CNCL} \) with the left rocker switch.

**Deactivating cruise control**

Select \( \text{CAN} \) with the right rocker switch.

- If you brake, deactivate ESP\textsuperscript{®} or if ESP\textsuperscript{®} intervenes, cruise control is deactivated.

**Function of Hill Start Assist**

Hill Start Assist holds the vehicle for a short time when pulling away on a hill under the following conditions:

- The transmission is in position \( \text{D} \) or \( \text{R} \).
- The electric parking brake is released.

This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll away.

**WARNING** Risk of accident and injury due to the vehicle rolling away

After a short time, Hill Start Assist no longer holds the vehicle.

*Swiftly move your foot from the brake pedal to the accelerator pedal. Do not leave the vehicle when it is being held by Hill Start Assist.*

**HOLD function**

**HOLD function**

The HOLD function holds the vehicle at a standstill without requiring you to depress the brake pedal, e.g. while waiting in traffic.

The HOLD function is only an aid. The responsibility for the vehicle safely standing still remains with the driver.

**System limits**

The HOLD function is only intended to provide assistance when driving and is not a sufficient means of safeguarding the vehicle against rolling away when stationary.

- The incline must not be greater than 30%.
Activating/deactivating the HOLD function

**WARNING** Risk of an accident due to the HOLD function being active when you leave the vehicle

If the vehicle is only braked with the HOLD function it could, in the following situations, roll away:

- If there is a malfunction in the system or in the power supply.
- If the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant.
- Always secure the vehicle against rolling away before you leave it.

Requirements:

- The vehicle is stationary.
- The driver’s door is closed or the seat belt on the driver’s side is fastened.
- The engine is running or has been automatically switched off by the ECO start/stop function.
- The electric parking brake is released.
- The transmission is in position D, R or N.

**Activating the HOLD function**

- Depress the brake pedal, and after a short time quickly depress further until the \[\text{HOLD}\] display appears in the multifunction display.
- Release the brake pedal.

**Deactivating the HOLD function**

- Depress the accelerator pedal to pull away.
- Or
- Depress the brake pedal until the \[\text{HOLD}\] display disappears from the multifunction display.

The HOLD function is deactivated in the following situations:

- The transmission is shifted to position \[P\].
- The vehicle is secured with the electric parking brake.

In the following situations, the vehicle is held by transmission position \[P\] and/or by the electric parking brake:

- The seat belt is unfastened and the driver’s door is opened.
- The vehicle is switched off.
- There is a malfunction in the system or the power supply is insufficient.

**RACE START**

Function of RACE START

RACE START enables optimal vehicle acceleration from a standstill. For this, a suitably high-grip road surface is required, the tires and vehicle must also be in good condition.

- Use RACE START only after the vehicle has been broken in (→ page 95).
- RACE START may not be used on normal roads. RACE START must only be activated and used on dedicated race circuits, not on public roads.

Be sure to read the safety notes and information on ESP® (→ page 122).
If you use RACE START, depending on the ESP® mode selected, there is an increased risk of skidding and having an accident.

Make sure that no persons or obstacles are in the close vicinity of your vehicle.

Activating RACE START
Requirements:

- the driver’s door is closed.
- the engine is running and the transmission and engine are at normal operating temperature.
- the front wheel is in the straight-ahead position.
- the vehicle is on level ground.
- the vehicle is stationary, the brake pedal is depressed (left foot) and the parking brake is released.
- the transmission is in position [D].

- one of the drive programs [S], [S] or [ ] is selected (→ page 106).
- Rapidly depress the accelerator pedal fully. The engine speed increases.
- If the activation conditions are not fulfilled, RACE START cannot be activated. The RACE START Not Possible See Operator’s Manual message appears in the multifunction display.
- The RACE START Release brake to start message appears in the multifunction display.
- In this phase you can adjust RACE START depending on the road conditions; you can vary the engine speed by pulling on one of the steering wheel gearshift paddles. The segments in the multifunction display flicker rapidly.
- If the brake pedal is not released after a short while, RACE START is canceled. The RACE START Canceled message appears in the multifunction display.
- Take your foot off the brake, but keep the accelerator pedal depressed. The vehicle pulls away at maximum acceleration. The RACE START Active message appears in the multifunction display.

RACE START is deactivated immediately if you release the accelerator pedal during RACE START or if any of the activation conditions are no longer fulfilled. The RACE START Canceled message appears in the multifunction display.

After using it several times in short succession, RACE START is unavailable until a certain distance has been driven.

Traction control
Function of traction control

WARNING Risk of skidding if ESP® is deactivated

If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.
ESP® should only be deactivated in the following situations.

Adjustable traction control is used to enhance performance on a race track and is only activated when ESP® is deactivated. You can adjust the level of assistance from traction control and, in doing so, adjust the balance between stability and agility gradually while accelerating.

Traction control supports you only in metering the engine output. As ESP® is deactivated, ESP® does not stabilize the vehicle if the vehicle starts to skid.

Deactivating ESP® and using adjustable traction control requires a highly qualified and experienced driver. Adjustable traction control may not be used on normal roads. Adjustable traction control may only be activated and used on dedicated race circuits, not on public roads. Be sure to observe the safety notes and information on ESP® (→ page 122).

Adjusting traction control
Requirements:

- ESP® is deactivated. The 🔴 and ESP OFF warning lamps light up in the instrument cluster (→ page 124).

You can adjust the level of assistance from traction control and, in doing so, adjust the balance between stability and agility gradually while accelerating.

Take the following parameters into account:
- Current road conditions
- Type of tire used
- Road characteristics
- Tire condition, such as temperature or wear
- Personal driving style

To increase or reduce the level of assistance from traction control, turn control with LED segment display 1 clockwise or counterclockwise.

If you turn the control all the way counterclockwise (OFF), traction control is deactivated and all the LEDs light up.

If you activate ESP®, the level of assistance from traction control is controlled automatically.
Function of the AMG steering-wheel buttons

The AMG steering-wheel buttons are two additional control elements on the steering wheel. You can assign two vehicle functions of your choice to the left control element. You can change between the available functions by pressing display buttons 2 repeatedly. The currently selected functions are displayed in display buttons 2.

The following functions are available:
- ESP® (→ page 122)
- AMG adaptive sport suspension system (→ page 134)
- AMG Performance exhaust system (→ page 101)
- ECO start/stop function (→ page 99)
- Manual gearshifting (→ page 111)
- AMG Dynamics (→ page 106)
- Rear wing (→ page 131)
- Front and rear view camera (→ page 135)

If you have assigned a function to one of display buttons 2, you can operate this function with corresponding button 1.

The assignment of display button 2 remains stored even after a new engine start, but the operating status of the respective function is reset to the basic setting.

You can change between the drive programs with stabilizer bar actuator 3. The selected drive program appears in display button 4. By pressing display button 4, you can directly access the drive program [Individual] (→ page 106).

Rear wing

Function of the rear wing

Your vehicle is equipped with a fixed double rear wing. The two wings can be moved into two steeper positions independently of each other to ensure optimum coordination of the rear axle power output on the race track (→ page 132).

The flap positions must be set for both wings when driving on public roads. All other wing positions are not permitted for normal road operation.

A flap is integrated in the upper wing that automatically extends and retracts when the vehicle is in motion. This adapts the aerodynamics of the vehicle to the current operating conditions. In racetrack mode, the flap also increases the power output in certain driving conditions, such as during cornering or braking.

You can manually extend and retract the flap of the upper wing for cleaning (→ page 132).
Extending and retracting the flap for cleaning

**WARNING** Risk of becoming trapped when the flap is extended and retracted manually

Parts of the body could become trapped.
- Ensure that there is no one in the sweep of the flap when it is retracted.
- If someone does become trapped when the flap is retracted, release the display switch immediately. The flap will then extend again.

**Requirements:**
- The ignition is switched on.
- The tailgate is closed.

**To extend:** press display switch 1.

**To retract:** press and hold display switch 1. Flap 3 in the double rear wing will extend or retract.

The color of the symbol on display switch 2 shows the position of flap 3:
- **Blue:** retracted
- **Red:** extended
- **Yellow:** extending or retracting

The different positions of the flap are also indicated on the instrument cluster.

**Adjusting the fixed rear wing**

**Requirements:**
- There is a socket wrench available for the rear wing's bolts.

The double rear wing improves the rear axle output and, therefore, the vehicle's driving stability. You can move the two wings into two more inclined positions and into one flat position.

When you move the rear wing into the more inclined position, the rear axle output and the air resistance increase.
Unscrew bolts 1 for the wing in question with a socket wrench.

Tilt the wing in question into one of the two positions, upwards or downwards into a flat position.

Tighten bolts 1 of the adjusted wing. **Specified tightening torque:** 7.5 lb-ft (10 Nm).

**Front diffuser**

**Function of the adjustable front diffuser**

The adjustable front diffuser is attached to the underbody in the front section and, together with the stationary rear wing, optimizes the vehicle's aerodynamics. The extended position of the front diffuser is not permitted for normal road operation. It may be used for racing mode only on dedicated race circuits, not on public roads. The extended front diffuser changes the pressure distribution across the underbody and thus increases the power output to the maximum level.

The front diffuser can be fully extended for race-track mode and for cleaning (→ page 133).

**Extending and retracting the front diffuser**

**Requirements:**

- The vehicle is parked on a vehicle lift, ramp or similar and the adjustable front diffuser can be accessed from below.

**To extend:**

1. Pull levers 2 down. Adjustable front diffuser 1 will be released.
2. Pull front diffuser 1 out as far as it will go and into the front detent under the vehicle using levers 2.
3. Push levers 2 up.
4. Check that front diffuser 1 is engaged.
If the front diffuser is not engaged, the front diffuser warning lamp will light up on the instrument cluster:

- Make sure that front diffuser 1 is engaged.

When the front diffuser is extended, a corresponding message will appear on the multifunction display with each ignition cycle and when the driver’s door is closed.

- Acknowledge the message using the Touch Control.

- Note the restricted ground clearance when the front diffuser is extended.

- **To retract:** pull levers 2 down and release front diffuser 1.
- Slide front diffuser 1 under the vehicle as far as it will go and into the rear detent using levers 2.
- Push levers 2 up.

- Check that front diffuser 1 is engaged.

If the front diffuser is not engaged, the front diffuser warning lamp will light up on the instrument cluster:

- Make sure that front diffuser 1 is engaged.

**AMG adaptive sport suspension system**

**Function of AMG adaptive sport suspension system**

AMG adaptive sport suspension system is an electronically controlled damping system for improved driving comfort and increased driving safety.

The damping is adjusted individually to each wheel and depends on the following factors:

- driving style, e.g. sporty
- road condition, e.g. bumps
- drive program selected

- selected suspension setting SPORT, SPORT + or COMFORT

1️⃣ When the vehicle is started again, the COMFORT setting is activated automatically.

**Selecting the suspension setting**

You can select from three different suspension settings:

- **COMFORT** ensures a comfortable suspension setting. Select this suspension setting if you prefer a comfortable driving style.
- **SPORT** ensures a firmer suspension setting. Select this suspension setting when employing a sporty driving style, e.g. on winding country roads.
- **SPORT PLUS** ensures a very firm suspension setting.
Press display button 1. The display button shows currently selected suspension setting 2:

- [ ] C (blue): COMFORT
- [ ] S (yellow): SPORT
- [ ] S+ (red): SPORT PLUS

The selected suspension setting is shown in the multifunction display as a message.

Front and rear view camera

Function of the front camera and rear view camera

The front camera and rear view camera help you to orient yourself, and they help you to avoid obstacles when maneuvering.

When automatic operation of the rear view camera is activated in the multimedia system, the image from the rear view camera is displayed automatically when reverse gear is selected (→ page 137).

The front camera view can be called up using button 1 or using the softkeys in the multimedia system.

You can also switch between the front camera and rear view camera views using the AMG steering-wheel buttons (→ page 131).
If the rear view camera is active and you shift from reverse gear to the drive position, the view automatically switches from the rear view camera to the front camera. The front camera and rear view camera are only aids. They are not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking.

The area behind the vehicle is displayed as a mirror image, as in the inside rearview mirror. You can switch between various views in the multimedia system, not just between the front camera and rear view camera.

Dynamic guide lines in the camera image show the path the vehicle will take with the steering wheel in its current position. This helps you to orient yourself and to avoid obstacles when maneuvering.

1. Yellow lanes marking the course the tires will take with the current steering angle (dynamic)
2. Yellow guide line, vehicle width (driven surface) depending on the current steering angle (dynamic)
3. Red guide line at a distance of approximately 1 in (0.3 m) from the rear area
4. Mark at a distance of approx. 3.3 ft (1.0 m)

The guide lines in the media display show the distances to your vehicle. The distances displayed only apply to road level.
System limits

The cameras will not function or will only partially function in the following situations:

- There is heavy rain, snow or fog.
- The ambient light conditions are poor, e.g. at night.
- The respective camera lens is obstructed, dirty or fogged up. Observe the notes on cleaning the cameras (→ page 266).
- Cameras, or vehicle components in which the cameras are installed, are damaged. In this event, have the cameras, their positions and their setting checked at a qualified specialist workshop.

The field of vision and other functions of the rear view camera may be restricted due to additional accessories (e.g. license plate bracket or bicycle rack).

- The display contrast may be impaired due to incident sunlight or other light sources. In this case, pay particular attention.

Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

Switching rear view camera automatic mode on/off

The rear view camera is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range. Pay attention to your surroundings and be ready to brake at all times.

Multimedia system:

- Camera & Parking Auto. Rear View Cam.
- Switch the function on □ or off □.

ATTENTION ASSIST

Function of ATTENTION ASSIST

ATTENTION ASSIST assists you on long, monotonous journeys, e.g. on highways and trunk roads. If ATTENTION ASSIST detects indicators of fatigue or increasing lapses in concentration on the part of the driver, it suggests taking a break.

ATTENTION ASSIST is only an aid. It cannot always detect fatigue or lapses in concentration in time. The system is not a substitute for a well-rested and attentive driver. On long journeys, take regular breaks in good time that allow for adequate recuperation.

You can choose between two settings:

- **Standard**: normal system sensitivity.
- **Sensitive**: higher system sensitivity. The driver is warned earlier and the attention level detected by ATTENTION ASSIST is adapted accordingly.

If drowsiness or increasing lapses in concentration are detected, the ATTENTION ASSIST: Take a Break! warning appears in the Instrument Display. You can acknowledge the message and take a break where necessary. If you do not take a break and ATTENTION ASSIST continues to detect increasing lapses in concentration, you will be warned again after a minimum of 15 minutes.
You can have the following status information for ATTENTION ASSIST displayed in the assistance menu of the on-board computer:
- The length of the journey since the last break.
- The attention level determined by ATTENTION ASSIST.

If ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the System Suspended message appears.

If a warning is given in the Instrument Display, the multimedia system offers to search for a rest area. You can select a rest area and start navigation to this rest area. This function can be activated and deactivated in the multimedia system. If ATTENTION ASSIST is deactivated, the symbol appears in the assistance graphic in the Instrument Display when the engine is running. ATTENTION ASSIST is activated automatically when the engine is re-started. The last selected sensitivity level remains stored.

**System limits**
ATTENTION ASSIST is active in the 37 mph (60 km/h) to 124 mph (200 km/h) speed range. Particularly in the following situations, ATTENTION ASSIST only functions in a restricted manner and warnings may be delayed or not occur:
- If you have been driving for less than approximately 30 minutes.
- If the road condition is poor (uneven road surface or potholes).
- If there is a strong side wind.
- If you adopt a sporty driving style (high cornering speeds or high rates of acceleration).
- If the time has been set incorrectly.
- If you change lanes and vary your speed frequently in active driving situations.
- If you switch off the engine.
- If you unfasten your seat belt and open the driver's door (e.g. changing drivers or taking a break).

The ATTENTION ASSIST tiredness or alertness assessment is deleted and restarted when continuing the journey in the following situations:
- If you switch off the engine.
- If you unfasten your seat belt and open the driver's door (e.g. changing drivers or taking a break).

**Setting ATTENTION ASSIST**

**Multimedia system:**
- Vehicle  Assistance  ATTENTION ASSIST

**Setting options**
- Select Standard, Sensitive or Off.

**Suggesting a rest area**
- Select Suggest Rest Area.
- Activate or deactivate the function .

If ATTENTION ASSIST detects fatigue or increasing lack of attention, it suggests a rest area in the vicinity.
Select a suggested rest area: you are guided to the selected rest area.

**Blind Spot Assist**

**Function of Blind Spot Assist**

At speeds above approximately 18 mph (30 km/h), Blind Spot Assist uses two lateral, rear-facing radar sensors to monitor the area up to 10 ft (3 m) behind your vehicle and directly next to your vehicle. Below 18 mph (30 km/h), the system is not active and vehicles in the monitoring range are not detected.

If Blind Spot Assist is activated, the warning lamp in the outside mirror lights up yellow at speeds of up to 18 mph (30 km/h). At speeds above approximately 18 mph (30 km/h), the warning lamp goes out and Blind Spot Assist is operational.

If a vehicle is detected within the monitoring range at speeds above 18 mph (30 km/h), the warning lamp in the outside mirror lights up red.

If a vehicle is detected close to your vehicle in the lateral monitoring range and you switch on the turn signal indicator in the corresponding direction, a warning tone sounds once and the warning lamp in the outside mirror flashes red. If the turn signal indicator remains switched on, all other detected vehicles are indicated only by the flashing of the red warning lamp.

If you overtake a vehicle quickly, no warning is given.

**WARNING** Risk of accident despite Blind Spot Assist

Blind Spot Assist does not react to vehicles approaching and overtaking you at a greatly different speed.

Blind Spot Assist cannot warn drivers in this situation.

Always pay careful attention to the traffic situation and maintain a safe distance at the side of the vehicle.

Blind Spot Assist is only an aid. It may fail to detect some vehicles and is not a substitute for attentive driving. Always ensure that there is sufficient distance to the side for other road users and obstacles.

**System limits**

The system may be limited, particularly in the following situations:

- The sensors are dirty or covered.
- Poor visibility, e.g. due to fog, heavy rain, snow or spray.
- Narrow vehicles, e.g. bicycles, are within the monitoring range.
- If the lanes are very narrow or very wide, especially if vehicles are not driving in the middle of their lane.

Warnings may be issued in error when driving close to crash barriers or similar continuous lane borders. Warnings may be interrupted when driving alongside long vehicles, for example trucks, for a prolonged time.

Blind Spot Assist is not operational when reverse gear is engaged.

Lane Keeping Assist

Function of Lane Keeping Assist
Lane Keeping Assist monitors the area in front of your vehicle by means of multifunction camera (→ page 121). It serves to protect you against unintentionally leaving your lane. You will be warned by means of a vibration in the steering wheel.

Lane Keeping Assist is available in the speed range between 40 mph (60 km/h) and 120 mph (200 km/h).

Lane Keeping Assist can neither reduce the risk of an accident if you fail to adapt your driving style nor override the laws of physics. It cannot take into account road, weather or traffic conditions. Lane Keeping Assist is only an aid. You are responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

You are warned by vibration pulses in the steering wheel in the following circumstances:

- Lane Keeping Assist detects lane markings.
- A front wheel passes over the lane markings.

Whether a warning is issued and when this occurs also depends on the selected sensitivity setting (standard or adaptive).

System limits
The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, if there are highly variable shade conditions or in rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, the sun or reflections.
- If the windshield in the area of the multifunction camera is dirty, or if the camera is fogged up, damaged or covered.
- If there are no lane markings, or several unclear lane markings are present for one lane, e.g. around roadworks.
- If the lane markings are worn, dark or covered.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- If the lane markings change quickly, e.g. lanes branch off, cross one another or merge.
- If the road is very narrow and winding.

Sensitivity of Lane Keeping Assist
With the Standard or Adaptive setting, you can influence when the warning vibration of Lane Keeping Assist takes place.

In both the Standard and Adaptive settings, no warning vibration occurs in the following situations:

- You have switched on the turn signal indicator.
- A driving safety system intervenes, such as ABS, BAS or ESP®.
In the Adaptive setting, there will also be no warning vibration in the following situations:

- The vehicle is accelerated or braked considerably.
- You steer actively, e.g. swerve to avoid an obstacle or change lane quickly.
- You cut the corner on a sharp bend.

Setting Lane Keeping Assist

Multimedia system:

- Select Adaptive or Standard. Lane Keeping Assist is activated with the selected setting.
- Select Off. Lane Keeping Assist is deactivated.

Vehicle towing instructions

The vehicle is not suitable for the use of tow bar systems that are used for flat towing or dinghy towing, for example. Attaching and using tow bar systems can lead to damage on the vehicle. When you are towing a vehicle with tow bar systems, safe driving characteristics cannot be guaranteed for the towing vehicle or the towed vehicle. The vehicle-trailer combination may swerve from side to side. Comply with the permitted towing methods (→ page 280) and the instructions for towing with both axles on the ground (→ page 281).
### Notes on the Instrument Display and on-board computer

**WARNING** Risk of accident due to an Instrument Display malfunction

If the Instrument Display has failed or malfunctioned, the function restrictions applying to safety relevant systems are not visible. The operating safety of your vehicle may be impaired.

- Drive carefully.
- Have the vehicle checked immediately at a qualified specialist workshop.

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

The on-board computer shows only display messages and warnings from specific systems on the multifunction display. You must therefore ensure that your vehicle is always reliable.

If the operating safety of your vehicle is impaired, park the vehicle immediately and safely. Contact a qualified specialist workshop.

You can find information about the possible settings and selections on the menus in the Digital Operator’s Manual.

To call up the menu bar: press the left-hand back button until the menu bar is displayed.

Vehicle without Active Distance Assist DISTRONIC: press the button to call up the menu bar of the on-board computer.

- To scroll in the menu bar: swipe left or right on the left-hand Touch Control.
- To call up a menu, submenu or possible settings on the menu, or confirm a selection or setting: press the left-hand Touch Control.
- To scroll through displays or lists on the menu, or select display content, a function, an entry or a display: swipe upwards or downwards on the left-hand Touch Control.
- To exit a submenu: press the left-hand back button.

Notes on operating safety

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

For your own safety, always observe the following points when operating mobile communications equipment and especially your voice control system:

- Observe the legal requirements for the country in which you are driving.
- If you use the voice control system in an emergency your voice can change and your telephone call, e.g. an emergency call, can thereby be unnecessarily delayed.
- Familiarize yourself with the voice control system functions before starting the journey.

**Operation**

**Overview of operation of the Voice Control System on the multifunction steering wheel**

The Voice Control System is operational approximately thirty seconds after the ignition is switched on.

1. Press the rocker switch up: \[ \text{ starts the Voice Control System} \]
2. Press the control: \[ \text{ switches the sound off or on (ends the Voice Control System)} \]
3. Turn the control up/down: increases/decreases the volume

### Conducting a dialog with the Voice Control System

- **To start or continue a dialog:** on the multifunction steering wheel, press the \( \text{ kickoff} \) rocker switch up.
  You can say a voice command after an acoustic signal.
- **To correct an entry:** say the Correction voice command.
- **To select an entry from the selection list:** say the line number or the contents.
- **To browse the selection list:** say the Next or Back voice command.
- **To interrupt the dialog:** say the Pause voice command.
- **To cancel the dialog:** say the Cancel voice command.

### Operable functions

You can use the Voice Control System to operate the following equipment depending on the features:
- Telephone
- Text messages
- Navigation
- Address book
- Radio
- Audio (memory card, Media Interface, USB and Bluetooth audio)
- Vehicle

### Application-specific voice commands

- are only available for the active application.

Once the Voice Control System is started an autocue is shown. Apart from the available voice commands for the application currently active, this also cites example voice commands for other applications which are not active. In this way, you will be familiar more quickly with the available voice commands. The list can be scrolled or it can be operated by speech or the controller/touchpad.

### Overview of types of voice command

A distinction is made between the following voice commands:
- **Global voice commands** can be said at any time and regardless of the current application, e.g. the voice commands Navigate to, Call or Text message to.

### Information on the language setting

You can change the language of the Voice Control System via the system language settings. If the set system language is not supported by the Voice Control System, English will be selected. The Voice Control System is available in English, French, Portuguese and Spanish.
Using the Voice Control System effectively

Features of audible help functions

You receive information and help for the following topics:

- **Optimum operation**: say the brief instruction voice command.
- **Current application**: on the multifunction steering wheel, press the [OK] rocker switch up and say the Help voice command.
- **Continued dialog**: say the Help voice command during a voice dialog.
- **Specific function**: say voice commands for the desired function, e.g. Help telephone.

Notes on how to improve speech quality

If the Voice Control System does not understand you:

- only operate the Voice Control System from the driver’s seat.
- say the voice commands coherently and clearly, but do not exaggerate the words.
- avoid loud noises that cause interference while making a voice command entry, e.g. the blower.

A voice tag in the address book is not recognized:

- only create sensible address book entries in the system/mobile phone, e.g. enter surname and first name in the correct field.

- do not use any abbreviations, unnecessary spaces or special characters.

If a station list entry is not recognized:

- say the Read out station list voice command.

**Essential voice commands**

**Overview of switch voice commands**

Switch voice commands can be used to open certain applications. The voice command selection can be used regardless of the application that is currently active.

Overview and operation

Overview of the multimedia system

⚠️ WARNING Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

Press the display button: switches the multimedia system on/off

**Activating/deactivating Wi-Fi**

- Switch Wi-Fi on ✔ or off ☐.
  - If Wi-Fi is deactivated ☐, communication via Wi-Fi to all devices is interrupted. This also means that a connection to the HERMES communication module cannot be established. Then functions such as dynamic route guidance with Live Traffic Information are not available.

**Connecting the multimedia system with a device via Wi-Fi**

This function is not available if a HERMES communication module is installed.
The type of connection established must be selected on the multimedia system and on the device to be connected.

- The connection procedure may differ depending on the device. Follow the instructions that are shown in the display. Further information (see the manufacturer’s operating instructions).

- Select Internet Settings.
- Select Search for Wi-Fi Networks.

**Using a security key**
- Select a Wi-Fi network in the list.
- Have the security key displayed on the device to be connected (see the manufacturer’s operating instructions).
- Enter this security key on the multimedia system.
- Confirm the entry with \( \text{ok} \).

- All devices support a security key as a means of connection.

**Using a WPS PIN**
- Highlight a Wi-Fi network in the list.
- Select \( \text{Connect via WPS PIN Input}. \)
  The multimedia system generates an eight-digit PIN.
- Enter this PIN on the device to be connected.
- Confirm the entry.

**Using a button**
- Highlight a Wi-Fi network in the list.
- Select \( \text{Connect via WPS PBC}. \)
- Select "Connect via WPS PBC" in the options on the device to be connected.
- Press the WPS button on the device to be connected.
- Select Continue in the multimedia system.

**Device has already been connected:**
- To automatically connect: highlight a Wi-Fi network in the list.
- Activate \( \text{Connect Automatically}. \)
- To connect: highlight a Wi-Fi network in the list.
- Select \( \text{Connect}. \)

The connection is established again. These functions are possible when the device has already been connected to the Wi-Fi network.

**Setting up a Wi-Fi hotspot**

**Requirements:**
- For connection by pressing a button: this function is only available in a Wi-Fi frequency of 2.4 GHz.

**Multimedia system:**

**Configuring the multimedia system as a Wi-Fi hotspot**

The type of connection established depends on the device to be connected. The function must be supported by the multimedia system and by the device to be connected. The type of connection established must be selected on the multimedia system and on the device to be connected.
Select **Set Up Hotspot**.

Highlight **Connect Device to Vehicle Hotspot**.

**Generating a WPS PIN**
- Select **Connect via WPS PIN Generation**.
- Enter the PIN shown in the media display on the device to be connected and confirm.

**Connecting using a WPS PIN**
- Select **Connect via WPS PIN Input**.
- Select **Enter WPS PIN**.
- Enter the PIN that is shown on the external device's display on the multimedia system.
- Select **Continue**.

**Connecting using a button**
- Select **Connect via WPS PBC**.
- Press the WPS button on the device to be connected or select **Connect**.
- Select **Continue** in the multimedia system.

**Connecting using a security key**
- Select **Connect Device to Vehicle Hotspot**. A security key is displayed.
- Select the vehicle from the device to be connected. The vehicle is displayed with the SSID MB Hotspot XXXXX.
- Enter the security key which is shown in the media display on the device to be connected.
- Confirm the entry.

**Generating a new security key:**
- Select **Set Up Hotspot**.
- Select **Generate Security Key**. A connection will be established with the newly created security key.
- **To save a security key:** select **Save**. When a new security key is saved, all existing Wi-Fi connections are then disconnected. If the Wi-Fi connections are being re-established, the new security key must be entered.

**Managing COMAND Touch devices**

**Requirements:**

- The COMAND Touch app is installed on the external device (e.g. tablet or smartphone).
- Wi-Fi is activated (→ page 170) and the multimedia system is configured as a Wi-Fi hotspot (→ page 171).

Multimedia system: ➤ **System ➔** **COMAND Touch**

Data import and export

Data import/export function
The following functions are possible:

- Transferring data from one system or vehicle to another system or vehicle.
- Creating a backup copy of your personal data and loading it again.
- Protecting your personal data against unwanted export with PIN protection.

Please note that the NTFS file system is not supported. The FAT32 file system is recommended.
Importing/exporting data

**NOTE** Loss of data due to premature removal

> Do not remove the data storage medium when data is being exported.

Mercedes-Benz is not liable for any loss of data.

Requirements:
- The vehicle is stationary.
- The ignition is switched on or the vehicle has been started.
- The SD card is inserted (→ page 236) or the USB device is connected (→ page 238).

Multimedia system:

<table>

**Importing**

> Select a data storage medium.

A prompt appears asking whether you really wish to overwrite the current data. If data originates from another vehicle, this is recognized during data reading. The multimedia system is restarted once the data has been imported.

> Current vehicle settings can be edited after the import.

**Exporting**

If PIN protection is activated, your PIN is requested.

> Enter the four-digit PIN.

> Select a data storage medium.

The data is exported. The data export may take several minutes.

**Activating/deactivating PIN protection**

Requirements:

To unlock the PIN:
- There is an Internet connection.
- A Mercedes me account exists at https://me.secure.mercedes-benz.com.
- The Personalization service is active (→ page 175).

Multimedia system:

**Changing the PIN**

> Select Change Settings.

> Enter the current PIN.

> Select Change PIN.

> Set a new PIN.

**Activating PIN protection for data export**

> Select Change Settings.

Confirm with the PIN.

> Select Protect Data Export.

Activate ✔️ or deactivate ❌ the function.

**Unblocking the PIN**

If the PIN has been entered incorrectly three times, the PIN will be blocked. You can have a
single-use password sent to you via the Mercedes me connect online portal to reset the PIN protection.

- Select Unblock PIN.
- Enter the single-use password. PIN protection is reset, and you can set a new PIN.

The availability of this function is country dependent and may not be available in your country. Alternatively, you can have PIN protection reset at an authorized Mercedes-Benz Center.

Software updates

Information on software updates

The multimedia system displays a corresponding message when a software update is available.

The availability of this function is dependent on the country.

Depending on the source, you can perform various updates:

<table>
<thead>
<tr>
<th>Source of the update</th>
<th>Update type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Updates via an external storage medium, e.g. a USB flash drive</td>

Software updates via mobile phone require an active Internet connection for the vehicle. This is not available in all countries. For further information on connecting to the Internet, see (page 231).

Advantages of software updates

Software updates ensure your vehicle's technology is up-to-date.

In order to constantly improve the quality of our services you will receive future software updates for your multimedia system, the Mercedes me connect services and your vehicle's communica-
tion module. These will be sent to you via the mobile phone connection in your vehicle and, as an option, installed automatically. You can monitor the status of your software updates on the Mercedes me Portal and find information about potential innovations.

Your advantages at a glance:
- Conveniently receive software updates via the mobile phone network
- Improves the quality and availability of Mercedes me connect services
- Keeps your multimedia system and communication module up-to-date

Further information about software updates can be found at https://me.secure.mercedes-benz.com

Carrying out software updates

Requirements:
- There is an Internet connection (→ page 231).
- For automatic software updates: your vehicle has a permanently installed communication module.

Multimedia system:

- System ➤ Software Update

Automatic software updates

- Activate ✓ Automatic Online Update. The software updates will be downloaded and installed automatically.
- The current status of the software update is displayed.

Manual software updates
- Switch off □ Automatic Online Update.
- Select a software update from the list and start the update.

Activating a software update
- Restart the system.

Function of important system updates

Important system updates may be necessary for the security of your multimedia system’s data. Please install these updates, otherwise the security of your multimedia system cannot be ensured.

If automatic online updates are activated, the system updates will be downloaded automatically (→ page 177).

As soon as a system update is available for download, a corresponding message appears on the media display.

You have the following selection options:
- Download
  The system update will be downloaded in the background.

- Details
  Information about the pending system update is displayed.

- Later
  The system update can be downloaded manually at a later time (→ page 177).

You will be informed when the download is complete and the system update is ready for installation.

Park the vehicle safely in a suitable location before starting the installation.
Requirements for the installation:
- The ignition is switched on.
- The engine is not running.
- Notes and warnings have been read and accepted.
- The parking brake is applied.

If all requirements are met, the system update is installed. The multimedia system cannot be operated during the installation and vehicle functions are restricted.

If errors should occur during the installation, the multimedia system automatically attempts to restore the previous version. If restoration of the previous version is not possible, a symbol appears on the multimedia system display. Consult a qualified specialist workshop to resolve the problem.

**Reset function**

Multimedia system:

👉 System ➔ Reset

Personal data is deleted, for example:
- Station presets
- Connected mobile phones

If PIN protection is activated, a prompt appears asking if you also wish to restore this to the factory settings during a reset.

- Select Yes.
- Enter the current PIN.
  The PIN is reset.

or

- Select No.
  The current PIN stays the same after resetting.

If you have forgotten your PIN, an authorized Mercedes-Benz Center can deactivate the PIN protection for you.

A prompt appears again asking whether you really wish to reset.

- Select Yes.
  The multimedia system is reset to the factory settings.

**AMG TRACK PACE**

**Function of AMG TRACK PACE**

With AMG TRACK PACE, the driving characteristics on race tracks can be analyzed and optimized. You can drive previously stored race tracks (e.g. Hockenheimring), or new tracks can be recorded and stored. The driven lap times are stored for every track. These can be analyzed and compared to other lap times to achieve the best possible race results. Additionally, acceleration and braking procedures can be measured and stored.

**Please note:** Use AMG TRACK PACE only on closed off routes outside the public traffic area. Adapt your driving style to your personal performance and environmental conditions. As the driver, you are solely responsible for driving your...
vehicle. Park your vehicle safely before operating the application.

**Setting Track Race**

Multimedia system:

[System menu] Vehicle ➤ TRACK PACE ➤ Track Race

**Recording a track**

- Select New track.
- At the desired starting point, select Start. The track recording starts at this point. During track recording, sectors can be set to determine intervals.
- To finish track recording, select Stop or cross the starting line again.
- Enter the weather and the track name.

**Searching by track name**

- Select All Tracks.
- Select Search.
- Enter the track name. Tracks with the searched name are displayed.

**Measuring the time on the track**

- Select Timing. An overview of nearby tracks appears. The distance and direction to the starting line of the track is displayed.
- Select the desired track. If you have already driven on this track, you can select a driven time as a reference time.

Timing begins automatically when the starting line has been crossed.

- When Zoom is selected, the track display can be switched from 2D to 3D.

**Displaying the analysis**

- Select Lap Times. An overview of all the driven tracks appears.
- Select a track. The following data is displayed:
  - Lap and sector times
  - Average and maximum permissible speed
  - Driver
  - Vehicle

- Date
- Weather
- Select a desired lap. The analysis is displayed.

1. Parameter 1 (e.g. speed)
2. Parameter 2 (e.g. steering angle)
3. Speed trend (Parameter 1)
4. Steering angle trend (Parameter 2)
5. Time difference between lap A and B (only when two laps are selected)
The following values can be set for parameters 1 and 2, for example:
- Speed
- Longitudinal/lateral acceleration
- Steering angle
- Engine speed
- Engine oil/tire temperature

Based on the analysis you can check and optimize driving characteristics for any position on the track.

**Exporting tracks or races (USB)**

- Select All Tracks.
- An overview of all stored tracks and races appears.
- Highlight desired tracks or races.
- Select Options.
- Select Export.

The selected tracks or races can be exported to a USB storage device connected to the vehicle.

**Editing tracks and recordings**

- Select All Tracks.
- Highlight the desired track.
- Select Options.
- Select Rename or Delete.

or

- Select a track.
- Highlight the desired recording.
- Select Options.
- Select Weather or Delete.

**Setting Drag Race**

Multimedia system:

- Vehicle ➔ TRACK PACE ➔ Drag Race

**Measuring acceleration**

- Select Acceleration.

Measurement begins when the vehicle accelerates. Measurement is incremental, in steps of 30 mph (50 km/h) to a maximum of 180 mph (300 km/h) or up to the set maximum speed.

Measurement can be stopped early by selecting Stop or by stopping the vehicle.

**Quarter-mile race**

- Select Quarter Mile.

The time measurement runs until a mile has been traveled or a previously set distance (e.g. quarter mile, third mile or half mile) has been reached.

The possible values for setting the end distance are determined by the system and cannot be freely chosen.

Measurement can be stopped early by selecting Stop or by stopping the vehicle.

**Manual start for acceleration and quarter-mile race**

- Select Acceleration or Quarter Mile.
- Select Manual start.

Three red traffic lights appear one after the other. The reaction time measurement starts when they change to green at the same time. The reaction time is displayed as soon as you drive off. If you drive off too early, the Jump...
start message appears and acceleration or quarter mile measurement will be canceled.

Measuring braking

- Select **Braking**.
- Select **Start Record**.

Measurement is incremental, in steps of 30 mph (50 km/h) to a standstill. If the braking procedure is started e.g. at a speed of 99 mph (160 km/h), measurement starts as soon as 90 mph (150 km/h) has been reached.

Storing and calling up measurement values

When a measurement has been completed or canceled, the measured time can be stored.

- After a measurement, select **Save measurement?**.

The stored measurements can be displayed via the **History** menu item.

Editing measurements

- Select **History**.
- Highlight the desired measurement.

- Select **Weather** or **Delete**.

The measurements can be displayed by category, e.g. acceleration measurements, by applying a filter.

Calling up the telemetry display

Multimedia system:

- **Vehicle**  ➤ **TRACK PACE**  ➤ **Telemetry**

The telemetry display shows current vehicle data as a digital value and as a diagram.

Up to four parameters can be selected that are to be shown in the display, such as:

- Engine speed
- Wheel angle
- Speed
- Steering angle

- Set the desired parameters.
- Set the time.

The set parameters are evaluated in the diagram for the time set.

The time can range between 30 seconds and a maximum of 20 minutes.

Select Online Search.
Enter the destination address as a 3 word address. Separate each of the words with a full stop.
The search results are displayed.
Select the destination in the list.
The destination address is shown. The route can be calculated.

3 word addresses from what3words are an alternative addressing system for multilingual georeferencing of global locations with a resolution of three meters. Using this grid, locations on the Earth’s surface are included which do not have a building address such as a street and house number, for example. The Empire State Building has this language dependent 3 word address:

- English: parade.help.bleat
- French: commun.verbe.bisquer
• Spanish: suertes.diga.pesca

3 word addresses are unique, easy to remember and suffice for most routine applications.
You can convert addresses to 3 word addresses and back again:
• At the website https://what3words.com
• In the what3words apps

### Route

**Calculating a route**

**Requirements:**

- The destination has been entered.
- The destination address is shown.

- If route guidance is not active, select Start Route Guidance.
  The route to the destination is calculated. The map shows the route. Route guidance then begins.

- If route guidance is active, select Start New Route Guidance or Set as Next Way Point.
  Start New Route Guidance: the selected destination address is set as a new destination. The previous destinations and intermediate destinations are deleted. Route guidance to the new destination begins.
  **Set as Next Way Point:** the selected destination address is set as the next intermediate destination. Route guidance begins.

### Taking alternative routes into consideration

- Select an alternative route (→ page 193).

### Other menu functions

- To save the destination: select ☑️ Store in "Previous Destinations".
- To display on the map: select ☑️ Map.
- To call a telephone number: select ☑️ Call (if available).
- To call up an Internet address: select ☑️ www (if available).

### Selecting a route type

Multimedia system:

- Navigation ➔ Route and Position
- Select Route Settings.

- Select the route type.
  If route guidance is active, the new route is calculated with the new route type.
  If route guidance is not active, the next route is calculated with the new route type.

You can choose from the following route types:

- **Eco Route**
  An economical route is calculated. The journey time may be somewhat longer than for quicker routes.
  The symbol for the current vehicle position is displayed in green.

- **Fast Route**
  A route with a quick journey time is calculated.

- **Short Route**
  A route with a short driving distance is calculated.

**Automatic Traffic Jam Avoidance** can be switched on ☑️ or off ☐ for these route types.

If **Automatic Traffic Jam Avoidance** is switched
on, Ask in the Event of Traffic Jam Avoidance can be selected.

The Automatic Traffic Jam Avoidance and Ask in the Event of Traffic Jam Avoidance settings are not available in every country.

The settings enable the following:

- **Automatic Traffic Jam Avoidance**
  
  The route is calculated with the currently set route type.

  Traffic reports via Live Traffic Information are taken into account.

  Live Traffic Information is not available in all countries.

- **Ask in the Event of Traffic Jam Avoidance**
  
  A prompt appears when a new route is detected with a shorter journey time based on traffic reports. You can continue to use the current route or use the dynamic route instead.

**Selecting route options**

Multimedia system:

- Navigation ➤ Route and Position
- Avoid Options

**Avoiding areas**

- Select Areas (page 205).

**Avoiding highways, ferries, motorail trains, tunnels, unpaved roads**

- Select ☑ or deselect ☐ avoid option.

**Using toll roads**

- Select Use Toll Roads.
- Select Cash or Electronic Billing or Off.
  
  The route takes into account roads that require the payment of a usage fee (toll).

  If Off is selected, toll roads are not taken into account.

The selected route options cannot always be implemented. Therefore, a route may include a ferry, for instance, even though the avoid Ferries option is enabled. A message appears and you will hear a corresponding message.

**Using carpool lanes**

- Select Number of Occupants in the Vehicle.

- Select number.

  When using carpool lanes, observe the applicable legal requirements as well as any conditions pertaining to when and where such lanes may be used. Carpool lanes may only be used if certain conditions are met.

These route options are not available in every country.

**Selecting notifications for the route**

### Route guidance

#### Notes on route guidance

**WARNING** Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

Route guidance begins once a route has been calculated.

The road and traffic rules and regulations always have priority over multimedia system driving instructions.

The following driving instructions can be used:
- Navigation announcements
- Route guidance displays
- Lane recommendations

If you do not follow the driving instructions or if you leave the calculated route, a new route is calculated automatically.

Driving instructions may differ from the actual road and traffic conditions if:
- The route is diverted
- The direction of a one-way street has been changed

For this reason, you must always observe road and traffic rules and regulations during your journey as well as the prevailing traffic conditions.

The route may differ from the ideal route due to the following:
- Roadworks
• Incomplete digital map data

**Notes on GPS reception**
The correct function of the navigation system depends amongst other things on GPS reception. In certain situations GPS reception can be impaired, defective or even not possible, e.g. in tunnels or in parking garages.

**Changing direction overview**

There are three phases when changing direction:

• **Preparation phase**
  If there is enough time between the changes of direction, the multimedia system prepares you for the upcoming change of direction. A navigation announcement is issued, e.g. "Prepare to turn right".
  The map appears in full-screen mode.

• **Announcement phase**
  The multimedia system announces the upcoming change of direction, e.g. by announcing "Turn right in 300 ft (100 m)".
  The display is split into two parts. The map is displayed on the left; on the right, there is a detailed image of the intersection or a 3D image of the upcoming change of direction.

• **Change-of-direction phase**
  The multimedia system announces the imminent change of direction, e.g. by announcing "Now turn right".
  The display is split into two parts.
  The vehicle has successfully changed direction when the light-color bar on the right drops down to 0 feet (0 m) and the current vehicle position symbol has reached the highlighted change-of-direction point.
  When the change of direction is complete, the map appears in full-screen mode.

  Changes of direction are also shown in the Instrument Display.

**Lane recommendations overview**
This display appears for multi-lane roads.
If the digital map contains the relevant data, the multimedia system can display lane recommendations for the next two changes of direction.
The following lanes are displayed:

- **Recommended lane 1**
  In this lane, you will be able to complete both the next change of direction and the one after that.

- **Possible lane 2**
  In this lane, you will only be able to complete the next change of direction.

- **Lanes not recommended 3**
  In this lane, you will not be able to complete the next change of direction without changing lane.

During the change of direction, new lanes may be added.

Lane recommendations can also be shown in the Instrument Display.

**Overview of destination reached**
Once the destination is reached, you will see the checkered flag. Route guidance is finished.

When an intermediate destination has been reached, you will see the intermediate destination flag with the number of your intermediate destination. After this, route guidance is continued.

**Switching navigation announcements on/off**

**Requirements:**

- Route guidance is active.

To switch off: press the volume control on the multifunction steering wheel during a navigation announcement (→ page 165). The Voice Guidance has been deactivated message appears.

or

Show the navigation menu (→ page 183). Select Voice Guidance. The symbol changes to.

To activate: select Voice Guidance. The current navigation announcement is played.

In the following situations, navigation announcements are switched on automatically:

- A new route guidance is started.
- The route is recalculated.

You can add and call up this function as a favorite under Voice Guidance On/Off.

**Switching navigation announcements on/off during a phone call**

Select System.
Select Audio.

Overview of route guidance to an off-road destination
An off-road destination is within the digital map. The map contains no roads that lead to the destination.
You can enter geo-coordinates or a three word address for off-road destinations on the map. Route guidance guides you for as long as possible with navigation announcements and displays on roads that are known to the multimedia system.

Shortly before you reach the last known position on the map, you will hear the "Please follow the direction arrow" announcement. The display shows a direction arrow and the linear distance to the destination.

Overview of route guidance from an off-road location to a destination
Off-road position: the current vehicle position is located within the digital map on roads that are not available.

When route guidance begins the following displays appear:
- The Road Not Mapped message is shown.
- A direction arrow showing the linear direction to the POI.

When the vehicle is back on a road known to the multimedia system, route guidance continues as normal.

Overview of off-road status during route guidance
Due to roadworks, for example, there may be differences between the data on the digital map and the actual course of the road. In such cases, the multimedia system will temporarily be unable to locate the vehicle's current position on the digital map. The vehicle is off-road.

If the vehicle is displayed as being offroad, the following displays appear:
- The Road Not Mapped message
- A direction arrow showing the linear direction to the POI

When the vehicle is back on a road known to the multimedia system, route guidance continues as normal.

Route guidance with current traffic reports
Traffic information overview
Traffic reports are received using Live Traffic Information and are used for route guidance.
This service is unavailable in some countries.
There may be differences between the traffic reports received and the actual road and traffic conditions.

**Important information on Live Traffic Information:**
- Current traffic reports are received via the Internet connection.
- The traffic situation is updated at short, regular intervals.
- The subscription information shows the status (→ page 200).

Information on the vehicle’s position is regularly sent to Mercedes-Benz AG. The data is immediately rendered anonymous by Mercedes-Benz AG and forwarded to the traffic data provider. Using this data, traffic reports relevant to the vehicle’s position are sent to the vehicle. The vehicle acts as a sensor for the flow of traffic and helps to improve the quality of the traffic reports.

If you do not wish to transmit your vehicle position, you can have this service deactivated at an authorized Mercedes-Benz Center.

### Displaying subscription information

**Requirements:**
- The vehicle is equipped with Live Traffic Information.

**Multimedia system:**

**Navigation ➤ Options**

The subscription expiration date is automatically displayed:
- one month before the expiration date.
- one week before the expiration date.
- on the expiration date.

**To display manually:** select Live Traffic Subscription Info.

Depending on the status, one of the following messages appears:
- the period of validity for the subscription is displayed.
- the subscription has expired.

The subscription can be extended:
- At an authorized Mercedes-Benz Center
- via an MB Info call to the Mercedes-Benz Customer Assistance Center

### Displaying the traffic map

**Requirements:**

The map and satellite images are shown in globe projection. This allows for a realistic map display in all map scales. The map uses elevation modeling.

Depending on the map data, important buildings in many cities are depicted realistically on the map in small map scales (e.g. 1/32 mi (20 m), 1/16 mi (50 m)). Other buildings are shown as models.

You can set the unit of measurement of the map scale (page 173).
If online information is available, fuel prices and
the availability of parking spaces in parking
garages are displayed, for example.

Requirements:

- Mercedes me connect is available.
- You have a user account for the
  Mercedes me Portal.
- The service has been activated at an

Overview of avoiding an area
You can define areas along a route that you would like to avoid.

The route can include an area that is to be avoided in the following situations:
- the destination is located in an area that is to be avoided
- if freeways are located within the area that is to be avoided
  Freeways are always taken into account for the route.
- there is no sensible alternative route

Avoiding a new area
Multimedia system:

To search for an area using an address:
- select Address Entry.
- Enter the address.
- Select Select Destination.
  The map appears.
- To display an area: press the Touch Control, the touchpad or the controller.
  A red rectangle appears. This designates the area that should be avoided.
- To change the size of the area: swipe up or down on the Touch Control or the touchpad.
  or
  Slide the controller up or down.
  The map scale is enlarged or reduced and changes the size of the area.
- To set the area: press the Touch Control, the touchpad or the controller.

- To change: swipe up or down on the Touch Control or the touchpad.
  or
- Slide the controller up or down.
- To stop: press the Touch Control, the touchpad or the controller.
Taking the area for the route into account

- Avoid an area in the list.
  If route guidance is active, a new route is calculated.
  If there is no route yet, the setting is carried over to the next route guidance.

Deleting one or all areas

Multimedia system:
- Navigation ► Route and Position ► Avoid Options ► Areas
- Highlight an area in the list.
- Select Delete or Delete All.
- Confirm the prompt with Yes.
  One or all areas are deleted.

Map data update overview

Updating at the authorized Mercedes-Benz Center
The digital maps generated by the map software become outdated in the same way as conventional road maps. Optimal route guidance can only be provided by the navigation system in conjunction with up-to-date map data. Information about new versions of the digital map can be obtained from an authorized Mercedes-Benz Center. You can have updates to the digital map implemented there.

Additional costs can be incurred in this process.

Online map update
The online map update service from Mercedes me connect can be used to update map data.

The online map update service is not available in all countries.

The following options are available for the update:
- The automatic map update updates map data for one region.
- The manual map update updates map data for several or all regions.

Further information on the online map update is available at an authorized Mercedes-Benz Center or at https://www.mercedes.me.

Overview of map data
Your vehicle is supplied with map data at the factory. Depending on the country, map data for your region is either pre-installed or the map data is supplied on a data storage medium.

If the map data on your vehicle has been installed at the factory and you wish to reinstall it, you do not need to enter the activation code.

For map data that you have purchased in the form of a data storage medium, you must enter the accompanying activation code.

If you save the map data on a data storage medium with the online map update service, no entry is required. The activation code is stored on the data storage medium during the downloading process.

Observe the following when entering the activation code:
- The activation code can be used for one vehicle
The activation code is not transferable
The activation code has six digits
In the event of the following problems, please contact an authorized Mercedes-Benz Center:
The multimedia system does not accept the activation code
You have lost the activation code

Displaying the compass
Multimedia system:
Select Compass.
The compass display shows the following information:
• the current direction of travel with bearing (360° format) and compass direction
• longitude and latitude coordinates in degrees, minutes and seconds
• height (rounded)
• number of GPS satellites from which a signal can be received

Setting the map scale automatically
Multimedia system:
The map scale is set automatically depending on your driving speed.
For journeys in cities with detailed city models, a map view from the driver’s perspective is used.
Switch Auto Zoom on ✓ or off □.
The automatically selected map scale can be changed manually for a short time. The setting is reset automatically after a few seconds.

Displaying the satellite map
Multimedia system:
Switch Satellite Map on ✓ or off □.

If satellite map display ✓ is available in the map menu, switch it on ✓ or off □ (→ page 202).
Switched on ✓: satellite maps are displayed in map scales of 2 mi (2 km) or less.
Switched off □: no satellite maps are displayed.
Satellite maps for these map scales are not available in all countries.

Displaying weather information
Requirements:
• Mercedes me connect is available.
• You have a user account for the Mercedes me Portal.
• The service is available.
• The service has been activated at an authorized Mercedes-Benz Center.

#### Telephony

**Notes on telephony**

**WARNING** Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

**WARNING** Risk of an accident from operating mobile communication equipment while the vehicle is in motion

Mobile communications devices distract the driver from the traffic situation. This could also cause the driver to lose control of the vehicle.

- As the driver, only operate mobile communications devices when the vehicle is stationary.
- As a vehicle occupant, only use mobile communications devices in the areas intended for this purpose, e.g., in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating mobile communication equipment in the vehicle.

Telephony operating modes overview

Depending on your equipment, the following telephony operating modes are available:
- A mobile phone is connected to the multimedia system via Bluetooth® (→ page 210).
- Two mobile phones are connected with the multimedia system via Bluetooth® (two phone mode) (→ page 211).

Information on telephony

The following situations can lead to the call being disconnected while the vehicle is in motion:
- There is insufficient network coverage in the area
- You move from one GSM or UMTS transmitter/receiver area (cell) into another and no communication channels are free
- The SIM card used is not compatible with the network available
- A mobile phone with "Twincard" is logged into the network with the second SIM card at the same time

The multimedia system supports calls in HD Voice® for improved speech quality. A requirement for this is that the mobile phone and the mobile phone network provider of the person you are calling support HD Voice®.

Depending on the quality of the connection, the voice quality may fluctuate.

Connecting a mobile phone (Bluetooth® telephony)

Requirements:
- Bluetooth® is activated on the mobile phone (see the manufacturer’s operating instructions).
- Bluetooth® is activated on the multimedia system (→ page 170).

Multimedia system:

Connecting a mobile phone (authorization using Secure Simple Pairing)

Searching for a mobile phone
- Select Connect New Device.
- Select Start Search on System.

The available mobile phones are displayed. If a new mobile phone is found, it is indicated by the symbol.

Connecting a mobile phone
- Select the mobile phone.
- A code is displayed in the multimedia system and on the mobile phone.
If the codes match: confirm the code on the mobile phone.

Connecting a mobile phone (authorization by entering a passkey)

- Select the mobile phone.
- Choose a one to sixteen-digit number combination as a passkey.
- On the multimedia system: enter the passkey and select [OK].
- On the mobile phone: enter the passkey again and confirm.

Up to 15 mobile phones can be authorized on the multimedia system. Authorized mobile phones are reconnected automatically.

Connecting a second mobile phone (two phone mode)

Requirements:
- At least one mobile phone is already connected to the multimedia system via Bluetooth®.

Multimedia system:

- Phone ➔ Devices
- Select Connect New Device.
- Select Start Search on System.
- The available mobile phones are displayed.
- Select the mobile phone.
- Answer the How would you like to connect the new device? prompt.
- To replace the currently connected mobile phone: select Phone 1.
  The currently connected mobile phone is replaced by the new mobile phone.
  or
- To connect the second mobile phone: select Phone 2.
  The new mobile phone is connected as Phone 2. If two mobile phones have already been connected, the second telephone is replaced by the new mobile phone.
  or
- To use the mobile phone as an audio source: select Audio Source (→ page 244).

A mobile phone can be operated both as an audio source as well as telephone in parallel.

The type of connection for the connected mobile phone, for example as Phone 1, Phone 2 or as Audio Source, can be redefined at any time. (→ page 211).

Mercedes-Benz link

Overview of Mercedes-Benz Link

⚠️ WARNING Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

Using Mercedes-Benz Link, various functions and selected mobile phone apps can be transferred to the media display.

The Mercedes-Benz Link control box supplementary equipment is required for this. You can obtain this at an authorized Mercedes-Benz Center.

- The Mercedes-Benz Link control box uses the Android operating system.
- The service provider is responsible for these apps and the services and content connected to it.

Connecting Mercedes-Benz Link with the multimedia system

- Connect the Mercedes-Benz Link control box with the USB port of the multimedia connection unit using a suitable connecting cable.
- A suitable connecting cable is available separately at an authorized Mercedes-Benz Center.

Using Mercedes-Benz Link

Requirements:

- The Mercedes-Benz Link control box is connected with the multimedia system using the USB port.

Ending Mercedes-Benz Link

Multimedia system:

- Connect → Mercedes-Benz Link
- Select MB Link.

The connection is ended.
The mobile phone continues to be supplied with electricity.

Multimedia system:

- Disconnect the connecting cable between the Mercedes-Benz Link control box and the multimedia system.

Mercedes-Benz recommends disconnecting the connecting cable only when the vehicle is stationary.

Transferred vehicle data with Android Auto and Apple CarPlay®
Overview of transferred vehicle data
When using Android Auto or Apple CarPlay®, certain vehicle data is transferred to the mobile phone. This enables you to get the best out of selected mobile phone services. Vehicle data is not directly accessible.

The following system information is transmitted:
- Software release of the multimedia system
- System ID (anonymized)

The transfer of this data is used to optimize communication between the vehicle and the mobile phone.
To do this, and to assign several vehicles to the mobile phone, a vehicle identifier is randomly generated.

This has no connection to the vehicle identification number (VIN) and is deleted when the multimedia system is reset (→ page 178).

The following driving status data is transmitted:
- Distinction between parked, standstill, rolling and driving
- Day/night mode of the instrument cluster

The transfer of this data is used to alter how content is displayed to correspond to the driving situation.
The following position data is transmitted:
- Coordinates
- Speed
- Compass direction
- Acceleration direction

This data is only transferred while the navigation system is active in order to improve it (e.g. so it can continue functioning when in a tunnel).

Mercedes me calls
Making a call via the overhead control panel
Requirements:
- You have access to a GSM network.
- The contract partner’s GSM network coverage is available in the respective region.
The ignition is switched on so that vehicle data can be transferred automatically.

To make a breakdown assistance call: press button 1.

To make an emergency call: press SOS button cover 3 briefly to open.

Press and hold SOS button 4 for at least one second.

To make an MB Info call: press button 2.

An emergency call can be initiated even if a breakdown assistance or MB Info call is active. This has priority over all other active calls. Calls via the overhead control panel are only possible with an available mobile phone network.

More information on Mercedes me connect and further services can be found at: https://www.mercedes.me

Calling the Mercedes-Benz Customer Center using the multimedia system

Requirements:
- You have access to a GSM network.
- The contract partner's GSM network coverage is available in the respective region.
- The ignition is switched on so that vehicle data can be transferred automatically.

Multimedia system:

- Phone
- Contacts

Call Mercedes me connect.
The call is made.

After confirmation, the multimedia system sends the required vehicle data. The data transfer is shown in the media display. Then, you can select a service and be connected to a specialist at the Mercedes-Benz Customer Center.

In some countries, or if the Concierge Service is active, you will be connected directly with the Mercedes-Benz Customer Center. The Concierge Service is not available in all countries. More information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Information on the MB Info call

An Info call to the Mercedes-Benz Customer Center has been initiated via the overhead control panel (→ page 223) or the multimedia system (→ page 224).

You can find information on the following topics:
- Activation of Mercedes me connect
- Operating the vehicle
Nearest authorized Mercedes-Benz Center
Other products and services from Mercedes-Benz
Data is transferred during the connection to the Mercedes-Benz Customer Center.

Information on the breakdown assistance call
A breakdown assistance call to the Mercedes-Benz Customer Center has been initiated via the overhead control panel (→ page 223) or the multimedia system (→ page 224).
For the scope of Accident and Breakdown Management, see "Information on Mercedes me connect Accident and Breakdown Management" (→ page 228).
Data is transferred during the connection to the Mercedes-Benz Customer Center (→ page 226).

Calling the Mercedes-Benz Customer Center after automatic accident or breakdown detection
Requirements:
- The vehicle has detected an accident or breakdown situation.
- The vehicle is stationary.
- The hazard warning lights are switched on.
This function is not available in all countries. In limited situations the vehicle can detect accident or breakdown situations.
In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display.
After quitting the emergency guide display on the multimedia system, a prompt appears asking whether you wish to get support from the Mercedes-Benz Customer Center.

Select Call.
- After your agreement, or if the Mercedes me connect service "Accident and Breakdown Management" is active, the vehicle data is transferred automatically (→ page 228).
- A Mercedes-Benz Customer Center employee takes your call and organizes the breakdown and accident assistance.
You may be charged for these services.

Depending on the severity of the accident, an automatic emergency call can be initiated. This has priority over all other active calls.
In addition, if the Mercedes me connect service "Telediagnostics" is active, a similar prompt can appear after a delay in the event of a breakdown. If you are already in contact with the Mercedes-Benz Customer Center or have already received support, this prompt can be ignored or declined.
If you answer the prompt for support from the Mercedes-Benz Customer Center with Later, the message will be hidden and appear again later.
The prompt triggered by the Mercedes me connect service "Telediagnostics", can either be confirmed or declined. After being declined, this will not be shown again.

Arranging a service appointment via a Mercedes me call
If you have activated the maintenance management service, relevant vehicle data is transferred automatically to the Mercedes-Benz Customer Center.
You will then receive individual recommendations regarding the maintenance of your vehicle.

Regardless of whether you have consented to the maintenance management service, the multimedia system reminds you after a certain amount of time that a service is due. A prompt appears asking if you would like to make an appointment.

**To arrange a service appointment:** select Call.

After your agreement the vehicle data is sent and a Mercedes-Benz Customer Center employee deals with your appointment. The information is then sent to your desired service outlet. This will contact you to confirm the appointment and if necessary consult about the details.

If you select Later after the service message appears, the message is hidden and reappears at a later time.

### Transferred data during a Mercedes me call

If you initiate a service call using Mercedes me, data is transferred to enable targeted advice and an efficient service.

The following requirements must be fulfilled for the transfer of the data:

- The ignition is switched on.
- The required data transfer technology is supported by the mobile phone network provider.
- The quality of the mobile connection is sufficient.

Multi-stage transfer depends on the following factors:

- Reason for the initiation of the call
- The available mobile phone transmission technology.
- The activated Mercedes me connect services.
- The service selected in the voice control system.

### Data transfer if Mercedes me connect services are not activated

If no Mercedes me connect services are activated, the following data is transferred:

- Vehicle identification number
- Time of the call
- Reason for the initiation of the call
- Confirmation of the data protection prompt
- Country indicator of the vehicle
- Set language for the multimedia system
- Telephone number of the communication platform installed in the vehicle

If a call is made for a service appointment via the service reminder, the following data is also transmitted:

- Current mileage and maintenance data

If a call is made after automatic accident or breakdown detection using the multimedia system, the following data is also transmitted:

- Current mileage and maintenance data
- Current vehicle location
If Accident and Breakdown Management is called via the voice control system and no service has been activated, the following data can also be called up from the vehicle by the Mercedes-Benz Customer Center:

- Current vehicle location

**Data transfer if Mercedes me connect services are activated**

Only if the respective service is activated will additional incident-specific data be transmitted in the second stage to enable an optimal service.

An overview of the data transmitted can be found in the respective terms of use for Mercedes me connect services. These can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

**Data processing**

The data transmitted within the scope of the call is deleted from the processing system after the call is finished, in so far as this data is not being used for other activated Mercedes me connect services.

The incident-specific data is processed and stored in the Mercedes-Benz Customer Center and, if required to process the incident, forwarded to the service partner authorized by the Mercedes-Benz Customer Center. Please take note of the data protection information on the Mercedes me Internet page https://www.mercedes.me or in the recorded message immediately after calling the Mercedes-Benz Customer Center.

ℹ️ The recorded message is not available in every country.

**Mercedes me connect**

**Information on Mercedes me connect**

Mercedes me connect consists of multiple services.

You can use the following services via the multimedia system and the overhead control panel, for example:

- Accident and breakdown management (breakdown assistance call button)
- If the service is activated: Concierge Service (Info call button)
- Mercedes-Benz emergency call system (automatic emergency call and SOS button in the overhead control panel)

The Mercedes-Benz Customer Center and the Mercedes-Benz emergency call center are available for you around the clock.

The Info call button, the breakdown assistance call button and the emergency call button can be found on the overhead control panel of the vehicle (→ page 223).

You can call the Mercedes-Benz Customer Center using the multimedia system (→ page 224). Please note that Mercedes me connect is a Mercedes-Benz service. In emergencies, always call the national emergency services first using the standard national emergency service phone numbers. In emergencies, you can also use the Mercedes-Benz emergency call system (→ page 229).
Information on Mercedes me connect Accident and Breakdown Management

The Accident and Breakdown Management can include the following functions:

- Supplement to the Mercedes-Benz emergency call system (→ page 229)
  If necessary, the contact person at the Mercedes-Benz emergency call center forwards the call to Mercedes me connect Accident and Breakdown Management. Forwarding the call is however not possible in all countries.
- Breakdown assistance by a technician on location and/or the towing away of the vehicle to the nearest authorized Mercedes-Benz Center
  You may be charged for these services.

More information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Data transferred during Mercedes me connect call services

The data transferred during a Mercedes me connect call depends on:
- The reason for initiation of the call
- The service that is selected in the voice control system
- The activated Mercedes me connect services

Which data is transferred for the services can be taken from the currently valid terms of use. These can be obtained in the Mercedes me portal: https://me.secure.mercedes-benz.com

Mercedes-Benz emergency call system

Information on the Mercedes-Benz emergency call system

Your vehicle is equipped with the Mercedes-Benz emergency call system ("eCall"). This feature can help save lives in the event of an accident. eCall in no way replaces assistance provided from dialing 911.

The Mercedes-Benz emergency call system is available for at least ten years starting from the manufacturing date.

Mercedes-Benz eCall only functions in areas where mobile phone coverage is available from the wireless service providers. Insufficient network coverage from the wireless service providers may result in an emergency call not being transmitted.

eCall is a standard feature in your Mercedes-Benz vehicle. In order to function as intended, the system relies on the transmission of data detailed in the Transmitted Data section that follows (→ page 230).

To disable eCall, a customer must visit an authorized Mercedes-Benz Service department to deactivate the vehicle's communication module.

Deactivation of this module prevents the activation of any and all Mercedes me connect services. After the deactivation of eCall, automatic emergency call and manual emergency call will not be available.
The ignition must be switched on before an automatic emergency call can be made.

- eCall is activated at the factory.
- eCall can be deactivated by an authorized Mercedes-Benz dealer. Please note that in the event ownership of the vehicle is transferred to another owner in its deactivated state, eCall will remain deactivated unless the new owner visits an authorized Mercedes-Benz dealership to reactivate the system.

**Overview of the Mercedes-Benz emergency call system**

eCall can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. It helps locate an accident site in places that are difficult to access. However, even if a vehicle is equipped with eCall, this does not mean the system is ON. As such, eCall does not replace dialing 911 in the event of an accident.

An emergency call can be made automatically (→ page 229) or manually (→ page 230).

Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

**Displays in the media display**

- **SOS READY**: eCall available
- **SOS NOT READY**: the ignition is not on or eCall is not available.

During an active emergency call, [SOS] appears in the display.

You can find more information on the regional availability of eCall at: https://www.mercedes-benz-mobile.com/extra/ecall/

If there is a malfunction in the emergency call system (e.g. a malfunction with the speaker, microphone, airbag, SOS button), a corresponding message appears in the multifunction display of the instrument cluster.

**Triggering an automatic emergency call**

**Requirements**

- The ignition is switched on.
- The starter battery is sufficiently charged.

If restraint systems such as airbags or Emergency Tensioning Devices have been activated after an accident, the Mercedes-Benz emergency call system may automatically initiate an emergency call.

The emergency call has been made:

- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.

The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.

The SOS button in the overhead control panel flashes until the emergency call is finished. It is not possible to immediately end an automatic emergency call.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

- [Dial the local emergency number on your mobile phone.](Multimedia system 229)
If an emergency call has been initiated:

- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call center operator.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.
- If no vehicle occupant answers, an ambulance is sent to the vehicle immediately.

**Triggering a manual emergency call**

- Press and hold the SOS button in the overhead control panel for at least one second.

The emergency call has been made:

- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center. The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.
- GPS position data on the route (a few hundred meters before the incident)
- Direction of travel
- Vehicle identification number
- Vehicle drive type
- Number of people determined to be in the vehicle
- Whether Mercedes me connect is available or not
- Whether the emergency call was initiated manually or automatically
- Time of the accident
- Language setting on the multimedia system

**Ending an unintentional emergency call**

- On the multifunction steering wheel: select [ ]. Depress the button for several seconds.

**Data transfer of the Mercedes-Benz emergency call system**

In the event of an automatic or manual emergency call the following data is transmitted, for example:

- Vehicle's GPS position data
- Vehicle's GPS position data on the route (a few hundred meters before the incident)
For accident clarification purposes, the following measures can be taken up to an hour after the emergency call has been initiated:

- The current vehicle position can be determined.
- A voice connection to the vehicle occupants can be established.

Online and Internet functions

Internet connection

Information on connecting to the Internet

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.

**WARNING** Risk of an accident from operating mobile communication equipment while the vehicle is in motion

Mobile communications devices distract the driver from the traffic situation. This could also cause the driver to lose control of the vehicle.

- As the driver, only operate mobile communications devices when the vehicle is stationary.
- As a vehicle occupant, only use mobile communications devices in the areas intended for this purpose, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

You must observe the legal requirements for the country in which you are currently driving when operating mobile communication equipment in the vehicle.

The Internet functions can only be used to a limited degree whilst driving.

**Function of the communication module**

On vehicles with a built-in communication module, the Internet connection is established via an integrated SIM card.

To use Internet access via the communication module the following conditions must be met:

- The vehicle is equipped with a permanently installed communication module.
- Mercedes me connect is active and ready for operation.
- Mercedes me connect is activated for Internet access.

For most Mercedes me connect services, data volume is available when purchasing the services.

Additional data volume is required to use some functions, e.g. Internet radio or Wi-Fi hotspot.
If the data volume limit is reached, the availability of Mercedes me connect services is limited. The data volume can be purchased directly from a mobile phone network provider via the Mercedes me Portal.

Visit an authorized Mercedes-Benz Center to find out whether it is possible to purchase data volume in your country directly from a mobile phone network provider.

ASSYST PLUS service interval display

Function of the ASSYST PLUS service interval display

The ASSYST PLUS service interval display on the Instrument Display provides information on the remaining time or distance before the next service due date.

You can hide this service display using the back button on the left-hand side of the steering wheel.

Depending on how the vehicle is used, the ASSYST PLUS service interval display may shorten the service interval, e.g. in the following cases:

- Mainly short-distance driving
- When the engine is often left idling for long periods
- In the event of frequent cold start phases

Mercedes-Benz recommends avoiding such operating conditions.

You can obtain information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Displaying the service due date

On-board computer:

➡️ Service ➔ ASSYST PLUS

The next service due date is displayed.

- To exit the display: press the back button on the left-hand side of the steering wheel.

Bear in mind the following related topic:

- Operating the on-board computer (➔ page 144).

Information on regular maintenance work

⚠️ NOTE Premature wear through failure to observe service due dates

Service work which is not carried out at the right time or incompletely can lead to increased wear and damage to the vehicle.

Special service requirements

The prescribed service interval is based on normal operation of the vehicle. Maintenance work will need to be performed more often if the vehicle is operated under arduous conditions or increased loads.

The ASSYST PLUS service interval display is only an aid. The driver of the vehicle bears responsibility as regards to whether maintenance work needs to be performed more often than specified based on the actual operating conditions and/or loads.

Examples of arduous operating conditions:

- regular city driving with frequent intermediate stops
- mainly short-distance driving

Always observe the prescribed service intervals.
Always have the prescribed service work carried out at a qualified specialist workshop.
frequent operation in mountainous terrain or on poor road surfaces
- when the engine is often left idling for long periods
- operation in particularly dusty conditions and/or if air-recirculation mode is frequently used

In these or similar operating conditions, have the interior air filter, engine air cleaner, engine oil and oil filter etc. changed more frequently. The tires must be checked more frequently if the vehicle is operated under increased loads. Further information can be obtained at a qualified specialist workshop.

Battery disconnection periods

The ASSYST PLUS service interval display can only calculate the service due date when the battery is connected.

- Note down the service due date displayed on the instrument display before disconnecting the battery (→ page 257).

### Engine compartment

#### Opening and closing the hood

**WARNING** Risk of accident due to driving with the hood unlocked

The hood may open and block your view.
- Never release the hood when driving.
- Before every trip, ensure that the hood is locked.

**WARNING** Risk of accident and injury when opening and closing the hood

The hood may suddenly drop into the end position.
There is a risk of injury for anyone in the hood's range of movement.
- Open or close the hood only when there is nobody in the hood's range of movement.

**WARNING** Danger of burns when opening the hood

If you open the hood when the engine has overheated or during a fire in the engine compartment, you could come into contact with hot gases or other escaping operating fluids.
- Before opening the hood, allow the engine to cool down.
- In the event of a fire in the engine compartment, keep the hood closed and call the fire service.

**WARNING** Risk of injury due to moving parts

Components in the engine compartment may continue running or start up suddenly, even if the ignition is switched off.

Make sure of the following before performing tasks in the engine compartment:
- Switch the ignition off.
Never reach into the danger zone surrounding moving components, e.g. the rotation area of the fan.

Remove jewelry and watches.

Keep items of clothing and hair away from moving parts.

**WARNING** Risk of injury from touching components under voltage

The ignition system and the fuel injection system work under high voltage. You could receive an electric shock.

Never touch components of the ignition system or the fuel injection system when the ignition is switched on.

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

Allow the engine to cool down and only touch component parts described in the following.

**WARNING** Risk of injury from using the windshield wipers while the engine hood is open

When the engine hood is open and the windshield wipers are set in motion, you can be trapped by the wiper linkage.

Always switch off the windshield wipers and ignition before opening the engine hood.

---

### Opening the hood

- Pull on handle 1 twice.
- The hood will be released and open slightly.

### Closing the hood

- Lower the hood to a height of around 8 in (20 cm) and then allow it to fall, applying a little force as you let it go.
If the hood can still be lifted slightly, open the hood again and close it with a little more force until it engages correctly.

**Engine oil**

**Checking the engine oil level using the oil dipstick**

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g., the engine, the cooler, and parts of the exhaust system.

Allow the engine to cool down and only touch component parts described in the following.

**Requirements:**

- The engine has been warmed up.
- The coolant temperature is 176°F (80°C).
- The vehicle is parked on a level surface.

- The engine has run at 2000 to 2400 rpm (2400 1/min) for 30 seconds in the drive program [C].

Check the engine oil level within two minutes of switching off the engine.

- [Switch off the engine.](#)
- Pull oil dipstick 1 out and wipe off.

Slowly slide oil dipstick 1 into the guide tube to the stop, and pull it out again after approximately three seconds.

The following measurement results are possible:

- Oil level is correct: oil level is between 2 and 3.
- Oil level too low: oil level is at 3 or below.
- Oil level too high: oil level is above 2.

If the oil level is too low, add 1.1 US qt (1 liter) of engine oil.

If the oil level is too high, drain off excess engine oil. Consult a qualified specialist workshop.

**Refilling engine oil**

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g., the engine, the cooler, and parts of the exhaust system.
Allow the engine to cool down and only touch component parts described in the following.

**WARNING** Risk of fire and injury from engine oil
If engine oil comes into contact with hot component parts in the engine compartment, it may ignite.
- Make sure that no engine oil is spilled next to the filler opening.
- Allow the engine to cool off and thoroughly clean the engine oil from component parts before starting the vehicle.

**NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives
- Do not use engine oils or oil filters which do not correspond to the specifications explicitly prescribed for the service intervals.

Follow the instructions on the service interval display for changing the engine oil and observe the prescribed change intervals.
- Do not use additives.

**NOTE** Damage caused by refilling too much engine oil
Too much engine oil can damage the engine or the catalytic converter.
- Have excess engine oil removed at a qualified specialist workshop.

Depending on driving style, the vehicle consumes up to 0.9 US qt (0.8 l) of oil per 600 miles (1000 km). The oil consumption may be higher than this when the vehicle is new or if you frequently drive at high engine speeds.

- Turn cap 1 counter-clockwise and remove it.
- Add engine oil.
- Replace cap 1 and turn it clockwise until it engages.
- Check the oil level again (→ page 260).
Checking the coolant level

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
- Allow the engine to cool down and only touch component parts described in the following.

**WARNING** Risk of scalding from hot coolant

If you open the cap, you could be scalded.
- Let the motor cool down before opening the cap.
- When opening the cap, wear protective gloves and safety glasses.
- Open the cap slowly to release pressure.

- Park the vehicle on a level surface.
- Check the coolant temperature display in the instrument cluster.
  The coolant temperature must be in the bottom quarter of the temperature display.
- Remove engine cover 1.
- Slowly turn caps 2 counter-clockwise to release overpressure.

- Turn caps 2 counter-clockwise again and remove them.

The coolant level is correct in the following cases:
- If the engine is cold, the coolant is up to marker bar 4.
- If the engine is warm, the coolant is up to 0.6 in (1.5 cm) over the marker bar 4.
- Coolant expansion reservoir without marker bar: if the coolant reaches to the bleed line 3.
- If necessary, add coolant that has been approved for Mercedes-Benz.

Further information on coolant (→ page 323)
Refilling the windshield washer system

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

- Allow the engine to cool down and only touch component parts described in the following.

**WARNING** - Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.

- Make sure that no windshield washer concentrate spills out next to the filler opening.

- **NOTE** Damage to the detachable parts when using an automatic car wash

  - Do not use a car wash to wash the vehicle.
  - Wash the vehicle by hand only.

Observe the notes on washing the vehicle by hand (→ page 264).

- **WARNING** Risk of an accident when using power washers with round-spray nozzles

  The water jet can cause externally invisible damage. Components damaged in this way may unexpectedly fail.

**Cleaning and care**

Notes on washing the vehicle in a car wash

**NOTE**

- Keep the area between the hood and the windshield free of deposits, e.g. ice, snow and leaves.

- Remove cap 1 by the tab.

- Add washer fluid.

Keeping the air-water duct free

- Keep the air-water duct free.
Do not use a power washer with round-spray nozzles.

Have damaged tires or chassis parts replaced immediately.

To avoid damage to your vehicle, observe the following when using a power washer:

- Keep the SmartKey at least 10 ft (3 m) away from the vehicle. Otherwise, the tailgate could open unintentionally.
- Maintain a distance of at least 11.8 in (30 cm) to the vehicle.
- **Vehicles with decorative foil:** parts of your vehicle are covered with a decorative foil. Maintain a distance of at least 27.6 in (70 cm) between the foil-covered parts of the vehicle and the nozzle of the power washer. Move the power washer nozzle around whilst cleaning. The water temperature of the power washer must not exceed 140°F (60°C).
- Observe the information on the correct distance in the equipment manufacturer’s operating instructions.

- Do not direct the nozzle of the power washer directly at sensitive parts, e.g. tires, gaps, electrical components, batteries, light sources and ventilation slits.

**Washing the vehicle by hand**

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Engine damage due to water ingress</th>
</tr>
</thead>
<tbody>
<tr>
<td>Take care not to point the water jet directly towards the air inlet grille below the hood.</td>
<td></td>
</tr>
</tbody>
</table>

Observe the legal requirements, e.g. in a number of countries, washing by hand is only permitted in specially designated wash bays.

- Use a mild cleaning agent, e.g. car shampoo.
- Wash the vehicle with lukewarm water using a soft car sponge. When doing so, do not expose the vehicle to direct sunlight.
- Carefully hose the vehicle off with water and dry using a chamois.

- Observe the notes on the care of vehicle parts (→ page 266).

**Notes on paintwork/matte finish paintwork care**

Observe the notes on cleaning and care to avoid damaging the paintwork.

**Paint**

- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- Tree resin, oils, fuels and greases: remove by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Coolant and brake fluid: remove with a damp cloth and clean water.
- Tar stains: use tar remover.
- Wax: use silicone remover.
- Do not attach stickers, films or similar materials.
- Remove dirt immediately, where possible.
**Matte finish**

- Only use care products approved for Mercedes-Benz.
- Do not polish the vehicle and alloy wheels.
- Do not use paint cleaners, buffing or polishing products, gloss preservers, e.g. wax.
- Always have paintwork repairs carried out at a qualified specialist workshop.

**Notes on cleaning decorative foils**

Observe the notes on matte finish care in the chapter "Notes on paintwork/matte finish paintwork care" (→ page 264). They also apply to matte decorative foils.

Observe the notes on cleaning decorative foils to avoid vehicle damage.

**Cleaning**

- For cleaning, use plenty of water and a mild cleaning agent without additives or abrasive substances, e.g. a car shampoo approved for Mercedes-Benz.
- Remove dirt immediately, where possible, whilst avoiding rubbing too hard. There is otherwise a risk of damaging the decorative foil irreparably.
- If there is dirt on the finish or if the decorative foil is dull: use the Paint Cleaner recommended and approved for Mercedes-Benz.
- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- To prevent water stains, dry a foil-wrapped vehicle with a soft, absorbent cloth after every car wash.

**Avoiding damage to the decorative foil**

- The service life and color of decorative foils are impaired by:
  - Sunlight
  - Temperature, e.g. hot air blower
  - Weather conditions
  - Stone chippings and dirt
  - Chemical cleaning agents
  - Oily products

- Do not use polish on matte decorative foil. Polishing will have the effect of shining the foil-wrapped surface.
- Do not treat matte or structured decorative foils with wax. Permanent stains may occur.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by incorrect care cannot always be completely repaired. In such cases, visit a qualified specialist workshop.

You can obtain more information on care and cleaning products from the manufacturer.

In the case of foil-wrapped surfaces, optical differences may occur between the surfaces that were not protected by a decorative foil after removing a decorative foil.

⚠️ Have work or repairs to decorative foils carried out at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.
Notes on care of car parts

**WARNING** Risk of entrapment if the windshield wipers are switched on while the windshield is being cleaned

If the windshield wipers are set in motion while you are cleaning the windshield or wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and the ignition before cleaning the windshield or wiper blades.

**WARNING** Risk of burns from the tailpipe and tailpipe trims

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.

Allow vehicle parts to cool down before touching them.

To avoid damage to the vehicle, observe the notes on cleaning and care of the following vehicle parts.

**Wheels and rims**

- Use water and acid-free wheel cleaners.
- Do not use acidic wheel cleaners to remove brake dust. This could damage wheel bolts and brake components.
- To avoid corrosion of the brake discs and brake pads, drive the vehicle for a few minutes after cleaning before parking it. The brake discs and brake pads warm up and dry out.

**Air inlet grilles**

- Regularly check the air inlet grilles on the radiator grill and in front of the wheels.
- Keep the air inlet grilles clean and free of deposits such as leaves.

**Windows**

- Clean windows inside and outside with a damp cloth and with a cleaning agent recommended for Mercedes-Benz.
- Do not use dry cloths or abrasive or solvent-based cleaning agents to clean the inside of windows.

**Wiper blades**

- Fold out the wiper blades and clean them using a damp cloth.
- Do not clean the wiper blades too often.

**Exterior lighting**

- Clean the lenses with a wet sponge and mild cleaning agent, e.g. car shampoo.
- Only use cleaning agents or cleaning cloths that are suitable for plastic lenses.

**Rear view camera and front camera**

- Use clean water and a soft cloth to clean the camera lens.
- Do not use a power washer.
Double rear wing flap
- Extend the double rear wing flap for washing by hand (→ page 132).
- Clean the double rear wing with a soft car sponge and mild cleaning agent, e.g. car shampoo.
- Retract the double rear wing flap completely after drying (→ page 132).
- Do not use a power washer.

Front diffusor
- Extend the front diffusor when washing by hand (→ page 133).
- Clean the front diffusor with a soft car sponge and mild cleaning agent, e.g. car shampoo.
- Retract the front diffusor completely after drying (→ page 133).
- Do not use a power washer.

Tailpipes
- Clean with a cleaning agent recommended for Mercedes-Benz, especially in the winter and after washing the vehicle.
- Do not use acidic cleaning agents.

Notes on care of the interior

**WARNING** Risk of injury from plastic parts breaking off after the use of solvent-based care products

Care and cleaning products containing solvents can cause surfaces in the cockpit to become porous. When the airbags are deployed, plastic parts may break away.

- Do not use any care or cleaning products containing solvents to clean the cockpit.

**WARNING** Risk of injury or death from bleached seat belts

Bleaching or dyeing seat belts can severely weaken them.

This can, for example, cause seat belts to tear or fail in an accident.

- Never bleach or dye seat belts.

To avoid damage to the vehicle, observe the notes on cleaning and care.

Seat belts
- Clean with lukewarm and soapy water.
- Do not use chemical cleaning agents.
- Do not dry seat belts by heating them to over 176°F (80°C) or exposing them to direct sunlight.

Display
- Switch off the display and let it cool down.
- Clean the surface carefully with a microfiber cloth and a suitable display care product (TFT-LCD).
- Do not use any other agents.

Plastic trim
- Clean with a damp microfiber cloth.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Do not attach stickers, films or similar materials.
- Do not allow cosmetics, insect repellent or sun cream to come in contact with the plastic trim.

**Real wood and trim elements**
- Clean with a microfiber cloth.
- Black piano-lacquer look: clean with a damp cloth and soapy water.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Do not use solvent-based cleaning agents, polishes or waxes.

**Headliner**
- Clean with a brush or dry shampoo.

**Carpet**
- Use a carpet and textile cleaning agent recommended for Mercedes-Benz.

**Steering wheel made of genuine leather or DINAMICA**

- Clean with a damp cloth and 1% soapy water solution and then wipe with a dry cloth.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.

![Leather is a natural product. It has natural surface properties, such as differences in structure, marks caused by growth and injury or subtle color differences.](image)

**Genuine leather seat covers**
- Clean with a damp cloth and then wipe with a dry cloth.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.

- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.

**DINAMICA seat covers**
- Clean with a damp cloth.
- Do not use a microfiber cloth.

**Imitation leather seat covers**
- Clean with a damp cloth and 1% soapy water.
- Do not use a microfiber cloth.

**Cloth seat covers**
- Clean with a damp microfiber cloth and 1% soap solution and allow to dry.
Emergency
Removing the safety vest

The safety vests are located in the cargo compartment when the vehicle is delivered.

- Open the safety vest bag and pull out the safety vest.

1. Maximum number of washes
2. Maximum wash temperature
3. Do not bleach
4. Do not iron
5. Do not tumble dry
6. Do not dry clean
7. Class 2 safety vest

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed. The safety vest must be replaced in the following situations:
- The reflective strips are damaged or dirty
- The maximum permissible number of washes is exceeded
- The fluorescence has faded

Warning triangle
Removing the warning triangle

- Detach Velcro strips 1.
- Remove warning triangle 2.
Setting up the warning triangle

- Fold side reflectors 1 upwards to form a triangle and attach at the top using upper press-stud 2.
- Fold legs 3 down and out to the side.

First-aid kit (soft-sided) overview

Flat tire

**Notes on flat tire**

⚠️ **WARNING** Risk of accident due to a flat tire

A flat tire severely affects the driving characteristics as well as the steering and braking of the vehicle.

**Tires without run-flat characteristics:**
- Do not drive with a flat tire.

**Tires with run-flat characteristics:**
- Change the flat tire immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

In the event of a flat tire, the following options are available depending on your vehicle’s equipment:

- **Vehicles with MOExtended tires:** it is possible to continue the journey for a short period of time. Make sure you observe the notes on MOExtended tires (run-flat tires) (→ page 271).

- **Vehicles with a TIREFIT kit:** you can repair the tire so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 272).
**Vehicles with Mercedes me connect:** you can make a call for breakdown assistance in the case of a breakdown (→ page 224).

**All vehicles:** change the wheel (→ page 310).

The emergency spare wheel is only available in certain countries.

---

### Notes on MOExtended tires (run-flat tires)

<table>
<thead>
<tr>
<th>Warning</th>
<th>Risk of accident when driving in limp-home mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>When driving in emergency mode the handling characteristics are impaired.</td>
<td></td>
</tr>
<tr>
<td>Do not exceed the specified maximum speed of the MOExtended tires.</td>
<td></td>
</tr>
<tr>
<td>Avoid any abrupt steering and driving maneuvers as well as driving over obstacles (curbs, pot holes, off-road). This applies, in particular, to a loaded vehicle.</td>
<td></td>
</tr>
</tbody>
</table>

- Stop driving in the emergency mode if you notice:
  - Banging noise
  - Vehicle vibration
  - Smoke which smells like rubber
  - Continuous ESP® intervention
  - Cracks in the tire side walls
- After driving in emergency mode, have the rims checked by a qualified specialist workshop with regard to their further use.
- The defective tire must be replaced in every case.

With MOExtended tires (run-flat tires), you can continue to drive your vehicle even if there is a total loss of pressure in one or more tires. However, the tire affected must not show any clearly visible damage.

You can recognize MOExtended tires by the MOExtended marking which appears on the side wall of the tire.

---

**Vehicles with tire pressure monitoring system:** MOExtended tires may only be used in conjunction with an activated tire pressure monitoring system.

If a pressure loss warning message appears in the multifunction display, proceed as follows:

- Check the tires for damage.
- If driving on, observe the following notes.

### Driving distance possible in emergency mode after the pressure loss warning:

<table>
<thead>
<tr>
<th>Load condition</th>
<th>Driving distance possible in emergency mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Partially laden</td>
<td>50 miles (80 km)</td>
</tr>
<tr>
<td>Fully laden</td>
<td>19 miles (30 km)</td>
</tr>
</tbody>
</table>

The driving distance possible in emergency mode may vary depending on the driving style. Observe the maximum permissible speed of 50 mph (80 km/h).
If a tire has gone flat and cannot be replaced with an MOExtended tire, you can use a standard tire as a temporary measure.

**TIREFIT kit storage location**

The TIREFIT kit is located on the left side of the cargo compartment in the storage compartment behind service flap 1.

**Using the TIREFIT kit**

**Requirements:**
- Tire sealant bottle and tire inflation compressor available (→ page 272)
- TIREFIT sticker available
- Gloves available

You can use TIREFIT tire sealant to seal perforation damage of up to 0.16 in (4 mm), particularly those in the tire contact surface. You can use TIREFIT in outside temperatures down to -4°F (-20°C).

**WARNING** Risk of accident when using tire sealant

The tire sealant may be unable to seal the tire properly, especially in the following cases:
- There are large cuts or punctures in the tire (larger than damage previously mentioned)
- The wheel rims have been damaged
- After journeys with very low tire pressure or with flat tires

- Do not continue driving.
- Consult a qualified specialist workshop.

**WARNING** Risk of injury and poisoning from tire sealant

The tire sealant is harmful and causes irritation. Do not allow it to come into contact with the skin, eyes or clothing, and do not swallow it. Do not inhale tire sealant fumes. Keep the tire sealant away from children.

If you come into contact with the tire sealant, observe the following:

- Rinse off the tire sealant from your skin immediately using water.
- If tire sealant gets into your eyes, thoroughly rinse out the eyes using clean water.
- If tire sealant has been swallowed, immediately rinse out the mouth thoroughly and drink plenty of water. Do not induce vomiting and seek medical attention immediately.
- Change out of any clothes contaminated with tire sealant immediately.
- If allergic reactions occur, seek medical attention immediately.
**NOTE** Overheating due to the tire inflation compressor running too long

- Do not run the tire inflation compressor for longer than ten minutes without interruption.

Comply with the manufacturer’s safety notes on the sticker on the tire inflation compressor.

Have the tire sealant bottle replaced in a qualified specialist workshop every five years.

- Do not remove any foreign objects which have entered the tire.

- Affix part 1 of the TIREFIT sticker to the instrument cluster within the driver’s field of vision.
- Affix part 2 of the TIREFIT sticker near the valve on the wheel with the faulty tire.

- Pull plug 4 with the cable and hose 5 out of the tire inflation compressor housing.
- Push the plug of hose 5 into flange 6 of tire sealant bottle 1 until the plug engages.
- Place tire sealant bottle 1 head downwards into recess 2 of the tire inflation compressor.
- Remove the valve cap from valve 7 on the faulty tire.
- Screw filling hose 6 onto valve 7.
- Insert plug 4 into a 12 V socket in your vehicle (→ page 77).
- Switch on the ignition.
Press on and off switch 3 on the tire inflation compressor.
The tire inflation compressor is switched on. The tire is inflated. First, tire sealant is pumped into the tire. The pressure may briefly rise to approximately 500 kPa (73 psi (5 bar)).

Do not switch off the tire inflation compressor during this phase!

Let the tire inflation compressor run for a maximum of ten minutes. The tire should then have attained a tire pressure of at least 200 kPa (29 psi (2.0 bar)).

If tire sealant leaks out, make sure you clean the affected area as quickly as possible. It is preferable to use clean water.

If you get tire sealant on your clothing, have it cleaned as soon as possible with perchloroethylene.

If, after ten minutes, a tire pressure of 200 kPa (29 psi (2.0 bar)) has not been attained:

Switch off the tire inflation compressor.

Unscrew the filling hose from the valve of the faulty tire.

Please note that tire sealant may leak out when unscrewing the filling hose.

Drive forwards or in reverse very slowly for approximately 33 ft (10 m).

Pump up the tire again. After a maximum of ten minutes, the tire pressure must be at least 200 kPa (29 psi (2.0 bar)).

WARNING Risk of accident due to the specified tire pressure not being attained

If the minimum tire pressure is not reached after the specified time, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

The braking and driving characteristics may be greatly impaired.

If, after ten minutes, a tire pressure of 200 kPa (29 psi (2.0 bar)) has been attained:

Switch off the tire inflation compressor.

Unscrew the filling hose from the valve of the faulty tire.

Do not continue driving.

Consult a qualified specialist workshop.

WARNING Risk of accident from driving with sealed tires

A tire temporarily sealed with tire sealant impairs the handling characteristics and is not suitable for higher speeds.

Adapt your driving style accordingly and drive carefully.

Do not exceed the maximum speed limit with a tire that has been repaired using tire sealant.

Observe the maximum permissible speed for a tire sealed with tire sealant 50 mph (80 km/h).
Affix the upper section of the TIREFIT sticker to the instrument cluster in a location where it will be easily seen by the driver.

**NOTE** Staining caused by leaking tire sealant

After use, excess tire sealant may leak out from the filling hose.

Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

**ENVIRONMENTAL NOTE** Environmental pollution caused by environmentally irresponsible disposal

Tire sealant contains pollutants.

- Have the tire sealant bottle disposed of professionally, e.g. at an authorized Mercedes-Benz Center.

- Store the tire sealant bottle, the tire inflation compressor and, if necessary, the warning triangle.

**Pull away immediately.**

- Stop driving after approximately ten minutes and check the tire pressure using the tire inflation compressor.
  - The tire pressure must now be at least 130 kPa (19 psi (1.3 bar)).

**WARNING** Risk of accident due to the specified tire pressure not being attained

If the specified tire pressure is not reached, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

- The braking and driving characteristics may be greatly impaired.
  - Do not continue driving.
  - Consult a qualified specialist workshop.

In cases such as the one mentioned above, contact an authorized Mercedes-Benz Center. Or call 1-800-FOR-MERCEdes (in the USA) or 1-800-387-0100 (in Canada).

- Correct the tire pressure if it is still at least 130 kPa (19 psi (1.3 bar)). See the Tire and Loading Information placard on the B-pillar on the driver’s side or the tire pressure table in the fuel filler flap for values. (→ page 290).

**Increasing the tire pressure**

- Switch on the tire inflation compressor.

**Decreasing the tire pressure**

- Press pressure release button 1 next to manometer 2.

- When the tire pressure is correct, unscrew the filling hose from the valve of the sealed tire.
Screw the valve cap onto the valve of the sealed tire.

Pull the tire sealant bottle out of the tire inflation compressor. The filling hose stays on the tire sealant bottle.

Drive to the nearest qualified specialist workshop and have the tire, tire sealant bottle and filling hose replaced there.

### Battery (vehicle)

**Notes on the 12 V battery**

**WARNING** Risk of an accident due to work carried out incorrectly on the battery

Work carried out incorrectly on the battery can, for example, lead to a short circuit. This can restrict functions relevant for safety systems and impair the operating safety of your vehicle.

You could lose control of the vehicle in the following situations in particular:

- When braking
- In the event of abrupt steering maneuvers and/or when the vehicle's speed is not adapted to the road conditions
- In the event of a short circuit or a similar incident, contact a qualified specialist workshop immediately.
- Do not drive on.
- Always have work on the battery carried out at a qualified specialist workshop.

- Further information on ABS (→ page 122)
- Further information on ESP®

For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz.

**ENVIRONMENTAL NOTE** Environmental damage caused by improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

If you have to disconnect the 12 V battery, contact a qualified specialist workshop. Comply with safety notes and take protective measures when handling batteries.
Risk of explosion.

Fire, open flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor if necessary.

Wear safety glasses.

Keep children away.

Observe this Operator’s Manual.

Observe the following if you do not intend to use the vehicle over an extended period of time:

- Activate standby mode.
- Alternatively: connect the battery to a battery charger approved by Mercedes-Benz or consult a qualified specialist workshop to disconnect the battery.

**Notes on starting assistance and charging the 12 V battery**

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

**NOTE** Damaging the battery through overvoltage

When charging using a battery charger without a maximum charging voltage, the battery or the vehicle electronics may be damaged.

**WARNING** Risk of explosion during charging process and starting assistance

During the charging process and starting assistance, the battery may release an explosive gas mixture.

- Avoid fire, open flames, creating sparks and smoking.

**NOTE** Damaging the battery through overvoltage

When charging using a battery charger without a maximum charging voltage, the battery or the vehicle electronics may be damaged.

Only use battery chargers with a maximum charging voltage of 14.8 V.

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

**NOTE** Damaging the battery through overvoltage

When charging using a battery charger without a maximum charging voltage, the battery or the vehicle electronics may be damaged.

Only use battery chargers with a maximum charging voltage of 14.8 V.
Make sure there is sufficient ventilation.
- Do not lean over a battery.

**WARNING** Risk of explosion from a frozen battery

A discharged battery may freeze at temperatures slightly above or below freezing point. During starting assistance or battery charging, battery gas can be released.
- Always allow a battery to thaw before charging it or performing starting assistance.

If the indicator/warning lamps in the instrument cluster do not light up at low temperatures, it is very likely that the discharged battery has frozen. In this case you may neither jump-start the vehicle nor charge the battery. The service life of a battery that has been thawed may be dramatically shortened. The starting characteristics may be impaired, especially at low temperatures.

It is recommended that you have a thawed battery checked at a qualified specialist workshop.

**NOTE** Damage caused by numerous or extended attempts to start the engine

Numerous or extended attempts to start the engine may damage the catalytic converter due to non-combusted fuel.
- Avoid numerous and extended attempts to start the engine.

Observe the following points during starting assistance and when charging the battery:
- Only use undamaged jumper cables/charging cables with a sufficient cross-section and insulated terminal clamps.
- Non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jumper cable/charging cable is connected to the battery/jump-start connection point.
- The jumper cable/charging cable must not come into contact with any parts which may move when the engine is running.
- Always make sure that neither you nor the battery is electrostatically charged.
- Keep away from fire and open flames.
- Do not lean over the battery.
- Take care that the positive terminal of a connected battery does not come into contact with vehicle parts.
- Never place metal objects or tools on a battery.
- When connecting and disconnecting the battery, always observe the sequence of battery terminals described.

Observe the additional following points when charging the battery:
- Only use battery chargers tested and approved for Mercedes-Benz.
- Read the battery charger’s operating instructions before charging the battery.
Observe the additional following points during starting assistance:

- Starting assistance may only be provided using vehicles, batteries or other jump start devices with a nominal voltage of 12 V.
- The vehicles must not touch.
- Take care to connect only battery terminals of identical polarity.
- Observe the sequence described for connecting and disconnecting the jumper cables.
- **Vehicles with a gasoline engine**: Jump-start the vehicle only when the engine and exhaust system are cold.

**Starting assistance and charging the 12 V battery**

**Requirements:**

- The vehicle is secured with the electric parking brake.
- **Vehicles with automatic transmission**: The transmission is in position P.
- The ignition and all electrical consumers are switched off.
- The hood is open.

Example: engine compartment

- Slide cover 1 of positive clamp 2 on the jump-starting connection point in the direction of the arrow.

- Connect positive clamp 2 on your vehicle to the positive pole of the donor battery using the jumper cable/charging cable. Always begin with positive clamp 2 on your own vehicle first.

- **During starting assistance**: start the engine of the donor vehicle and run at idle speed.

- Connect the negative pole of the donor battery and ground point 3 of your own vehicle by using the jumper cable/charging cable. Begin with the donor battery first.

- **During starting assistance**: start the engine of your own vehicle.

- **During the charging process**: start the charging process.

- **During starting assistance**: let the engines run for several minutes.

- **During starting assistance**: before disconnecting the jumper cable, switch on an electrical consumer in your own vehicle, e.g. the rear window heater or lighting.
When the starting assistance/charging process is complete, perform the following steps:

1. First, remove the jumper cable/charging cable from ground point 3 and the negative pole of the donor battery, then from positive clamp 2 and the positive pole of the donor battery. Begin each time with the contacts on your own vehicle first.
2. After removing the jumper cable/charging cable, close cover 1 of positive clamp 2.

Further information can be obtained at a qualified specialist workshop.

Replacing the 12 V battery

1. Observe the notes on the 12 V battery (→ page 276).

Mercedes-Benz recommends that you have the 12 V battery replaced at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

If you want to replace the battery yourself, observe the following notes:

- Replace a faulty battery with a battery which meets the specific vehicle requirements. The vehicle is equipped with a lithium-ion battery. Full vehicle functionality is only guaranteed with a lithium-ion battery. For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz.
- Use detachable parts such as vent hoses, elbow fittings or terminal covers from the battery which is to be replaced.
- Make sure that the vent hose is always connected to the original opening on the side of the battery. Install any existing or supplied cell caps. Otherwise, gases or battery acid could escape.
- Make sure that detachable parts are reconnected in the same way.

Tow starting or towing away

Permitted towing methods

NOTE Damage from automatic braking

If one of the following functions is switched on, the vehicle brakes automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:

- During towing
- In a car wash

Mercedes-Benz recommends transporting your vehicle in the case of a breakdown, rather than towing it away.
For towing, use a tow rope or tow bar with both axles on the ground. Do not use tow bar systems.

⚠️ **WARNING** Risk of accident when towing with steering wheel lock

You will no longer be able to steer the vehicle if the steering wheel lock is engaged.

- Always switch on the ignition when towing the vehicle with a tow cable or a tow bar.

⚠️ **NOTE** Damage to the vehicle due to towing away incorrectly

- Observe the instructions and notes on towing away.

### Permitted towing methods

<table>
<thead>
<tr>
<th>Both axles on the ground</th>
<th>Yes, maximum 31 miles (50 km) at 31 mph (50 km/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front axle raised</td>
<td>No</td>
</tr>
<tr>
<td>Rear axle raised</td>
<td>No</td>
</tr>
</tbody>
</table>

### Towing the vehicle with both axles on the ground

- Observe the notes on the permitted towing methods (→ page 280).
- Make sure that the battery is connected and charged.

Observe the following points when the battery is discharged:

- The engine cannot be started
- The electric parking brake cannot be released or applied

- **Vehicles with automatic transmission:**

  The automatic transmission cannot be shifted to position N or P

- **Vehicles with automatic transmission:** If the automatic transmission cannot be shifted to position N, or the multifunction display in the instrument cluster does not show anything, have the vehicle transported away (→ page 283). A towing vehicle with lifting equipment is required for vehicle transportation.

⚠️ **NOTE** Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.

- A towing speed of 30 mph (50 km/h) must not be exceeded.
- A towing distance of 30 miles (50 km) must not be exceeded.
**WARNING** Risk of accident when towing a vehicle which is too heavy

If another vehicle is tow-started or towed away, its weight must not exceed the permissible gross mass of your own vehicle, otherwise the following could occur:
- The towing eye may become detached.
- The vehicle/trailer combination may swerve or even rollover.

If another vehicle is tow-started or towed away, its weight must not exceed the permissible gross mass of your own vehicle.

If a vehicle must be tow-started or towed away, its permissible gross weight must not exceed the permissible gross weight of the towing vehicle.

Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (→ page 317).

**Vehicles with automatic transmission:** Do not open the driver's door or front passenger door, otherwise the automatic transmission automatically shifts to position **P**.
- Install the towing eye (→ page 284).
- Fasten the tow bar.

**NOTE** Damage due to incorrect connection of the tow bar

- Only connect the tow rope or tow bar to the towing eyes.

Deactivate the automatic locking mechanism (→ page 57).
- Do not activate the HOLD function.

**Vehicles with automatic transmission:** Shift the automatic transmission to position **N**.
- Release the electric parking brake.

---

**WARNING** Risk of accident due to limited safety-related functions during the towing process

Safety-related functions are limited or no longer available in the following situations:
- The ignition is switched off.
- The brake system or power steering system is malfunctioning.
- The energy supply or the on-board electrical system is malfunctioning.

When your vehicle is then towed away, significantly more effort may be required to steer and brake than is normally required.
- Use a tow bar.
- Make sure that the steering wheel can move freely before towing the vehicle away.
NOTE Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

- Pull away slowly and smoothly.

Loading the vehicle for transport

- Observe the notes on towing away (→ page 281).
- Connect the tow bar to the towing eye in order to load the vehicle.
- Shift the automatic transmission to position N.

The automatic transmission may be locked in position P in the event of damage to the electrics. To shift to N, provide the on-board electrical system with power (→ page 279).

- Load the vehicle onto the transporter.
- Shift the automatic transmission to position P.
- Use the electric parking brake to secure the vehicle against rolling away.
- Only secure the vehicle by the wheels.
- Make sure that the front and rear axles come to rest on the same transportation vehicle.

NOTE Damage to drivetrain due to incorrect positioning

- Do not position the vehicle above the connection point of the transport vehicle.

Towing eye storage location

The towing eye is located on the left side of the cargo compartment in the storage compartment behind service flap 1.
Installing the towing eye

- Pull out cover ➊.
- Screw in the towing eye clockwise as far as it will go and tighten.
- Make sure that cover ➊ engages in the bumper when you remove the towing eye.
- NOTE Damage to the vehicle due to incorrect use of the towing eye

When a towing eye is used to recover a vehicle, the vehicle may be damaged in the process.

Tow-starting the vehicle (emergency engine start)

- NOTE Damage to the automatic transmission due to tow starting

The automatic transmission may be damaged in the process of tow starting vehicles with automatic transmission.
- Vehicles with automatic transmission must not be tow started.
- Vehicles with automatic transmission must not be tow-started.

Only use the towing eye to tow away or tow start the vehicle.

Electrical fuses

Notes on electrical fuses

⚠️ WARNING Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded.
This could result in a fire.
- Always replace faulty fuses with specified new fuses containing the correct amperage.

⚠️ NOTE Damage due to incorrect fuses

Electrical components or systems may be damaged by incorrect fuses, or their functionality may be significantly impaired.
- Only use fuses that have been approved by Mercedes-Benz and which have the correct fuse rating.
Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color and fuse rating. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

**Fuse assignment diagram:** on the fuse box in the cargo compartment (→ page 285).

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Damage or malfunctions caused by moisture</strong></td>
</tr>
<tr>
<td>Moisture may cause damage to the electrical system or cause it to malfunction.</td>
</tr>
<tr>
<td>▶ When the fuse box is open, make sure that no moisture can enter the fuse box.</td>
</tr>
<tr>
<td>▶ When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.</td>
</tr>
</tbody>
</table>

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:
- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The ignition is switched off.

The electrical fuses are located in various fuse boxes:
- Fuse box in the front passenger footwell (→ page 285)
- Fuse box in the cargo compartment on the left-hand side of the vehicle, when viewed in the direction of travel (→ page 285)

### Opening and closing the fuse box in the front passenger footwell

Observe the notes on electrical fuses (→ page 284).

### Opening and closing the fuse box in the cargo compartment

Observe the notes on electrical fuses (→ page 284).
Turn the fastener on service flap clockwise.

Open the service flap.

The fuse assignment diagram is in a recess on the side of the fuse box.
Notes on noise or unusual handling characteristics

Make sure there are no vibrations, noises or unusual handling characteristics when the vehicle is in motion. This may indicate that the wheels or tires are damaged. Hidden tire damage could also be causing the unusual handling characteristics.

If you suspect that a tire is malfunctioning, reduce your speed immediately and have the tires and wheels checked at a qualified specialist workshop.

Notes on regularly inspecting wheels and tires

**WARNING** Risk of injury through damaged tires

Damaged tires can cause tire pressure loss.

- Check the tires regularly for signs of damage and replace any damaged tires immediately.

**WARNING** Risk of hydroplaning due to insufficient tire tread

Insufficient tire tread will result in reduced tire grip.

In heavy rain or slush the risk of hydroplaning is increased, in particular where speed is not adapted to suit the conditions.

- Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tires.

Minimum tread depth for:
- Summer tires: $\frac{1}{16}$ in (3 mm)
- M+S tires: $\frac{1}{8}$ in (4 mm)

- For safety reasons, replace the tires before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:
- Check the tire pressure (→ page 288).
- Visually inspect wheels and tires for damage.
- Check the valve caps.
- Visual check of the tire tread depth and the tire contact surface across the entire width. The minimum tread depth for summer tires is $\frac{1}{16}$ in (3 mm) and for winter tires $\frac{1}{8}$ in (4 mm).

Six marks show where the bar indicators (arrow) are integrated into the tire tread. They are visible once a tire tread depth of approximately $\frac{1}{16}$ in (1.6 mm) has been reached.
Notes on snow chains

**WARNING** Risk of accident due to incorrect mounting of snow chains

If you have mounted snow chains to the front wheels, the snow chains may drag against the vehicle body or chassis components. This could cause damage to the vehicle or the tires.

- Never mount snow chains on the front wheels.
- Only mount snow chains on the rear wheels in pairs.

Observe the following notes when using snow chains:

- Snow chains are only permissible for certain wheel/tire combinations. You can obtain information about this from an authorized Mercedes-Benz Center.
- For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.
- If snow chains are installed, the maximum permissible speed is 30 mph (50 km/h).
- **Vehicles with level control:** If snow chains are installed, only drive at raised vehicle level.

*You can deactivate ESP® to pull away (→ page 124). This allows the wheels to spin, achieving an increased driving force.*

Tire pressure

**Notes on tire pressure**

**WARNING** Risk of accident due to insufficient or excessive tire pressure

Tires with either too low or too high a pressure present the following hazards:

- the tires could burst
- the tires could wear excessively and/or unevenly

- the driving characteristics as well as steering and braking characteristics may be severely impaired

- Observe the recommended tire pressures and check the tire pressure of all tires including the spare wheel:
  - monthly
  - if altering the load on the vehicle
  - prior to long journeys
  - if the operating conditions change, for example when driving off-road

- Adjust the tire pressure where necessary.

Tire pressure which is too high or too low can:

- Shorten the service life of the tires.
- Cause increased tire damage.
- Adversely affect driving characteristics and thus driving safety, e.g. due to hydroplaning.
**WARNING** Risk of accident due to too low a tire pressure

Tires with pressure that is too low can overheat and burst as a consequence.

In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

► Avoid excessively low tire pressure.

Tire pressure which is too low can cause:
- Tire faults as a result of overheating
- Impaired handling characteristics
- Irregular wear
- Increased fuel consumption

**WARNING** Risk of accident due to too high a tire pressure

Tires with excessively high pressure can burst.

In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

► Avoid excessively high tire pressures.

Tire pressure which is too high can cause:
- Increased braking distance
- Impaired handling characteristics
- Irregular wear
- Impaired driving comfort
- Susceptibility to damage

► Check whether the tire has a puncture or the valve has a leak.
► If you are unable to rectify the damage, contact a qualified specialist workshop.

You can find information on tire pressure for the vehicle’s factory-installed tires on the following labels:
- Tire and Loading Information placard on the B-pillar of your vehicle (→ page 293).
- Tire pressure table on the inside of the fuel filler flap (→ page 290).

Observe the maximum tire pressure (→ page 300).

Use a suitable pressure gauge to check the tire pressure. The outer appearance of a tire does not permit any reliable conclusion about the tire pressure.

Only correct tire pressure when the tires are cold. Conditions for cold tires:
- The vehicle has been parked with the tires out of direct sunlight for at least three hours.
The vehicle has traveled less than 1 mile (1.6 km).

The vehicle's tires heat up when driving. As the temperature of the tires increases, so too does the tire pressure.

**Vehicles with tire pressure monitoring system:** You can also see the tire pressure in the driver’s display.

The tire pressure recommended for increased load/speed in the tire pressure table can affect the ride comfort.

---

**WARNING** Risk of accident due to unsuitable accessories on tire valves

If you mount unsuitable accessories onto tire valves, the tire valves may be overloaded and malfunction, which can cause tire pressure loss.

- Only screw standard valve caps or valve caps specifically approved by Mercedes-Benz for your vehicle onto the tire valve.

---

**Tire pressure table**

The tire pressure table is on the inside of the fuel filler flap.

- The data shown in the images is example data.

- If one or more tire sizes precede a tire pressure, the following tire pressure information is only valid for those tire sizes and their respective load condition.

- The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ from this.

---

Some tire pressure tables only show the rim diameter instead of the complete tire size, e.g. **R18**. The rim diameter is part of the tire size and can be found on the tire side wall (→ page 301).

- Tire and Loading Information placard (→ page 293)
- Maximum tire pressure (→ page 300)
Checking tire pressures manually

- Read the tire pressure for the current operating conditions from the Tire and Loading Information placard or the tire pressure table. Observe the notes on tire pressure.
- Remove the valve cap of the tire to be checked.
- Press the tire pressure gauge securely onto the valve.
- Read the tire pressure.
- If the tire pressure is lower than the recommended value, increase the tire pressure to the recommended value.
- If the tire pressure is higher than the recommended value, release air. To do so, press down the metal pin in the valve, e.g. using the tip of a pen for example. Then check the tire pressure again using the tire pressure gauge.
- Screw the valve cap onto the valve.

Tire pressure monitoring system

Function of the tire pressure monitoring system

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Risk of accident due to incorrect tire pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each tire, including the spare (if provided), should be checked monthly when cold and then inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for these tires.) As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly underinflated. Accordingly, if the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale. Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the indicator lamp will flash for approximately a minute</td>
<td></td>
</tr>
</tbody>
</table>
and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

The system checks the tire pressure and the tire temperature of the tires installed on the vehicle by means of a tire pressure sensor.

The tire pressure and the tire temperature appear in the multifunction display (→ page 292).

If there is a substantial pressure loss or if the tire temperature is excessive, you will be warned in the following ways:

- Via display messages (→ page 361)
- Via the \[
\]
warning lamp in the instrument cluster

The tire pressure monitoring system is only an aid. It is the driver’s responsibility to set the tire pressure to the recommended cold tire pressure suitable for the operating situation.

In most cases, the tire pressure monitoring system will automatically update the new reference values after you have changed the tire pressure. You can, however, also update the reference values by restarting the tire pressure monitoring system manually (→ page 379).

System limits

The system may be impaired or may not function particularly in the following situations:

- The tire pressure has been set incorrectly
- There is a sudden pressure loss caused, for example, by a foreign object penetrating the tire

- There is a malfunction caused by another radio signal source

Checking the tire pressure with the tire pressure monitoring system

Requirements:

- The ignition is switched on.

Driver display:

Service  Tires

One of the following displays appears:

- Current tire pressure and tire temperature of the individual wheels:
- Tire pressure will be displayed after driving a few minutes
- Tire Pressure Monitor Active: the teach-in process of the system is not yet complete. The tire pressures are already being monitored.

Compare the tire pressure with the recommended tire pressure for the current operating condition (→ page 290). Observe the notes on tire temperature (→ page 288).

The values displayed in the driver display may deviate from those of the tire pressure gauge as they refer to sea level. At high elevations, the tire pressure values indicated by a pressure gauge are higher than those shown by the driver display. In this case, do not reduce the tire pressure.

Restarting the tire pressure monitoring system
Requirements:
- The recommended tire pressure is correctly set for the respective operating status on all of the wheels (→ page 288).

Restart the tire pressure monitoring system in the following situations:
- The tire pressure has changed.
- The wheels or tires have been changed or newly installed.

Driver display:

► Service ► Tires

► Swipe downwards on Touch Control on the left-hand side of the steering wheel. The Use Current Pressures as New Reference Values? message is shown in the multifunction display.

► To restart, press Touch Control on the left-hand side of the steering wheel. The Tire Press. Monitor Restarted message is shown in the multifunction display.

Current warning messages are deleted and the yellow [Q] warning lamp goes out.

After you have been driving for a few minutes, the system checks whether the current tire pressures are within the specified range. The current tire pressures are then accepted as reference values and monitored.

Be sure to also pay attention to the following related topic:
- Notes on tire pressure (→ page 288)

Loading the vehicle

Notes on Tire and Loading Information placard

► WARNING Risk of accident from overloaded tires

Overloaded tires may overheat and burst as a consequence. Overloaded tires can also impair the steering and handling characteristics and lead to brake failure.

- Observe the load rating of the tires.
- The load rating must be at least half the permissible axle load of the vehicle.
- Never overload the tires by exceeding the maximum load.

The Tire and Loading Information placard is on the B-pillar on the driver’s side of the vehicle.
The data shown in the illustration is example data.

The Tire and Loading Information placard shows:

- **Maximum number of seats** according to the maximum number of people permitted to travel in the vehicle.
- **Maximum permissible load** comprises the gross weight of all vehicle occupants, load and luggage.

- **Recommended tire pressure** for cold tires. The recommended tire pressures are valid for the maximum permissible load and up to the maximum permissible vehicle speed.

Please also note:

- Information on permissible weights and loads on the vehicle identification plate (→ page 317).
- Information on tire pressure in the tire pressure table (→ page 290).

Further related subjects:

- Determining the maximum permissible load (→ page 294)
- Notes on tire pressure (→ page 288)

### Steps for Determining Correct Load Limit

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575, pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".
(1): Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle’s placard.

(2): Determine the combined weight of the driver and passengers that will be riding in your vehicle.

(3): Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4): The resulting figure equals the available amount of cargo and luggage load capacity. For example: if "XXX" equals 1,400 lbs and there are five occupants in your vehicle with a weight of 150 lbs each, the maximum cargo and luggage load capacity is 650 lbs (1,400 - 750 (5 x 150) = 650 lbs).

(5): Determine the combined weight of luggage and cargo being loaded on the vehicle. The weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

(6): If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how much this reduces the available cargo and luggage load capacity of your vehicle.

Not all vehicles are permitted to tow a trailer. Towing a trailer is only permitted if a trailer-hitch is installed. Please consult an authorized Mercedes-Benz dealer if you have any questions about towing a trailer with your vehicle.

Even if you have calculated the total load carefully, you should still make sure that the maximum permissible gross weight and the maximum gross axle weight rating of your vehicle are not exceeded. Details can be found on the vehicle identification plate.

Have your loaded vehicle – including driver, occupants and load – weighed on a vehicle weighbridge. The measured values may not exceed the maximum permissible values stated on the vehicle identification plate.

Calculation example for determining the maximum load

The following table shows examples of how to calculate total and load capacities with varying seating configurations and different numbers and sizes of occupants. The following examples use a maximum load of 1500 lbs (680 kg). This is for illustration purposes only. Make sure you are using the actual load limit for your vehicle stated on your vehicle’s Tire and Loading Information placard (→ page 293).

The higher the weight of all the occupants, the smaller the maximum load for luggage.

Tire Quality Grading

In accordance with the US Department of Transportation’s "Uniform Tire Quality Grading Standards", tire manufacturers are required to grade their tires on the basis of the following three performance factors:

1 Tread wear grade
2 Traction grade
3 Temperature grade

The data shown in the illustration is example data.

The classification is not legally stipulated for Canada, but it is generally stated.

Tread wear grade

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1\1/2) times...
as well on the government course as a tire graded 100.
The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate conditions.

**Traction grade**

<table>
<thead>
<tr>
<th>DANGER Risk of accident due to inadequate traction</th>
</tr>
</thead>
<tbody>
<tr>
<td>The traction grade assigned to this tire is based on straight-ahead braking traction tests.</td>
</tr>
<tr>
<td>▶ Always adapt your driving style and drive at a speed to suit the prevailing traffic and weather conditions.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTE Damage to the drivetrain from wheelspin</th>
</tr>
</thead>
<tbody>
<tr>
<td>▶ Avoid wheelspin.</td>
</tr>
</tbody>
</table>

The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

**Temperature grade**

<table>
<thead>
<tr>
<th>WARNING Risk of accident from tire overheating and tire failure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.</td>
</tr>
<tr>
<td>▶ Observe the recommended tire pressure.</td>
</tr>
<tr>
<td>▶ Regularly check the pressure of all the tires.</td>
</tr>
<tr>
<td>▶ Adjust the tire pressure, if necessary.</td>
</tr>
</tbody>
</table>

The temperature grades are A (the highest), B and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

**DOT, Tire Identification Number (TIN)**

US tire regulations stipulate that every tire manufacturer or retreader must imprint a TIN in or on the side wall of each tire produced.
The data shown in the image is example data.

The TIN is a unique identification number to identify tires and comprises the following:

- **DOT (Department of Transportation):** tire symbol marks indicating that the tire complies with the requirements of the US Department of Transportation.

- **Manufacturer identification code:** manufacturer identification code contains details of the tire manufacturer. New tires have a code with two symbols. Retreaded tires have a code with four symbols. Further information on retreaded tires (→ page 306).

- **Tire size:** identifier describes the tire size.

- **Tire type code:** tire type code can be used by the manufacturer as a code to describe specific characteristics of the tire.

- **Manufacturing date:** manufacturing date provides information about the age of a tire. The 1st and 2nd positions represent the calendar week and the 3rd and 4th positions state the year of manufacture (e.g. "3208" represents the 32nd week of 2008).

**Information on the maximum tire load**

- **Maximum tire load** is the maximum permissible weight for which the tire is approved. Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle’s Tire and Loading Information placard on the B-pillar on the driver’s side (→ page 293).

**Specifications for maximum tire pressure**

- The data shown in the image is example data.
Never exceed maximum tire pressure specified for the tire.

Information on tire characteristics

The data shown in the image is example data.

This information describes the type of tire cord and the number of layers in side wall and under tire tread.

Tire size designation, load-bearing capacity, speed rating and load index

WARNING Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

Therefore, only use tire types and sizes approved for your vehicle model.

Observe the tire load rating and speed rating required for your vehicle.

The data shown in the illustration is example data.

Information about reading tire data can be obtained from any qualified specialist workshop.
First letter(s) 1:
- Without: passenger vehicle tires according to European manufacturing standards.
- "P": passenger vehicle tires according to US manufacturing standards.
- "LT": light truck tires according to US manufacturing standards.
- "T": compact emergency spare wheels with high tire pressure that are only designed for temporary use in an emergency.

Aspect ratio 3:
Ratio between tire height and tire width in percent (tire height divided by tire width).

Tire code 4 (tire type):
- "R": radial tire
- "D": bias ply tire
- "B": bias belted tires
- "ZR": radial tire with a maximum speed above 149 mph (240 km/h) (optional)

Rim diameter 5:
The diameter of the bead seat (not the diameter of the rim flange). The rim diameter is specified in inches (in).

Load-bearing index 6:
Numerical code that specifies the maximum load-bearing capacity of a tire (e.g. "91" corresponds to 1356 lbs (615 kg)).

The load-bearing capacity of the tire must be at least half the gross axle weight rating of your vehicle. Do not overload the tires by exceeding the specified load limit.

See also:
- Maximum permissible load on the Tire and Loading Information placard (→ page 293)
- Maximum tire load (→ page 300)
- Load index

Speed rating 7:
Specifies the approved maximum speed of the tire.

An electronic speed limiter prevents your vehicle from exceeding a speed of 130 mph (210 km/h).

Make sure that your tires have the required speed rating. You can obtain information on the required speed rating from an authorized Mercedes-Benz Center.

Specifying the speed rating as the "ZR" index in tire code \(^1\) is optional for tires up to 186 mph (300 km/h).

If your tire code \(^4\) includes "ZR" and there is no speed rating \(^7\), find out what the maximum speed is from the tire manufacturer.

If load-bearing index \(^8\) and speed rating \(^7\) are in brackets, the maximum speed rating of your tire is above 186 mph (300 km/h). To find out the maximum speed, ask the tire manufacturer.

Winter tires bear the \(\bigstar\) snowflake symbol and fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow.

Load index \(^3\):
- No specification given: standard load (SL) tire
- "XL" or "Extra Load": extra load tire or reinforced tire
- "Light Load": light load tire

\(^1\) "ZR" stated in the tire code.

\(^2\) Or "M+S \(\bigstar\) " for winter tires.

Definition of terms for tires and loading

Tire structure and characteristics: describes the number of layers or the number of rubber-coated belts in the tire contact surface and the tire wall. These are made of steel, nylon, polyester and other materials.

Bar: metric unit for tire pressure. 14.5038 pounds per square inch (psi) and 100 kilopascal (kPa) is the equivalent of one bar.

DOT (Department of Transportation): DOT-marked tires fulfill the requirements of the US Department of Transportation.

Average weight of the vehicle occupants: the number of vehicle occupants for which the vehicle is designed, multiplied by 150 lb (68 kg).
Uniform Tire Quality Grading Standards: a uniform standard to grade the quality of tires with regard to tread quality, tire traction and temperature characteristics. The quality grading assessment is made by the manufacturer following specifications from the U.S. government. The quality grade of a tire is imprinted on the side wall of the tire.

Recommended tire pressure: the recommended tire pressure is the tire pressure specified for the tires mounted to the vehicle at the factory.

The tire and information table contains the recommended tire pressures for cold tires, the maximum permissible load and the maximum permissible vehicle speed.

The tire pressure table contains the recommended tire pressures for cold tires under various operating conditions, i.e. loading and/or speed of the vehicle.

Increased vehicle weight due to optional equipment: the combined weight of all standard and optional equipment available for the vehicle, regardless of whether it is actually installed on the vehicle or not.

Rim: the part of the wheel on which the tire is installed.

GAWR (Gross Axle Weight Rating): the GAWR is the maximum permissible axle load. The actual load on an axle must never exceed the gross axle weight rating. The gross axle weight rating can be found on the vehicle identification plate on the B-pillar on the driver's side.

Speed rating: the speed rating is part of the tire identification. It specifies the speed range for which a tire is approved.

GVW (Gross Vehicle Weight): the gross vehicle weight comprises the weight of the vehicle including fuel, tools, the spare wheel, accessories installed, occupants, luggage and the trailer drawbar noseweight, if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating GVWR as specified on the vehicle identification plate on the B-pillar on the driver's side.

GVWR (Gross Vehicle Weight Rating): the GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, occupants, fuel, luggage and the trailer drawbar noseweight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver's side.

Maximum weight of the laden vehicle: the maximum weight is the sum of the curb weight of the vehicle, the weight of the accessories, the maximum load and the weight of optional equipment installed at the factory.

Kilopascal (kPa): metric unit for tire pressure. 6.9 kPa corresponds to 1 psi. Another unit for tire pressure is bar. 100 kilopascal (kPa) equals 1 bar.

Load index: in addition to the load-bearing index, the load index may also be imprinted on the side wall of the tire. This specifies the load-bearing capacity of the tire more precisely.

Curb weight: the weight of a vehicle with standard equipment including the maximum capacity of fuel, oil and coolant. It also includes the air conditioning system and optional equipment if
these are installed on the vehicle, but does not include passengers or luggage.

**Maximum tire load:** the maximum tire load is the maximum permissible weight in kilograms or lbs for which a tire is approved.

**Maximum permissible tire pressure:** maximum permissible tire pressure for one tire.

**Maximum load on one tire:** maximum load on one tire. This is calculated by dividing the maximum axle load of one axle by two.

**PSI (pounds per square inch):** standard unit of measurement for tire pressure.

**Aspect ratio:** ratio between tire height and tire width in percent.

**Tire pressure:** pressure inside the tire applying an outward force to every square inch of the tire. The tire pressure is specified in pounds per square inch (psi), in kilopascals (kPa) or in bar. The tire pressure should only be corrected when the tires are cold.

**Cold tire pressure:** the tires are cold when the vehicle has been parked for at least 3 hours without direct sunlight on the tires or the vehicle has been driven for less than 1 mile (1.6 km).

**Tire contact surface:** the part of the tire that comes into contact with the road.

**Tire bead:** the purpose of the tire bead is to ensure that the tire sits securely on the wheel rim. There are several wire cores in the tire bead to prevent the tire from changing length on the wheel rim.

**Side wall:** the part of the tire between the tread and the tire bead.

**Weight of optional equipment:** the combined weight of the optional equipment weighing more than the replaced standard parts and more than 5 lbs (2.3 kg). This optional equipment, such as high-performance brakes, level control system, a roof luggage rack or high-performance batteries, is not included in the curb weight and the weight of the accessories.

**TIN (Tire Identification Number):** a unique identification number which can be used by a tire manufacturer to identify tires, for example, in a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer’s identity code, tire size, tire type code and the manufacturing date.

**Load-bearing index:** the load-bearing index is a code that contains the maximum load-bearing capacity of a tire.

**Traction:** traction is the grip resulting from friction between the tires and the road surface.

**Wear indicator:** narrow bars (tread wear bars) that are distributed over the tire contact surface. If the tire tread is level with the bars, the wear limit of 1/16 in (1.6 mm) has been reached.

**Distribution of vehicle occupants:** distribution of vehicle occupants over designated seat positions in a vehicle.

**Maximum permissible payload weight:** nominal load and luggage load plus 150 lb (68 kg) multiplied by the number of seats in the vehicle.
Changing a wheel
Notes on selecting, installing and replacing tires

**WARNING** Risk of accident due to incorrect dimensions of wheels and tires

If wheels and tires of the wrong size are installed, the wheel brakes or wheel suspension components may be damaged.

- Always replace wheels and tires with those that fulfill the specifications of the original part.

When replacing wheels, make sure to fit the correct:
- Designation
- Model

When replacing tires, make sure to install the correct:
- Designation
- Manufacturer
- Model

**WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.
- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

**NOTE** Vehicle and tire damage through tire types and sizes that have not been approved

For safety reasons, only use tires, wheels and accessories which have been specially approved by Mercedes-Benz for your vehicle. These tires are specially adapted to the control systems, such as ABS, ESP® and 4MATIC, and marked as follows:
- MO = Mercedes-Benz Original
- MO1 = Mercedes-Benz Original (only certain AMG tires)
- MOE = Mercedes-Benz Original Extended (run-flat tire only for certain wheels)

Certain characteristics, such as handling, vehicle noise emissions, consumption, etc. may otherwise be adversely affected. Furthermore, other tire sizes could result in the tires rubbing against the body and axle components when loaded. This could result in damage to the tire or the vehicle.

Only use tires, wheels and accessories that have been checked and recommended by Mercedes-Benz.

**NOTE** Risk to driving safety from retreaded tires

Retreaded tires are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tires.

For this reason driving safety cannot be guaranteed.
Do not use used tires if you have no information about their previous usage.

**NOTE** Possible damage to wheels or tires when driving over obstacles

Large wheels have a lower tire section width. The lower the tire section width, the greater is the risk of damage to wheels or tires when driving over obstacles.

- Avoid obstacles or drive particularly carefully.

**NOTE** Possible wheel and tire damage when parking on curbs or in potholes

Parking on curbs or in potholes may damage the wheels and tires.

- If possible, park only on flat surfaces.
- Avoid curbs and potholes when parking.

**NOTE** Damage to electronic component parts from the use of tire-mounting tools

*Vehicles with a tire pressure monitoring system*: Electronic component parts are located in the wheel. Tire-mounting tools should not be used in the area of the valve. This could otherwise damage the electronic component parts.

- Have the tires changed at a qualified specialist workshop only.

**NOTE** Damage to summer tires at low ambient temperatures

At low ambient temperatures, tears could form when driving with summer tires, causing permanent damage to the tires.

- At temperatures below 45 °F (7 °C), use M+S tires.

Accessory parts that are not approved for your vehicle by Mercedes-Benz or are not being used correctly can impair the operating safety.

---

Before purchasing and using non-approved accessories, visit a qualified specialist workshop and inquire about:

- Suitability
- Legal stipulations
- Factory recommendations

**WARNING** Risk of accident with high performance tires

There is an increased risk of skidding and hydroplaning when using sport tires on wet roads.

In addition, the tire grip is greatly reduced at a low outside temperature and tire running temperature.

- Activate ESP® and adapt your driving style accordingly.
- Use M+S tires at outside temperatures below 50 °F (10 °C).
- Only use the tires for their intended purpose.
Observe the following when selecting, installing and replacing tires:

- Furthermore, the use of certain tire types in certain regions and areas of operation can be highly beneficial.
- Only use tires and wheels of the same type (summer tires, winter tires, MOExtended tires) and the same make.
- Only install wheels of the same size on one axle (left and right). It is only permissible to install a different wheel size in the event of a flat tire in order to drive to the specialist workshop.
- **Vehicles with a tire pressure monitoring system:** All installed wheels must be equipped with functioning sensors for the tire pressure monitoring system.
- At temperatures below 45°F (7°C) use winter tires or all-season tires marked M+S for all wheels.
- Winter tires bearing the snowflake symbol in addition to the M+S marking provide the best possible grip in wintry road conditions.
- For M+S tires, only use tires with the same tread.
- Observe the maximum permissible speed for the M+S tires installed. If the tire’s maximum speed is below that of the vehicle, this must be indicated by an appropriate label in the driver’s field of vision.
- Break in new tires at moderate speeds for the first 60 miles (100 km).
- Replace the tires after six years at the latest, regardless of wear.
- **When replacing with tires that do not feature run-flat characteristics:** vehicles with MOExtended tires are not equipped with a TIREFIT kit at the factory. Equip the vehicle with a TIREFIT kit after replacing with tires that do not feature run-flat characteristics, e.g. winter tires.

For more information on wheels and tires, contact a qualified specialist workshop.

Be sure to also observe the following further related subjects:

- Notes on tire pressure (→ page 288)
- Tire and Loading Information placard (→ page 293)
- Tire size designation, load-bearing capacity, speed rating and load index (→ page 301)
- Tire pressure table (→ page 290)
- Notes on the emergency spare wheel (→ page 315)

⚠️ **WARNING** Risk of accident caused by non-approved tire types

If you use tire types that have not been adapted to changes made to the factory speed limit, this can have the following consequences:

- The tires are not suitable for high speeds and the corresponding driving dynamics.
- The tires wear unevenly and affect the roadworthiness of the vehicle.
ABS, ESP® and cruise control operation are restricted.
This can jeopardize road safety.
Only use tire types that have been approved for the maximum permissible speed set and the vehicle.

Notes on rotating wheels

**WARNING** Risk of injury through different wheel sizes
Rotating the front and rear wheels can severely impair the driving characteristics. The wheel brakes or suspension components may also be damaged.

- Rotate front and rear wheels only if the wheels and tires are of the same dimensions.

The wear patterns on the front and rear wheels differ:
- Front wheels wear more on the tire shoulder
- Rear wheels wear more in the center of the tire

Do not drive with tires that have too little tread depth. This significantly reduces traction on wet roads (hydroplaning).

On vehicles that have the same size front and rear wheels, rotate the wheels according to the intervals in the tire manufacturer's warranty book in your vehicle documents. If this is not available, rotate the tires every 3000 to 6000 miles (5000 to 10,000 km), depending on the wear. Ensure that the direction of rotation is maintained.

Observe the instructions and safety notes on "Changing a wheel" when doing so (→ page 310).

Notes on storing wheels
When storing wheels, observe the following notes:
- After removing wheels, store them in a cool, dry and preferably dark place.
- Protect the tires from contact with oil, grease or fuel.

Overview of the tire-change tool kit
Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

Required tire-changing tools may include, for example:
- Jack
- Chock
- Lug wrench
- Alignment bolt
Preparing the vehicle for a wheel change

Requirements:
- The required tire-change tool kit is available. If your vehicle is not equipped with the tire-change tool kit, consult a qualified specialist workshop to find out about suitable tools.
- The vehicle is not on a slope.
- The vehicle is on solid, non-slippery and level ground.

- Apply the electric parking brake manually.
- Move the front wheels to the straight-ahead position.
- Shift the transmission to position P.
- Switch off the engine.
- Make sure that the engine cannot be started.
- Place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.
- If necessary, remove the hub cap cover (→ page 310).
- Raise the vehicle (→ page 311).

Installing/removing plastic hub caps

Removing

- Remove socket 2 and lug wrench 3 from the vehicle tool kit (→ page 309).
- Position socket 2 on hub cap 1.
- Position wheel wrench 3 on socket 2.
- Using wheel wrench 3, turn hub cap 1 counter-clockwise and remove it.

Installing

- Before installing, check hub cap 1 and the wheel area for dirt, and clean if necessary.
Position hub cap  ➤ and turn until it is in the right position.
Position socket  ➤ on hub cap  ➤ .
Position lug wrench  ➤ on socket  ➤ and tighten hub cap  ➤ .

**Specified tightening torque:** 18 lb-ft (25 Nm).

### Raising the vehicle when changing a wheel

**Requirements:**
- There are no persons in the vehicle.
- The vehicle has been prepared for a wheel change (→ page 310).

**Important notes on using the jack:**
- Use only a vehicle-specific jack that has been approved by Mercedes-Benz to raise the vehicle.
- The jack is only designed for raising and holding the vehicle for a short time while a wheel is being changed and not for maintenance work under the vehicle.
- The jack must be placed on a firm, flat and non-slip surface. If necessary, use a large, flat, load-bearing, non-slip underlay.
- The jack must be positioned so that the direction of the lifting force is always vertical.

**Rules of conduct when the vehicle is raised:**
- Never place your hands or feet under the vehicle.
- Never lie under the vehicle.
- Do not start the engine and do not release the electric parking brake.
- Do not open or close any doors or the tailgate.
Position of jack support points

**WARNING** Risk of injury through incorrect positioning of the jack

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip over with the vehicle raised.

- Only position the jack at the appropriate jacking point of the vehicle.
- Position the jack so that the direction of the lifting force is always vertical.

**NOTE** Vehicle damage from the jack

If you do not position the jack correctly at the appropriate jack support point of the vehicle, the jack could tip over with the vehicle raised.

- The jack is designed exclusively for jacking up the vehicle at the jack support points.

**NOTE** Vehicle damage from the jack

If you do not position the jack correctly at the appropriate jacks support point of the vehicle, the jack could tip over with the vehicle raised.

- The jack is designed exclusively for jacking up the vehicle at the jack support point.

**Removing a wheel**

Requirements:
- The vehicle is raised (→ page 311).

**Vehicles with AMG ceramic high-performance composite braking system:**

- Position support 2 of jack 3 on jack support point 1.
- Raise until jack support 2 sits completely on jack support point 1 and the base of the jack lies evenly on the ground.
- Raise until the tire is raised a maximum of 1.2 in (3 cm) from the ground.
- Loosen and remove the wheel (→ page 312).

**Mercedes-AMG vehicles with ceramic brake disks:** during removal and repositioning of the wheel, the wheel rim may strike the ceramic brake disk and damage it.
Take particular care.

Ask another person for assistance or use a second centering pin.

When changing a wheel, avoid applying any force to the brake discs, since this could impair the level of comfort when braking.

**NOTE** Damage to threading from dirt on wheel bolts

Do not place wheel bolts in sand or on a dirty surface.

Unscrew the uppermost wheel bolt completely.

Unscrew the remaining wheel bolts completely.

Remove the wheel.

Install the new wheel (→ page 313).

---

**WARNING** Risk of accident from losing a wheel

Oiled, greased or damaged wheel bolt/wheel nut threads or wheel hub/wheel mounting bolt threads can cause the wheel bolts/wheel nuts to come loose.

As a result, you could lose a wheel while driving.

Never oil or grease the threads.

In the event of damage to the threads, contact a qualified specialist workshop immediately.

Have the damaged wheel bolts or damaged hub threads replaced.

Do not continue driving.

Unscrew alignment bolt 1 into the thread instead of the wheel bolt.

Install the new wheel (→ page 313).

---

**Installing a new wheel**

**Requirements:**
- The wheel is removed (→ page 312).

---

For tires with a specified direction of rotation, an arrow on the side wall of the tire indicates the correct direction of rotation. Observe the direction of rotation when installing.
NOTE Damage to the ceramic brake disk when changing a wheel

Mercedes-AMG vehicles with ceramic brake disks: during removal and repositioning of the wheel, the wheel rim may strike the ceramic brake disk and damage it.
- Take particular care.
- Ask another person for assistance or use a second centering pin.

Slide the wheel to be mounted onto the alignment bolt and push it on.
- Notes on installing an emergency spare wheel (→ page 315).

WARNING Risk of injury from tightening wheel bolts and nuts
If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip.
- Only tighten wheel bolts or wheel nuts when the vehicle is on the ground.

Be sure to observe the instructions and safety notes on "Changing a wheel" (→ page 306).
- For safety reasons, only use wheel bolts which have been approved by Mercedes-Benz and for the wheel in question.

NOTE Damage to paintwork of the wheel rim when screwing on the first wheel bolt
If the wheel has too much play when screwing in the first wheel bolt, the wheel rim paint can be damaged.
- Press the wheel firmly against the wheel hub when screwing on the first wheel bolt.

Tighten the wheel bolts evenly in a diagonal pattern in the order indicated until they are finger-tight.
- Unscrew and remove the alignment bolt.
- Tighten the last wheel bolt until it is finger-tight.
- Lower the vehicle (→ page 314).

Lowering the vehicle after a wheel change
Requirements:
- The new wheel has been installed (→ page 313).
- To lower the vehicle: turn the crank of the jack counter-clockwise until the vehicle is once again standing firmly on the ground.

Tighten the wheel bolts evenly in a diagonal pattern in the order indicated ① to ⑤ with an initial maximum force of 59 lb-ft (80 Nm).
- Tighten the wheel bolts evenly in a diagonal pattern in the order indicated ① to ⑤ to
the specified tightening torque of 133 lb-ft (180 Nm).

**WARNING** Risk of accident due to incorrect tightening torque

The wheels could come loose if the wheel bolts or wheel nuts are not tightened to the prescribed torque.

- Ensure that the wheel bolts or wheel nuts are tightened to the prescribed tightening torque.
- If you are not sure, do not move the vehicle. Contact a qualified specialist workshop and have the tightening torque checked immediately.

- Check the tire pressure of the newly installed wheel and adjust it if necessary.

**Vehicles with a tire pressure monitoring system:** Restart the tire pressure monitoring system (→ page 293).

**Exception:** the new wheel is an emergency spare wheel.

---

**Emergency spare wheel**

**Notes on the emergency spare wheel**

**WARNING** Risk of accident caused by incorrect wheel and tire dimensions

The wheel or tire size and the tire type of the emergency spare wheel or spare wheel and the wheel to be replaced may differ. The emergency spare wheel or spare wheel can significantly impair driving characteristics of the vehicle.

To prevent hazardous situations:

- Adapt your driving style accordingly and drive carefully.
- Never install more than one emergency spare wheel or spare wheel that differs in size.
- Only use an emergency spare wheel or spare wheel of a different size briefly.
- Do not switch off ESP®.
- Have the emergency spare wheel or spare wheel of a different size replaced at the nearest qualified specialist work-

shop. The new wheel must have the correct dimensions.

---

Observe the following notes on installing an emergency spare wheel:

- Check the tire pressure of the emergency spare wheel installed. Correct the pressure as necessary.
- The maximum permissible speed with an emergency spare wheel installed is 50 mph (80 km/h).
- Do not install the emergency spare wheel with snow chains.
- Replace the emergency spare wheel after six years at the latest, regardless of wear.

**Vehicles with a tire pressure monitoring system:** If an emergency spare wheel is installed the tire pressure monitoring system cannot function reliably. For a few minutes after an emergency spare wheel is installed, the system may still display the tire pressure of the removed wheel. Only restart the system again when the emergency spare wheel has been replaced with a new wheel.
Be sure to also observe the following further related subjects:

Notes on technical data

The data stated only applies to vehicles with standard equipment. You can obtain further information from an authorized Mercedes-Benz Center.

Radio operating permits for vehicle components

Manufacturer information about radio-based vehicle components can be found using the key word “Radio operating permits” in the Digital Operator’s Manual in the vehicle, on the Internet and in the app.
Vehicle identification plate (Canada only)
1 Maximum permissible gross vehicle weight
2 Maximum permissible front axle load
3 Maximum permissible rear axle load
4 Paint code
5 VIN (vehicle identification number)

The maximum permissible gross vehicle weight is made up of the vehicle weight, all vehicle occupants, the fuel and the load. The maximum gross axle weight rating is the maximum weight that can be carried on one axle (front or rear axle).

Do not exceed the maximum gross vehicle weight or the maximum gross axle weight rating for the front or rear axle.

VIN below right-hand front seat
1 Imprinted VIN (vehicle identification number)
2 Floor covering

VIN at the lower edge of the windshield
1 VIN (vehicle identification number) as label
Additional plates

1 Plate with information about emissions testing, including confirmation of emissions guidelines at the U.S. federal level as well as for California
2 Engine number stamped into the crankcase
3 VIN (vehicle identification number) as a label at the lower edge of the windshield

Operating fluids

Notes on operating fluids

**WARNING** Risk of injury from operating fluids harmful to your health

Operating fluids may be poisonous and harmful to your health.
- Observe the text on the original containers when using, storing or disposing of operating fluids.
- Always store operating fluids sealed in their original containers.
- Always keep children away from operating fluids.

**ENVIRONMENTAL NOTE** Environmental pollution caused by environmentally irresponsible disposal

- Dispose of operating fluids in an environmentally responsible manner.

Operating fluids include the following:
- Fuels
- Lubricants
- Coolant
- Brake fluid
- Windshield washer fluid
- Climate control system refrigerant

Only use products approved by Mercedes-Benz. Damage caused by the use of products that have not been approved is not covered by the Mercedes-Benz warranty or goodwill gestures.

The operating fluids approved by Mercedes-Benz can be identified by the following inscriptions on the container:
- MB-Freigabe (e.g. MB-Freigabe 229.51)
- MB-Approval (e.g. MB-Approval 229.51)

Further information on approved operating fluids:
- In the Mercedes-Benz Specifications for Operating Fluids by entering the designation
  - At https://bevo.mercedes-benz.com
If you or other people come into contact with fuel, observe the following:

- Immediately rinse fuel off your skin with soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical attention immediately.
- If you swallow fuel, seek medical attention immediately. Do not induce vomiting.
- Change immediately out of clothing that has come into contact with fuel.

**Fuel**

**Notes on fuel grade**

Observe the notes on operating fluids (→ page 319).

**WARNING Risk of fire or explosion from fuel**

Fuels are highly flammable.
- Fire, open flames, smoking and creation of sparks must be avoided.
- Switch off the ignition and, if available, the stationary heater, before and while refueling the vehicle.

**WARNING Risk of injury from fuels**

Fuels are poisonous and hazardous to your health.
- Do not swallow fuel or let it come into contact with skin, eyes or clothing.
- Do not inhale fuel vapor.
- Keep children away from fuel.
- Keep doors and windows closed during the refueling process.

**NOTE**

- Small amounts of the wrong fuel may cause damage to the fuel system, engine and emission control system.
- Never under any circumstances refuel with any of the following fuels:
  - Diesel
  - Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100
  - Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
  - Gasoline with additives containing metal

If you have refueled with the wrong fuel:
- Do not switch the ignition on.
- Consult a qualified specialist workshop.

If the available fuel is not sufficiently low in sulfur, this can produce unpleasant odors.

Refuel only with low-sulfur spark-ignition engine fuel.
This fuel may contain up to 10% ethanol by volume. Your vehicle is suitable for use with E10 fuel.

The recommended octane number for your vehicle can also be found on the information label in the fuel filler flap.

Only refuel using unleaded premium grade gasoline with at least 91 AKI/95 RON.

As a temporary measure, if the recommended fuel is not available, you may also use unleaded regular gasoline which has at least the octane number specified in the instruction label in the fuel filler flap. Otherwise engine output can be reduced and fuel consumption increased.

Never refuel using gasoline with a lower RON.

**NOTE** Premature wear through unleaded regular gasoline

Unleaded regular gasoline can cause the engine to wear more quickly and impair longevity and performance.

If unleaded premium grade gasoline is unavailable and you have to refuel using unleaded regular gasoline:

- Only fill the fuel tank to half full with unleaded regular gasoline and refill as soon as possible with unleaded premium grade gasoline.
- Do not drive at the maximum design speed.
- Avoid sudden acceleration engine speeds over 3000 rpm.

Further information on fuel is available at the following locations:
- At a gas station
- At a qualified specialist workshop
- On the https://www.mbusa.com (USA only)

**Notes on additives in gasoline**

Observe the notes on operating fluids (→ page 319).

**NOTE** Damage from use of unsuitable additives

Even small amounts of the wrong additive may lead to malfunctions occurring.

- Only add cleaning additives recommended by Mercedes-Benz to the fuel.

Mercedes-Benz recommends that you use brand-name fuels with additives.

In some countries, the fuel available may not have sufficient additives. Residue could build up in the fuel injection system as a result. In this case, in consultation with an authorized Mercedes-Benz Center, mix the fuel with the cleaning additive recommended by Mercedes-Benz. Observe the notes and mixing ratios indicated on the tank.

**Tank content and reserve fuel**

The total capacity of the fuel tank may vary, depending on the vehicle equipment.

* Recommended for lowest possible fuel consumption (lowest SAE viscosity class in each case; observe possible restrictions of the approved SAE viscosity classes).

To achieve the lowest possible fuel consumption, it is recommended to use the engine oil specifications marked in the table for the lowest SAE viscosity class. Possible restrictions of the approved SAE viscosity classes must be observed.

Only use SAE 0W-40 or SAE 5W-40 viscosity class engine oils.

**NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives

- Do not use engine oils or oil filters other than those which meet the specifications necessary for the prescribed service intervals.
- Do not alter the engine oil or oil filter in order to achieve longer change intervals than prescribed.
- Do not use additives.
- Have the engine oil changed after the prescribed intervals.

Mercedes-Benz recommends that you have the oil change carried out at a qualified specialist workshop.

**Notes on brake fluid**

Observe the notes on operating fluids (→ page 319).

⚠️ **WARNING** Risk of an accident due to vapor pockets forming in the brake system

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point is too low, vapor pockets may form in the brake system when the brakes are applied hard. This causes the braking effect to be impaired.

- Have the brake fluid renewed at the specified intervals.
- Have the brake fluid regularly replaced at a qualified specialist workshop. Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.
- Have the brake fluid renewed at the specified intervals.
- Have the brake fluid regularly replaced at a qualified specialist workshop. Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.

**Coolant**

**Notes on coolant**

Observe the notes on operating fluids (→ page 319).

⚠️ **WARNING** - Risk of fire and injury from antifreeze

If antifreeze comes into contact with hot component parts in the engine compartment, it may ignite.

- Allow the engine to cool down before adding antifreeze.
- Make sure that no antifreeze spills out next to the filler opening.
- Thoroughly clean off any antifreeze from component parts before starting the vehicle.

⚠️ **NOTE** Damage caused by incorrect coolant

- Only use coolant that has been pre-mixed with the required antifreeze protection.

Information on coolant is available at the following locations:

- In the Mercedes-Benz Specifications for Operating Fluids 310.1
- At https://bevo.mercedes-benz.com
- In the Mercedes-Benz BeVo app
- At a qualified specialist workshop

⚠️ **NOTE** Overheating at high outside temperatures

If an inappropriate coolant is used, the engine cooling system is not sufficiently pro-
tected against overheating and corrosion at high outside temperatures.

- Always use coolant approved by Mercedes-Benz.
- Observe the instructions in the Mercedes-Benz Specifications for Operating Fluids 310.1.

Have the coolant regularly replaced at a qualified specialist workshop.

Proportion of antifreeze concentrate in the engine cooling system:
- A minimum of 50% (antifreeze protection down to approximately -35°F (-37°C))
- A maximum of 55% (antifreeze protection down to -49°F (-45°C))

**Notes on windshield washer fluid**

Observe the notes on operating fluids → page 319.

**WARNING - Risk of fire and injury from windshield washer concentrate**

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.

Make sure that no windshield washer concentrate spills out next to the filler opening.

**NOTE** Damage to the exterior lighting due to unsuitable windshield washer fluid

Unsuitable windshield washer fluid may damage the plastic surface of the exterior lighting.

- Only use windshield washer fluid which is also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.

**NOTE** Blocked spray nozzles caused by mixing windshield washer fluids

- Do not mix MB SummerFit and MB WinterFit with other windshield washer fluids.

Do not use distilled or de-ionized water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windshield washer fluid:
- Above freezing point: e.g. MB SummerFit
- Below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.

Mix washer fluid with windshield washer fluid all year round.

**Refrigerant**

**Notes on refrigerant**

Observe the notes on operating fluids → page 319.
NOTE Damage due to incorrect refrigerant

If a non-approved refrigerant is used, the climate control system may be damaged.
- **USA/China:** Use only R-134a refrigerant.
- **Canada:** Use only R-1234yf refrigerant.

NOTE Damage to the climate control system due to incorrect refrigerant compressor oil

- Only use refrigerant compressor oil that has been approved by Mercedes-Benz.
- Do not mix the approved refrigerant compressor oil with a different refrigerant compressor oil.

Work on the climate control system may be carried out only by a qualified specialist workshop. All applicable regulations, as well as SAE standard J639, must be adhered to.

The information label on the climate control system for the refrigerant type and the refrigerant compressor oil is located on the inside of the hood.

Introduction

Notes about display messages
Display messages appear on the multifunction display.
Display messages with graphic symbols are simplified in the Operator's Manual and may differ from the symbols on the multifunction display. The multifunction display shows high-priority display messages in red. Certain display messages are accompanied by a warning tone.
Please act in accordance with the display messages and follow the additional notes in the Operator's Manual.
For some display messages, a symbol will also be shown:
- Further information
- Hide display message

With the left-hand Touch Control, you can select the respective symbol by swiping to the left or right. Press the symbol to show further information on the media display. Press the symbol to hide the display message.
You can hide low-priority display messages by pressing the button or the left-hand Touch Control. The display messages will then be stored in the message memory.
Rectify the cause of a display message as quickly as possible.
High-priority display messages cannot be hidden. The multifunction display shows these display messages continuously until the cause of the display message has been rectified.

Calling up saved display messages
On-board computer:

If there are no display messages, No Messages will appear on the multifunction display.
- Scroll through the display messages by swiping upwards or downwards on the left-hand Touch Control.
- To exit the message memory: press the button.

### Warning and indicator lamps

**Overview of indicator and warning lamps**

Some systems will perform a self-test when the ignition is switched on. Some indicator and warning lamps may briefly light up or flash. This behavior is non-critical. These indicator and warning lamps indicate a malfunction only if they light up or flash after the engine has been started or during a journey.
Depending on the display setting, the positions of the indicator lamps on the Instrument Display may differ from the example shown.

### Supersport setting

If you select the Supersport display setting, the positions of the indicator lamps on the Instrument Display will change.
