Digital – in the vehicle
Familiarize yourself with the contents of the Operator’s Manual directly via the vehicle’s multimedia system (menu item “Vehicle information”). Start with the quick guide or broaden your knowledge with practical tips.

Vehicle document wallet
Here you can find comprehensive information about operating your vehicle and about services and guarantees in printed form.

Digital – on the Internet
You can find the Operator’s Manual on the Mercedes-Benz homepage.

Digital – as an app
The Mercedes-Benz Guides app is available free-of-charge in familiar app stores.

E-Class Wagon
Operator’s Manual
Mercedes-Benz
Front passenger airbag warning

⚠️ **WARNING** Risk of injury or death if the co-driver airbag is enabled

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the co-driver airbag during an accident. NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the chapter "Children in the vehicle".

Airbag warning sticker for USA and Canada

⚠️ **WARNING AVERTISSEMENT**

As at 02.04.20

Vehicle manufacturer

Mercedes-Benz AG
Mercedesstraße 120
70372 Stuttgart
Germany
Thank you for purchasing a Mercedes-Benz

Before you first drive off, read this Operator’s Manual carefully and familiarize yourself with your vehicle. For your own safety and a longer operating lifespan of the vehicle, follow the instructions and warning notices in this Operator’s Manual. Disregarding them may lead to damage to the vehicle or injury to people.

Damage to the vehicle resulting from the disregard of the instructions is not covered by the Mercedes-Benz Limited Warranty.

The standard equipment and product description of your vehicle may vary and depends on the following factors:
- Model
- Order
- National version
- Availability

Mercedes-Benz reserves the right to introduce changes in the following areas:
- Design
- Equipment
- Technical features

The equipment in your vehicle may therefore differ from that shown in the descriptions and illustrations.

The following documents are integral parts of the vehicle:
- Printed Operator's Manual
- Maintenance Booklet
- Equipment-dependent Supplements

Keep these documents in the vehicle at all times. If you sell the vehicle, always pass all of the documents on to the new owner.

Mercedes-Benz USA, LLC
Mercedes-Benz Canada, Inc.
A Daimler Company

**Index** .................................................. 429
In this Operator’s Manual, you will find the following symbols:

**DANGER** Danger due to not observing the warning notices

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

- Observe the warning notices.

**ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes

Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.

- Observe environmental notes.

**NOTE** Damage to property due to failure to observe notes on material damage

Notes on material damage inform you of risks which may lead to your vehicle being damaged.

- Observe notes on material damage.

These symbols indicate useful instructions or further information that could be helpful to you.

- Instruction

The Digital Operator's Manual describes the functions and operation of the vehicle and the multimedia system.

Select one of the following menu items in the Digital Operator's Manual:

- **Search:** search for keywords in order to find quick answers to questions about the operation of the vehicle.
- **Quick start:** here is where you find the first steps towards setting up your vehicle.
- **Tips:** find information that prepares you for certain everyday situations with your vehicle.
- **Animations:** watch animations of the vehicle functions.
- **Messages:** receive additional information about the messages in the Instrument Display.
- **Bookmarks:** gain access to your personally saved bookmarks.
- **Language:** select the language for the Digital Operator's Manual.

Some sections in the Digital Operator's Manual, e.g. warning notes, can be expanded and collapsed.

**Additional methods of calling up the Digital Operator's Manual:**

**Direct access:** open the required content in the Digital Operator's Manual by pressing and hold-
ing an entry on the tab bar in the multimedia system:

**Instrument Display:** call up brief information as display messages in the instrument cluster

**Voice Control System:** call up via the voice control system

For safety reasons, the Digital Operator's Manual is deactivated while driving.
Protecting the environment

Environmental damage due to operating conditions and personal driving style

The pollutant emission of the vehicle is directly related to the way you operate the vehicle.

Operate your vehicle in an environmentally responsible manner to help protect the environment. Please observe the following recommendations on operating conditions and personal driving style.

Operating conditions:

- Make sure that the tire pressure is correct.
- Do not carry any unnecessary weight (e.g. roof luggage racks once you no longer need them).
- Adhere to the service intervals.
  A regularly serviced vehicle will contribute to environmental protection.

Personal driving style:

- Always have maintenance work carried out at a qualified specialist workshop.
- Do not depress the accelerator pedal when starting the engine.
- Do not warm up the engine while the vehicle is stationary.
- Drive carefully and maintain a suitable distance from the vehicle in front.
- Avoid frequent, sudden acceleration and braking.
- Change gear in good time and use each gear only up to $\frac{3}{5}$ of its maximum engine speed.
- Switch off the engine in stationary traffic, e.g. by using the ECO start/stop function.
- Drive fuel-efficiently. Observe the ECO display for a fuel-efficient driving style.

Environmental issues and recommendations

It is recommended that you re-use or recycle materials instead of just disposing of them.

The relevant environmental guidelines and regulations serve to protect the environment and must be strictly observed.

Genuine Mercedes-Benz parts

Environmental damage due to not using recycled reconditioned components

Mercedes-Benz AG offers recycled reconditioned components and parts with the same quality as new parts. The same entitlement from the Limited Warranty is valid as for new parts.

- Use recycled reconditioned components and parts from Mercedes-Benz AG.
NOTE Impairment of the operating efficiency of the restraint systems from installing accessory parts or from repairs or welding

Airbags and Emergency Tensioning Devices, as well as control units and sensors for the restraint systems, may be installed in the following areas of your vehicle:

- Doors
- Door pillars
- Door sills
- Seats
- Cockpit
- Instrument cluster
- Center console
- Lateral roof frame

Do not install accessory parts such as audio systems in these areas.

Do not carry out repairs or welding.

Have aftermarket installation of accessories carried out at a qualified specialist workshop.

You could jeopardize the operating safety of your vehicle if you use parts, tires and wheels as well as accessories relevant to safety which have not been approved by Mercedes-Benz. Safety-relevant systems, e.g. the brake system, may malfunction. Only use Mercedes-Benz Genuine Parts or parts of equal quality. Only use tires, wheels and accessories that have been specifically approved for your vehicle model.

Mercedes-Benz Genuine Parts are subject to strict quality inspections. Each part has been specially developed, manufactured or selected for Mercedes-Benz vehicles and adapted to them. Therefore, only Mercedes-Benz Genuine Parts should be used.

More than 300,000 different Mercedes-Benz Genuine Parts are available for Mercedes-Benz models.

All authorized Mercedes-Benz Centers maintain a supply of Mercedes-Benz Genuine Parts for necessary service and repair work. In addition, strategically located parts delivery centers provide for quick and reliable parts service.

Always specify the vehicle identification number (VIN) (→ page 354) when ordering Mercedes-Benz Genuine Parts.

Operator’s Manual

This Operator’s Manual describes all models and all standard and optional equipment available for your vehicle at the time of this Operator’s Manual going to press. Country-specific differences are possible. Note that your vehicle may not be equipped with all features described. This is also the case for systems and functions relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.

The original purchase agreement for your vehicle contains a list of all of the systems in your vehicle.

Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.
The Operator’s Manual and Maintenance Booklet are important documents and should be kept in the vehicle.

Service and vehicle operation

Vehicle operation outside the USA or Canada

When you are abroad with your vehicle, observe the following points:

- Service points or replacement parts may not be available immediately.
- Unleaded fuel may not be available for vehicles with a catalytic converter. Leaded fuel may cause damage to the catalytic converter.
- The fuel may have an extremely low octane number. Unsuitable fuel can cause engine damage.

Some Mercedes-Benz models are available in Europe through our European Delivery Program. For more information, please consult an authorized Mercedes-Benz service center, or write to one of the following address:

In the USA:
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes-Benz Drive
Sandy Springs, GA 30328

In Canada:
Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

Maintenance

Your customer advisor confirms the service in the service report.

Roadside Assistance

The Mercedes-Benz Roadside Assistance Program offers technical help in the case of a breakdown. Your calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.

1-800-FOR-MERCEdes (1-800-367-6372) (USA)
1-800-387-0100 (Canada)

You can find further information in the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty booklet (Canada). You will find both in the vehicle document wallet.

Change of address or change of ownership

In the event of a change of address, please send us the "Notification of address change" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) on the hotline number 1-800-FOR-MERCEdes (1-800-367-6372) or Customer Service (Canada) on 1-800-387-0100. We can then reach you in a timely fashion, if necessary.

If you sell your Mercedes, please leave all literature in the vehicle so that it is available to the next owner. If you have purchased a used vehicle, please send us the "Notice of Purchase of Used Car" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assist-
Possible danger due to substances hazardous to health

In compliance with Proposition 65 ("Prop65"), the following detachable label has been added to each vehicle sold in California:

**WARNING**
Operating, servicing and maintaining a passenger vehicle, pickup truck, van or off-road motor vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle

---

**Operating safety**

**WARNING** Risk of accident due to malfunctions or system failures

To avoid malfunctions or system failures:
- Always have the prescribed service and maintenance work as well any required repairs carried out at a qualified specialist workshop.

**WARNING** Risk of accident or injury due to incorrect modifications on electronic component parts

Modification of electronic components, their software or wiring could impair their function and/or the function of other networked component parts or safety-relevant systems.

This can endanger the operating safety of the vehicle.
- Never tamper with the wiring and electronic component parts or their software.

---

† You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

Observe the "On-board electronics" section in "Technical data".

**WARNING** Risk of fire due to flammable materials on hot parts of the exhaust system

Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.
- When driving on unpaved roads or off-road, regularly check the vehicle underside.
- Remove trapped plants or other flammable material, in particular.
- If there is damage, consult a qualified specialist workshop immediately.
NOTE Damage to the vehicle due to driving too fast and due to impacts to the vehicle underbody or suspension components

In the following situations, in particular, there is a risk of damage to the vehicle:
- The vehicle becomes grounded, e.g. on a high curb or an unpaved road
- The vehicle is driven too fast over an obstacle, e.g. a curb, speed bump or pothole
- A heavy object strikes the underbody or suspension components

In situations such as these, damage to the body, underbody, suspension components, wheels or tires may not be visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may no longer absorb the resulting force as intended. If the underbody paneling is damaged, flammable materials such as leaves, grass or twigs can collect between the underbody and the underbody paneling. These materials may ignite if they come into contact with hot parts of the exhaust system.

- Have the vehicle checked and repaired immediately at a qualified specialist workshop.
- If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately, while paying attention to road and traffic conditions, and contact a qualified specialist workshop.

Vehicles with a 48 V on-board electrical system (EQ Boost technology)

⚠️ DANGER Risk of fatal injury by touching damaged high-voltage components

Vehicles with a 48 V on-board electrical system contain high voltage components. These components are marked with a high voltage label:

If you modify component parts of these high-voltage components or touch damaged component parts, you may be electrocuted. High voltage components may be damaged in an accident, although the damage may not be visible.

- Never perform modifications to component parts of high-voltage components.
- Never touch damaged component parts of high-voltage components.
- Never touch component parts of high-voltage components after an accident.

Vehicles with a 48 V on-board electrical system contain high voltage components. These components are marked with a high voltage label:
All work on high voltage components must be carried out at a qualified specialist workshop.

Declaration of conformity for wireless vehicle components

USA: "Radio based devices of this vehicle comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) These devices may not cause harmful interference, and 2) These devices must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment."

Canada: "This vehicle contains license-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada’s RSS(s). Operation is subject to the following two conditions: (1) These devices may not cause interference, and (2) These devices must accept any interference, including interference that may cause undesired operation of the device."

Charging unit for wireless charging of mobile phones (WMI)

This equipment complies with the FCC and IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 0 cm (in contact) between the radiator and your body. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

USA: "Wireless charging system for mobile devices (Model: D-WMI2015A): this device complies with Part 18 of the FCC Rules."

The name and address of the responsible party is:
Continental Automotive Systems US Inc.
2400 Executive Hills Drive
Auburn Hills, MI 48326-2980
United States of America

Diagnostics connection

The diagnostics connection is a technical interface in the vehicle. It is used, for example, within the scope of repair and maintenance work or for reading out vehicle data by a specialist workshop. Diagnostic devices should therefore only be connected by a qualified specialist workshop.

WARNING Risk of accident due to connecting devices to the diagnostics connection

If you connect devices to the diagnostics connection of the vehicle, the function of vehicle systems and operating safety may be impaired.
For safety reasons, we recommend that you only use and connect products approved by your authorized Mercedes-Benz Center.

**WARNING** Risk of accident due to objects in the driver’s footwell

Objects in the driver’s footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver’s footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

**NOTE** Battery discharging from using devices connected to the diagnostics connection

Using devices at the diagnostics connection drains the battery.

- Check the charge level of the battery.
- If the charge level is low, charge the battery, e.g. by driving a considerable distance.

Connecting and using another device with the diagnostics connection can have the following effects:

- Malfunctions in the vehicle system
- Permanent damage to vehicle components

Please refer to the warranty terms and conditions for this matter.
Moreover, connecting equipment to the diagnostics connection can lead to emissions monitoring information being reset, for example. This may lead to the vehicle failing to meet the requirements of the next emissions inspection during the main inspection.

Qualified specialist workshop
An authorized Mercedes-Benz Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehicle. This particularly applies to safety-relevant works.

Always have the following work carried out on your vehicle at a qualified specialist workshop:
- Safety-relevant works
- Service and maintenance work
- Repair work
- Modifications as well as installations and conversions
- Work on electronic components

Vehicles with 48 V on-board electrical system (EQ boost technology): work on high voltage components of the 48 V on-board electrical system

Mercedes-Benz recommends an authorized Mercedes-Benz Center.

Correct use of the vehicle
If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.
Observe the following information in particular when driving your vehicle:
- the safety notes in this manual
- technical data for the vehicle
- traffic rules and regulations
- laws and safety standards pertaining to motor vehicles

Notes for persons with electronic medical aids
Mercedes-Benz AG cannot, despite carefully developing vehicle systems, completely rule out the interaction of vehicle systems with electronic medical aids such as cardiac pacemakers.

In addition, there are components installed in the vehicle that, regardless of the operating status of the vehicle, can generate magnetic fields on a par with permanent magnets. These fields can be found, for example, in the area around the multimedia and sound system or also in the area of the seats, depending on the vehicle equipment.

For this reason, the following can occur in isolated cases, depending on the aids used:
- Medical aids malfunctioning
- Adverse health effects

Observe the notes and warnings of the manufacturer of the medical aids; if in doubt, contact the device manufacturer and/or your doctor. If there is continuing uncertainty concerning the possibility of medical aids malfunctioning, Mercedes-Benz
Benz AG recommends using only few electrical vehicle systems and/or maintaining a distance from the components.

Only have repairs and maintenance work in the area of the following components carried out by a qualified specialist workshop:

- Vehicle components carrying live voltage
- Transmission antenna
- Multimedia system and sound system

If you have any queries or suggestions, consult a qualified specialist workshop.

Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and rectified. If the problem is not resolved to your satisfaction, please discuss the problem again with an authorized Mercedes-Benz Center or, if necessary, contact us at one of the following addresses:

In the USA:
Mercedes-Benz USA, LLC
Customer Assistance Center
One Mercedes-Benz Drive
Sandy Springs, GA 30328

In Canada:
Mercedes-Benz Canada, Inc.
Customer Relations Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

Reporting safety defects

USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to the https://www.safercar.gov/; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590; USA.

You can also obtain other information about motor vehicle safety from: https://www.safercar.gov

Canada only:
The following text is published as required of manufacturers under subsection 18.4 (4) of the Motor Vehicle Safety Regulations.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying Mercedes-Benz Canada Inc.

If Transport Canada received similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer or Mercedes-Benz Canada Inc.

To contact Transport Canada, you may call the Defect Investigations and Recalls Division toll-free in Canada at 1-800-333-0510 or 819-994-3328 in the Gatineau-Ottawa area or internationally; you may also go to the following websites for more information:

- English: https://www.tc.gc.ca/recalls
- French: https://www.tc.gc.ca/rappels

### Limited Warranty

**NOTE** Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.

This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

### QR code for rescue card

QR codes are attached in the fuel filler flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle in a compact form, e.g. the routing of the electric lines.

Further information can be obtained at https://www.mercedes-benz.de/qr-code.

### Data storage

#### Data processing in the vehicle

**Electronic control units**

Electronic control units are installed in your vehicle. Control units process data which, for example, they receive from vehicle sensors, generate themselves or exchange between themselves. Some control units are required for the safe operation of your vehicle, some assist you when driving, such as driver assistance systems, while others enable comfort or infotainment functions.

The following provides you with general information regarding data processing in the vehicle. Additional information regarding exactly which data in your vehicle are collected, saved and transmitted to third parties and for what purpose, can be found in the information directly related to the functional characteristics in ques-
tion in their respective operating instructions. This information is also available on line and, depending on the vehicle equipment, digitally.

**Personal data**
Every vehicle is identified by a unique vehicle identification number. Depending on the country, this vehicle identification number can be used by, for example, governmental authorities to determine the identity of the owner. There are other possibilities to use data collected from the vehicle to identify the owner or driver, such as the license plate number.

Therefore, data generated or processed by control units may be attributable to a person or, under certain conditions, become attributable to a person. Depending on which vehicle data are available, it may be possible to make inferences about, for example, your driving behavior, your location, your route or your use patterns.

**Legal requirements regarding the disclosure of data**
If legally required to do so, manufacturers are, in individual cases, legally obliged to provide governmental entities, upon request and to the extent required, data stored by the manufacturer. For example, this may be the case during the investigation of a criminal offense.

Governmental entities are themselves, in individual cases and within the applicable legal framework, authorized to read out data from the vehicle. In the case of an accident, information that can help with an investigation can, therefore, be taken from the airbag control unit, for example.

**Operational data in the vehicle**
This is data regarding the operation of the vehicle, which have been processed by control units. This includes the following data, for example:

- Vehicle status information such as the speed, longitudinal acceleration, lateral acceleration, number of wheel revolutions or the fastened seat belts display
- Ambient conditions, such as temperature, rain sensor or distance sensor

Generally, the use of these data is temporary; they will not be stored beyond the period of operation and will only be processed within the vehicle itself. Control units often contain data memories for vehicle keys, for example. Their use permits the temporary or permanent documentation of technical information about the vehicle’s operating state, component loads, maintenance requirements and technical events or malfunctions.

Depending on the vehicle equipment, the following data are stored:

- Operating status of system components, such as fill levels, tire pressure or battery status
- Malfunctions or faults in important system components, such as lights or brakes
- System reactions in special driving situations, such as airbag deployment or the intervention of stability control systems
- Information on events leading to vehicle damage

In certain cases, it may be required to store data that would have otherwise been used only temporarily. This may be the case if the vehicle has detected a malfunction, for example.
If you use services, such as repair services and maintenance work, stored operational data as well as the vehicle identification number can be read out and used. They can be read out by service network employees, such as workshops and manufacturers or third parties, such as breakdown services. The same is true in the case of warranty claims and quality assurance measures.

In general, the read out is performed via the legally prescribed port for the diagnostics connection in the vehicle. The operational data that are read out document technical states of the vehicle or of individual components and assist in the diagnosis of malfunctions, compliance with warranty obligations and quality improvement. To that end, these data, in particular information about component loads, technical events, malfunctions and other faults may be transmitted along with the vehicle identification number to the manufacturer. Furthermore, the manufacturer is subject to product liability. For this reason the manufacturer also uses operational data from the vehicle, for example, for recalls. These data can also be used to examine the customer’s warranty and guarantee claims.

Fault memories in the vehicle can be reset by a service outlet or at your request as part of repair or maintenance work.

Convenience and infotainment functions
You can store convenience settings and individual settings in the vehicle and change or reset them at any time.

Depending on the vehicle equipment, this includes the following settings, for example:
- Seat and steering wheel positions
- Suspension and climate control settings
- Individual settings, such as interior lighting

Depending on the selected equipment, you can import data into vehicle infotainment functions yourself.

Depending on the vehicle equipment, this includes the following data, for example:
- Multimedia data, such as music, films or photos for playback in an integrated multimedia system
- Address book data for use in connection with an integrated hands-free system or an integrated navigation system
- Entered navigation destinations
- Data about the use of Internet services

These data for convenience and infotainment functions may be saved locally in the vehicle or they may be located on a device which you have connected to the vehicle, such as a smartphone, USB flash drive or MP3 player. If you have entered these data yourself, you can delete them at any time.

This data is transmitted from the vehicle to third parties only at your request. This applies, in particular, when you use online services in accordance with the settings that you have selected.

Smartphone integration (e.g. Android Auto or Apple CarPlay)
If your vehicle is accordingly equipped, you can connect your smartphone or another mobile end device to the vehicle. You can then control them by means of the control elements integrated in the vehicle. Images and audio from the smartphone can be output via the multimedia system.
Certain information is simultaneously transferred to your smartphone. Depending on the type and integration, this includes position data, the day/night mode and other general vehicle statuses. For more information please consult the Operator’s Manual of the vehicle/infotainment system.

This integration allows the use of selected smartphone apps, such as navigation or music player apps. There is no further interaction between the smartphone and the vehicle; in particular, vehicle data is not directly accessible. The type of additional data processing is determined by the provider of the app being used. Which settings you can make, if any, depends on the specific app and the operating system of your smartphone.

### Online services

#### Wireless network connection
If your vehicle has a wireless network connection, it enables data to be exchanged between your vehicle and additional systems. The wireless network connection is made possible by the vehicle's own transmitter and receiver or by a mobile end device that you have brought into the vehicle, for example, a smartphone. Online functions can be used via the wireless network connection. This includes online services and applications/apps provided to you by the manufacturer or by other providers.

**Manufacturer's services**
Regarding the manufacturer's online services, the individual functions are described by the manufacturer in a suitable place, for example, in the Operator's Manual or on the manufacturer's website, where the relevant data protection information is also given. Personal data may be used for the provision of online services. Data are exchanged via a secure connection, such as the manufacturer's designated IT systems. Any personal data which are collected, processed and used, other than for the provision of services, is done so exclusively on the basis of legal permission. This is the case, for example, for a legally prescribed emergency call system, a contractual agreement or when consent has been given.

You can have services and functions, some of which are subject to a fee, activated or deactivated. This excludes legally prescribed functions and services, such as an emergency call system.

**Third party services**
If you use online services from other providers (third parties), these services are the responsibility of the provider in question and subject to that provider's data protection conditions and terms of use. As a general rule, the manufacturer has no influence on the content exchanged.

For this reason, when services are provided by third parties, please ask the service provider in question for information about the type, extent and purpose of the collection and use of personal data.

**Data protection rights**
Depending on your country or the equipment and range of functions of your vehicle as well as the services you use and the services on offer, you are entitled to different data protection rights. Further information on data protection...
and your data protection rights can either be found on the manufacturer's website or you will receive this information as part of the various services and service offers. There you will also find the contact information for the manufacturer and its data protection officers.

At a workshop, for example, with the support of a specialist and possibly for a fee, you can have data read out which is stored only locally in the vehicle.

**MBUX multimedia system/Mercedes me connect**

If the vehicle is equipped with the MBUX multimedia system or Mercedes me connect, additional data about the vehicle's operation, the use of the vehicle in certain situations, and the location of the vehicle may be compiled by the MBUX multimedia system or Mercedes me connect.

For additional information, please refer to the "MBUX multimedia system" section and/or the Mercedes me connect Terms and Conditions.

**Event data recorders**

**USA only:**

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an airbag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating
- Whether or not the driver and front passenger seat belts were buckled/fastened
- How far (if at all) the driver was depressing the accelerator and/or brake pedal and
- How fast the vehicle was traveling

This data can help provide a better understanding of the circumstances in which accidents and injuries occur. NOTE: EDR data is recorded by your vehicle only if a non-trivial crash situation occurs; no data is recorded by the EDR under normal driving conditions and no personal data (e.g. name, gender, age and accident location) is recorded. However, other parties, such as law enforcement, could combine EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties that have the special equipment, such as law enforcement, can read the information by accessing the vehicle or the EDR.

EDR data may be used in civil and criminal matters as a tool in accident reconstruction, accident claims and vehicle safety. Since the Crash Data Retrieval (CDR) tool that is used to extract data from the EDR is commercially available, Mercedes-Benz USA, LLC ("MBUSA") expressly disclaims any and all liability arising from the extraction of this information by unauthorized Mercedes-Benz personnel.
MBUSA will not share EDR data with others without the consent of the vehicle owner or, if the vehicle is leased, without the consent of the lessee. Exceptions to this representation include responses to subpoenas by law enforcement; by federal, state or local government; in connection with or arising out of litigation involving MBUSA or its subsidiaries and affiliates; or, as required by law.

Warning: The EDR is a component of the Restraint System Module. Tampering with, altering, modifying or removing the EDR component may result in a malfunction of the Restraint System Module and other systems.

State laws or regulations regarding EDRs that conflict with federal regulation are pre-empted. This means that in the event of such conflict, the federal regulation governs. As of December 2016, 17 states have enacted laws relating to EDRs.

Copyright
Free and open source software
Information on license for free and open-source software used in your vehicle can be found on the data carrier in your vehicle document wallet and with updates on the following website: https://www.mercedes-benz.com/opensource

Restraint system
Protection provided by the restraint system
The restraint system includes the following components:
- Seat belt system
- Airbags
- Child restraint system
- Child seat securing systems

The restraint system can help prevent the vehicle occupants from coming into contact with parts of the vehicle interior in the event of an accident. In the event of an accident, the restraint system can also reduce the forces to which the vehicle occupants are subjected.

A seat belt can only provide the best level of protection if it is worn correctly. Depending on the detected accident situation, Emergency Tensioning Devices and/or airbags supplement the protection offered by a correctly worn seat belt. Emergency Tensioning Devices and/or airbags are not deployed in every accident.

In order for the restraint system to provide the intended level of protection, each vehicle occupant must observe the following information:
- Fasten seat belts correctly.
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.
- Always secure persons under 5 ft (1.50 m) tall in an additional restraint system suitable for Mercedes-Benz vehicles.

However, no system available today can completely eliminate injuries and fatalities in every accident situation. In particular, the seat belt and airbag generally do not protect against objects penetrating the vehicle from the outside. It is also not possible to completely rule out the risk of injury caused by the airbag deploying.

Reduced restraint system protection

⚠️ WARNING Risk of injury or death due to modifications to the restraint system

Vehicle occupants may no longer be protected as intended if alterations are made to the restraint system.
- Never alter the parts of the restraint system.
- Never tamper with the wiring or any electronic component parts or their software.

If it is necessary to modify the vehicle to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details. USA only: for details, contact our Customer Assistance Center on 1-800-FOR-MERCEdes (1-800-367-6372).

Restraint system functionality

When the ignition is switched on, a self-test is performed, during which the restraint sys-
tem warning lamp lights up. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are then functional.

**Malfunctioning restraint system**

A malfunction has occurred in the restraint system if:

- The restraint system warning lamp does not light up when the ignition is switched on
- The restraint system warning lamp lights up continuously or repeatedly during a journey

**WARNING** Risk of injury due to malfunctions in the restraint system

Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.

- Have the restraint system checked and repaired immediately at a qualified specialist workshop.

**Function of the restraint system in an accident**

How the restraint system works is determined by the severity of the impact detected and the type of accident anticipated:

- Frontal impact
- Rear impact
- Side impact
- Rollover

The activation thresholds for the components of the restraint system are determined based on the evaluation of the sensor values measured at various points in the vehicle. This process is preemptive in nature. The triggering/deployment of the components of the restraint system must take place in good time at the start of the collision.

Factors which can only be seen and measured after a collision has occurred do not play a decisive role in the deployment of an airbag. Nor do they provide an indication of airbag deployment. The vehicle may be deformed significantly without an airbag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of vehicle deceleration is not high. Conversely, an airbag may be deployed even though the vehicle suffers only minor deformation. If very rigid vehicle parts such as longitudinal members are hit, this may result in sufficiently high levels of vehicle deceleration.

Depending on the detected deployment situation, the components of the restraint system can be activated or deployed independently of each other:

- Emergency Tensioning Device: frontal impact, rear impact, side impact, rollover
- Driver's airbag, front passenger airbag: frontal impact
- Knee airbag: frontal impact
- Side airbag: side impact
- Window curtain airbag: side impact, rollover, frontal impact
- PRE-SAFE® Impulse Side: side impact

The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF
indicator lamp is off. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (→ page 46).

**WARNING** Risk of burns from hot air bag components

The air bag parts are hot after an air bag has been deployed.
- Do not touch the air bag parts.
- Have a deployed air bag replaced at a qualified specialist workshop as soon as possible.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident. Take this into account, particularly if an Emergency Tensioning Device is triggered or an airbag deployed.

If the Emergency Tensioning Devices are triggered or an airbag is deployed, you will hear a bang, and a small amount of powder may also be released:
- The bang will not generally affect your hearing.
- In general, the powder released is not hazardous to health but may cause short-term breathing difficulties to persons suffering from asthma or other pulmonary conditions. Provided it is safe to do so, leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Airbags and pyrotechnic Emergency Tensioning Devices contain perchlorate material, which may require special handling or environmental protection measures. National guidelines regarding waste disposal must be observed. In California, see https://dtsc.ca.gov/. Using the search function, you will find information on perchlorate, for example.

---

**Seat belts**

**Protection provided by the seat belt**

Always fasten your seat belt correctly before starting a journey. A seat belt can only provide the best level of protection if it is worn correctly.

**WARNING** Risk of injury or death due to incorrectly fastened seat belt

If the seat belt is not worn correctly, it cannot perform its intended protective function. In addition, an incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction suddenly.

- Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

Always observe the instructions about the correct driver's seat position and adjusting the seat (→ page 90).
In order for the correctly worn seat belt to provide the intended level of protection, each vehicle occupant must observe the following information:

- The seat belt must not be twisted and must fit tightly and snugly across the body.
- The seat belt must be routed across the center of the shoulder and as low down across the hips as possible.
- The shoulder section of the seat belt should not touch your neck nor be routed under your arm or behind your back.
- Avoid wearing bulky clothing, e.g. a winter coat.
- Push the lap belt down as far as possible across your hips and pull tight with the shoulder section of the belt. Never route the lap belt across your abdomen.
- Pregnant women must also take particular care with this.
- Never route the seat belt across sharp, pointed, abrasive or fragile objects.
- Only one person should use each seat belt at any one time. Never allow babies and children to travel sitting on the lap of another vehicle occupant.
- Never secure objects with a seat belt if the seat belt is also being used by one of the vehicle’s occupants. Always observe the instructions for loading the vehicle when securing objects, luggage or loads (→ page 108).
  Also ensure that no objects, e.g. a cushion, are ever placed between a person and the seat.
- The seat belts on the following seats are equipped with a special seat belt retractor:
  - Front passenger seat
  - Rear seats
- The seat belts for the folding bench seat in the cargo compartment are not equipped with a special seat belt retractor.
- Activate or deactivate the special seat belt retractor (→ page 55).

If children are traveling in the vehicle, be sure to observe the instructions and safety notes on "Children in the vehicle" (→ page 51).

**Limitations of the protection provided by the seat belt**

⚠️ **WARNING** Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position. You could slip beneath the seat belt and injure yourself.

- Adjust the seat properly before commencing your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.
**WARNING** Risk of injury or death when additional restraint systems are not used for persons with a smaller stature

Persons under 5 ft (1.50 m) tall cannot wear the seat belt correctly without a suitable additional restraint system.

- Always secure persons under 5 ft (1.50 m) tall in a suitable restraint system.

**WARNING** Danger of injury or death due to blocked seat belt anchorage

The restraint effect of the seat belt is impaired if objects between the front seat and the door are blocking the movable seat belt anchorage on the front seat.

- Before starting a journey, make sure that there are no objects between the front seat and the door.

**WARNING** Risk of injury or death due to damaged or modified seat belts

Seat belts cannot provide protection in the following situations:

- The seat belt is damaged, has been modified, is extremely dirty, bleached or dyed
- The seat belt buckle is damaged or extremely dirty
- Modifications have been made to the Emergency Tensioning Device, seat belt anchorage or seat belt retractor

Seat belts may sustain non-visible damage in an accident, e.g. due to glass splinters.

Modified or damaged seat belts could tear or fail in the event of an accident, for example.

Modified Emergency Tensioning Devices could accidentally trigger or fail to function as intended.

- Never modify the seat belt system, for example the seat belt, seat belt buckle, Emergency Tensioning Device, seat belt anchorage and seat belt retractor.

- Make sure that the seat belts are undamaged, not worn and clean.
- Always have the seat belts checked immediately after an accident at a qualified specialist workshop.

Only use seat belts which have been approved for your vehicle by Mercedes-Benz.

**WARNING** Risk of injury or death from deployed pyrotechnic Emergency Tensioning Devices

Pyrotechnic Emergency Tensioning Devices that have been deployed are no longer operational and are unable to perform their intended protective function.

- Therefore, have deployed pyrotechnic Emergency Tensioning Devices immediately replaced at a qualified specialist workshop.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident.
NOTE Damage caused by trapping the seat belt

If an unused seat belt is not fully retracted, it may become trapped in the door or in the seat mechanism.

Always ensure that an unused seat belt is fully retracted.

Fastening and adjusting seat belts

If the seat belt is pulled quickly or sharply, the seat belt retractor locks. The seat belt strap cannot be pulled out any further.

Always engage seat belt tongue 3 of the seat belt into seat belt buckle 1 of the corresponding seat.

Press and hold the seat belt outlet release and slide seat belt outlet 3 into the desired position.

Let go of the seat belt outlet release and ensure that seat belt outlet 3 locks into position.

Vehicles with automatic front passenger airbag shutoff:

NOTE Deployment of the Emergency Tensioning Device and side air bag when the front passenger seat is unoccupied

If the seat belt tongue is engaged in the seat belt buckle of the unoccupied front passenger seat, the Emergency Tensioning Device and the side air bag may also deploy in the event of an accident along with other systems.

Only one person should use each seat belt at any one time.

Vehicles without automatic front passenger airbag shutoff:

NOTE Deployment of the Emergency Tensioning Device when the front-passenger seat is unoccupied

If the seat belt tongue is engaged in the seat belt buckle of the unoccupied front-passenger seat, the Emergency Tensioning Device and side air bag may also deploy in the event of an accident along with other systems.

Only one person should use each seat belt at any one time.
Device may also deploy in the event of an accident along with other systems.

Only one person should use each seat belt at any one time.

Seat belt adjustment function

Vehicles with PRE-SAFE®: After a front seat belt has been fastened, the automatic seat belt adjustment may apply a certain tightening force. Do not hold the seat belt tightly while it is adjusting.

You can activate and deactivate the seat belt adjustment function using the multimedia system (→ page 41).

Activating/deactivating seat belt adjustment via the multimedia system

Multimedia system:

- ➤ ➤ Settings ➤ Vehicle

- ➤ Activate or deactivate Belt Adjustment.

Releasing seat belts

- Press the release button in the seat belt buckle and guide the seat belt back with the seat belt tongue.

Seat belt warning function for the driver and front passenger

The seat belt warning lamp in the instrument display is a reminder that all vehicle occupants must wear their seat belts correctly.

The seat belt warning lamp lights up for six seconds every time the vehicle is started. In addition, a warning tone may sound.

When the driver’s and front passenger’s doors are closed and the driver and front passenger have fastened their seat belts, the seat belt warning goes out.

In the following cases, the seat belt warning lights up during a journey if:

- The vehicle speed exceeds 15 mph (25 km/h) and the driver’s or front passenger seat belt is not fastened.

- The driver or front passenger unfastens their seat belt while the vehicle is in motion.

Airbags

Overview of airbags

1 Driver’s knee airbag
2 Driver’s airbag
3 Front passenger airbag
4 Front passenger knee airbag
5 Window curtain airbag
6 Side airbag
The installation location of an airbag is identified by the AIRBAG symbol. When enabled, an airbag can provide additional protection for the respective vehicle occupant. Potential protection provided by each airbag:

- Knee airbag: thigh, knee and lower leg
- Driver's airbag, front passenger airbag: head and ribcage
- Side airbag: ribcage, also pelvis for front seat occupants
- Window curtain airbag: head

![NOTE] Mercedes-AMG vehicles

Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

![WARNING] Risk of injury or death if the co-driver airbag is enabled

If the co-driver airbag is enabled, a child on the co-driver seat may be struck by the co-driver airbag during an accident.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 60). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat.

Information on automatic front passenger airbag shutoff

The front passenger airbag can only be deployed in an accident if the PASSENGER AIR BAG OFF indicator lamp is off. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger airbag is correct (→ page 46).

![NOTE] Important points to remember if the front passenger seat is unoccupied

In an accident, the components of the restraint system may deploy unnecessarily on the front passenger side if:

- There are heavy objects on the front passenger seat.
- The seat belt tongue is engaged in the seat belt buckle of the front passenger seat and the front passenger seat is unoccupied.

Stow objects in a suitable place.

Only one person should use each seat belt at any one time.

Depending on the detected accident situation, the window curtain airbag on the front passenger side may deploy. The airbag is deployed regardless of whether the front passenger seat is occupied.
Protective capacity of the airbags

Depending on the accident situation, an airbag may supplement the protection offered by a correctly fastened seat belt.

⚠️ **WARNING** Risk of injury or death due to an incorrect seat position

If you deviate from the correct seat position, the airbag cannot perform its intended protective function.

Each vehicle occupant must make sure of the following:

- Fasten seat belts correctly. Pregnant women must take particular care to ensure that the lap belt never lies across the abdomen.
- Adopt the correct seat position and keep as far away as possible from the airbags.
- Observe the following information.
- Always make sure that there are no objects between the airbag and vehicle occupant.

To avoid the risks resulting from the deployment of an airbag, each vehicle occupant must observe the following information in particular:

- Before starting your journey, adjust your seat correctly; the driver’s seat and front passenger seat should be moved as far back as possible.
  
  When doing so, always observe the information on the correct driver’s seat position (→ page 90).
- Only hold the steering wheel by the steering wheel rim. This allows the airbag to be fully deployed.
- Always lean against the seat backrest when the vehicle is in motion. Do not lean forwards or against the door or side window. You may otherwise be in the deployment area of the airbags.
- The occupants must always keep their feet on the floor. Do not put your feet on the cockpit, for example. Your feet may otherwise be in the deployment area of the airbag.
- If children are traveling in the vehicle, observe the additional notes (→ page 51).
- Always store and secure objects correctly.

Objects in the vehicle interior may prevent an airbag from functioning correctly. Each vehicle occupant must always make sure of the following in particular:

- There are no people, animals or objects between the vehicle occupants and an airbag.
- There are no objects between the seat, door and door pillar (B-pillar).
- There are no hard objects, e.g. coat hangers, hanging on the grab handles or coat hooks.
- There are no accessory parts, such as mobile navigation devices, mobile phones or cup holders, within the deployment area of an airbag, e.g. on the cockpit, on the door, on the side window or on the side trim.

In addition, no connecting cables, tensioning straps or retaining straps must be routed or attached to the vehicle within the deployment area of an airbag. Always comply with the accessory manufacturer's installation instructions and, in particular, the notes on suitable places for installation.
There are no heavy, sharp-edged or fragile objects in the pockets of your clothing. Store such objects in a suitable place.

**Limited protection provided by airbags**

**WARNING** Risk of injury due to modifications to the cover of an airbag
If you modify the cover of an airbag or affix objects such as stickers to it, the airbag may no longer function correctly.

- Never modify the cover of an airbag and do not affix objects to it.

The installation location of an airbag is identified by the AIRBAG symbol (→ page 41).

**WARNING** Risk of injury or death due to the use of unsuitable seat covers
Due to unsuitable seat covers, the airbags cannot protect vehicle occupants as intended.

In addition, the operation of the automatic front passenger airbag shutoff could be restricted.

- You should only use seat covers that have been approved for the corresponding seats by Mercedes-Benz.

**WARNING** Risk of injury due to malfunctioning sensors in the door
The function of the airbags can be impaired due to modifications or incorrect work performed on the doors or door trim, or if the doors are damaged.

- Never modify the doors or parts of the doors.
- Always have work on the doors or door trim carried out at a qualified specialist workshop.

**WARNING** Risk of injury due to deployed airbag
A deployed airbag no longer offers any protection.

Have the vehicle towed to a qualified specialist workshop in order to have the deployed airbag replaced.

### Status of the front passenger front airbag

**Function of the automatic front passenger airbag shutoff**

The automatic front passenger airbag shutoff is able to detect whether the front passenger seat is occupied by a person or a child restraint system. The front passenger airbag and front passenger knee airbag are enabled or disabled accordingly.

**WARNING** Risk of injury or death due to objects under the co-driver seat
Objects trapped under the co-driver seat can interfere with the function of the automatic co-driver airbag shutoff or damage the system.
Do not store any objects under the co-driver seat.

When the co-driver seat is occupied, make sure that no objects are trapped under the co-driver seat.

When installing a child restraint system on the front passenger seat, always make sure of the following:

- Ensure that the child restraint system is positioned correctly (→ page 50).
- Always comply with the child restraint system manufacturer's installation instructions.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Fully retract the seat cushion length adjustment.
- The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- The child restraint system must not touch the roof or be put under strain by the head restraints. Adjust the seat backrest inclination and the head restraint setting accordingly.

WARNING Risk of injury or death due to objects between the seat surface and the child restraint system

Objects between the sitting surface and the child restraint system could affect the function of the automatic co-driver airbag shut-off.

- Do not place any objects between the sitting surface and the child restraint system.
- The entire base of the child restraint system must always rest on the sitting surface of the co-driver seat.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the co-driver seat.
- Always comply with the child restraint system manufacturer's installation instructions.

A person on the front passenger seat must observe the following information:

- Fasten seat belts correctly (→ page 37).
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.

The front passenger airbag may otherwise be disabled by mistake, for example, in the following situations:

- The front passenger transfers their weight by supporting themselves on a vehicle armrest.
- The front passenger sits in such a way that their weight is raised from the sitting surface.
A WARNING Risk of injury or death due to a disabled front passenger airbag

The front passenger airbag is disabled when the PASSENGER AIR BAG OFF indicator lamp is lit.

A person in the front passenger seat could then, for example, come into contact with the vehicle interior, especially if the person is sitting too close to the cockpit.

If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The front passenger seat has been moved as far back as possible.
- The person is seated correctly.

Both before and during the journey, ensure that the status of the front passenger airbag is correct.

If the front passenger seat is occupied, the classification of the person or child restraint system on the front passenger seat takes place after the self-test. The PASSENGER AIR BAG indicator lamps display the status of the front passenger airbag.

Always observe the notes on the function of the PASSENGER AIR BAG indicator lamps (→ page 46).

Function of the PASSENGER AIR BAG indicator lamps

Self-test of automatic front passenger airbag shutoff

When the ignition is switched on, a self-test is performed during which the two PASSENGER AIR BAG ON and OFF indicator lamps light up simultaneously.
The status of the front passenger airbag is displayed via the PASSENGER AIR BAG indicator lamps after the self-test:

- **ON is lit**: the front passenger airbag may deploy during an accident. The indicator lamp goes out after approximately 60 seconds.
- **ON and OFF are not lit**: the front passenger airbag may deploy during an accident.
- **OFF is lit**: the front passenger airbag is disabled. It will then not be deployed in the event of an accident.

If the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp shows the status of the front passenger airbag. The PASSENGER AIR BAG OFF indicator lamp may be lit continuously or be off.

If the PASSENGER AIR BAG OFF indicator lamp and the [ ] restraint system warning lamp light up simultaneously, the front passenger seat may not be used. Also in this case, do not install a child restraint system on the front passenger seat. Have the automatic front passenger airbag shutoff checked and repaired immediately at a qualified specialist workshop.

### Status display

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation.

#### After installing a rearward-facing child restraint system on the front passenger seat: PASSENGER AIR BAG OFF must be lit continuously.

**WARNING** Risk of injury or death when using a rearward-facing child restraint system while the front passenger airbag is enabled

If you secure a child in a rearward-facing child restraint system on the front passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag can deploy in the event of an accident. The child could be struck by the airbag.

Always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 60).

Depending on the child restraint system and the stature of the child, the PASSENGER AIR BAG OFF indicator lamp may be off. In this case, do not install the rearward-facing child restraint system on the front passenger seat.

Instead, install the rearward-facing child restraint system on a suitable rear seat.

**After installing a forward-facing child restraint system on the front passenger seat**: depending on the child restraint system and the stature of the child, PASSENGER AIR BAG OFF may be lit continuously or be off. Always observe the following information.
**WARNING** Risk of injury or death due to incorrect positioning of the forward-facing child restraint system

If you secure a child in a forward-facing child restraint system on the front passenger seat that is positioned too close to the cockpit, in the event of an accident, the child could:

- come into contact with the vehicle interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example
- be struck by the airbag if the PASSENGER AIR BAG OFF indicator lamp is off.

Always move the front passenger seat as far back as possible and fully retract the seat cushion length adjustment. While doing so, always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet. If necessary, adjust the seat belt outlet and the front passenger seat accordingly.

Always comply with the child restraint system manufacturer’s installation instructions.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 60).

**If a person is sitting on the front passenger seat:** PASSENGER AIR BAG OFF may be lit continuously or be off, depending on the person's stature.

A person on the front passenger seat must always observe the following information:

- If the front passenger seat is occupied by an adult or a person with a stature corresponding to that of an adult, the PASSENGER AIR BAG OFF indicator lamp must be off. This indicates that the front passenger airbag is enabled.

  If the PASSENGER AIR BAG OFF indicator lamp is lit continuously, an adult or person with a build corresponding to that of an adult should not use the front passenger seat. Instead, they should use a rear seat.

- If the front passenger seat is occupied by a person of smaller stature (e.g. a teenager or small adult), the PASSENGER AIR BAG OFF indicator lamp either lights up continuously or remains off, depending on the classification.
  - If the PASSENGER AIR BAG OFF indicator lamp is off: move the front passenger seat as far back as possible, or the person of smaller stature should use a rear seat.
  - If the PASSENGER AIR BAG OFF indicator lamp is lit continuously: the person of smaller stature should not use the front passenger seat.
WARNING Risk of injury or death when the PASSENGER AIR BAG OFF indicator lamp is lit

If the PASSENGER AIR BAG OFF indicator lamp remains lit after the self-test, the front passenger airbag is disabled. If the front passenger seat is occupied, always ensure that:
- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The person is seated properly with a correctly fastened seat belt.

Be sure to also observe the following further related subjects:
- Child restraint system on the front passenger seat (→ page 60)

PRE-SAFE® system

PRE-SAFE® (anticipatory occupant protection)

PRE-SAFE® is able to detect certain critical driving situations and implement pre-emptive measures to protect the vehicle occupants. PRE-SAFE® can implement the following measures independently of each other:
- Tightening the seat belts on the driver’s seat and front passenger seat.
- Closing the side windows.
- Vehicles with sliding sunroof: Close the sliding sunroof.
- Vehicles with memory function: Move the front passenger seat to a more favorable seat position.
- Vehicles with multicontour seat: Increase the air pressure in the seat side bolsters of the seat backrest.
- PRE-SAFE® Sound: provided that the multimedia system is switched on, generates a brief noise signal to stimulate the innate protective mechanism of a person’s hearing.

NOTE Damage caused by objects in the footwell or behind the seat

| The automatic adjustment of the seat position may result in damage to the seat and/or the object. |
| Stow objects in a suitable place. |

Reversing the PRE-SAFE® system measures

If an accident did not occur, the pre-emptive measures that were taken are reversed. You will need to perform certain settings yourself.
- If the seat belt pre-tensioning is not reduced, move the seat backrest back slightly. The locking mechanism releases.
Function of PRE-SAFE® PLUS (anticipatory occupant protection plus)

PRE-SAFE® PLUS can detect certain impacts, particularly an imminent rear impact, and take pre-emptive measures to protect the vehicle occupants. These measures cannot necessarily prevent an imminent impact.

PRE-SAFE® PLUS can implement the following measures independently of each other:
- Tightening the seat belts on the driver’s seat and front passenger seat.
- Increasing brake pressure when the vehicle is stationary. This brake application is canceled automatically when the vehicle pulls away.

If an accident did not occur, the pre-emptive measures that were taken are reversed.

System limits
The system will not initiate any action in the following situations:
- When backing up
- When driving
- When entering or exiting a parking space while using Active Parking Assist

Function of PRE-SAFE® Impulse Side
If an imminent side impact is detected, PRE-SAFE® Impulse Side can pre-emptively move the front seat vehicle occupant’s upper body towards the center of the vehicle. It does this by rapidly inflating an air cushion in the outer seat side bolster of the seat backrest on the side on which the impact is anticipated. This increases the distance between the door and the vehicle occupant.

If PRE-SAFE® Impulse Side has been deployed or is faulty, the PRE-SAFE Impulse Side Inoperative see Operator’s Manual (→ page 365) display message appears.

Safely transporting children in the vehicle

Always observe when children are traveling in the vehicle

Be diligent
Bear in mind that negligence when securing a child in the child restraint system may have serious consequences. Always be diligent in securing a child carefully before every journey.

To improve protection for children younger than 12 years old or under 5 ft (1.50 m) in height, Mercedes-Benz recommends you observe the following information:
- Always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle.
- The child restraint system must be appropriate to the age, weight and size of the child.

Also strictly observe the safety notes for the specific situation. In this way you can recognize potential risks and avoid dangers if children are traveling in the vehicle (→ page 51).
The vehicle seat must be suitable for installing a child restraint system.

Accident statistics show that children secured on the rear seats are generally safer than children secured on the front seats. For this reason, Mercedes-Benz strongly advises that you install a child restraint system on a rear seat.

The generic term child restraint system

The generic term child restraint system is used in this Operator’s Manual. A child restraint system is, for example:

- A baby car seat
- A rearward-facing child seat
- A forward-facing child seat
- A child booster seat with a backrest and seat belt guide
  
  Mercedes-Benz recommends using a child booster seat with a backrest.

The child restraint system must be appropriate to the age, weight and size of the child.

Observe laws and legal requirements

Always observe the legal requirements when using a child restraint system in the vehicle.

Observe standards for child restraint systems

All child restraint systems must meet the following standards:

- U.S. Federal Motor Vehicle Safety Standards 213 and 225
- Canadian Motor Vehicle Safety Standards 213 and 210.2

Confirmation that the child restraint system complies with the standards can be found on an instruction label on the child restraint system. This confirmation can also be found in the installation instructions that are included with the child restraint system.

Detecting risks, avoiding danger

Securing systems for child restraint systems in the vehicle

Only use the following securing systems for child restraint systems:

- The LATCH-type (ISOFIX) securing rings
- The vehicle’s seat belt system
- The Top Tether anchorages

Installing a LATCH-type (ISOFIX) child restraint system is favored.

Simply attaching to the securing rings on the vehicle can reduce the risk of installing the child restraint system incorrectly.

When securing a child with the integrated seat belt of the LATCH-type (ISOFIX) child restraint system, always comply with the permissible gross weight for the child and child restraint system (→ page 55).

A booster seat may be necessary to achieve proper seat belt positioning for children over 40 lbs (18 kg) in weight or until they reach a
height where a three-point seat belt can be installed properly without a booster seat. Mercedes-Benz recommends a suitable child booster seat with a backrest and seat belt guide.

**Advantage of a rearward-facing child restraint system**

It is preferable to transport a baby or a small child in a suitable rearward-facing child restraint system. In this case, the child sits in the opposite direction to the direction of travel and faces backwards.

Babies and small children have comparatively weak neck muscles in relation to the size and weight of their head. The risk of injury to the cervical spine during an accident can be reduced in a rearward-facing child restraint system.

### Always secure a child restraint system correctly

**WARNING Risk of injury or death due to incorrect installation of the child restraint system**

The child can then not be protected or restrained as intended.

- Be sure to comply with the manufacturer's installation instructions for the child restraint system and its correct use.
- Make sure that the entire base of the child restraint system always rests on the sitting surface of the seat.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Use child restraint systems only with the original cover designed for them.
- Always replace damaged covers with genuine covers.

### WARNING Risk of injury or death due to unsecured child restraint systems in the vehicle

If the child restraint system is incorrectly installed or not secured, it can come loose. The child restraint system could be flung around and hit vehicle occupants.

- Always install child restraint systems correctly, even when not in use.
- Always comply with the child restraint system manufacturer's installation instructions.

- Always observe the child restraint system manufacturer's installation and operating instructions as well as the vehicle-specific information:
  - Installing the LATCH-type (ISOFIX) child restraint system on the rear seat (→ page 55).
  - Securing the child restraint system with the seat belt on the rear seat (→ page 59).
Securing the child restraint system with the seat belt on the front passenger seat (→ page 61). Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 60).

If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (→ page 46).

- Observe the warning labels in the vehicle interior and on the child restraint system.
- Also secure Top Tether if present.

Do not modify the child restraint system

**WARNING** Risk of injury due to modifications to the child restraint system

The child restraint system can no longer function properly. This poses an increased risk of injury.

- Never modify a child restraint system.

Only affix accessories which have been specially approved for this child restraint system by the child restraint system's manufacturer.

**WARNING** Risk of injury or death caused by the use of damaged child restraint systems

Child restraint systems or their retaining systems that have been subjected to stress in an accident may not be able to perform their intended protective function. It may be the case that the child cannot be properly restrained.

- Always immediately replace child restraint systems that have been damaged or involved in an accident.
- Have the securing systems for the child restraint systems checked at a qualified specialist workshop before installing a child restraint system again.

Only use child restraint systems which are in proper working condition

Avoid direct sunlight

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.

Avoid direct sunlight

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.

Avoid direct sunlight

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.

Avoid direct sunlight

**WARNING** Risk of burns when the child seat is exposed to direct sunlight

If the child restraint system is exposed to direct sunlight or heat, parts could heat up. Children could suffer burns from these parts, particularly on the metallic parts of the child restraint system.

- Always make sure that the child restraint system is not exposed to direct sunlight.
- Protect the child restraint system, e.g. with a blanket.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child in it.
- Never leave children unattended in the vehicle.
Observe when stopping or parking

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.
- Never leave children unattended in the vehicle.

**WARNING** Danger to life due to exposure to extreme heat or cold in the vehicle

If people, particularly children, are exposed to extreme temperatures over an extended period of time, there is a risk of serious injury or danger to life.
- Never leave persons, children in particular, unattended in the vehicle.

**Overview of suitable seats in the vehicle for installing a child restraint system**

**Left/right rear seat**
Preferred securing system:
- LATCH-type (ISOFIX) child seat anchor

**Front passenger seat**
Securing system:
- Vehicle seat belt

Be sure to observe:
- If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger airbag is correct for the current situation (→ page 46).
- Observe the notes on automatic front passenger airbag shutoff (→ page 44)

**Center rear seat**
Securing system:
- Vehicle seat belt
- Also secure Top Tether if present (→ page 57).
Activating or deactivating the special seal belt retractor of the seat belt

**WARNING** Risk of injury or death if a seat belt is unfastened while the vehicle is in motion

If the seat belt is released while the vehicle is in motion, the child safety lock is deactivated and the child restraint system is no longer correctly secured. The seat belt is drawn in slightly by the inertia reel and cannot be immediately closed again.

- Stop the vehicle immediately in accordance with the traffic conditions.
- Activate the special seal belt retractor again and correctly secure the child restraint system.

When enabled, the special seal belt retractor ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured.

The seat belts on the following seats are equipped with a special seal belt retractor:
- Front passenger seat
- Rear seats

- **To install a child restraint system:** when installing a child restraint system, always observe the manufacturer’s installation and operating instructions as well as the information in this Operator’s Manual.
  - Pull the seat belt smoothly from the seat belt outlet.
  - Engage the seat belt tongue in the seat belt buckle.
- **To activate the special seal belt retractor:** pull the seat belt out fully and let the inertia reel retract it again. When the special seal belt retractor is activated, you will hear a ratcheting sound.
  - Push the child restraint system down until the seat belt sits tightly.
- **To deactivate the special seal belt retractor:** press the release button of the seat belt buckle.

- Hold the seat belt tongue and guide back to the seat belt outlet.

Installing a LATCH-type (ISOFIX) child restraint system on the rear seat

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the multifunction display on the instrument cluster.

If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

**WARNING** Risk of injury or death if the permissible gross mass of the child and child restraint system is exceeded

The LATCH-type (ISOFIX) child seat securing systems may be overloaded and the child may not be restrained in the event of an accident, for example.

If the child and the child restraint system together weigh more than the permissible gross mass of 73 lb (33 kg), use only a LATCH-type (ISOFIX) child restraint system that secures the child with the vehicle seat belt.

Also secure the child restraint system with the Top Tether belt, if available.

Always comply with the information about the mass of the child restraint system:
- In the manufacturer’s installation and operating instructions for the child restraint system used
- On a label on the child restraint system, if present

Regularly check that the permissible gross mass of the child and child restraint system is still complied with.

When installing a child restraint system, observe the following:
- Always observe the correct use of the seats and consider their suitability for attaching a child restraint system.
- Always comply with the manufacturer's installation and operating instructions for the child restraint system used.

Make sure that the child’s feet do not touch the front seat. If necessary, move the front seat slightly forwards.

When installing a LATCH-type (ISOFIX) child restraint system, also observe the following:

When using a baby car seat in weight group 0/0+ and a rearward-facing child restraint system in weight group I on a rear seat: adjust the front seat so that the seat does not touch the child restraint system.

When using a forward-facing child restraint system in weight group I: remove the head restraint from the respective seat, if possible. In addition, the backrest of the child restraint system must lie as flat as possible against the backrest of the vehicle seat.

After the child restraint system has been removed, replace the head restraints again immediately and adjust them correctly.

If the head restraint of the child seat cannot be fully extended when it is installed in the
vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight group 2 or 3.

Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction. Where possible, adjust the seat cushion inclination accordingly.

The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.

![LATCH-type (ISOFIX) mounting bracket](image)

**1** LATCH-type (ISOFIX) mounting bracket

Before every journey, make sure that the LATCH-type (ISOFIX) child restraint system is engaged correctly in both mounting brackets in the vehicle.

**NOTE** Damage to the seat belt for the center seat during installation of the child restraint system

- Make sure that the seat belt is not trapped.
- Remove and store away covers 1.
- Attach the LATCH-type (ISOFIX) child restraint system to both mounting brackets in the vehicle.
- After removing the child seat, reattach covers 1.

**Securing Top Tether**

**WARNING** Risk of injury or death if the rear seat backrests are not locked after Top Tether belts are installed

The rear seat backrests may fold forwards when you are driving.

As a result, child restraint systems will no longer be able to perform their intended pro-
Occupant safety

- Always lock rear seat backrests after installing Top Tether belts.
- Observe the lock verification indicator.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the multifunction display on the instrument cluster.

If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

- If necessary, slide head restraint 1 upwards (→ page 95).
- Install the LATCH-type (ISOFIX) child restraint system with Top Tether. In doing so, comply with the child restraint system manufacturer's installation instructions.
- Guide Top Tether belt 5 under head restraint 1 between the two head restraint bars.
- Guide Top Tether belt 5 downwards between combined cargo cover and net 3 and seat backrest 2.
- Hook Top Tether hook 6 of Top Tether belt 5 into Top Tether anchorage 4 without twisting.
- Tension Top Tether belt 5. In doing so, comply with the child restraint system manufacturer's installation instructions.
- If necessary, slide head restraint 1 downwards (→ page 95). Make sure that you do not interfere with the correct routing of Top Tether belt 5.

The risk of injury may be reduced by Top Tether. The Top Tether belt enables an additional connection between the child restraint system attached with LATCH-type (ISOFIX) and the vehicle.
Securing the child restraint system with the seat belt

Securing the child restraint system with the seat belt on the rear seat

⚠️ **WARNING** Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.
- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.

Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the multifunction display on the instrument cluster.
If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

When installing a belt-secured child restraint system, observe the following:
- Always comply with the manufacturer’s installation and operating instructions for the child restraint system used.
- **When using a weight category 0/0+ baby car seat and a weight category I rearward-facing child restraint system on a rear seat:** adjust the front seat so that the seat does not touch the child restraint system.
- **When using a weight category I forward-facing child restraint system:** remove the head restraint from the respective seat, if possible.

After the child restraint system has been removed, replace the head restraints again immediately and adjust them correctly.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the rear seat.
- If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight category II or III.
- Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.
- The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction. Where possible, adjust the seat cushion inclination accordingly.
- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
Make sure that the child’s feet do not touch the front seat. If necessary, move the front seat slightly forwards.

The seat belts on the following seats are equipped with a special seat belt retractor:
- Front passenger seat
- Rear seats

The seat belts for the folding bench seat in the cargo compartment are not equipped with a special seat belt retractor.

When enabled, the special seat belt retractor ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured (→ page 55).

Install the child restraint system. The entire base of the child restraint system must always rest on the sitting surface of the rear seat.

Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.

**Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat**

**WARNING** Risk of injury or death when using a rearward-facing child restraint system while the front passenger airbag is enabled

If you secure a child in a rearward-facing child restraint system on the front passenger seat and the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag can deploy in the event of an accident.

The child could be struck by the airbag.

Always ensure that the front passenger airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 61).

Always observe the status of the front passenger airbag on the PASSENGER AIR BAG OFF indicator lamp:

- When using a rearward-facing child restraint system on the front passenger seat, the front passenger airbag must always be disabled. This is only the case if the PASSENGER AIR BAG OFF indicator lamp is lit continuously (→ page 46).
- If the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger airbag is enabled. The front passenger airbag may deploy during an accident.
Securing the child restraint system with the seat belt on the front passenger seat

When installing a belt-secured child restraint system on the front passenger seat, always observe the following:

- Observe the notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 60).
- Observe the child restraint system manufacturer's installation and operating instructions.
- When using a forward-facing child restraint system in weight category I: remove the head restraint from the respective seat, if possible. After the child restraint system has been removed, replace the head restraints again immediately and adjust them correctly.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight category II or III. Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.
- The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing the wrong direction.
- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
- Never place objects (e.g. cushions) under or behind the child restraint system.

The seat belt on the front passenger side is equipped with a special seat belt retractor. When enabled, the special seat belt retractor ensures that the seat belt does not slacken once the child seat is secured (→ page 55).

- Set the front passenger seat as far back as possible and move the seat into the highest position if possible.
- Fully retract the seat cushion length adjustment.
- Adjust the seat cushion inclination so that the front edge of the seat cushion is in the highest position and the back edge of the seat cushion is in the lowest position.
- Set the seat backrest to the most vertical position possible.
- Install the child restraint system. The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.
- Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.
- If necessary, adjust the seat belt outlet and the front passenger seat accordingly.
Child safety locks

Activating or deactivating the child safety lock for the rear doors

**WARNING** Risk of accident and injury due to left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

**WARNING** Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If people – particularly children – are exposed to extreme temperatures over an extended period of time, there is a risk of serious or even fatal injury.
- Never leave anyone – particularly children – unattended in the vehicle.
- Never leave animals in the vehicle unattended.

**WARNING** Risk of accident and injury due to left unattended in the vehicle

If children are traveling in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

- Always activate the child safety locks installed if children are traveling in the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

There are child safety locks for the rear doors and the rear passenger compartment side windows.
The child safety lock on the rear doors secures each door separately. The doors can no longer be opened from the inside.

Press the lever in direction 1 (activate) or 2 (deactivate).

Make sure that the child safety locks are working properly.

Activating or deactivating the child safety lock for the rear side windows

To activate/deactivate: press button 2.

The rear side window can be opened or closed in the following cases:

- Indicator lamp 1 is lit: via the switch on the driver’s door

Vehicles with folding bench seat: the switch for opening the tailgate which is located on the right-hand wheel arch when viewed in the direction of travel is also secured.

Notes on pets in the vehicle

WARNING Risk of accident and injury due to animals left unsecured or unattended in the vehicle

If you leave animals in the vehicle unattended or unsecured, they could possibly press buttons or switches.

An animal may:

- Activate vehicle equipment and become trapped, for example
- Switch systems on or off and endanger other road users
Unsecured animals may be thrown around in the vehicle in the event of an accident or sudden steering and braking maneuvers and injure vehicle occupants in the process.

- Never leave animals in the vehicle unattended.
- Always correctly secure animals while driving, e.g. using a suitable animal carrier.
**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.

## SmartKey

**Overview of SmartKey functions**

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

**NOTE** Damage to the SmartKey caused by magnetic fields

- Keep the SmartKey away from strong magnetic fields.

The SmartKey locks and unlocks the following components:

- The doors
- The fuel filler flap
- The tailgate

If the vehicle is not opened within approximately 40 seconds after unlocking, it locks again. Anti-theft protection is armed again.

Do not keep the SmartKey together with electronic devices or metal objects. This can affect the SmartKey’s functionality.

### Opening and closing

1. Locks
2. Indicator lamp
3. Unlocks
4. Opens/closes the tailgate
5. Panic alarm

If indicator lamp 2 does not light up after pressing the [3] or [5] button, the battery is weak or possibly discharged. Replace the battery as soon as possible.

Replace the SmartKey battery (→ page 67).
Activating/deactivating the acoustic locking verification signal

Multimedia system:
» Settings » Vehicle
» Activate or deactivate Acoustic Lock.

Activating/deactivating the panic alarm

Requirements:
• The ignition is switched off.

To activate:
press button 1 for approximately one second.
A visual and audible alarm is triggered.

To deactivate:
briefly press button 1 again.
or
Press the start/stop button on the cockpit, with the SmartKey inside the vehicle.

Changing the unlocking settings

Possible unlocking functions of the SmartKey:
• Central unlocking
• Unlocking the driver’s door and fuel filler flap

To switch between settings: press the Ú and ß buttons simultaneously for approximately six seconds until the indicator lamp flashes twice.

Options if the unlocking function for the driver’s door and fuel filler flap has been selected:
• To unlock the vehicle centrally: press the Ú button twice.
• Vehicles with KEYLESS-GO: if you touch the inner surface of the door handle on the driver’s door, only the driver’s door and fuel filler flap are unlocked.

Deactivating the SmartKey functions

If you do not use the vehicle or a SmartKey for an extended period of time, you can reduce the energy consumption of the respective SmartKey. To do so, deactivate the SmartKey functions.

To deactivate:
press the ß button on the SmartKey twice in quick succession. The SmartKey indicator lamp flashes twice briefly and lights up once.

To activate:
press any button on the SmartKey.

When the vehicle is started with the SmartKey in the storage compartment of the center console, the SmartKey functions are automatically activated (→ page 153).
Removing/inserting the emergency key

Removing the emergency key

[Image]

1. Press release knob 1.
2. Emergency key 2 is pushed out slightly.
3. Pull out emergency key 2 until it engages in the intermediate position.
4. Press release knob 1 again and fully remove emergency key 2.

Inserting the emergency key

1. Press release knob 1.
2. Insert emergency key 2 to the intermediate position or fully until it engages.
3. You can use the intermediate position of emergency key 2 to attach the SmartKey to a key ring.

Replacing the SmartKey battery

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Serious damage to health caused by swallowing batteries</th>
</tr>
</thead>
<tbody>
<tr>
<td>Batteries contain toxic and corrosive substances. Swallowing batteries may cause serious damage to health.</td>
<td></td>
</tr>
<tr>
<td>There is a risk of fatal injury.</td>
<td></td>
</tr>
<tr>
<td>Keep batteries out of the reach of children.</td>
<td></td>
</tr>
<tr>
<td>If batteries are swallowed, seek medical attention immediately.</td>
<td></td>
</tr>
</tbody>
</table>

Replacing the SmartKey battery

1. Press release knob 1.
2. Insert emergency key 2 to the intermediate position or fully until it engages.

Requirements:

- You require a CR 2032 3 V cell battery.

Mercedes-Benz recommends that you have the battery replaced at a qualified specialist workshop.

ENVIRONMENTAL NOTE

Environmental damage due to improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.
Remove the emergency key (→ page 67).

Press release knob 2 down fully and slide cover 1 in the direction of the arrow.

Fold out cover 1 in the direction of the arrow and remove.

Remove battery compartment 3 and take out the discharged battery.

Insert the new battery into battery compartment 3. Observe the positive pole marking in the battery compartment and on the battery when doing this.

Push in battery compartment 3.

Re-attach cover 1 and push it until it engages.

Problems with the SmartKey

You can no longer lock or unlock the vehicle
Possible causes:
- The SmartKey battery is weak or discharged.
- The SmartKey is faulty.

Check the battery using the indicator lamp (→ page 65).
Replace the SmartKey battery, if necessary (→ page 67).
Use the emergency key to lock or unlock (→ page 71).
Have the SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source
The key function is impaired by, for example:
- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

Make sure that there is a sufficient distance between the SmartKey and the potential source of interference.

You have lost a SmartKey

Have the SmartKey deactivated at a qualified specialist workshop.
If necessary, have the mechanical lock replaced as well.
Doors
Unlocking/opening the doors from the inside

To unlock and open a front door: pull door handle 2. Locking pin 1 pops up when the door is unlocked.

To unlock a rear door: pull the rear door handle. The locking pin pops up when the rear door is unlocked.

To open a rear door: pull the rear door handle again.

Centrally locking and unlocking the vehicle from the inside

To unlock: press button 1.
To lock: press button 2.

This does not lock or unlock the fuel filler flap. The vehicle is not unlocked:
- If you have locked the vehicle using the SmartKey.
- If you have locked the vehicle using KEY-LESS-GO.

Locking/unlocking the vehicle with KEY-LESS-GO

Requirements:
- The SmartKey is outside the vehicle.
- The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The driver’s door and the door at which the door handle is used are closed.
To unlock the vehicle: touch the inner surface of the door handle.

To lock the vehicle: touch sensor surface 1 or 2.

Convenience closing: touch recessed sensor surface 2 until the closing process has been completed.

Further information on convenience closing (→ page 80).

If you open the tailgate from outside, it is automatically unlocked.

Problems with KEYLESS-GO

You can no longer lock or unlock the vehicle using KEYLESS-GO.

Possible causes:
- The SmartKey functions have been deactivated.
- The SmartKey battery is weak or discharged.
- The SmartKey is faulty.

- Activate the key functions (→ page 66).
- Check the battery using the indicator lamp (→ page 65).
- Replace the SmartKey battery, if necessary (→ page 67).
- Use the emergency key to lock or unlock (→ page 71).
- Have the vehicle and SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source

The KEYLESS-GO function is impaired by, for example:
- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

Make sure that there is a sufficient distance between the SmartKey and the potential source of interference.

Activating/deactivating the automatic locking feature

The vehicle is locked automatically when the ignition is switched on and the wheels are turning faster than walking pace.
To activate: press and hold button 2 for approximately five seconds until an acoustic signal sounds.

To deactivate: press and hold button 1 for approximately five seconds until an acoustic signal sounds.

In the following situations, there is a danger of being locked out when the function is activated:
- While the vehicle is being tow started/pushed.
- If the vehicle is being tested on a roller dynamometer.

Power closing function

- **WARNING** Risk of becoming trapped when the doors close automatically
  - Body parts or objects can become trapped, causing injuries.
  - Ensure that no body parts or objects are in the closing area.
  - Automatic closing of the doors can be canceled by pulling the outer or inner door handle.

If you push the door into the lock to the first detent position, the power closing function will automatically pull the door into the lock.

Locking/unlocking the driver's door with the emergency key

If you wish to lock the vehicle entirely using the emergency key, first press the button for locking from the inside while the driver's door is open. Then proceed to lock the driver's door using the emergency key.

Remove the emergency key (→ page 67).
Insert the emergency key as far as it will go into opening 1 in the cover.

Pull and hold the door handle.

Pull the cover on the emergency key as straight as possible away from the vehicle until it releases.

Release the door handle.

To unlock: turn the emergency key counterclockwise to position 1.

To lock: turn the emergency key clockwise to position 1.

Carefully press the cover onto the lock cylinder until it engages and is seated firmly.

**Cargo compartment**

**Opening the tailgate**

⚠️ **DANGER** Risk of exhaust gas poisoning

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.

- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

⚠️ **NOTE** Damage to the tailgate caused by obstacles above the vehicle

The tailgate swings rearwards and upwards when it is opened.

- Make sure that there is sufficient space behind and above the tailgate.

- If the tailgate is unlocked, pull the tailgate handle and release it again immediately.

- **Vehicles with HANDS-FREE ACCESS:** Make a kicking movement with your foot below the bumper (→ page 75).
Pull remote operating switch ① for the tailgate.
Press and hold the button on the SmartKey.
If the tailgate is stopped in an intermediate position, pull it upwards. Release it as soon as it begins to open.

If an obstacle obstructs the tailgate during the automatic opening process, blockage detection will stop the tailgate. The automatic blockage detection function is only an aid. It is not a substitute for your attentiveness.

If the tailgate has been locked from the outside, or the child safety lock has been activated, the tailgate cannot be unlocked from the inside using button ①.

Closing the tailgate

Vehicles with folding bench seat: Pull button ① for the tailgate twice. The tailgate will be unlocked.

Observe the notes on loading the vehicle.

**WARNING** Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

Observethenotesonloadingthevehicle.
Pull the tailgate downwards slightly. Release it as soon as it begins to close.

**WARNING** Risk of becoming trapped during automatic closing of the tailgate

Body parts may become trapped. There may be people in the closing area.

- Make sure that nobody is in the vicinity of the closing area during the closing process.

Use one of the following options to stop the closing process:
- Press the button on the SmartKey.
- Press or pull the remote operating switch on the driver’s door.
- Press the closing or locking button on the tailgate.
- Pull the tailgate handle.

**Vehicles with HANDS-FREE ACCESS:** it is also possible to stop the closing process by making a kicking movement below the rear bumper.

Switch on the power supply or the ignition.
- Press remote operating switch 1 for the tailgate.

Press closing button 1 on the tailgate.

**Vehicles with KEYLESS-GO**
- Press locking button 2 on the tailgate.
  If a SmartKey is detected outside the vehicle, the tailgate will close and the vehicle will be locked.
Press and hold the \[\text{button}\] button on the SmartKey. The SmartKey must be in the vicinity of the vehicle.

**Vehicles with HANDS-FREE ACCESS**

- Make a kicking movement with your foot below the bumper (\(\rightarrow\) page 75).

**Automatic reversing function for the tailgate**
The tailgate is equipped with automatic blockage detection with a reversing function. If an obstacle stops the tailgate during the automatic closing procedure, it will automatically open again. Automatic blockage detection with the reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.

**WARNING** Risk of becoming trapped despite reversing function

The reversing function will not react:

- To soft, light and thin objects, e.g. fingers
- Towards the end of the closing procedure

In these situations in particular, the reversing function cannot prevent someone being trapped.

- Ensure that no body parts are in the closing area.

If someone is trapped, either:

- Press the \[\text{button}\] button on the SmartKey.
- Press or pull the remote operating switch on the driver’s door.
- Press the closing or locking button on the tailgate.
- Pull the tailgate handle.

**HANDS-FREE ACCESS function**

With HANDS-FREE ACCESS you can open, close or stop the closing process of the tailgate by performing a kicking movement under the rear bumper.

The kicking movement triggers the opening or closing process alternately.
Observe the notes when opening (→ page 72) and closing (→ page 73) the tailgate.

Two warning tones sound when the tailgate is opening or closing.

⚠️ **WARNING** Risk of burns caused by a hot exhaust system

The vehicle exhaust system can become very hot. If you use HANDS-FREE ACCESS, you could burn yourself by touching the exhaust system.

- Always ensure that you only make a kicking movement within the detection range of the sensors.

❗️ **NOTE** Vehicle damage due to unintentional opening of the tailgate

- when using an automatic car wash
- when using a high pressure cleaner
- Deactivate KEYLESS-GO or make sure that the key located is at least 10 ft (3 m) away from the vehicle in such situations.

When making the kicking movement, make sure that you are standing firmly on the ground. You could otherwise lose your balance, e.g. on ice. Observe the following notes:

- The SmartKey is behind the vehicle.
- Stand at least 12 in (30 cm) away from the vehicle while performing the kicking movement.
- Do not come into contact with the bumper while making the kicking movement.
- Do not carry out the kicking movement too slowly.
- The kicking movement must be towards the vehicle and back again.

If several consecutive kicking movements are not successful, wait ten seconds.

**System limits**

The system may be impaired or may not function in the following cases:

- The sensors are dirty, e.g. due to road salt or snow.
- The kicking movement is made using a prosthetic leg.
The tailgate can open or close unintentionally in the following situations:

- A person's arms or legs are moving in the sensor detection range, e.g. when polishing the vehicle or picking up objects.
- Objects are moved or placed behind the vehicle, e.g. tensioning straps or luggage.
- Clamping straps, tarps or other coverings are pulled over the bumper.
- A protective mat with a length reaching over the trunk sill down into the detection range of the sensors is used.
- The protective mat is not secured correctly.

Deactivate the SmartKey functions (→ page 66) or do not carry the SmartKey about your person in such situations.

### Limiting the opening angle of the tailgate

#### Activating the opening angle limiter

You can limit the opening angle of the tailgate in the top half of its opening range to approximately 8 in (20 cm) before the end position.

- Stop the opening procedure of the tailgate at the desired position.
- Press and hold the closing button on the tailgate until you hear a short acoustic signal. The opening angle limiter will be activated. The tailgate will then stop in the stored position when opened.

To open the tailgate fully, pull the handle on the outside of the tailgate again after it has stopped automatically.

#### Deactivating the opening angle limiter

- Press and hold the closing button on the tailgate until two short acoustic signals sound.

### Unlocking the tailgate with the emergency key

- Fold the rear seat backrest forward.
- Remove the combined cargo cover and net.
- Remove the emergency key (→ page 67).

> Insert emergency key 2 into opening 1 in the trim and push it in. The tailgate will be unlocked.
Emergency release of the tailgate from inside (vehicles with a folding bench seat)

Press the cover down in the direction of arrow 1 and pull in the direction of arrow 2 to remove it.

Pull the emergency release lever in the direction of arrow 3. The tailgate will be unlocked.

Side windows
Opening and closing the side windows

**WARNING Risk of entrapment when opening a side window**

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- When opening, make sure that nobody is touching the side window.
- If someone is trapped, release the button immediately or pull it in order to close the side window again.

**WARNING Risk of becoming trapped when closing a side window**

When closing a side window, body parts could be trapped in the closing area in the process.

- When closing, make sure that no body parts are in the closing area.

> If someone is trapped, release the button immediately or press the button in order to reopen the side window.

**WARNING Risk of becoming trapped when children operate the side windows**

Children could become trapped if they operate the side windows, particularly when unattended.

- Activate the child safety lock for the rear passenger compartment side windows.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Never leave children unattended in the vehicle.

Requirements:

- The power supply or the ignition is switched on.
To close
To open

The buttons on the driver’s door take precedence.

To start automatic operation: press the button beyond the point of resistance or pull and release it.

To interrupt automatic operation: press or pull the button again.

When the vehicle is switched off, you can continue to operate the side windows.

This function is available for around four minutes or until a front door is opened.

Automatic reversing function of the side windows
If an obstacle impedes a side window during the closing process, the side window will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

During the closing process, make sure that no body parts are in the closing area.

WARNING Risk of becoming trapped despite there being reversing protection on the side window

The reversing function does not react:
- To soft, light and thin objects, e.g. fingers.
- During resetting.

The reversing function cannot prevent someone from becoming trapped in these situations.

During the closing process, make sure that no body parts are in the closing area.

If someone becomes trapped, press the button to open the side window again.

Convenience opening (ventilating the vehicle before starting a journey)

WARNING Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

When opening, make sure that nobody is touching the side window.
Release the button immediately if somebody becomes trapped.

Press and hold the button on the SmartKey.

The following functions are performed:
- The vehicle is unlocked.
- The side windows are opened.
- The sliding sunroof is opened.
- The panoramic sliding roof is opened.
- The seat ventilation of the driver's seat is switched on.

If the roller sunblind of the panoramic sliding sunroof is closed, the roller sunblind is opened first.

To interrupt convenience opening: release the button.

To continue convenience opening: press and hold the button again.

### Convenience closing (closing the vehicle from outside)

**WARNING** Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side window and the sliding sunroof.

- When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

Press and hold the button on the SmartKey.

The following functions are performed:
- The vehicle is locked.
- The side windows are closed.
- The sliding sunroof is closed.
- The panoramic sliding roof is closed.

To interrupt convenience closing: release the button.

To close the roller sunblinds: press and hold the button again.

Convenience closing also functions with KEYLESS-GO (→ page 69).

### Problems with the side windows

**WARNING** Risk of becoming trapped or fatally injured if reversing protection is not activated

If you close a side window again immediately after it has been blocked, the side window will close with increased or maximum force. The reversing function is then not active and body parts may become trapped.

- Make sure that no parts of the body are in the closing area.
- To stop the closing process, release the button or press the button again to reopen the side window.
A side window cannot be closed and you cannot see the cause.
- Check to see whether any objects are in the window guide.
- Adjust the side windows.

Adjusting the side windows
If a side window is obstructed during closing and reopens again immediately:
- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (re-adjustment). The side window will be closed without the automatic reversing function.

If the side window is obstructed again and reopens again immediately:
- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (follow-up adjustment). The side window will be closed without the automatic reversing function.

The side windows cannot be opened or closed using the convenience opening feature.
Possible cause:
- The SmartKey battery is weak or discharged.
  - Check the battery using the indicator lamp (→ page 65).
  - Replace the SmartKey battery, if necessary (→ page 67).

Sliding sunroof
Opening and closing the sliding sunroof
The term "sliding sunroof" also refers to the panorama roof with power tilt/sliding panel.

WARNING Risk of becoming trapped when the sliding sunroof is being opened and closed
Body parts may become trapped in the range of movement.
- During opening and closing, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.
or
- Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

WARNING Risk of becoming trapped if the sliding sunroof is operated by children
Children operating the sliding sunroof could get caught in the moving parts, particularly if unattended.
Never leave children unattended in the vehicle.
When leaving the vehicle, always take the key with you and lock the vehicle.

**WARNING** Risk of becoming trapped when the roller sunblind is being opened and closed

Body parts may become trapped between the roller sunblind and frame or sliding roof.
- When opening or closing, make sure that no body parts are in the roller sunblind’s range of movement.
- Release the button immediately if somebody becomes trapped.
- Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

**NOTE** Malfunction due to snow and ice
Snow and ice may cause the sliding sunroof to malfunction.
- Open the sliding sunroof only if it is free of snow and ice.

**NOTE** Damage caused by protruding objects
Objects that protrude from the sliding sunroof may damage the sealing strips.
- Do not allow anything to protrude from the sliding sunroof.

**NOTE** Important points to remember when a roof luggage rack is installed
When a roof luggage rack is installed, raising or opening the sliding sunroof may be limited.
- Check whether the sliding sunroof can be raised or opened when a roof luggage rack is installed.

If in doubt, do not raise or open the sliding sunroof.

1 To raise
2 To open
3 To close/lower
Use the [ ] button to operate the panorama roof with power tilt/sliding panel and the roller sunblind.

The panorama roof with power tilt/sliding panel can be operated only when the roller sunblind is open.

- Check whether the sliding sunroof can be raised or opened when a roof luggage rack is installed.
- **To start automatic operation:** press the [ ] button beyond the point of resistance or pull and release it.
- **To interrupt automatic operation:** briefly press the [ ] button in any direction. The opening/closing process will be stopped.

**Vehicles with a panorama roof with power tilt/sliding panel:** The automatic raising feature is available only when the sliding sunroof is closed or raised.

**Vehicles without a panorama roof with power tilt/sliding panel:** The automatic opening and raising features are available only when the sliding sunroof is closed.

**Automatic reversing function of the sliding sunroof**

If an obstacle obstructs the sliding sunroof during the closing process, the sliding sunroof will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.

**WARNING** Risk of becoming trapped despite the reversing function being active

In particular, the reversing function does not react:

- To soft, light and thin objects, e.g. fingers.
- Towards the end of the closing procedure.
- During resetting.

**Automatic reversing function of the roller sunblind**

If an obstacle obstructs the roller sunblind during the closing process, the roller sunblind will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- When closing the roller sunblind, make sure that no body parts are in the range of movement.

- During the closing process, make sure that no body parts are in the closing area.
- Release the button immediately if somebody becomes trapped.
- Briefly press the button in any direction during automatic operation. The closing process will be stopped.
WARNING Risk of becoming trapped despite reversing function

In particular, the reversing function does not react to soft, light and thin objects, e.g. fingers.

- When closing the roller sunblind, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.
- Briefly press the button in any direction during the automatic closing process.
The closing process will be stopped.

Automatic functions of the sliding sunroof

The term "sliding sunroof" also refers to the panoramic roof with power tilt/sliding panel.

Rain closing function when driving

Vehicles with a panorama roof with power tilt/sliding panel: If it starts to rain, the raised sliding sunroof will automatically be lowered while the vehicle is in motion.

Automatic lowering function

Vehicles with a panorama roof with power tilt/sliding panel: If the sliding sunroof is raised at the rear, it will automatically be lowered slightly at higher speeds. At low speeds, it will be raised again automatically.

WARNING Risk of becoming trapped by automatic lowering of the sliding sunroof

At higher speeds, the raised sliding sunroof will automatically be lowered slightly at the rear.

- Make sure that nobody reaches into the sliding sunroof’s range of movement while the vehicle is in motion.
- If somebody becomes trapped, briefly push the sliding sunroof button forwards or backwards.

By pushing or pulling the button, you can interrupt the automatic functions: "Rain closing function when driving" and "Automatic lowering".

Problems with the sliding sunroof

WARNING Risk of becoming trapped or fatal injuries when the sliding sunroof is closed again

If the sliding sunroof is closed again immediately after it has been blocked or reset, it will close with increased force.

- Make sure that no parts of the body are in the closing area.
- Release the button immediately if somebody becomes trapped.
- Briefly press the button in any direction during the automatic closing process.
The closing process will be stopped.
The sliding sunroof cannot be closed and you cannot see the cause.

The term “sliding sunroof” also refers to the panorama roof with power tilt/sliding panel.

If the sliding sunroof is obstructed during closing and reopens again slightly:

- Immediately after automatic reversing, pull and hold the button down again to the point of resistance until the sliding sunroof is closed. The sliding sunroof will be closed with increased force.

If the sliding sunroof is obstructed again and reopens again slightly:

- Repeat the previous step. The sliding sunroof will be closed again with increased force.

Vehicles without a panorama roof with power tilt/sliding panel: The sliding sunroof is not operating smoothly.

- Reset the sliding sunroof.

Resetting the sliding sunroof

- Push the button up to the point of resistance repeatedly until the sliding sunroof is fully open.
- Press the button for another second.
- Close the sliding sunroof.

Vehicles with a panorama roof with power tilt/sliding panel: The sliding sunroof or the roller sunblind is not operating smoothly.

- Reset the sliding sunroof and the roller sunblind.

Resetting the sliding sunroof and the roller sunblind

- Pull and hold the button little by little until the sliding sunroof is fully closed.
- Pull and hold the button little by little until the roller sunblind is fully closed.
- Use automatic operation to fully open and then close the sliding sunroof.

Roller sun blinds

Extending the rear side window roller sunblinds

- NOTE Damage to the inertia reel due to it snapping back

If suddenly snapped back, the inertia reel may be damaged.

- Always move the roller sun blind by hand.
- Do not drive with the roller sun blind hooked in and side windows opened at the same time.
Pull the roller sunblind out by tab 1 and hook it onto brackets 2 at the top of the window.

Extending or retracting the rear-window roller sunblind

⚠️ **WARNING** Risk of becoming trapped when extending or retracting the roller sunblind

Body parts may become trapped in the roller sunblind's range of movement.
- Ensure there are no body parts in the range of movement.
- If someone becomes trapped, briefly press the button again. The opening or closing process will briefly be stopped. The roller sunblind will then return to its starting position.

⚠️ **NOTE** Damage caused by objects

Objects may cause the roller sunblind to malfunction.
- Do not store any objects on the parcel shelf.
- Make sure that the roller sunblind can move freely.

To extend or retract: press button 1.

Anti-theft protection

Function of the immobilizer

The immobilizer prevents your vehicle from being started without the correct SmartKey.
The immobilizer is automatically activated when the ignition is switched off and deactivated when the ignition is switched on.

When leaving the vehicle, always take the Smart-Key with you and lock the vehicle. Anyone can start the engine if a valid SmartKey has been left inside the vehicle.

In the event the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCEDES (in the USA) or 1-800-387-0100 (in Canada).

ATA (anti-theft alarm system)

Function of the ATA system

If the ATA system is armed, a visual and audible alarm is triggered in the following situations:

- When a door is opened
- When the tailgate is opened
- When the hood is opened
- When the interior motion sensor is triggered (→ page 88)
- When the tow-away alarm is triggered (→ page 88)

The ATA system is armed automatically after approximately ten seconds in the following situations:

- After locking the vehicle with the SmartKey
- After locking the vehicle using KEYLESS-GO

Indicator lamp 1 flashes when the ATA system is armed.

The ATA system is deactivated automatically in the following situations:

- After unlocking the vehicle with the Smart-Key
- After unlocking the vehicle using KEYLESS-GO
- After pressing the start/stop button with the SmartKey in the storage compartment (→ page 153)

When the Mercedes-Benz emergency call system is active and the alarm stays on for more than 30 seconds, a message is automatically sent to the Customer Assistance Center (→ page 274).

In the case of severe battery discharging, the anti-theft alarm system is automatically deactivated to facilitate the next engine start.

Deactivating the ATA

Press the , or button on the SmartKey.
Press the start/stop button with the Smart-Key in the marked space (→ page 153)

Deactivating the alarm using KEYLESS-GO

Grasp the outside door handle with the SmartKey outside the vehicle.

Function of the tow-away alarm

- This function may not be available in all countries.

An audible and visual alarm is triggered if an alteration to your vehicle’s angle of inclination is detected while the tow-away alarm is armed. The tow-away alarm is automatically armed after approximately 60 seconds:
  - After locking the vehicle with the SmartKey
  - After locking the vehicle using KEYLESS-GO

The tow-away alarm is only armed when the following components are closed:
  - The doors
  - The tailgate

The tow-away alarm is automatically deactivated:
  - After pressing the or button on the SmartKey
  - After pressing the start/stop button with the SmartKey in the storage compartment (→ page 153)
  - After unlocking the vehicle using KEYLESS-GO
  - When using HANDS-FREE ACCESS

Information on collision detection on a parked vehicle (→ page 180).

Arming/disarming the tow-away alarm

Multimedia system:

→ Settings → Quick Access

Arm or disarm Tow-away Protection.

The tow-away alarm is armed again in the following cases:
  - The vehicle is unlocked again.
  - A door is opened.

- The vehicle is locked again.

If quick access is unavailable, select the Vehicle submenu in the Settings main menu to arm or disarm the tow-away alarm.

Function of the interior motion sensor

- This function may not be available in all countries.

When the interior motion sensor is activated, a visual and audible alarm is triggered if movement is detected in the vehicle interior. The interior motion sensor is activated automatically after approximately ten seconds:
  - After locking the vehicle with the SmartKey
  - After locking the vehicle using KEYLESS-GO

The interior motion sensor is only activated when the following components are closed:
  - The doors
  - The tailgate
The interior motion sensor is automatically deactivated:
- After pressing the 🎉 or 🎊 button on the SmartKey
- After pressing the start/stop button with the SmartKey in the storage compartment (→ page 153)
- After unlocking the vehicle using KEYLESS-GO
- When using HANDS-FREE ACCESS

The following situations can lead to a false alarm:
- Moving objects such as mascots in the vehicle interior
- When the side window is open
- When the sliding sunroof is open
- When the panoramic sliding sunroof is open

**Arming/deactivating the interior motion sensor**

Multimedia system:

- 🎟️ ➡️ 🏷️ ➡️ Settings ➡️ Quick Access
- ➤ Activate or deactivate Interior Motion Sensor.

The interior motion sensor is activated again in the following cases:
- The vehicle is unlocked again.
- A door is opened.
- The vehicle is locked again.

⚠️ If quick access is unavailable, select the Vehicle menu under Settings to activate or deactivate the interior motion sensor.
WARNING Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver’s seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver’s seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

Ensure the following when adjusting steering wheel 1, seat belt 2 and driver’s seat 3:

- You are sitting as far away from the driver’s airbag as possible, taking the following points into consideration.
- You are sitting in an upright position
- Your thighs are slightly supported by the seat cushion
- Your legs are not fully extended and you can depress the pedals properly
- The back of your head is supported at eye level by the center of the head restraint
- You can hold the steering wheel with your arms slightly bent
- You can move your legs freely
- You can see all the displays on the instrument cluster clearly
- You have a good overview of the traffic conditions
- Your seat belt sits snugly against your body and passes across the center of your shoulder and across your hips in the pelvic area
Seats

Adjusting the front seat mechanically and electrically (without Seat Comfort Package)

**WARNING Risk of becoming trapped if the seats are adjusted by children**

Children could become trapped if they adjust the seats, particularly when unattended.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Never leave children unattended in the vehicle.

You can adjust the seats when the ignition is switched off.

**WARNING Risk of becoming trapped when adjusting the seat**

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

- When adjusting a seat, make sure that no one has any part of their body within the sweep of the seat.

Observe the safety notes on "Airbags" and "Children in the vehicle".

**WARNING Risk of accident due to the driver's seat not being engaged**

The driver’s seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.

Always make sure that the driver's seat is engaged before starting the vehicle.

**WARNING Risk of accident due to adjusting vehicle settings while the vehicle is in motion**

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver’s seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

**WARNING Risk of becoming trapped if the seat height is adjusted carelessly**

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.
Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

- While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

**WARNING** Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly. Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

**WARNING** Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position. You could slip beneath the seat belt and injure yourself.

- Adjust the seat properly before commencing your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.

**NOTE** Damage to the seats when moving the seats back

The seats may be damaged by objects when moving the seats back.

- When moving the seats back, make sure that there are no objects in the footwell, under or behind the seats.
To adjust the seat fore-and-aft position:

1. Lift lever 1 and slide the seat into the desired position.
2. Make sure that the seat is engaged.

Adjusting the front seat electrically

- Head restraint height
- Seat backrest inclination
- Seat height
- Seat cushion length
- Seat cushion inclination
- Seat fore-and-aft position

Save the settings with the memory function (→ page 107).

Adjusting the 4-way lumbar support

1. Higher
2. Softer
3. Lower
4. Firmer
Using buttons 1 to 4, adjust the contour of the backrest individually to suit your back.

**Head restraints**

**Adjusting the front seat head restraints mechanically**

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver’s seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver’s seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

**WARNING** Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not interchange the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

To raise:

- Pull the head restraint up.

To lower:

- Press release knob 1 in the direction of the arrow and push the head restraint down.

To move forwards:

- Pull the head restraint forwards.

To move backwards:

- Press release knob 2 and push the head restraint backwards.
Adjusting the front seat luxury head restraints mechanically

- To adjust the side bolsters of the head restraint: pull or push right or left-hand side bolster 2.
- To move forwards: pull the head restraint forwards.

- To move backwards: press release knob 1 and push the head restraint backwards.
- Ensure that the head restraint is engaged correctly.

Lowering the rear seat head restraints from the front

- Press button 1.

Adjusting the head restraints of the rear seats mechanically

- To raise: pull the head restraint up.
- To lower: press release knob 1 in the direction of the arrow and push the head restraint down.
Installing/removing the outer rear seat head restraints

Removing

1. Release the rear seat backrest and fold it forwards slightly (→ page 110).
2. Pull the head restraint upwards as far as it will go.

Push release knob 1 in the direction of the arrow and pull out the head restraint.

Installing

1. Insert the head restraint such that the notches on the bar are on the left when viewed in the direction of travel.
2. Push the head restraint down until it engages.
3. Fold the rear seat backrest back until it engages.

Configuring the seat settings

Multimedia system:

Adjusting the backrest contour in the lumbar region of the seat backrest (lumbar)

1. Select Lumbar.
2. Select the settings  for the desired seat.
3. Adjust the air cushions.

Adjusting the backrest side bolsters

1. Select Side Bolsters.
2. Adjust the air cushion for the desired seat.

Setting the seat heating balance

2. Adjust the heat distribution for the desired seat.

Setting automatic seat adjustment

WARNING Risk of becoming trapped during adjustment of the driver’s seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver’s seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

Make sure that when the position of driver’s seat is being adjusted using the multimedia system, no people or body...
parts are in the seat’s range of movement.

If there is a risk of someone becoming trapped, stop the adjustment process immediately:

- a) Tap the warning message on the media display.

or

- b) Press a memory position button or a seat adjustment switch on the driver’s door.

The adjustment process will be stopped.

Requirements:

- Adapting the driver’s seat position to the body size: automatic seat adjustment has been switched on.

Multimedia system:

- ➤ ➤ Settings ➤ Vehicle ➤ Automatic Seat Adjustment

Switching automatic seat adjustment on/off

When the active user profile is changed while the vehicle is stationary, the driver’s seat, outside mirror and seat contour will automatically be adapted to the driver.

- Select On or Off.

This setting is available only for individual user profiles. For the guest profile, automatic seat adjustment cannot be switched on or off. Further information about user profiles.

Adjusting the driver’s seat position to body size

The vehicle will calculate a suitable driver’s seat position on the basis of the driver’s body size and set this directly.

- To set the unit of measurement: select cm or ft/in.

- Set the size using the scale.

Select Start Positioning.

The driver’s seat position will be adjusted to the body size that has been set.

If the driver’s seat position calculated by the vehicle is not practical or comfortable, it can be changed manually at any time via the buttons. The outside mirrors are not set via this function. Instead, they have to be set manually via the switches.

You can also configure these settings via the Mercedes me portal for your user profile. By synchronizing the profiles in the vehicle and the Mercedes me connect profiles, you can carry over these settings for your vehicle. Further information about synchronizing user profiles.

Setting the easy entry and exit feature

- Activate or deactivate the function.

If you use an individual user profile and have set your body size, this information is carried over for the easy entry and exit feature. This causes the driver’s seat to automatically move into the correct position.
Overview of massage programs

- **Hot Relaxing Back** Combination of heat and massage. It starts by massaging the back. In addition, warm pressure points become noticeable, starting in the pelvic area.
- **Hot Relaxing Shoulder** Combination of heat and massage. It starts by massaging the shoulders. In addition, warm pressure points become noticeable, starting in the pelvic area.
- **Activating Massage** Activating massage with upward-moving massage waves.
- **Classic Massage** Relaxing back massage.
- **Wave Massage** Regenerating massage via massage waves across the back and in the seat cushion.
- **Mobilizing Massage** Mobilizing Massage with upward-moving massage waves. Can promote slower, deeper respiration. This can improve the supply of oxygen to cells and the brain.
- **Active Workout, Backrest** and **Active Workout, Cushion** These programs require your cooperation. Alternating between tensing and releasing helps to improve blood flow to your muscles. Press against a pressure point as soon as you feel it.

Selecting the massage program for the front seats

Multimedia system:

- Select a massage program (→ page 98).
- Start the program for the desired seat.
- **To set the massage intensity:** switch High Intensity on or off.

Resetting seat settings

Multimedia system:

- Select Comfort >> Seat Comfort
- Select for the desired seat.
- Confirm the prompt.

Switching the seat heating on/off

**WARNING** Risk of burns due to repeatedly switching on the seat heating

Repeatedly switching on the seat heating can cause the seat cushion and seat backrest padding to become very hot. In particular, the health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries.

- Do not repeatedly switch on the seat heating.

To protect against overheating, the seat heating may be temporarily deactivated after it is switched on repeatedly.

**NOTE** Damage to the seats caused by objects or documents when the seat heating is switched on

When the seat heating is switched on, overheating may occur due to objects or docu-
ments placed on the seats, e.g. seat cushions or child seats. This could cause damage to the seat surface.

Make sure that no objects or documents are on the seats when the seat heating is switched on.

Requirements:
- The power supply is switched on.

Press button 1 repeatedly until the desired heating level is set. Depending on the heating level, up to three indicator lamps will light up. If all indicator lamps are off, the seat heating is switched off.

The seat heating will automatically switch down from the three heating levels after 8, 10 and 20 minutes until the seat heating is switched off.

Setting the panel heating
Multimedia system:

Switching the seat ventilation on/off

Requirements:
- The power supply is switched on.
Press button 1 repeatedly until the desired blower setting has been reached. Depending on the blower setting, up to three indicator lamps will light up. If all indicator lamps are off, the seat ventilation is switched off.

**Folding bench seat in the cargo compartment**

**Notes on the folding bench seat**

**WARNING** Risk of injury when the seat backrest is not upright and locked in position

The seat backrest of the folding bench seat may fold down while the vehicle is in motion. In this case, the seat belts may not perform their intended protective function.

- Make sure that the seat backrests of the rear bench seat are locked in the upright position.

Observe the notes on "Seat belts" (→ page 41), "Head restraints" (→ page 94) and "Children in the vehicle" (→ page 51).

The folding bench seat is approved for use only with child seats designed for children up to six years old. Information on suitable child restraint systems on the folding bench seat can be obtained at an authorized Mercedes-Benz Center.

The folding bench seat may be used only when the combined cargo cover and net is installed.

The tailgate can be opened from the folding bench seat. The switch is located on the wheel arch on the right-hand side when viewed in the direction of travel.

**Folding out the folding bench seat**

**Requirements:**

- The seat backrests of the rear bench seat are locked in the upright position.
- The handle for the combined luggage cover and net has been moved up. To improve the rear view, the upper part of the plate has been folded down.
Pull release handle 1 and fold the seat backrest of the folding bench seat upwards.
- Hook the seat belts into retainers 2.
- Secure the seat belt buckles in the back of the seat backrest.
- Pull release 2 and fold the seat cushion of the folding bench seat into the seat position.
- Push down the seat cushion until the seat backrest engages fully.
- Fold the head restraints upwards.

Folding back the folding bench seat

Pull the seat cushion upwards by tab 1 and fold it back into its starting position until it engages.
![NOTE Damage to the folding bench seat when folding back](image)

The folding bench seat may be damaged when it is folded back.
- Fully insert the head restraints into the guides.
- Make sure that the seat belt buckles engages in their guides.

- Press release knob 1 and fold the head restraints down.
- Press release knob 3 and push the head restraints all the way in.
- Fold back seat backrest 2 of the folding bench seat into its starting position.

**Opening/closing the cargo compartment floor**

**WARNING** Risk of injury due to an open cargo compartment floor

If you drive with the cargo compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.
- Always close the cargo compartment floor before a journey.

**Opening**

- Press the release knob in the middle of the cargo compartment floor and turn it to the OPEN position.

**Closing**

- Pull the loop on the cargo compartment floor and fold the cargo compartment floor up.

When the seat cushion is removed (→ page 102), you can remove the cargo compartment floor completely.

**Removing or installing the seat cushion**

If you want to open the cargo compartment floor while the folding bench seat is folded back, you must first of all remove the seat cushion.
To remove: fold seat cushion 2 vertically upwards and remove it from seat cushion guide 1.

Installing

Push seat cushion 2 into seat cushion guide 1 at a slight angle from the rear 3.
Fold seat cushion 2 back into its starting position 4 until it engages.

Steering wheel

Adjusting the steering wheel mechanically

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver's seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.

Before starting the engine: adjust the driver's seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

**WARNING** Risk of entrapment for children when adjusting the steering wheel

Children could injure themselves if they adjust the steering wheel.
Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

- To unlock: push release lever 1 down as far as it will go.

- Adjust height 2 and distance 3 to the steering wheel.

- To lock: push release lever 1 up as far as it will go.

- Check and make sure that the steering column is locked by moving the steering wheel.

Adjusting the steering wheel electrically
The steering wheel can be adjusted when the power supply is disconnected.

To adjust the distance to the steering wheel
To adjust the height
Save the settings with the memory function (→ page 107).
Switching the steering wheel heater on/off

**Requirements:**
- The power supply or the ignition is switched on.

- Turn the lever in the direction of arrow 1 or 2.
  - If indicator lamp 3 lights up, the steering wheel heater is switched on.

When you switch the ignition off, the steering wheel heater will switch off.

**Easy entry and exit feature**

**Using the easy entry and exit feature**

**WARNING** Risk of accident when pulling away during the adjustment process for the easy exit feature

- You could lose control of the vehicle.
- Always wait until the adjustment process is complete before pulling away.

**WARNING** Risk of becoming trapped during adjustment of the easy entry and exit feature

- You and other vehicle occupants – particularly children – could become trapped.
- Ensure that no one has a body part in the sweep of the steering wheel or driver’s seat.

If there is a risk of becoming trapped by the steering wheel:
- Move the adjustment lever of the steering wheel. The adjustment process will be stopped.

If there is a risk of becoming trapped by the driver’s seat:
- Press the seat adjustment switch. The adjustment process will be stopped.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

**Vehicles with memory function:** You can stop the adjustment process by pressing one of the memory function position switches.
WARNING Risk of becoming trapped if children activate the easy entry and exit feature.

Children could become trapped if they activate the easy entry- and exit feature, particularly when unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

If the easy entry and exit feature is active, the steering wheel will move upwards and the driver's seat will move back in the following situations:

- You switch the ignition off with the driver's door open.
- You open the driver's door with the ignition switched off.

The steering wheel will then move upwards only if it is not already as high as it will go. The driver's seat will then move backwards only if it is not already in the rearmost position.

The steering wheel and the driver’s seat will move back to the last drive position in the following cases:

- You switch the power supply or the ignition on when the driver's door is closed
- You close the driver's door with the ignition switched on.

The last drive position will be saved when:

- You switch the ignition off.

Vehicles with memory function: You call up the seat settings via the memory function.

Vehicles with memory function: You save the seat settings via the memory function.

Setting the easy entry and exit feature

Multimedia system:

- Settings
- Vehicle
- Automatic Seat Adjustment
- Easy Entry/Exit
- Activate or deactivate the function.

Memory function

Function of the memory function

WARNING Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- Only use the memory function on the driver's side when the vehicle is stationary.
**WARNING** Risk of entrapment when setting the seat with the memory function

When the memory function adjusts the seat, you and other vehicle occupants – particularly children – could become trapped.

- During the adjustment process of the memory function, make sure that no one has any body parts in the sweep of the seat.
- If someone becomes trapped, press a preset position button or seat adjustment switch immediately.

**WARNING** Risk of entrapment if the memory function is activated by children

Children could become trapped if they activate the memory function, particularly when unattended.

- Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

You can use the memory function when the ignition is switched off. Seat adjustments for up to three people can be stored and called up using the memory function.

You can save settings for the following systems:
- Seat, backrest and head restraint
- Steering wheel
- Outside mirrors
- Head-up Display

---

**Operating the memory function**

**Storing**

Set the desired position for all systems.

Briefly press the \[M\] memory button and then press preset position \[1\], \[2\] or \[3\] within three seconds.

An acoustic signal sounds. The settings are stored.
To call up: press or briefly hold preset position button 1, 2 or 3. After releasing the button, all systems are moved into the stored position.

Stowage areas
Notes on loading the vehicle

**DANGER** Risk of exhaust gas poisoning

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.

- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

**WARNING** Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open storage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or abrupt changes in direction.

**WARNING** Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

**WARNING** - Risk of accident or injury when using the cup holder while the vehicle is moving

The cup holder cannot secure containers while the vehicle is moving.

If you use a cup holder while the vehicle is moving, the container may be flung around and liquids may be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You
could be distracted from traffic conditions and you may lose control of the vehicle.

- Only use the cup holder when the vehicle is stationary.
- Only use the cup holder for containers of the right size.
- Close the container, particularly if the liquid is hot.

**NOTE** Damage to the cup holder

When the rear armrest is folded back the cup holder could become damaged.

- Only fold the rear armrest back when the cup holder is closed.

**WARNING** Risk of injury due to an open cargo compartment floor

If you drive with the cargo compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

**WARNING** Damage to the stowage compartment under the ashtray due to intense heat

The stowage compartment under the ashtray is not heat resistant and could be damaged if you rest a lit cigarette on it.

- Make sure that the ashtray is fully engaged.

**WARNING - Risk of fire and injury from hot cigarette lighter**

You can burn yourself if you touch the hot heating element or the socket of the cigarette lighter.

In addition, flammable materials may ignite if:

- you drop the hot cigarette lighter
- a child holds the hot cigarette lighter to objects, for example

**WARNING** Risk of burns from the tailpipe and tailpipe trims

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.
- Always hold the cigarette lighter by the knob.
- Always make sure that the cigarette lighter is out of reach of children.
- Never leave children unattended in the vehicle.
The driving characteristics of your vehicle are dependent on the distribution of the load within the vehicle. You should bear the following in mind when loading the vehicle:

- Never exceed the permissible gross mass or the gross axle weight rating for the vehicle (including occupants). The values are specified on the vehicle identification plate on the vehicle’s B-pillar.
- The load must not protrude above the upper edge of the seat backrests.
- When transporting objects in the cargo compartment, always install the combined cargo cover and net.
- Always place the load behind unoccupied seats if possible.
- Secure the load using the tie-down eyes and distribute the load evenly.

### Stowage spaces in the vehicle interior

**Overview of the front storage compartments**

1. Storage space in the doors
2. Storage compartment in the armrest with USB ports and storage space, e.g. for an MP3 player
3. Storage compartment in the front center console with a USB port
4. Glove box

### Through-loading feature in the rear bench seat (EASY-PACK Quickfold)

**Folding the rear seat backrest forwards**

**WARNING** Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.

Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.
If the seat backrest is not engaged and locked, this will be shown on the multifunction display on the instrument cluster.

**Requirements:**
- The rear seat backrest head restraints are fully inserted.

You can fold the center and outer seat backrests forwards separately.

The right seat backrest can be folded forwards only together with the center seat backrest.

The outer seat backrests are unlocked electrically.

- **Vehicles with a memory function:** If at least one section of the rear seat backrest is folded forwards, the corresponding front seat will move forwards slightly, if necessary, to avoid a collision.

- **To fold the left and right seat backrests forward:** pull right or left button 1.

- **To fold the center seat backrest forwards:** pull release catch 3 of seat backrest 2 forwards.

- **Fold seat backrest 2 forwards.**
Folding back the rear seat backrest

**NOTE** Damage caused by trapping the seat belt when folding back the seat backrest

The seat belt could become trapped and thus damaged when the seat backrest is folded back.

- Make sure that the seat belt is not trapped when folding back the seat backrest.

**Vehicles with a memory function:** If at least one part of the seat backrest in the rear is folded back, the corresponding front seat will automatically return to the most recent original position.

**Locking the release catch of the center rear seat backrest**

**Requirements:**
- The left and center seat backrests are engaged and joined together.

Lock the center seat backrest release catch if you want to secure the cargo compartment against unauthorized access. The center seat backrest can then be folded forwards only together with the left seat backrest.

- Fold the corresponding seat backrest back until it engages.

**Left and right seat backrests:** If the seat backrest is not engaged and locked, this will be shown on the multifunction display on the instrument cluster.

**Center seat backrest:** If the seat backrest is not engaged and locked, red lock verification indicator will be visible.
Fold the center and left seat backrests forwards.

To lock: slide catch 1 upwards. The release catch of the center seat backrest will be locked.

To unlock: slide catch 1 downwards.

Adjusting the angle of the rear seat backrests (cargo position)

To enlarge the cargo compartment, you can adjust the seat backrests so that they are ten degrees steeper (cargo position).

Fold the seat backrest forwards (→ page 110).

Move bracket 1 in the direction of the arrow.

Push seat backrest 2 back to bracket 1 until the backrest engages.

Cargo compartment cover with partition net (combined cargo cover and net)

Notes on the cargo compartment cover

⚠️ WARNING Risk of injury or death due to poorly secured objects

The cargo compartment cover alone cannot secure or restrain heavy objects, items of luggage or heavy loads. You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

Always stow objects in such a way that they cannot be thrown around.

Secure objects, luggage or loads against slipping or tipping over, e.g. by
using tie downs, even if you are using the cargo compartment cover.

**NOTE** Damage to the cargo compartment cover when loading the vehicle

The cargo compartment cover may be damaged when the vehicle is being loaded.

- Do not place any objects above the lower edge of the side windows or on the cargo compartment cover.

The cargo compartment cover and the partitioning net form the combined cargo cover and net. When the cargo compartment cover is clipped in, no objects in the cargo compartment should obstruct the lowering movement of the cover when the tailgate is closed. The cargo compartment cover will otherwise be raised again automatically.

### Extending/retracting the cargo compartment cover

**To extend:**
- pull cargo compartment cover 1 back by handle 2 and clip it into the brackets on the left and right.
- The cargo compartment cover raises automatically when the tailgate is opened and lowers again when the tailgate is closed.

**Retracting**
- Remove cargo compartment cover 1 from the brackets on the left and right.
- Guide cargo compartment cover 1 forwards by handle 2 until it is fully retracted.

The handle strip of the retracted cargo compartment cover 1 can be used in the following positions:

1. Folded up by 45° (loading position)
2. Horizontal position (driving position)
3. Folded down and locked in place (rattle-free position when driving)

### Installing/removing the combined cargo cover and net

**Requirements:**
- The cargo compartment cover and partition net are retracted.
Removing
Remove the combined cargo cover and net from the cargo compartment, or from the left-hand rear door if the seat backrests are folded forwards.

- Press button 2.
- Fold the combined cargo cover and net backwards with the seat backrest folded up.

Installing
- First, detach the combined cargo cover and net from left-hand catch 1 and then remove it from right-hand bracket 4.
- Slide the combined cargo cover and net into right-hand bracket 4 as far as it will go.
- Place the combined cargo cover and net into the left-hand bracket and slide it into catch 1 until the combined cargo cover and net engages audibly. Red lock verification indicator 3 must no longer be visible.

Attaching the combined cargo cover and net to the rear seat backrest

- **NOTE** Damage to the combined luggage cover and net when attaching it to the seat backrest

When the combined luggage cover and net is attached to the seat backrest, it may be damaged when the seat backrest is folded back.
- Do not fold the seat backrests back.

Requirements:
- The seat backrests are folded forwards.

Insert combined cargo cover and net 2 into both guides 1 and push it as far as it will go in the direction of the arrow.

To disassemble the combined cargo cover and net, follow the instructions in reverse order.
Attaching the partitioning net

**WARNING** Risk of injury or death due to poorly secured objects

The partitioning net alone cannot secure or restrain heavy objects, items of luggage or heavy loads.

You could be hit by an unsecured load, particularly in the event of abrupt changes in direction, sudden braking or an accident.

- Always stow objects in such a way that they cannot be thrown around.
- Secure objects, luggage or loads against slipping or tipping over, e.g. by using tie downs, even if you are using the partitioning net.

For safety reasons, always use a partitioning net when transporting a load.

Damaged partitioning nets can no longer fulfill their protective functions and must be replaced. Visit a qualified specialist workshop.

---

**Partitioning net without cargo compartment enlargement**

1. Pull the partitioning net far out towards the rear from the rear bench seat using tab 1.
2. Hook the partitioning net into eyelets 2, first on the left, then on the right.

**Partitioning net with cargo compartment enlargement**

2. Hook the partitioning net into eyelets 2.
Overview of the tie-down eyes

Observe the notes on loading the vehicle (→ page 108).

1 Cargo tie-down rings

Overview of bag hooks

⚠️ **WARNING** Risk of injury when using bag hooks with heavy objects

The bag hooks cannot restrain heavy objects or items of luggage. Objects or items of luggage may be flung around and hit vehicle occupants.

- Only hang light objects on the bag hooks.
- Never hang hard, sharp-edged or fragile objects on the bag hooks.

Observe the notes on loading the vehicle (→ page 108).

Subject the bag hooks to a maximum load of 6.6 lbs (3 kg) and do not attach any goods to them.

1 Bag hook

Attaching the parcel net

⚠️ **WARNING** Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown.
around and hit vehicle occupants. In addition, cup holders, open storage spaces and mobile phone receptacles cannot always retain all objects within. There is a risk of injury, particularly in the event of sudden braking or abrupt changes in direction.

- Always store objects such that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from storage spaces, parcel nets or storage nets.
- Close the lockable storage spaces before starting a journey.
- Stow and secure objects that are heavy, hard, pointed, sharp-edged, fragile or too large in the cargo compartment.

Observe the notes on loading the vehicle.

EASY-PACK load-securing kit

Notes on the EASY-PACK load-securing kit

The EASY-PACK load-securing kit allows you to use your cargo compartment for a variety of purposes. The components are located in the storage space under the cargo compartment floor.

- Fold up the tie-down eyes.
- Hook parcel net 1 into the front and rear tie-down eyes.

1 Bag containing the brackets and luggage holder
2 Telescopic rod
Inserting the brackets into the load rail

- Insert bracket 1 into the center of load rail 5.
- Press release knob 3 and slide bracket 1 into the desired position in load rail 5.
- Let go of release knob 3.

- Press locking button 4. Bracket 1 has been secured in the selected position in load rail 5.
- If necessary, fold tie-down eye 2 upwards.

Installing or removing the luggage holder

Requirements:
- Select a load size that can be secured by the luggage holder.

The luggage holder is used to secure loads against the side wall of the cargo compartment to prevent them from moving around.

You can subject the load holder to a maximum load of 15.4 lbs (7 kg).

- Insert two brackets 1 into the load rail (→ page 119).
- Press and hold release knob 1 on luggage holder 2.
- Pull the belt on the handle out slightly.
- Let go of release knob 1.
Installing

- Press and hold release knob 3 on first bracket 5.
- Insert luggage holder 2 into first bracket 5 and slide it downwards until it engages.
- Let go of release knob 3.
- Repeat the process with second bracket 5 and the handle.

To remove: press release knob 3 on bracket 5 and remove luggage holder 2 by pulling it out.

Loading

- Press and hold release knob 1 on luggage holder 2.
- Pull the belt on the handle out.
- Place the load between the strap and the cargo compartment side wall.
- Press and hold release knob 1 on luggage holder 2.
- Hold the belt on the handle firmly and slowly guide it back until the load has been secured.
- Let go of release knob 1.
- On both brackets 5, press locking button 4.

Installing or removing the telescopic rod

Installing

The telescopic rod is used to secure loads against the rear seats to prevent them from moving around.

- Insert one bracket 2 into both the left and right load rails and slide it to the desired position.
- Press and hold the release knob 3.
- Insert telescopic rod 1 into brackets 2 and slide it downwards until it engages.
- On both brackets, press locking button 4.
- To remove: press release knob 3 on respective bracket 2 and remove telescopic rod 1 by pulling it upwards and out.

Attaching a roof luggage rack

WARNING Risk of accident due to exceeding the maximum roof load

The vehicle center of gravity and the usual driving characteristics as well as the steering and braking characteristics alter.

If you exceed the maximum roof load, the driving characteristics, as well as steering and braking, will be greatly impaired.

Never exceed the maximum roof load and adjust your driving style.
You will find information on the maximum roof load in the "Technical data" section.

**NOTE** Vehicle damage from non-approved roof luggage racks

The vehicle could be damaged by roof luggage racks that have not been tested and approved for Mercedes-Benz.

- Use only roof luggage racks tested and approved for Mercedes-Benz.
- Depending on the vehicle equipment, ensure that the sliding sunroof can be fully raised when the roof luggage rack is installed.
- Depending on the vehicle equipment, ensure that the tailgate can be fully opened when the roof luggage rack is installed.
- Position the load on the roof luggage rack in such a way that the vehicle will not sustain damage even when it is in motion.

**NOTE** Damage to the panorama roof with power tilt/sliding panel due to non-approved roof luggage racks

The panorama roof with power tilt/sliding panel may be damaged by the roof luggage rack if you attempt to open it when using a roof luggage rack not tested and approved for Mercedes-Benz.

- When a roof luggage rack is installed, open the panorama roof with power tilt/sliding panel only if this has been tested and approved for Mercedes-Benz.

The panorama roof with power tilt/sliding panel may be raised to allow ventilation of the vehicle interior.

- Secure the roof luggage rack to the roof railing.
- Observe the manufacturer’s installation instructions.

### Sockets

**Using the 12 V socket**

**Requirements:**
- Only connect devices up to a maximum of 180 W (15 A).

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:
- In the storage compartment in the front center console
- In the storage compartment in the center console of the rear passenger compartment
- In the cargo compartment
Example: 12 V socket in the storage compartment in the front center console

- Briefly press the trim element of the cover on the front.
- The cover opens in the direction of the arrow.
- Lift up cap 1 of the socket and insert the plug of the device.

If you have connected a device to the 12 V socket, leave the cover of the storage compartment open.

Using the 115 V socket in the rear passenger compartment

**DANGER** Risk of fatal injury due to damaged connecting cables or sockets

You could receive an electric shock if the connecting cable or the 115 V power socket is pulled out of the trim or is damaged or wet.

- Use only connecting cables that are dry and free of damage.
- When the ignition is switched off, make sure that the 115 V power socket is dry.
- Immediately have the 115 V power socket checked or replaced at a qualified specialized workshop if it is damaged or has been pulled out of the trim.
- Never plug the connecting cable into a 115 V power socket that is damaged or has been pulled out of the trim.

**DANGER** Risk of fatal injury due to incorrect handling of the socket

You could receive an electric shock in particular:

- If you reach into the socket.
- If you insert unsuitable devices or objects into the socket.
- Do not reach into the socket.
- Only connect suitable devices to the socket.

**Requirements:**

- Only connect devices with a suitable plug which conforms to the standards specific to the country you are in.
- Only connect devices up to a maximum of 150 W.
- Do not use multiple socket outlets.
Open flap 3.
Insert the plug of the device into 115 V socket 1.
When the on-board electrical system voltage is sufficient, indicator lamp 2 lights up.

USB port in the rear passenger compartment
You can charge a USB device, such as a mobile phone, at the USB ports using a suitable charging cable.
The devices can be charged with 5 V (up to 3 A) and when the ignition is switched on.

Wireless charging of the mobile phone and connection with the exterior antenna
Notes on wirelessly charging the mobile phone

⚠️ WARNING Risk of injury due to objects being stowed incorrectly
If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.
There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

⚠️ WARNING Risk of fire from placing objects in the mobile phone storage compartment
Placing other objects in the mobile phone storage compartment could constitute a fire hazard.
Apart from a mobile phone, do not place any other objects in the mobile
phone storage compartment, especially those made of metal.

NOTE Damage to objects caused by placing them in the mobile phone storage compartment

If objects are placed in the mobile phone storage compartment, they may be damaged by electromagnetic fields.
- Do not place credit cards, data storage devices, ski passes or other objects sensitive to electromagnetic fields in the mobile phone storage compartment.

NOTE Damage to the mobile phone storage compartment caused by liquids

If liquids enter the mobile phone storage compartment, the compartment may be damaged.
- Ensure that no liquids enter the mobile phone storage compartment.

- Depending on the vehicle equipment, the mobile phone is connected to the vehicle’s exterior antenna via the charging module.
- The charging function and wireless connection of the mobile phone to the vehicle’s exterior antenna are only available if the ignition is switched on.
- Small mobile phones may not be able to be charged in every position of the mobile phone storage compartment.
- Large mobile phones which do not rest flat in the mobile phone storage compartment may not be able to be charged or connected with the vehicle’s exterior antenna.
- The mobile phone may heat up during the charging process. This depends on the applications (apps) currently running. The mobile phone can be cooled in the mobile phone storage compartment when the air conditioning system is switched on. The cooling output in the mobile phone storage compartment is highest when the controller in the glove box is closed.
- To ensure more efficient charging and connection with the vehicle’s exterior antenna, remove the protective cover from the mobile phone. Protective covers which are designed for wireless charging are excluded.
- When charging, the mat should be used if possible.

Wirelessly charging a mobile phone

Requirements:
- The mobile phone is suitable for wireless charging (Qi-compatible mobile phone).

A list of Qi-compatible mobile phones can be found at: https://www.mercedes-benz-mobile.com
Place the mobile phone as close to the center of mat 1 as possible with the display facing upwards. When the charging symbol is shown in the multimedia system, the mobile phone is being charged. Malfunctions during the charging process are shown in the media display.

The mat can be removed for cleaning, e.g. using clean, lukewarm water.

---

**Installing and removing the floor mats**

**WARNING** Risk of accident due to objects in the driver's footwell

Objects in the driver's footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

---

To install: press studs 1 onto holders 2.

To remove: pull the floor mat off holders 2.
Exterior lighting

Information about lighting systems and your responsibility

The various lighting systems of the vehicle are only aids. The driver of the vehicle is responsible for correct vehicle illumination in accordance with the prevailing light and visibility conditions, legal requirements and traffic situation.

Operating the light switch

1. Left-hand standing lamps
2. Right-hand standing lamps
3. Parking lamps and license plate lamp
4. Automatic driving lights (preferred light switch position)
5. Low beam/high beam
6. Switches the rear fog light on/off

When low beam is activated, the indicator lamp for the parking lamps will be deactivated and replaced by the low-beam indicator lamp.

Always park your vehicle safely using sufficient lighting, in accordance with the relevant legal stipulations.

NOTE Battery discharging by operating the standing lights

Operating the standing lights over a period of hours puts a strain on the battery.

Where possible, switch on the right or left parking light.

In the event of severe battery discharging, the standing lamps or parking lamps will be switched off automatically to facilitate the next engine start.
The exterior lighting (except standing and parking lamps) will switch off automatically when the driver’s door is opened.

- Observe the notes on surround lighting (→ page 134).

**Automatic driving lights function**

The parking lamps, low beam and daytime running lamps are switched on automatically depending on the ignition status and the ambient light.

**WARNING** Risk of accident when the low beam is switched off in poor visibility

When the light switch is set to AUTO, the low beam may not be switched on automatically if there is fog, snow or other causes of poor visibility such as spray.

- In such cases, turn the light switch to D.

The automatic driving lights are only an aid. You are responsible for vehicle lighting.

**Switching the rear fog lights on or off**

**Requirements:**
- The light switch is in the D or AUTO position.

- Press the D button.

Please observe the country-specific laws on the use of rear fog lamps.

**Operating the combination switch for the lights**

- Use the combination switch to activate the desired function.
Switching on high beam
► Turn the light switch to the \[SD\] or \[AUTO\] position.
► Push the combination switch beyond the point of resistance in the direction of arrow 1.
When the high beam is activated, the \[SD\] indicator lamp for low beam will be deactivated and replaced by the \[ED\] indicator lamp for high beam.

Switching off high beam
► Move the combination switch back to its starting position.

High-beam flasher
► Pull the combination switch in the direction of arrow 2.

Turn signal light
► To indicate briefly: push the combination switch briefly to the point of resistance in the direction of arrow 3 or 4.
The corresponding turn signal light will flash three times.

► To indicate permanently: push the combination switch beyond the point of resistance in the direction of arrow 3 or 4.
Vehicles with Active Lane Change Assist:
- A turn signal indicator activated by the driver may continue to operate for the duration of the lane change.
- If the driver indicated directly beforehand but a lane change was not immediately possible, the turn signal indicator may activate automatically.

Activating/deactivating the hazard warning lights
► Press button 1.
The hazard warning lights will switch on automatically if:
- The airbag has been deployed.
Adaptive functions, MULTIBEAM LED

Intelligent Light System function (Canada)
The MULTIBEAM LED headlamps adapt to the driving and weather situation and provide extended functions for improved illumination of the road.

The system comprises the following functions:
- Active headlamps (→ page 129)
- Cornering light (→ page 129)
- Highway mode (→ page 130)
- Enhanced fog light function (→ page 130)
- Adverse weather light (→ page 130)
- City lighting (→ page 130)

The system is active only when it is dark.

Active headlamps function (Canada)

Functions of the active headlamps:
- The headlamps follow the steering movements.
- Relevant areas are better illuminated during a journey.

The functions are active when the low beam is switched on.

Depending on the vehicle’s equipment, the course of the lane in which you are driving will also be evaluated and the active headlamps function will adjust the light in advance.

Cornering light function

The cornering light improves the illumination of the road over a wide angle in the turning direction, enabling better visibility on tight curves, for example. It can be activated only when the low beam is switched on.

The function is active in the following cases:
- At speeds below 25 mph (40 km/h) when the turn signal light is switched on or the steering wheel is turned
- At speeds between 25 mph (40 km/h) and 43 mph (70 km/h) and when the steering wheel is turned
Roundabout and intersection function: the cornering light will be activated on both sides based on an evaluation of the vehicle's current GPS position. It will remain active until after the vehicle has left the roundabout or the intersection.

Highway mode function (Canada)
Highway mode increases the range and brightness of the cone of light, enabling better visibility.

The function is active if a freeway journey is detected by means of:
- The vehicle’s speed
- The multifunction camera
- Or the navigation system

The function is not active in the following cases:
- At speeds below 50 mph (80 km/h)

Enhanced fog light function (Canada)
The enhanced fog light function reduces reflections and improves the illumination of the edge of the road.

The function is automatically activated under the following conditions:
- At speeds below 43 mph (70 km/h) and when the rear fog light is switched on.

The function is automatically deactivated under the following conditions:
- At speeds above 62 mph (100 km/h) after activation.
- When the rear fog light is switched off.

Function of the adverse weather light (Canada)
The adverse weather light reduces reflections in rainy conditions by dimming individual LEDs in the headlamps. The driver and other road users are blinded less as a result.

The city lighting function (Canada)
City lighting improves the illumination of roadsides in urban areas using a broad distribution of light.

The function is active in the following cases:
- At low speeds
- In illuminated parts of urban areas

Switching the Intelligent Light System on/off (Canada)

Requirements:
- The ignition is switched on.
Multimediasystem:

Settings ➤ Light
Intelligent Light System
 Activate or deactivate the function.

Adaptive Highbeam Assist

Adaptive Highbeam Assist function

⚠️ WARNING Risk of accident despite Adaptive Highbeam Assist
Adaptive Highbeam Assist does not react to:
- Road users without lights, e.g. pedestrians
- Road users with poor lighting, e.g. cyclists
- Road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist may fail to recognize other road users with their own lighting, or may recognize them too late.

In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.

Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions. Detection may be restricted in the following cases:
- In poor visibility, e.g. fog, heavy rain or snow
- If there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle’s lighting to the prevailing light, visibility and traffic conditions.

Adaptive Highbeam Assist automatically switches between the following types of light:
- Low beam
- High beam

At speeds greater than 19 mph (30 km/h):
- If no other road users are detected, the high beam will be switched on automatically.
The high beam will switch off automatically in the following cases:
- At speeds below 16 mph (25 km/h)
- If other road users are detected
- If street lighting is sufficient

The system’s optical sensor is located behind the windshield near the overhead control panel.

Switching Adaptive Highbeam Assist on/off

Switching on
- Turn the light switch to the \textit{auto} position.
- Switch on the high beam using the combination switch.
  If Adaptive Highbeam Assist is activated, the \textit{D} indicator lamp will light up on the multifunction display.

Switching off
- Switch off the high beam using the combination switch.

\textbf{Adaptive Highbeam Assist Plus}

\textbf{Adaptive Highbeam Assist Plus function (Canada)}

\textbf{WARNING} Risk of accident despite Adaptive Highbeam Assist Plus

Adaptive Highbeam Assist Plus does not react to:
- Road users without lights, e.g. pedestrians
- Road users with poor lighting, e.g. cyclists
- Road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist Plus may fail to recognize other road users with their own lighting, or may recognize them too late.

In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.

---

Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Adaptive Highbeam Assist Plus cannot take into account road, weather or traffic conditions.

Detection may be restricted in the following cases:
- In poor visibility, e.g. fog, heavy rain or snow
- If there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist Plus is only an aid. You are responsible for adjusting the vehicle’s lighting to the prevailing light, visibility and traffic conditions.
Adaptive Highbeam Assist Plus automatically switches between the following types of light:

- Low beam
- Partial high beam
- High beam
- ULTRA RANGE Highbeam

ULTRA RANGE Highbeam increases the brightness of the cone of light to the legally permitted maximum.

Partial high beam does not include other road users in the high beam area. It does not blind them but enables full high beam illumination for the driver apart from the excluded vehicles.

At speeds below 16 mph (25 km/h) or when there is sufficient street lighting:

- The partial high beam and the high beam will be switched off automatically.

At speeds greater than 19 mph (30 km/h):  
- If no other road users are detected, the high beam will be switched on automatically.
- If other road users are detected, the partial high beam will be switched on automatically.

At speeds above 25 mph (40 km/h):

- If no other road users are detected on a straight road, ULTRA RANGE Highbeam will be switched on automatically.
- If other road users are detected, the partial high beam will be switched on automatically.

- If highly reflective signs are detected, ULTRA RANGE Highbeam will be switched off automatically.

The system’s optical sensor is located behind the windshield near the overhead control panel.

Switching Adaptive Highbeam Assist Plus on/off (Canada)

Switching on

- Turn the light switch to the AUTO position.
- Switch on the high beam using the combination switch.

When the high beam is switched on automatically in the dark, the indicator lamp on the multifunction display will light up.

Switching off

- Switch off the high beam using the combination switch.
Setting the low beam (vehicles with MULTI-BEAM LED headlamps only)

Multimedia system:
- Settings ➤ Light
- Low-beam Headlamps
- Select Right-side Traffic, Left-side Traffic or Automatic.

Switching the daytime running lamps on/off

Multimedia system:
- Settings ➤ Light
- Daytime Run. Lights
- Switch the function on or off.

Setting the exterior lighting switch-off delay time

Requirements:
- The light switch is in the AUTO position.

Multimedia system:
- Settings ➤ Light
- Exterior Lighting Delay
- Set the switch-off delay time. When the vehicle engine is switched off, the exterior lighting will be activated for the set time.

Switching the surround lighting on/off

Multimedia system:
- Settings ➤ Light
- Locator Lighting

When Locator Lighting is active, the exterior lighting lights up for 40 seconds after the vehicle is unlocked. When you start the vehicle, the surround lighting is deactivated and the automatic driving lights are activated.
- Activate or deactivate the function.

Interior lighting

Adjusting the interior lighting

Front overhead control panel

1. Front left reading lamp
2. Automatic interior lighting control
3. Front interior lighting
4. Rear interior lighting
5. Front right reading lamp

To switch on/off: press button 1 – 5 accordingly.
Control panel in the grab handle

1 Rear reading lamp

To switch on/off: press button 1.

Adjusting the ambient lighting
Multimedia system:

Setting the color

- Select Color.
- Set the desired color.

Adjusting the brightness

- Select Brightness.
- Adjust the brightness.

Activating the brightness for zones

- Select Brightness.
- Select Brightness Zones.
- Activate or deactivate the function.
- Set the brightness for the desired zones.

Activating multi-color lighting

- Select Color.
- Select Multi-color.
- Select a color combination.

Activating multi-color animation

- Select Color.
- Select Multi-color Animation.
  The chosen color combination will change at predefined intervals.

Activating welcome lighting

- Select Color.
- Select Welcome.
  When the vehicle is unlocked, a special ambient lighting sequence will run.

Activating dependency on air conditioning settings

- Select Color.
- Select Climate.
  If changes are made to the temperature setting in the vehicle, the color of the ambient lighting will change briefly.

Switching the interior lighting switch-off delay time on/off

Multimedia system:

- Settings
- Light
- Interior Lighting Delay

- Switch the switch-off delay time on or off.
  When this function is active, the interior lighting lights up for a short time after the vehicle is locked.
Windshield wiper and windshield washer system

Switching the windshield wipers on/off

<table>
<thead>
<tr>
<th>Position</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Windshield wiper off</td>
</tr>
<tr>
<td>2</td>
<td>Intermittent wiping, normal</td>
</tr>
<tr>
<td>3</td>
<td>Intermittent wiping, frequent</td>
</tr>
<tr>
<td>4</td>
<td>Continuous wiping, slow</td>
</tr>
<tr>
<td>5</td>
<td>Continuous wiping, fast</td>
</tr>
</tbody>
</table>

- Turn the combination switch to the corresponding position 1 - 5.

- **Single wipe/washing:** push the button on the combination switch in the direction of arrow 1.
  - Single wipe
  - Wipes with washer fluid

Switching the rear window wiper on/off

<table>
<thead>
<tr>
<th>Position</th>
<th>Description</th>

Light and visibility
> Turn switch 1 to the correct position 1 - 4. The symbol will appear on the instrument cluster when the rear window wiper is switched on.

**Replacing the windshield wiper blades**

**WARNING** Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and the ignition before changing the wiper blades.

**Moving the wiper arms into the replacement position**

- Switch the ignition on and then off again immediately.
- Within around 15 seconds, press and hold the button on the combination switch for approximately three seconds (→ page 136). The wiper arms will move into the replacement position.

**Removing the wiper blades**

- Fold the wiper arms away from the windshield.

- Hold the wiper arm with one hand. With the other hand, turn the wiper blade away from the wiper arm in the direction of arrow 1 as far as it will go.

- Slide catch 2 in the direction of arrow 3 until it engages in the removal position.

- Remove the wiper blade from the wiper arm in the direction of arrow 4.

Hold the wiper arm with one hand. With the other hand, turn the wiper blade away from the wiper arm in the direction of arrow 1 as far as it will go.

Slide catch 2 in the direction of arrow 3 until it engages in the removal position.

Remove the wiper blade from the wiper arm in the direction of arrow 4.
Installing the wiper blades

- Insert the new wiper blade into the wiper arm in the direction of arrow 1.
- Slide catch 2 in the direction of arrow 3 until it engages in the locking position.
- Make sure that the wiper blade is seated correctly.
- Fold the wiper arms back onto the windshield.
- Switch on the ignition.
- Press the button on the combination switch. The wiper arms will return to the original position.
- Switch the ignition off.

Maintenance display

- Remove protective film 1 from the maintenance display on the tip of the newly installed wiper blades.

When the color of the maintenance display changes from black to yellow, the wiper blades should be replaced.
The duration until the color changes varies depending on the usage conditions.

Replacing the rear window wiper blade

**WARNING** Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and the ignition before changing the wiper blades.

Removing the wiper blade

- Switch the ignition off.

Installing the wiper blade

- Position wiper blade 1 with both lugs 3 on holder 2 on the wiper arm.
- Push wiper blade 1 in the direction of arrow 4 until it engages in holder 2.
- Make sure that wiper blade 1 is seated correctly.

- Fold wiper arm 2 away from the rear window until it engages in the replacement position.
- Unclip wiper blade 1 from wiper arm 2 and remove it in the direction of arrow 3.
Fold the wiper arm from the replacement position back onto the rear window.

Mirrors

Operating the outside mirrors

**WARNING** Risk of accident due to adjusting vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:
- If you adjust the driver’s seat, the head restraints, the steering wheel or the mirror while the vehicle is in motion.
- If you fasten your seat belt while the vehicle is in motion.
- Before starting the engine: adjust the driver’s seat, the head restraints, the steering wheel and the mirror and fasten your seat belt.

**WARNING** Risk of accident due to misjudgment of distance when using the front-passenger mirror

The outside mirror on the front passenger side reflects objects on a smaller scale. The objects in view are in fact closer than they appear.

Therefore, always look over your shoulder in order to ensure that you are aware of the actual distance between you and the road users driving behind you.

Folding the outside mirrors in/out

Briefly press button 1.

Resetting the outside mirrors

If the battery has been disconnected or completely discharged, the outside mirrors must be reset. Only then will the automatic mirror folding function work properly.

Briefly press button 1.
Adjusting the outside mirrors
- Press button 3 or 4 to select the outside mirror to be adjusted.
- Press button 2 to adjust the position of the mirror glass.

Engaging the outside mirrors
- Vehicles without electrically folding outside mirrors: manually move the outside mirror into the correct position.
- Vehicles with electrically folding outside mirrors: press and hold button 1. You will hear a click and the mirror will audibly click into place. The outside mirror will now be set to the correct position.

Automatic anti-glare mirrors function

![WARNING] Risk of acid burns and poisoning due to the anti-glare mirror electrolyte

Electrolyte may escape if the glass in an automatic anti-glare mirror breaks.

The electrolyte is hazardous to health and causes irritation. It must not come into contact with your skin, eyes, respiratory organs or clothing or be swallowed.
- If you come into contact with electrolyte, observe the following:
  - Immediately rinse the electrolyte from your skin with water and seek medical attention.
  - If electrolyte comes into contact with your eyes, immediately rinse them thoroughly with clean water and seek medical attention.
  - If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting. Seek medical attention immediately.
  - Immediately change out of clothing which has been contaminated with electrolyte.
  - If an allergic reaction occurs, seek medical attention immediately.

System limits
The system will not go into anti-glare mode if:
- The engine is switched off.
- Reverse gear is engaged.
- The interior lighting is switched on.

Front-passenger outside mirror parking position function
The parking position makes parking easier.
The front-passenger outside mirror will swivel downwards in the direction of the rear wheel on the front passenger’s side when:
- The parking position is stored (→ page 142).
- The front-passenger mirror is selected.
- Reverse gear is engaged.
The front-passenger outside mirror will move back to its original position when:

- You shift the transmission to another transmission position.
- You are traveling at a speed greater than 9 mph (15 km/h).
- You press the button for the outside mirror on the driver’s side.

**Storing the parking position of the front-passenger outside mirror using reverse gear**

**Storing**

1. Select the front-passenger outside mirror using button 2.
2. Engage reverse gear.
3. Move the front-passenger outside mirror into the desired parking position using button 1.

**Calling up**

- Select the front-passenger outside mirror using button 2.
- Engage reverse gear.
- The front-passenger outside mirror will move to the stored parking position.

**Activating/deactivating the automatic mirror folding function**

Multimedia system:
- Select Settings >> Vehicle
- Switch Automatic Folding on or off.
Area permeable to radio waves on the windshield

Radio-controlled equipment, e.g. toll systems, can be mounted only on areas of the windshield that are permeable to radio waves 1. The area permeable to radio waves 1 is best visible from outside the vehicle when the windshield is illuminated with an additional light source.

Infrared-reflective windshield function

The infrared-reflective windshield is coated and reduces the build-up of heat in the vehicle interior. The coating shields the vehicle interior from radio waves.
Overview of climate control systems

Notes on climate control

An interior air filter in combination with the pre-filter in the engine compartment must always be used so that the air conditioning system, pollution level monitoring and the air filtration work correctly. Make sure that the filter is installed correctly and the filter housing in the engine compartment is closed correctly using the cap and always tightly sealed when in operation. Use filters recommended and approved by Mercedes-Benz. Always have service work carried out at a qualified specialist workshop.

Overview of the air conditioning control panel

The indicator lamps on the buttons indicate that the corresponding function is activated.

- 1 ▼▲ Sets the temperature, left
- 2 ✔ Sets the air distribution
- 3 ¹ Sets the airflow or switches off climate control
- 4 AUTO Sets climate control to automatic (→ page 146)
- 5 DEF Defrosts the windshield
- 6 Vehicles with control panel for dual-zone automatic climate control (without stationary heater): MENU calls up the air conditioning menu
- 7 Vehicles with control panel for dual-zone automatic climate control (with stationary heater) or 3-zone automatic climate control (with/without stationary heater): MENU calls up the air conditioning menu, switches residual heat on/off (→ page 147)
- 8 Vehicles with control panel for dual-zone automatic climate control without stationary heater: MENU calls up the air conditioning menu, switches synchronization on/off (→ page 146)
- 9 Vehicles with a stationary heater: MENU switches the stationary heater on/off (→ page 145)
- 10 Vehicles with a stationary heater: Switches air-recirculation mode on/off (→ page 147)
Vehicles with control panel for dual-zone automatic climate control: \( \text{A/C} \) switches the A/C function on/off (→ page 145)

Vehicles with control panel for 3-zone automatic climate control: \( \wedge \) adjusts the air distribution, right

\( \wedge \) Sets the temperature, right

Rear operating unit in vehicles with control panel for 3-zone automatic climate control

1 Sets the temperature
2 Display
3 Sets the airflow

### Operating the climate control system

#### Switching climate control on/off

- **To switch on:** set the airflow to level 1 or higher using the \( \text{H} \) button.
- **To switch off:** set the airflow to level 0 using the \( \text{H} \) button.

If climate control is switched off, the windows may fog up more quickly. Switch climate control off only briefly.

#### Switching the A/C function on/off using the air conditioning control panel

The A/C function heats, cools and dehumidifies the vehicle’s interior air.

- Press the \( \text{A/C} \) button.

Switch off the A/C function only briefly; otherwise, the windows may fog up more quickly. Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a malfunction.

### Calling up the air conditioning menu

**Calling up the air conditioning menu using the multimedia system**

- Select one of the temperature displays at the lower edge of the media display.

**Calling up the air-conditioning menu using the button on the climate control panel**

- Press the \( \text{A/C} \) button on the climate control panel.

### Activating/deactivating the A/C function via the multimedia system

The A/C function heats, cools and dehumidifies the vehicle’s interior air.

- Call up the air-conditioning menu (→ page 145).
- Select First Row of Seats.
- Select A/C.
Setting climate control to automatic mode

In automatic mode, the set temperature is controlled and maintained at a constant level by the air supply.

- Press the \textit{auto} button.
- To switch to manual mode: press the \textit{OFF} or \textit{H} button.

Climate style

Climate style function

The following climate styles are available in automatic mode:

- FOCUS: high airflow, slightly cooler setting
- MEDIUM: medium airflow, standard setting
- DIFFUSE: low airflow, slightly warmer and draft-free setting

Adjusting the climate mode settings

- Call up the air conditioning menu (→ page 145).
- Select First Row of Seats or Second Row of Seats.
- Select a climate style.

Setting the air distribution

- Call up the air conditioning menu (→ page 145).
- Select a row of seats.
- To set the air distribution: select \textit{F}/\textit{P} or \textit{O}/\textit{P}.
- Set the airflow.

Several air distribution options can be selected at the same time, for example to set the climate control for the windshield and the footwells simultaneously.

The \textit{F} climate control for the windshield can only be selected for the first seat row.

Activating/deactivating the climate control synchronization function via the air conditioning control panel

Climate control can be set centrally using the synchronization function. The temperature and air distribution settings for the driver’s side will be adopted automatically for the front passenger side.

- Press the \textit{SYNC} button.

The synchronization function will be deactivated if the settings for one of the other climate control zones are changed.

Activating/deactivating the climate control synchronization function via the multimedia system

Climate control can be set centrally using the synchronization function. The driver’s settings for temperature, air quantity and air distribution are adopted automatically for all climate zones.

- Call up the air conditioning menu (→ page 145).
- Select First Row of Seats.
- Select \textit{SYNC}.
Removing condensation from the windows

Windows fogged up on the inside
- Press the \[ \text{AUTO} \] button.
- If the windows continue to fog up: press the \[ \text{MAX} \] button.

Windows fogged up on the outside
- Switch on the windshield wipers.
- Press the \[ \text{AUTO} \] button.

Switching air-recirculation mode on/off
- Press the \[ \text{Rec} \] button.
  The interior air will be recirculated.

Air-recirculation mode automatically switches to fresh air mode after some time.
- If air-recirculation mode is switched on, the windows may fog up more quickly. Switch on air-recirculation mode only briefly.

Switching the residual heat on or off
Requirements:
- The vehicle is parked.

It is possible to make use of the residual heat from the engine to continue heating or ventilating the front compartment of the vehicle for approximately 30 minutes.
- To switch on: press the \[ \text{Menu} \] button.

Residual heat is switched off automatically.

Activating/deactivating ionization
Ionization improves the quality of the vehicle's interior air. Ionization of the interior air is odorless.
- Call up the air conditioning menu (→ page 145).
- Select Air Quality.
- Select IONIZATION.

Fragrance system

Setting the fragrance system
Requirements:
- Automatic climate control is activated.
- The glove box is closed.

The fragrance system distributes a pleasant fragrance throughout the vehicle interior from a flask located in the glove box.
- Call up the climate control menu (→ page 145).
- Select Air Quality.
- Select AIR FRESHENER.
- Keep pressing until the desired intensity is reached.
Inserting or removing the flacon of the fragrance system

**WARNING** Risk of injury from liquid perfume

If children open the flacon, they could drink the liquid perfume or it could come into contact with their eyes.

- Do not leave children unattended in the vehicle.
- Consult a doctor immediately if liquid perfume has been drunk.
- If liquid perfume comes into contact with your eyes or skin, rinse your eyes with clean water.
- If symptoms continue, consult a doctor.

**ENVIRONMENTAL NOTE** Environmental damage due to improper disposal of full flacons

- Full flacons must not be disposed of with household waste.
- Full flacons must be taken to a harmful substance collection point.

1. Cap
2. Flacon

- **To insert**: slide the flacon into the holder as far as it will go.
- **To remove**: pull out the flacon.

If you do not use genuine Mercedes-Benz interior perfumes, observe the manufacturers' safety notices on the perfume packaging.
Dispose of the genuine Mercedes-Benz interior perfume flacon when it is empty and do not refill it.

**Refillable flacon**
- Unscrew the cap of the empty flacon.
- Fill the flacon with a maximum of 0.5 fl. oz. (15 ml).
- Screw the cap back on to the flacon.

Always refill the empty refillable flacon with the same perfume. Observe the separate information sheet with the flacon.

**Information on the windshield heater**
The windshield heater is switched on automatically if the button is activated.

After the vehicle is started, the windshield heater is switched on automatically as required.

---

**Air vents**

**Adjusting the front air vents**

**WARNING** Risk of burns and frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.
- Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.
- If necessary, direct the airflow to another area of the vehicle interior.

To guarantee the flow of fresh air through the air vents into the vehicle interior, comply with the following:
- Always keep the vents and vent grilles in the vehicle interior free.
- Keep the air inlet free of residue build-up (→ page 293).

---

*To open or close:* turn controller 2 to the left or right as far as it will go.

*To adjust the air direction:* hold air vent 1 in the center and move it up or down or to the left or right.
Adjusting the rear air vents

- **To open or close:** turn controller 2 to the left or right as far as it will go.
- **To set the airflow direction:** hold air vent 1 in the center and move it up or down or to the left or right.

Opening or closing the air vent in the glove box

- **NOTE** Damage to temperature-sensitive objects in the glove box

  Temperature-sensitive objects stored in the glove box may be damaged by the air vent located inside it.
  - Close the air vent when you heat the vehicle.
  - At high outside temperatures, open the air vent and switch on the A/C function.

  The automatic climate control must be switched on to cool the glove box.

- **To open or close:** turn controller 1 to the right or left.
Driving

Notes on Mercedes-AMG vehicles

Observe the notes on the following topics in the Supplement, otherwise you may fail to recognize dangers.

1. The availability of certain functions depends on the equipment and model of the vehicle.
   - Emotion Start
   - Rear axle locking differential
   - AMG Performance exhaust system
   - AMG ceramic high-performance composite brake system
   - RACE START
   - DRIFT MODE
   - AMG adaptive sport suspension system +
   - AMG steering-wheel buttons

Switching on the power supply or ignition

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.

Requirements:
- The SmartKey is in the vehicle and is recognized.
- The brake pedal is not depressed.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
Keep the vehicle SmartKey out of reach of children.
To switch on the power supply: press button 1 once.
You can activate the windshield wipers, for example.
The power supply is switched off again if the following conditions are met:
• You open the driver’s door.
• You press button 1 twice more.

To switch on the ignition: press button 1 twice.
The indicator lamps in the instrument cluster light up.
The ignition is switched off again if one of the following conditions is met:
• You do not start the vehicle within 15 minutes and the transmission is in position P or the electric parking brake is applied.
• You press button 1 once.

Starting the vehicle
Starting the vehicle with the start/stop button

DANGER Risk of death caused by exhaust gases
Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

WARNING Risk of fire due to flammable material in the engine compartment or the exhaust system
Flammable materials may ignite.
Therefore, check regularly that there are no flammable materials in the engine compartment or on the exhaust system.

Requirements:
• The SmartKey is in the vehicle and is recognized.
• Shift the transmission to position P or N.
• Depress the brake pedal and press button 1 once.
• If the vehicle does not start: switch off non-essential consumers and press button 1 once.
If the vehicle still does not start and the display message also appears in the multifunction display: start the vehicle with the SmartKey in the marked space (emergency operation mode) (→ page 153).

1 You can switch off the engine while driving by pressing button 1 for about three seconds or by pressing button 1 three times within three seconds. Be sure to observe the safety notes under "Driving tips" (→ page 156).

Starting the vehicle with the SmartKey in the marked space (emergency operation mode)
If the vehicle does not start and the message appears in the multifunction display, you can start the vehicle in emergency operation mode.

1 Make sure that marked space 2 is empty.
2 Remove SmartKey 1 from the key ring.
3 Place SmartKey 1 in marked space 2. The vehicle will start after a short time.
4 If you remove SmartKey 1 from marked space 2 the engine continues running. For further vehicle starts however, SmartKey 1 must be located in marked space 2 during the entire journey.
5 Have SmartKey 1 checked at a qualified specialist workshop.

If the vehicle does not start:
1 Place SmartKey 1 in marked space 2 and leave it there.
2 Depress the brake pedal and start the vehicle using the start/stop button.
3 You can also switch on the power supply or the ignition with the start/stop button.

Starting the vehicle via Remote Online services
Cooling or heating the vehicle interior before commencing your journey
Ensure the following before starting the engine:
- The legal stipulations in the area where your vehicle is parked allow engine starting via smartphone.
- It is safe to start and run the engine where your vehicle is parked.
- The fuel tank is sufficiently full.
- The starter battery is sufficiently charged.
Charging the starter battery before starting the journey
If the vehicle battery is discharged, you can receive a message on your smartphone. You can then start the vehicle with the smartphone to charge the battery. The vehicle is automatically switched off after ten minutes.

Ensure the following before starting the engine:
- The legal stipulations in the area where your vehicle is parked allow engine starting via smartphone.
- It is safe to start and run the engine where your vehicle is parked.
- The fuel tank is sufficiently full.

Starting the vehicle (Remote Online)

**WARNING** Risk of crushing or entrapment due to unintentional starting of the engine
Limbs could be crushed or trapped if the engine is started unintentionally during service or maintenance work.

Always secure the engine against unintentional starting before carrying out maintenance or repair work.

Requirements:
- Park position [P] is selected.
- The anti-theft alarm system is not activated.
- The panic alarm is not activated.
- The hazard warning light system is switched off.
- The hood is closed.
- The doors are closed and locked.
- The windows and sliding sunroof are closed.

Start the vehicle using the smartphone.
After every engine start, the engine runs for ten minutes.

You can carry out a maximum of two consecutive starting attempts. You must start the vehicle once with the SmartKey before trying to start the engine again with the smartphone. You can stop the vehicle again at any time.

Further information can be found in the smartphone app.

Securing the engine against starting before carrying out maintenance or repair work:
- Switch on the hazard warning light system.
or
- Unlock the doors.
or
- Open a side window or the sliding sunroof.

Breaking-in notes
To preserve the engine during the first 1000 miles (1500 km):
- Drive at varying road speeds and engine speeds.
- Do not drive at speeds greater than 85 mph (140 km/h).
- Drive the vehicle in drive program [C] or [E].
- Shift to the next highest gear at the very latest when the needle reaches the last third before the red area in the tachometer.
• Do not shift down a gear manually in order to brake.
• Avoid overstraining the vehicle, e.g. driving at full throttle.
• Do not depress the accelerator pedal past the pressure point (kickdown).
• Only increase the engine speed gradually and accelerate the vehicle to full speed after 1000 miles (1500 km).

This also applies when the engine or parts of the drivetrain have been replaced.
Please also observe the following breaking-in notes:
• In certain driving and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full system effectiveness is not reached until the end of this teach-in process.
• Brakepads, brake discs and tires that are either new or have been replaced only achieve optimum braking effect and grip after several hundred kilometers of driving. Compensate for the reduced braking effect by applying greater force to the brake pedal.

Notes on optimized acceleration
If all necessary requirements and activation conditions are fulfilled, the best possible acceleration can be achieved from a standstill.
Do not use the optimized acceleration on public roads. Individual wheels could spin and you could lose control of the vehicle. There is an increased risk of skidding and/or accident. Be sure to observe the safety notes and information on ESP® (→ page 184).

Pulling away with optimized acceleration

WARNING Risk of skidding and having an accident from wheels spinning
When you use optimized acceleration, individual wheels could spin and you could lose control of the vehicle.

If ESP® is deactivated, there is a risk of skidding and accident.
Make sure that no persons or obstacles are in the close vicinity of your vehicle.

Requirements:
• The vehicle has been broken in (→ page 154).
• The vehicle and tires are in good condition.
• You are on a high-grip roadway.
• The engine and transmission are at normal operating temperature.

NOTE Increased wear due to optimized acceleration
When pulling away with optimized acceleration, all components of the drivetrain are subjected to a very high load. This can lead to increased component wear.
Do not always pull away with optimized acceleration.

Engage the D drive position (→ page 169).
Move the steering wheel to the straight-ahead position.
Select the sportiest available drive program [S] or [S] (page 166).
Deactivate ESP® (page 185).
Depress and hold the brake pedal firmly with your left foot.
With your right foot, fully depress the accelerator pedal.
After no more than five seconds, take your left foot quickly off the brake, but keep the accelerator pedal depressed. The vehicle pulls away at maximum acceleration.
Switch on ESP® once the acceleration procedure is complete.

Ending optimized acceleration
Remove your foot from the accelerator pedal.
Reactivate the ESP®.

After you pull away with optimized acceleration, components of the drivetrain can become very hot, which means that optimized acceleration values may be reached again only after a few minutes.

Notes on driving

⚠️ WARNING Risk of accident due to objects in the driver’s footwell
Objects in the driver's footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.
- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

⚠️ WARNING Risk of accident due to incorrect footwear
Incorrect footwear includes, for example:
- Shoes with platform soles
- Shoes with high heels
- Slippers
- Always wear suitable footwear so that you can operate the pedals safely.

⚠️ WARNING Risk of accident if the ignition is switched off while driving
If you switch off the ignition while driving, safety functions are restricted or no longer available. You will need to use considerably more force to steer and brake, for example.
- Do not switch off the ignition while driving.
DANGER Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

WARNING Risk of skidding and of an accident due to shifting down on slippery road surfaces

If you shift down on slippery road surfaces to increase the engine braking effect, the drive wheels may lose traction.

- Do not shift down on slippery road surfaces to increase the engine braking effect.

DANGER Risk of fatal injury due to poisonous exhaust gases

If the tailpipe is blocked or sufficient ventilation is not possible, poisonous exhaust gases such as carbon monoxide may enter the vehicle. This is the case when the vehicle becomes stuck in snow, for example.

- Keep the tailpipe and the area around the vehicle free from snow when the engine or the stationary heater are running.

- Open a window on the side of the vehicle facing away from the wind to ensure an adequate supply of fresh air.

WARNING Risk of accident due to the brake system overheating

If you leave your foot on the brake pedal when driving, the brake system may overheat.

This increases the braking distance and the brake system may even fail.

- Never use the brake pedal as a footrest.

- Do not depress the brake pedal and the accelerator pedal at the same time while driving.

The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

- Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

WARNING Risk of accident and injury due to being under the influence of alcohol and drugs while driving

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.
**NOTE** Engine damage due to excessively high engine speeds

The engine will be damaged if you drive with the engine in the overrevving range.

- Do not drive with the engine in the overrevving range.

**NOTE** Wearing out the brake linings by continuously depressing the brake pedal

- Do not depress the brake pedal continuously whilst driving.
- To use the braking effect of the engine, shift to a lower gear in good time.

**NOTE** Damage to the drivetrain and engine when pulling away

- Do not warm up the engine while the vehicle is stationary. Pull away immediately.
- Avoid high engine speeds and driving at full throttle until the engine has reached its operating temperature.

**NOTE** Damage to the catalytic converter due to non-combusted fuel

The engine is not running smoothly and is misfiring.

Non-combusted fuel may get into the catalytic converter.

- Only depress the accelerator pedal slightly.
- Have the cause rectified immediately at a qualified specialist workshop.

**Notes on driving on salt-treated roads**

The braking effect is limited on salt-treated roads.

Therefore, observe the following notes:

- Due to salt build-up on the brake discs and brakepads, the braking distance can increase considerably or result in braking only on one side
- Maintain a much greater safe distance to the vehicle in front

To remove salt build-up:

- Brake occasionally while paying attention to the traffic conditions
- Carefully depress the brake pedal at the end of the journey and when starting the next journey

**Notes on hydroplaning**

Hydroplaning can take place once a certain amount of water has accumulated on the road surface.

Observe the following notes during heavy precipitation or in conditions in which hydroplaning may occur:

- Reduce speed
- Avoid tire ruts
- Avoid sudden steering movements
- Brake carefully

Also observe the notes on regularly checking wheels and tires (→ page 321).
Notes on driving through water on the road surface
Water which has entered into the vehicle can damage the engine, electrics and transmission. Water can also enter the air intake of the engine and cause engine damage.
Observe the following if you must drive through water:
- The water, when calm, may only reach the lower edge of the vehicle body.
- Drive at a maximum speed of 6 mph (10 km/h); water can otherwise enter the vehicle interior or engine compartment.
- Vehicles traveling in front, or oncoming vehicles, can create waves which may exceed the maximum permissible depth of the water.

The braking effect of the brakes is reduced after fording. Brake carefully while paying attention to the traffic conditions until braking power has been fully restored.

Notes on off-road driving

**WARNING** Risk of accident if you do not keep to line of fall on inclines
If you drive at an angle or turn on an incline, the vehicle could slip sideways, tip and roll-over.
- Always drive on inclines in the line of fall (straight up or down) and do not turn.

**WARNING** Risk of fire due to flammable materials on hot parts of the exhaust system
Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.
- When driving on unpaved roads or off-road, regularly check the vehicle underside.
- Remove trapped plants or other flammable material, in particular.

If there is damage, consult a qualified specialist workshop immediately.

When driving off-road, sand, mud and water or water mixed with oil may get into the brakes. This may lead to a reduction in braking effect or total brake failure as a result of increased wear. The braking characteristics will vary depending on the material that has entered the system. Clean the brakes after driving off-road. If you then notice reduced braking effect or hear scraping noises, have the brake system checked at a qualified specialist workshop. Adapt your driving style to the changed braking characteristics.

**NOTE** Damage caused by driving over obstacles
The vehicle can be damaged by:
- driving up onto high curbs or unpaved roads.
- quickly driving over obstacles such as curbs, speed bumps or potholes.
• heavy objects hitting the underbody or chassis components.
  ▶ Do not drive over obstacles that could damage the vehicle.
  ▶ Check the vehicle regularly for damage during off-road driving.
  ▶ Adjust the vehicle speed to suit the road surface conditions.
  ▶ If there is damage, consult a qualified specialist workshop immediately.

**Checklist before driving off-road**
Check the following points before driving off-road:
- Fuel level
- Engine oil level: fill engine oil to the maximum level to ensure full gradeability (→ page 289).
- Tire-change tool kit and spare wheel
- Tires and wheels

Further information about special all-terrain tires for retrofitting can be obtained from a qualified specialist workshop.

**Off-road driving**
Read this section before driving your vehicle off-road. Practice by driving over more gentle off-road terrain first.
- Observe the notes on the cross-country ABS.
- If necessary, select the [F] or [G] (→ page 166) drive program before driving off-road.
- Select a vehicle level suitable for off-road terrain (→ page 219). To avoid damaging the vehicle, make sure there is always sufficient ground clearance.
- Always keep the engine running and in gear when driving on downhill gradients and slopes. Observe the notes on driving in mountainous terrain.
- Do not drive on unknown terrain that is not easily visible and stay on marked routes.
- Always keep the doors and windows closed while the vehicle is in motion.
- Deactivate Active Distance Assist DISTRONIC and cruise control.
- Adapt your driving style to the terrain.
- Do not use the HOLD function on steep downhill or uphill gradients with slippery or loose surfaces.

**Driving on sand**
When driving on sand, also observe the following instructions:
- Select the [G] drive program.
- Select a higher vehicle level.
- Shift to a lower gear.
- Drive quickly to overcome the rolling resistance, otherwise the vehicle may dig itself in.
- Drive in the tracks of other vehicles if possible. Make sure that the following prerequisites are met:
  - The tire ruts are not too deep
  - The sand is firm enough
  - The ground clearance is sufficient

**Fording**

Also observe the following information when fording:

- Drive no faster than 6 mph (10 km/h).
- The water, when calm, may only reach the lower edge of the vehicle body.
- Switch off automatic climate control (→ page 146).
- Ensure that a bow wave does not form as you drive.
- Do not stop in the water and do not switch off the engine. Ensure the ECO start/stop function is switched off (→ page 163).

**Driving in mountainous terrain**

Also observe the following information when driving in mountainous terrain:

- Avoid high engine speeds.
- Use the braking power of the engine when driving downhill.
- Shift to a lower gear on uphill gradients and on long, steep downhill gradients.
- Activate DSR before driving downhill, if necessary (→ page 199).

**Checklist after driving off-road**

Driving off-road places greater demands on your vehicle than driving on normal roads. Check the entire vehicle for damage and foreign bodies every time after driving off-road. Foreign bodies in the wheels or drivetrain can lead to imbalances and therefore vibrations.

- If the or drive program is selected: select another drive program.
- Deactivate DSR.
- Lower the vehicle level again to a level suitable to the road conditions, e.g. to the normal level.
- Apply the brakes to dry them after fording.
- Check that the service brake is working normally after a long downhill stretch.
- Clean the following components every time after driving off-road:
  - License plate number
  - Headlamps and tail lamps
  - Tires, wheels and wheel arches
  - Underbody
- After driving through sand, mud, water or gravel, have the following components checked and cleaned:
  - Brake discs and brakepads
  - Tires and wheels
  - Axle joints

- Deactivate DSR.
- Lower the vehicle level again to a level suitable to the road conditions, e.g. to the normal level.
- Apply the brakes to dry them after fording.
- Check that the service brake is working normally after a long downhill stretch.
- Clean the following components every time after driving off-road:
  - License plate number
  - Headlamps and tail lamps
  - Tires, wheels and wheel arches
  - Underbody
- After driving through sand, mud, water or gravel, have the following components checked and cleaned:
  - Brake discs and brakepads
  - Tires and wheels
  - Axle joints

- Deactivate DSR.
- Lower the vehicle level again to a level suitable to the road conditions, e.g. to the normal level.
- Apply the brakes to dry them after fording.
- Check that the service brake is working normally after a long downhill stretch.
- Clean the following components every time after driving off-road:
  - License plate number
  - Headlamps and tail lamps
  - Tires, wheels and wheel arches
  - Underbody
- After driving through sand, mud, water or gravel, have the following components checked and cleaned:
  - Brake discs and brakepads
  - Tires and wheels
  - Axle joints

- Deactivate DSR.
- Lower the vehicle level again to a level suitable to the road conditions, e.g. to the normal level.
- Apply the brakes to dry them after fording.
- Check that the service brake is working normally after a long downhill stretch.
- Clean the following components every time after driving off-road:
  - License plate number
  - Headlamps and tail lamps
  - Tires, wheels and wheel arches
  - Underbody
- After driving through sand, mud, water or gravel, have the following components checked and cleaned:
  - Brake discs and brakepads
  - Tires and wheels
  - Axle joints
ECO start/stop function

Operation of the ECO start/stop function

The ECO start/stop function is not available in all drive programs, depending on the engine. Observe the status display in the multifunction display for this.

The engine is switched off automatically in the following situations if all vehicle conditions for an automatic engine stop are met:

- You brake the vehicle to a standstill in transmission position D or N.
- Vehicles with a 48 V on-board electrical system: you depress the brake pedal when traveling at a low speed.

If the system has detected one of the following situations, the engine will not stop:

- You stop at a stop sign and there is no vehicle in front of you.
- The vehicle that stopped in front of you starts up again.
- You maneuver, turn the steering wheel sharply or engage reverse gear.

If the system detects an intelligent stop inhibitor, e.g. a stop sign, the engine will not stop.

If you activate the HOLD function or engage the park position P, the engine can be switched off in spite of an intelligent stop inhibitor.

The engine is restarted automatically if:

- You engage transmission position D or R.
- You depress the accelerator pedal.
- An automatic engine start is required by the vehicle.
- You release the brake pedal.

Vehicles with a 48 V on-board electrical system:

- You release the brake pedal on a downhill gradient and the vehicle does not roll.
- The vehicle rolls on a downhill gradient and does not automatically enter glide mode at 15 mph (20 km/h).

If the system detects an intelligent stop inhibitor, e.g. a stop sign, the engine will not stop.

If you activate the HOLD function or engage the park position P, the engine can be switched off in spite of an intelligent stop inhibitor.

The engine is restarted automatically if:

- You engage transmission position D or R.
- You depress the accelerator pedal.
- An automatic engine start is required by the vehicle.
- You release the brake pedal.

Vehicles with a 48 V on-board electrical system:

- You release the brake pedal on a downhill gradient and the vehicle does not roll.
- The vehicle rolls on a downhill gradient and does not automatically enter glide mode at 15 mph (20 km/h).

ECO start/stop function symbols in the multifunction display:

- The symbol (green) appears when the vehicle is at a standstill: the engine was switched off by the ECO start/stop function.
- The symbol (yellow) appears when the vehicle is at a standstill: not all vehicle conditions for an engine stop have been met.
- Neither the symbol nor symbol appears when the vehicle is at a standstill: an intelligent stop inhibitor was detected, e.g. a stop sign.
- The symbol appears: the ECO start/stop function is deactivated or there is a malfunction.

If the engine was switched off by the ECO start/stop function and you leave the vehicle, a warning tone sounds and the engine is not restarted. In addition, the following display message appears in the multifunction display:

Vehicle Ready to Drive Switch the Ignition Off Before Exiting
If you do not switch off the ignition, it is automatically switched off after three minutes.

Deactivating or activating the ECO start/stop function

Press button 1. If indicator lamp 2 lights up, the ECO start/stop function is activated.

Depending on the model and the vehicle equipment, the button may also be located at a different position in the center console.

ECO display function

The ECO display summarizes your driving characteristics from the start of the journey to its completion and assists you in achieving the most economical driving style.

You can influence consumption by doing the following:
- Drive with particular care
- Follow the gearshift recommendations

The lettering in the segment will light up brightly, the outer edge will light up and the segment will fill up when the following driving style is adopted:
- 1 Steady speed
- 2 Gentle deceleration and rolling
- 3 Moderate acceleration

The lettering in the segment will be gray, the outer edge will be dark and the segment will empty when the following driving style is adopted:
- 1 Fluctuations in speed
- 2 Heavy braking
- 3 Sporty acceleration

The ECO display will show you when you have driven economically:
- The three segments will fill up completely at the same time
- The edges around all three segments will light up
The additional range achieved as a result of your driving style in comparison with a driver with a very sporty driving style will be shown in the center of display 4. The range displayed does not indicate a fixed reduction in consumption.

**ECO Assist function**

**Vehicles with a 48 V on-board electrical system (EQ Boost technology):**

ECO Assist analyzes data for the vehicle’s expected route. This allows the system to optimally adjust the driving style for the route ahead, save fuel and recuperate. If the system detects an event ahead, e.g. a speed limit or a roundabout, it will appear on the multifunction display. The following symbols can be displayed:

1. Event ahead
2. Distance display for the event ahead
3. "Foot off the accelerator" prompt

The segments of distance display 2 show the distance to the event ahead as follows:
- A few segments light up: the event ahead is near.
- Many segments light up: the event ahead is further away.

When the vehicle nears the event, ECO Assist will calculate the optimal speed for maximum fuel economy and recuperative energy based on the distance, speed and gradient. The Foot off the Accelerator message 3 appears on the multifunction display. The first segments in front of the vehicle will turn green. The remaining segments will initially stay white. If the driver takes their foot off the accelerator pedal in good time, the remaining segments on the display will successively turn green until the event shown is reached. The drivetrain will be set for maximum fuel economy. Recuperation will charge the battery. Recuperation will be adapted to the selected drive program.

The event will be shown for a short time after it has been passed. If there is no response to the
Foot off the Accelerator prompt, the segments will remain white.

If the event involves a vehicle in front, all segments will immediately turn green once there is a response to the Foot off the Accelerator prompt.

For active ECO Assist in drive program [E], symbol 3 will appear on the multifunction display and on the Head-up Display beside transmission position [D]. Symbol 3 will also appear when the assistant display is not selected.

If the system does not intervene during the event ahead, nothing will be displayed. The system will be passive.

ECO Assist is active only in drive programs [E] and [C].

System limits

ECO Assist can function even more precisely if the route is adhered to when route guidance is active. The basic function is also available without active route guidance. Not all information and traffic situations can be foreseen. The quality depends on the map data.

ECO Assist is only an aid. The driver is responsible for keeping a safe distance from the vehicle in front, for vehicle speed and for braking in good time. The driver must be ready to brake at all times irrespective of whether the system intervenes.

The system may be impaired or may not function in the following situations:

- If visibility is poor, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- If there is dirt on the windshield in the area of the multifunction camera or the camera is fogged up, damaged or obscured.
- If traffic signs are hard to discern, e.g. due to dirt, snow or insufficient lighting, or because they are obscured.
- If the information on the navigation system's digital map is incorrect or out of date.
- If signs are ambiguous, e.g. traffic signs in roadworks or in adjacent lanes.

Displaying ECO Assist

On-board computer:

DriveAssist
Select ECO Assist.

DYNAMIC SELECT switch

Function of the DYNAMIC SELECT switch

<table>
<thead>
<tr>
<th></th>
<th>NOTE Mercedes-AMG vehicles</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Observe the notes in the Supplement. You could otherwise fail to recognize dangers.</td>
</tr>
</tbody>
</table>

Depending on the engine and equipment, the vehicle has different drive programs.

Use the DYNAMIC SELECT switch to change between the following drive programs.

The drive program selected appears in the multifunction display of the on-board computer.

Individual

- Individual settings
Sport+
- Particularly sporty driving
- Emphasizes the vehicle's own oversteering and understeering characteristics for a more active driving style
- Only suitable for good road conditions, a dry road surface and a clear stretch of road

Sport
- Continues to offer stability but with a sporty setup
- Allows the sporty driver a more active driving style
- Only suitable for good road conditions, a dry road surface and a clear stretch of road

Comfort
- Comfortable and economical driving
- Balance between traction and stability
- Recommended for all road conditions

Eco
- Particularly economical driving
- Balance between traction and stability
- Recommended for all road conditions

Offroad
- Intervenes later if there is oversteering or understeering, thus improving traction
- Suitable for easily negotiable off-road terrain, such as dirt tracks, gravel or sandy surfaces
- Not suitable for use on public roads

Offroad+
- Intervenes later if there is oversteering or understeering, thus improving traction
- Suitable for rough terrain, such as steep and/or uneven terrain or for driving on rocky terrain
- Not suitable for use on public roads

Depending on the drive program, the following systems change their characteristics:
- Drive:
  - Engine and transmission management
  - Active Distance Assist DISTRONIC
  - ESP®
  - Vehicles with AIR BODY CONTROL or DYNAMIC BODY CONTROL: suspension
  - Electric power steering

Selecting the drive program
Press DYNAMIC SELECT switch 1 forwards or backwards. The drive program selected appears in the multifunction display.

Configuring DYNAMIC SELECT (multimedia system)

Multimedia system:

Setting drive program I

Select Individual Configuration.

Select and set a category.

Switching the restoration display on or off

Switch Request at Start on or off.

Function on: the next time the vehicle is started a prompt appears asking whether the last active drive program should be restored. If the ECO start/stop function was deactivated, an additional prompt appears asking if the function should remain deactivated.

The prompt appears only if the previously active settings deviate from the standard settings.

Function off: the next time the vehicle is started the drive program is set automatically. The ECO start/stop function is activated automatically.

This function must be activated for each user profile separately. Only when this function is activated will the drive program and ECO start/stop setting for the previous journey be saved for the respective user profile.

Displaying vehicle data

Multimedia system:

Displaying engine data

Multimedia system:

Select Engine.

The engine data is displayed.

The actual (maximum) values that can be achieved for engine output and engine torque may deviate from the certified values within the country-specific guidelines for permissible tolerances (basis: UN-ECE No. 85 or country-specific guidelines).

Factors that can influence this are, for example:

- Sea level
- Fuel grade
- Outside temperature
- Operating temperature of the engine

The values displayed serve only as orientation. The values for engine output and engine torque shown in the media display may deviate from the actual values.
Calling up the consumption indicator

Multimedia system:

Select Consumption.
The current and average consumption is displayed.

Automatic transmission

DIRECT SELECT lever

Function of the DIRECT SELECT lever

⚠️ WARNING Risk of accident due to incorrect gearshifting

If the engine speed is higher than the idle speed and you engage the transmission position D or R, the vehicle may accelerate sharply.

⚠️ If you engage the transmission position D or R when the vehicle is at a standstill, always depress the brake pedal firmly and do not accelerate at the same time.

⚠️ WARNING Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:

- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:

- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

Keep the vehicle SmartKey out of reach of children.

Use the DIRECT SELECT lever to switch the transmission position. The current transmission position is displayed in the multifunction display.

- Park position
- Reverse gear
Neutral

Drive position

Engaging reverse gear R

Depress the brake pedal and push the DIRECT SELECT lever upwards past the first point of resistance.

Engaging neutral N

Depress the brake pedal and push the DIRECT SELECT lever up or down to the first point of resistance.

To shift into neutral [N] with the ignition on, push the selector lever up or down for several seconds to the first point of resistance.

Subsequently releasing the brake pedal will allow you to move the vehicle freely, e.g. to push it or tow it away.

Proceed as follows if you want the automatic transmission to remain in neutral [N], even if the ignition is switched off or the driver’s door is opened:

Depress the brake pedal and engage neutral [N] when the vehicle is at a standstill.

Release the brake pedal.

Switch the ignition off.

If you then exit the vehicle leaving the SmartKey in the vehicle, the automatic transmission remains in neutral [N].

Engaging park position P

Observe the notes on parking the vehicle (→ page 174).

Depress the brake pedal until the vehicle is at a standstill.

When the vehicle is at a standstill, press button [P].

When the transmission position display shows [P], the park position is engaged. If no transmission position display [P] appears, secure the vehicle to prevent it from rolling away.

Depending on the situation, it may take a short time until [P] is engaged. Therefore, always pay attention to the transmission position display.

Park position [P] is engaged automatically if one of the following conditions is met:

- You switch off the ignition when the vehicle is stationary and the transmission position is [D] or [R].
- You open the driver’s door when the vehicle is at a standstill or when driving at a very low speed and the transmission position is [D] or [R].

To maneuver with an open driver’s door, open the driver’s door while at a standstill and engage transmission position [D] or [R] again.

Engaging drive position D

Depress the brake pedal and push the DIRECT SELECT lever down past the first point of resistance.

When the automatic transmission is in transmission position [D], it shifts the gears automatically. This depends, among other things, on the following factors:

- The selected drive program
- The position of the accelerator pedal
The driving speed

**Manual gear shifting**

The gears shift automatically when manual gear-shifting is deactivated.

**Temporary setting:**
- **To activate:** pull steering wheel gearshift paddle 1 or 2.
  Manual gear shifting is activated for a short time. The transmission position display shows **M** and the current gear.

How long the manual gear shifting stays activated is dependent on various factors.

Manual gear shifting can be automatically deactivated in the following cases:
- Changing the drive program
- Restarting the vehicle
- When the transmission position **D** is engaged again
- Driving style

**To shift up:** pull steering wheel gearshift paddle 2.

**To shift down:** pull steering wheel gearshift paddle 1.

**To deactivate:** pull steering wheel gearshift paddle 2 and hold it in place.
The transmission position display shows **D**.

**Permanent setting:**
- Change to drive program **M** (page 166).
- Select drive setting **M** (page 167).

**Gearshift recommendation**

The gearshift recommendation assists you in adopting an economical driving style.
If gearshift recommendation 1 appears next to the transmission position display, shift to the recommended gear.

Using kickdown

**Maximum acceleration:** depress the accelerator pedal beyond the pressure point.

To protect against engine overrev, the automatic transmission shifts up to the next gear when maximum engine speed has been reached.

**Glide mode function**

- **NOTE** Mercedes-AMG vehicles
  - Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

With an anticipatory driving style, glide mode helps you to reduce fuel consumption.

Glide mode is characterized by the following:
- The combustion engine is disconnected from the drivetrain and continues to run in neutral.
- The transmission position display [D] is shown in green.
- **Vehicles with 48 V on-board electrical system (EQ-Boost technology):** the combustion engine can be switched off. All of the vehicle functions remain active.

Glide mode is activated if the following conditions are met:
- Drive program [E] is selected.
- The speed is within a suitable range.
- The road’s course is suitable, e.g. no steep uphill or downhill inclines or tight curves.
- you do not depress the accelerator or brake pedal (except for light brake applications).

Glide mode can also be activated if you have selected the “Eco” setting for the drive in the drive program [E].

Glide mode is deactivated again if one of the conditions is no longer met.

Glide mode can also be prevented by the following parameters:
- Incline
- Downhill gradient
- Temperature
- Height
- Speed
- Operating status of the engine
- Traffic situation

**Function of the 4MATIC**

4MATIC ensures that all four wheels are driven. Together with ESP® and 4ETS, 4MATIC improves the traction of your vehicle whenever a driven wheel spins due to insufficient traction.

If you fail to adapt your driving style, 4MATIC can neither reduce the risk of an accident nor over-ride the laws of physics. 4MATIC cannot take account of road, weather and traffic conditions. 4MATIC is only an aid. You are responsible especially for maintaining a safe distance from the
vehicle in front, for vehicle speed, for braking in 
good time and for staying in lane.

In wintry road conditions, the maximum 
effect of 4MATIC can be achieved only if you 
use winter tires (M+S tires), with snow 
chains if necessary.

## Refueling the vehicle

### WARNING Risk of fire or explosion from fuel

Fuels are highly flammable.
- Fire, open flames, smoking and creation 
of sparks must be avoided.
- Switch off the ignition and, if available, 
the stationary heater, before and while 
refueling the vehicle.

### WARNING Risk of injury from fuels

Fuels are poisonous and hazardous to your 
health.

- Do not swallow fuel or let it come into 
contact with skin, eyes or clothing.
- Do not inhale fuel vapor.
- Keep children away from fuel.
- Keep doors and windows closed during 
the refueling process.

If you or other people come into contact with 
fuel, observe the following:
- Immediately rinse fuel off your skin with 
soap and water.
- If fuel comes into contact with your 
eyes, immediately rinse them thor- 
roughly with clean water. Seek medical 
attention immediately.
- If you swallow fuel, seek medical atten-
tion immediately. Do not induce vomit-
ing.
- Change immediately out of clothing that 
has come into contact with fuel.

### WARNING Risk of fire and explosion due 
to electrostatic charge

Electrostatic charge can ignite fuel vapor.
- Before you open the fuel filler cap or 
take hold of the pump nozzle, touch the 
metallic vehicle body.
- To avoid creating another electrostatic 
charge, do not get into the vehicle again 
during the refueling process.

### NOTE Damage caused by the wrong fuel

Vehicles with a gasoline engine:
Even small amounts of the wrong fuel could 
result in damage to the fuel system, the 
engine and the emission control system.
- Only refuel with low-sulfur gasoline.

This fuel may contain up to 10% ethanol. Your 
vehicle is suitable for use with E10 fuel.
Never refuel with one of the following fuels:
- Diesel
• Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100
• Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
• Gasoline with additives containing metal If you have accidentally refueled with the wrong fuel:
  ▶ Do not switch the ignition on.
  ▶ Consult a qualified specialist workshop.

! NOTE Do not use diesel to refuel vehicles with a gasoline engine

If you have accidentally refueled with the wrong fuel:
• Do not switch the ignition on. Otherwise fuel can enter the engine. Even small amounts of the wrong fuel could result in damage to the fuel system and the engine. The repair costs are high.
  ▶ Consult a qualified specialist workshop.

Have the fuel tank and fuel lines drained completely.

! NOTE Damage to the fuel system caused by overfilled fuel tanks

Only fill the fuel tank until the pump nozzle switches off.

Requirements:
• The vehicle is unlocked.
  ▶ Do not get into the vehicle again during the refueling process. Otherwise, electrostatic charge could build up again.

Observe the notes on operating fluids and fuel. Only refuel with fuel that has at least the octane number specified in the information label in the fuel filler flap. Otherwise, engine output can be reduced and fuel consumption increased.

Press on the back area of fuel filler flap 1.
Turn the fuel filler cap counter-clockwise and remove it.
Insert the fuel filler cap from above into bracket 2.
Completely insert the pump nozzle into the tank filler neck, hook in place and refuel.
Only fill the fuel tank until the pump nozzle switches off.
Replace the cap on the filler neck and turn clockwise until it engages audibly.
Close fuel filler flap 1.

Parking
Parking the vehicle

**WARNING** Risk of accident and injury caused by an insufficiently secured vehicle rolling away

If the vehicle is not securely parked sufficiently, it can roll away in an uncontrolled way even at a slight downhill gradient.

**WARNING** Risk of fire caused by hot exhaust system parts

Flammable materials such as leaves, grass or twigs may ignite.
- Park the vehicle so that no flammable material can come into contact with hot vehicle components.
- In particular, do not park on dry grass-land or harvested grain fields.

- On uphill or downhill gradients, turn the front wheels so that the vehicle rolls towards the curb if it starts moving.
- Apply the parking brake.
- Switch the transmission to position P.

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.

- **NOTE** Damage to the vehicle due to it rolling away

- Always secure the vehicle against rolling away.

- **NOTE** Damage due to the vehicle lowering

**Vehicles with AIR BODY CONTROL or level control:** The vehicle can lower because of temperature differences or longer non-operational times. This can cause damage to parts of the body.

- When stopping the vehicle and when driving off, make sure that there are no obstacles such as curbs under or in the immediate vicinity of the body.

- Bring the vehicle to a standstill by pressing the brake pedal.

- On gradients, turn the front wheels so that the vehicle will roll towards the curb if it starts moving.

- Apply the electric parking brake.

- Engage transmission position **P** in a stationary vehicle with the brake pedal applied (→ page 169).

- Switch off the engine and the ignition by pressing button 1.

- Release the service brake slowly.

- Get out of the vehicle and lock it.

- When you park the vehicle, you can still operate the side windows and the sliding sunroof for approximately four minutes if the driver’s door is closed.

- When you park the vehicle, you can still operate the side windows and the panoramic sliding sunroof for approximately four minutes if the driver’s door is closed.
Garage door opener

Programming buttons for the garage door opener

⚠️ **DANGER** Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

⚠️ **WARNING** Risk of injury when opening or closing a door with the garage door opener

When you operate or program the door with the integrated garage door opener, persons in the range of movement of the door may become trapped or be struck by the door.

Always make sure that nobody is within the range of movement of the door.

Only operate the following doors using the garage door opener:

- Doors with a safety stop and reversing feature
- Doors which conform to the current U.S. safety standards

**Requirements:**

- The vehicle has been parked outside the garage or outside the range of movement of the door.
- The engine is switched off.
- The ignition is switched on.

The garage door opener function is always available when the ignition is switched on.

Check if the transmitter frequency of the remote control has the frequency range of 280 to 868 MHz.

Radio equipment approval number:

- NZLMUAHL5 (USA)
- 4112A-MUAHL5 (Canada)
Press and hold button 1, 2 or 3 that you wish to program. Indicator lamp 4 flashes yellow.

It can take up to 20 seconds before the indicator lamp flashes yellow.

Release the previously pressed button. Indicator lamp 4 continues to flash yellow.

Point remote control 6 from a distance of 0.4 in (1 cm) to 3 in (8 cm) towards button 1, 2 or 3.

Press and hold button 5 of remote control 6 until one of the following signals appears:
- Indicator lamp 4 lights up green continuously. Programming is complete.
- Indicator lamp 4 flashes green. Programming was successful. Additionally, synchronization of the rolling code with the door system must also be carried out.

If indicator lamp 4 does not light up or flash green: repeat the procedure.

Release all of the buttons.

The remote control for the door drive is not included in the scope of delivery of the garage door opener.

**Synchronizing the rolling code**

**Requirements:**
- The door system uses a rolling code.
- The vehicle must be within range of the garage door or door drive.
- The vehicle as well as persons and objects are located outside the range of movement of the door.

Press the programming button on the door drive unit. Initiate the next step within approximately 30 seconds.

Press previously programmed button 1, 2 or 3 repeatedly until the door closes. When the door closes, programming is completed.

Please also read the operating instructions for the door drive.

**Troubleshooting when programming the remote control**

- Check if the transmitter frequency of remote control 6 is supported.
- Replace the batteries in remote control 6.
- Hold remote control 6 at various angles from a distance of 0.4 in (1 cm) to 3 in (8 cm) front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- Hold remote control 6 at the same angles at various distances in front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- On remote controls that transmit only for a limited period, press button 5 on remote control 6 again before transmission ends.
- Align the antenna line of the door opener unit with the remote control.

Driving and parking 177
Support and additional information on programming:
- On the toll free HomeLink® Hotline on 1-800-355-3515
- On the Internet at https://www.homelink.com/mercedes

Opening or closing the garage door

Requirements:
- The corresponding button is programmed to operate the door.
- Press and hold buttons 1, 2 or 3 until the door opens or closes.
- If indicator lamp 4 flashes yellow after approximately 20 seconds: press and hold the previously pressed button again until the door opens or closes.

Clearing the garage door opener memory
- Press and hold buttons 1 and 3.
- Indicator lamp 4 lights up yellow.
- If indicator lamp 4 flashes green: release buttons 1 and 3.
- The entire memory has been deleted.

Electric parking brake

Function of the electric parking brake (applying automatically)

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are left unsupervised in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion, for example by:
- Releasing the parking brake.
- Changing the transmission position.
- Starting the vehicle.

The electric parking brake is applied if the transmission is in position [P] and one of the following conditions is fulfilled:
- The engine is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.

To prevent application: pull the handle of the electric parking brake.

In the following situations, the electric parking brake is also applied:
- Active Distance Assist DISTRONIC is bringing the vehicle to a standstill.
- The HOLD function is keeping the vehicle stationary.

Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Keep the vehicle SmartKey out of reach of children.
• Active Parking Assist is keeping the vehicle stationary.

This is the case if one of the following conditions is also fulfilled:
• The engine is switched off.
• The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.
• There is a system malfunction.
• The power supply is insufficient.
• The vehicle is stationary for a lengthy period.

When the electric parking brake is applied, the red \textbf{PARK} (USA) or \textbf{EP} (Canada) indicator lamp lights up in the instrument cluster.

The electric parking brake is not automatically applied if the engine is switched off by the ECO start/stop function.

\textbf{Electric parking brake function (releasing automatically)}

The electric parking brake is released when the following conditions are fulfilled:
• The driver’s door is closed.
• The engine is running.
• The transmission is in position \textbf{D} or \textbf{R} and you depress the accelerator pedal or you shift from transmission position \textbf{P} to \textbf{D} or \textbf{R} when on level ground with the driver’s door closed.
• If the transmission is in position \textbf{R}, the tailgate must be closed.
• The seat belt tongue is inserted into the seat belt buckle of the driver’s seat.

If the seat belt tongue is not inserted into the seat belt buckle of the driver’s seat, one of the following conditions must be fulfilled:
- You shift from transmission position \textbf{P}.
- You have previously driven at speeds greater than 2 mph (3 km/h).

When the electric parking brake is released, the red \textbf{PARK} (USA) or \textbf{EP} (Canada) indicator lamp in the instrument cluster goes out.

\textbf{Applying/releasing the electric parking brake manually}

\textbf{Applying}
Push handle 1.
The red PARK (USA) or EP (Canada) indicator lamp lights up in the instrument cluster.

The electric parking brake is only securely applied if the indicator lamp is lit continuously.

Releasing

Switch on the ignition.

Pull handle 1.
The red PARK (USA) or EP (Canada) indicator lamp in the instrument cluster goes out.

Emergency braking

Press and hold handle 1.

As long as the vehicle is driving, the Please Release Parking Brake message is displayed and the red EP indicator lamp flashes.

When the vehicle has been braked to a standstill, the electric parking brake is applied. The red PARK (USA) or EP (Canada) indicator lamp lights up in the instrument cluster.

Information on collision detection on a parked vehicle

If a collision is detected when the tow-away alarm is armed on a locked vehicle, you will receive a notification in the multimedia system when you switch on the ignition. You will receive information about the following points:

- The area of the vehicle that may have been damaged.
- The force of the impact.

The following situations can lead to inadvertent activation:

- The parked vehicle is moved, e.g. in a two-story garage.

Deactivate the tow-away alarm in order to prevent inadvertent activation. If you deactivate the tow-away alarm, collision detection will also be deactivated.

If the battery is severely discharged, the function for detecting a collision on a parked vehicle is automatically deactivated to facilitate the next engine start.

System limits

Detection may be restricted in the following situations:

- The vehicle is damaged without impact, e.g. if an outside mirror is torn off or the paint is damaged by a SmartKey
- An impact occurs at low speed
- The electric parking brake is not applied

Notes on parking the vehicle for an extended period

If you leave the vehicle parked for longer than six weeks, it may suffer damage through disuse. The 12 V battery may also be impaired or damaged by heavy discharging.

Further information can be obtained at a qualified specialist workshop.
Standby mode (extension of the starter battery’s period out of use)

Standby mode function

This function is not available for all models. If standby mode is activated, energy loss will be minimised during extended periods of non-operation.

Standby mode is characterised by the following:

- The starter battery is preserved.
- The maximum non-operational time appears in the media display.
- The connection to online services is interrupted.
- The ATA (anti-theft alarm system) is not available.
- The interior motion sensor and tow-away alarm functions are not available.
- The function for detecting collisions on a parked vehicle is not available.

If the following conditions are fulfilled, standby mode can be activated or deactivated using the multimedia system:

- The engine is switched off.
- The ignition is switched on.

Exceeding the vehicle’s displayed non-operational time may cause inconvenience, i.e., it cannot be guaranteed that the starter battery will reliably start the engine.

The starter battery must be charged first in the following situations:

- The vehicle's non-operational time must be extended.
- The Battery Charge Insufficient for Standby Mode message appears in the media display.

Standby mode is automatically deactivated when the ignition is switched on.

Activating/deactivating standby mode (parking the vehicle for an extended period)

Requirements:

- The engine is switched off.

Multimedia system:

→ Settings → Vehicle

- Activate or deactivate Standby Mode.
- Select Yes.

Driving and driving safety systems
Driving systems and your responsibility

Your vehicle is equipped with driving systems which assist you in driving, parking and maneuvering the vehicle. The driving systems are only aids. They are not a substitute for your attention to the surroundings and do not relieve you of your responsibility pertaining to road traffic law. The driver is always responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane. Pay attention to the traffic conditions at all times and intervene when necessary. Be aware of the limitations regarding the safe use of these systems.

Driving systems can neither reduce the risk of accident if you fail to adapt your driving style nor override the laws of physics. They cannot always
take into account road, weather or traffic conditions.

Information on vehicle sensors and cameras

Some driving and driving safety systems use cameras as well as radar or ultrasonic sensors to monitor the area in front of, behind or next to the vehicle.

![Diagram of vehicle sensors and cameras]

The radar sensors are integrated behind the bumpers and/or behind the Mercedes star.

1. Cameras in the outside mirrors
2. Multifunction camera
3. Front camera
4. Ultrasonic sensors
5. Rear view camera

**WARNING** Risk of accident due to restricted detection performance of vehicle sensors and cameras

If the area around vehicle sensors or cameras is covered, damaged or dirty, certain driving and safety systems cannot function correctly. There is a risk of an accident.

- Keep the area around vehicle sensors or cameras clear of any obstructions and clean.
- Have damage to the bumper, radiator grille or stone chipping in the area of the front and rear windows repaired at a qualified specialist workshop.

Particularly, keep the areas around the sensors and cameras free of dirt, ice or slush (→ page 296). The sensors and cameras may not be covered and the detection ranges around them must be kept free. Do not attach additional license plate brackets, advertisements, stickers, foils or foils to protect against stone chippings in the detection range of the sensors and cameras. Make sure that there are no overhanging loads protruding into the detection range.

If there is damage to a bumper or the radiator grille, or after an impact, have the function of the sensors checked at a qualified specialist workshop. Have damage or stone chipping in the area of the cameras on the windshield and rear window repaired at a qualified specialist workshop.

Overview of driving systems and driving safety systems

- ABS (Anti-lock Braking System) (→ page 183)
- BAS (Brake Assist System) (→ page 183)
Driving Assistance package

The following functions are part of the Driving Assistance Package. Certain functions are only available in some countries. Some functions are also available without the Driving Assistance Package, albeit with restricted functionality.

- ESP® (Electronic Stability Program) (→ page 184)
- ESP® Crosswind Assist (→ page 185)
- EBD (Electronic Brakeforce Distribution) (→ page 185)
- STEER CONTROL (→ page 186)
- HOLD function (→ page 186)
- Hill Start Assist (→ page 187)
- ATTENTION ASSIST (→ page 187)
- Cruise control (→ page 189)
- Traffic Sign Assist (→ page 209)
- AIR BODY CONTROL (→ page 218)

Function of ABS

The Anti-lock Brake System (ABS) regulates the brake pressure in critical driving situations:

- During braking, e.g. at full brake application or insufficient tire traction, the wheels are prevented from locking.
- Vehicle steerability while braking is ensured.

If ABS intervenes when braking, you will feel a pulsing in the brake pedal. The pulsating brake pedal can be an indication of hazardous road conditions and can serve as a reminder to take extra care while driving.

Function of BAS

The Brake Assist System (BAS) supports your emergency braking situation with additional brake force.

If you depress the brake pedal quickly, BAS is activated:

- BAS automatically boosts the brake pressure.
- BAS can shorten the braking distance.

Parking Package

- Parking Assist PARKTRONIC (→ page 226)
- Rear view camera (→ page 221)
- Surround view camera (→ page 223)
- Active Parking Assist (country-dependent) (→ page 230)
• ABS prevents the wheels from locking. The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Function of ESP® (Electronic Stability Program)

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of skidding if ESP® is deactivated</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.</td>
<td></td>
</tr>
<tr>
<td>ESP® should only be deactivated in the following situations.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Mercedes-AMG vehicles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Observe the notes in the Supplement. You could otherwise fail to recognize dangers.</td>
<td></td>
</tr>
</tbody>
</table>

ESP® can monitor and improve driving stability and traction in the following situations, within physical limits:
- When pulling away on a wet or slippery road.
- When braking.

If the vehicle deviates from the direction desired by the driver, ESP® can stabilize the vehicle by intervening in the following ways:
- One or more wheels are braked.
- The engine output is adapted according to the situation.

When ESP® is deactivated, the ⚠️ warning lamp lights up continuously:
- Driving stability will no longer be improved.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.

⚠️ When ESP® is deactivated, you are still assisted by ESP® when braking.

When the ⚠️ warning lamp flashes, one or several wheels has reached its grip limit:
- Adapt your driving style to suit the current road and weather conditions.
- Do not deactivate ESP®.
- Only depress the accelerator pedal as far as is necessary when pulling away.

Deactivate ESP® in the following situations to improve traction:
- When using snow chains.
- In deep snow.
- On sand or gravel.

⚠️ Spinning the wheels results in a cutting action, which enhances traction.

If the ⚠️ ESP® warning lamp lights up continuously, ESP® is not available due to a malfunction. Observe the following information:
- Warning and indicator lamps (→ page 414)
- Display messages (→ page 364)
ETS/4ETS (Electronic Traction System)
ETS/4ETS traction control is part of ESP® and makes it possible to pull away and accelerate on a slippery road.
ETS/4ETS can improve the vehicle’s traction by intervening in the following ways:
- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

Influence of drive programs on ESP®
The drive programs enable ESP® to adapt to different weather and road conditions as well as the driver’s preferred driving style. Depending on the selected drive program, the appropriate ESP® mode will be activated. You can select the drive programs using the DYNAMIC SELECT switch (→ page 166).

Function of ESP® Crosswind Assist
ESP® Crosswind Assist detects sudden gusts of side wind and helps the driver to keep the vehicle in the lane:
- ESP® Crosswind Assist is active at vehicle speeds between approx. 47 mph (75 km/h) and 125 mph (200 km/h) when driving straight ahead or cornering slightly.
- The vehicle is stabilized by means of individual brake application on one side.

Activating/deactivating ESP® (Electronic Stability Program)
Multimedia system:

ESP® can only be activated/deactivated using quick access when at least one other function is available in quick access. ESP® can otherwise be found in the Assistance menu.

Function of EBD
Electronic Breakforce Distribution (EBD) is characterized by the following:
- Monitoring and regulating the brake pressure on the rear wheels.
- Improved driving stability when braking, especially on bends.
Function of STEER CONTROL

STEER CONTROL helps you by transmitting a noticeable steering force to the steering wheel in the direction required for vehicle stabilization. This steering recommendation is given in the following situations:

- Both right wheels or both left wheels are on a wet or slippery road surface when you brake
- The vehicle starts to skid

System limits

STEER CONTROL may be impaired or may not function in the following situations:

- ESP® is deactivated.
- ESP® is malfunctioning.
- The steering is malfunctioning.

If ESP® is malfunctioning, you will be assisted further by the electric power steering.

HOLD function

HOLD function

The HOLD function holds the vehicle at a standstill without requiring you to depress the brake pedal, e.g. while waiting in traffic. The HOLD function is only an aid. The responsibility for the vehicle safely standing still remains with the driver.

System limits

The HOLD function is only intended to provide assistance when driving and is not a sufficient means of safeguarding the vehicle against rolling away when stationary.

- The incline must not be greater than 30%.

Activating/deactivating the HOLD function

WARNING Risk of an accident due to the HOLD function being active when you leave the vehicle

If the vehicle is only braked with the HOLD function it could, in the following situations, roll away:

- If there is a malfunction in the system or in the power supply.
- If the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant.

Always secure the vehicle against rolling away before you leave it.

Requirements:

- The vehicle is stationary.
- The driver’s door is closed or the seat belt on the driver’s side is fastened.
- The engine is running or has been automatically switched off by the ECO start/stop function.
The electric parking brake is released.
Active Distance Assist DISTRONIC is deactivated.
The transmission is in position D, R or N.

**Activating the HOLD function**
- Depress the brake pedal, and after a short time quickly depress further until the HOLD display appears in the multifunction display.
- Release the brake pedal.

**Deactivating the HOLD function**
- Depress the accelerator pedal to pull away.
- Depress the brake pedal until the HOLD display disappears from the multifunction display.

The HOLD function is deactivated in the following situations:
- Active Distance Assist DISTRONIC is activated.
- The transmission is shifted to position P.
- The vehicle is secured with the electric parking brake.

In the following situations, the vehicle is held by transmission position P and/or by the electric parking brake:
- The seat belt is unfastened and the driver’s door is opened.
- The vehicle is switched off.
- There is a malfunction in the system or the power supply is insufficient.

The HOLD function is deactivated in the following situations:
- Active Distance Assist DISTRONIC is activated.
- The transmission is in position D, R or N.

**Function of Hill Start Assist**
Hill Start Assist holds the vehicle for a short time when pulling away on a hill under the following conditions:
- The transmission is in position D or R.
- The electric parking brake is released.

This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll away.

**WARNING** Risk of accident and injury due to the vehicle rolling away

After a short time, Hill Start Assist no longer holds the vehicle.
- Swiftly move your foot from the brake pedal to the accelerator pedal. Do not leave the vehicle when it is being held by Hill Start Assist.

**ATTENTION ASSIST**

**Function of ATTENTION ASSIST**
ATTENTION ASSIST assists you on long, monotonous journeys, e.g. on highways and trunk roads. If ATTENTION ASSIST detects indicators of fatigue or increasing lapses in concentration on the part of the driver, it suggests taking a break. ATTENTION ASSIST is only an aid. It cannot always detect fatigue or lapses in concentration in time. The system is not a substitute for a well-rested and attentive driver. On long journeys, take regular breaks in good time that allow for adequate recuperation.
You can choose between two settings:

- **Standard**: normal system sensitivity.
- **Sensitive**: higher system sensitivity. The driver is warned earlier and the attention level detected by ATTENTION ASSIST is adapted accordingly.

If drowsiness or increasing lapses in concentration are detected, the ATTENTION ASSIST: Take a Break! warning appears in the Instrument Display. You can acknowledge the message and take a break where necessary. If you do not take a break and ATTENTION ASSIST continues to detect increasing lapses in concentration, you will be warned again after a minimum of 15 minutes.

You can have the following status information for ATTENTION ASSIST displayed in the assistance menu of the on-board computer:

- The length of the journey since the last break.
- The attention level determined by ATTENTION ASSIST:
  - The fuller the circle, the higher the attentional level determined
  - As your attention wanes, the circle in the center of the display becomes smaller

If ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the System Suspended message appears.

If a warning is given in the Instrument Display, the multimedia system offers to search for a rest area. You can select a rest area and start navigation to this rest area. This function can be activated and deactivated in the multimedia system.

If ATTENTION ASSIST is deactivated, the 🏡 symbol appears in the assistance graphic in the Instrument Display when the engine is running. ATTENTION ASSIST is activated automatically when the engine is re-started. The last selected sensitivity level remains stored.

**System limits**

ATTENTION ASSIST is active in the 37 mph (60 km/h) to 124 mph (200 km/h) speed range. Particularly in the following situations, ATTENTION ASSIST only functions in a restricted manner and warnings may be delayed or not occur:

- If you have been driving for less than approximately 30 minutes.
If the road condition is poor (uneven road surface or potholes).
If there is a strong side wind.
If you adopt a sporty driving style (high cornering speeds or high rates of acceleration).
If the Steering Assist function of Active Distance Assist DISTRONIC is active.
If the time has been set incorrectly.
If you change lanes and vary your speed frequently in active driving situations.

The ATTENTION ASSIST drowsiness or alertness assessment is reset and restarted when continuing the journey in the following situations:
If you switch off the engine.
If you unfasten your seat belt and open the driver’s door (e.g. to change drivers or take a break).

Setting ATTENTION ASSIST
Multimedia system:

Settings ➤ Assistance
➤ Attention Assist

Setting options
➤ Select Standard, Sensitive or Off.
Suggesting a rest area
➤ Select Suggest Rest Area.
➤ Activate or deactivate the function.
If ATTENTION ASSIST detects fatigue or increasing lack of attention, it suggests a rest area in the vicinity.
➤ Select the suggested rest area.
You are guided to the selected rest area.

Speed control cruise control

Function of cruise control
Cruise control regulates the speed to the value selected by the driver.
If you accelerate to overtake, for example, the stored speed is not deleted. If you remove your foot from the accelerator pedal after overtaking, cruise control will resume speed regulation back to the stored speed.

You can store any speed above 15 mph (20 km/h) up to the maximum design speed.
Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (page 181).

Mercedes-AMG vehicles: Cruise control is available up to a maximum speed of 155 mph (250 km/h).

Displays on the multifunction display
- (gray): cruise control is selected but not yet activated.
- (green): cruise control is active.
A stored speed appears along with the display.

The segments between the stored speed and the end of the segment display light up in the speedometer.
System limits
Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out. Change into a lower gear in good time on long and steep downhill gradients. Take particular note of this when driving a laden vehicle. By doing so, you will make use of the engine’s braking effect. This relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

Do not use cruise control in the following situations:
- In traffic situations which require frequent changes of speed, e.g. in heavy traffic, on winding roads.
- On slippery roads. Accelerating can cause the drive wheels to lose traction and the vehicle could then skid.
- If you are driving when visibility is poor.

Operating cruise control

⚠️ WARNING Risk of accident due to stored speed

If you call up the stored speed and this is lower than your current speed, the vehicle decelerates.

- Take into account the traffic situation before calling up the stored speed.

Requirements:
- Cruise control is selected.
- ESP® must be activated, but not intervening.
- The vehicle speed is at least 15 mph (20 km/h).
- The transmission is in position D.

Steering wheel control panel for cruise control

Adopts the stored/detected speed
Deactivates cruise control
Activates cruise control
Deactivates cruise control
Control panel to increase/decrease speed

To activate cruise control: press M.
Activating cruise control

- Press \( \text{SET+} \) or \( \text{SET-} \) on control panel 1. The current speed is stored and maintained by the vehicle.

  or

- Press \( \text{RES} \). The last stored speed is called up and maintained by the vehicle.

  If the last stored speed has previously been deleted, the current vehicle speed is stored.

  When you switch off the vehicle, the last speed stored is deleted.

Increasing/decreasing the stored speed

- To increase the stored speed: swipe upwards from the bottom of control panel 1.
  - The stored speed is increased by 1 mph (1 km/h).

- To decrease the stored speed: swipe downwards from the top of control panel 1.
  - The stored speed is decreased by 1 mph (1 km/h).

Briefly press \( \text{SET+} \) or \( \text{SET-} \) on control panel 1.

The stored speed is increased or decreased to the following values depending on the unit:

- \( \text{mph} \): the next value ending in 5
- \( \text{km/h} \): the next value ending in 0

or

- Accelerate the vehicle to the desired speed.
- Press \( \text{SET+} \) on control panel 1.

Adopting a detected speed

If cruise control is activated and Traffic Sign Assist has detected a speed restriction sign with a maximum permissible speed and this is displayed in the instrument cluster:

- Press \( \text{RES} \).
  - The maximum permissible speed shown by the traffic sign is stored and the vehicle maintains this speed.

Deactivating cruise control

- Press \( \text{CANCEL} \).

Switching off cruise control

- Press \( \text{OFF} \).

If you brake, deactivate ESP® or if ESP® intervenes, cruise control is deactivated.

Active Distance Assist DISTRONIC

Function of Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC maintains the set speed on free-flowing roads. If vehicles in front are detected, the set distance is maintained, if necessary, until the vehicle comes to a halt. The vehicle accelerates or brakes depending on the distance to the vehicle in front and the set speed. The speed and distance to the vehicle in front are set and saved using the steering wheel.

Available speed range:

- **Vehicles without Driving Assistance Package**: 15 mph (20 km/h) - 120 mph (200 km/h)
Vehicles with Driving Assistance Package:

- 15 mph (20 km/h) - 130 mph (210 km/h)

Other features of Active Distance Assist DISTRONIC:

- Adjusts the driving style depending on the selected drive program (fuel-saving, comfortable or dynamic)
- Initiates acceleration to the stored speed if the turn signal indicator is switched on to change to the overtaking lane

Vehicles with Driving Assistance Package:

- Reacts to stationary vehicles detected in urban speed ranges (except bicycles and motorcycles)
- Takes one-sided overtaking restrictions into account on highways or on multi-lane roads with separate roadways (country-dependent)

Vehicles with Driving Assistance Package and Parking Assist PARKTRONIC:

if the vehicle has been braked to a standstill on multi-lane, separate roadways by Active Distance Assist DISTRONIC, it can automatically follow the vehicle in front when driving off again within 30 seconds. If a critical situation is detected when driving off, a visual and acoustic warning is given indicating that the driver must now take control of the vehicle. The vehicle is not accelerated any further.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).
Permanent status display of Active Distance Assist DISTRONIC

- (white): Active Distance Assist DISTRONIC selected, specified distance set
- (white vehicle, green speedometer): Active Distance Assist DISTRONIC active, specified distance set and vehicle detected
- (green): Active Distance Assist DISTRONIC active, specified distance set and vehicle detected
- : Route-based speed adaptation active (→ page 197).

The stored speed is shown along with the permanent status display and highlighted on the speedometer. When Active Distance Assist DISTRONIC is passive, the speed is grayed out.

- On highways or high-speed major roads, the green vehicle symbol is displayed cyclically when the vehicle is ready to pull away.
- If you depress the accelerator pedal beyond the setting of the Active Distance Assist DISTRONIC, the system is switched to passive mode. The Suspended message appears in the multifunction display.

Display on the speedometer
The stored speed is highlighted on the speedometer. If the speed of the vehicle in front or the speed adjustment is less than the stored speed due to the route event ahead, the segments in the speedometer light up. Deactivation of Active Distance Assist DISTRONIC, as well as alterations to the speed due to manual or automatic adoption of the maximum permissible speed, are displayed in the control feedback of the multifunction display on a single line.

System limits
The system may be impaired or may not function in the following situations, for example:
- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying ambient light.
- The windshield in the area of the camera is dirty, fogged up, damaged or covered.
- If the radar sensors are dirty or covered.
- In parking garages or on roads with steep uphill or downhill gradients.
- If there are narrow vehicles in front, such as bicycles or motorcycles.

In addition, on slippery roads, braking or accelerating can cause one or several wheels to lose traction and the vehicle could then skid. Do not use Active Distance Assist DISTRONIC in these situations.

**WARNING** Risk of accident from acceleration or braking by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC may accelerate or brake in the following cases, for example:
- If the vehicle pulls away using Active Distance Assist DISTRONIC.
- If the stored speed is called up and is considerably faster or slower than the currently driven speed.
If Active Distance Assist DISTRONIC no longer detects a vehicle in front or does not react to relevant objects.

Always carefully observe the traffic conditions and be ready to brake at all times.

Take into account the traffic situation before calling up the stored speed.

**WARNING** Risk of accident due to insufficient deceleration by Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC brakes your vehicle with up to 50% of the possible deceleration. If this deceleration is not sufficient, Active Distance Assist DISTRONIC alerts you with a visual and acoustic warning.

- Adjust your speed and maintain a suitable distance from the vehicle in front.
- Brake the vehicle yourself and/or take evasive action.

**WARNING** Risk of accident if detection function of Active Distance Assist DISTRONIC is impaired

Active Distance Assist DISTRONIC does not react or has a limited reaction:

- when driving on a different lane or when changing lanes
- to pedestrians, animals, bicycles or stationary vehicles, or unexpected obstacles
- to complex traffic conditions
- to oncoming vehicles and crossing traffic

As a result, Active Distance Assist DISTRONIC may neither give warnings nor intervene in such situations.

Always observe the traffic conditions carefully and react accordingly.

**Operating Active Distance Assist DISTRONIC**

**Requirements:**

- The transmission is in position D.
- All the doors are closed.
- Check of the radar sensor system has been successfully completed.
- DSR is deactivated.
- Drive program G is deactivated.

- The electric parking brake is released.
- ESP® is activated and is not intervening.
To operate Active Distance Assist DISTRONIC: press the respective button with only one finger or swipe on the control panel.

Activates/deactivates Active Distance Assist DISTRONIC
- Press #.

Activating Active Distance Assist DISTRONIC
- To activate without a stored speed: on control panel 1 press \( \text{SET}^+ \) on the upper section or \( \text{SET}^- \) on the lower section or \( \text{RES}^+ \). Remove your foot from the accelerator pedal.

or
- To activate with a stored speed: press \( \text{RES}^- \). Remove your foot from the accelerator pedal. The current speed is stored and maintained by the vehicle.

Increasing or reducing the speed
- To increase the stored speed: swipe upwards from the bottom of control panel 1.
  - The stored speed is increased by 1 mph (1 km/h).
- To decrease the stored speed: swipe downwards from the top of control panel 1.
  - The stored speed is decreased by 1 mph (1 km/h).

or
- Briefly press \( \text{SET}^+ \) on the upper section or \( \text{SET}^- \) on the lower section of control panel 1. The stored speed is increased or reduced by 5 mph (10 km/h).

or
- Accelerate the vehicle to the desired speed.
- Press \( \text{SET}^+ \) on the upper section of control panel 1.

Adopting the limit speed shown in the instrument cluster
- Activate Active Distance Assist DISTRONIC.
Press \( \text{RES} \).
The limit speed displayed in the instrument cluster is adopted as the stored speed. The vehicle adapts its speed to that of the vehicle in front, but only up to the stored speed.

### Pulling away with Active Distance Assist DISTRONIC

- Activate Active Distance Assist DISTRONIC and remove your foot from the brake pedal.
- Press \( \text{RES} \).
- or
- Depress the accelerator pedal briefly and firmly.

The functions of Active Distance Assist DISTRONIC continue to be carried out.

### Reducing or increasing the specified distance from the vehicle in front

- Press \( \text{OC} \).

The \( \text{ } \) display appears under the \( \text{ } \) status display.

The specified distance is reduced by one level.

If the lowest level is already selected, the selection jumps to the highest level.

### Deactivating Active Distance Assist DISTRONIC

**WARNING** Risk of an accident due to Active Distance Assist DISTRONIC being active when you leave the driver’s seat

If you leave the driver’s seat while the vehicle is being braked by Active Distance Assist DISTRONIC only, the vehicle can roll away.

- Always deactivate Active Distance Assist DISTRONIC and secure the vehicle to prevent it from rolling away before you leave the driver’s seat.

- Press \( \text{CANCEL} \).

If you brake, deactivate ESP\(^\circ\) or if ESP\(^\circ\) intervenes, Active Distance Assist DISTRONIC is deactivated.

### Function of Active Speed Limit Assist

If speed limit change between 12 mph (20 km/h) and 80 mph (130 km/h) is detected and the automatic adoption of speed limits is active, it will be automatically adopted as the stored speed (→ page 210).

The driven speed is adjusted when the vehicle is level with the traffic sign at the latest. In the case of signs indicating entry into an urban area, the speed is adapted according to the speed permitted within the urban area. The speed limit display in the Instrument Display is always updated when the vehicle is level with the traffic sign.

- If there is no speed restriction on an unlimited stretch of road (e.g. on a freeway), the recommended speed is automatically adopted as the stored speed. The system uses the speed stored on an unlimited stretch of road as the recommended speed. If you do not alter the stored speed on an unlimited stretch of road, the recommended speed is 80 mph (130 km/h).
- If Active Distance Assist DISTRONIC has been put into passive mode by pressing the accelerator pedal, only speed limits which are higher than the set speed are adopted.
Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

**System limits**
The system limits of Traffic Sign Assist apply to the detection of traffic signs (→ page 209).

Speed limits below 12 mph (20 km/h) are not automatically adopted by the system as the stored speed. Temporary speed restrictions (e.g. for a certain time or due to weather conditions) cannot be properly detected by the system. The maximum permissible speed applying to a vehicle with a trailer is not detected by the system. Adjust the speed in these situations.

⚠️ **WARNING** Risk of accident due to Active Speed Limit Assist adapting the vehicle’s speed

The speed adopted by Active Speed Limit Assist may be too high or incorrect in some individual cases, such as:
- at speed limits below 12 mph (20 km/h)
- in wet conditions or in fog
- when towing a trailer
- Ensure that the driven speed complies with traffic regulations.
- Adjust the driving speed to suit current traffic and weather conditions.

**Function of route-based speed adaptation**

When Active Distance Assist DISTRONIC is activated, the vehicle speed will be adapted accordingly to the route events ahead. Depending on the drive program selected, the vehicle negotiates a route event ahead in an economical, comfortable or dynamic manner. When the route event has been passed, the vehicle accelerates again to the stored speed. The set distance to the vehicle in front, vehicles detected ahead and speed restrictions ahead are taken into account.

You can activate and deactivate route-based speed adaptation in the multimedia system (→ page 198).

The following route events are taken into account:
- Curves
- T-intersections, roundabouts and toll stations
- Turns and exits
- Traffic jams ahead (only with Live Traffic Information)

ℹ️ When the toll station is reached, Active Distance Assist DISTRONIC adopts the speed as the stored speed.

Also, the speed is reduced if the turn signal indicator to change lanes is switched on and one of the following situations is detected:
- Turning off at intersections
- Driving on slowing-down lanes
- Driving on lanes adjacent to slowing-down lanes

The driver is responsible for choosing the right speed and observing other road users. This applies in particular to intersections, roundabouts and traffic lights, as route-based speed
adaptation does not brake the vehicle to a standstill.
When route guidance is active, the first speed adjustment is carried out automatically. If the turn signal indicator is switched on, the selected route is confirmed and further speed adjustment is activated.
Speed adaptation is canceled in the following cases:
- If the turn signal indicator is switched off before the route event.
- If the driver depresses the accelerator or brake pedal during the process.

System limits
Route-based speed adaptation does not take right of way regulations into account. The driver is responsible for complying with road traffic regulations and driving at a suitable speed.
The speed adaptation made by the system may not always be suitable, particularly in the following situations:
- The road’s course not clearly visible
- Road narrowing
- Varying maximum permissible speeds in individual lanes
- Wet road surfaces, snow or ice
In these situations the driver must intervene accordingly.

**WARNING** Risk of accident in spite of route-based speed adaptation
Route-based speed adaptation can malfunction or be temporarily unavailable in the following situations:
- If the driver does not follow the calculated route
- If map data is not up-to-date or available
- In the event of roadworks
- In bad weather or road conditions
- If the accelerator pedal is depressed
- In the event of electronically displayed speed limitations
- Adapt the speed to the traffic situation.

**Setting route-based speed adaptation**

**Requirements:**
- Active Distance Assist DISTRONIC is activated.
- ECO Assist is active.

Multimedia system:

- Activate or deactivate the function. When the function is active, the vehicle speed is adjusted depending on the route events ahead.

Further information on the route-based speed adaptation (→ page 197).

**Function of Active Stop-and-Go Assist**
Active Stop-and-Go Assist helps you when in traffic jams on multi-lane roads with separate roadways by automatically pulling away within 60 seconds and with moderate steering maneuvers. It orients itself using the vehicle in front and lane markings. Active Stop-and-Go Assist automatically maintains a safe distance from the vehicle in front and vehicles cutting in.
Active Stop-and-Go Assist requires you, as the driver, to keep your hands on the steering wheel at all times so that you are able to intervene at any time to correct the course of the vehicle and keep it in lane. Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

Active Stop-and-Go Assist activates automatically as soon as all of the requirements are met: The status display appears in the instrument cluster when the function is active.

Requirements:

- You are in a traffic jam on a freeway or high-speed major road.
- Active Distance Assist DISTRONIC is activated and active (→ page 194).
- Active Brake Assist is available (→ page 204).
- Active Steering Assist is activated and active (→ page 202).
- Active Stop-and-Go Assist is activated (→ page 199).
- You are traveling no faster than 35 mph (60 km/h).

System limits
The system limitations of Active Distance Assist DISTRONIC and Active Steering Assist apply to Active Stop-and-Go Assist (→ page 200).

Activating/deactivating Active Traffic Jam Assist
Multimedia system:

Settings
Quick Access
Select .

DSR (Downhill Speed Regulation)

Function of DSR (Downhill Speed Regulation)
DSR is an aid to assist you when driving downhill. It keeps the speed of travel at the selected target speed. The steeper the downhill gradient, the greater the DSR braking effect on the vehicle. On flat stretches of road and uphill gradients, the DSR brakes the vehicle minimally or not at all.

When DSR is activated and the transmission is in position D, R or N, DSR controls the driving speed. The target speed can be set to a value between 1 mph (2 km/h) and 11 mph (18 km/h). By braking or accelerating, you can drive at a higher or lower speed than the target speed at any time.

DSR is deactivated automatically if you drive at speeds greater than 28 mph (45 km/h) or select drive program C or B. The Off message then appears in the multifunction display. The status indicator in the multifunction display disappears. You also hear a warning tone.

Notes on DSR

WARNING Risk of skidding and accident when DSR is activated on slippery road surfaces

If the driven speed and the target speed differ, the wheels may lose traction.

Take into account the road surface and the difference between the driving
speed and target speed before activating DSR.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

You are always responsible for keeping control of the vehicle and for assessing whether the downhill gradient can be negotiated. Depending on road surface and tires, DSR may not always be able to keep to the target speed. Select a target speed suitable for the environmental conditions and also apply the brakes yourself if required.

Activating or deactivating DSR (Downhill Speed Regulation)

Requirements:
- You are driving at a speed of 25 mph (40 km/h) or lower.
  If the current vehicle speed is too high, the Max. Speed 24 mph message appears in the multifunction display.
- Active Distance Assist DISTRONIC is deactivated.

Changing the target speed

To increase the target speed: swipe upwards from the bottom of control panel 1.
- The target speed is increased by 1 mph (1 km/h).

To decrease the target speed: swipe downwards from the top of control panel 1.
- The target speed is decreased by 1 mph (1 km/h).

The selected target speed appears along with the ⏰ status display in the multifunction display.

Active Steering Assist

Function of Active Steering Assist

Active Steering Assist is only available up to a speed of 130 mph (210 km/h). The system helps you to stay in the center of the lane by means of moderate steering interventions. Depending on the speed driven, Active Steering Assist uses the vehicles ahead and lane markings as a reference.
Depending on the country, in the lower speed range Active Steering Assist can use the surrounding traffic as a reference. If necessary, Active Steering Assist can then also provide assistance when driving outside the center of the lane, for example, to form a rescue lane.

If the detection of lane markings and vehicles ahead is impaired, Active Steering Assist switches to passive mode. The system provides no support in this case.

**Status display of Active Steering Assist in the multifunction display**

- ![Gray](gray): activated and passive
- ![Green](green): activated and active
- ![Red](red): system limits detected
- ![White, Red Hands](white, red hands): "hands on the steering wheel" prompt

During the transition from active to passive status, the ![Gray](gray) symbol is shown as enlarged and flashing. Once the system is passive, the ![Gray](gray) symbol is shown as gray in the multifunction display.

Depending on the selected vehicle settings, Active Steering Assist may be unavailable.

**Steering and touch detection**

The driver is required to keep their hands on the steering wheel at all times and be able to intervene at any time to correct the course of the vehicle and keep it in lane. The driver must expect a change from active to passive mode or vice versa at any time.

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display ![Gray](gray) appears. If the driver still does not steer the vehicle, a warning tone sounds in addition to the visual warning message.

If the driver does not react to this warning for a considerable period, an emergency stop is initiated (→ page 202).

If the driver steers, no warning is issued, or the warning is ended.

If Active Steering Assist detects that a system limit has been reached, a visual warning is issued and a warning tone sounds.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

**System limits**

Active Steering Assist has a limited steering torque for lateral guidance. In some cases, the steering intervention is not sufficient to keep the vehicle in the lane or to drive through exits.

The system may be impaired or may not function in the following instances:

- There is poor visibility, e.g. due to snow, rain, fog, heavy spray, greatly varying ambient light or strong shadows on the road.
- There is glare, e.g., from oncoming traffic, direct sunlight or reflections.
- Insufficient road illumination.
- The windshield is dirty, fogged up, damaged or covered in the vicinity of the camera, e.g., by a sticker.
- No, or several, unclear lane markings are present for one lane, or the markings change quickly, for example, in a construction area or at intersections.
- The lane markings are worn away, dark or covered up, e.g., by dirt or snow.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- The road is narrow and winding.
- There are obstacles on the lane or projecting out into the lane, such as object markers.

The system does not provide assistance in the following conditions:
- On tight curves and when turning.
- When crossing intersections.

- At roundabouts or toll plazas.
- When the tire pressure is too low.

⚠️ **WARNING** Risk of accident if Active Steering Assist unexpectedly stops functioning

If the system limits of Active Steering Assist are reached there is no guarantee that the system will remain active or will keep the vehicle in lane.

- Always keep your hands on the steering wheel and observe the traffic carefully.
- Always steer the vehicle paying attention to traffic conditions.

⚠️ **WARNING** Risk of accident if Active Steering Assist unexpectedly intervenes

The detection of lane markings and objects may malfunction and cause unexpected steering interventions.

- Steer according to traffic conditions.

### Activating/deactivating Active Steering Assist

**Requirements:**
- ESP® is activated, but is not intervening.
- Active Distance Assist DISTRONIC is activated.

Multimedia system:

- Settings
- Quick Access
- Select Steering Assist.

### Function of Active Emergency Stop Assist
If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display 1 appears in the multifunction display. If the driver still does not steer the vehicle, or gives no confirmation to the system, a warning tone sounds in addition to the visual warning message.

If the driver still does not respond to the warning, the **Beginning Emergency Stop** message appears in the multifunction display. If the driver still does not respond, **Active Distance Assist DISTRONIC** reduces the speed. The vehicle is decelerated in stages to a standstill.

Depending on the country, at speeds below 40 mph (60 km/h) the hazard warning lights switch on automatically.

When the vehicle is stationary, the following actions are carried out:
- The vehicle is secured with the electric parking brake.
- **Active Distance Assist DISTRONIC** is ended
- The vehicle is unlocked.

*IF POSSIBLE, AN EMERGENCY CALL IS PLACED TO THE MERCEDES-BENZ EMERGENCY CALL CENTER*

The driver can cancel the deceleration at any time by performing one of the following actions:
- Steering
- Braking or accelerating
- Deactivating **Active Distance Assist DISTRONIC**

**Active Lane Change Assist**

*FUNCTION OF ACTIVE LANE CHANGE ASSIST*

Active Lane Change Assist supports the driver when changing lanes by applying steering torque if the driver operates a turn signal indicator.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

Assistance when changing lanes is provided if all the following conditions are met:
- You are driving on a freeway or road with multiple lanes in the direction of travel.
- The neighboring lane is separated by a broken lane marking.
- No vehicle is detected in the adjacent lane.
- The vehicle speed is between **50 mph (80 km/h)** and **110 mph (180 km/h)**.
- **Active Lane Change Assist** is switched on in the multimedia system.
- **Active Steering Assist** is activated and active.
- If no vehicle is detected in the adjacent lane and a lane change is permitted, the lane change begins after the driver has activated the turn signal indicator. This is shown to the driver with a green arrow next to the steering wheel symbol. The **Lane Change to the Left** message, for example, also appears. If **Active Lane Change Assist** has been activated with the turn signal indicator but a lane change is not immediately possible, a gray arrow appears next to the steering wheel symbol, which remains green.

When the lane change assistance starts, the turn signal indicator is automatically activated along with the display in the multifunction display.
If a lane change is not possible, the arrow is faded out after a few seconds and a new lane change must be initiated. An immediate lane change is only possible on freeway sections without speed limits.

If the system is impaired, Active Lane Change Assist may be canceled. The Lane Change Cancelled message appears in the multifunction display. In addition, a warning tone may sound, depending on the situation.

**WARNING** Risk of accident when changing lane to an occupied adjacent lane

Lane Change Assist cannot always clearly detect if the adjacent lane is free. The lane change might be initiated although the adjacent lane is not free.

- Before changing lanes, make sure that the neighboring lane is free and there is no danger to other road users.
- Monitor the lane change.

**WARNING** Risk of accident if Lane Change Assist unexpectedly stops functioning

If the system limitations for Lane Change Assist have been reached, there is no guarantee that the system will remain active. Lane Change Assist cannot then assist you by applying steering torque.

- Always monitor the lane change and keep your hands on the steering wheel. Observe the traffic conditions and steer and/or brake if necessary.

**System limits**

The system limitations of Active Steering Assist apply to Active Lane Change Assist (→ page 200).

The system may also be impaired or may not function in the following situations:

- The sensors in the rear bumper are dirty, damaged or covered by a sticker or ice and snow, for example.
- The exterior lighting shows a defect.

**Activating/deactivating Active Lane Change Assist**

Multimedia system:

- Settings
- Assistance
- Active Lane Change Assist

Activate or deactivate the function.

**Active Brake Assist**

**Function of Active Brake Assist**

Active Brake Assist consists of the following functions:

- Distance warning function
- Autonomous braking function
- Situation-dependent braking assistance
• **Vehicles with Driving Assistance Package:** Evasive Steering Assist and cornering function

Active Brake Assist can help you to minimize the risk of a collision with vehicles, cyclists or pedestrians or to reduce the effects of such a collision.

If Active Brake Assist has detected a risk of collision, a warning tone sounds and the distance warning lamp lights up in the instrument cluster.

If you do not react to the warning, autonomous braking can be initiated in critical situations. In especially critical situations, Active Brake Assist can initiate autonomous braking directly. In this case, the warning lamp and warning tone occur simultaneously with the braking application.

If you apply the brake yourself in a critical situation or apply the brake during autonomous braking, situation-dependent braking assistance occurs. The brake pressure increases up to maximum full-stop braking if necessary.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

If autonomous braking or situation-dependent braking assistance has occurred, display 1 appears in the multifunction display and then automatically goes out after a short time.

**WARNING** Risk of an accident caused by limited detection performance of Active Brake Assist

Active Brake Assist cannot always clearly identify objects and complex traffic situations.

Always pay careful attention to the traffic situation; do not rely on Active Brake Assist alone. Active Brake Assist is only an aid. The driver is responsible for maintaining a sufficiently safe distance to the vehicle in front, vehicle speed and for braking in good time.

Be prepared to brake or swerve if necessary.

Also observe the system limits of Active Brake Assist.

**The individual subfunctions are available in various speed ranges:**

The distance warning function can issue a warning in the following situations:

- From approximately 4 mph (7 km/h), if your vehicle is critically close to a vehicle, cyclist or pedestrian, you will hear an intermittent warning tone and the distance warning lamp lights up in the instrument cluster.
Brake immediately or take evasive action, provided it is safe to do so and the traffic situation allows this.

Distance warning function (vehicles without Driving Assistance Package)
The distance warning function can aid you in the following situations with an intermittent warning tone and a warning lamp:
- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 50 mph (80 km/h) when approaching stationary vehicles, pedestrians walking in the direction of travel and cyclists ahead
- At speeds up to approximately 37 mph (60 km/h) when approaching crossing pedestrians

Distance warning function (vehicles with Driving Assistance Package)
The distance warning function can aid you in the following situations with an intermittent warning tone and a warning lamp:
- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- At speeds up to approximately 50 mph (80 km/h) when approaching moving pedestrians and cyclists ahead
- At speeds up to approximately 43 mph (70 km/h) when approaching stationary pedestrians, crossing vehicles and stationary and crossing cyclists

Autonomous braking function (vehicles without Driving Assistance Package)
If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:
- At speeds up to approximately 124 mph (200 km/h) when approaching vehicles ahead
- At speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- At speeds up to approximately 37 mph (60 km/h) when approaching stationary vehicles or moving pedestrians

Autonomous braking function (vehicles with Driving Assistance Package)
If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:
- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- At speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- At speeds up to approximately 43 mph (70 km/h) when approaching stationary and moving pedestrians, crossing vehicles and stationary and crossing cyclists

**Situation-dependent braking assistance (vehicles without Driving Assistance Package)**
The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:
- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- At speeds up to approximately 37 mph (60 km/h) when approaching stationary and moving pedestrians, crossing vehicles and stationary and crossing cyclists

**Situation-dependent braking assistance (vehicles with Driving Assistance Package)**
The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:
- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- At speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- At speeds up to approximately 37 mph (60 km/h) when approaching stationary and moving pedestrians, crossing vehicles and stationary and crossing cyclists

**Canceling a brake application of Active Brake Assist**
You can cancel a brake application of Active Brake Assist at any time by:
- Sharply depressing the accelerator pedal or with kickdown
- Releasing the brake pedal

Active Brake Assist may cancel the brake application when one of the following conditions is fulfilled:
- You maneuver to avoid the obstacle.
- There is no longer a risk of collision.
- An obstacle is no longer detected in front of your vehicle.

**Evasive Steering Assist (only vehicles with Driving Assistance Package)**
Evasive Steering Assist has the following characteristics:
- The ability to detect stationary or moving pedestrians.
- Assistance through power-assisted steering if it detects a swerving maneuver.
Activation by an abrupt steering movement during a swerving maneuver.
Assistance during swerving and straightening of the vehicle.
Reaction from a speed of approximately 12 mph (20 km/h) up to a speed of approximately 43 mph (70 km/h).

You can prevent the assistance at any time by actively steering.

Cornering function (only vehicles with Driving Assistance Package)
If a danger of collision from an oncoming vehicle is detected when turning across an oncoming lane, autonomous braking can be initiated at speeds below 9 mph (15 km/h) before you have left the lane in which you are driving.

**WARNING** Risk of accident despite Evasive Steering Assist

Evasive Steering Assist cannot always recognize objects or complex traffic situations clearly.

Moreover, the steering support provided by Evasive Steering Assist is not sufficient to avoid a collision.
- Always pay careful attention to the traffic situation; do not rely on Evasive Steering Assist alone.
- Be prepared to brake or swerve if necessary.
- End the support by actively steering in non-critical situations.
- Drive at an appropriate speed if there are pedestrians close to the path of your vehicle.

System limits
Full system performance is not available for a few seconds after switching on the ignition or after driving off.
If Active Brake Assist is impaired or inoperative due to a malfunction, the warning lamp appears in the multifunction display.

The system may be impaired or may not function, particularly in the following situations:
- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying ambient light.
- If the sensors are dirty, fogged up, damaged or covered.
- If the sensors are impaired due to interference from other radar sources, e.g. strong radar reflections in parking garages.
- If a loss of tire pressure or a faulty tire has been detected and displayed.
- In complex traffic situations where objects cannot always be clearly identified.
- If pedestrians or vehicles move quickly into the sensor detection range.
- If pedestrians are hidden by other objects.
- If the typical outline of a pedestrian cannot be distinguished from the background.
- If a pedestrian is not detected as such, e.g. due to special clothing or other objects.
- If the driver's seat belt is not fastened.
On bends with a tight radius.

The Active Brake Assist sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered. Active Brake Assist is unavailable or only partially available during the teach-in process.

Setting Active Brake Assist

Requirements:
- The ignition is switched on.

Multimedia system:

Select the desired setting.
- The setting is retained when the drive system is next started.

Deactivating Active Brake Assist
- It is recommended that you always leave Active Brake Assist activated.

Select Off.
The distance warning function, the autonomous braking function and the Evasive Steering Assist are deactivated.
When the vehicle is next started, the middle setting is automatically selected.
If Active Brake Assist is deactivated, the symbol appears in the status bar of the multifunction display.

Traffic Sign Assist

Function of Traffic Sign Assist
Traffic Sign Assist detects traffic signs with the multifunction camera (→ page 182). It assists you by displaying detected speed limits and overtaking restrictions in the instrument cluster.
Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).
Since Traffic Sign Assist also uses the data stored in the navigation system, it can update the display in the following situations without detecting traffic signs.

Warning when the maximum permissible speed is exceeded
The system can warn you if you unintentionally exceed the maximum permissible speed. To do this, you can specify in the multimedia system by how much the maximum permissible speed can be exceeded before a warning is issued. You can specify whether the warning is to be just a visual warning or an acoustic one as well.

The camera also detects traffic signs with a restriction indicated by an additional sign (e.g. when wet). These are only displayed if a restriction applies or if the system cannot clearly determine whether the restriction applies.
Display in the Instrument Display

If Traffic Sign Assist cannot determine the maximum permissible speed (e.g. due to missing signs), the following display appears in the Instrument Display:

This is displayed continuously if the vehicle is in a country where Traffic Sign Assist is not supported. Traffic Sign Assist is not available in all countries.

Also observe the information on display messages in Traffic Sign Assist (→ page 364).

System limits

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, if there are highly variable shade conditions or in rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.

- If the windshield in the area of the multifunction camera is dirty, or if the camera is fogged up, damaged or covered.
- If the traffic signs are hard to detect, e.g. due to dirt or snow, because they are covered, or due to insufficient lighting.
- If the information in the navigation system’s digital map is incorrect or out-of-date.
- If the signs are ambiguous, e.g. traffic signs on construction sites or in adjacent lanes.
- If you turn sharply when passing traffic signs outside the camera’s field of vision.

Setting Traffic Sign Assist

Requirements:

- Only vehicles with Driving Assistance Package:
  
  Active Distance Assist DISTRONIC and ECO Assist must be activated for the automatic adoption of speed limits.
Multimediasystem:

Settings ➔ Assistance ➔ Traffic Sign Assist

Activating or deactivating automatic adoption of speed limits (only vehicles with Driving Assistance Package)

- Activate or deactivate the function.
- The speed limits detected by Traffic Sign Assist are automatically adopted by Active Distance Assist DISTRONIC.

If one of the following systems is activated, the detected speed can be manually adopted as the speed limit:

- Active Distance Assist DISTRONIC
- Cruise control
- Variable limiter

Further information (➔ page 194).

Displaying detected traffic signs in the media display

- Select Display in Central Display.

Setting the type of warning

- Select Visual & Audible, Visual or Off.

Setting the warning threshold

This value determines the speed at which a warning is issued when exceeded.

- Select Warning Threshold.
- Set the desired speed.

Overview of the traffic light data service

WARNING Risk of an accident or injury due to distraction, incorrect or missing data

The traffic light information display is an aid and cannot replace the observation of the actual driving situation.

- Keep the actual traffic situation constantly in view when approaching a traffic light and when changing lanes.

Avoid prolonged viewing of the Instrument Display and Head-up Display.

The Instrument Display and Head-up Display (if available) show the traffic light and remaining time ➔ until the next green phase as a countdown.

Example representation in the Instrument Display

The display is hidden about five seconds before the traffic lights change to green.
The display also goes out in the following cases:

- When turning off before the intersection into a cross or side street
- When turning before the intersection

The direction arrows are displayed depending on the following functions:

- A turn signal is set
- A lane is recommended during active route guidance

If neither function is active, the remaining time until the next green phase for the lane straight ahead is displayed.

Use of the traffic light information service requires the regular transmission of vehicle positions and driving directions to Mercedes-Benz. The data is immediately anonymized by Mercedes-Benz and forwarded to the provider of the traffic light information service. The vehicle positions and driving directions are deleted after a very short time (a few seconds) and are not permanently saved.

If you do not want to transmit the vehicle positions and driving directions, you have the following options:

- You deactivate the service in the Mercedes me Portal.
- You have the service deactivated at an authorized Mercedes-Benz Center.
- You deactivate the service in the Assistance menu in the multimedia system (→ page 213).

This traffic light data service is only available in cities and regions countries.

The function is supported under the following conditions:

- The vehicle is equipped with a multimedia system featuring navigation and a communication module with an activated, integrated SIM card.
- You have a user account for the Mercedes me Portal.
- The vehicle has been connected with the user account.
- The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
- The traffic light data service is within the scope of the navigation service.

The current vehicle position and the direction of travel are transmitted via the communication module and aligned with the data from the traffic light data service provider. The provider gathers data from traffic lights which transmit their changing phases. When the vehicle approaches an intersection with networked traffic lights, data is transmitted to the vehicle.

A set turn signal left or right and lane recommendations during active route guidance are taken into account for the display.

The service is for information purposes only and is not linked to any other vehicle functions, systems or components. Please note that the displayed data is not available in all traffic areas and may be incorrect.

Certain light signal systems automatically adapt their switching times to the current traffic situa-
tion. This can lead to a sudden change in the countdown display.
The information in the Instrument Display is shown after selecting the display contents in the Assistance menu. If another menu is selected, the traffic light countdown is not displayed.
In addition, observe the following information:
- Select a speed adapted to the traffic, surroundings and weather conditions
- Observe actual traffic signs
- Observe applicable traffic rules and regulations

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers.

System limits
The display does not appear in the following situations, for example:
- There is no traffic light data available.
- The time remaining until the next green phase is less than ten seconds.
- Emergency vehicles or local public transport are located in the vicinity of the intersection.
- The data transmission from the vehicle has been interrupted.
- Light signal systems are located in a construction site area or are being maintained.
- The light signal system is malfunctioning.
- The subscription to the service has expired.

Switching the traffic light information display on or off

Multimedia system:

Switch Traffic Light Information on or off.

Blind Spot Assist and Active Blind Spot Assist with exit warning
Function of Blind Spot Assist and Active Blind Spot Assist with exit warning
Blind Spot Assist and Active Blind Spot Assist use two lateral, rear-facing radar sensors to monitor the area up to 130 ft (40 m) behind and 10 ft (3 m) next to your vehicle.
If a vehicle is detected at speeds above approximately 8 mph (12 km/h) and this vehicle subsequently enters the monitoring range directly next to your vehicle, the warning lamp in the outside mirror lights up red.
Permanent status display in the instrument cluster:
-  (gray): system is activated but inoperative
-  (green): system is activated and operational
If a vehicle is detected close to your vehicle and you switch on the turn signal indicator in the corresponding direction, a double warning tone sounds and the red warning lamp in the outside mirror flashes. If the turn signal indicator remains switched on, all other detected vehicles are indicated only by the flashing of the red warning lamp.
If you overtake a vehicle quickly, no warning is given.
WARNING Risk of accident despite Blind Spot Assist

Blind Spot Assist does not react to vehicles approaching and overtaking you at a greatly different speed.
Blind Spot Assist cannot warn drivers in this situation.
- Always pay careful attention to the traffic situation and maintain a safe distance at the side of the vehicle.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 181).

Exit warning
The exit warning is an additional function of Blind Spot Assist and can warn vehicle occupants about approaching vehicles when leaving the vehicle when stationary.

If there is a vehicle in the monitoring range, this is indicated in the outside mirror. If a vehicle occupant opens the door on the side with the warning, a warning tone sounds and the warning lamp in the outside mirror starts to flash.
This additional function is only available when Blind Spot Assist is active. When the exit warning is activated, it can warn vehicle occupants for up to three minutes after switching the ignition off. The exit warning is no longer available once the warning lamp in the outside mirror flashes three times.

WARNING Risk of accident despite exit warning

The exit warning neither reacts to stationary objects nor to vehicles approaching you at a greatly differing speed.
The exit warning cannot warn drivers in these situations.
- Always pay particular attention to the traffic situation when opening the doors and make sure there is sufficient clearance.

The exit warning is only an aid and not a substitute for the attention of vehicle occupants. The responsibility for opening and closing the doors and for leaving the vehicle remains with the vehicle occupants.

System limits
Blind Spot Assist and Active Blind Spot Assist may be limited in the following situations, in particular:
- If there is dirt on the sensors or the sensors are obscured
- In poor visibility, e.g. due to fog, heavy rain or snow
- If there are narrow vehicles, e.g. bicycles or motorbikes
- If the road has very wide or narrow lanes
- If vehicles are not driving in the middle of their lane

Warnings may be issued in error when driving close to crash barriers or similar continuous lane borders. Always make sure that there is sufficient distance to the side for other traffic or obstacles.
Warnings may be interrupted when driving along-side long vehicles, for example trucks, for a pro-longed time.

Blind Spot Assist is not operational when reverse gear is engaged.

The exit warning may be limited in the following situations:

- When the sensors are covered by adjacent vehicles in narrow parking spaces
- When people approach the vehicle
- In the event of stationary or slowly moving objects

**Function of brake application (Active Blind Spot Assist)**

If Active Blind Spot Assist detects a risk of a side impact in the monitoring range, a course-correcting brake application is carried out. This is designed to help you avoid a collision.

The course-correcting brake application is available in the speed range between approximately 20 mph (30 km/h) and 125 mph (200 km/h).

**WARNING Risk of accident despite brake application of Active Blind Spot Assist**

A course-correcting brake application cannot always prevent a collision.

- Always steer, brake or accelerate yourself, especially if Active Blind Spot Assist warns you or makes a course-correcting brake application.
- Always maintain a safe distance at the sides.

If a course-correcting brake application occurs, the red warning lamp flashes in the outside mirror and a warning tone sounds. In addition, display 1 indicating the danger of a side collision appears in the multifunction display.

In rare cases, the system may make an inappropriate brake application. This brake application may be interrupted at any time if you steer slightly in the opposite direction or accelerate.

**System limits**

Note the system limitations of Active Blind Spot Assist; you may otherwise not recognize the dangers (→ page 213).

Either a course-correcting brake application appropriate to the driving situation, or none at all, may occur in the following situations:

- Vehicles or obstacles, e.g. crash barriers, are located on both sides of your vehicle.
- A vehicle approaches too closely on the side.
- You have adopted a sporty driving style with high cornering speeds.
- You brake or accelerate significantly.
- A driving safety system intervenes, e.g. ESP® or Active Brake Assist.
• ESP® is deactivated.
• A loss of tire pressure or a faulty tire is detected.

Activating/deactivating Blind Spot Assist or Active Blind Spot Assist
Multimedia system:
- Settings > Assistance
- Activate or deactivate Blind Spot Assist.
- Activate or deactivate Act. Blind Spot Assist.

Active Lane Keeping Assist
Function of Active Lane Keeping Assist
Active Lane Keeping Assist monitors the area in front of your vehicle by means of the multifunction camera (⇒ page 182). It serves to protect you against unintentionally leaving your lane. You will be warned by vibration pulses in the steering wheel and guided by a course-correcting brake application back into your lane.

Active Lane Keeping Assist is available in the speed range between 37 mph (60 km/h) and 124 mph (200 km/h).

Active Lane Keeping Assist can neither reduce the risk of an accident if you fail to adapt your driving style nor override the laws of physics. It cannot take into account road, weather or traffic conditions. Active Lane Keeping Assist is only an aid. You are responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

The status of Active Lane Keeping Assist is displayed in the on-board computer:
- 🔴 (green): Active Lane Keeping Assist is active and operating.
- 🔴 (gray): Active Lane Keeping Assist is active but not operating.
- 🔴: Active Lane Keeping Assist is deactivated or there is a malfunction.

If a lane-correcting brake application occurs, display 1 appears in the multifunction display.
The system does not apply the brake if you activate the turn signal indicator.

Vehicles with Driving Assistance Package: if the system detects an obstacle, such as another vehicle in the adjacent lane, it will apply the brake regardless of the turn signal indicator.

You are warned by vibrations in the steering wheel in the following circumstances:
- Active Lane Keeping Assist detects a lane marking.
- A front wheel drives over this lane marking.
Conditions for a course-correcting brake application (vehicles without Driving Assistance Package)

Lane markings were detected on both sides of the lane. The front wheel drives over a continuous lane marking.

A brake application may be interrupted at any time if you steer slightly in the opposite direction.

Conditions for a course-correcting brake application (vehicles with Driving Assistance Package)

A continuous lane marking was detected and driven over with the front wheel.

A lane marking and an approaching vehicle, an overtaking vehicle or vehicles driving parallel to your vehicle were detected in the adjacent lane. The front wheel drives over the lane marking.

A brake application may be interrupted at any time if you steer slightly in the opposite direction.

System limits

No lane-correcting brake application occurs in the following situations:

- You clearly and actively steer, brake or accelerate.
- If a driving safety system intervenes, such as ESP®, Active Brake Assist or Active Blind Spot Assist.
- You have adopted a sporty driving style with high cornering speeds or high rates of acceleration.
- When ESP® is deactivated.
- If a loss of tire pressure or a faulty tire has been detected and displayed.

If you deactivate the Active Lane Keeping Assist warning and the lane markings cannot be clearly detected, it is possible that no lane correcting brake application takes place (→ page 218).

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, if there are highly variable shade conditions or in rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, the sun or reflections.
- If the windshield in the area of the multifunction camera is dirty, or if the camera is fogged up, damaged or covered.
- If there are no lane markings, or several unclear lane markings are present for one lane, e.g. around roadworks.
- If the lane markings are worn, dark or covered.
- If the distance from the vehicle in front is too short and thus the lane markings cannot be detected.
- If the lane markings change quickly, e.g. lanes branch off, cross one another or merge.
- If the road is very narrow and winding.

Vehicles with Driving Assistance Package: if the radar sensors in the rear bumper are dirty or covered in snow and an obstacle
is detected in your lane, no lane-correcting brake application takes place.

Activating/deactivating Active Lane Keeping Assist
Multimedia system:

- Settings ➤ Quick Access ➤ Active Lane Keeping Assist
- Activate or deactivate the function.

Setting Active Lane Keeping Assist
Multimedia system:

- Settings ➤ Assistance ➤ Active Lane Keeping Assist

Activating or deactivating the haptic warning
- Select Warning.
- Activate or deactivate the function.

AIR BODY CONTROL

AIR BODY CONTROL function

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Mercedes-AMG vehicles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Observe the notes in the Supplement. You could otherwise fail to recognize dangers.</td>
<td></td>
</tr>
</tbody>
</table>

AIR BODY CONTROL is an air suspension system with variable damping for improved driving comfort. The all-round level control system ensures the best possible suspension and constant ground clearance, even with a laden vehicle. When driving at speed, the vehicle is lowered automatically to improve driving safety and to reduce fuel consumption. You also have the option of manually adjusting the vehicle level.

AIR BODY CONTROL includes the following components and functions:
- Air suspension with variable spring rate
- Automatic level control system
- Speed-dependent lowering to reduce fuel consumption
- Manually selectable high-level setting for greater ground clearance
- ADS PLUS (Adaptive Damping System with constant damping force adjustment)
- DYNAMIC SELECT switch and level button

Suspension setting and vehicle level per drive program

Drive program [A]:
- The suspension setting is comfortable.
- The vehicle is set to the normal level.
- When driving at speeds of approximately 78 mph (125 km/h) or above, the vehicle is lowered.
- When driving at speeds below approximately 50 mph (80 km/h), the vehicle is raised again.

Drive program [C]:
- The suspension setting is comfortable.
- The vehicle is set to low level -1.
- The vehicle is not lowered any further if you are traveling at higher speeds.
Drive program [S]:
- The suspension setting is firmer.
- The vehicle is set to low level -1.
- The vehicle is not lowered any further if you are traveling at higher speeds.

Drive program [S]:
- The suspension setting is even firmer.
- The vehicle is set to low level -1.
- The vehicle is not lowered any further if you are traveling at higher speeds.

Drive program [F]:
- The suspension setting is suitable for off-road terrain.
- The vehicle is set to normal level.
- When driving at speeds of 78 mph (125 km/h) or above the vehicle is lowered.
- When driving at speeds below 50 mph (80 km/h), the vehicle is raised again.

Drive program [G]:
- The suspension setting is suitable for off-road terrain.
- The vehicle is set to high level +1.
- When driving at speeds of 22 mph (35 km/h) or above the vehicle is lowered to the normal level.
- When driving at speeds below 12 mph (20 km/h), the vehicle is raised again.

Individual suspension settings can be called up in drive program [P] (→ page 167).

Setting the vehicle level

**WARNING** Risk of accident because vehicle level is too high

Driving characteristics may be impaired. The vehicle can drift outwards, for example, when steering or cornering.

Choose a vehicle level which is suited to the driving style and the road surface conditions.

**WARNING** Risk of entrapment from vehicle lowering

When lowering the vehicle, people could become trapped if their limbs are between the vehicle body and the tires or underneath the vehicle.

Make sure no one is underneath the vehicle or in the immediate vicinity of the wheel arches when the vehicle is being lowered.

**WARNING** Risk of becoming trapped due to the vehicle lowering

Vehicles with AIR BODY CONTROL or level control system: when you unload luggage or leave the vehicle, the vehicle first rises slightly and then returns to the set level shortly afterwards.

You or anyone else in the vicinity of the wheel arches or the underbody could thus become trapped.

The vehicle can also be lowered after being locked.
When leaving the vehicle, make sure that nobody is in the vicinity of the wheel arches or the underbody.

**NOTE** Damage due to vehicle lowering

Parts of the body could be damaged when the vehicle is lowered.

- Make sure that there are no obstacles such as curbs underneath or in the immediate vicinity of the body when the vehicle is being lowered.

**NOTE** Mercedes-AMG vehicles

Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

**Requirements:**
- The vehicle has been started.
- **All vehicles except All-Terrain vehicles:** the vehicle must not be moving faster than 37 mph (60 km/h).

**Raising the vehicle**

- **All-Terrain vehicles:** the vehicle must not be moving faster than 22 mph (35 km/h).

Press button 1. Indicator lamp 2 lights up. The vehicle is set to the high level.

Your selection is saved.

In the drive program, the vehicle cannot be raised further by using button 1.

The vehicle is lowered again in the following situations:

- **All vehicles except All-Terrain vehicles:** when driving faster than 50 mph (80 km/h).
- **All vehicles except All-Terrain vehicles:** when driving between 37 mph (60 km/h) and 50 mph (80 km/h) for approximately three minutes.
- **All-Terrain vehicles:** when driving faster than 22 mph (35 km/h).
- After changing a drive program using the DYNAMIC SELECT switch.

The vehicle is adjusted to the height of the last active drive program.

**Lowering the vehicle**

Press button 1. Indicator lamp 2 goes out. The vehicle is adjusted to the height of the active drive program.

**Operation with a trailer or bicycle rack**
Requirements:

- The electrical connection to the trailer or bicycle rack is established correctly.

All vehicles except All-Terrain vehicles:

- Up to approximately 18.7 mph (30 km/h): the high level can be selected regardless of the drive program.
- From approx. 18.7 mph (30 km/h): the vehicle is adjusted to normal level, regardless of drive program.

All-Terrain vehicles:

- Up to approximately 22 mph (35 km/h): the high level can be selected regardless of the drive program.
- From approximately 22 mph (35 km/h): the vehicle is set to the normal level regardless of the drive program.
- Below approximately 12 mph (20 km/h) in the G drive program, the vehicle is raised back up to the high level.

Rear view camera

Function of the rear view camera

When you engage reverse gear, the image from the rear view camera is shown in the media display. Dynamic guide lines show the path the vehicle will take with the current steering angle. This helps you to orient yourself and to avoid obstacles when backing up.

The rear view camera is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking.

The guide lines in the media display show the distances to your vehicle. The distances displayed only apply to road level.

Depending on the vehicle equipment, you can select from the following views:

- Normal view
- Wide-angle view

The area behind the vehicle is displayed as a mirror image, as in the inside rearview mirror.

Vehicles without Parking Assist PARKTRONIC

The following camera views are available in the multimedia system:

- Normal view
  1 Driven surface depending on the current steering angle (dynamic)
  2 Guide lines at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area
  3 Lane marking the course the tires will take with the current steering angle (dynamic)
Bumper

Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area

Wide-angle view

**Vehicles with Parking Assist PARKTRONIC**

The following camera views are available in the multimedia system:

1. **Normal view**

2. **Yellow warning display:** obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)

3. **Orange warning display:** obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)

4. **Guide lines:** at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area

5. **Yellow lanes:** marking the course the tires will take with the current steering angle (dynamic)

6. **Driven surface depending on the current steering angle (dynamic)**

7. **Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area**

The color of warning display 1 / 2 changes dynamically and is based on the distance to the detected obstacle:

- **Blue:** no obstacles detected at a distance less than 3.3 ft (1.0 m)
- **Yellow:** obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)
- **Orange:** obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)
- **Red:** obstacles at a very short distance of approximately 1.3 ft (0.4 m) or less

**Vehicles with Active Parking Assist:** when Active Parking Assist is active, lane markings 4 are displayed in green.
Wide-angle view

Display of Parking Assist PARKTRONIC

System malfunction
If the rear view camera is not ready for operation, the System Inoperative message appears in the media display.

System limits
The rear view camera will not function or will only partially function in the following situations:

- The tailgate is open.
- The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
- The ambient light conditions are poor, e.g. at night.
- Cameras, or vehicle components in which the cameras are installed, are damaged, dirty or covered. Observe the information on vehicle sensors and cameras (→ page 182).

Do not use the rear view camera in these types of situations. You could otherwise injure others or collide with objects when parking the vehicle.

The contrast of the display may be impaired by direct sunlight or by other light sources, e.g. when driving out of a garage. In this case, pay particular attention.

Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

360° camera

Function of the surround view camera
The surround view camera is a system that consists of four cameras which cover the immediate surroundings of the vehicle. The system assists you when you are parking or at exits with reduced visibility, for example. The views of the surround view camera are always available when driving forwards up to a speed of approx. 10 mph (16 km/h) and when backing up.

The surround view camera is only an aid and may show a distorted view of obstacles, show them incorrectly or not show them at all. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking.

The system evaluates images from the following cameras:

- Rear view camera
- Front camera
- Two side cameras in the outside mirrors
Views of the surround view camera

1 Wide-angle view, front
2 Top view with image from the front camera
3 Top view with images from the side cameras in the outside mirrors
4 Wide-angle view, rear
5 Top view with image from the rear view camera
6 Top view with trailer view (vehicles with a trailer hitch)

Function of the guide lines
Guide lines are also displayed in the camera images of the top views, which aid you by showing you the calculated vehicle path as well as the distance to objects and other vehicles, based on the current steering angle.

1 Guide lines at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area
2 Yellow lanes marking the course the tires will take with the current steering angle (dynamic)
3 Driven surface depending on the current steering angle (dynamic)
4 Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area

When Active Parking Assist is active, paths are displayed in green. The guide lines show the distances to your vehicle. The distances apply to road level. In all views, the Parking Assist PARKTRONIC warning display is shown as well (→ page 226). The color of warning display changes dynamically and is based on the distance to the detected obstacle:

- **Blue**: no obstacles detected at a distance less than 3.3 ft (1.0 m)
- **Yellow**: obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)
- **Orange**: obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)
- **Red**: obstacles at a very short distance of approximately 1.3 ft (0.4 m) or less

When Parking Assist PARKTRONIC is operational and no object is detected, the warning display is shown here in blue.
Wide-angle view, front

1 Warning display of Parking Assist PARKTRONIC

Top view with image from the front camera

1 Warning display of Parking Assist PARKTRONIC (→ page 226)
2 Your vehicle from above
3 Lane indicating the route the vehicle will take at the current steering angle

Top view with images from the side cameras in the outside mirrors
The sides of the vehicle can be seen in this view.

1 Guide line of external vehicle dimensions with outside mirrors folded out
2 Marker of the wheel contact points

System limits
If the system is not ready for operation, the System Inoperative message appears in the media display.
The surround view camera will not function or will only partially function in the following situations:
- You are driving forwards at a speed greater than approximately 10 mph (16 km/h).
- The doors are open.
An outside mirror is not completely folded out.
The trunk lid is open.
The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
The ambient light conditions are poor, e.g. at night.
The camera lens is obstructed, dirty or fogged up.
If cameras or vehicle components in which the cameras are installed are damaged. In this event, have the cameras, their positions and their setting checked at a qualified specialist workshop.

Do not use the surround view camera under such circumstances. You could otherwise injure others or collide with objects when parking the vehicle.

For technical reasons, the standard height of the vehicle may be altered if the vehicle is carrying a heavy load and can result in inaccuracies in the guide lines and in the display of the generated images.

The field of vision and other functions of the camera system may be restricted due to additional attachments on the vehicle (e.g. license plate bracket, bicycle rack).

The contrast of the display may be impaired by abrupt, direct sunlight or by other light sources, e.g. when driving out of a garage. In this case, pay particular attention.

Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

See the notes on cleaning the surround view camera (→ page 296).

**Calling up the view of the surround view camera using reverse gear**

- Shift to reverse gear.
- Select the desired view in the multimedia system (→ page 223).
- If, after shifting to reverse gear, the image of the rear view camera is not shown: switch off the ignition, press and hold the [button], switch on the ignition and engage reverse gear again.

**Parking Assist PARKTRONIC**

**Function of Parking Assist PARKTRONIC**

Parking Assist PARKTRONIC is an electronic parking assistance system which monitors the area surrounding your vehicle and shows you the distance between the vehicle and a detected obstacle visually and audibly.

Parking Assist PARKTRONIC is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects in the maneuvering area while maneuvering and parking in/exiting parking spaces.

The passive side impact protection also warns you of obstacles to the side. During the parking procedure or maneuvering, objects are detected as the vehicle drives past. If you steer in the direction of a detected obstacle and there is a risk of a lateral collision, a warning is issued. In order for an object on the side to be detected, the sensors in the front and rear bumper must first detect the object while you are driving past it.
In order for front or rear obstacles to the side to be displayed, the vehicle must first travel a distance of at least half a vehicle length. Once the vehicle has traveled one vehicle length, obstacles on all sides can be shown.

**Displays in the media display**

![Vehicles with surround view camera](image1)

Vehicles without surround view camera

As soon as Parking Assist PARKTRONIC is operational, the respective areas of the display are shown in blue.

1. **Operational, front and rear**
2. **Operational, all around**
3. **Obstacles detected at the front left and on the right-hand side**

The color of the display changes depending on the distance to the detected obstacle:

- **Blue**: > 3.3 ft (1 m) (no obstacles detected)
- **Yellow**: approximately 3.3 ft (1 m) - 2.3 ft (0.7 m)
- **Orange**: approximately 2.3 ft (0.7 m) - 1.2 ft (0.4 m)
- **Red**: < 1.2 ft (0.4 m)

**Vehicles with surround view camera**: the boundary line shifts dynamically depending on the position and distance of the obstacles detected.

Depending on the distance to the obstacle detected, an intermittent warning tone also sounds. You can set the timing of the warnings in the multimedia system (→ page 230).

**Standard setting:**

- **Front and sides**: < 1.2 ft (0.4 m)
- **Rear**: < 3.3 ft (1 m)

**Warn Early All Around:**

- **Front**: < 3.3 ft (1 m)
- **Sides**: < 2.3 ft (0.7 m)
- **Rear**: < 3.3 ft (1 m)

A continuous warning tone sounds from a distance of approximately 0.7 ft (0.2 m), regardless of the selected setting.
If an obstacle in the vehicle path is detected and the Camera & Parking menu is not open in the media display, pop-up window 1 appears:

- **Vehicles without Active Parking Assist**: at speeds below 8 mph (12 km/h)
- **Vehicles with Active Parking Assist**: at speeds below 11 mph (18 km/h)

Optionally, obstacles detected by Parking Assist PARKTRONIC from a distance of approximately 3.3 ft (1.0 m) in front 2 and 2.3 ft (0.7 m) on the side 3 can also be displayed in the Head-up Display.

### System limits

PARKTRONIC does not necessarily take into account the following obstacles:

- Obstacles below the detection range, e.g. persons, animals or objects.
- Obstacles above the detection range, e.g. overhanging loads, overhangs or loading ramps of trucks.
- Pedestrians or animals approaching the vehicle from the side.
- Objects placed next to the vehicle.

Obstacles on the sides are not shown in the following situations, for example:

- You park the vehicle and switch off the ignition.
- You open the doors.

After an ignition cycle, obstacles must be detected again by driving past them before a warning can be issued.

Observe the information on vehicle sensors and cameras; the system otherwise cannot function properly (→ page 182).
**Problems with Parking Assist PARKTRONIC**

1. Vehicles with surround view camera
2. Vehicles without surround view camera

If the Parking Assist PARKTRONIC display lights up red for approximately three seconds then goes out, and the symbol appears in the instrument cluster, the system may have been deactivated due to signal interference. Start the vehicle again and check if Parking Assist PARKTRONIC is working at a different location.

- **The sensors are dirty**: clean the sensors and observe the notes on care of vehicle parts (→ page 296).
- **Parking Assist PARKTRONIC has been deactivated due to a malfunction**: restart the vehicle. If the problem persists, consult a qualified specialist workshop.

**Activating/deactivating Parking Assist PARKTRONIC**

1. **NOTE** Risk of an accident from objects at close range

Parking Assist PARKTRONIC may not detect certain objects at close range.

- When parking or maneuvering the vehicle, pay particular attention to any objects which are above or below the sensors, e.g. flower pots or drawbars. The vehicle or other objects could otherwise be damaged.

**Vehicles without AIR BODY CONTROL**: press the button in the center console.

**Vehicles with AIR BODY CONTROL**: you can activate or deactivate Parking Assist PARKTRONIC in the multimedia system (→ page 229).

If the indicator lamp in the button is not lit, Parking Assist PARKTRONIC is active. If the indicator lamp is lit or the symbol appears in the instrument cluster, Parking Assist PARKTRONIC is not active.

Parking Assist PARKTRONIC is automatically activated when the vehicle is started.

**Activating/deactivating Parking Assist PARKTRONIC using the multimedia system**

1. **NOTE** Risk of an accident from objects at close range

Parking Assist PARKTRONIC may not detect certain objects at close range.

- When parking or maneuvering the vehicle, pay particular attention to any objects which are above or below the
sensors, e.g. flower pots or drawbars. The vehicle or other objects could otherwise be damaged.

Requirements:
- The camera menu is open.
- Or: Active Parking Assist is active.
- Or: the PARKTRONIC pop-up window appears.

- Tap in the media display.

If the indicator lamp is lit, Parking Assist PARKTRONIC is active. If the indicator lamp is not lit or the symbol appears in the instrument cluster, Parking Assist PARKTRONIC is not active.

Parking Assist PARKTRONIC is automatically activated when the vehicle is started.

Alternatively, Parking Assist PARKTRONIC can be activated or deactivated in the quick access menu.

Setting the warning tones of Parking Assist PARKTRONIC
Multimedia system:

Adjusting the volume of the warning tones
- Select Warning Tone Volume.
- Set a value.

Adjusting the pitch of the warning tones
- Select Warning Tone Pitch.
- Set a value.

Specifying the starting point for the warning tones
You can specify whether the Parking Assist PARKTRONIC warning tones should commence when the vehicle is further away from an obstacle.
- Select Warn Early All Around.
- Activate or deactivate the function.

Activating/deactivating audio fadeout
You can specify whether the volume of a media source in the multimedia system is to be reduced when Parking Assist PARKTRONIC sounds a warning tone.
- Select Audio Fadeout During Warning Tones.
- Activate or deactivate the function.

Active Parking Assist
Function of Active Parking Assist
Active Parking Assist is an electronic parking assistance system, which uses ultrasound with the assistance of the rear view camera and surround view camera. When you are driving forwards up to approximately 22 mph (35 km/h), the system automatically measures parking spaces on both sides of the vehicle.

Active Parking Assist offers the following functions:
- Vehicles with rear view camera
- Parking in parking spaces parallel to the road

230 Driving and parking
Vehicles with surround view camera
- Parking in parking spaces parallel to the road
- Parking in parking spaces perpendicular to the road (optionally either forwards or reverse)
- Parking in parking spaces that can only be detected as such due to markings (for example at the roadside)
- Exiting a parking space parallel to the road

As soon as all requirements are met for searching for parking spaces, the \( \text{P} \) display appears in the multifunction display.

When Active Parking Assist has detected parking spaces, the \( \text{P} \) display appears in the multifunction display. The arrows show on which side of the road detected parking spaces are located. They are then shown in the media display.

**Vehicles with rear view camera**: the parking space can be selected as desired. The vehicle is parked in reverse.

**Vehicles with surround view camera**: the parking space can be selected as desired. Depending on the location of the parking space, the parking direction (rearwards or forwards) can also be selected as desired.

When Active Parking Assist is activated, the turn signal indicators are activated based on the calculated path of your vehicle.

The parking procedure is assisted by accelerating, braking, steering and gear changes.

Active Parking Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range.

Active Parking Assist will be canceled in the following situations:
- Parking Assist PARKTRONIC is deactivated.
- You begin steering.
- You engage transmission position \( \text{P} \).
- ESP® intervenes.
- You open the driver’s door.
- After activating Active Parking Assist, you press the \( \text{P} \) button again (→ page 232).

**System limits**
If the exterior lighting is malfunctioning, Active Parking Assist is not available.

Objects located above or below the detection range of the sensors, e.g. overhanging loads, overhanging or loading ramps of trucks, or the borders of parking spaces, are not detected during measurement of the parking space. These are also then not taken into account when calculating the parking procedure. In some circumstances, Active Parking Assist may therefore guide you into the parking space incorrectly.

**WARNING** Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:
- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

This could cause a collision.
In these situations, do not use Active Parking Assist.

Extreme weather conditions, such as snow or heavy rain, may lead to a parking space being measured inaccurately. Parking spaces that are partially occupied by trailer drawbars might not be identified as such or be measured incorrectly. Only use Active Parking Assist on level, high-grip ground.

Do not use Active Parking Assist in the following situations:

- In extreme weather conditions such as ice, packed snow or in heavy rain.
- When transporting a load that protrudes beyond the vehicle.
- On steep uphill or downhill gradients of more than approximately 15%.
- When snow chains are installed.
- Directly after a tire change or when spare tires are installed.
- If the tire pressure is too low or too high.

- If the suspension is out of alignment, e.g. after bottoming out on a curb.

Active Parking Assist may also display parking spaces that are not suitable for parking, such as:
- Parking spaces where parking is prohibited.
- Parking spaces on unsuitable surfaces.

**Parking with Active Parking Assist**

Press button 1.

Parking spaces detected by the system are shown in the media display. When the vehicle is stationary, indicated vehicle path 2 into currently selected parking space 3 also appears.

- If a parking space is displayed: stop the vehicle.
- If necessary, select another parking space.

**Vehicles with surround view camera:** if necessary, change the parking direction.

**To start the parking procedure:** confirm selected parking space 3.
The turn signal indicator is switched on automatically when the parking procedure begins. You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

**WARNING** Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane. This could cause you to collide with objects or other road users.

- Pay attention to objects and other road users.
- Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.

If, for example, the Please Engage Reverse Gear message appears in the media display:

select the corresponding transmission position. The vehicle drives into the selected parking space.

During the parking procedure with Active Parking Assist, the lane markings are displayed in green in the camera image. On completion of the parking procedure, the Parking Assist Finished, Take Control of Vehicle message appears. Further maneuvering may still be necessary.

- Secure the vehicle against rolling away. When required by legal requirements or local conditions: turn the wheels towards the curb.
- You can stop the vehicle and change the transmission position during the parking procedure. The system then calculates a new vehicle path. If no new vehicle path is available, the transmission position can be changed again, or the process can be canceled. You can also interrupt the parking procedure by braking, for example to let people in or out of the vehicle. The parking procedure can then be continued by briefly pressing the accelerator pedal.

**Exiting a parking space with Active Parking Assist**

**Requirements:**
- The vehicle is equipped with a surround view camera.
- The vehicle has been parked parallel to the road with Active Parking Assist.

Please note that you are responsible for the vehicle and surroundings during the entire parking procedure.

- Start the vehicle.
- Press button 1. The media display shows the view of Active Parking Assist.
Select Exit Space 2.

If, for example, the Please Engage Forward Gear message appears in the media display: select the corresponding transmission position. The vehicle moves out of the parking space and is brought to a standstill by Active Parking Assist (at an angle to the direction of travel). The Parking Assist Finished, Take Control of Vehicle message appears.

Take control of the vehicle and complete the parking process.

The vehicle path shown on the media display may differ from the actual vehicle path. The turn signal indicator is switched on automatically when the exiting procedure begins. You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

**Maneuvering assistance**

**Function of Drive Away Assist**

Drive Away Assist can reduce the severity of an impact when pulling away. If an obstacle is detected in the direction of travel, the vehicle’s speed is briefly reduced to approx. 1 mph (2 km/h). If a critical situation is detected, the symbol appears in the media display.

You can cancel an intervention by Drive Away Assist at any time by deactivating Parking Assist PARKTRONIC (→ page 229).

**WARNING** Risk of accident caused by limited detection performance of Drive Away Assist

Drive Away Assist cannot always clearly identify objects and traffic situations.

- Always pay careful attention to the traffic situation; do not rely on Drive Away Assist alone.
- Be prepared to brake or swerve as necessary, provided the traffic situation permits and that it is safe to take evasive action.

Drive Away Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range.

A risk of a collision may arise in the following situations, for example:

- If the accelerator and brake pedals are mixed up.
If an incorrect transmission position is engaged.

Drive Away Assist is active under the following conditions:

- If Parking Assist PARKTRONIC is activated.
- If you shift the transmission position to R or D when the vehicle is stationary.
- If the detected obstacle is less than approx. 3.3 ft (1.0 m) away.
- If the maneuvering assistance function is activated in the multimedia system.

System limits
The performance of Drive Away Assist is limited on inclines.

Also observe the system limits of Parking Assist PARKTRONIC (→ page 226).

Function of Cross Traffic Alert

Cross Traffic Alert is only available for vehicles with Blind Spot Assist or Active Blind Spot Assist.

Cross Traffic Alert can warn drivers of any crossing traffic when backing up and maneuvering out of a parking space. The radar sensors in the bumper also monitor the area adjacent to the vehicle. If a critical situation is detected, the symbol appears in the media display and the vehicle can be braked automatically.

If the radar sensors are obstructed by vehicles or other objects, detection is not possible.

When the vehicle is backing up at a walking pace, Cross Traffic Alert is automatically active.

Also observe the instructions on Blind Spot Assist and Active Blind Spot Assist (→ page 213).

System limits
Cross Traffic Alert is not available on inclines.

Maneuvering brake function
The maneuvering brake function can prevent collisions with pedestrians when the vehicle is backing up at slow speeds. If the rear view camera detects a person in the vehicle path, the vehicle can be braked to a standstill.

The maneuvering brake function can intervene under the following conditions:

- The vehicle is backing up at a speed slower than 6 mph (10 km/h).
- The camera image is shown in the media display.

You can activate and deactivate the maneuvering brake function (→ page 236).

If the maneuvering brake function is triggered, the following symbol appears in red in the selected view in the Camera & Parking menu:

Also, if the maneuvering brake function is not available, the same symbol appears in gray. If the Camera & Parking menu is not opened in the media display, the symbol and pop-up of Parking Assist PARKTRONIC both appear.

The maneuvering brake function is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuver-
Driving and parking

The maneuvering brake function is not available in the following situations:

- On inclines

**Activating/deactivating the maneuvering assistant**

Multimedia system:

- Settings > Assistance
- Camera & Parking
- Switch Maneuvering Assistance on or off.

For Drive Away Assist (→ page 234) to function, maneuvering assistant must be active.

**Vehicle towing instructions**

The vehicle is not suitable for the use of tow bar systems that are used for flat towing or dinghy towing, for example. Attaching and using tow bar systems can lead to damage on the vehicle. When you are towing a vehicle with tow bar systems, safe driving characteristics cannot be guaranteed for the towing vehicle or the towed vehicle. The vehicle-trailer combination may swerve from side to side. Comply with the permitted towing methods (→ page 313) and the instructions for towing with both axles on the ground (→ page 313).
**Notes on the Instrument Display and on-board computer**

**WARNING Risk of accident due to an Instrument Display malfunction**

If the Instrument Display has failed or malfunctioned, the function restrictions applying to safety relevant systems are not visible. The operating safety of your vehicle may be impaired.

- Drive on carefully.
- Have the vehicle checked immediately at a qualified specialist workshop.

**WARNING Risk of distraction from information systems and communications equipment**

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

**NOTE Mercedes-AMG vehicles**

- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

You must observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

The on-board computer shows only display messages and warnings from specific systems on the multifunction display. You must therefore ensure that your vehicle is always reliable.

If the operating safety of your vehicle is impaired, park the vehicle immediately and safely. Contact a qualified specialist workshop.
Instrument Display overview

1 Speedometer
   The segments on the speedometer indicate the statuses of the following systems: cruise control/limiter/Active Distance Assist DISTRONIC
2 Index points
3 Outside temperature
4 Time
5 Area for additional values (example: tachometer): tachometer/navigation/ECO display/consumption/G-meter/date
   The fuel supply will be interrupted to protect the engine when the red mark on the tachometer (overrevving range) is reached.
6 Coolant temperature display
7 Selected drive program

During normal operation, the coolant temperature display is permitted to rise to 248°F (120°C).
Vehicles with 48 V on-board electrical system: POWER and CHARGE display (electrical drive support and recuperation power of the electric motor)
Selected transmission position
Multifunction display (example: standard display for a trip): assistance/telephone/navigation/trip/media/radio/styles and displays/service/possible settings for Head-up Display
Fuel level and fuel filler flap location indicator

Overview of the buttons on the steering wheel
Depending on the equipment, the layout and the design of the control elements on the steering wheel may differ.

1 Control panel for cruise control or Active Distance Assist DISTRONIC (→ page 190)
2 Back button, on-board computer
3 Touch Control, on-board computer
   Swipe (navigate)
   Press (confirm)
4 Main menu, on-board computer
5 Main menu, MBUX multimedia system
6 Touch Control, MBUX multimedia system
   Swipe (navigate)
   Press (confirm)
7 Back button, MBUX multimedia system
8 Control panel for the MBUX multimedia system
9 Voice Control System
10 To adjust the brightness of the instrument lighting

Operating the on-board computer
Observe the legal requirements for the country in which you are currently driving when operating the on-board computer.
The on-board computer is operated using the left-hand Touch Control and the left-hand back/home button.

When the on-board computer is being operated, different acoustic signals will sound as operating feedback, e.g. when the end of a list is reached or when you are scrolling through a list.

To operate Touch Control in the most effective way, use the tip of your thumb if possible.

The following menus are available:
- Assistance
- Phone
- Navigation
- Trip
- Radio
- Media
- Service
- Vehicles with an Instrument Display in the Widescreen Cockpit: Designs

You can find information about the possible settings and selections on the menus in the Digital Operator’s Manual.

To call up the menu bar: press the left-hand back button until the menu bar is displayed.

Vehicles without Active Distance Assist DISTRONIC: press the button to call up the menu bar of the on-board computer.

To scroll in the menu bar: swipe left or right on the left-hand Touch Control.

To call up a menu, submenu or possible settings on the menu, or confirm a selection or setting: press the left-hand Touch Control.

To scroll through displays or lists on the menu, or select display content, a function, an entry or a display: swiping up or down on the left-hand Touch Control.

To exit a submenu: press the left-hand back button.

Selecting the Head-up Display

To switch on the Head-up Display: switch on the Head-up Display via the multimedia system or activate it in the menu bar by swiping upwards on the left-hand Touch Control. The Head-up Display menu will be selected on the Head-up Display.

To switch to the Head-up Display: press the left-hand Touch Control or swipe upwards on the left-hand Touch Control.

To set the three display ranges of the Head-up Display: swiping up or down on the left-hand Touch Control.
Full-screen menus
You can display the following menus full-screen on the Instrument Display:

- Assistance
- Trip
- Navigation

On the corresponding menu, use the left-hand Touch Control to scroll to the end of the list.

Press the left-hand Touch Control. The selected menu will be displayed full-screen.

Overview of displays on the multifunction display
Displays on the multifunction display

- Active Parking Assist activated (→ page 232)
- Parking Assist PARKTRONIC deactivated (→ page 229)
- Cruise control (→ page 189)
- Active Distance Assist DISTRONIC (→ page 191)
- Active Brake Assist (→ page 209)
- Active Steering Assist (→ page 200)
- Active Traffic Jam Assist (→ page 198)
- Active Lane Keeping Assist (→ page 216)
- Active Lane Change Assist (→ page 203)
- ECO start/stop function (→ page 162)
- HOLD function (→ page 186)
- Adaptive Highbeam Assist (→ page 131)
- Adaptive Highbeam Assist Plus (→ page 132)
- Vehicles with Traffic Sign Assist: Detected instructions and traffic signs (→ page 209).

For an overview of the indicator and warning lamps, see (→ page 414).

Head-up Display
Function of the Head-up Display

NOTE Mercedes-AMG vehicles
Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

The Head-up Display projects the following information into the driver’s field of vision above the cockpit, for example:

- The vehicle speed
- Information from the navigation system
- Information from the driving systems and driving safety systems
- Some warning messages

Depending on the vehicle’s equipment, different content can be shown in the three areas of the Head-up Display (→ page 242).
Display content

1 Navigation instructions
2 Current speed
3 Detected instructions and traffic signs
4 Set speed in the driving system (e.g. cruise control)

System limits
The visibility of the displays will be affected by the following conditions:
- Seat position
- Image position setting
- Ambient light conditions
- Wet road
- Objects on the display cover
- Polarization in sunglasses

In extreme sunlight, sections of the display may appear washed out. You can correct this by switching the Head-up Display off and on again.

Setting the Head-up Display using the on-board computer

On-board computer:

To select the Settings menu: swipe to the right on the left-hand Touch Control. The Settings menu 1 will be selected.

To call up the Settings menu: press the left-hand Touch Control.

To adjust the position: swiping up or down on the left-hand Touch Control.

To adjust the brightness: swipe to the left or right on the left-hand Touch Control.

Setting messages, assistance status, telephone, audio and the Voice Control System

Press the left-hand Touch Control. The list of setting options will be displayed.

Swipe upwards or downwards on the left-hand Touch Control and select a setting by pressing the left-hand Touch Control.
Selecting what the Head-up Display shows

1. To switch the Head-up Display on/off
2. Left display area
   - Navigation system
   - Average consumption
   - G-meter
3. Central display area
   - Speedometer
   - Set speed in the driver assistance system, e.g. cruise control
   - Warnings from driver assistance systems, e.g. distance warning
4. Right display area
   - Traffic Sign Assist Assistant display
5. To adjust the position, brightness and lower display area
6. Index points
7. Lower display area (example: left display area)

Display areas 2 to 4 that are not required can be hidden.

In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated. In addition, the latest calls will be displayed when the telephone list on the Instrument Display is actively operated.

To select a display: swipe upwards on the left-hand Touch Control.
Press the left-hand Touch Control.

Switching the Head-up Display on/off via the multimedia system

Multimedia system:

[Settings] [Quick Access]
Select HUD.
The Head-up Display is activated.
Overview and operation

Notes on the MBUX multimedia system

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information and communication equipment integrated in the vehicle when driving, you will be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system.

---

**Overview of the MBUX multimedia system**

1. Touch Control and control panel for the MBUX multimedia system
2. Media display with touch functionality
3. Control panel for telephone, navigation, radio/media, vehicle functions/system settings and favourites/themes
4. Touchpad
5. Controller
   - Turn: adjusts the volume
   - Press: switches sound on or off
6. Switches the MBUX multimedia system or media display on or off

Further operating options:
- Conducting a voice dialog with the Voice Control System.
- Operating functions contact-free with the MBUX Interior Assistant.

You can find further information about operation as well as about applications and services in the Digital Operator's Manual.

**Anti-theft protection**

This device is equipped with technical provisions to protect it against theft. Further information on protection against theft can be obtained from an authorized Mercedes-Benz Center.
Home screen overview

1 Depending on the display, calls up the first three applications or the home screen
2 Calls up the profile
3 Calls up the global search
4 SOS NOT READY (only when the Mercedes-Benz emergency call system is not available)
5 Mercedes me connect active

6 Transmission of vehicle position active
7 Signal strength of the mobile phone network, network display, battery status of the mobile phone connected, time
8 Calls up the Notifications Center
9 Calls up an application using the symbol
10 Application and current information
11 Quick-access, e.g. enter home address
12 Index points and selected display area
13 Calls up the air conditioning menu
14 Calls up SUGGESTIONS, THEMES and FAVORITES
If Mercedes me connect is active, the vehicle is linked with Mercedes me connect. Vehicle data is then transmitted to the backend system. What data is transmitted depends on which services are activated. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

If transmission of vehicle position is active, Mercedes me connect services have been activated for this vehicle which access the vehicle’s geoposition. In which instances the geoposition is transmitted depends on the particular services. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

Operating the MBUX multimedia system

Using Touch Control

1. Shows the home screen
2. Touch Control
   - swipe in the direction of the arrow (navigate)
   - Press (confirm)
3. Returns to the previous display
4. Makes or accepts a call
   - Rejects or ends a call
5. Increase volume: swipe upwards
   Reduce volume: swipe down

Switch off the sound: press
Starts the Voice Control System
Calls up favourites (press briefly) or adds favourites and themes (press and hold)

For optimum operation of Touch Control, use the tip of your thumb if possible.

Navigation through the menus is carried out with Touch Control with single-finger swipes.

- To select a menu option: swipe and press.
- To move the digital map: swipe in any direction.

Using the touchscreen

- Select menu options, symbols or characters by pressing briefly.
- To navigate in menus: swipe up, down, left or right.
- To use handwriting to enter characters: write the character with one finger on the touchscreen.
- To zoom in and out of the map: move two fingers together or apart.
To call up the global menu: press and hold on the touchscreen until the OPTIONS menu appears.

Using the touchpad

1. Returns to the previous display
2. Calls up the audio control menu
3. Calls up the home screen
4. Touchpad

To select a menu option: swipe and press.
To use handwriting recognition: write a character on the touchpad.
To open or close the Notifications Center: swipe down or up with two fingers.
To zoom in and out of the map: move two fingers together or apart.

Calling up applications using buttons

1. button calls up the telephone
2. button calls up navigation
3. button calls up radio or media
4. button calls up vehicle functions
5. button
   - Press briefly: calls up favourites
   - Press and hold: adds a favourite or creates a new theme
   - Alternatively, tap on the touchscreen.
   - Call up the application (→ page 245).

Functions of the Voice Control System

With the Voice Control System, various applications in the MBUX multimedia system are operable using voice input. The Voice Control System is operational approximately thirty seconds after the ignition is switched on and is available for the driver’s seat and front passenger seat.

The following multimedia system applications can be operated:
- Navigation
- Telephone
- Radio and TV
- Media player
- Messages
Starting the Voice Control System

- Press 1.
- or
- Say "Hello Mercedes".

Overview of the MBUX Interior Assistant

**WARNING Risk of injury from the camera's laser radiation**

This product uses a classification 1 laser system. If the housing is opened or damaged, laser radiation may damage your retina.
- Do not open the housing.
- Always have maintenance work and repairs carried out by a qualified specialist workshop.

This product complies with the requirements of the FDA 21 CFR 1040.10 and 1040.11 with exception of the variations according to the FDA Laser Notice No. 50 from 24. June 2007.

The camera is located in the overhead control panel.

If the vehicle is equipped with the MBUX Interior Assistant, selected functions of the multimedia system can be operated contact-free. The MBUX Interior Assistant can differentiate between driver and front passenger interactions and detects specific hand positions (poses).

System limits, display messages and notes for rectification

The system may be impaired or may not function in the following situations:

- The camera in the overhead control panel may heat up due to operating conditions. As a result the camera may switch off temporarily, particularly during longer periods of operation and at high outside temperatures. Do not touch or cover the camera and wait until the camera has cooled down and is available again.
- The camera is covered or dirty, fogged up or scratched. Wait until the camera has cooled down before cleaning the camera lens.
  Clean the outside of the camera lens with a dry or damp cotton cloth. Do not use microfiber cloths. Do not remove the cover when cleaning.
- Recognition can be impaired by reflective clothing, an adverse color of clothing or by accessories, for example.
• Clothing being worn (hat, shawl, scarf) may be limiting the detection area of the camera.  
• Keep the camera's field of vision clear.  
• The camera is not operational.  
Consult an authorized Mercedes-Benz Center.

The MBUX Interior Assistant supports the following interactions:

<table>
<thead>
<tr>
<th>Interaction area</th>
<th>Interaction</th>
<th>Description</th>
</tr>
</thead>
</table>
| In front of the media display or above the touchpad | Proximity to the control element                 | The Interior Assistant recognizes the approach of the hand towards a control element.  
Depending on the active application, the display will be adjusted in the media display. Some functions differentiate between driver and front passenger.  
No specific hand position is required. |
| Above the center console                  | Defined poses                                   | With defined poses a function is triggered depending on the application active.                                                            |
| Below the inside rearview mirror          | Brief up and down movements                     | With brief vertical up and down movements below the inside rearview mirror the reading light for the driver or the front passenger is switched on and off. |
| Above the front passenger seat            | Stretching out a hand above the front passenger seat | By stretching out a hand above the front passenger seat the search light is switched on. If you withdraw a hand from this area, the search light is switched off again. |
Switching the reading light and search light and on or off

Requirements:

- **For the reading light:** the function is available when it is dark.
- The hand movement takes place in the interaction area below the inside rearview mirror.
- **For the search light:** the function is available when it is dark.
- The hand movement takes place in the interaction area above the front passenger seat.
- The seat belt on the front passenger seat must not be inserted in the seat belt buckle.

Switching the reading light on and off

Briefly move a hand up or down beneath the inside rearview mirror. The reading light is switched on or off for the driver or the front passenger.

Switching the search light on and off

- **To switch on:** reach across the front passenger seat with a hand. The search light is switched on for the driver.
- **To switch off:** take a hand back away from the front passenger seat. The search light is switched off again.

Information on profiles, themes, suggestions and favourites

For electrically adjustable seats observe the following notes.
WARNING Risk of becoming trapped during adjustment of the driver's seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver's seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

➤ Make sure that when the position of driver's seat is being adjusted using the multimedia system, no people or body parts are in the seat's range of movement.

If there is a risk of someone becoming trapped, stop the adjustment process immediately:

➤ a) Tap the warning message on the media display.

or

➤ b) Press a memory position button or a seat adjustment switch on the driver's door. The adjustment process will be stopped.

The driver's seat is equipped with an access preventer.

If the driver's door is open, the driver's seat will **not** be set after calling up the driver's profile.

Profiles store your vehicle settings and settings for the multimedia system. If the vehicle is used by several drivers, the driver can select their own profile without changing the stored profile settings of other drivers.

Information on profiles from Mercedes me connect can be found in the Digital Operator's Manual.

Vehicle settings are, for example, driver's seat, steering wheel and mirror settings, climate control and ambient lighting. For the settings of the multimedia system, you can select, for example, radio stations, previous destinations as well as themes, suggestions and favourites.

For recurring driving situations, such as long drives on the freeway, you can save your preferred settings in a theme in the vehicle. In a theme you can save the display of the digital map, your preferred radio station and preferred drive program, for example.

The vehicle can learn the habits of the driver. It then offers suggestions for the most probable navigation destinations, media sources, radio stations or contacts. The pre-requirements for that are the selection of a profile, your consent to the recording of data and sufficient collected data.

Favourites provide quick access to applications that are used often. You can select favourites from categories or add them directly to an application.
Configuring profiles, themes and suggestions

Multimedia system:

Creating a new profile
- Select Create Profile.
- Select an avatar.
- Enter the name and confirm with OK.
- Select Continue.
- Select Current Settings.
- Select Save.
- Activate Bluetooth® and select Connect Phone, to connect a mobile phone with the user profile.
- Select Finish.

Selecting profile options
- Select for a profile.
  The following functions are available:
  - Editing, resetting or deleting a profile
  - Resetting themes or favorites

Configuring suggestions
- Select for a profile.
- Select Suggestion Settings.
- Switch Allow Destination Suggestions, Allow Music Suggestions and Allow Contact Suggestions on or off.
  **To deactivate the learning function for one day:** activate Deact. Learning for 24 h. For 24 hours no new actions will be trained and no data recorded for the active profile. Suggestions will continue to be shown.
Example: if the option is switched on and a route to a new destination has been calculated, this destination would not be taken into account for the learning function.

Creating new themes
- Select .
- Select THEMES.
- Select Create Theme.
  The settings which are saved in the theme are shown.

Select Continue.
- Select Audio and Navigation (Navigation) and store the active settings in the theme.
- Select Continue.
- Select an entry screen.
- Select Continue.
- Select an image.
- Enter the names into the entry field and confirm with OK.
- Select Save.

System settings

Overview of the system settings menu
In the system settings menu, you can make settings in the following menus and control elements:
- Display
  - Styles
  - Instrument lighting
  - Display brightness
- Edge lighting

  - Telephone
  - Voice amplification to the rear compartment

• Connectivity
  - Wi-Fi, Bluetooth®, NFC

• MBUX Remote Control
  - Authorizing and deauthorizing devices

• Time & date
• Language

• Units for distance
• Software updates
• Data import/export
• PIN protection
• System Reset

Information on important system updates

Important system updates may be necessary for the security of your multimedia system’s data. Install these updates, or else the security of your multimedia system cannot be ensured.

A system update consists of three steps:

- Downloading or copying of the data required for installation
- Installation of the downloaded system update
- Activation of the downloaded system update by restarting the system

If automatic software updates are activated, the system updates will be downloaded automatically.

The multimedia system provides a message when a system update is available.
You have the following selection options:

- Accept and Install
  The system update will be downloaded in the background.
- Information
  Information about the pending system update is displayed.
- Later
  The system update can be downloaded manually at a later time.

Deep system updates

Deep system updates access vehicle or system settings and can therefore only be carried out when the vehicle is stationary and the ignition is switched off.

If the download of a deep system update is completed and the downloaded system update is ready for installation, you will be informed of this after the next ignition cycle, for example.
Park the vehicle safely in a suitable location before starting the installation.

Requirements for the installation:
- The ignition is switched off.
- Notes and warnings have been read and accepted.
- The electric parking brake is applied.

If all requirements have been fulfilled, the downloaded system update is installed. The multimedia system cannot be operated while the downloaded system update is being installed and vehicle functions are restricted.

If errors should occur during the installation, the multimedia system automatically attempts to restore the previous version. If restoration of the previous version is not possible, a symbol appears on the media display. Consult a qualified specialist workshop to resolve the problem.

### Setting up a Wi-Fi hotspot

**Requirements:**
- To set up the Wi-Fi connection of the multimedia system with external hotspots: there is no communication module installed.
- The device to be connected supports at least one of the types of connection described.

Multimedia system:

- Settings
- System

**Activating/deactivating Wi-Fi**

- Select Wi-Fi.

**Connecting the multimedia system with an external hotspot using Wi-Fi**

The type of connection established must be selected on the multimedia system and on the device to be connected.

- The connection procedure may differ depending on the device. Follow the instructions that are shown in the display. Further information can be found in the manufacturer’s operating instructions.

- Select Internet Settings.
- Select Connect via Wi-Fi.
- Select Add Hotspot.

**Connecting using a security key**

- Select the options of the desired Wi-Fi network.
- Select Connect Using Security Key.
- Have the security key displayed on the device to be connected (see the manufacturer’s operating instructions).
- Enter this security key on the multimedia system.
- Confirm the entry with ok.

**Connecting using a WPS PIN**

- Select the options of the desired Wi-Fi network.
- Select Connect via WPS PIN Input.
- The multimedia system generates an eight-digit PIN.
- Enter this PIN on the device to be connected.
- Confirm the entry.
Connecting using a button

- Select the options of the desired Wi-Fi network.
- Select **Connect via WPS PBC**.
- Select *Connect via WPS PBC* in the options on the device to be connected (see the manufacturer’s operating instructions).
- Press the WPS button on the device to be connected.
- Select **Continue** in the multimedia system.

Activating automatic connection

- Select **Connect via Wi-Fi**.
- Select the options of the desired Wi-Fi network.
- Activate **Permanent Internet Connection**.

Connecting with a known Wi-Fi

- Select **Connect via Wi-Fi**.
- Select a Wi-Fi network.
- The connection is established again.

Configuring the multimedia system as a Wi-Fi hotspot for external devices

The type of connection established depends on the device to be connected. The function must be supported by the multimedia system and by the device to be connected. The type of connection established must be selected on the multimedia system and on the device to be connected.

- Select **Vehicle Hotspot**.
- Select **Connect Device to Vehicle Hotspot**.

Connecting using WPS PIN generation

- Select **Connect via WPS PIN Generation**.
- Enter the PIN shown in the media display on the device to be connected and confirm.

Connecting using WPS PIN entry

- Select **Connect via WPS PIN Input**.
- Enter the PIN that is shown on the external device's display on the multimedia system.

Connecting using a button

- Select **Connect via WPS PBC**.
- Press the push button on the device to be connected (see the manufacturer's operating instructions).
- Select **Continue**.

Connecting using a security key

- Select **Connect Device to Vehicle Hotspot**. A security key is displayed.
- Select the vehicle from the device to be connected. The vehicle is displayed with the **DIRECT-MBUX XXXXX** network name.
- Enter the security key which is shown in the media display on the device to be connected.
- Confirm the entry.

Connecting using NFC

- Select **Connect via NFC**.
- Activate NFC on the mobile device (see the manufacturer’s operating instructions).
- Hold the device to be connected at the vehicle’s NFC interface.
- Select **Finished**. The mobile device is now connected to the multimedia system hotspot via NFC.
Generating a new security key

- Select Vehicle Hotspot.
- Select Generate Security Key. A connection will be established with the newly created security key.
- To save a security key: select Save. When a new security key is saved, all existing Wi-Fi connections are then disconnected. If the Wi-Fi connections are being re-established, the new security key must be entered.

A connection will be established with the newly created security key.

To save a security key: select Save. When a new security key is saved, all existing Wi-Fi connections are then disconnected. If the Wi-Fi connections are being re-established, the new security key must be entered.

To show: tap on the touchscreen. The menu is hidden automatically.

Always keep an eye on the actual traffic situation.
Avoid extended observation of the camera image.

Navigation

Notes on navigation

Route guidance with augmented reality

- WARNING Risk of accident and injury due to imprecise positioning of additional information

The additional information from the augmented reality display is not a substitute for observing the actual driving situation.
Always keep an eye on the actual traffic situation when carrying out all driving maneuvers.

Switching navigation on

Multimedia system:

Alternatively: press the button. The map shows the vehicle’s current position. The navigation menu is shown.
Navigation overview

1. To enter a POI or address and additional destination entry options
2. To cancel active route guidance
3. To repeat a navigation announcement and switch navigation announcements on or off

ON THE WAY menu with Route Overview, Alternative Routes and Report Traffic Incident (Car-to-X)
TRAFFIC menu with Traffic Announcements, Area Alerts and Live Traffic Subscription Info
To display Route List

POSITION menu with Save Position and Compass
Quick access for Traffic, Parking and Highway Information as well as options for View, Announcements and Route via Advanced
**Entering a destination**

Multimedia system:

1. The federal state or province in which the vehicle is located
2. Entering a POI or address
3. List with additional destination entry options
4. Deletes an entry
5. Confirms an entry
6. Switches to handwriting recognition
7. Enters a space
8. Switches to voice input
9. Sets the written language
10. Switches to digits, special characters and symbols
11. Switches to upper-case or lower-case letters

- **Navigation**
- **Where to?**

PREV. DESTINATIONS >
FAVOURITES >
RECEIVED DESTINATIONS >
POIS >

Filling station
Parking
Restaurant

MBUX multimedia system
Enter the destination in 2. The entries can be made in any order.
The following entries can be made, for example:
- City, street, house number
- Street, city
- ZIP code
- POI name or POI category, e.g. Parking
- Contact name

Select a search result in list 3.
Calculate the route (→ page 259).

You can find further information about destination entry, e.g. 3 word addresses, in the Digital Operator's Manual.

Changing country
Select the indicator for federal state or province 1.
Select the federal state or the province in 1.
Enter the country indicator.
Select the country on list 3.

Select the federal state or the province from list 3.

Using online search
Destination entry uses online map services. If the on-board search finds no suitable destinations or if you change countries, the online search is available.

For the destination you can enter an address, a POI or a 3 word address.
Select country indicator 1.
Select the provider for the online service from the countries list.

or
If the on-board search delivers no results, enter the destination in input line 2.
Select the destination in the list.
The detailed view for the route is displayed.

Calculating a route and using settings for route guidance

Requirements:
- The destination has been entered.

The destination address is shown.

Multimedia system:

→ MBUX multimediasystem

No route yet.
A route has been mapped.

The route to the destination is calculated. Route guidance begins.

or
Select the destination in the list.
The detailed view for the route is displayed.
Select Set as Waypoint.
The destination address is set as the next intermediate destination.

or

Select Start New Route Guidance.
The destination address is set as the new destination. The previous destination and the intermediate destinations are deleted. Route guidance to the new destination begins.

Selecting route settings

Select [ ].
Select Advanced.
Select Route.
Select the route type.
Take traffic information into consideration with Dynamic Route Guidance [ ].
Select route options with Avoid Options.
Activate Suggest Alternative Route.
Alternative routes are calculated for every route.

Activate Activate Commuter Route.
If the requirements are met, the multimedia system automatically detects that the vehicle is on a commuter route. Route guidance begins without voice output.

Activating route guidance with augmented reality

During route guidance, tap on the camera symbol on the media display.
The camera image will be shown instead of the navigation map before a turning maneuver and will show additional information.

To return to the navigation map: tap on the camera symbol again.

Displaying additional information in the camera image

Select [ ].
Select Advanced.
Select Augmented Reality.
Activate Street Names and House Numbers.
During route guidance, street names and house numbers are shown in the camera image.

Using map functions

Multimedia system:

Setting the map scale

To zoom in: tap twice quickly with one finger on the media display.
To zoom out: tap with two fingers on the media display.

Moving the map

Move one finger in any direction on the touchscreen.
To reset the map to the current vehicle position: press [ ] briefly.

Selecting map orientation

Tap repeatedly on the compass symbol on the map.
The view changes in the sequence 3D, 2D Heading Up to 2D North Up.

Switching freeway information on/off

Select [ ].
Switch **Highway Information** on or off.

### Using services

**Requirements:**
- There is an Internet connection.
- Mercedes me connect is available.
- You have set up a user account in the Mercedes me Portal.
- The vehicle is connected to a user account and you have accepted the conditions of use for the service.
- Further information can be found at: https://www.mercedes.me
- The service is available.
- The service has been activated at an authorized Mercedes-Benz Center.

**Multimedia system:**

- Navigation

### Displaying the traffic situation with Live Traffic Information

- Select **Z**.
- Activate **Traffic**.
- Select Advanced.
- Select View.
- Select **Map Elements**.
- Switch on **Traffic Incidents**, **Free Flowing Traffic** and **Delay**.
  If traffic information has been received, then traffic incidents such as roadworks, road blocks, local area reports (e.g. fog) and warning messages are displayed.
  The traffic delay is displayed for the current route. Traffic delays lasting one minute or longer are taken into consideration.

### Displaying hazard warnings with Car-to-X-Communication

If hazard warnings are available these can be shown as symbols on the map. The display depends on the settings for the **Traffic and Traffic Incidents** options.

- Set the options.
  - If **Traffic** is switched off and **Traffic Incidents** is switched on, the symbols are shown on the prospective route.

### Displaying weather information and other map contents

- Select **Z**.
- Select Advanced.
- Select View.
- Select **Map Elements**.
- Scroll up and show the **ONLINE MAP CONTENT** category.
- Switch on a service, e.g. **Weather**.
  Current weather information is displayed on the navigation map, e.g. temperature or cloud cover.
Telephone
Telephony

Notes on telephony

⚠️ **WARNING** Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

⚠️ **WARNING** Risk of an accident from operating mobile communication equipment while the vehicle is in motion

Mobile communications devices distract the driver from the traffic situation. This could also cause the driver to lose control of the vehicle.

- As the driver, only operate mobile communications devices when the vehicle is stationary.
- As a vehicle occupant, only use mobile communications devices in the areas intended for this purpose, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating mobile communication equipment in the vehicle.

⚠️ **WARNING** Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk/cargo compartment.
Observe the additional information on stowing mobile communications devices correctly:
- Loading the vehicle (→ page 108)

**Bluetooth® connection:**
The menu view and the available functions in the telephone menu are in part dependent on the Bluetooth® profile of the connected mobile phone. Full functionality is only available if the mobile phone supports both of the following Bluetooth® profiles:
- PBAP (Phone Book Access Profile)
  - The contacts on the mobile phone are shown automatically on the multimedia system.
- MAP (Message Access Profile)
  - The mobile phone message functions can be used on the multimedia system.

Irrespective of this, Bluetooth® audio functionality can be used with any mobile radio unit.
For information on the range of functions of the mobile radio unit to be connected, see the manufacturer's operating instructions.

**Network connection:**
The following cases can lead to the call being disconnected while the vehicle is in motion:
- You switch into a transmission/reception station, in which no communication channel is free.
- The SIM card used is not compatible with the network available
- A mobile phone with “Twincard” is logged into the network with the second SIM card at the same time

The multimedia system supports calls in HD Voice® for improved speech quality. A requirement for this is that the mobile phone and the mobile phone network provider of the person you are calling support HD Voice®.
Depending on the quality of the connection, the voice quality may fluctuate.
Further information can be obtained from an authorized Mercedes-Benz Center or at: https://www.mercedes-benz.com/connect
Telephone menu overview

1. Bluetooth® device name of the currently connected mobile phone/of the mobile phone
2. Bluetooth® device name of the currently connected mobile phone/of the mobile phone (two phone mode)
3. Battery status of the connected mobile phone
4. Signal strength of the mobile phone network
5. Options
6. Device manager
7. Messages
8. Numerical pad
9. Contact search

Telephony operating modes overview

Depending on your equipment, the following telephony operating modes are available:
- A mobile phone is connected to the multimedia system via Bluetooth®.
Two mobile phones are connected with the multimedia system via Bluetooth® (two phone mode).

- You can use all the functions of the multimedia system with the mobile phone in the foreground.
- You can receive incoming calls and messages with the mobile phone in the background.
- You can interchange the mobile phone in the foreground and background.

### Connecting a mobile phone

**Requirements:**

- Bluetooth® is activated on the mobile phone (see the manufacturer’s operating instructions).
- Bluetooth® is activated on the multimedia system.

### Searching for a mobile phone

- Select 📞.
- Select Connect New Device.

### Connecting a mobile phone

Authorization follows using secure simple pairing.

- Select a mobile phone.
- A code is displayed in the multimedia system and on the mobile phone.
- If both codes match, confirm the code on the mobile phone.

### Functions in the telephony menu

In the telephony menu you have the following functions, for example:

- Making calls, e.g.:
  - 📞 Accept a call
  - 📞 End Call
  - 📞 Create Confer. Call
- Accepting or rejecting a waiting call
- Managing contacts, e.g.:
  - Downloading mobile phone contacts
  - Managing the format of a contact’s name
  - Saving a contact as a favorite
- Receiving and sending messages, e.g.:
  - Using the read-aloud function
  - Dictating a new message

---

**Mercedes me and apps**

**Mercedes me connect**

**Information on Mercedes me connect**

Mercedes me connect consists of multiple services.

You can use the following services via the multimedia system and the overhead control panel, for example:

- Accident and Breakdown Management (me button or situation-dependent display in the multimedia system)
Mercedes-Benz emergency call system (automatic emergency call and SOS button)

The Mercedes me connect Accident and Breakdown Management and the Mercedes-Benz emergency call center are available to you around the clock.

The me button and the SOS button can be found on the vehicle’s overhead control panel (→ page 267).

You can also call the Mercedes-Benz Customer Center using the multimedia system (→ page 268).

Please note that Mercedes me connect is a Mercedes-Benz service. In emergencies, first call the national emergency services using the standard national emergency service telephone numbers. In emergencies, you can also use the Mercedes-Benz emergency call system (→ page 274).

Observe the conditions of use for Mercedes me connect and other services. These can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Further information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Information on Mercedes me connect Accident and Breakdown Management

The Accident and Breakdown Management can include the following functions:

- Supplement to the Mercedes-Benz emergency call system (→ page 274)
  If necessary, the contact person at the Mercedes-Benz emergency call center forwards the call to Mercedes me connect Accident and Breakdown Management. Forwarding the call is however not possible in all countries.

- Breakdown assistance by a technician on location and/or the towing away of the vehicle to the nearest authorized Mercedes-Benz Center
  You may be charged for these services.

- Addition to the emergency guide after automatic accident or breakdown detection (→ page 268)

In the event of a breakdown or accident, further vehicle data is sent which enables optimal support by the Mercedes-Benz Customer Center and the authorized service partner or breakdown assistance.

- Addition to the Mercedes me connect service Telediagnostics
  With the Telediagnostics function, specific wear and failure reports are recorded by the service provider, in so far as these can be clearly interpreted and are available through the monitoring of components that are subject to diagnostics.

If your vehicle detects a breakdown or threat of a breakdown, you may be prompted via the multimedia system to contact the Mercedes-Benz Customer Center for further help. This prompt in the multimedia system only appears when the vehicle is stationary.
These services are subject to technical restrictions such as the mobile phone coverage, mobile network quality and the ability of the processing systems to interpret the transferred data. In some circumstances, this can result in delays or the failure of the information to appear in the multimedia system.

More information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Data transferred during Mercedes me connect call services
The data transferred during a Mercedes me connect call depends on:
- The reason for initiation of the call
- The service that is selected in the voice control system
- The activated Mercedes me connect services

You can find out which data is transferred when using the services in the currently valid Mercedes me connect terms of use and the data protection information for Mercedes me connect. You can find these in your Mercedes me user account.

Mercedes me calls
Making a call via the overhead control panel

Making a Mercedes me call
- Press me button 1.
Making an emergency call

To open the cover of SOS button 2, press it briefly.

Press and hold SOS button 3 for at least one second.

If a Mercedes me call is active, an emergency call can still be triggered. This has priority over all other active calls.

Information about the Mercedes me call using the me button

A call to the Mercedes-Benz Customer Center has been initiated via the me button in the overhead control panel or the multimedia system (→ page 267).

Using the voice dialog system you access the desired service:

- Accident and Breakdown Management
- Mercedes-Benz Customer Center for general information about the vehicle

You can find information on the following topics:

- Activation of Mercedes me connect
- Operating the vehicle

- Nearest authorized Mercedes-Benz Center
- Other products and services from Mercedes-Benz

Data is transferred during the connection to the Mercedes-Benz Customer Center (→ page 269).

Calling the Mercedes-Benz Customer Center after automatic accident or breakdown detection

Requirements:

- The vehicle has detected an accident or breakdown situation.
- The vehicle is stationary.
- The hazard warning lights are switched on.

This function is not available in all countries. The vehicle can detect accident or breakdown situations under certain circumstances.

In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display.

After quitting the emergency guide display on the multimedia system, a prompt appears asking whether you would like to get support from the Mercedes-Benz Customer Center.
Select Call.
- After your agreement, or if the Mercedes me connect service "Accident and Breakdown Management" is active, the vehicle data is transferred automatically (→ page 266).
- The Mercedes-Benz Customer Center takes your call and organizes the breakdown and accident assistance.

You may be charged for these services.

Depending on the severity of the accident, an automatic emergency call can be initiated. This has priority over all other active calls.

In addition, if the Mercedes me connect service "Telediagnostics" is active, a similar prompt can appear after a delay in the event of a breakdown. If you are already in contact with the Mercedes-Benz Customer Center or have already received support, this prompt can be ignored or declined.

If you answer the prompt for support from the Mercedes-Benz Customer Center with Later, the message will be hidden and appear again later. The prompt triggered by the Mercedes me connect service "Telediagnostics", can either be confirmed or declined. After being declined, this will not be shown again.

**Arranging a service appointment via a Mercedes me call**
If you have activated the maintenance management service, relevant vehicle data is transferred automatically to the Mercedes-Benz Customer Center. You will then receive individual recommendations regarding the maintenance of your vehicle.

Regardless of whether you have consented to the maintenance management service, the multimedia system reminds you after a certain amount of time that a service is due. A prompt appears asking if you would like to make an appointment.

**To arrange a service appointment: select Call.**
After your agreement, the vehicle data is transferred and the Mercedes-Benz Customer Center takes your preferred appointment date. The information is then sent to your desired service outlet.
This will contact you to confirm the appointment and if necessary consult about the details.

If you select Later after the service message appears, the message is hidden and reappears at a later time.

**Transferred data during a Mercedes me call**
When you make a service call via Mercedes me, data is transmitted. This enables targeted advice and a smooth service.

The following requirements must be fulfilled for the transfer of the data:
- The ignition is switched on.
- The required data transfer technology is supported by the mobile phone network provider.
- The quality of the mobile connection is sufficient.
Multi-stage transfer depends on the following factors:
- Reason for the initiation of the call
- The available mobile phone transmission technology.
- The activated Mercedes me connect services.
- The service selected in the voice control system.

Data transfer if Mercedes me connect services are not activated
If no Mercedes me connect services are activated, the following data is transferred:
- Vehicle identification number
- Time of the call
- Reason for the initiation of the call
- Country indicator of the vehicle
- Set language for the multimedia system
- Telephone number of the communication platform installed in the vehicle

If a call is made for a service appointment via the service reminder, the following data is also transmitted:
- Current mileage and maintenance data

If a call is made after automatic accident or breakdown detection using the multimedia system, the following data is also transmitted:
- Current mileage and maintenance data
- Current vehicle location

If Accident and Breakdown Management is called via the voice control system, the following data can also be called up from the vehicle by the Mercedes-Benz Customer Center:
- Current vehicle location

Data transfer if Mercedes me connect services are activated
Only if the respective service is activated will additional incident-specific data be transmitted in the second stage to enable an optimal service.

An overview of the data transmitted can be found in the respective terms of use for Mercedes me connect services. These can be obtained in the Mercedes me portal: https://me.secure.mercedes-benz.com

Data processing
The data transmitted within the scope of the call is deleted from the processing system after the call is finished, insofar as this data is not being used for other activated Mercedes me connect services.

The incident-specific data is processed and stored in the Mercedes-Benz Customer Center and, if required to process the incident, forwarded to the service partner authorized by the Mercedes-Benz Customer Center. Please take note of the data protection information on the Mercedes me Internet page https://www.mercedes.me or in the recorded message immediately after calling the Mercedes-Benz Customer Center.

1 The recorded message is not available in every country.
Overview of the Mercedes me & Apps menu

When you log in with a user account to the Mercedes me Portal, then services and offers from Mercedes-Benz will be available to you.

For more information consult an authorized Mercedes-Benz Center or visit the Mercedes me portal: https://me.secure.mercedes-benz.com

Make sure you always keep the Mercedes me apps updated.

You can call up the menu using Mercedes me & Apps in the multimedia system.

In the Mercedes me & Apps menu, the following options can be available:
- Connecting the vehicle with the Mercedes me user account
- Deleting a connection between a Mercedes me user account and the vehicle
- Calling up the Mercedes me services
- Calling up apps such as, In-Car Office or the web browser depending on availability

Web browser overview

The web browser is started using the Mercedes me & Apps menu.
Overview of smartphone integration

With Smartphone Integration, you can use certain functions on your mobile phone via the multimedia system display.

Only one mobile phone at a time can be connected via Smartphone Integration to the multimedia system. Also for use with two phone mode with smartphone integration, only one additional mobile phone can be connected using Bluetooth® with the multimedia system.

The full range of functions for Smartphone Integration is only possible with an Internet connection. The appropriate application must be downloaded on the mobile phone to use Smartphone Integration. The mobile phone must be switched on and connected to a USB port with the symbol on the multimedia system using a suitable cable.
Apps for Smartphone Integration

- Mercedes-Benz Link (implementation of the function using the Mercedes-Benz Link control box)
- Apple CarPlay®
- Android Auto

You can start Smartphone Integration using the Mercedes me & Apps menu.

You can end Smartphone Integration by disconnecting the connecting cable between the mobile phone and multimedia system.

1. Mercedes-Benz recommends disconnecting the connecting cable only when the vehicle is stationary.

Overview of transferred vehicle data

When using Smartphone Integration, certain vehicle data is transferred to the mobile phone. This enables you to get the best out of selected mobile phone services. Vehicle data is not directly accessible.

The following system information is transmitted:

- Software release of the multimedia system
- System ID (anonymized)

The transfer of this data is used to alter how content is displayed to correspond to the driving situation.

The following position data is transmitted:

- Coordinates
- Speed
- Compass direction
- Acceleration direction

This data is used by the mobile phone to improve the accuracy of the navigation (e.g. for continuation in a tunnel).

Mercedes-Benz emergency call system

Information on the Mercedes-Benz emergency call system

Your vehicle is equipped with the Mercedes-Benz emergency call system ("eCall"). This feature can help save lives in the event of an accident. eCall in no way replaces assistance provided from dialing 911.

Mercedes-Benz eCall only functions in areas where mobile phone coverage is available from the wireless service providers. Insufficient network coverage from the wireless service providers may result in an emergency call not being transmitted.

eCall is a standard feature in your Mercedes-Benz vehicle. In order to function as intended, the system relies on the transmission of data detailed in the Transmitted Data section that follows (→ page 275).

To disable eCall, a customer must visit an authorized Mercedes-Benz Service department to deactivate the vehicle’s communication module.

Deactivation of this module prevents the activation of any and all Mercedes me connect services. After the deactivation of eCall, automatic emergency call and manual emergency call will not be available.

The ignition must be switched on before an automatic emergency call can be made.

1. eCall is activated at the factory.
eCall can be deactivated by an authorized Mercedes-Benz dealer. Please note that in the event ownership of the vehicle is transferred to another owner in its deactivated state, eCall will remain deactivated unless the new owner visits an authorized Mercedes-Benz dealership to reactivate the system.

Overview of the Mercedes-Benz emergency call system

eCall can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. It helps locate an accident site in places that are difficult to access. However, even if a vehicle is equipped with eCall, this does not mean the system is ON. As such, eCall does not replace dialing 911 in the event of an accident.

An emergency call can be made automatically (→ page 274) or manually (→ page 275) Only make emergency calls if you or others are in need of rescue.

Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

Messages on the display
SOS NOT READY: the ignition is not on or eCall not available.
During an active emergency call, 
\[
\text{SOS}
\]
appears in the display.
You can find more information on the regional availability of eCall at: https://www.mercedes-benz-mobile.com/extra/ecall/

If there is a malfunction in the Mercedes-Benz emergency call system (e.g. a fault with the speaker, microphone, airbag, SOS button), a corresponding message appears in the multifunction display of the instrument cluster.

Triggering an automatic Mercedes-Benz emergency call

Requirements:
- The ignition is switched on.
- The starter battery is sufficiently charged.

The Mercedes-Benz emergency call system triggers an emergency call automatically in the following cases:
- After activation of the restraint systems such as airbags or Emergency Tensioning Devices after an accident
- After an automatically initiated emergency stop by Active Emergency Stop Assist

The emergency call has been made:
- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.

The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.

The SOS button in the overhead control panel flashes until the emergency call is finished.
It is not possible to immediately end an automatic emergency call.
If no connection can be made to the emergency services either, a corresponding message appears in the media display.

- Dial the local emergency number on your mobile phone.

If an emergency call has been initiated:

- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call center operator.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.
- If no vehicle occupant answers, an ambulance is sent to the vehicle immediately.

**Triggering a manual Mercedes-Benz emergency call**

- **To use the SOS button in the overhead control panel**: press and hold the SOS button for at least one second (→ page 267).
- **To use voice control**: use the Voice Control System voice commands.

The emergency call has been made:

- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center. The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.
- Remain in the vehicle if the road and traffic conditions permit you to do so until a voice connection is established with the emergency call center operator.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

- Dial the local emergency number on your mobile phone.

**Ending an unintentionally triggered manual Mercedes-Benz emergency call**

- **Select** on the multifunction steering wheel. Depress the button for several seconds.

**Data transfer of the Mercedes-Benz emergency call system**

In the event of an automatic or manual emergency call the following data is transmitted, for example:

- Vehicle's GPS position data
- GPS position data on the route (a few hundred meters) before the incident
- Direction of travel
- Vehicle identification number
- Vehicle drive type
- Number of people determined to be in the vehicle
- Whether Mercedes me connect is available or not
Whether the emergency call was initiated manually or automatically
Time of the accident
Language setting on the multimedia system

Data transmitted is vehicle information. For any questions about the collection, use and sharing of the eCall system data, please contact MBU-SA’s Customer Assistance Center at 800-FORMERC.

For Canada, please contact MBC’s Customer Assistance Center at 1-800-387-0100.

Customer requests for covered information should be submitted via the same channels.

For accident clarification purposes, the following measures can be taken up to an hour after the emergency call has been initiated:

- The current vehicle position can be determined.
- A voice connection to the vehicle occupants can be established.
### Overview of the symbols and functions in the media menu

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Designation</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>🎧</td>
<td>Play</td>
<td>Select to start or continue playback.</td>
</tr>
<tr>
<td>⏯️</td>
<td>Rest</td>
<td>Select to pause the playback.</td>
</tr>
</tbody>
</table>
| 📻 | Repeat a track | Select to repeat the current track or the active playlist.  
  - Select once: the active playlist is repeated.  
  - Select twice: the current track is repeated.  
  - Select three times: the function is deactivated. |
|_shuffle | Random playback | Select to play back the tracks in random order. |
| ↪/↤ | Skip forwards/back | Select to skip to the next or to the previous track. |
| 🟪 | Options | Select to show additional options. |
| 📚 | Categories | Select to show or search through available categories (e.g. playback lists, albums, artists, etc.). |
|🔎 | Search | Select to search in the active menu. You can search for artists, genres or moods, for example. |
Symbol Designation Function

- Settings Select to make settings.
- Home Select to return to the home screen.
- Messaging Select to call up messaging.
- Full screen Select to switch to full screen mode.

The following functions and settings are available in the media menu:
- Connecting external data storage media with the multimedia system (e.g. using USB or Bluetooth®)
- Playing back audio or video files

**Authorizing a Bluetooth® audio device for media playback**

Requirements:
- Bluetooth® is activated on the multimedia system and audio equipment.
- The audio equipment supports the Bluetooth® audio profiles A2DP and AVRCP.
- The audio equipment is "visible" for other devices.

Multimedia system:

With Bluetooth® audio, you can play back music files from an external data storage medium, e.g. your smartphone, using the MBUX multimedia system.

> To play back audio files using the multimedia system, authorize the external data storage medium on the MBUX multimedia system.

**Authorizing a new Bluetooth® audio device**

1. Select Connect New Device.
2. Select an audio device. Authorization starts. A code is displayed on the multimedia system and on the mobile phone.
3. If the codes are identical, confirm on the audio equipment.
4. Select Only as Bluetooth Audio Device. The Bluetooth® audio equipment is connected with the multimedia system.
Connecting previously authorized Bluetooth® audio equipment

Select a Bluetooth® audio device from the list.
The connection is being established.

Overview of the symbols and functions in the radio menu

<table>
<thead>

**Additional functions of the satellite radio**

SIRIUS XM® satellite radio offers more than 175 digital-quality radio channels providing 100% commercial-free music, sports, news and entertainment, for example. SIRIUS XM® satellite radio employs a fleet of high-performance satellites to broadcast around the clock throughout the USA and Canada. The satellite radio program is available for a monthly fee. Information about this can be obtained from a Sirius XM® Service Center and at https://www.siriusxm.com (USA) or https://www.siriusxm.ca (Canada).

ℹ️ Sirius, XM and all related marks and logos are trademarks of Sirius XM Radio Inc. and its subsidiaries. All other marks, channel names and logos are the property of their respective owners. All rights reserved.
### Symbol Designation Function

</tbody>
</table>

Depending on the frequency band selected, different functions are available to you. Select the desired frequency band in the radio menu head runner. 

#### Calling up TuneIn Radio

**Requirements:**
The TuneIn Radio service is activated in the Mercedes me Portal.

The data volume is available. Depending on the country, data volume may need to be purchased.

A fast Internet connection for data transmission free of interference.

Data volume can be purchased directly from a mobile phone network provider via the Mercedes me Portal.

The functions and services are country-dependent. For more information, consult an authorized Mercedes-Benz Center.

Multimedia system:

The connection quality depends on the local mobile phone reception.

Setting up satellite radio

Requirements:

- Satellite radio equipment is available.
- Registration with a satellite radio provider has been completed.
- If registration is not included when purchasing the system, your credit card details will be required to activate your account.

Multimedia system:

Establish a telephone connection.
Follow the service staff's instructions.
The activation process may take up to ten minutes.
You can also have the satellite service activated online. To do so, please visit https://www.siriusxm.com (USA) or https://www.siriusxm.ca (Canada).

Music and sport alerts

Multimedia system:

Setting music and sport alerts

This function enables you to program an alert for your favorite artists, tracks or sporting events. Music alerts can be saved whilst a track is being played and sport alerts can be saved during a live game. You can also specify sport alerts via the menu option. The system then continuously searches through all the channels.

Set a music or sports alert, to be informed of matches in the Live program.

Activating the music information function

Set Music Alerts.

Setting a music alert

Select Add Alert.
Select Artists or Song in the dialog window. The alert is set for the current artist or track. If a match is found, a prompt appears asking whether you wish to change to the station.

Activating sports information
- Activate Activate Sports Alerts.

Setting a sport alert
- Select Add Alert.
- Select the team name or league in the dialog window.

Deleting individual sports and music alerts
- Select Manage Music Alerts.
- Select Manage Sports Alerts.
- Select Delete Selected Entries.
  All highlighted alerts are deleted.
- Select Delete All Entries.
  All alerts are deleted.

Deleting all sports and music alerts
- Select Manage Music Alerts.
- Select Manage Sports Alerts.

Sound settings
Overview of functions in the sound menu
The setting options and functions available depend on the sound system installed. You can find out which sound system is installed in your vehicle in the Digital Operator's Manual.

Standard sound system and Advanced sound system
The following functions are available:
- Equalizer:
  - Treble, mid-range and bass
- Balance and fader
- Volume:
  - Automatic adjustment

Burmester® surround sound system and Burmester® high-end 3D surround sound system
The following functions are available:
- Equalizer:
  - Treble, mid-range and bass
- Balance and fader
- Sound focus
- VIP seat (Burmester® high-end 3D surround sound system only)
- Sound profiles
- Volume:
  - Automatic adjustment
ASSYST PLUS service interval display

Function of the ASSYST PLUS service interval display

The ASSYST PLUS service interval display on the Instrument Display provides information on the remaining time or distance before the next service due date. You can hide this service display using the back button on the left-hand side of the steering wheel. Depending on how the vehicle is used, the ASSYST PLUS service interval display may shorten the service interval, e.g. in the following cases:

- Mainly short-distance driving
- When the engine is often left idling for long periods
- In the event of frequent cold start phases

Mercedes-Benz recommends avoiding such operating conditions. You can obtain information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Displaying the service due date

On-board computer:

- Service ➤ ASSYST PLUS

The next service due date is displayed. To exit the display: press the back button on the left-hand side of the steering wheel.

Bear in mind the following related topic:

- Operating the on-board computer (→ page 239).

Information on regular maintenance work

- NOTE Premature wear through failure to observe service due dates

Maintenance work which is not carried out at the right time or incompletely can lead to increased wear and damage to the vehicle.

Special service requirements

The prescribed service interval is based on normal operation of the vehicle. Maintenance work will need to be performed more often if the vehicle is operated under arduous conditions or increased loads.

- Adhere to the prescribed service intervals.
- Always have the prescribed maintenance work carried out at a qualified specialist workshop.

Examples of arduous operating conditions:

- regular city driving with frequent intermediate stops
- mainly short-distance driving
- frequent operation in mountainous terrain or on poor road surfaces
- when the engine is often left idling for long periods
- operation in particularly dusty conditions and/or if air-recirculation mode is frequently used

In these or similar operating conditions, have the interior air filter, engine air cleaner, engine oil and oil filter etc. changed more frequently. The tires must be checked more frequently if the vehicle is operated under increased loads. Further information can be obtained at a qualified specialist workshop.

**Battery disconnection periods**

The ASSYST PLUS service interval display can only calculate the service due date when the battery is connected.

Note down the service due date displayed on the instrument display before disconnecting the battery (→ page 285).

**Engine compartment**

**Active hood (pedestrian protection)**

**Operation of the active hood (pedestrian protection)**
In certain accident situations, the actuation of the active hood reduces the risk of injury to pedestrians. The rear area of the hood is raised by approximately 3 in (85 mm).

For the drive to the workshop, reset the actuated active hood yourself (→ page 286).

After the active hood has been actuated, pedestrian protection may be limited.

Have the full functionality of the active hood restored in a qualified specialist workshop.

**Resetting the active hood**

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

**WARNING** Risk of burns from hot component parts in the engine compartment

- Allow the engine to cool down and only touch component parts described in the following.

- With your hand flat, push down active hood in the area around the hinges on both sides (arrows).
  In doing so, the actuator is depressurized and you may hear a hissing sound.
  The engine hood must engage in position.

- If the active hood can be raised slightly at the rear in the area of the hinges, repeat the step until it engages correctly.
Opening and closing the hood

**WARNING** Risk of accident due to driving with the hood unlocked

The hood may open and block your view.
- Never release the hood when driving.
- Before every trip, ensure that the hood is locked.

**WARNING** Risk of accident and injury when opening and closing the hood

The hood may suddenly drop into the end position.
There is a risk of injury for anyone in the hood's range of movement.
- Open or close the hood only when there is nobody in the hood's range of movement.

**WARNING** Danger of burns when opening the hood

If you open the hood when the engine has overheated or during a fire in the engine compartment, you could come into contact with hot gases or other escaping operating fluids.
- Before opening the hood, allow the engine to cool down.
- In the event of a fire in the engine compartment, keep the hood closed and call the fire service.

**WARNING** Risk of injury due to moving parts

Components in the engine compartment may continue running or start up suddenly, even if the ignition is switched off.
Make sure of the following before performing tasks in the engine compartment:
- Switch the ignition off.

**WARNING** Risk of injury from touching components under voltage

The ignition system and the fuel injection system work under high voltage. You could receive an electric shock.
- Never touch components of the ignition system or the fuel injection system when the ignition is switched on.

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
Allow the engine to cool down and only touch component parts described in the following.

**WARNING** Risk of injury from using the windshield wipers while the engine hood is open

When the engine hood is open and the windshield wipers are set in motion, you can be trapped by the wiper linkage.

Always switch off the windshield wipers and ignition before opening the engine hood.

---

**Opening the hood**

To release the hood, pull on handle 1.

**Closing the hood**

- Push handle 1 of the hood catch upwards and lift the hood by approximately 15 in (40 cm).

- Lower the hood to a height of around 8 in (20 cm) and then allow it to fall, applying a little force as you let it go.
If the hood can still be lifted slightly, open the hood again and close it with a little more force until it engages correctly.

**Engine oil**

**Checking the engine oil level using the oil dipstick**

![Image of an oil dipstick]

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

- Allow the engine to cool down and only touch component parts described in the following.

**Requirements:**
- The engine has an oil dipstick. If not, the engine oil level can be checked only with the on-board computer (→ page 289).

Depending on the engine, the oil dipstick may be installed in the engine compartment in different locations.

The waiting time before checking the oil level when the engine is at normal operating temperature is five minutes.

- Slowly slide oil dipstick 1 into the guide tube to the stop, and pull it out again after approximately three seconds.
  - Oil level is correct: oil level is between 2 and 3.
  - Oil level too low: oil level is at 3 or below.
  - Oil level too high: oil level is above 2.

- If the oil level is too low, add 1.1 US qt (1 liter) of engine oil.
- If the oil level is too high, drain off excess engine oil. Consult a qualified specialist workshop.

**Checking the engine oil level using the on-board computer**

**Requirements:**
- The engine has been warmed up.
- The vehicle is parked on a level surface.
- The engine is running at idle speed.

The engine oil level is determined during driving. Determining the engine oil level can take up to
30 minutes with a normal driving style and even longer with an active driving style.

On-board computer:

- **Service** ➔ **Engine Oil Level**

You will see one of the following messages on the multifunction display:

- **Measuring Engine Oil Level...**: measurement of the oil level is not yet possible.
- **Engine Oil Level OK** and the bar display for indicating the oil level on the multifunction display is green and is between "min" and "max": the oil level is correct.
- **Engine Oil Level Add 1,1 qts.** and the bar display for indicating the oil level on the multifunction display is orange and is below "min":
  - Add 1.1 US qt (1 l) of engine oil.
- **Reduce Engine Oil Level** and the bar display for indicating the oil level on the multifunction display is orange and is above "max":
  - Drain off any excess engine oil that has been added. To do so, consult a qualified specialist workshop.
  - **For Engine Oil Level Switch Ignition On**
  - Switch on the ignition to check the engine oil level.
  - **Engine Oil Level System Inoperative**: The oil level sensor is defective or not connected.
  - Consult a qualified specialist workshop.
  - **Engine Oil Level System Currently Unavail.**
  - Close the hood.

### Refilling engine oil

- **WARNING Risk of burns from hot component parts in the engine compartment**
  
  Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

  - Allow the engine to cool down and only touch component parts described in the following.

- **WARNING Risk of fire and injury from engine oil**
  
  If engine oil comes into contact with hot component parts in the engine compartment, it may ignite.

  - Make sure that no engine oil is spilled next to the filler opening.
  - Allow the engine to cool off and thoroughly clean the engine oil from component parts before starting the vehicle.

- **NOTE Engine damage caused by an incorrect oil filter, incorrect oil or additives**

  - Do not use engine oils or oil filters which do not correspond to the specifications explicitly prescribed for the service intervals.

  - Follow the instructions on the service interval display for changing the engine oil and observe the prescribed change intervals.

* **NOTE** Enginedamagecausedbyan
correctoilfilter,incorrectoiloradditives

**WARNING** Risk of fire and injury from engine oil

If engine oil comes into contact with hot component parts in the engine compartment, it may ignite.

- Make sure that no engine oil is spilled next to the filler opening.
- Allow the engine to cool off and thoroughly clean the engine oil from component parts before starting the vehicle.

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

- Allow the engine to cool down and only touch component parts described in the following.

**NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives

- Do not use engine oils or oil filters which do not correspond to the specifications explicitly prescribed for the service intervals.
- Follow the instructions on the service interval display for changing the engine oil and observe the prescribed change intervals.
Do not use additives.

**NOTE** Damage caused by refilling too much engine oil

Too much engine oil can damage the engine or the catalytic converter.

Have excess engine oil removed at a qualified specialist workshop.

Depending on driving style, the vehicle consumes up to 0.9 US qt (0.8 l) of oil per 600 miles (1000 km). The oil consumption may be higher than this when the vehicle is new or if you frequently drive at high engine speeds.

- Turn cap 1 counter-clockwise and remove it.
- Add engine oil.
- Replace cap 1 and turn it clockwise until it engages.
- Check the oil level again (→ page 289).

---

**Checking the coolant level**

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

- Allow the engine to cool down and only touch component parts described in the following.

**WARNING** Risk of scalding from hot coolant

If you open the cap, you could be scalded.

- Let the motor cool down before opening the cap.
- When opening the cap, wear protective gloves and safety glasses.
- Open the cap slowly to release pressure.
Park the vehicle on a level surface.

Check the coolant temperature display in the instrument cluster. The coolant temperature must be in the bottom quarter of the temperature display.

Slowly turn cap 1 counter-clockwise to release overpressure.

► Continue turning cap 1 counter-clockwise and remove it.

The coolant level is correct in the following cases:
- If the engine is cold, the coolant is up to marker bar 2.
- If the engine is warm, the coolant is up to 0.6 in (1.5 cm) over marker bar 2.

► If necessary, add coolant that has been approved for Mercedes-Benz.

Further information on coolant (→ page 360)

Refilling the windshield washer system

► Allow the engine to cool down and only touch component parts described in the following.

**WARNING** - Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.

► Make sure that no windshield washer concentrate spills out next to the filler opening.

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
Cleaning and care

Notes on washing the vehicle in a car wash

WARNING Risk of accident due to reduced braking effect after washing the vehicle

The braking effect is reduced after washing the vehicle.

- After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until the braking effect has been fully restored.

NOTE Damage from automatic braking

If one of the following functions is switched on, the vehicle brakes automatically in certain situations:
- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:
- During towing
- In a car wash

NOTE Damage due to unsuitable car wash

- Before driving into a car wash make sure that the car wash is suitable for the vehicle dimensions.
- Ensure there is sufficient ground clearance between the underbody and the guide rails of the car wash.
- Ensure that the clearance width of the car wash, in particular the width of the guide rails, is sufficient.

To avoid damage to your vehicle when using a car wash, ensure the following beforehand:
- Active Distance Assist DISTRONIC is deactivated.
- The HOLD function is switched off.

Removing cap 1 by the tab.

Add washer fluid.

Keeping the air-water duct free

- Keep the area between the hood and the windshield free of deposits, e.g. ice, snow and leaves.
Notes on using a power washer

**WARNING** Risk of an accident when using power washers with round-spray nozzles

The water jet can cause externally invisible damage. Components damaged in this way may unexpectedly fail.

- Do not use a power washer with round-spray nozzles.
- Have damaged tires or chassis parts replaced immediately.

To avoid damage to your vehicle, observe the following when using a power washer:

- The SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle. Otherwise, the tailgate could open unintentionally.
- Maintain a distance of at least 11.8 in (30 cm) to the vehicle.
- **Vehicles with decorative foil:** parts of your vehicle are covered with a decorative foil.

Maintain a distance of at least 27.6 in (70 cm) between the foil-covered parts of the vehicle and the nozzle of the power washer. Move the power washer nozzle around whilst cleaning. The water temperature of the power washer must not exceed 140°F (60°C).

- Observe the information on the correct distance in the implement manufacturer’s operating instructions.
- Do not direct the nozzle of the power washer directly at sensitive parts, e.g. tires, gaps, electrical components, batteries, light sources and ventilation slits.

Washing the vehicle by hand

**NOTE** Engine damage due to water ingress

- Take care not to point the water jet directly towards the air inlet grille below the hood.
Observe the legal requirements, e.g. in a number of countries, washing by hand is only permitted in specially designated wash bays.

- Use a mild cleaning agent, e.g. car shampoo.
- Wash the vehicle with lukewarm water using a soft car sponge. When doing so, do not expose the vehicle to direct sunlight.
- Carefully hose the vehicle off with water and dry using a chamois.

Observe the notes on the care of vehicle parts (→ page 296).

**Notes on paintwork/matte finish paintwork care**

Observe the notes on cleaning and care to avoid damaging the paintwork.

**Paint**
- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- Tree resin, oils, fuels and greases: remove by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Coolant and brake fluid: remove with a damp cloth and clean water.
- Tar stains: use tar remover.
- Wax: use silicone remover.
- Do not attach stickers, films or similar materials.
- Remove dirt immediately, where possible.

**Matte finish**
- Only use care products approved for Mercedes-Benz.
- Do not polish the vehicle and alloy wheels.
- Only use car washes that correspond to the latest engineering standards.
- Do not use car wash programs with a final hot wax treatment.
- Do not use paint cleaners, buffing or polishing products, gloss preservers, e.g. wax.
- Always have paintwork repairs carried out at a qualified specialist workshop.

Notes on cleaning decorative foils

Observe the notes on matte finish care in the chapter "Notes on paintwork/matte finish paintwork care" (→ page 295). They also apply to matte decorative foils.

Observe the notes on cleaning decorative foils to avoid vehicle damage.

**Cleaning**
- For cleaning, use plenty of water and a mild cleaning agent without additives or abrasive substances, e.g. a car shampoo approved for Mercedes-Benz.
- Remove dirt immediately, where possible, whilst avoiding rubbing too hard. There is otherwise a risk of damaging the decorative foil irreparably.
- If there is dirt on the finish or if the decorative foil is dull: use the Paint Cleaner recommended and approved for Mercedes-Benz.
- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
To prevent water stains, dry a foil-wrapped vehicle with a soft, absorbent cloth after every car wash.

Avoiding damage to the decorative foil
- The service life and color of decorative foils are impaired by:
  - Sunlight
  - Temperature, e.g. hot air blower
  - Weather conditions
  - Stone chippings and dirt
  - Chemical cleaning agents
  - Oily products
- Do not use polish on matte decorative foil. Polishing will have the effect of shining the foil-wrapped surface.
- Do not treat matte or structured decorative foils with wax. Permanent stains may occur.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by incorrect care cannot always be completely repaired. In such cases, visit a qualified specialist workshop.

You can obtain more information on care and cleaning products from the manufacturer. In the case of foil-wrapped surfaces, optical differences may occur between the surfaces that were not protected by a decorative foil after removing a decorative foil.

Have work or repairs to decorative foils carried out at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

**Notes on care of vehicle parts**

**WARNING** Risk of entrapment if the windshield wipers are switched on while the windshield is being cleaned

If the windshield wipers are set in motion while you are cleaning the windshield or wiper blades, you can be trapped by the wiper arm.

Always switch off the windshield wipers and the ignition before cleaning the windshield or wiper blades.

**WARNING** Risk of burns from the tailpipe and tailpipe trims

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.
- Allow vehicle parts to cool down before touching them.

To avoid damage to the vehicle, observe the notes on cleaning and care of the following vehicle parts:

**Wheels and rims**
- Use water and acid-free alloy wheel cleaners.
- Do not use acidic alloy wheel cleaners to remove brake dust. This could damage wheel bolts and brake components.
- To avoid corrosion of the brake discs and brakepads, drive the vehicle for a few
minutes after cleaning before parking it. The brake discs and brakepads warm up and dry out.

Windows
- Clean the windows inside and outside with a damp cloth and with a cleaning agent recommended for Mercedes-Benz.
- Do not use dry cloths or abrasive or solvent-based cleaning agents to clean the inside of windows.

Wiper blades
- Move the wiper arms into the replacement position (→ page 137).
- With the wiper arms folded out, clean the wiper blades with a damp cloth.
- Do not clean the wiper blades too often.

Exterior lighting
- Clean the lenses with a wet sponge and mild cleaning agent, e.g. car shampoo.
- Only use cleaning agents or cleaning cloths that are suitable for plastic lenses.

Sensors
- Clean the sensors in the front and rear bumpers with a soft cloth and car shampoo (→ page 182).
- When using a power washer, maintain a minimum distance of 11.8 in (30 cm).

Rear view camera and surround view camera
- To open the rear view camera cover, switch on the ignition.
- Use clean water and a soft cloth to clean the camera lens.
- Do not use a power washer.

Tailpipes
- Clean with a cleaning agent recommended for Mercedes-Benz, especially in the winter and after washing the vehicle.
- Do not use acidic cleaning agents.

Notes on care of the interior

![WARNING Risk of injury from plastic parts breaking off after the use of solvent-based care products](image)

Care and cleaning products containing solvents can cause surfaces in the cockpit to become porous. When the airbags are deployed, plastic parts may break away.

- Do not use any care or cleaning products containing solvents to clean the cockpit.

![WARNING Risk of injury or death from bleached seat belts](image)

Bleaching or dyeing seat belts can severely weaken them. This can, for example, cause seat belts to tear or fail in an accident.

- Never bleach or dye seat belts.

To avoid damage to the vehicle, observe the following notes on cleaning and care:
Seat belts
- Clean with lukewarm and soapy water.
- Do not use chemical cleaning agents.
- Do not dry by heating them to over 176°F (80°C) or exposing them to direct sunlight.

Display
- Switch off the display and let it cool down.
- Clean the surface carefully with a microfiber cloth and a suitable display care product (TFT-LCD).
- Do not use any other agents.

Plastic trim
- Clean with a damp microfiber cloth.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Do not attach stickers, films or similar materials.
- Do not allow cosmetics, insect repellent or sun cream to come in contact with the plastic trim.

Real wood and trim elements
- Clean with a microfiber cloth.
- Black piano-lacquer look: clean with a damp cloth and soapy water.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Do not use solvent-based cleaning agents, polishes or waxes.

Headliner
- Clean with a brush or dry shampoo.

Carpet
- Use a carpet and textile cleaning agent recommended for Mercedes-Benz.

Steering wheel made of genuine leather or DINAMICA
- Clean with a damp cloth and 1% soapy water solution and then wipe with a dry cloth.
- For heavy soiling: use a cleaner recommended for Mercedes-Benz.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.

Leather is a natural product. It has natural surface properties, such as differences in structure, marks caused by growth and injury or subtle color differences.

Genuine leather seat covers
- Clean with a damp cloth and then wipe with a dry cloth.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.

DINAMICA seat covers
- Clean with a damp cloth.
- Do not use a microfiber cloth.
Imitation leather seat covers
- Clean with a damp cloth and 1% soapy water.
- Do not use a microfiber cloth.

Fabric seat covers
- Clean with a damp microfiber cloth and 1% soap solution and allow to dry.
Emergency

Removing the safety vest

The safety vests are located in the stowage compartments in the driver and front passenger door.

- **To remove:** pull out the safety vest bag by the loop.
- Open the safety vest bag and pull out the safety vest.

There are also safety vest compartments in the rear door stowage compartments in which safety vests can be stored.

1. Maximum number of washes
2. Maximum wash temperature
3. Do not bleach
4. Do not iron
5. Do not tumble dry
6. Do not dry clean
7. Class 2 safety vest

The requirements defined by the legal standard are only fulfilled if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:
- The maximum permissible number of washes is exceeded.
- The fluorescence has faded.

Warning triangle

Removing the warning triangle

- Remove warning triangle 1.
Setting up the warning triangle

- Fold side reflectors 1 upwards to form a triangle and attach at the top using upper press-stud 2.
- Fold legs 3 down and out to the side.

First-aid kit (soft-sided) overview

First-aid kit (soft sided) 1 is in the cargo compartment in the left-hand storage net.

- In vehicles with a Burmester® surround sound system, the first-aid kit (soft sided) is located in the trunk when the vehicle is delivered.

Flat tire

Notes in the event of a flat tire

⚠️ WARNING Risk of accident due to a flat tire

A flat tire severely affects the driving characteristics as well as the steering and braking of the vehicle.

Tires without run-flat characteristics:
- Do not drive with a flat tire.
- Change the flat tire immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

Tires with run-flat characteristics:
- Observe the information and warning notes on MOExtended tires (run-flat tire).
In the event of a flat tire, the following options are available depending on your vehicle’s equipment:

- **Vehicles with MOExtended tires**: it is possible to continue the journey for a short period of time. Make sure you observe the notes on MOExtended tires (run-flat tires) (→ page 302).
- **Vehicles with a TIREFIT kit**: you can repair the tire so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 303).
- **Vehicles with Mercedes me connect**: you can make a call for breakdown assistance via the overhead control panel in the case of a breakdown (→ page 267).
- **All vehicles**: change the wheel (→ page 345).

The emergency spare wheel is only available in certain countries.

### Notes on MOExtended tires (run-flat tires)

**WARNING** Risk of accident when driving in limp-home mode

When driving in emergency mode the handling characteristics are impaired.

- Do not exceed the specified maximum speed of the MOExtended tires.
- Avoid any abrupt steering and driving maneuvers as well as driving over obstacles (curbs, pot holes, off-road). This applies, in particular, to a loaded vehicle.
- Stop driving in the emergency mode if you notice:
  - Banging noise
  - Vehicle vibration
  - Smoke which smells like rubber
  - Continuous ESP® intervention
  - Cracks in the tire side walls
- After driving in emergency mode, have the rims checked by a qualified special-ist workshop with regard to their further use.
- The defective tire must be replaced in every case.

With MOExtended tires (run-flat tires), you can continue to drive your vehicle even if there is a total loss of pressure in one or more tires. However, the tire affected must not show any clearly visible damage.

You can recognize MOExtended tires by the MOExtended marking which appears on the side wall of the tire.

**Vehicles with tire pressure loss warning system**: MOExtended tires may only be used in conjunction with an activated tire pressure loss warning system.

**Vehicles with tire pressure monitoring system**: MOExtended tires may only be used in conjunction with an activated tire pressure monitoring system.
If a pressure loss warning message appears in the multifunction display, proceed as follows:
- Check the tires for damage.
- If driving on, observe the following notes.

Driving distance possible in emergency mode after the pressure loss warning:

<table>
<thead>
<tr>
<th>Load condition</th>
<th>Driving distance possible in emergency mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Partially laden</td>
<td>50 miles (80 km)</td>
</tr>
<tr>
<td>Fully laden</td>
<td>19 miles (30 km)</td>
</tr>
</tbody>
</table>

The driving distance possible in emergency mode may vary depending on the driving style. Observe the maximum permissible speed of 50 mph (80 km/h).

If a tire has gone flat and cannot be replaced with an MOExtended tire, you can use a standard tire as a temporary measure.

TIREFIT kit storage location

The TIREFIT kit is located under the cargo compartment floor.

![TIREFIT kit](image)

1. Tire sealant bottle
2. Tire inflation compressor

Using the TIREFIT kit

Requirements:
- Tire sealant bottle and tire inflation compressor (→ page 303).
- TIREFIT sticker
- Gloves (depending on the vehicle equipment)

You can use TIREFIT tire sealant to seal perforation damage of up to 0.16 in (4 mm), particularly those in the tire contact surface. You can use TIREFIT in outside temperatures down to -4°F (-20°C).

⚠️ WARNING Risk of accident when using tire sealant

The tire sealant may be unable to seal the tire properly, especially in the following cases:
- There are large cuts or punctures in the tire (larger than damage previously mentioned)
- The wheel rims have been damaged
After journeys with very low tire pressure or with flat tires
- Do not continue driving.
- Consult a qualified specialist workshop.

**WARNING** Risk of injury and poisoning from tire sealant

The tire sealant is harmful and causes irritation. Do not allow it to come into contact with the skin, eyes or clothing, and do not swallow it. Do not inhale tire sealant fumes. Keep the tire sealant away from children.

If you come into contact with the tire sealant, observe the following:
- Rinse off the tire sealant from your skin immediately using water.
- If tire sealant gets into your eyes, thoroughly rinse out the eyes using clean water.
- If tire sealant has been swallowed, immediately rinse out the mouth thoroughly and drink plenty of water. Do not induce vomiting and seek medical attention immediately.
- Change out of any clothes contaminated with tire sealant immediately.
- If allergic reactions occur, seek medical attention immediately.

**NOTE** Overheating due to the tire inflation compressor running too long

- Do not run the tire inflation compressor for longer than ten minutes without interruption.

Comply with the manufacturer’s safety notes on the sticker on the tire inflation compressor.

Have the tire sealant bottle replaced in a qualified specialist workshop every five years.

- Do not remove any foreign objects which have entered the tire.

Affix part 1 of the TIREFIT sticker to the instrument cluster within the driver’s field of vision.

Affix part 2 of the TIREFIT sticker near the valve on the wheel with the faulty tire.
Pull plug 4 with the cable and hose 5 out of the tire inflation compressor housing.

Push the plug of hose 5 into flange 6 of tire sealant bottle 1 until the plug engages.

Place tire sealant bottle 1 head downwards into recess 2 of the tire inflation compressor.

Do not switch off the tire inflation compressor during this phase!

Remove the valve cap from valve 7 on the faulty tire.

Screw filling hose 8 onto valve 7.

Insert plug 4 into a 12 V socket in your vehicle.

Switch on the ignition.

Switch on the tire inflation compressor using On/Off switch 3. The tire is inflated. First, tire sealant is pumped into the tire. The pressure may briefly rise to approximately 500 kPa (5 bar / 73 psi).

Let the tire inflation compressor run for a maximum of ten minutes. The tire should then have attained a tire pressure of at least 200 kPa (2.0 bar / 29 psi).

If tire sealant leaks out, make sure you clean the affected area as quickly as possible. It is preferable to use clean water.

If you get tire sealant on your clothing, have it cleaned as soon as possible with perchloroethylene.

If, after ten minutes, a tire pressure of 200 kPa (2.0 bar / 29 psi) has not been attained:

Switch off the tire inflation compressor.

Unscrew the filling hose from the valve of the faulty tire.

Please note that tire sealant may leak out when unscrewing the filling hose.

Drive forwards or in reverse very slowly for approximately 33 ft (10 m).
Pump up the tire again. After a maximum of ten minutes the tire pressure must be at least 200 kPa (2.0 bar/29 psi).

**WARNING** Risk of accident due to the specified tire pressure not being attained

If the minimum tire pressure is not reached after the specified time, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance. The braking and driving characteristics may be greatly impaired.

- Do not continue driving.
- Consult a qualified specialist workshop.

If, after ten minutes, a tire pressure of 200 kPa (2.0 bar/29 psi) has been attained:

- Switch off the tire inflation compressor.
- Unscrew the filling hose from the valve of the faulty tire.

**WARNING** Risk of accident from driving with sealed tires

A tire temporarily sealed with tire sealant impairs the handling characteristics and is not suitable for higher speeds.

- Adapt your driving style accordingly and drive carefully.
- Do not exceed the maximum speed limit with a tire that has been repaired using tire sealant.
- Observe the maximum permissible speed for a tire sealed with tire sealant 50 mph (80 km/h).

**NOTE** Staining caused by leaking tire sealant

After use, excess tire sealant may leak out from the filling hose.

- Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

**ENVIRONMENTAL NOTE** Environmental pollution caused by environmentally irresponsible disposal

Tire sealant contains pollutants.

- Have the tire sealant bottle disposed of professionally, e.g. at an authorized Mercedes-Benz Center.
- Store the tire sealant bottle and the tire inflation compressor.
- Pull away immediately.
- Stop driving after approximately ten minutes and check the tire pressure using the tire inflation compressor. The tire pressure must now be at least 130 kPa (1.3 bar/19 psi).

**WARNING** Risk of accident due to the specified tire pressure not being attained

If the specified tire pressure is not reached, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.
The braking and driving characteristics may be greatly impaired.

- Do not continue driving.
- Consult a qualified specialist workshop.

In cases such as the one mentioned above, contact an authorized Mercedes-Benz Center. Or call 1-800-FOR-MERCEDES (in the USA) or 1-800-387-0100 (in Canada).

- Correct the tire pressure if it is still at least 130 kPa (1.3 bar/19 psi). See the Tire and Loading Information placard on the B-pillar on the driver’s side or the tire pressure table in the fuel filler flap for values.

- **To increase the tire pressure**: switch on the tire inflation compressor.

- **To reduce the tire pressure**: press pressure release button 1 next to manometer 2.

  - When the tire pressure is correct, unscrew the filling hose from the valve of the sealed tire.
  - Screw the valve cap onto the valve of the sealed tire.
  - Pull the tire sealant bottle out of the tire inflation compressor.
    - The filling hose stays on the tire sealant bottle.
  - Drive to the nearest qualified specialist workshop and have the tire, tire sealant bottle and filling hose replaced there.

---

**Battery (vehicle)**

**Notes on the 12 V battery**

⚠️ **WARNING** Risk of an accident due to work carried out incorrectly on the battery

Work carried out incorrectly on the battery can, for example, lead to a short circuit. This can restrict functions relevant for safety systems and impair the operating safety of your vehicle.

You could lose control of the vehicle in the following situations in particular:

- When braking
- In the event of abrupt steering maneuvers and/or when the vehicle's speed is not adapted to the road conditions

- In the event of a short circuit or a similar incident, contact a qualified specialist workshop immediately.
- Do not drive on.
Always have work on the battery carried out at a qualified specialist workshop.

- Further information on ABS (→ page 183)
- Further information on ESP® (→ page 184)

For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz.

All vehicles except vehicles with a lithium-ion battery

⚠️ WARNING Risk of explosion due to electrostatic charge

Electrostatic charge can ignite the highly explosive gas mixture in the battery.

- To discharge any electrostatic charge that may have built up, touch the metal vehicle body before handling the battery.

The highly flammable gas mixture is created while the battery is charging and during starting assistance.

⚠️ WARNING Danger of chemical burns from the battery acid

Battery acid is caustic.

- Avoid contact with the skin, eyes or clothing.
- Do not lean over the battery.
- Do not inhale battery gases.
- Keep children away from the battery.
- Immediately rinse battery acid off thoroughly with plenty of clean water and seek medical attention immediately.

All vehicles

.identifier: Environmental damage caused by improper disposal of batteries

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

Dispose of batteries in an environmentally responsible manner. Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

If you have to disconnect the 12 V battery, contact a qualified specialist workshop. Comply with safety notes and take protective measures when handling batteries.
Risk of explosion.

Fire, open flames and smoking are prohibited when handling the battery. Avoid creating sparks.

Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor if necessary.

Wear safety glasses.

Keep children away.

Observe this Operator's Manual.

Observe the following if you do not intend to use the vehicle over an extended period of time:

- Activate standby mode.
- Alternatively: connect the battery to a battery charger approved by Mercedes-Benz or consult a qualified specialist workshop to disconnect the battery.

Notes on starting assistance and charging the 12 V battery

Vehicles with a lithium-ion battery

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

**NOTE** Damage to the battery from over-voltage

When charging using a battery charger without a maximum charging voltage, the battery or the on-board electronics may be damaged.

- Only use battery chargers with a maximum charging voltage of 14.8 V.

All other vehicles

When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

**NOTE** Damage to the battery from over-voltage

When charging using a battery charger without a maximum charging voltage, the battery or the on-board electronics may be damaged.

- Only use battery chargers with a maximum charging voltage of 14.8 V.
**WARNING** Risk of explosion from hydrogen gas igniting

There is a danger of hydrogen gas igniting when charging the battery if there is a short circuit or sparks start to form.

- Make sure that the positive terminal of the connected battery does not come into contact with vehicle parts.
- Never place metal objects or tools on a battery.
- The described order of the battery clamps must be observed when connecting and disconnecting the battery.
- When giving starting assistance, always make sure that you only connect battery terminals with identical polarity.
- During starting assistance, you must observe the described order for connecting and disconnecting the jumper cable.
- Do not connect or disconnect the battery clamps while the engine is running.

**WARNING** Risk of explosion during charging process and starting assistance

During the charging process and starting assistance, the battery may release an explosive gas mixture.

- Avoid fire, open flames, creating sparks and smoking.
- Make sure there is sufficient ventilation.
- Do not lean over a battery.

**WARNING** Risk of explosion from a frozen battery

A discharged battery may freeze at temperatures slightly above or below freezing point. During starting assistance or battery charging, battery gas can be released.

- Always allow a battery to thaw before charging it or performing starting assistance.

If the indicator/warning lamps in the instrument cluster do not light up at low temperatures, it is very likely that the discharged battery has frozen. In this case you may neither jump-start the vehicle nor charge the battery.

The service life of a battery that has been thawed may be dramatically shortened. The starting characteristics may be impaired, especially at low temperatures.

It is recommended that you have a thawed battery checked at a qualified specialist workshop.

**NOTE** Damage caused by numerous or extended attempts to start the engine

Numerous or extended attempts to start the engine may damage the catalytic converter due to non-combusted fuel.

- Avoid numerous and extended attempts to start the engine.
Observe the following points during starting assistance and when charging the battery:

- Only use undamaged jumper cables/charging cables with a sufficient cross-section and insulated terminal clamps.
- Non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jumper cable/charging cable is connected to the battery/jump-start connection point.
- The jumper cable/charging cable must not come into contact with any parts which may move when the engine is running.
- Always make sure that neither you nor the battery is electrostatically charged.
- Keep away from fire and open flames.
- Do not lean over the battery.

Observe the additional following points when charging the battery:

- Only use battery chargers tested and approved for Mercedes-Benz.
- Read the battery charger's operating instructions before charging the battery.

Observe the additional following points during starting assistance:

- Starting assistance may only be provided using vehicles, batteries or other jump start devices with a nominal voltage of 12 V.
- The vehicles must not touch.
- **Vehicles with a gasoline engine:** Jump start the vehicle only when the engine and exhaust system are cold.

### Starting assistance and charging the 12 V battery

#### Requirements:

- The vehicle is secured with the electric parking brake.
- **Vehicles with automatic transmission:** The transmission is in position P.
- The ignition and all electrical consumers are switched off.
- The hood is open.

Example: engine compartment

- Slide cover 1 of positive clamp 2 on the jump-starting connection point in the direction of the arrow.
- Connect positive clamp 2 on your vehicle to the positive pole of the donor battery using the jumper cable/charging cable. Always
begin with positive clamp 2 on your own vehicle first.

- **During starting assistance:** start the engine of the donor vehicle and run at idle speed.
- Connect the negative pole of the donor battery and ground point 3 of your own vehicle by using the jumper cable/charging cable. Begin with the donor battery first.
- **During starting assistance:** start the engine of your own vehicle.
- **During the charging process:** start the charging process.
- **During starting assistance:** let the engines run for several minutes.
- **During starting assistance:** before disconnecting the jumper cable, switch on an electrical consumer in your own vehicle, e.g. the rear window heater or lighting.

When the starting assistance/charging process is complete, perform the following steps:

- First, remove the jumper cable/charging cable from ground point 1 and the negative pole of the donor battery, then from positive clamp 2 and the positive pole of the donor battery. Begin each time with the contacts on your own vehicle first.
- After removing the jumper cable/charging cable, close cover 1 of positive clamp 2.

Further information can be obtained at a qualified specialist workshop.

### Replacing the 12 V battery

- Observe the notes on the 12 V battery (→ page 307).

Mercedes-Benz recommends that you have the 12 V battery replaced at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.

Observe the following notes if you want to replace the battery yourself:

- Always replace a faulty battery with a battery which meets the specific vehicle requirements.

  The vehicle is equipped with an AGM technology battery (Absorbent Glass Mat) or a lithium-ion battery. Full vehicle functionality is only guaranteed with an AGM battery or lithium-ion battery. For safety reasons, Mercedes-Benz recommends that you only use batteries which have been tested and approved for your vehicle by Mercedes-Benz.

- Carry over detachable parts, such as vent hoses, elbow fitting or terminal covers from the battery being replaced.

- Make sure that the vent hose is always connected to the original opening on the side of the battery.

  Install any existing or supplied cell caps. Otherwise, gases or battery acid could escape.

- Make sure that detachable parts are reconnected in the same way.
**Tow starting or towing away**

**Permitted towing methods**

---

**NOTE** Damage from automatic braking

If one of the following functions is switched on, the vehicle brakes automatically in certain situations:
- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:
- During towing
- In a car wash

Mercedes-Benz recommends transporting your vehicle in the case of a breakdown, rather than towing it away.

---

For towing, use a tow rope or tow bar with both axles on the ground. Do not use tow bar systems.

**NOTE** Damage to the vehicle due to towing away incorrectly

- Observe the instructions and notes on towing away.

**Vehicles with rear wheel drive**

<table>
<thead>
<tr>
<th></th>
<th>Both axles on the ground</th>
<th>Front axle raised</th>
<th>Rear axle raised</th>
</tr>
</thead>
<tbody>
<tr>
<td>Both axles on the ground</td>
<td>Yes, max. 50 km at 50 km/h</td>
<td>No</td>
<td>Yes, if the steering wheel is fixed in the center position with a steering wheel lock</td>
</tr>
</tbody>
</table>

**4MATIC vehicles**

<table>
<thead>
<tr>
<th></th>
<th>Both axles on the ground</th>
<th>Front axle raised</th>
<th>Rear axle raised</th>
</tr>
</thead>
<tbody>
<tr>
<td>Both axles on the ground</td>
<td>Yes, max. 50 km at 50 km/h</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

**To tow with a raised axle:** towing should be performed by a towing company.

**Towing the vehicle with both axles on the ground**

- Observe the notes on the permitted towing methods (→ page 313).
- Make sure that the battery is connected and charged.

Observe the following points when the battery is discharged:
- The engine cannot be started
The electric parking brake cannot be released or applied.

**Vehicles with automatic transmission:** The automatic transmission cannot be shifted to position N or P.

1. **Vehicles with automatic transmission:** If the automatic transmission cannot be shifted to position N, or the multifunction display in the instrument cluster does not show anything, have the vehicle transported away (→ page 315). A towing vehicle with lifting equipment is required for vehicle transportation.

2. **NOTE** Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.

- A towing speed of 30 mph (50 km/h) must not be exceeded.

**WARNING** Risk of accident when towing a vehicle which is too heavy

If another vehicle is tow-started or towed away, its weight must not exceed the permissible gross mass of your own vehicle, otherwise the following could occur:

- The towing eye may become detached.
- The vehicle/trailer combination may swerve or even rollover.

- If another vehicle is tow-started or towed away, its weight must not exceed the permissible gross mass of your own vehicle.

If a vehicle must be tow-started or towed away, its permissible gross weight must not exceed the permissible gross weight of the towing vehicle.

- Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (→ page 354).

3. **Vehicles with automatic transmission:** Do not open the driver's door or front passenger door, otherwise the automatic transmission automatically shifts to position P.

4. **Install the towing eye (→ page 317).**

5. **Fasten the tow bar.**

6. **NOTE** Damage due to incorrect connection of the tow bar

- Only connect the tow rope or tow bar to the towing eyes.

7. **Deactivate the automatic locking mechanism (→ page 70).**

8. **Do not activate the HOLD function.**

9. **Deactivate the tow-away alarm (→ page 88).**

10. **Deactivate Active Brake Assist (→ page 209).**

11. **Vehicles with automatic transmission:** Shift the automatic transmission to position N.

12. **Release the electric parking brake.**
**WARNING** Risk of accident due to limited safety-related functions during the towing process

Safety-related functions are limited or no longer available in the following situations:
- The ignition is switched off.
- The brake system or power steering system is malfunctioning.
- The energy supply or the on-board electrical system is malfunctioning.

When your vehicle is then towed away, significantly more effort may be required to steer and brake than is normally required.

- Use a tow bar.
- Make sure that the steering wheel can move freely before towing the vehicle away.

---

**NOTE** Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

- Pull away slowly and smoothly.

---

**Loading the vehicle for transport**

- Observe the notes on towing away (→ page 313).
- Connect the tow bar to the towing eye in order to load the vehicle.
- **Vehicles with automatic transmission:** Shift the automatic transmission to position **P**.
- **Vehicles with automatic transmission:** The automatic transmission may be locked in position **P** in the event of damage to the electrical system. To shift to **N**, provide the on-board electrical system with power (→ page 311).

---

**Vehicles with ADS PLUS (Adaptive Damping System PLUS)**

- Load the vehicle correctly onto the transporter.
- **Vehicles with automatic transmission:** Shift the automatic transmission to position **P**.
- Use the electric parking brake to secure the vehicle against rolling away.
- Only secure the vehicle by the wheels.
- Load the vehicle onto the transporter.
- Connect the tow bar to the towing eye in order to load the vehicle.
- **Vehicles with automatic transmission:** Shift the automatic transmission to position **N**.
- **Vehicles with automatic transmission:** The automatic transmission may be locked in position **P** in the event of damage to the electrical system. To shift to **N**, provide the on-board electrical system with power (→ page 311).

---

**WARNING** Risk of an accident when transporting vehicles with Adaptive Damping System PLUS

When transporting vehicles with Adaptive Damping System PLUS, the vehicle/trailer combination may begin to rock and start to skid.

- Load the vehicle correctly onto the transporter.
- Secure the vehicle on all four wheels with suitable tensioning straps.
Do not exceed the maximum permissible speed of 35 mph (60 km/h) when transporting.

**NOTE** Damage to the vehicle from securing it incorrectly

- After loading, the vehicle must be secured on all four wheels. Otherwise, the vehicle could be damaged.
- A minimum distance of 8 in (20 cm) upwards and 4 in (10 cm) downwards must be kept to the transport platform.

Secure the vehicle on all four wheels after loading.

**NOTE** Damage to the drivetrain due to incorrect positioning

- Do not position the vehicle above the connection point of the transport vehicle.

---

**4MATIC vehicles/vehicles with automatic transmission**

Make sure that the front and rear axles come to rest on the same transportation vehicle.

---

**Towing eye storage location**

Towing eye 1 is attached to the edge of the cargo compartment under the cargo compartment floor.

**Vehicles with folding bench seat:** the towing eye is located under a cover.
Installing the towing eye

- Press the mark on cover 1 inwards and remove.
- Screw in the towing eye clockwise as far as it will go and tighten.
- Make sure that cover 1 engages in the bumper when you remove the towing eye.

**NOTE** Damage to the vehicle due to incorrect use of the towing eye

When a towing eye is used to recover a vehicle, the vehicle may be damaged in the process.
- Only use the towing eye to tow away or tow start the vehicle.

Tow starting the vehicle (emergency engine start)

**Vehicles with automatic transmission**

**NOTE** Damage to the automatic transmission due to tow starting

The automatic transmission may be damaged in the process of tow starting vehicles with automatic transmission.
- Vehicles with automatic transmission must not be tow started.
- Vehicles with automatic transmission must not be tow-started.

**Electrical fuses**

**Notes on electrical fuses**

**WARNING** Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded.

This could result in a fire.
- Always replace faulty fuses with specified new fuses containing the correct amperage.

**NOTE** Damage due to incorrect fuses

Electrical components or systems may be damaged by incorrect fuses, or their functionality may be significantly impaired.
- Only use fuses that have been approved by Mercedes-Benz and which have the correct fuse rating.
Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color and fuse rating. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

**Fuse assignment diagram:** on the fuse box in the cargo compartment (→ page 320).

![NOTE](image)

**NOTE** Damage or malfunctions caused by moisture

- Moisture may cause damage to the electrical system or cause it to malfunction.
  - When the fuse box is open, make sure that no moisture can enter the fuse box.
  - When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.

If the newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:
- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The ignition is switched off.

The electrical fuses are located in various fuse boxes:
- Fuse box in the engine compartment on the driver's side (→ page 318)
- Fuse box on the driver's side of the cockpit (→ page 319)
- Fuse box in the front passenger footwell (→ page 319)
- Fuse box in the cargo compartment on the right-hand side of the vehicle, when viewed in the direction of travel (→ page 320)

**Opening and closing the fuse box in the engine compartment**

**Requirements:**
- A dry cloth and a screwdriver are available.

Observe the notes on electrical fuses (→ page 317).

---

**Opening**

**WARNING** Risk of injury from using the windshield wipers while the engine hood is open

When the engine hood is open and the windshield wipers are set in motion, you can be trapped by the wiper linkage.

Always switch off the windshield wipers and ignition before opening the engine hood.
Opening and closing the fuse box in the cockpit

The fuse box is on the side of the dashboard under a cover.

- Contact an authorized Mercedes-Benz Center for further information.

Opening and closing the fuse box in the front passenger footwell

Observe the notes on electrical fuses (→ page 317).
Open cover 1 in the direction of the arrow and remove it.

### Opening and closing the fuse box in the cargo compartment

Observe the notes on electrical fuses (→ page 317).

- Lift up the side panel.
Notes on noise or unusual handling characteristics

Make sure there are no vibrations, noises or unusual handling characteristics when the vehicle is in motion. This may indicate that the wheels or tires are damaged. Hidden tire damage could also be causing the unusual handling characteristics.

If you suspect that a tire is malfunctioning, reduce your speed immediately and have the tires and wheels checked at a qualified specialist workshop.

Notes on regularly inspecting wheels and tires

**WARNING** Risk of injury through damaged tires

Damaged tires can cause tire pressure loss.

- Check the tires regularly for signs of damage and replace any damaged tires immediately.

**WARNING** Risk of hydroplaning due to insufficient tire tread

Insufficient tire tread will result in reduced tire grip.

In heavy rain or slush the risk of hydroplaning is increased, in particular where speed is not adapted to suit the conditions.

- Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tires.

Minimum tread depth for:
- Summer tires: $\frac{1}{32}$ in (3 mm)
- M+S tires: $\frac{1}{16}$ in (4 mm)

- For safety reasons, replace the tires before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:

- Check the tire pressure (→ page 322).

- Visually inspect wheels and tires for damage.
- Check the valve caps.
- Visual check of the tire tread depth and the tire contact surface across the entire width. The minimum tread depth for summer tires is $\frac{1}{32}$ in (3 mm) and for winter tires $\frac{1}{16}$ in (4 mm).

Six marks show where the bar indicators (arrow) are integrated into the tire tread. They are visible once a tire tread depth of approximately $\frac{1}{16}$ in (1.6 mm) has been reached.
Notes on snow chains

**WARNING** Risk of accident due to incorrect mounting of snow chains

If you have mounted snow chains to the front wheels, the snow chains may drag against the vehicle body or chassis components. This could cause damage to the vehicle or the tires.

- Never mount snow chains on the front wheels.
- Only mount snow chains on the rear wheels in pairs.

Observe the following notes when using snow chains:

- Snow chains are only permissible for certain wheel/tire combinations. You can obtain information about this from an authorized Mercedes-Benz Center.
- For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.
- If snow chains are installed, the maximum permissible speed is 30 mph (50 km/h).
- **Vehicles with Active Parking Assist:** Do not use Active Parking Assist when snow chains are installed.
- **Vehicles with level control:** If snow chains are installed, only drive at raised vehicle level (page 219).

You can deactivate ESP® to pull away (page 185). This allows the wheels to spin, achieving an increased driving force.

Tire pressure

**WARNING** Risk of accident due to insufficient or excessive tire pressure

Tires with either too low or too high a pressure present the following hazards:

- the tires could burst
- the tires could wear excessively and/or unevenly
- the driving characteristics as well as steering and braking characteristics may be severely impaired

Observe the recommended tire pressures and check the tire pressure of all tires including the spare wheel:

- monthly
- if altering the load on the vehicle
- prior to long journeys
- if the operating conditions change, for example when driving off-road
Adjust the tire pressure where necessary.

Tire pressure which is too high or too low can:
- Shorten the service life of the tires.
- Cause increased tire damage.
- Adversely affect driving characteristics and thus driving safety, e.g. due to hydroplaning.

**WARNING** Risk of accident due to too low a tire pressure

Tires with pressure that is too low can overheat and burst as a consequence. In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

- Avoid excessively low tire pressure.

Tire pressure which is too low can cause:
- Tire faults as a result of overheating
- Impaired handling characteristics
- Irregular wear

**WARNING** Risk of accident due to too high a tire pressure

Tires with excessively high pressure can burst. In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

- Avoid excessively high tire pressure.

Tire pressure which is too high can cause:
- Increased fuel consumption
- Increased braking distance
- Impaired handling characteristics
- Irregular wear
- Impaired driving comfort
- Susceptibility to damage

**WARNING** Risk of accident due to repeated pressure drop in the tires

The wheels, valves or tires could be damaged. Too low a tire pressure can lead to the tires bursting.

- Examine the tires for foreign objects.
- Check whether the tire has a puncture or the valve has a leak.
- If you are unable to rectify the damage, contact a qualified specialist workshop.

You can find specifications for the tire pressure for the vehicle’s factory-installed tires on the following labels:
- Tire and Loading Information placard on the B-pillar of your vehicle (→ page 329).
- Tire pressure table on the inside of the fuel filler flap (→ page 324).

Observe the maximum tire pressure (→ page 335).
Use a suitable pressure gauge to check the tire pressure. The outer appearance of a tire does not permit any reliable conclusion about the tire pressure.

Only correct tire pressure when the tires are cold. Conditions for cold tires:
- The vehicle has been parked with the tires out of direct sunlight for at least three hours.
- The vehicle has traveled less than 1 mile (1.6 km).

The vehicle's tires heat up when driving. As the temperature of the tires increases, so too does the tire pressure.

**Vehicles with tire pressure monitoring system:** You can also see the tire pressure in the driver’s display.

The tire pressure recommended for increased load/speed in the tire pressure table can affect the ride comfort.

**WARNING** Risk of accident due to unsuitable accessories on tire valves

If you mount unsuitable accessories onto tire valves, the tire valves may be overloaded and malfunction, which can cause tire pressure loss.

- Only screw standard valve caps or valve caps specifically approved by Mercedes-Benz for your vehicle onto the tire valve.

**Tire pressure table**

The tire pressure table is on the inside of the fuel filler flap.

- The data shown in the images is example data.

---

If one or more tire sizes precede a tire pressure, the following tire pressure information is only valid for those tire sizes and their respective load condition.

The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ from this.
Some tire pressure tables only show the rim diameter instead of the complete tire size, e.g., R18. The rim diameter is part of the tire size and can be found on the tire side wall (→ page 336).
- Tire and Loading Information placard (→ page 329)
- Maximum tire pressure (→ page 335)

### Checking tire pressures manually

- Read the tire pressure for the current operating conditions from the Tire and Loading Information placard or the tire pressure table. Observe the notes on tire pressure.
- Remove the valve cap of the tire to be checked.
- Press the tire pressure gauge securely onto the valve.
- Read the tire pressure.
- If the tire pressure is lower than the recommended value, increase the tire pressure to the recommended value.
- If the tire pressure is higher than the recommended value, release air. To do so, press down the metal pin in the valve, e.g. using the tip of a pen, for example. Then check the tire pressure again using the tire pressure gauge.
- Screw the valve cap onto the valve.

Further related subjects:
- Notes on tire pressure (→ page 322)
- Tire pressure table (→ page 324)
- Tire and Loading Information placard (→ page 329)

### Tire pressure monitoring system

#### Function of the tire pressure monitoring system

**DANGER** Risk of accident due to incorrect tire pressure

Each tire, including the spare (if provided), should be checked monthly when cold and then inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for these tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire...
pressure telltale when one or more of your tires is significantly underinflated. Accordingly, if the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the indicator lamp will flash for approximately a minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

The system checks the tire pressure and the tire temperature of the tires installed on the vehicle by means of a tire pressure sensor. The tire pressure and the tire temperature appear in the on-board computer (→ page 327).

If there is a substantial pressure loss or if the tire temperature is excessive, you will be warned in the following ways:

- via display messages (→ page 407).
- via the \( \bigcirc \) warning lamp in the instrument cluster (→ page 427)

The tire pressure monitoring system is only an aid. It is the driver's responsibility to set the tire pressure to the recommended cold tire pressure suitable for the operating situation.

In most cases, the tire pressure monitoring system will automatically update the new reference values after you have changed the tire pressure. You can, however, also update the reference values by restarting the tire pressure monitoring system manually (→ page 427).

**System limits**

The system may be impaired or may not function particularly in the following situations:

- The tire pressure has been set incorrectly
- Sudden pressure loss caused by a foreign object penetrating the tire, for example
There is a malfunction caused by another radio signal source.

**Checking the tire pressure with the tire pressure monitoring system**

**Requirements:**
- The ignition is switched on.

On-board computer:
- Service ➞ Tires

One of the following displays appears:
- Current tire pressure and tire temperature of the individual wheels:

```
36 (psi)
136°

36°
136°
```

- Tire pressure will be displayed after driving a few minutes.
- Tire Pressure Monitor Active: the teach-in process of the system is not yet complete. The tire pressures are already being monitored.

- Compare the tire pressure with the recommended tire pressure for the current operating condition (page 324). Observe the notes on tire temperature (page 322).

- The values displayed in the on-board computer may deviate from those of the tire pressure gauge as they refer to sea level. At high elevations, the tire pressure value indicated by a pressure gauge are higher than those shown by the on-board computer. In this case, do not reduce the tire pressure.

**Restarting the tire pressure monitoring system**

**Requirements:**
- The recommended tire pressure is correctly set for the respective operating status on all of the wheels (page 322).

Restart the tire pressure monitoring system in the following situations:
- The tire pressure has changed.
- The wheels or tires have been changed or newly installed.

On-board computer:
- Service ➞ Tires

- Swipe downwards on Touch Control on the left-hand side of the steering wheel. The Use Current Pressures as New Reference Values message is shown in the multifunction display.

- To restart, press Touch Control on the left-hand side of the steering wheel. The Tire Press. Monitor Restarted message is shown in the multifunction display.

Current warning messages are deleted and the yellow [ ] warning lamp goes out.

After you have been driving for a few minutes, the system checks whether the current tire pressures are within the specified range. The current tire pressures are then accepted as reference values and monitored.
Be sure to also pay attention to the following related topic:
- Notes on tire pressure (→ page 322)

**Tire pressure loss warning system**

**Function of the tire pressure loss warning system**
The tire pressure loss warning system warns the driver by means of display messages when there is a severe tire pressure loss.

**System limits**
The system may be impaired or may not function particularly in the following situations:
- Incorrectly set tire pressure
- Sudden pressure loss caused, for example, by a foreign object penetrating the tire
- Steady pressure loss in several tires

The system has a restricted or delayed function particularly in the following situations:
- Poor ground conditions, e.g. snow or gravel
- Driving with snow chains
- When adopting a very sporty driving style with high cornering speeds or sudden acceleration
- Driving with a very heavy or large trailer
- Driving with a high load

The tire pressure loss warning system is only an aid. It is the driver's responsibility to set the tire pressure to the recommended cold tire pressure suitable for the operating situation and to check it.

Be sure to also observe the following further related subjects:
- Notes on tire pressure (→ page 322)
- Display messages about the tires (→ page 407)

**Restarting the tire pressure loss warning system**

**Requirements:**
- The recommended tire pressure is correctly set for the respective operating status on all wheels.

Restart the tire pressure loss warning system in the following situations:
- The tire pressure has changed.
- The wheels or tires have been changed or newly installed.

**On-board computer:**
- Swipe downwards on Touch Control on the left-hand side of the steering wheel. The **Tire Pressure Control System Active Restart** message is shown in the multifunction display.
- To begin restart, press Touch Control on the left-hand side of the steering wheel. The **Tire Pressure Now OK?** message is shown in the multifunction display.
- Select Yes.
- To confirm restart, press Touch Control on the left-hand side of the steering wheel. The **Run Flat Indicator Restarted** message is shown in the multifunction display.
After you have driven for a few minutes, the tire pressure loss warning system monitors the set tire pressure of all the tires. Be sure to also pay attention to the following related topic:
- Notes on tire pressure (→ page 322)

### Loading the vehicle

#### Notes on Tire and Loading Information placard

**WARNING**  Risk of accident from overloaded tires

Overloaded tires may overheat and burst as a consequence. Overloaded tires can also impair the steering and handling characteristics and lead to brake failure.

- Observe the load rating of the tires.
- The load rating must be at least half the permissible axle load of the vehicle.
- Never overload the tires by exceeding the maximum load.

The Tire and Loading Information placard is on the B-pillar on the driver’s side of the vehicle.

The data shown in the illustration is example data. The Tire and Loading Information placard shows the following information:
- Maximum number of seats according to the maximum number of people permitted to travel in the vehicle.
Maximum permissible load comprises the gross weight of all vehicle occupants, load and luggage.

Recommended tire pressure for cold tires. The recommended tire pressures are valid for the maximum permissible load and up to the maximum permissible vehicle speed.

Please also note:
- Information on permissible weights and loads on the vehicle identification plate (page 354).
- Information on tire pressure in the tire pressure table (page 324).

Steps for Determining Correct Load Limit

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575, pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle's placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1,400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1,400 - 750 (5 x 150) = 650 lbs.)
5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

Not all vehicles are permitted to tow a trailer. Towing a trailer is only permitted if a trailer-hitch is installed. Please consult an authorized Mercedes-Benz dealer if you have any questions about towing a trailer with your vehicle.

Even if you have calculated the total load carefully, you should still make sure that the maximum permissible gross weight and the maximum gross axle weight rating of your vehicle are not exceeded. Details can be found on the vehicle identification plate.
Have your loaded vehicle – including driver, occupants and load – weighed on a vehicle weighbridge. The measured values may not exceed the maximum permissible values stated on the vehicle identification plate.

Further related subjects:
- Calculation example for determining the maximum load (→ page 331)
- Tire and Loading Information placard (→ page 329)
- Tire pressure table (→ page 324)
- Vehicle identification plate (→ page 354)

**Calculation example for determining the maximum load**

The following table shows examples of how to calculate total and load capacities with varying seating configurations and different numbers and sizes of occupants. The following examples use a maximum load of 1500 lbs (680 kg). **This is for illustration purposes only.** Make sure you are using the actual load limit for your vehicle stated on your vehicle's Tire and Loading Information placard (→ page 329).

The higher the weight of all the occupants, the smaller the maximum load for luggage.

Tire labeling

Overview of tire labeling

1 Uniform Tire Quality Grading Standards (→ page 333)
2 DOT (Department of Transportation), (TIN) Tire Identification Number (→ page 334)
3 Maximum tire load (→ page 335)
4 Maximum tire pressure (→ page 335)
5 Manufacturer
6 Characteristics of the tire (→ page 336)
7 Tire size designation, load-bearing capacity, speed rating and load index (→ page 336)
8 Tire name

The data shown in the illustration is example data.

Tire Quality Grading

In accordance with the US Department of Transportation's "Uniform Tire Quality Grading Standards", tire manufacturers are required to grade their tires on the basis of the following three performance factors:

1 Tread wear grade
2 Traction grade
3 Temperature grade

The classification is not legally stipulated for Canada, but it is generally stated.

Tread wear grade

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1\1/2) times
as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate conditions.

Traction grade

⚠️ DANGER Risk of accident due to inadequate traction

The traction grade assigned to this tire is based on straight-ahead braking traction tests.

- Always adapt your driving style and drive at a speed to suit the prevailing traffic and weather conditions.

⚠️ NOTE Damage to the drivetrain from wheelspin

- Avoid wheelspin.

The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Temperature grade

⚠️ WARNING Risk of accident from tire overheating and tire failure

Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.

- Observe the recommended tire pressure.
- Regularly check the pressure of all the tires.
- Adjust the tire pressure, if necessary.

The temperature grades are A (the highest), B and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

DOT, Tire Identification Number (TIN)

US tire regulations stipulate that every tire manufacturer or retreader must imprint a TIN in or on the side wall of each tire produced.
The data shown in the image is example data.

The TIN is a unique identification number to identify tires and comprises the following:

- **DOT (Department of Transportation):** tire symbol marks indicating that the tire complies with the requirements of the US Department of Transportation.

- **Manufacturer identification code:** manufacturer identification code contains details of the tire manufacturer. New tires have a code with two symbols. Retreaded tires have a code with four symbols. Further information on retreaded tires (→ page 341).

- **Tire size:** identifier describes the tire size.

- **Tire type code:** tire type code can be used by the manufacturer as a code to describe specific characteristics of the tire.

- **Manufacturing date:** manufacturing date provides information about the age of a tire. The 1st and 2nd positions represent the calendar week and the 3rd and 4th positions state the year of manufacture (e.g. "3208" represents the 32nd week of 2008).

**Information on the maximum tire load**

Maximum tire load is the maximum permissible weight for which the tire is approved. Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle's Tire and Loading Information placard on the B-pillar on the driver's side (→ page 329).

**Specifications for maximum tire pressure**

The data shown in the illustration is example data.
Never exceed maximum tire pressure specified for the tire. Always observe the recommended tire pressure for your vehicle when adjusting the tire pressure (→ page 324).

Information on tire characteristics

The data shown in the image is example data.

This information describes the type of tire cord and the number of layers in side wall 1 and under tire tread 2.

Tire size designation, load-bearing capacity, speed rating and load index

**WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

1. First letter(s)
2. Nominal tire width in millimeters
3. Aspect ratio in %
4. Tire code
5. Rim diameter
6. Load-bearing index
7. Speed rating
8. Load index

The data shown in the illustration is example data.

Information about reading tire data can be obtained from any qualified specialist workshop.
First letter(s) 1:
- Without: passenger vehicle tires according to European manufacturing standards.
- "P": passenger vehicle tires according to US manufacturing standards.
- "LT": light truck tires according to US manufacturing standards.
- "T": compact emergency spare wheels with high tire pressure that are only designed for temporary use in an emergency.

Aspect ratio 2:
Ratio between tire height and tire width in percent (tire height divided by tire width).

Tire code 4 (tire type):
- "R": radial tire
- "D": bias ply tire
- "B": bias belted tires
- "ZR": radial tire with a maximum speed above 149 mph (240 km/h) (optional)

Rim diameter 5:
The diameter of the bead seat (not the diameter of the rim flange). The rim diameter is specified in inches (in).

Load-bearing index 6:
Numerical code that specifies the maximum load-bearing capacity of a tire (e.g. "91" corresponds to 1356 lbs (615 kg)). The load-bearing capacity of the tire must be at least half the gross axle weight rating of your vehicle. Do not overload the tires by exceeding the specified load limit.

See also:
- Maximum permissible load on the Tire and Loading Information placard (→ page 329)
- Maximum tire load (→ page 335)
- Load index

Speed rating 7:
Specifies the approved maximum speed of the tire.

- An electronic speed limiter prevents your vehicle from exceeding a speed of 130 mph (210 km/h).

Make sure that your tires have the required speed rating. You can obtain information on the required speed rating from an authorized Mercedes-Benz Center.

### Summer tires

Index | Speed rating
--- | ---
ZR...Y\(^1\) | up to 186 mph (300 km/h)
ZR...Y\(^1\) | over 186 mph (300 km/h)
ZR\(^1\) | over 149 mph (240 km/h)

- Specifying the speed rating as the "ZR" index in tire code \(^1\) is optional for tires up to 186 mph (300 km/h).
- If your tire code \(^4\) includes "ZR" and there is no speed rating \(^7\), find out what the maximum speed is from the tire manufacturer.
- If load-bearing index \(^6\) and speed rating \(^7\) are in brackets, the maximum speed rating of your tire is above 186 mph (300 km/h). To find out the maximum speed, ask the tire manufacturer.

Winter tires bear the \(\bigtriangleup\) snowflake symbol and fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow.

Load index \(\bigtriangleup\):
- No specification given: standard load (SL) tire
- "XL" or "Extra Load": extra load tire or reinforced tire
- "Light Load": light load tire

- "C", "D", "E": a load range that depends on the maximum load that the tire can carry at a certain pressure

Definition of terms for tires and loading

**Tire structure and characteristics:** describes the number of layers or the number of rubber-coated belts in the tire contact surface and the tire wall. These are made of steel, nylon, polyester and other materials.

**Bar:** metric unit for tire pressure. 14.5038 pounds per square inch (psi) and 100 kilopascal (kPa) is the equivalent of one bar.

**DOT (Department of Transportation):** DOT-marked tires fulfill the requirements of the US Department of Transportation.

**Average weight of the vehicle occupants:** the number of vehicle occupants for which the vehicle is designed, multiplied by 150 lb (68 kg).

---

\(^1\) "ZR" stated in the tire code.

\(^2\) Or "M+S \(\bigtriangleup\)" for winter tires.
Uniform Tire Quality Grading Standards: a uniform standard to grade the quality of tires with regard to tread quality, tire traction and temperature characteristics. The quality grading assessment is made by the manufacturer following specifications from the U.S. government. The quality grade of a tire is imprinted on the side wall of the tire.

Recommended tire pressure: the recommended tire pressure is the tire pressure specified for the tires mounted to the vehicle at the factory.

The tire and information table contains the recommended tire pressures for cold tires, the maximum permissible load and the maximum permissible vehicle speed.

The tire pressure table contains the recommended tire pressures for cold tires under various operating conditions, i.e. loading and/or speed of the vehicle.

Increased vehicle weight due to optional equipment: the combined weight of all standard and optional equipment available for the vehicle, regardless of whether it is actually installed on the vehicle or not.

Rim: the part of the wheel on which the tire is installed.

GAWR (Gross Axle Weight Rating): the GAWR is the maximum permissible axle load. The actual load on an axle must never exceed the gross axle weight rating. The gross axle weight rating can be found on the vehicle identification plate on the B-pillar on the driver’s side.

Speed rating: the speed rating is part of the tire identification. It specifies the speed range for which a tire is approved.

GVW (Gross Vehicle Weight): the gross vehicle weight comprises the weight of the vehicle including fuel, tools, the spare wheel, accessories installed, occupants, luggage and the trailer drawbar noseweight, if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating GVWR as specified on the vehicle identification plate on the B-pillar on the driver’s side.

GVWR (Gross Vehicle Weight Rating): the GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, occupants, fuel, luggage and the trailer drawbar noseweight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver’s side.

Maximum weight of the laden vehicle: the maximum weight is the sum of the curb weight of the vehicle, the weight of the accessories, the maximum load and the weight of optional equipment installed at the factory.

Kilopascal (kPa): metric unit for tire pressure. 6.9 kPa corresponds to 1 psi. Another unit for tire pressure is bar. 100 kilopascal (kPa) equals 1 bar.

Load index: in addition to the load-bearing index, the load index may also be imprinted on the side wall of the tire. This specifies the load-bearing capacity of the tire more precisely.

Curb weight: the weight of a vehicle with standard equipment including the maximum capacity of fuel, oil and coolant. It also includes the air conditioning system and optional equipment if
these are installed on the vehicle, but does not include passengers or luggage.

**Maximum tire load:** the maximum tire load is the maximum permissible weight in kilograms or lbs for which a tire is approved.

**Maximum permissible tire pressure:** maximum permissible tire pressure for one tire.

**Maximum load on one tire:** maximum load on one tire. This is calculated by dividing the maximum axle load of one axle by two.

**PSI (pounds per square inch):** standard unit of measurement for tire pressure.

**Aspect ratio:** ratio between tire height and tire width in percent.

**Tire pressure:** pressure inside the tire applying an outward force to every square inch of the tire. The tire pressure is specified in pounds per square inch (psi), in kilopascals (kPa) or in bar. The tire pressure should only be corrected when the tires are cold.

**Cold tire pressure:** the tires are cold when the vehicle has been parked for at least 3 hours without direct sunlight on the tires or the vehicle has been driven for less than 1 mile (1.6 km).

**Tire contact surface:** the part of the tire that comes into contact with the road.

**Tire bead:** the purpose of the tire bead is to ensure that the tire sits securely on the wheel rim. There are several wire cores in the tire bead to prevent the tire from changing length on the wheel rim.

**Side wall:** the part of the tire between the tread and the tire bead.

**Weight of optional equipment:** the combined weight of the optional equipment weighing more than the replaced standard parts and more than 5 lbs (2.3 kg). This optional equipment, such as high-performance brakes, level control system, a roof luggage rack or high-performance batteries, is not included in the curb weight and the weight of the accessories.

**TIN (Tire Identification Number):** a unique identification number which can be used by a tire manufacturer to identify tires, for example, in a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer’s identity code, tire size, tire type code and the manufacturing date.

**Load-bearing index:** the load-bearing index is a code that contains the maximum load-bearing capacity of a tire.

**Traction:** traction is the grip resulting from friction between the tires and the road surface.

**Wear indicator:** narrow bars (tread wear bars) that are distributed over the tire contact surface. If the tire tread is level with the bars, the wear limit of 1/16 in (1.6 mm) has been reached.

**Distribution of vehicle occupants:** distribution of vehicle occupants over designated seat positions in a vehicle.

**Maximum permissible payload weight:** nominal load and luggage load plus 150 lb (68 kg) multiplied by the number of seats in the vehicle.
Changing a wheel
Notes on selecting, installing and replacing tires

**NOTE** Mercedes-AMG vehicles

- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

**WARNING** Risk of accident due to incorrect dimensions of wheels and tires

- If wheels and tires of the wrong size are installed, the wheel brakes or wheel suspension components may be damaged.
- Always replace wheels and tires with those that fulfill the specifications of the original part.

When replacing wheels, make sure to fit the correct:
- Designation
- Model

When replacing tires, make sure to install the correct:
- Designation
- Manufacturer
- Model

**WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

- Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.
- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

**NOTE** Vehicle and tire damage through tire types and sizes that have not been approved

For safety reasons, only use tires, wheels and accessories which have been specially approved by Mercedes-Benz for your vehicle. These tires are specially adapted to the control systems, such as ABS, ESP® and 4MATIC, and marked as follows:
- MO = Mercedes-Benz Original
- MOE = Mercedes-Benz Original Extended (run-flat tire only for certain wheels)
- MO1 = Mercedes-Benz Original (only certain AMG tires)

Certain characteristics, such as handling, vehicle noise emissions, consumption, etc. may otherwise be adversely affected. Furthermore, other tire sizes could result in the tires rubbing against the body and axle components when loaded. This could result in damage to the tire or the vehicle.
Only use tires, wheels and accessories that have been checked and recommended by Mercedes-Benz.

**NOTE** Risk to driving safety from retreaded tires

Retreaded tires are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tires. For this reason driving safety cannot be guaranteed.

- Do not use used tires if you have no information about their previous usage.

**NOTE** Possible damage to wheels or tires when driving over obstacles

Large wheels have a lower tire section width. The lower the tire section width, the greater is the risk of damage to wheels or tires when driving over obstacles.

- Avoid obstacles or drive particularly carefully.

**NOTE** Possible wheel and tire damage when parking on curbs or in potholes

Parking on curbs or in potholes may damage the wheels and tires.

- If possible, park only on flat surfaces.
- Avoid curbs and potholes when parking.

**NOTE** Damage to electronic component parts from the use of tire-mounting tools

**Vehicles with a tire pressure monitoring system:** Electronic component parts are located in the wheel. Tire-mounting tools should not be used in the area of the valve. This could otherwise damage the electronic component parts.

- Have the tires changed at a qualified specialist workshop only.

**NOTE** Damage to summer tires at low ambient temperatures

At low ambient temperatures, tears could form when driving with summer tires, causing permanent damage to the tire.

- At temperatures below 45 °F (7 °C) use **M+S**-tires.

Accessory parts that are not approved for your vehicle by Mercedes-Benz or are not being used correctly can impair the operating safety. Before purchasing and using non-approved accessories, visit a qualified specialist workshop and inquire about:

- Suitability
- Legal stipulations
- Factory recommendations

**WARNING** Risk of accident with high performance tires

The special tire tread in combination with the optimized tire compound means that the risk
of skidding and hydroplaning on wet roads is increased.
In addition, the tire grip is greatly reduced at a low outside temperature and tire running temperature.

- Switch on the ESP® and adapt your driving style accordingly.
- Use M+S tires at outside temperatures of less than 50 °F (10 °C).
- Only use the tires for their intended purpose.

Observe the following when selecting, installing and replacing tires:

- Furthermore, the use of certain tire types in certain regions and areas of operation can be highly beneficial.
- Only use tires and wheels of the same type (summer tires, winter tires, MOExtended tires) and the same make.
- Only install wheels of the same size on one axle (left and right).

It is only permissible to install a different wheel size in the event of a flat tire in order to drive to the specialist workshop.

- **Vehicles with a tire pressure monitoring system:** All installed wheels must be equipped with functioning sensors for the tire pressure monitoring system.
  - At temperatures below 45 °F (7 °C) use winter tires or all-season tires marked M+S for all wheels.
  - Winter tires provide the best possible grip in wintry road conditions.
  - For M+S tires, only use tires with the same tread.
  - Observe the maximum permissible speed for the M+S tires installed.
  - If the tire’s maximum speed is below that of the vehicle, this must be indicated by an appropriate label in the driver’s field of vision.
  - Break in new tires at moderate speeds for the first 60 miles (100 km).

- **Replace the tires after six years at the latest, regardless of wear.**

- **When replacing with tires that do not feature run-flat characteristics:** vehicles with MOExtended tires are not equipped with a TIREFIT kit at the factory. Equip the vehicle with a TIREFIT kit after replacing with tires that do not feature run-flat characteristics, e.g. winter tires.

For more information on wheels and tires, contact a qualified specialist workshop.

Be sure to also observe the following further related subjects:

- Notes on tire pressure (page 322)
- Tire and Loading Information placard (page 329)
- Tire size designation, load-bearing capacity, speed rating and load index (page 336)
- Tire pressure table (page 324)
- Notes on the emergency spare wheel (page 350)
Notes on rotating wheels

**WARNING** Risk of injury through different wheel sizes

Rotating the front and rear wheels can severely impair the driving characteristics. The wheel brakes or suspension components may also be damaged.

- Rotate front and rear wheels only if the wheels and tires are of the same dimensions.

The wear patterns on the front and rear wheels differ:
- Front wheels wear more on the tire shoulder
- Rear wheels wear more in the center of the tire

Do not drive with tires that have too little tread depth. This significantly reduces traction on wet roads (hydroplaning).

On vehicles that have the same size front and rear wheels, rotate the wheels according to the intervals in the tire manufacturer’s warranty book in your vehicle documents. If this is not available, rotate the tires every 3000 to 6000 miles (5000 to 10,000 km), depending on the wear. Ensure that the direction of rotation is maintained.

Observe the instructions and safety notes on "Changing a wheel" when doing so (→ page 345).

Notes on storing wheels

When storing wheels, observe the following notes:
- After removing wheels, store them in a cool, dry and preferably dark place.
- Protect the tires from contact with oil, grease or fuel.

Overview of the tire-change tool kit

- **NOTE** Mercedes-AMG vehicles
  - Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

You require the following tools, for example, to change a wheel:
- Jack
- Chock
- Lug wrench
- Alignment bolt

The tire-change tool kit is in tool bag 1 under the cargo compartment floor.
The tool bag contains:
- Jack
- Gloves
- Lug wrench
- Alignment bolt
- Folding chock
- Ratchet for jack

Preparing the vehicle for a wheel change

Requirements:
- The required tire-change tool is available. If your vehicle is not equipped with the tire-change tool kit, consult a qualified specialist workshop to find out about suitable tools.
- The vehicle is not on a slope.
- The vehicle is on solid, non-slippery and level ground.

- Apply the electric parking brake manually.
- Move the front wheels to the straight-ahead position.
- **Vehicles with automatic transmission:** Shift into position P.
- **Vehicles with level control system:** Set the normal vehicle level (→ page 219).
- Switch off the engine.
- Make sure that the engine cannot be started.
- Place chocks or other suitable items under the front and rear of the wheel that is diagonally opposite the wheel you wish to change.
- Remove the hub caps if necessary (→ page 345).
- Raise the vehicle (→ page 346).

Removing and installing the wheel trim/hub caps

Requirements:
- The vehicle is prepared for a wheel change (→ page 345).

Plastic hub cap
- **To remove:** turn the center cover of the hub cap counter-clockwise and remove the hub cap.
- **To install:** make sure that the center cover of the hub cap is turned counter-clockwise.
- Position the hub cap and turn the center cover clockwise until the hub cap engages physically and audibly.
Aluminum hub cap

To remove: position socket 2 from the tire-change tool kit on hub cap 1.
Position wheel wrench 3 on socket 2.
Using wheel wrench 3, turn hub cap 1 counter-clockwise and remove it.

To install: follow the instructions above in reverse order.

Specified tightening torque: 18 lb-ft (25 Nm).

Raising the vehicle when changing a wheel

Requirements:
- There are no persons in the vehicle.
- The vehicle has been prepared for a wheel change (→ page 345).
- The wheel trims and hub caps have been removed (→ page 345).

Important notes on using the jack:
- Use only a vehicle-specific jack that has been approved by Mercedes-Benz to raise the vehicle.
- The jack is only designed for raising and holding the vehicle for a short time while a wheel is being changed and not for maintenance work under the vehicle.
- The jack must be placed on a firm, flat and non-slip surface. If necessary, use a large, flat, load-bearing, non-slip underlay.
- The foot of the jack must be positioned vertically under the jack support point.

Rules of conduct when the vehicle is raised:
- Never place your hands or feet under the vehicle.
- Never lie under the vehicle.
- Do not start the engine and do not release the electric parking brake.
- Do not open or close any doors or the tailgate.
Using the lug wrench, loosen the wheel bolts on the wheel you wish to change by about one full turn. Do not unscrew the bolts completely.

Position of jack support points

**NOTE** Mercedes-AMG vehicles

- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

**WARNING** Risk of injury from incorrect positioning of the jack

- If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip with the vehicle raised.

**NOTE** Vehicle damage from the jack

- If you do not position the jack correctly at the appropriate jack support point of the vehicle, the jack could tip over with the vehicle raised.

- The jack is designed exclusively for jacking up the vehicle at the jack support points.

- Take the ratchet out of the tire-change tool kit and place it on the hexagon nut of the jack so that the letters "AUF" are visible.
Removing a wheel

Requirements:
- The vehicle is raised (→ page 346).

**NOTE** Mercedes-AMG vehicles
- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

When changing a wheel, avoid applying any force to the brake discs, since this could impair the level of comfort when braking.

**NOTE** Damage to threading from dirt on wheel bolts
- Do not place wheel bolts in sand or on a dirty surface.

Mounting a new wheel

**NOTE** Mercedes-AMG vehicles
- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

- Screw alignment bolt 1 into the thread instead of the wheel bolt.
- Unscrew the remaining wheel bolts completely.
- Remove the wheel.
WARNING  Risk of accident from losing a wheel
Oiled, greased or damaged wheel bolt/wheel nut threads or wheel hub/wheel mounting bolt threads can cause the wheel bolts/wheel nuts to come loose.
➤ Never oil or grease the threads.
➤ In the event of damage to the threads, contact a qualified specialist workshop immediately.
➤ Have the damaged wheel bolts or damaged hub threads replaced.
➤ Do not continue driving.

➤ Observe the information on the choice of tires (→ page 341).
For tires with a specified direction of rotation, an arrow on the side wall of the tire indicates the correct direction of rotation. Observe the direction of rotation when installing.
➤ Slide the wheel to be mounted onto the alignment bolt and push it on.

WARNING  Risk of injury from tightening wheel bolts and nuts
If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip.
➤ Only tighten wheel bolts or wheel nuts when the vehicle is on the ground.

➤ Be sure to observe the instructions and safety notes on "Changing a wheel" (→ page 341).
➤ For safety reasons, only use wheel bolts which have been approved by Mercedes-Benz and for the wheel in question.

NOTE  Damage to paintwork of the wheel rim when screwing on the first wheel bolt
If the wheel has too much play when screwing in the first wheel bolt, the wheel rim paint can be damaged.
➤ Press the wheel firmly against the wheel hub when screwing on the first wheel bolt.

➤ Tighten the wheel bolts evenly in a diagonal pattern in the order indicated until they are finger-tight.
➤ Unscrew and remove the alignment bolt.
➤ Tighten the last wheel bolt until it is finger-tight.
➤ Lower the vehicle (→ page 349).

Lowering the vehicle after a wheel change
Requirements:
• The new wheel has been installed (→ page 348).

➤ To lower the vehicle: place the ratchet onto the hexagon nut of the jack so that the letters "AB" are visible and turn counter-clockwise.
Tighten the wheel bolts evenly in a diagonal pattern in the order indicated 1 to 5 with an initial maximum force of 59 lb-ft (80 Nm).

Tighten the wheel bolts evenly in a diagonal pattern in the order indicated 1 to 5 to the specified tightening torque of 111 lb-ft (150 Nm).

**WARNING** Risk of accident due to incorrect tightening torque

The wheels could come loose if the wheel bolts or wheel nuts are not tightened to the prescribed torque.

Ensure that the wheel bolts or wheel nuts are tightened to the prescribed tightening torque.

If you are not sure, do not move the vehicle. Contact a qualified specialist workshop and have the tightening torque checked immediately.

Check the tire pressure of the newly installed wheel and adjust it if necessary.

**Vehicles with tire pressure loss warning system:** Restart the tire pressure loss warning system (→ page 328).

Exception: the new wheel is an emergency spare wheel.

**Vehicles with a tire pressure monitoring system:** Restart the tire pressure monitoring system (→ page 327).

Exception: the new wheel is an emergency spare wheel.

**Emergency spare wheel**

**Notes on the emergency spare wheel**

**WARNING** Risk of accident caused by incorrect wheel and tire dimensions

The wheel or tire size and the tire type of the emergency spare wheel or spare wheel and the wheel to be replaced may differ. The emergency spare wheel or spare wheel can significantly impair driving characteristics of the vehicle.

To prevent hazardous situations:

- Adapt your driving style accordingly and drive carefully.
- Never install more than one emergency spare wheel or spare wheel that differs in size.
- Only use an emergency spare wheel or spare wheel of a different size briefly.
- Do not switch off ESP®.
- Have the emergency spare wheel or spare wheel of a different size replaced.
at the nearest qualified specialist workshop. The new wheel must have the correct dimensions.

The emergency spare wheel is secured in the emergency spare wheel bag in the cargo compartment.

Observe the following notes on installing an emergency spare wheel:

- Check the tire pressure of the emergency spare wheel installed. Correct the pressure as necessary.
- The maximum permissible speed with an emergency spare wheel installed is 50 mph (80 km/h).
- Do not equip the emergency spare wheel with snow chains.
- Replace the emergency spare wheel after six years at the latest, regardless of wear.

Vehicles with a tire pressure loss warning system: If an emergency spare wheel is installed the tire pressure monitoring system cannot function reliably. For a few minutes after an emergency spare wheel is installed, the system may still display the tire pressure of the removed wheel. Only restart the system again when the emergency spare wheel has been replaced with a new wheel.

Be sure to also observe the following further related subjects:
- Notes on tire pressure (→ page 322)
- Tire and Loading Information placard (→ page 329)
- Tire pressure table (→ page 324)
- Notes on installing tires (→ page 341)
Notes on technical data

NOTE Mercedes-AMG vehicles

Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

The data stated only applies to vehicles with standard equipment. You can obtain further information from an authorized Mercedes-Benz Center.

Vehicle electronics

Two-way radios

Notes on installing two-way radios

WARNING Risk of accident due to improper work on two-way radios

If two-way radios are manipulated or retrofitted incorrectly, the electromagnetic radiation from the two-way radios can interfere with the vehicle electronics and jeopardize the operating safety of the vehicle.

You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

WARNING Risk of accident due to improper operation of two-way radios

If you use two-way radios in the vehicle improperly, their electromagnetic radiation can disrupt the vehicle’s electronics. This is the case in the following situations, in particular:

• The two-way radio is not connected to an exterior antenna.
• The exterior antenna is installed incorrectly or is not a low-reflection antenna.

This could jeopardize the operating safety of the vehicle.

Have the low-reflection exterior antenna installed at a qualified specialist workshop.

When operating two-way radios in the vehicle, always connect them to the low-reflection exterior antenna.

NOTE Invalidation of the operating permit due to failure to comply with the instructions for installation and use

The operating permit may be invalidated if the instructions for installation and use of two-way radios are not observed.

• Only use approved frequency bands.
• Observe the maximum permissible output power in these frequency bands.
• Only use approved antenna positions.
On the rear fenders, it is recommended that you install the antenna on the side of the vehicle closest to the center of the road. Use Technical Specification ISO/TS 21609 (Road Vehicles - "EMCs for installation of aftermarket radio frequency transmitting equipment") when retrofitting two-way radios. Comply with the legal requirements for detachable parts.

If your vehicle has installing for two-way radio equipment, use the power supply and antenna connectors provided in the pre-installation. Observe the manufacturer's supplements when installing.

**Two-way radio transmission output**
The maximum transmission output (PEAK) at the base of the antenna must not exceed the values in the following table.

<table>
<thead>
<tr>
<th>Frequency band and maximum transmission output</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Frequency band</strong></td>
</tr>
<tr>
<td>Short wave 3 - 54 MHz</td>
</tr>
<tr>
<td>4 m frequency band 74 - 88 MHz</td>
</tr>
<tr>
<td>2 m frequency band 144 - 174 MHz</td>
</tr>
<tr>
<td>Terrestrial Trunked Radio (TETRA) 380 - 460 MHz</td>
</tr>
<tr>
<td>70 cm frequency band 420 - 450 MHz</td>
</tr>
<tr>
<td>Two-way radio (2G/3G/4G)</td>
</tr>
</tbody>
</table>

On vehicles with a panoramic sliding sunroof, installing an antenna to the front or rear roof area is not permitted.
The following can be used in the vehicle without restrictions:

- Two-way radios with a maximum transmission output of up to 100 mW
- RF transmitters with transmitter frequencies in the 380 - 410 MHz frequency band and a maximum transmission output of up to 2 W (TETRA)
- Mobile phones (2G/3G/4G)
- Terrestrial Trunked Radio (TETRA)
- 70 cm frequency band
- 2G/3G/4G

There are no restrictions when positioning the antenna on the outside of the vehicle for some wavebands.

- Terrestrial Trunked Radio (TETRA)
- 70 cm frequency band
- 2G/3G/4G

**Radio operating permits for vehicle components**

Manufacturer information about wireless vehicle components can be found using the key phrase "Radio operating permits" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

**Vehicle identification plate, VIN and engine number overview**

**Vehicle identification plate**

- Vehicle identification plate (USA only)
  1. Maximum permissible gross vehicle weight
  2. Maximum permissible front axle load
  3. Maximum permissible rear axle load
  4. Paint code
  5. VIN (vehicle identification number)
Vehicle identification plate (Canada only)

1. Maximum permissible gross vehicle weight
2. Maximum permissible front axle load
3. Maximum permissible rear axle load
4. Paint code
5. VIN (vehicle identification number)

The maximum permissible gross vehicle weight is made up of the vehicle weight, all vehicle occupants, the fuel and the load. The maximum gross axle weight rating is the maximum weight that can be carried on one axle (front or rear axle).

Do not exceed the maximum gross vehicle weight or the maximum gross axle weight rating for the front or rear axle.

**VIN below right-hand front seat**

1. Imprinted VIN (vehicle identification number)
2. Floor covering

**Additional plates**

1. Plate with information about emissions testing, including confirmation of emissions guidelines at the U.S. federal level as well as for California
2. Engine number stamped into the crankcase
3. VIN (vehicle identification number) as a label at the lower edge of the windshield
Operating fluids
Notes on operating fluids

**NOTE** Mercedes-AMG vehicles

- Observe the notes in the Supplement. You could otherwise fail to recognize dangers.

**WARNING** Risk of injury from operating fluids harmful to your health

Operating fluids may be poisonous and harmful to your health.
- Observe the text on the original containers when using, storing or disposing of operating fluids.
- Always store operating fluids sealed in their original containers.
- Always keep children away from operating fluids.

**ENVIRONMENTAL NOTE** Environmental pollution caused by environmentally irresponsible disposal

- Dispose of operating fluids in an environmentally responsible manner.

Operating fluids include the following:
- Fuels
- Lubricants
- Coolant
- Brake fluid
- Windshield washer fluid
- Climate control system refrigerant

Only use products approved by Mercedes-Benz. Damage caused by the use of products that have not been approved is not covered by the Mercedes-Benz warranty or goodwill gestures.

The operating fluids approved by Mercedes-Benz can be identified by the following inscriptions on the container:
- MB-Freigabe (e.g. MB-Freigabe 229.51)

Further information on approved operating fluids:

- In the Mercedes-Benz Specifications for Operating Fluids by entering the designation - At https://bevo.mercedes-benz.com
- In the Mercedes-Benz BeVo app
- At a qualified specialist workshop

**WARNING** Risk of fire or explosion from fuel

Fuels are highly flammable.
- Fire, open flames, smoking and creation of sparks must be avoided.
- Switch off the ignition and, if available, the stationary heater, before and while refueling the vehicle.

**WARNING** Risk of injury from fuels

Fuels are poisonous and hazardous to your health.
Do not swallow fuel or let it come into contact with skin, eyes or clothing.
Do not inhale fuel vapor.
Keep children away from fuel.
Keep doors and windows closed during the refueling process.

If you or other people come into contact with fuel, observe the following:
- Immediately rinse fuel off your skin with soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical attention immediately.
- If you swallow fuel, seek medical attention immediately. Do not induce vomiting.
- Change immediately out of clothing that has come into contact with fuel.

Fuel

**Notes on fuel grades for vehicles with a gasoline engine**

Note the instructions about operating fluids (→ page 356).

**NOTE** Damage caused by the wrong fuel

Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system.

- Only refuel with low-sulfur gasoline.

This fuel may contain up to 10% ethanol by volume. Your vehicle is suitable for use with E10 fuel.

Never refuel with one of the following fuels:
- Diesel
- Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100
- Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
- Gasoline with additives containing metal

If you have accidentally refueled with the wrong fuel:
- do not switch the ignition on.
- Consult a qualified specialist workshop.

If the available fuel is not sufficiently low in sulfur, this can produce unpleasant odors.

Only refuel with fuel that has at least the octane number specified in the information label in the fuel filler flap (→ page 172).

**If you want maximum engine output:** Only refuel with unleaded premium grade gasoline with an octane number of at least 91 AKI/95 RON.

As a temporary measure, if the recommended fuel is not available, you may also refuel with unleaded regular gasoline with at least 87 AKI/91 RON. This may reduce engine output and increase fuel consumption.

Never refuel using gasoline with an even lower RON.
NOTE Premature engine wear through unleaded regular gasoline

Impairment of the longevity and performance of the engine.
If unleaded premium grade gasoline is unavailable and you have to refuel using unleaded regular gasoline:

- Only fill the fuel tank to half full with unleaded regular gasoline and refill as soon as possible with unleaded premium grade gasoline.
- Do not drive at the maximum design speed.
- Avoid sudden acceleration and engine speeds over 3000 rpm.

Further information on fuel is available at the following locations:
- At a gas station
- At a qualified specialist workshop
- On the https://www.mbusa.com (USA only)

Notes on additives in gasoline
Observe the notes on operating fluids (→ page 356).

NOTE Damage from use of unsuitable additives

Even small amounts of the wrong additive may lead to malfunctions occurring.
- Only add cleaning additives recommended by Mercedes-Benz to the fuel.

Mercedes-Benz recommends that you use brand-name fuels with additives.
In some countries, the fuel available may not have sufficient additives. Residue could build up in the fuel injection system as a result. In this case, in consultation with an authorized Mercedes-Benz Center, mix the fuel with the cleaning additive recommended by Mercedes-Benz. Observe the notes and mixing ratios indicated on the tank.

Tank content and reserve fuel

</tr>
</tbody>
</table>

Engine oil

Notes on engine oil
Observe the notes on operating fluids (→ page 356).
**NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives

- Do not use engine oils or oil filters other than those which meet the specifications necessary for the prescribed service intervals.
- Do not alter the engine oil or oil filter in order to achieve longer change intervals than prescribed.
- Do not use additives.
- Have the engine oil changed after the prescribed intervals.

Mercedes-Benz recommends that you have the oil change carried out at a qualified specialist workshop.

**Quality and capacity of engine oil**

**Gasoline engines**

</tr>
</tbody>
</table>

* Recommended for lowest possible fuel consumption (lowest SAE viscosity class in each case; observe possible restrictions of the approved SAE viscosity classes).

To achieve the lowest possible fuel consumption, it is recommended to use the engine oil specifications marked in the table for the lowest SAE viscosity class. Possible restrictions of the approved SAE viscosity classes must be observed.

The following values refer to an oil change, including the oil filter.

**Notes on brake fluid**

Observe the notes on operating fluids (→ page 356).

**WARNING** Risk of an accident due to vapor pockets forming in the brake system

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point is too low, vapor pockets may form in the brake system when the brakes are applied hard.

This causes the braking effect to be impaired.

- Have the brake fluid renewed at the specified intervals.
Have the brake fluid regularly replaced at a qualified specialist workshop. Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.

Coolant

Notes on coolant
Observe the notes on operating fluids (→ page 356).

⚠️ WARNING - Risk of fire and injury from antifreeze
If antifreeze comes into contact with hot component parts in the engine compartment, it may ignite.

- Allow the engine to cool down before adding antifreeze.
- Make sure that no antifreeze spills out next to the filler opening.
- Thoroughly clean off any antifreeze from component parts before starting the vehicle.

⚠️ NOTE Damage caused by incorrect coolant
- Only use coolant that has been pre-mixed with the required antifreeze protection.
Information on coolant is available at the following locations:
- In the Mercedes-Benz Specifications for Operating Fluids 310.1
  - At https://bevo.mercedes-benz.com
  - In the Mercedes-Benz BeVo app
- At a qualified specialist workshop

⚠️ NOTE Overheating at high outside temperatures
If an inappropriate coolant is used, the engine cooling system is not sufficiently protected against overheating and corrosion at high outside temperatures.

- Always use coolant approved by Mercedes-Benz.

Have the coolant regularly replaced at a qualified specialist workshop.

Proportion of antifreeze concentrate in the engine cooling system:
- A minimum of 50% (antifreeze protection down to approximately -35°F (-37°C))
- A maximum of 55% (antifreeze protection down to -49°F (-45°C))

<td>13.7 US qt (13.0 liters)</td>
</tr>
</tbody>
</table>

Notes on windshield washer fluid
Observe the notes on operating fluids (→ page 356).
WARNING - Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.

Make sure that no windshield washer concentrate spills out next to the filler opening.

NOTE Damage to the exterior lighting due to unsuitable windshield washer fluid

Unsuitable windshield washer fluid may damage the plastic surface of the exterior lighting.

Only use windshield washer fluid which is also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.

NOTE Blocked spray nozzles caused by mixing windshield washer fluids

Do not mix MB SummerFit and MB WinterFit with other windshield washer fluids.

Do not use distilled or de-ionized water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windshield washer fluid:
- Above freezing point: e.g. MB SummerFit
- Below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.

Mix washer fluid with windshield washer fluid all year round.

Refrigerant

Notes on refrigerant

Observe the notes on operating fluids (→ page 356).

NOTE Damage due to incorrect refrigerant

If a non-approved refrigerant is used, the climate control system may be damaged.

USA/China: Use only R-134a refrigerant.
Canada: Use only R-1234yf refrigerant.

NOTE Damage to the climate control system due to incorrect refrigerant compressor oil

Only use refrigerant compressor oil that has been approved by Mercedes-Benz.

Do not mix the approved refrigerant compressor oil with a different refrigerant compressor oil.

Work on the climate control system may be carried out only by a qualified specialist workshop. All applicable regulations, as well as SAE standard J639, must be adhered to.

The information label for the climate control system regarding the refrigerant type and the refrigerant compressor oil.
PAG oil is located on the inside of the hood.

Information label (example – USA/China)
1. Hazard and service warning symbols
2. Refrigerant filling capacity
3. Applicable standards
4. PAG oil part number
5. GWP (global warming potential) of the refrigerant used
6. Refrigerant type

Symbols 1 indicate the following:
- Possible dangers
- The need to have service work carried out at a qualified specialist workshop only

Vehicle dimensions
The heights specified may vary as a result of the following factors:
- Tires
- Load
- Condition of the suspension
- Optional equipment

Display messages

Introduction

Information about display messages
Display messages appear on the multifunction display.

Display messages with graphical symbols are simplified in the Operator’s Manual and may differ from the symbols on the multifunction display. The multifunction display shows high-priority display messages in red. Certain display messages are accompanied by a warning tone.

Please act in accordance with the display messages and follow the additional notes in the Operator’s Manual.

For some display messages, a symbol will also be shown:
- ① Further information
- ② Hide display message

With the left-hand Touch Control, you can select the respective symbol by swiping to the left or right. Press the ① symbol to show further information on the media display. Press the ② symbol to hide the display message.

You can hide low-priority display messages by pressing the ② back button or the left-hand Touch Control. The display messages will then be stored in the message memory.

Rectify the cause of a display message as quickly as possible.

High-priority display messages cannot be hidden. The multifunction display shows these display messages continuously until the cause of the display message has been rectified.

Calling up saved display messages
On-board computer:

To exit the message memory: press the back button ②.
### Occupant safety

<table>
<thead>
<tr>
<th>Display messages</th>
<th>Possible causes/consequences and Solutions</th>

<tr>
<td><img src="image" alt="Left Side Curtain Airbag Malfunction Service Required" /> (example)</td>
<td>* The corresponding window curtain airbag is malfunctioning (→ page 36).</td>
</tr>
</tbody>
</table>

#### SRS Malfunction Service Required

- **WARNING** Risk of injury due to malfunctions in the restraint system
- Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.
- Have the restraint system checked and repaired immediately at a qualified specialist workshop.

#### Front Left Malfunction Service Required (example)

- **WARNING** Risk of injury due to malfunctions in the restraint system
- Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.
- Have the restraint system checked and repaired immediately at a qualified specialist workshop.

#### Left Side Curtain Airbag Malfunction Service Required (example)

- **WARNING** Risk of injury or fatal injury due to a malfunction in the window curtain airbag
- The window curtain airbag might be triggered unintentionally or might not be triggered at all in the event of an accident.
- Have the window curtain airbag checked and repaired immediately at a qualified specialist workshop.

### Vehicle Ready to Drive

**Display messages**

Vehicle Ready to Drive
Switch the Ignition Off Before Exiting

**Possible causes/consequences and Solutions**

* You are leaving the vehicle when it is in a ready-to-drive state.
  - When you leave the vehicle, switch off the ignition, secure the vehicle against rolling away and take the Smart-Key with you.
  - If you do not leave the vehicle, switch off the electrical consumers, e.g. the seat heating. Otherwise, the 12 V battery may discharge and it will then be possible to start the vehicle only with the aid of a second battery (starting assistance).

### Steering Malfunction

**Display messages**

Steering Malfunction
Increased Physical Effort
See Operator's Manual

**Possible causes/consequences and Solutions**

* The power steering assistance is malfunctioning.

⚠️ **WARNING** Risk of an accident due to altered steering characteristics

If the power assistance of the steering fails partially or completely, you will need to use more force to steer.
  - If safe steering is possible, drive on carefully.
  - Visit or consult a qualified specialist workshop immediately.

### Steering Malfunction Stop

**Display messages**

Steering Malfunction Stop
Immediately See Operator’s Manual

**Possible causes/consequences and Solutions**

* The steering is malfunctioning. Steering capability is significantly impaired.

⚠️ **WARNING** Risk of accident if steering capability is impaired

If the steering does not function as intended, the vehicle’s operating safety is jeopardized.

* The yellow \( \square \) indicator lamp is lit. The electric parking brake is malfunctioning.

**To apply:**
- Switch the ignition off and switch it back on.
- Apply the electric parking brake manually (→ page 179).

If it is not possible to apply the electric parking brake:
- Consult a qualified specialist workshop.
- Where necessary, also secure the parked vehicle against rolling away.

* The yellow \( \square \) indicator lamp and the red \( \square \) (USA only) or \( \square \) (Canada only) indicator lamp are lit. The electric parking brake is malfunctioning.

**To release:**
- Switch the ignition off and switch it back on.
- Release the electric parking brake manually (→ page 179).
- or
- Release the electric parking brake automatically (→ page 179).

If it is still not possible to release the electric parking brake:
- Do not continue driving. Consult a qualified specialist workshop.

Please Wait Charging 48 V Battery…

* The 48 V battery is discharged. You have switched on the ignition while the 12 V battery was being charged with a suitable charger or while another vehicle was providing starting assistance.

The discharged 48 V battery is charged automatically via the voltage converter. After a few minutes, the Engine Can Now Be Started display message will be shown on the multifunction display.

► Start the engine.
► Drive the vehicle for a while to charge the 12 V battery and the 48 V battery after disconnecting the charger from the vehicle.

If the Engine Can Now Be Started display message does not appear after a few minutes:

► Try to start the engine again.
► If the engine does not start, consult a qualified specialist workshop.

Cannot Start Engine See Operator’s Manual

* The charge level of the 48 V battery is too low. You can no longer start the engine.

► Switch off electrical consumers that are not required.
► Connect a suitable charger approved for Mercedes-Benz with sufficient charge output to the jump-start connection point of the 12 V battery (→ page 311).

The 48 V battery is charged via the voltage converter in the vehicle.

Engine Can Now Be Started

* The 48 V battery has been charged automatically via the voltage converter.

► Start the engine and drive the vehicle for a while to charge the 12 V battery and the 48 V battery.

#### Warning and indicator lamps

**Overview of indicator and warning lamps**

Some systems will perform a self-test when the ignition is switched on. Some indicator and warning lamps may briefly light up or flash. This behavior is non-critical. These indicator and warning lamps indicate a malfunction only if they light up or flash after the engine has been started or during a journey.

- Display message only for certain engines: The oil pressure is too low.
- Engine damage caused by driving with insufficient oil pressure
- Avoid driving with insufficient oil pressure.
- Stop the vehicle immediately in accordance with the traffic conditions. Do not continue driving.
- Consult a qualified specialist workshop.

- Consult a qualified specialist workshop.
Depending on the display setting, the positions of the indicator lamps on the Instrument Display may differ from the example shown.

**Indicator and warning lamps:**

- Restraint system (→ page 416)
- Seat belt (→ page 416)
- Power steering (→ page 417)

### Occupant safety

<table>
<thead>
<tr>
<th>Warning/indicator lamp</th>
<th>Possible causes/consequences and <strong>Solutions</strong></th>
</tr>
</thead>
</table>
| Restraint system warning lamp | * The red restraint system warning lamp is lit while the engine is running. The restraint system is malfunctioning (→ page 36).  
  
  **WARNING** Risk of injury due to malfunctions in the restraint system  
  Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.  
  ▶ Have the restraint system checked and repaired immediately at a qualified specialist workshop.  
  ▶ Drive on carefully.  
  ▶ Note the messages on the multifunction display.  
  ▶ Consult a qualified specialist workshop immediately. |
| Seat belt warning lamp flashes | * The red seat belt warning lamp flashes and an intermittent warning tone sounds. The driver or front passenger has not fastened his/her seat belt while the vehicle is in motion.  
  ▶ Fasten your seat belt (→ page 40).  
  There are objects on the front passenger seat.  
  ▶ Remove the objects from the front passenger seat. |
### Seat Belt Warning Lamp

- **Warning:** The red seat belt warning lamp lights up for six seconds once the engine has started.
- **Possible Causes/Consequences:** In addition, an intermittent warning tone may sound.
- **Solution:** The red seat belt warning lamp reminds the driver and front passenger to fasten their seat belts.
  - Fasten your seat belt (→ page 40).
- **Solutions:** If you have placed objects on the front passenger seat, the red seat belt warning lamp may remain lit.

### Power Steering Warning Lamp (Red)

- **Warning:** The red power steering system warning lamp is lit while the engine is running.
- **Possible Causes/Consequences:** The power assistance or the steering itself is malfunctioning.
- **Solutions:** Risk of accident if steering capability is impaired
  - If the steering does not function as intended, the vehicle's operating safety is jeopardized.
  - Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
  - Consult a qualified specialist workshop.
  - Note the messages on the multifunction display.
### Engine

<table>
<thead>
<tr>
<th>Warning/indicator lamp</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| Coolant warning lamp (red) | * The red coolant warning lamp is lit while the engine is running. Possible causes:  
  - The temperature sensor is malfunctioning  
  - The coolant level is too low  
  - The air supply to the radiator is obstructed  
  - The radiator fan is faulty  
  - The engine coolant pump is faulty  
  If there is an additional warning tone, the coolant temperature has exceeded the maximum permissible temperature.  |

⚠️ **WARNING** Danger of burns when opening the hood

If you open the hood when the engine has overheated or during a fire in the engine compartment, you could come into contact with hot gases or other escaping operating fluids.

- Before opening the hood, allow the engine to cool down.
- In the event of a fire in the engine compartment, keep the hood closed and call the fire service.

- Stop the vehicle immediately in accordance with the traffic conditions and switch off the engine. Do not continue driving under any circumstances.
- Note the messages on the multifunction display.
### Warning/indicator lamp  |  Possible causes/consequences and Solutions  
--- | ---
If the coolant temperature display is at the lower end of the temperature scale:  
- Consult a qualified specialist workshop.
If the coolant temperature display is at the upper end of the temperature scale:  
- Exit the vehicle and keep a safe distance from it until the engine has cooled down.
- Check the coolant level (→ page 291).
- Make sure that the air supply to the radiator is not obstructed.
- Avoiding high loads on the engine, drive to the nearest qualified specialist workshop. In doing so, ensure that the coolant temperature display remains below the red area.

* The yellow coolant warning lamp is lit while the engine is running.  
  Possible causes:
  - The temperature sensor is malfunctioning
  - The charge air, transmission oil or battery cooling is faulty
  - Avoiding high loads on the engine, drive to the nearest qualified specialist workshop.

* The yellow Check Engine warning lamp is lit while the engine is running.  
  A malfunction has occurred in the engine, the exhaust system or the fuel system.  
  The emission limit values may be exceeded and the engine may be in emergency mode.  
  In some states, legal requirements stipulate that you must immediately consult a qualified specialist workshop as soon as the yellow Check Engine warning lamp lights up.

▲ Drive on carefully.  
▲ Have ESP® checked at a qualified specialist workshop. |
| ESP® OFF warning lamp | * The yellow ESP® OFF warning lamp is lit while the engine is running. ESP® is deactivated.  
Other driving systems and driving safety systems may also be inoperative.  

⚠️ **WARNING** Risk of skidding when driving with ESP® deactivated  

ESP® does not act to stabilize the vehicle. The availability of further driving safety systems is also limited.  
▲ Drive on carefully.  
▲ Deactivate ESP® only for as long as the situation requires. |
### Tire pressure monitor

<table>
<thead>
<tr>
<th>Warning/indicator lamp</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Tire pressure monitoring system warning lamp flashes" /></td>
<td><em>The yellow tire pressure monitor warning lamp (pressure loss/malfunction) flashes for approximately one minute and then remains lit. The tire pressure monitor is malfunctioning.</em></td>
</tr>
</tbody>
</table>

**WARNING** There is a risk of an accident if the tire pressure monitoring system is malfunctioning

The tire pressure monitoring system cannot issue a warning if there is pressure loss in one or more of the tires. Tires with insufficient tire pressure may impair the driving characteristics as well as steering and braking.

➤ Have the tire pressure monitoring system checked at a qualified specialist workshop.
### Warning/indicator lamp

<table>
<thead>
<tr>
<th>Tire pressure monitoring system warning lamp lights up</th>
</tr>
</thead>
</table>

*The yellow tire pressure monitoring system warning lamp (pressure loss/malfunction) is lit. The tire pressure monitoring system has detected tire pressure loss in at least one of the tires.*

**WARNING** Risk of an accident due to insufficient tire pressure

- The tires can burst.
- The tires can wear excessively and/or unevenly.
- The driving characteristics as well as the steering and braking may be greatly impaired.

You could then lose control of the vehicle.

- Observe the recommended tire pressures.
- Adjust the tire pressure if necessary.

- Stop the vehicle in accordance with the traffic conditions.
- Check the tire pressure and the tires.
