Familiarize yourself with the contents of the Operator’s Manual directly via the vehicle’s multimedia system (menu item “Vehicle information”). Start with the quick guide or broaden your knowledge with practical tips.

Here you can find comprehensive information about operating your vehicle and about services and guarantees in printed form.
Front passenger air bag warning

WARNING Risk of injury or fatal injuries if the front passenger air bag is enabled.

If the front passenger air bag is enabled, a child on the front passenger seat may be struck by the front passenger air bag in the event of an accident.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIR BAG. This can result in the DEATH of or SERIOUS INJURY to the CHILD.

Observe the chapter “Children in the vehicle”.

Air bag warning sticker for USA and Canada

As at 25.02.22
Welcome to the world of Mercedes-AMG

Before your first drive, please read this Operator's Manual carefully and familiarize yourself with your vehicle. For your own safety and a longer operating lifespan of the vehicle, observe the instructions and warning notices in this Operator's Manual. Disregarding them may lead to personal injury or damage to the vehicle.

Damage to the vehicle resulting from failure to observe the instructions is not covered by the Mercedes-Benz limited warranty.

The standard equipment and product description of your vehicle may vary and depends on the following factors:

- Model
- Order
- National version
- Availability

Your vehicle may therefore differ from that in the descriptions and illustrations in individual cases.

Mercedes-AMG reserves the right to introduce changes in the following areas:

- Design
- Equipment
- Technical features

The following documents are integral parts of the vehicle:

- Printed Operator's Manual
- Service booklet
- Supplements relating to specific equipment
- Supplementary documents

Keep these documents in the vehicle at all times. Ensure that all documents are in the vehicle or passed on in the event of sale or rental.

Mercedes-Benz USA, LLC
Mercedes-Benz Canada, Inc.

In this Operator’s Manual, you will find the following symbols:

⚠️ **WARNING** Danger due to failure to observe the warning notices

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

▶️ Observe the warning notices.

💰 **ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes

Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.

▶️ Observe environmental notes.

⚠️ **NOTE** Damage to property due to failure to observe notes on material damage

Notes on material damage inform you of risks which may lead to your vehicle being damaged.

▶️ Observe notes on material damage.

These symbols indicate useful instructions or further information that could be helpful to you.

The Digital Operator's Manual describes the functions and operation of the vehicle and the multimedia system.

Select one of the following menu items in the Digital Operator's Manual:

- **Search**: search for keywords in order to find quick answers to questions about the operation of the vehicle.
- **Quick start**: here is where you find the first steps towards setting up your vehicle.
- **Tips**: find information that prepares you for certain everyday situations with your vehicle.
- **Animations**: watch animations of the vehicle functions.
- **Messages**: receive additional information about the messages on the Instrument Display.
- **Bookmarks**: gain access to your personally saved bookmarks.

Additional methods of calling up the Digital Operator's Manual:
**Direct access:** open the required content in the Digital Operator’s Manual by pressing and holding an entry on the tab bar in the multimedia system:

**Instrument Display:** call up brief information as display messages in the instrument cluster

**Voice Control System:** call up via the voice control system

For safety reasons, the Digital Operator’s Manual is deactivated while driving.
Protection of the environment

**ENVIRONMENTAL NOTE** Environmental damage due to operating conditions and personal driving style

The pollutant emission of the vehicle is directly related to the way you operate the vehicle.

Operate your vehicle in an environmentally responsible manner to help protect the environment. Please observe the following recommendations on operating conditions and personal driving style.

**Operating conditions:**
- Make sure that the tire pressure is correct.
- Do not carry any unnecessary weight (e.g. roof luggage racks once you no longer need them).
- Adhere to the service intervals. A regularly serviced vehicle will contribute to environmental protection.
- Always have maintenance work carried out at a qualified specialist workshop.

**Personal driving style:**
- Do not depress the accelerator pedal when starting the engine.
- Do not warm up the vehicle while stationary.
- Drive carefully and maintain a suitable distance from the vehicle in front.
- Avoid frequent, sudden acceleration and braking.
- Change gear in good time and use each gear only up to \( \frac{2}{3} \) of its maximum engine speed.
- Switch off the vehicle in stationary traffic, e.g. by using the ECO start/stop function.
- Drive in a fuel-efficient manner. Observe the ECO display for an economical driving style.

**Environmental issues and recommendations:**
It is recommended that you re-use or recycle materials instead of just disposing of them. The relevant environmental guidelines and regulations serve to protect the environment and must be strictly observed.

**Mercedes-Benz GenuineParts**

**ENVIRONMENTAL NOTE** Environmental damage due to not using recycled reconditioned components

Mercedes-Benz AG offers recycled reconditioned components and parts with the same quality as new parts. The same entitlement from the Limited Warranty is valid as for new parts.

- Use recycled reconditioned components and parts from Mercedes-Benz AG.
NOTE Impairment of the operating efficiency of the restraint systems from installing accessory parts or from repairs or welding

Air bags and Emergency Tensioning Devices, as well as control units and sensors for the restraint systems, may be installed in the following areas of your vehicle:
- doors
- door pillars
- sill
- seats
- cockpit
- instrument display
- center console
- lateral roof frame

Do not install accessory parts such as audio systems in these areas.
Do not carry out repairs or welding.
Have accessories retrofitted at a qualified specialist workshop.

You could jeopardize the operating safety of your vehicle if you use parts, tires and wheels as well as accessories relevant to safety that have not been approved by Mercedes-Benz. Safety-critical systems (e.g. the brake system) may malfunction. Use only Mercedes-Benz GenuineParts or parts of equal quality. Use only tires, wheels and accessory parts that have been specifically approved for your vehicle model.

Mercedes-Benz GenuineParts are subject to strict quality inspections. Each part has been specially developed, manufactured or selected for Mercedes-Benz vehicles and adapted to them. Therefore, only Mercedes-Benz GenuineParts should be used.

More than 300,000 different Mercedes-Benz GenuineParts are available for Mercedes-Benz models.

All authorized Mercedes-Benz Service Centers maintain a supply of Mercedes-Benz GenuineParts for necessary service and repair work. In addition, strategically located parts delivery centers provide for quick and reliable parts service.

Always specify the vehicle identification number (VIN) (→ page 351) when ordering Mercedes-Benz GenuineParts.

Operator’s Manual
This Operator’s Manual and the Digital Operator’s Manual in the vehicle describe the following models and the standard and special equipment for your vehicle:
- The models and the standard and special equipment available at the time of this Operator’s Manual going to press.
- The models and the standard and special equipment only available in certain countries.
- The models and the standard and special equipment, which will only be available at a later date.

Note that your vehicle may not have all features described. This is also the case for systems relevant to safety. Therefore, the equipment on your vehicle may differ from that in the descriptions and illustrations.
The original purchase agreement for your vehicle contains a list of the equipment in your vehicle at the time of delivery. Should you have any questions concerning equipment and operation, please consult an authorized Mercedes-Benz Center.

Please bear in mind that all the speed values stated in this Operator’s Manual are approximate and are subject to a certain tolerance. The Operator’s Manual, Supplement, further supplementary documents and Maintenance Booklet are important documents and should be kept in the vehicle.

Mercedes me app

Notes about the on-demand feature

You can also activate various functions (on-demand feature) subsequently via Mercedes me after purchasing your vehicle. Information is available at any authorized Mercedes-Benz Service Center.

Activating on-demand feature using Mercedes me

Requirements
- The vehicle has a wireless connection.
- The vehicle is linked to the Mercedes me user account.

Ordering and activating on-demand feature

- Add the desired on-demand feature for the vehicle to the shopping basket in the Mercedes me Store.
- Complete the order.
  The on-demand feature is activated when operating the vehicle.

Speeding up activation

- Switch the vehicle off and lock it.
- Unlock the vehicle after about two minutes and switch on the vehicle.
  The on-demand feature has been activated.
  For some features, a notification also appears in the vehicle’s multimedia system.

If the activation was not successful, repeat the process.

Service and vehicle operation

Vehicle operation outside the USA or Canada

When you are abroad with your vehicle, observe the following points:
- service points or replacement parts may not be available immediately.
- unleaded fuel may not be available for vehicles with a catalytic converter. Leaded fuel may cause damage to the catalytic converter.
- the fuel may have an extremely low octane number. Unsuitable fuel can cause engine damage.

Some Mercedes-Benz models are available in Europe through our European Delivery Program. For more information, please consult an authorized Mercedes-Benz Service Center, or write to one of the following addresses:
in the USA:
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes-Benz Drive
Sandy Springs, GA 30328
in Canada:
Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9

Maintenance
Your customer advisor confirms the service in the service report.

Roadside Assistance
The Mercedes-Benz Roadside Assistance Program offers technical help in the case of a breakdown. Your calls to the toll-free Roadside Assistance Hotline are answered by our agents 24 hours a day, 365 days a year.
1-800-FOR-MERCedes (1-800-367-6372) (USA)
1-800-387-0100 (Canada)
You can find further information in the Mercedes-Benz Roadside Assistance Program brochure (USA) or the "Roadside Assistance" section in the Service and Warranty booklet (Canada). You will find both in the vehicle document wallet.

Change of address or change of ownership
In the event of a change of address, please send us the "Notification of address change" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) on the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service (Canada) on 1-800-387-0100. We can then reach you in a timely fashion, if necessary.
If you sell your Mercedes, please leave all literature in the vehicle so that it is available to the next owner. If you have purchased a used vehicle, please send us the "Notice of Purchase of Used Car" in the Service and Guarantee booklet or simply call the Mercedes-Benz Customer Assistance Center (USA) at the hotline number 1-800-FOR-MERCedes (1-800-367-6372) or Customer Service (Canada) at 1-800-387-0100.

Possible danger due to substances hazardous to health
In compliance with Proposition 65 ("Prop65"), the following detachable label has been added to each vehicle sold in California:

Operating safety

⚠️ WARNING Risk of accident due to malfunctions or system failures
If you do not have the prescribed service/maintenance work or any required repairs ca-
ried out, this could result in malfunctions or system failures.

Always have the prescribed service and maintenance work or any required repairs carried out in a qualified specialist workshop.

WARNING Risk of accident or injury due to incorrect modifications on electronic component parts

Modification of electronic components, their software or wiring could impair their function and/or the function of other networked component parts or safety-relevant systems. This can endanger the operating safety of the vehicle.

Never tamper with the wiring and electronic component parts or their software.

You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

Observe the “On-board electronics” section in “Technical data”.

WARNING Risk of fire caused by flammable material on hot exhaust system components

Flammable material such as leaves, grass or twigs may ignite if they come into contact with hot parts of the exhaust system.

- When driving on an unpaved road or off-road, check the vehicle underside regularly.
- In particular, remove trapped plant parts or other flammable material.
- If there is damage, consult a qualified specialist workshop immediately.

NOTE Damage to the vehicle due to driving too fast and due to impacts to the vehicle underbody or suspension components

In the following situations, in particular, there is a risk of damage to the vehicle:

- The vehicle becomes grounded, e.g. on a high curb or an unpaved road
- The vehicle is driven too fast over an obstacle, e.g. a curb, speed bump or pot-hole
- A heavy object strikes the underbody or suspension components

In situations such as these, damage to the body, underbody, suspension components, wheels or tires may not be visible. Components damaged in this way can unexpectedly fail or, in the case of an accident, may no longer absorb the resulting force as intended.

If the underbody paneling is damaged, flammable materials such as leaves, grass or twigs can collect between the underbody and the
underbody paneling. These materials may ignite if they come into contact with hot parts of the exhaust system.

- Have the vehicle checked and repaired immediately at a qualified specialist workshop.
- or
- If driving safety is impaired while continuing your journey, pull over and stop the vehicle immediately, while paying attention to road and traffic conditions, and contact a qualified specialist workshop.

Vehicles with a 48 V on-board electrical system

**DANGER Risk of fatal injury by touching damaged high-voltage components**

Vehicles with a 48 V on-board electrical system contain individual high-voltage components. These high-voltage components are under high voltage.

If you modify component parts of these high-voltage components or touch damaged component parts, you may be electrocuted. High voltage components may be damaged in an accident, although the damage may not be visible.

- Never perform modifications to component parts of high-voltage components.
- Never touch damaged component parts of high-voltage components.
- Never touch component parts of high-voltage components after an accident.

Vehicles with a 48 V on-board electrical system contain high-voltage components. These components are marked with a high-voltage label:

All work on high voltage components must be carried out at a qualified specialist workshop.

**Notes on mounting the license plate on the front license plate holder**

1. **NOTE Malfunctions and system failures due to incorrect mounting of the license plate on the front license plate holder**

If the license plate is incorrectly mounted on the front license plate holder, sensors, cameras or driving and safety systems may malfunction or fail.
Observe the following points when mounting the license plate on the front license plate holder:

- Mount the license plate directly on the license plate holder without advertising media or other holders.
- Mount the license plate so that it does not protrude above or to the side of the license plate adapter.

**Declaration of conformity for vehicle installed radio components**

USA: "Radio based devices of this vehicle comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1) These devices may not cause harmful interference, and 2) These devices must accept any interference, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment."

Canada: "This vehicle contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada’s licence-exempt RSS(s). Operation is subject to the following two conditions: (1) These devices may not cause interference, (2) These devices must accept any interference, including interference that may cause undesired operation of the devices." "Les émetteurs/récepteurs dans cette véhicule sont conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : 1) Ces appareils ne doivent pas produire de brouillage; 2) Ces appareils doivent accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement."

**Diagnostics connection**

The diagnostics connection is a technical interface in the vehicle. It is used, for example, during repair and maintenance work or for reading out vehicle data in a specialist workshop. Diagnostic devices should therefore only be connected in a qualified specialist workshop.

**WARNING Risk of accident due to connecting devices to the diagnostics connection**

If you connect devices to the diagnostics connection of the vehicle, the function of vehicle systems and operating safety may be impaired.

- For safety reasons, we recommend that you use and connect only products approved by an authorized Mercedes-Benz Service Center.

**WARNING Risk of accident due to objects in the driver's footwell**

Objects in the driver's footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.
Stow all objects in the vehicle securely so that they cannot get into the driver’s footwell.

Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.

Do not use loose floor mats and do not place floor mats on top of one another.

**NOTE** Battery discharging from using devices connected to the diagnostics connection

Using devices at the diagnostics connection drains the battery.

- Check the charge level of the battery.
- If the charge level is low, charge the battery, e.g. by driving a considerable distance.

Please also note the information about the 12 V battery and short-distance trips in the "Driving and Parking" chapter (→ page 143).

Connecting and using another device with the diagnostics connection can have the following effects:
- Malfunctions in the vehicle system
- Permanent damage to vehicle components

Please refer to the warranty terms and conditions for this matter.

Moreover, connecting equipment to the diagnostics connection can lead to emissions monitoring information being reset, for example. This may lead to the vehicle failing to meet the requirements of the next emissions inspection during the main inspection.

**Qualified specialist workshop**

An authorized Mercedes-Benz Service Center is a qualified specialist workshop. It has the necessary special skills, tools and qualifications to correctly carry out the work required on your vehicle. This particularly applies to safety-relevant work.

For the following, always have your vehicle checked at an authorized Mercedes-Benz Service Center:

- Safety-relevant work
- Service and maintenance work
- Repair work
- Modifications as well as installations and conversions
- Work on electronic components
• Vehicles with 48 V on-board electrical system: work on the high-voltage component of the 48 V on-board electrical system

Mercedes-AMG recommends a Mercedes-Benz Service Center.

Correct use of the vehicle

If you remove any warning stickers, you or others could fail to recognize certain dangers. Leave warning stickers in position.

Observe the following information in particular when driving your vehicle:

• the safety notes in this Operator’s Manual, vehicle-specific supplements and further supplementary documents
• technical data for the vehicle
• traffic rules and -regulations
• laws and safety standards pertaining to motor vehicles

Notes for persons with electronic medical aids

Mercedes-Benz AG cannot, despite carefully developing vehicle systems, completely rule out the interaction of vehicle systems with electronic medical aids such as cardiac pacemakers.

In addition, there are components installed in the vehicle that, regardless of the operating status of the vehicle, can generate magnetic fields on a par with permanent magnets. These fields can be found, for example, in the area around the multi-media and sound system or also in the area of the seats, depending on the vehicle equipment.

For this reason, the following can occur in isolated cases, depending on the aids used:

• Medical aids malfunctioning
• Adverse health effects

Observe the notes and warnings of the manufacturer of the medical aids; if in doubt, contact the device manufacturer and/or your doctor. If there is continuing uncertainty concerning the possibility of medical aids malfunctioning, Mercedes-Benz AG recommends using only few electrical vehicle systems and/or maintaining a distance from the components.

Only have repairs and maintenance work in the area of the following components carried out at a qualified specialist workshop:

• Vehicle components carrying live voltage
• Transmission antenna
• Multimedia system and sound system

If you have any queries or suggestions, consult a qualified specialist workshop.

Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and rectified. If the problem is not resolved to your satisfaction, please discuss the problem again with an authorized Mercedes-Benz Center or, if necessary, contact us at one of the following addresses:

In the USA:
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to https://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590, USA.

You can also obtain other information about motor vehicle safety from https://www.safercar.gov.

If Transport Canada received similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer, or Mercedes-Benz Canada Inc.

To contact Transport Canada, you may call the Defect Investigations and Recalls Division toll-free in Canada at 1-800-333-0510 or 819-994-3328 in the Gatineau-Ottawa area or internationally; may also go to the following websites for more information:

- English: https://www.tc.gc.ca/recalls
- French: https://www.tc.gc.ca/rappels

**Limited Warranty**

**NOTE** Damage to the vehicle arising from violation of these operating instructions.

Damage to the vehicle can arise from violation of these operating instructions.
This damage is not covered either by the Mercedes-Benz implied warranty or by the New- or Used-Vehicle Warranty.

Follow the instructions in these operating instructions on proper operation of your vehicle as well as on possible vehicle damage.

### QR code for rescue card
QR codes are attached in the fuel filler flap and on the opposite side on the B-pillar. In the event of an accident, rescue services can use the QR code to quickly find the appropriate rescue card for your vehicle. The current rescue card contains the most important information about your vehicle (e.g. the routing of the electric lines) in compact form.

Further information can be obtained at https://www.mercedes-benz.de/qr-code

### Data storage
#### Data processing in the vehicle
**Electronic control units**
Electronic control units are installed in your vehicle. Control units process data which, for example, they receive from vehicle sensors, generate themselves or exchange between themselves. Some control units are required for the safe operation of your vehicle, some assist you when driving, such as driver assistance systems, while others enable convenience or infotainment functions.

The following provides you with general information regarding data processing in the vehicle. Additional information regarding exactly which data in your vehicle are collected, saved and transmitted to third parties, and for what purpose, can be found in the information directly related to the functional characteristics in question in their respective operating instructions. This information is also available online and, depending on the vehicle equipment, digitally.

### Personal data
Every vehicle is identified by a unique vehicle identification number. Depending on the country, this vehicle identification number can be used by, for example, governmental authorities to determine the identity of the owner. There are other possibilities to use data collected from the vehicle to identify the owner or driver, such as the license plate number.

Therefore, data generated or processed by control units may be attributable to a person or, under certain conditions, become attributable to a person. Depending on which vehicle data are available, it may be possible to make inferences about, for example, your driving behavior, your location, your route or your use patterns.

### Legal requirements regarding the disclosure of data
If legally required to do so, manufacturers are, in individual cases, legally obliged to provide governmental entities, upon request and to the extent required, data stored by the manufacturer. For example, this may be the case during the investigation of a criminal offense.
Governmental entities are themselves, in individual cases and within the applicable legal framework, authorized to read out data from the vehicle. In the case of an accident, information that can help with an investigation can, therefore, be taken from the air bag control unit, for example.

**Operational data in the vehicle**

This is data regarding the operation of the vehicle, which have been processed by control units. This includes the following data, for example:

- vehicle status information such as the speed, longitudinal acceleration, lateral acceleration, number of wheel revolutions or the fastened seat belts display
- ambient conditions, such as temperature, rain sensor or distance sensor

Generally, the use of these data is temporary; they will not be stored beyond the period of operation and will only be processed within the vehicle itself. Control units often contain data memories for vehicle keys, for example. Their use permits the temporary or permanent documentation of technical information about the vehicle’s operating state, component loads, maintenance requirements and technical events or malfunctions. Depending on the vehicle equipment, the following data are stored:

- operating status of system components, such as fill levels, tire pressure or battery status
- malfunctions or faults in important system components, such as lights or brakes
- system reactions in special driving situations, such as air bag deployment or the intervention of stability control systems
- information on events leading to vehicle damage

In certain cases, it may be required to store data that would have otherwise been used only temporarily. This may be the case if the vehicle has detected a malfunction, for example. If you use services, such as repair services and maintenance work, stored operational data as well as the vehicle identification number can be read out and used. They can be read out by service network employees, such as workshops and manufacturers or third parties, such as breakdown services. The same is true in the case of warranty claims and quality assurance measures. In general, the readout is performed via the legally prescribed port for the diagnostics connection in the vehicle. The operational data that are read out document technical states of the vehicle or of individual components and assist in the diagnosis of malfunctions, compliance with warranty obligations and quality improvement. To that end, these data, in particular information about component loads, technical events, malfunctions and other faults may be transmitted along with the vehicle identification number to the manufacturer. Furthermore, the manufacturer is subject to product liability. For this reason the manufacturer also uses operational data from the vehicle, for example, for recalls. These data can also be used to examine the customer’s warranty and guarantee claims.

Malfunction memories in the vehicle can be reset by a service outlet or at your request as part of repair or maintenance work.
Convenience and infotainment functions
You can store convenience settings and individual settings in the vehicle and change or reset them at any time.
Depending on the vehicle equipment, this includes the following settings, for example:
- seat and steering wheel positions
- suspension and climate control settings
- individual settings, such as interior lighting
Depending on the selected equipment, you can import data into vehicle infotainment functions yourself.
Depending on the vehicle equipment, this includes the following data, for example:
- multimedia data, such as music, films or photos for playback in an integrated multimedia system
- address book data for use in connection with an integrated hands-free system or an integrated navigation system
- entered navigation destinations
- data about the use of Internet services
These data for convenience and infotainment functions may be saved locally in the vehicle or they may be located on a device which you have connected to the vehicle, such as a smartphone, USB flash drive or MP3 player. If you have entered these data yourself, you can delete them at any time.
This data is transmitted from the vehicle to third parties only at your request. This applies, in particular, when you use online services in accordance with the settings that you have selected.
Smartphone integration (e.g. Android Auto or Apple CarPlay®)
If your vehicle is accordingly equipped, you can connect your smartphone or another mobile end device to the vehicle. You can then control them by means of the control elements integrated in the vehicle. Images and audio from the smartphone can be output via the multimedia system. Certain information is simultaneously transferred to your smartphone. Depending on the type and integration, this includes position data, day/night mode and other general vehicle statuses. For more information please consult the Operator’s Manual of the vehicle/infotainment system.
This integration allows the use of selected smartphone apps, such as navigation or music player apps. There is no further interaction between the smartphone and the vehicle; in particular, vehicle data is not directly accessible. The type of additional data processing is determined by the provider of the app being used. Which settings you can make, if any, depends on the specific app and the operating system of your smartphone.

Online services
Wireless network connection
If your vehicle has a wireless network connection, it enables data to be exchanged between your vehicle and additional systems. The wireless network connection is made possible by the vehicle’s own transmitter and receiver or by a mobile end device that you have brought into the vehicle, for example, a smartphone. Online functions can be used via the wireless network connection. This includes online services and applications/apps provided to you by the manufacturer or by other providers.
Manufacturer’s services
Regarding the manufacturer’s online services, the individual functions are described by the manufacturer in a suitable place, for example, in the Operator's Manual or on the manufacturer’s website, where the relevant data protection information is also given. Personal data may be used for the provision of online services. Data is exchanged via a secure connection, such as the manufacturer’s designated IT systems. Any personal data which is collected, processed and used, other than for the provision of services, is done so exclusively on the basis of legal permission. This is the case, for example, for a legally prescribed emergency call system, a contractual agreement or when consent has been given.

You can have services and functions, some of which are subject to a fee, activated or deactivated. This excludes legally prescribed functions and services, such as an emergency call system.

Third-party services
If you use online services from other providers (third parties), these services are the responsibility of the provider in question and subject to that provider’s data protection conditions and terms of use. As a general rule, the manufacturer has no influence on the content exchanged.

For this reason, when services are provided by third parties, please ask the service provider in question for information about the type, extent and purpose of the collection and use of personal data.

Data protection rights
Depending on your country or the equipment and range of functions of your vehicle as well as the services you use and the services on offer, you are entitled to different data protection rights. Further information on data protection and your data protection rights can either be found on the manufacturer’s website or you will receive this information as part of the various services and service offers. There you will also find the contact information for the manufacturer and its data protection officers.

At a workshop, for example, with the support of a specialist and possibly for a fee, you can have data read out which is stored only locally in the vehicle.

MBUX multimedia system/Mercedes me connect
If the vehicle is equipped with the MBUX multimedia system or Mercedes me connect, additional data about the vehicle’s operation, the use of the vehicle in certain situations, and the location of the vehicle may be compiled by the MBUX multimedia system or Mercedes me connect.

For additional information, please refer to the "MBUX multimedia system" section and/or the Mercedes me connect Terms and Conditions.

Event Data Recorder
USA only:
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.
The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and front passenger seat belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

This data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data is recorded by your vehicle only if a non-trivial crash situation occurs; no data is recorded by the EDR under normal driving conditions and no personal data (e.g. name, gender, age and accident location) is recorded. However, other parties, such as law enforcement, could combine EDR data with the type of personally identifying data routinely acquired during a crash investigation.

Access to the vehicle and/or the EDR is needed to read data that is recorded by the EDR, and special equipment is required. In addition to the vehicle manufacturer, other parties that have the special equipment, such as law enforcement, can read the information by accessing the vehicle or the EDR.

EDR data may be used in civil and criminal matters as a tool in accident reconstruction, accident claims and vehicle safety. Since the Crash Data Retrieval (CDR) tool that is used to extract data from the EDR is commercially available, Mercedes-Benz USA, LLC (“MBUSA”) expressly disclaims any and all liability arising from the extraction of this information by unauthorized Mercedes-Benz personnel.

MBUSA will not share EDR data with others without the consent of the vehicle owner or, if the vehicle is leased, without the consent of the lessee. Exceptions to this representation include responses to subpoenas by law enforcement; by federal, state or local government; in connection with or arising out of litigation involving MBUSA or its subsidiaries and affiliates; or, as required by law.

Warning: the EDR is a component of the Restraint System Module. Tampering with, altering, modifying or removing the EDR component may result in a malfunction of the Restraint System Module and other systems.

State laws or regulations regarding EDRs that conflict with federal regulation are pre-empted. This means that in the event of such conflict, the federal regulation governs. As of December 2016, 17 states have enacted laws relating to EDRs.

Copyright

The restraint system includes the following components:
- Seat belt system
- Air bags
- Child restraint system
- Child seat anchors

The restraint system can help prevent the vehicle occupants from coming into contact with parts of the vehicle interior in the event of an accident. In the event of an accident, the restraint system can also reduce the forces to which the vehicle occupants are subjected.

A seat belt can only provide the best level of protection if it is worn correctly. Depending on the detected accident situation, Emergency Tensioning Devices and/or air bags supplement the protection offered by a correctly worn seat belt. Emergency Tensioning Devices and/or air bags are not deployed in every accident.

In order for the restraint system to provide the intended level of protection, each vehicle occupant must observe the following information:
- Fasten seat belts correctly.
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.
- Always secure persons under 5 ft (1.50 m) tall in an additional restraint system suitable for Mercedes-Benz vehicles.

However, no system available today can completely eliminate injuries and fatalities in every accident situation. In particular, the seat belt and air bag generally do not protect against objects penetrating the vehicle from the outside. It is also not possible to completely rule out the risk of injury caused by the air bag deploying.

<table>

</table>

If it is necessary to modify the vehicle to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center for details.

USA only: for details, contact our Customer Assistance Center on 1-800-FOR-MERCEDES (1-800-367-6372).
Restraint system functionality

When the vehicle is switched on, a self-test is performed, during which the restraint system warning lamp lights up. It goes out no later than a few seconds after the vehicle is started. The components of the restraint system are then functional.

Malfunctioning restraint system

A malfunction has occurred in the restraint system if:

- the restraint system warning lamp does not light up when the vehicle is switched on
- the restraint system warning lamp lights up continuously or repeatedly during a journey

**WARNING** Risk of injury due to malfunctions in the restraint system

Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.

Have the restraint system checked and repaired immediately at a qualified specialist workshop.

Function of the restraint system in an accident

How the restraint system works depends on the severity of the impact detected and the apparent type of accident:

- Frontal impact
- Rear impact
- Side impact
- Rollover

The activation thresholds for the components of the restraint system are determined based on the evaluation of the sensor values measured at various points in the vehicle. This process is pre-emptive in nature. The triggering/deployment of the components of the restraint system must take place in good time at the start of the collision. Factors which can only be seen and measured after a collision has occurred cannot play a decisive role in air bag deployment. Nor do they provide an indication of air bag deployment.

The vehicle may be deformed significantly without an air bag being deployed. This is the case if only parts which are relatively easily deformed are affected and the rate of vehicle deceleration is not high. Conversely, an air bag may be deployed even though the vehicle suffers only minor deformation. If very rigid vehicle parts such as longitudinal members are hit, this may result in sufficiently high levels of vehicle deceleration.

Depending on the detected deployment situation, the components of the restraint system can be activated or deployed independently of each other:

- Emergency Tensioning Device: frontal impact, rear impact, side impact, rollover
- Driver’s air bag, front passenger air bag: frontal impact
- Knee bag: frontal impact
- Side impact air bag: side impact
- Window curtain air bag: side impact, rollover, frontal impact
• PRE-SAFE® Impulse Side: side impact

Only when the PASSENGER AIR BAG OFF indicator lamp is off can the front passenger air bag deploy in the event of an accident. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger air bag is correct (→ page 49).

⚠️ WARNING Risk of burns from hot air bag components

The air bag parts are hot after an air bag has been deployed.
- Do not touch the air bag parts.
- Have a deployed air bag replaced at a qualified specialist workshop as soon as possible.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident. Take this into account, particularly if an Emergency Tensioning Device is triggered or an air bag deployed.

If the Emergency Tensioning Devices are triggered or an air bag is deployed, you will hear a bang, and a small amount of powder may also be released:
- The bang will not generally affect your hearing.
- In general, the powder released is not hazardous to health but may cause short-term breathing difficulties to persons suffering from asthma or other pulmonary conditions.

Provided it is safe to do so, leave the vehicle immediately or open the window in order to prevent breathing difficulties.

Air bags and pyrotechnic Emergency Tensioning Devices contain perchlorate material, which may require special handling or environmental protection measures. National guidelines regarding waste disposal must be observed. In California, see https://dtsc.ca.gov/. Using the search function, you will find information on perchlorate, for example.

Seat belts

Protection provided by the seat belt

Always fasten your seat belt correctly before starting a journey. A seat belt can provide the best level of protection only if it is worn correctly.

⚠️ WARNING Risk of injury or death due to incorrectly fastened seat belt

If the seat belt is not worn correctly, it cannot perform its intended protective function.

In addition, an incorrectly fastened seat belt can also cause injuries, for example, in the event of an accident or when braking or changing direction suddenly.

- Always ensure that all vehicle occupants have their seat belts fastened correctly and are sitting properly.

Always observe the instructions about the correct driver’s seat position and adjusting the seat (→ page 90).
In order for the correctly worn seat belt to provide the intended level of protection, each vehicle occupant must observe the following information:

- The seat belt must not be twisted and must fit tightly and snugly across the body.
- The seat belt must be routed across the center of the shoulder and as low down across the hips as possible.
- The shoulder section of the seat belt should not touch your neck nor be routed under your arm or behind your back.
- Avoid wearing bulky clothing, e.g. a winter coat.
- Push the lap belt down as far as possible across your hips and pull tight with the shoulder section of the belt. Never route the lap belt across your abdomen. Pregnant women must also take particular care with this.
- Never route the seat belt across sharp, pointed, abrasive or fragile objects.
- Only one person should use each seat belt at any one time.
- Never secure objects with a seat belt if the seat belt is also being used by one of the vehicle's occupants.
  Also ensure that no objects, e.g. a cushion, are ever placed between a person and the seat.
- The seat belts on the following seats are equipped with a special seat belt retractor:
  - Front passenger seat
  - Rear passenger compartment seats
  Activate or deactivate the special seat belt retractor of the seat belt (→ page 57).
  If children are traveling in the vehicle, be sure to observe the instructions and safety notes on "Children in the vehicle" (→ page 54).
  Always observe the instructions for loading the vehicle when securing objects, luggage or loads (→ page 103).

Limitations of the protection provided by the seat belt

⚠️ WARNING Risk of injury or death due to an incorrect seat position

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position. In particular, you could slip beneath the seat belt and become injured.
- Adjust the seat properly before beginning your journey.
- Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.

⚠️ WARNING Risk of injury or death when additional restraint systems are not used for persons with a smaller stature

Persons under 5 ft (1.50 m) tall cannot wear the seat belt correctly without a suitable additional restraint system.
Always secure persons under 5 ft (1.50 m) tall in a suitable restraint system.

**WARNING** Danger of injury or death due to blocked seat belt anchorage

The restraint effect of the seat belt is impaired if objects between the front seat and the door are blocking the movable seat belt anchorage on the front seat.

Before starting a journey, make sure that there are no objects between the front seat and the door.

**WARNING** Risk of injury or death due to damaged or modified seat belts

Seat belts cannot provide protection in the following situations:

- The seat belt is damaged, has been modified, is extremely dirty, bleached or dyed
- The seat belt buckle is damaged or extremely dirty
- Modifications have been made to the Emergency Tensioning Device, seat belt anchorage or seat belt retractor

Seat belts may sustain non-visible damage in an accident, e.g. due to glass splinters. Modified or damaged seat belts could tear or fail in the event of an accident, for example. Modified Emergency Tensioning Devices could accidentally trigger or fail to function as intended.

Never modify the seat belt system, for example the seat belt, seat belt buckle, Emergency Tensioning Device, seat belt anchorage and seat belt retractor.

Make sure that the seat belts are undamaged, not worn and clean.

Always have the seat belts checked immediately after an accident at a qualified specialist workshop.

Only use seat belts which have been approved for your vehicle by Mercedes-Benz.

The AMG sports seat and the AMG Performance seat are designed for the standard three-point seat belt. If you install a different multipoint seat belt, for example a four-point seat belt, the restraint system cannot provide the intended level of protection.

Depending on the type of vehicle, there may be openings in the seat backrest. These openings have no function.

**WARNING** Risk of injury or fatal injury due to modified seat belt systems

If you feed seat belts through the opening in the seat backrest, the seat backrest may be damaged or may even break in the event of an accident.

- Only use the standard three-point seat belt.
- Never modify the seat belt system.
WARNING Risk of injury or death from deployed pyrotechnic Emergency Tensioning Devices

Pyrotechnic Emergency Tensioning Devices that have been deployed are no longer operational and are unable to perform their intended protective function.

Therefore, have deployed pyrotechnic Emergency Tensioning Devices immediately replaced at a qualified specialist workshop.

Mercedes-Benz recommends that you have the vehicle towed to a qualified specialist workshop after an accident.

NOTE Damage caused by trapping the seat belt

If an unused seat belt is not fully retracted, it may become trapped in the door or in the seat mechanism.

Always ensure that an unused seat belt is fully retracted.

Fastening and adjusting seat belts

If the seat belt is pulled quickly or sharply, the seat belt retractor locks. The seat belt strap cannot be pulled out any further.

To adjust the seat belt height: press button 1 on the seat belt outlet and slide the seat belt outlet to the desired position.

To engage the seat belt outlet: release button 2 and ensure that the seat belt outlet engages.

A seat belt can only provide the best level of protection if it is worn correctly. Observe the notes on fastening the seat belt (→ page 40).

NOTE Deployment of components of the restraint system when the front passenger seat is unoccupied and a seat belt is buckled

When the front passenger seat is unoccupied and the seat belt tongue of the seat belt is engaged in the seat belt buckle, components of the restraint system may deploy unnecessarily on the front passenger side, e.g. the Emergency Tensioning Device.

Only buckle the seat belts as intended.

Observe the notes on stowage areas (→ page 103).
Information on installing a child restraint system and on children traveling in the vehicle can be found in the "Children in the vehicle" section (→ page 57).

**Seat belt adjustment function**

Vehicles with PRE-SAFE®: after a front seat belt has been fastened, the automatic seat belt adjustment may apply a certain tightening force. Do not hold the seat belt tightly while it is adjusting.

You can activate and deactivate the seat belt adjustment function using the multimedia system (→ page 44).

**Activating/deactivating seat belt adjustment via the multimedia system**

Multimedia system:

- ➤ ➤ Settings ➤ Vehicle
- ➤ Activate or deactivate Belt Adjustment.

**Releasing seat belts**

- Press the release button in the seat belt buckle and guide the seat belt back with the seat belt tongue.

**Seat belt warning function for the driver and front passenger**

The seat belt warning lamp in the Instrument Display is a reminder that all vehicle occupants must wear their seat belts correctly.

The seat belt warning lamp lights up for six seconds every time the vehicle is started.

In addition, a warning tone may sound.

When the driver’s and front passenger’s doors are closed and the driver and front passenger have fastened their seat belts, the seat belt warning goes out.

In the following cases, the seat belt warning lights up during a journey if:

- The vehicle speed exceeds 15 mph (25 km/h) and the driver’s or front passenger seat belt is not fastened.
- The driver or front passenger unfastens their seat belt while the vehicle is in motion.

**Airbags**

**Overview of air bags**

1. Driver’s knee air bag
2. Driver’s air bag
3. Front passenger air bag
4. Front passenger knee air bag
5. Window air bag
6. Side air bag
The installation location of an air bag is identified by the AIRBAG symbol.
When enabled, an air bag can provide additional protection for the respective vehicle occupant.
Potential protection provided by each air bag:
- Knee air bag: thigh, knee and lower leg
- Driver's air bag, front passenger air bag: head and ribcage
- Window air bag: head
- Side air bag: ribcage, also pelvis for front seat occupants

The side air bag of the AMG Performance seat provides possible protection for the ribcage.

⚠️ WARNING Risk of injury or fatal injuries if the front passenger air bag is enabled

If the front passenger air bag is enabled, a child on the front passenger seat may be struck by the front passenger air bag in the event of an accident.

Never use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIR BAG. This can result in the DEATH of or SERIOUS INJURY to the CHILD.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 63). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat (→ page 62).

Information on the automatic front passenger air bag shutoff
Only when the PASSENGER AIR BAG OFF indicator lamp is off can the front passenger air bag deploy in the event of an accident. If the front passenger seat is occupied, make sure, both before and during the journey, that the status of the front passenger air bag is correct (→ page 49).

NOTE Deployment of components of the restraint system when the front passenger seat is unoccupied

In an accident, the components of the restraint system may deploy unnecessarily on the front passenger side if:
- There are heavy objects on the front passenger seat.
- The seat belt tongue is engaged in the seat belt buckle of the front passenger seat and the front passenger seat is unoccupied.

⚠️ Store objects in a suitable place.
⚠️ Only one person should use each seat belt at any one time.

Depending on the detected accident situation, the window air bag on the front passenger side may deploy. The air bag is deployed regardless of whether the front passenger seat is occupied.
Protection provided by the airbags

Depending on the accident situation, an airbag may supplement the protection offered by a correctly fastened seat belt.

**WARNING Risk of injury or death due to an incorrect seat position**

If you deviate from the correct seat position, the airbag cannot perform its intended protective function.

Each vehicle occupant must make sure of the following:

- Fasten seat belts correctly. Pregnant women must take particular care to ensure that the lap belt never lies across the abdomen.
- Adopt the correct seat position and keep as far away as possible from the airbags.
- Observe the following information.
- Always make sure that there are no objects between the airbag and vehicle occupant.

To avoid the risks resulting from the deployment of an airbag, each vehicle occupant must observe the following information in particular:

- Before starting your journey, adjust your seat correctly; the driver’s seat and front passenger seat should be moved as far back as possible.
- When doing so, always observe the information on the correct driver’s seat position (→ page 90).
- Only hold the steering wheel by the steering wheel rim. This allows the airbag to be fully deployed.
- Always lean against the seat backrest when the vehicle is in motion. Do not lean forwards or against the door or side window. You may otherwise be in the deployment area of the airbags.
- The occupants must always keep their feet on the floor. Do not put your feet on the cockpit, for example. Your feet may otherwise be in the deployment area of the airbag.
- If children are traveling in the vehicle, observe the additional notes (→ page 54).
- Always stow and secure objects correctly.

Objects in the vehicle interior may prevent an airbag from functioning correctly. Each vehicle occupant must always make sure of the following in particular:

- There are no people, animals or objects between the vehicle occupants and an airbag.
- There are no objects between the seat, door and door pillar (B-pillar).
- There are no hard objects, e.g. coat hangers, hanging on the grab handles or coat hooks.
- There are no accessories, such as mobile navigation devices, mobile phones or cup holders, within the deployment area of an airbag, e.g. on the cockpit, on the door, on the side window or on the side trim.

In addition, no connecting cables, tensioning straps or retaining straps must be routed or attached to the vehicle within the deployment area of an airbag. Always comply with the accessory manufacturer’s installation instructions and, in particular, the notes on suitable places for installation.
• There are no heavy, sharp-edged or fragile objects in the pockets of your clothing. Store such objects in a suitable place.

**Limitations of the protection provided by air bags**

**WARNING Risk of injury due to modifications to the cover of an airbag**

If you change the cover of an airbag or attach objects, e.g. even stickers, to it, the airbag may no longer function as intended.

- Never modify the cover of an airbag.
- Do not attach any objects to the cover.

The installation location of an air bag is identified by the AIRBAG symbol (→ page 44).

Objects in the deployment area of an air bag may prevent the air bag from functioning correctly.

**WARNING Risk of injury from objects in the deployment area of an airbag**

Objects in the deployment area of an airbag can hinder or prevent the correct deployment of the airbag.

The airbag may then deploy in an uncontrolled manner and may even cause additional injuries to the vehicle occupants by deploying. This may be the case in particular if the airbag is integrated into the seat.

- Always stow and secure objects correctly.
- Before commencing your journey, make sure that no objects are stowed in the deployment area of an airbag.

**WARNING Risk of injury or death due to the use of unsuitable seat covers**

If you use unsuitable seat covers, the air bags cannot protect vehicle occupants as they are designed to do.

In addition, the function of the automatic front passenger air bag shutoff could be restricted.

**WARNING Risk of injury due to malfunctioning sensors in the door**

The function of the airbags can be impaired due to modifications or incorrect work performed on the doors or door trim, or if the doors are damaged.

- Never modify the doors or parts of the doors.
- Always have work on the doors or door trim carried out at a qualified specialist workshop.

**WARNING Risk of injury due to deployed airbag**

A deployed airbag no longer offers any protection.

You should only use seat covers that have been approved for the corresponding seats by Mercedes-Benz.
Have the vehicle towed to a qualified specialist workshop in order to have the deployed airbag replaced.

Have deployed air bags replaced immediately.

**Status of the front passenger front airbag**

**Function of the automatic front passenger air bag shutoff**
The automatic front passenger air bag shutoff is able to detect whether the front passenger seat is occupied by a person or a child restraint system. The front passenger air bag and front passenger knee bag are enabled or disabled accordingly.

**WARNING** Risk of potentially fatal injuries due to objects trapped under the front passenger seat

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger air bag shutoff or damage the system.

Do not stow any objects under the front passenger seat.

When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 63). Also, always observe the notes on rearward-facing or forward-facing child restraint systems on the front passenger seat (→ page 62).

A person on the front passenger seat must observe the following information:

- Fasten seat belts correctly (→ page 40).
- Sit in an almost upright seat position with their back against the seat backrest.
- Sit with their feet resting on the floor, if possible.

When the front passenger seat is occupied, ensure that:

- The front passenger transfers their weight by supporting themselves on a vehicle armrest.
- The front passenger sits in such a way that their weight is raised from the seat surface.

**WARNING** Risk of injury or death due to a disabled front passenger airbag

The front passenger airbag is disabled when the PASSENGER AIR BAG OFF indicator lamp is lit.

A person in the front passenger seat could then, for example, come into contact with the vehicle interior, especially if the person is sitting too close to the cockpit.

If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in
accordance with the person in the front passenger seat.
• The front passenger seat has been moved as far back as possible.
• The person is seated correctly.

Both before and during the journey, ensure that the status of the front passenger airbag is correct.

If the front passenger seat is occupied, the classification of the person or child restraint system on the front passenger seat takes place after the front passenger airbag shutoff self-test. The PASSENGER AIR BAG indicator lamps display the status of the front passenger airbag.

Always observe the notes on the function of the PASSENGER AIR BAG indicator lamps (→ page 49).

Function of the PASSENGER AIR BAG indicator lamps

Self-test of the automatic front passenger airbag shutoff
When the vehicle is switched on, both the PASSENGER AIR BAG ON and OFF indicator lamps simultaneously light up during the self-test.

The status of the front passenger airbag is displayed after the self-test via the PASSENGER AIR BAG indicator lamps:
• ON is lit: the front passenger airbag may deploy during an accident.
  The indicator lamp goes out after 60 seconds.
• ON and OFF are not lit: the front passenger airbag may deploy during an accident.
• OFF is lit: the front passenger airbag is disabled. It will then not be deployed in the event of an accident.

When the PASSENGER AIR BAG ON indicator lamp is off, only the PASSENGER AIR BAG OFF indicator lamp displays the status of the front passenger airbag. The PASSENGER AIR BAG OFF indicator light may be lit continuously or off.

If the PASSENGER AIR BAG OFF indicator lamp and the restraint system warning lamp light up simultaneously, the front passenger seat may not be used. Also in this case, do not install a child restraint system on the front passenger seat. Have the automatic front passenger airbag
shutoff checked and repaired immediately at a qualified specialist workshop.

Status display
If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger air bag is correct for the current situation.

After installing a rearward-facing child restraint system on the front passenger seat: PASSENGER AIR BAG OFF must be lit continuously.

**WARNING** Risk of injury or fatal injury when using a rearward-facing child restraint system while the co-driver airbag is enabled

If you secure a child in a rearward-facing child restraint system on the co-driver seat and the PASSENGER AIR BAG OFF indicator lamp is off, the co-driver airbag can deploy in the event of an accident. The child could be struck by the airbag.

Always ensure that the co-driver airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.

NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 62).

Depending on the child restraint system and the stature of the child, the PASSENGER AIR BAG OFF indicator lamp may be off. In this case, do not install the rearward-facing child restraint system on the front passenger seat.

Instead, install the rearward-facing child restraint system to a suitable rear seat.

**After installing a forward-facing child restraint system on the front passenger seat:** depending on the child restraint system and the stature of the child, PASSENGER AIR BAG OFF may be lit continuously or be off. Always observe the following information.

**WARNING** Risk of injury or death due to incorrect positioning of the forward-facing child restraint system

If you secure a child in a forward-facing child restraint system on the front passenger seat that is positioned too close to the cockpit, in the event of an accident, the child could:

- come into contact with the vehicle interior if the PASSENGER AIR BAG OFF indicator lamp is lit, for example
- be struck by the airbag if the PASSENGER AIR BAG OFF indicator lamp is off.

Always move the front passenger seat as far back as possible and fully retract the seat cushion length adjustment. While doing so, always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet. If necessary,
adjust the seat belt outlet and the front passenger seat accordingly.

Always comply with the child restraint system manufacturer’s installation instructions.

When installing a child restraint system on the front passenger seat, observe the vehicle-specific information (→ page 62).

If a person is sitting on the front passenger seat: PASSENGER AIR BAG OFF may be lit continuously or be off, depending on the person’s stature.

A person on the front passenger seat must always observe the following information:

- If the front passenger seat is occupied by an adult or a person with a stature corresponding to that of an adult, the PASSENGER AIR BAG OFF indicator lamp must be off. This indicates that the front passenger airbag is enabled.

- If the PASSENGER AIR BAG OFF indicator lamp is lit continuously, an adult or person with a build corresponding to that of an adult must not use the front passenger seat. Instead, they should use a rear seat.

- If the front passenger seat is occupied by a person of smaller stature (e.g. a teenager or small adult), the PASSENGER AIR BAG OFF indicator lamp is either lit continuously or remains off, depending on the classification.
  - If the PASSENGER AIR BAG OFF indicator lamp is off: move the front passenger seat as far back as possible, or the person of smaller stature should use a rear seat.
  - If the PASSENGER AIR BAG OFF indicator lamp is lit continuously: the person of smaller stature should not use the front passenger seat.

**WARNING** Risk of injury or death when the PASSENGER AIR BAG OFF indicator lamp is lit

If the PASSENGER AIR BAG OFF indicator lamp remains lit after the self-test, the front passenger airbag is disabled.

If the front passenger seat is occupied, always ensure that:

- The classification of the person in the front passenger seat is correct and the front passenger airbag is enabled or disabled in accordance with the person in the front passenger seat.
- The person is seated properly with a correctly fastened seat belt.
- The front passenger seat has been moved as far back as possible.

Be sure to also observe the following further related subjects:

- Child restraint system on the front passenger seat (→ page 62)
**PRE-SAFE® system**

**Function of PRE-SAFE® (anticipatory occupant protection)**

PRE-SAFE® is able to detect certain critical driving situations and implement pre-emptive measures to protect the vehicle occupants.

PRE-SAFE® can implement the following measures independently of each other:

- Tightening the seat belts on the driver’s seat and front passenger seat.
- Closing the side windows.
- **Vehicles with sliding sunroof**: closing the sliding sunroof.
- **Vehicles with memory function**: moving the front passenger seat to a more favorable seat position.
- **Vehicles with multicontour seat**: increasing the air pressure in the seat side bolsters of the seat backrest.
- **PRE-SAFE® Sound**: provided that the multimedia system is switched on, generating a brief noise signal to stimulate the innate protective mechanism of a person’s hearing.

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Damage caused by objects in the footwell or behind the seat</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The automatic adjustment of the seat position may result in damage to the seat and/or the object.</td>
</tr>
<tr>
<td></td>
<td>Stow objects in a suitable place.</td>
</tr>
</tbody>
</table>

**Back up the PRE-SAFE® system measures**

If an accident did not occur, the pre-emptive measures that were taken are reversed.

You will need to perform certain settings yourself.

- If the seat belt pre-tensioning is not reduced, move the seat backrest back slightly.
- The locking mechanism releases.

**Function of PRE-SAFE® PLUS (anticipatory occupant protection plus)**

PRE-SAFE® PLUS can detect certain impacts, particularly an imminent rear impact, and take pre-emptive measures to protect the vehicle occupants. These measures cannot necessarily prevent an imminent impact.

PRE-SAFE® PLUS can implement the following measures independently of each other:

- Tightening the seat belts on the driver’s seat and front passenger seat.
- Increasing brake pressure when the vehicle is stationary. This brake application is canceled automatically when the vehicle pulls away.

If an accident did not occur, the pre-emptive measures that were taken are reversed.

**System limits**

The system will not initiate any action in the following situations:

- when backing up

The system will not initiate any braking application in the following situations:

- whilst driving
  or
when entering or exiting a parking space while using Active Parking Assist

Function of PRE-SAFE® Impulse Side
If an imminent side impact is detected, PRE-SAFE® Impulse Side can preemptively move the front seat vehicle occupant’s upper body towards the center of the vehicle. It does this by rapidly inflating an air cushion in the outer seat side bolster of the seat backrest on the side on which the impact is anticipated. This increases the distance between the door and the vehicle occupant. If PRE-SAFE® Impulse Side has been deployed or is faulty, the PRE-SAFE Impulse Side Inoperative display message will appear.

Safely transporting children in the vehicle
Always observe when children are traveling in the vehicle

Also strictly observe the safety notes for the specific situation. In this way you can recognize potential risks and avoid dangers if children are traveling in the vehicle (→ page 54).

Be diligent
Bear in mind that negligence when securing a child in the child restraint system may have serious consequences. Always be diligent in securing a child carefully before every journey. Never allow babies and children to travel sitting on the lap of another vehicle occupant.

To improve protection for children younger than 12 years old or under 5 ft (1.50 m) in height, Mercedes-Benz recommends you observe the following information:
- Always secure the child in a child restraint system suitable for this Mercedes-Benz vehicle.
- The child restraint system must be appropriate to the age, weight and size of the child.
- The vehicle seat must be suitable for installing a child restraint system.

Accident statistics show that children secured on the rear seats are generally safer than children secured on the front seats. For this reason, Mercedes-Benz strongly advises that you install a child restraint system on a rear seat.

The generic term child restraint system
The generic term child restraint system is used in this Operator’s Manual. A child restraint system is, for example:
- a baby car seat
- a rearward-facing child seat
- a forward-facing child seat
- a child booster seat with a backrest and seat belt guide

Mercedes-Benz recommends using a child booster seat with a backrest.

The child restraint system must be appropriate to the age, weight and size of the child.

Observe laws and legal requirements
Always observe the legal requirements when using a child restraint system in the vehicle.
Observe standards for child restraint systems
All child restraint systems must meet the following standards:
- U.S. Federal Motor Vehicle Safety Standards 213
- Canadian Motor Vehicle Safety Standards 213

Confirmation that the child restraint system complies with the standards can be found on an instruction label on the child restraint system. This confirmation can also be found in the installation instructions that are included with the child restraint system.

Detecting risks, avoiding danger

Securing systems for child restraint systems in the vehicle
Only use the following securing systems for child restraint systems:
- the ISOFIX mounting brackets
- the vehicle’s seat belt system
- the Top Tether anchorages

Installing an ISOFIX child restraint system is preferred.
Simply attaching to the securing rings on the vehicle can reduce the risk of installing the child restraint system incorrectly.
When securing a child with the integrated seat belt of the ISOFIX child restraint system, always comply with the permissible gross weight for the child and child restraint system (→ page 58).
A child booster seat may be necessary to achieve proper seat belt positioning for children over 40 lbs (18 kg) in weight or until they reach a height where a three-point seat belt can be installed properly without a child booster seat.
Mercedes-Benz recommends a suitable child booster seat with a backrest and seat belt guide.

Advantage of a rearward-facing child restraint system
It is preferable to transport a baby or a small child in a suitable rearward-facing child restraint system. In this case, the child sits in the opposite direction to the direction of travel and faces backwards.

Babies and small children have comparatively weak neck muscles in relation to the size and weight of their head. The risk of injury to the cervical spine during an accident can be reduced in a rearward-facing child restraint system.

Always secure a child restraint system correctly

WARNING Risk of injury or death due to incorrect installation of the child restraint system
The child can then not be protected or restrained as intended.
- Be sure to comply with the manufacturer’s installation instructions for the child restraint system and its correct use.
- Make sure that the entire base of the child restraint system always rests on the sitting surface of the seat.
- Never place objects (e.g. cushions) under or behind the child restraint system.
- Use child restraint systems only with the original cover designed for them.
Always replace damaged covers with genuine covers.

**WARNING** Risk of injury or death due to unsecured child restraint systems in the vehicle

If the child restraint system is incorrectly mounted or unsecured, it may come loose. The child can then not be protected or restrained as intended.

Unused child restraint systems could be flung around and hit vehicle occupants.

- Always comply with the manufacturer's installation instructions for the child restraint system and its correct use.
- Always fit child restraint systems correctly, even if they are transported in the vehicle unused.

- Always observe the child restraint system manufacturer's installation and operating instructions as well as the vehicle-specific information:
  - Installing the ISOFIX child restraint system on the right and left rear seats (→ page 58).
  - Securing the child restraint system with the seat belt on the rear seat (→ page 61).
  - Securing the child restraint system with the seat belt on the front passenger seat (→ page 63). Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 62).
    - If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger air bag is correct for the current situation (→ page 49).
  - Observe the warning labels in the vehicle interior and on the child restraint system.
  - Also secure Top Tether if present.

Do not modify the child restraint system

**WARNING** Risk of injury due to modifications to the child restraint system

The child restraint system can no longer function properly. This poses an increased risk of injury.

- Never modify a child restraint system.
- Only affix accessories which have been specially approved for this child restraint system by the child restraint system’s manufacturer.

Only use child restraint systems which are in proper working condition

**WARNING** Risk of injury or death caused by the use of damaged child restraint systems

Child restraint systems or their retaining systems that have been subjected to stress in an accident may not be able to perform their intended protective function.
It may be the case that the child cannot be properly restrained.
- Always immediately replace child restraint systems that have been damaged or involved in an accident.
- Have the securing systems for the child restraint systems checked at a qualified specialist workshop before installing a child restraint system again.

Avoid direct sunlight

⚠️ WARNING Risk of burns when the child seat is exposed to direct sunlight
If the child restraint system is exposed to direct sunlight or heat, parts could heat up excessively.
Children could suffer burns from these parts, particularly the metallic parts of the child restraint system.
- Always make sure that the child restraint system is not exposed to direct sunlight.

Cover the child restraint system with a blanket, for example.
- If the child restraint system has been exposed to direct sunlight, allow it to cool before securing a child into it.
- Never leave children unattended in the vehicle.

Observe when stopping or parking

⚠️ WARNING Risk of accident and injury due to children left unattended in the vehicle
If you leave children unattended in the vehicle, they could, in particular:
- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:
- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the key with you and lock the vehicle.
- Keep the key out of reach of children.

⚠️ WARNING Risk of fatal injury due to exposure to extreme heat or cold in the vehicle
If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.
- Never leave persons, particularly children, unattended in the vehicle.
Overview of suitable seats in the vehicle for installing a child restraint system

Left/right rear seat
Preferred securing system:

- ISOFIX child seat anchor
- Also secure Top Tether if present (→ page 60).

Alternative securing system:
- Vehicle seat belt

Front passenger seat
Securing system:
- Vehicle seat belt

Be sure to observe:
- If the front passenger seat is occupied, ensure, both before and during the journey, that the status of the front passenger air bag is correct for the current situation (→ page 49).
- Notes on the automatic front passenger air bag shutoff (→ page 48).

Center rear seat
Securing system:
- Vehicle seat belt
- Also secure Top Tether if present (→ page 60).

Activating or deactivating the child seat safety feature of the seat belt

- Adjust the seat backrest until it is as straight as possible and adjust the seat cushion inclination as far as it will go (→ page 93).

WARNING Risk of injury or death if a seat belt is unfastened while the vehicle is in motion

If the seat belt is released while the vehicle is in motion, the special seat belt retractor is deactivated and the child restraint system is no longer correctly secured. The seat belt is drawn in slightly by the inertia reel and cannot be immediately closed again.

- Stop the vehicle immediately in accordance with the traffic conditions.
- Activate the special seat belt retractor again and correctly secure the child restraint system.

When enabled, the child seat safety feature ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured.

The seat belts on the following seats are equipped with a child seat safety feature:
- Front passenger seat
- Rear seats

Installing a child restraint system

- When installing a child restraint system, always observe the manufacturer’s installation and operating instructions as well as the information in this Operator’s Manual.
- Pull the seat belt smoothly from the seat belt outlet.
- Engage the seat belt tongue in the seat belt buckle.
Activating the child seat safety feature
- Pull the seat belt out fully and let the inertia reel retract it again.
- When the child seat safety feature is activated, you will hear a ratcheting sound.
- Push the child restraint system down until the seat belt sits tightly.

Deactivating the child seat safety feature
- Press the release button of the seat belt buckle.
- Hold the seat belt tongue and guide back to the seat belt outlet.

Installing a LATCH-type (ISOFIX) child restraint system on the left and right rear seats

**WARNING** Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.
- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.
- Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

Installing an ISOFIX//LATCH child restraint system on the left and right rear seats

If the left and right seat backrests are not engaged and locked in place, this will be shown on the instrument display.

If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

**WARNING** Risk of injury or death if the permissible gross mass of the child and child restraint system together is exceeded.

Too much load may be placed on the LATCH-type (ISOFIX) or iSize child restraint systems and the child may not be restrained correctly in the event of an accident, for example.

If the child is secured in a LATCH-type (ISOFIX) child restraint system with integrated seat belt, the total mass of the child and child restraint system must not exceed 73 lb (33 kg).
Always comply with the information about the mass of the child:

- in the manufacturer's installation and operating instructions for the child restraint system used
- on a label on the child restraint system, if present

Regularly check that the permissible gross mass of the child and child restraint system is still complied with.

When installing a child restraint system, observe the following:

- Always observe the correct use of the seats and consider their suitability for attaching a child restraint system.
- Always comply with the manufacturer's installation and operating instructions for the child restraint system used.
- Make sure that the child's feet do not touch the front seat. If necessary, move the front seat slightly forwards.

When installing an ISOFIX/LATCH child restraint system, also observe the following:

- **When using a baby car seat in weight group 0/0+ and a rearward-facing child restraint system in weight group 1 on a rear seat:** adjust the front seat so that the seat does not touch the child restraint system.

- **When using a forward-facing child restraint system in weight group 1:** remove the head restraint from the respective seat, if possible.
  In addition, the backrest of the child restraint system must lie as flat as possible against the backrest of the vehicle seat.
  After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.

- If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight group 2 or 3.
  Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

- The child restraint system must not be put under strain between the roof and the seat surface and/or be installed facing in the wrong direction. Where possible, adjust the seat cushion inclination accordingly.

- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
Before every journey, make sure that the ISOFIX/LATCH child restraint system is engaged correctly in both mounting brackets in the vehicle.

**NOTE** Damage to the seat belt for the center seat during installation of the child restraint system

- Make sure that the seat belt is not trapped.

- Open the cover using zip fastener 1.
- Carefully widen the opening further.
- Attach the ISOFIX/LATCH child restraint system to both mounting brackets 2 in the vehicle.

### Fastening a Top Tether

**WARNING** Risk of injury or death if the rear seat backrests are not locked after Top Tether belts are installed

The rear seat backrests may fold forwards when you are driving.

As a result, child restraint systems will no longer be able to perform their intended protective function. This may also cause additional injuries.

- Always lock rear seat backrests after installing Top Tether belts.
- Observe the lock verification indicator.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the instrument display.

If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

If the child restraint system is equipped with a Top Tether belt:

The risk of injury may be reduced by Top Tether. The Top Tether belt enables an additional connection between the child restraint system attached with LATCH-type (ISOFIX) (left and right rear seats) or the seat belt (all rear seats) and the vehicle.

- If necessary, slide head restraint 1 upwards (→ page 95).
- Install the LATCH-type (ISOFIX) or belt-secured child restraint system with Top Tether. In doing so, comply with the child restraint system manufacturer’s installation instructions.
Guide Top Tether belt \(\textcolor{red}{4}\) under head restraint \(\textcolor{red}{1}\) between the two head restraint bars.

For child restraint systems with an I-strap Top Tether belt, the belt must be guided past the headrest on the left in the direction of travel.

- Hook Top Tether hook \(\textcolor{red}{3}\) into Top Tether anchorage \(\textcolor{red}{2}\) without twisting.
- Tension Top Tether belt \(\textcolor{red}{4}\). In doing so, comply with the child restraint system manufacturer’s installation instructions.
- If necessary, slide head restraint \(\textcolor{red}{1}\) downwards (→ page 95). Make sure that you do not interfere with the correct routing of Top Tether belt \(\textcolor{red}{4}\).

### Securing the child restraint system with the seat belt

#### Securing the child restraint system with the seat belt on the rear seat

**WARNING** Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.
- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.

Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the instrument display.

If the center seat backrest is not engaged and locked in place, the red lock verification indicator will be visible.

**When installing a belt-secured child restraint system, observe the following:**

- Always comply with the manufacturer’s installation and operating instructions for the child restraint system used.
- Also secure Top Tether if present (→ page 60).
- When using a weight category 0/0+ baby car seat and a weight category I rearward-facing child restraint system on a rear seat: adjust the front seat so that the seat does not touch the child restraint system.
- When using a weight category I forward-facing child restraint system: remove the
head restraint from the respective seat, if possible.

After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.

☑ The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the rear seat.

☑ If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle, this will result in restrictions on the maximum size setting for child restraint systems in weight category II or III. Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

☑ The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing in the wrong direction. Where possible, adjust the seat cushion inclination accordingly.

☑ The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.

☑ Make sure that the child’s feet do not touch the front seat. If necessary, move the front seat slightly forwards.

The seat belts on the following seats are equipped with a special seat belt retractor:
- Front passenger seat
- Rear seats

When enabled, the special seat belt retractor ensures that the seat belts of the front passenger seat and rear seats do not slacken once the child restraint system is secured (→ page 57).

- Install the child restraint system.
  - The entire base of the child restraint system must always rest on the seat surface of the rear seat.
  - Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forward from the seat belt outlet.

### Notes on rearward-facing and forward-facing child restraint systems on the front passenger seat

#### WARNING Risk of injury or fatal injury when using a rearward-facing child restraint system while the co-driver airbag is enabled

If you secure a child in a rearward-facing child restraint system on the co-driver seat and the PASSENGER AIR BAG OFF indicator lamp is off, the co-driver airbag can deploy in the event of an accident. The child could be struck by the airbag.

- Always ensure that the co-driver airbag is disabled. The PASSENGER AIR BAG OFF indicator lamp must be lit.
- NEVER use a rearward-facing child restraint system on a seat with an ENABLED FRONT AIRBAG; DEATH or SERIOUS INJURY to the CHILD can occur.
Observe the specific instructions for the rearward-facing and forward-facing child restraint systems (→ page 63).

Always observe the status of the front passenger air bag on the PASSENGER AIR BAG OFF indicator lamp:

- When using a rearward-facing child restraint system on the front passenger seat, the front passenger air bag must always be disabled. This is only the case if the PASSENGER AIR BAG OFF indicator lamp is lit continuously (→ page 49).
- If the PASSENGER AIR BAG OFF indicator lamp is off, the front passenger air bag is enabled. The front passenger air bag may be deployed during an accident.

### Securing the child restraint system with the seat belt on the front passenger seat

When installing a belt-secured child restraint system on the front passenger seat, always observe the following:

- Observe the notes on rearward-facing and forward-facing child restraint systems on the front passenger seat (→ page 62).
- Observe the child restraint system manufacturer’s installation and operating instructions.
- When using a forward-facing child restraint system in weight category I: remove the head restraint from the respective seat, if possible. After the child restraint system has been removed, replace the head restraint immediately and adjust all head restraints correctly.
- The backrest of the forward-facing child restraint system must, as far as possible, be resting on the seat backrest of the front passenger seat.
- If the head restraint of the child seat cannot be fully extended when it is installed in the vehicle; this will result in restrictions on the maximum size setting for child restraint systems in weight category II or III.
- Contact with the roof when the head restraint is fully extended and locked in place will not result in any restrictions on use.

- The child restraint system must not be put under strain between the roof and the seat cushion and/or be installed facing in the wrong direction.
- The child restraint system must not be put under strain by the head restraint. Adjust the head restraints as appropriate.
- Never place objects (e.g. cushions) under or behind the child restraint system.

The seat belt on the front passenger side is equipped with a special seat belt retractor.

When enabled, the special seat belt retractor ensures that the seat belt does not slacken once the child seat is secured (→ page 57).
**WARNING Risk of injury or death caused by objects between the seat surface and the child restraint system**

Objects between the seat surface and the child restraint system could affect the function of the automatic co-driver air bag shutoff.

- Do not place any objects between the seat surface and the child restraint system.
- Always make sure that the child restraint system is installed correctly.

- Install the child restraint system. The entire base of the child restraint system must always rest on the sitting surface of the front passenger seat.
- Always make sure that the shoulder belt strap is correctly routed from the seat belt outlet of the vehicle to the shoulder belt guide on the child restraint system. The shoulder belt strap must be routed forwards and downwards from the seat belt outlet.
- If necessary, adjust the seat belt outlet and the front passenger seat accordingly.

Set the front passenger seat as far back as possible and move the seat into the highest position if possible.

- Fully retract the seat cushion length adjustment.
- Adjust the seat cushion inclination so that the front edge of the seat cushion is in the highest position and the rear edge of the seat cushion is in the lowest position.
- Set the seat backrest to the most vertical position possible.

- **Child-proof locks**

  **Activating or deactivating the child safety lock for the rear doors**

**WARNING Risk of accident and injury due to children left unattended in the vehicle**

If you leave children unattended in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:

- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.

- Never leave children unattended in the vehicle.
When leaving the vehicle, always take the key with you and lock the vehicle.
Keep the key out of reach of children.

**WARNING** Risk of fatal injury due to exposure to extreme heat or cold in the vehicle

If persons, particularly children, are subjected to prolonged exposure to intense heat or cold, there is a risk of severe injury or even death.
Never leave persons, particularly children, unattended in the vehicle.

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If children are traveling in the vehicle, they could, in particular:
- Open doors, thereby endangering other persons or road users.
- Get out and be struck by oncoming traffic.
- Operate vehicle equipment and become trapped, for example.

Always activate the installed child safety locks if children are traveling in the vehicle.
Never leave children unattended in the vehicle.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

There are child safety locks for the rear doors and the rear side windows.
The child safety lock on the rear doors secures each door separately. The doors can no longer be opened from the inside.

Press the lever in direction 1 (activate) or 2 (deactivate).
Make sure that the child safety locks are working properly.

Activating and deactivating the child safety lock for the rear side windows
To activate/deactivate: press button 2.

The rear side window can be opened or closed in the following cases:

- indicator lamp 1 is lit: via the switch on the driver's door
- indicator lamp 1 is off: via the switch on the corresponding rear door or driver’s door

When the parental lock is activated, the touchscreen display in the rear passenger compartment will also be locked.

Notes on pets in the vehicle

**WARNING** Risk of accident and injury due to animals left unsecured or unattended in the vehicle

If you leave animals in the vehicle unattended or unsecured, they could possibly press buttons or switches.

An animal may:

- Activate vehicle equipment and become trapped, for example
- Switch systems on or off and endanger other road users

Unsecured animals may be thrown around in the vehicle in the event of an accident or sudden steering and braking maneuvers and injure vehicle occupants in the process.

Never leave animals in the vehicle unattended.

Always correctly secure animals while driving, e.g. using a suitable animal carrier.
SmartKey
Overview of key functions

WARNING Risk of accident and injury due to children left unattended in the vehicle

If you leave children unattended in the vehicle, they could, in particular:
- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:
- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.

Never leave children unattended in the vehicle.

![Vehicle key with panic alarm]

1. Locking
2. Indicator lamp
3. Unlocking
4. Opens/closes the tailgate
5. Panic alarm

If indicator lamp 2 does not light up after pressing the [3] or [5] button, the battery is weak or possibly discharged. Replace the battery as soon as possible.

Replace the key battery (→ page 69).

The key locks and unlocks the following components:
- doors
- Fuel filler flap
- Tailgate

If the vehicle is not opened within approximately 40 seconds after unlocking, it locks again. Anti-theft protection is armed again.

Do not keep the key together with electronic devices or metal objects. This can affect the key's functionality.

Do not keep the key in the temperature-controlled cup holder. Otherwise, the key will not be reliably detected.
Activating/deactivating the acoustic locking verification signal

Multimedia system:
- Settings ➤ Vehicle
- Activate or deactivate Acoustic Lock.

Activating/deactivating the panic alarm

Requirements
- The vehicle is switched off.

To activate: press button 1 for approximately one second. A visual and audible alarm is triggered.

To deactivate: briefly press button 1 again. or
- Press the start/stop button. A key belonging to the vehicle must be detected in the vehicle.

Changing the unlocking settings

Possible unlocking functions of the SmartKey:
- Central unlocking
- Unlocking the driver’s door and fuel filler flap

To switch between settings: press the Ú and ß buttons simultaneously for approximately six seconds until the indicator lamp flashes twice.

Options when the unlocking function for the driver’s door and fuel filler flap has been selected:
- To unlock the vehicle centrally: press the Ú button twice.
- Vehicles with KEYLESS-GO: if you touch the inner surface of the door handle on the driver’s door, only the driver’s door and the fuel filler flap will be unlocked.

Deactivating the function of the key

Vehicles with KEYLESS-GO: if you deactivate the function of the key, the KEYLESS-GO functions will also be deactivated. Access or drive authorization by KEYLESS-GO will then no longer be possible with that particular key. Activate the function of the key so that all its functions will again be available.

You can also deactivate the function of the key to reduce the energy consumption of the key if you do not use the vehicle or a key for an extended period of time.

To deactivate: press and hold the ß key button.

With the ß button pressed, immediately press the Ú key button twice in quick succession. The indicator light on the key will light up once briefly and once for a long time.

To activate: press any button on the key.
When the vehicle is started with the key in the stowage compartment of the center console, the function of the key will be activated automatically (→ page 140).

Removing/inserting the emergency key

Removing the emergency key

- Press release button 1. Emergency key 2 will be pushed out slightly.
- Pull out emergency key 2 until it engages in the intermediate position.
- Press release button 1 again and fully remove emergency key 2.

Inserting the emergency key

- Press release button 1.
- Insert emergency key 2 to the intermediate position or fully until it engages.
- You can use the intermediate position of emergency key 2 to attach the SmartKey to a key ring.

Replacing the SmartKey battery

⚠️ DANGER Risk of fatal injury due to swallowing batteries

Batteries contain toxic and corrosive substances. If batteries are swallowed or otherwise enter the body, severe internal burns can occur within two hours. There is a risk of fatal injury!

- Keep the batteries out of the reach of children.
- If the lid and/or the battery compartment do not close securely, stop using the key and keep it away from children.

Requirements

- You require a CR 2032 3 V cell battery.
Mercedes-Benz recommends that you have the battery replaced at a qualified specialist workshop.

- Remove the emergency key element (→ page 69).

- Press release knob 2 down fully and slide cover 1 in the direction of the arrow.
- Fold out cover 1 in the direction of the arrow and remove.
- Remove battery compartment 3 and take out the discharged battery.
- Insert the new battery into battery compartment 3. Observe the positive pole marking in the battery compartment and on the battery when doing this.
- Push in battery compartment 3.
- Re-attach cover 1 and push it until it engages.

Problems with the SmartKey, troubleshooting

You can no longer lock or unlock the vehicle
Possible causes:
- The SmartKey battery is weak or discharged.
  - Check the battery using the indicator lamp (→ page 67).
  - Replace the SmartKey battery, if necessary (→ page 69).
  - Use the replacement key.
  - Use the emergency key to lock or unlock (→ page 74).
  - Have the SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source
Possible causes if the function of the SmartKey is impaired:
- high voltage power lines
- mobile phones
- electronic devices (notebooks, tablets)
- shielding due to metallic objects or induction loops for electrical gate systems or automatic barriers

- Make sure that there is sufficient distance between the SmartKey and the potential source of interference.

You have lost a SmartKey.

- Have the SmartKey deactivated at a qualified specialist workshop.
- If necessary, have the mechanical lock replaced as well.
Doors
Unlocking/opening the doors from the inside

- To unlock and open a front door: pull door handle 2. Locking pin 1 pops up when the door is unlocked.
- To unlock a rear door: pull the rear door handle. The locking pin pops up when the rear door is unlocked.
- To open a rear door: pull the rear door handle again.

Centrally locking and unlocking the vehicle from the inside

- To unlock: press button 1.
- To lock: press button 2.

The buttons are also on the front passenger door.

This does not lock or unlock the fuel filler flap. The vehicle will not be unlocked:
- if you have locked the vehicle using the key
- if you have locked the vehicle using KEYLESS-GO

Locking/unlocking the vehicle with KEYLESS-GO

Requirements
- The SmartKey is outside the vehicle.
- The distance between the SmartKey and the vehicle does not exceed 3 ft (1 m).
- The driver's door and the door on which the door handle is operated are closed.
NOTE Vehicle damage due to unintentional opening of the tailgate

- When using an automatic car wash
- When using a high pressure cleaner

Deactivate the function of the SmartKey in these situations.

or

Make sure that the SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle.

Observe the notes:

- on washing the vehicle in a car wash (→ page 292)
- on using a high-pressure cleaner (→ page 293)

To unlock the vehicle: touch the inner surface of the door handle.

To lock the vehicle: touch sensor surface 1 or 2.

Convenience closing: touch recessed sensor surface 2 until the closing process has been completed.

Further information on convenience closing (→ page 82).

If you open the tailgate from outside, it is automatically unlocked.

Problems with KEYLESS-GO, troubleshooting

You can no longer lock or unlock the vehicle using KEYLESS-GO

Possible causes:

- The function of the SmartKey has been deactivated.
- The SmartKey battery is weak or discharged.

Activate the function of the SmartKey (→ page 68).

Check the battery using the indicator lamp (→ page 67).

Replace the SmartKey battery, if necessary (→ page 69).

Use the replacement SmartKey.

Use the emergency key to lock or unlock (→ page 74).
Have the vehicle and SmartKey checked at a qualified specialist workshop.

There is interference from a powerful radio signal source
Possible causes if the function of KEYLESS-GO is impaired:
- High voltage power lines
- Mobile phones
- Electronic devices (notebooks, tablets)
- Shielding due to metal objects or induction loops for electrical gate systems or automatic barriers

Make sure that there is sufficient distance between the SmartKey and the potential source of interference.

Activating/deactivating the automatic locking feature
The vehicle is locked automatically when the vehicle is switched on and the wheels are turning faster than walking pace.

To activate: press and hold button 2 for approximately five seconds until an acoustic signal sounds.

To deactivate: press and hold button 1 for approximately five seconds until an acoustic signal sounds.

In the following situations, there is a danger of being locked out when the function is activated:
- while the vehicle is being tow-started or pushed
- if the vehicle is being tested on a roller dynamometer

Power closing function

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of becoming trapped when the doors close automatically</th>
</tr>
</thead>
<tbody>
<tr>
<td>Body parts or objects can become trapped, causing injuries.</td>
<td></td>
</tr>
</tbody>
</table>

- Ensure that no body parts or objects are in the closing area.
- Automatic closing of the doors can be canceled by pulling the outer or inner door handle.

If you push the door into the lock to the first detent position, the power closing function will automatically pull the door into the lock.
Locking/unlocking the driver’s door with the emergency key

If you wish to lock the vehicle entirely using the emergency key, first press the button for locking from the inside while the driver’s door is open. Then proceed to lock the driver’s door using the emergency key.

If you unlock and open the driver’s door with the emergency key, this triggers the burglar alarm system.

- Remove the emergency key (→ page 69).
- Insert the emergency key as far as it will go into opening 1 in the cover.
- Pull and hold the door handle.
- Pull the cover on the emergency key as straight as possible away from the vehicle until it releases.
- Release the door handle.

To unlock: turn the emergency key counterclockwise to position 1.

To lock: turn the emergency key clockwise to position 1.

Carefully press the cover onto the lock cylinder until it engages and is seated firmly.
Cargo compartment

Opening the tailgate

**DANGER** Risk of exhaust gas poisoning

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.

- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

**NOTE** Damage to the tailgate caused by obstacles above the vehicle

The tailgate swings rearwards and upwards when it is opened.

- Make sure that there is sufficient space behind and above the tailgate.

Pull on the handle for the tailgate in the bumper above the license plate.

**Vehicles with HANDS-FREE ACCESS:** make a kicking movement with your foot below the bumper (→ page 78).

- Pull remote operating switch 1 until the tailgate opens.
  or
- Press and hold the button on the key.

If the tailgate has stopped in an intermediate position, pull it upwards. Release it as soon as it begins to open.

If an obstacle obstructs the tailgate during the automatic opening process, blockage detection will stop the tailgate. The automatic blockage detection function is only an aid. It is not a substitute for your attentiveness.

Closing the tailgate

**WARNING** Risk of injury from unsecured items in the vehicle

If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects in such a way that they cannot be thrown around.
Before the journey, secure objects, luggage or loads against slipping or tipping over.

Observe the notes on loading the vehicle.

**Notes on closing the tailgate:** your vehicle is equipped with automatic key recognition. If a key belonging to the vehicle is detected in the vehicle, the tailgate will not be locked.

Note that the tailgate will not be locked in the following situation:

- You have locked the vehicle and close the tailgate while a key belonging to the vehicle is inside the vehicle.
- A second key belonging to the vehicle is not detected outside the vehicle.

Automatic key recognition is only an aid and is not a substitute for your attentiveness.

Before locking, ensure that at least one key belonging to the vehicle is outside the vehicle.

**To close the tailgate:** pull the tailgate downwards slightly. Release it as soon as it begins to close.

**WARNING** Risk of becoming trapped during automatic closing of the tailgate

Body parts may become trapped. There may be people in the closing area.

Make sure that nobody is in the vicinity of the closing area during the closing process.

Use one of the following options to stop the closing process:

- Press the button on the SmartKey.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Pull the tailgate handle.

**Vehicles with HANDS-FREE ACCESS:** it is also possible to stop the closing process by making a kicking movement below the rear bumper.

Switch on the power supply or the vehicle.

Push remote operating switch until the tailgate is fully closed.
Press closing button 1 on the tailgate.

Vehicles with KEYLESS-GO

- Press locking button 2 on the tailgate.
  - If a key is detected outside the vehicle, the tailgate will close and the vehicle will be locked.
- Press and hold the button on the key.
  - The key must be in the vicinity of the vehicle.

Vehicles with HANDS-FREE ACCESS

- Make a kicking movement with your foot below the bumper (→ page 78).

Automatic reversing function for the tailgate

The tailgate is equipped with automatic blockage detection with a reversing function. If an obstacle obstructs the tailgate during the automatic closing process, it will automatically open again slightly. Automatic blockage detection with the reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.

⚠️ WARNING Risk of becoming trapped despite reversing function

The reversing function will not react:
- To soft, light and thin objects, e.g. fingers
- Towards the end of the closing procedure

In these situations in particular, the reversing function cannot prevent someone being trapped.

Ensure that no body parts are in the closing area.
If someone is trapped, either:
- Press the button on the SmartKey.
- Press or pull the remote operating switch on the driver's door.
- Press the closing or locking button on the tailgate.
- Pull the tailgate handle.
HANDS-FREE ACCESS function

With HANDS-FREE ACCESS you can open, close or stop the closing process of the tailgate by performing a kicking movement under the rear bumper.

The kicking movement will trigger the opening or closing process alternately.

Observe the notes when opening (→ page 75) and closing (→ page 75) the tailgate.

ℹ️ Two warning tones will sound when the tailgate is opening or closing.

⚠️ **WARNING** Risk of burns caused by a hot exhaust system

The vehicle exhaust system can become very hot. If you use HANDS-FREE ACCESS, you could burn yourself by touching the exhaust system.

Always ensure that you only make a kicking movement within the detection range of the sensors.

ℹ️ **NOTE** Vehicle damage due to unintentional opening of the tailgate

- When using an automatic car wash
- When using a high pressure cleaner

➢ Deactivate the function of the SmartKey in these situations.

Make sure that the SmartKey is at a minimum distance of 10 ft (3 m) away from the vehicle.

When making the kicking movement, make sure that you are standing firmly on the ground. You could otherwise lose your balance, e.g. on ice.

Observe the following notes:

- The key is behind the vehicle.
- Stand at least 12 in (30 cm) away from the vehicle while performing the kicking movement.
- Do not come into contact with the bumper while making the kicking movement.
- Do not carry out the kicking movement too slowly.
- The kicking movement must be towards the vehicle and back again.
Detection range of the sensors

If several consecutive kicking movements are not successful, wait ten seconds.

System limits

The system may be impaired or may not function in the following cases:

- The sensors are dirty, e.g. due to road salt or snow.
- The kicking movement is made using a prosthetic leg.

The tailgate may open or close unintentionally in the following situations:

- A person’s arms or legs are moving in the sensor detection range, e.g. when polishing the vehicle or picking up objects.
- Objects are moved or placed behind the vehicle, e.g. the hose of a fuel dispenser, a charging cable or luggage.
- Clamping straps, tarp or other coverings are pulled over the bumper.
- A protective mat with a length reaching over the trunk sill down into the detection range of the sensors is used.
- The protective mat is not secured correctly.

Deactivate the function of the key (→ page 68) or do not carry the key about your person in such situations.

Limiting the opening angle of the tailgate

Activating the opening angle limiter

You can limit the opening angle of the tailgate in the top half of its opening range up to a point shortly before the end position.

- Stop the opening procedure of the tailgate at the desired position.
- Press and hold the closing button on the tailgate until you hear a short acoustic signal. The opening angle limiter will be activated. The tailgate will then stop in the stored position when opened.

To open the tailgate fully, pull the handle on the outside of the tailgate again after it has stopped automatically.

Deactivating the opening angle limiter

- Press and hold the closing button on the tailgate until two short acoustic signals sound.
Unlocking the tailgate with the emergency key

Requirements
- The rear seat backrest has been folded forward.

Removing the emergency key (→ page 69).
Insert emergency key 2 into opening 1 in the trim and push it in.

The tailgate will be unlocked.

Side windows

Opening and closing the side windows

**WARNING Risk of entrapment when opening a side window**

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.
- When opening, make sure that nobody is touching the side window.
- If someone is trapped, release the button immediately or pull it in order to close the side window again.

**WARNING Risk of becoming trapped when closing a side window**

When closing a side window, body parts could be trapped in the closing area in the process.
- When closing, make sure that no body parts are in the closing area.

If someone is trapped, release the button immediately or press the button in order to reopen the side window.

**WARNING Risk of becoming trapped when children operate the side windows**

Children could become trapped if they operate the side windows, particularly when unattended.
- Activate the child safety lock for the rear passenger compartment side windows.
- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.
- Never leave children unattended in the vehicle.

Requirements:
- The power supply or the vehicle has been switched on.
The buttons on the driver’s door take precedence.

**To start automatic operation:** press the button beyond the point of resistance or pull and release it.

**To interrupt automatic operation:** press or pull the button again.

When the vehicle is switched off, you can continue to operate the side windows. This function is available for around four minutes or until a front door is opened.

**Automatic reversing function of the side windows**
If an obstacle impedes a side window during the closing process, the side window will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

During the closing process, make sure that no body parts are in the closing area.

**WARNING** Risk of becoming trapped despite there being reversing protection on the side window

The reversing function does not react:

- To soft, light and thin objects, e.g. fingers.
- During resetting.

The reversing function cannot prevent someone from becoming trapped in these situations.

During the closing process, make sure that no body parts are in the closing area.

If someone becomes trapped, press the button to open the side window again.

**Convenience opening (ventilating the vehicle before starting a journey)**

**WARNING** Risk of entrapment when opening a side window

When opening a side window, parts of the body could be drawn in or become trapped between the side window and window frame.

- When opening, make sure that nobody is touching the side window.
- Release the button immediately if somebody becomes trapped.

**Requirements**

- The SmartKey is in the immediate vicinity of the vehicle.
Press and hold the \( \text{Ü} \) button on the Smart-Key.

The following functions will be performed:
- The vehicle will be unlocked.
- The side windows will be opened.
- The sliding sunroof will be opened.
- The seat ventilation of the driver’s seat will be switched on.

To interrupt convenience opening: release the \( \text{Ü} \) button.

To continue convenience opening: press and hold the \( \text{Ü} \) button again.

Convenience closing (closing the vehicle from outside)

\( \text{WARNING} \) Risk of entrapment due to not paying attention during convenience closing

When the convenience closing feature is operating, parts of the body could become trapped in the closing area of the side window and the sliding sunroof.

> When the convenience closing feature is operating, monitor the entire closing process and make sure that no body parts are in the closing area.

Requirements
- The key is in the immediate vicinity of the vehicle.

To interrupt convenience closing: release the \( \text{ß} \) button.

To continue convenience closing: press and hold the \( \text{ß} \) button again.

Convenience closing also functions with KEY-LESS-GO (→ page 71).

Resolving problems with the side windows

\( \text{WARNING} \) Risk of becoming trapped or fatally injured if reversing protection is not activated

If you close a side window again immediately after it has been blocked, the side window will close with increased or maximum force. The reversing function is then not active and body parts may become trapped.

- Make sure that no parts of the body are in the closing area.
- To stop the closing process, release the button or press the button again to reopen the side window.

A side window cannot be closed and you cannot see the cause.

- Check to see whether any objects are in the window guide.
- Adjust the side windows.

Adjusting the side windows
If a side window is obstructed during closing and reopens again immediately:

- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (re-adjustment). The side window will be closed without the automatic reversing function.

If the side window is obstructed again and reopens again immediately:

- Immediately after this, pull and hold the corresponding button again until the side window has closed and hold the button for at least one more second (follow-up adjustment). The side window will be closed without the automatic reversing function.

The side windows cannot be opened or closed using the convenience opening feature.

Possible causes:
- The key battery is weak or discharged.
- Check the battery using the indicator lamp (→ page 67).

Replace the key battery, if necessary (→ page 69).

### Sliding sunroof

#### Opening and closing the sliding sunroof

- The term "sliding sunroof" also refers to the panoramic roof.

#### WARNING Risk of becoming trapped when the sliding sunroof is being opened and closed

Body parts may become trapped in the range of movement.

- During opening and closing, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.

or

Briefly press the button in any direction during automatic operation. The opening or closing process will be stopped.

#### WARNING Risk of becoming trapped if the sliding sunroof is operated by children

Children operating the sliding sunroof could get caught in the moving parts, particularly if unattended.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the key with you and lock the vehicle.

#### NOTE Malfunction due to snow and ice

Snow and ice may cause the sliding sunroof to malfunction.

- Open the sliding sunroof only if it is free of snow and ice.
NOTE Damage caused by protruding objects

Objects that protrude from the sliding sunroof may damage the seals.

- Do not allow anything to protrude from the sliding sunroof.

NOTE Damage to the sliding sunroof when a roof luggage rack is installed

When a roof luggage rack is installed, raising or opening the sliding sunroof may be restricted.

- Check whether the sliding sunroof can be raised or opened when a roof luggage rack is installed.
- If in doubt, do not raise or open the sliding sunroof.

To start automatic operation: press or pull the button beyond the point of resistance and release it.

To interrupt automatic operation: briefly press the button in any direction. The opening/closing process will be stopped.

Vehicles without a panorama roof with power tilt/sliding panel: the automatic opening and raising features are available only when the sliding sunroof is closed.

Automatic reversing function of the sliding sunroof

If an obstacle obstructs the sliding sunroof during the closing process, the sliding sunroof will open again automatically. The automatic reversing function is only an aid and is not a substitute for your attentiveness.

- During the closing process, make sure that no body parts are in the closing area.

1. Raise
2. Open
3. Close/lower

Check whether the sliding sunroof can be raised or opened when a roof luggage rack is installed.
WARNING Risk of becoming trapped despite the reversing function being active

In particular, the reversing function does not react:
- To soft, light and thin objects, e.g. fingers.
- Towards the end of the closing procedure.
- During resetting.

- During the closing process, make sure that no body parts are in the closing area.
- Release the button immediately if somebody becomes trapped.

or
- Briefly press the button in any direction during automatic operation. The closing process will be stopped.

Rectifying problems with the sliding sunroof

WARNING Risk of becoming trapped or fatal injuries when the sliding sunroof is closed again

If the sliding sunroof is closed again immediately after it has been blocked or reset, it will close with increased force.
- Make sure that no parts of the body are in the closing area.
- Release the button immediately if somebody becomes trapped.

or
- Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

The sliding sunroof cannot be closed and you cannot see the cause.

The term "sliding sunroof" also refers to the panoramic roof.

If the sliding sunroof is obstructed during closing and reopens again slightly:

- Immediately after automatic reversing, pull and hold the button down again to the point of resistance until the sliding sunroof is closed. The sliding sunroof will be closed with increased force.

If the sliding sunroof is obstructed again and opens again slightly:
- Repeat the previous step. The sliding sunroof will be closed with even greater force.

Vehicles without a panoramic roof: The sliding sunroof is not operating smoothly.
- Reset the sliding sunroof.

Resetting the sliding sunroof

- Push the button up to the point of resistance repeatedly until the sliding sunroof is fully open.
- Press the button for another second.
- Close the sliding sunroof.

Vehicles with a panoramic roof: the roller sunblind does not operate smoothly.
Reset the roller sunblind.

Resetting the roller sunblind
- Pull and hold the button little by little until the roller sunblind is fully closed.
- Use automatic operation to fully open and then close the roller sunblind.

Sunblind and roller sunblind
Folding up or down the sun blind for the rear window
- Fold the sun blind up or down.

Operating the roller sunblind for the panoramic roof

**WARNING** Risk of becoming trapped when the roller sunblind is being opened and closed

Body parts may become trapped between the roller sunblind and frame.
- When opening or closing, make sure that no body parts are in the roller sunblind’s range of movement.
- Release the button immediately if somebody becomes trapped.
  or
- Briefly press the button in any direction during automatic operation. The opening/closing process will be stopped.

Opening and closing the roller sunblind

- To open: push the button in direction 1 or pull it in direction 2.
- To close: pull the button in direction 3.

Automatic reversing function of the roller sunblind
If an object is obstructing the roller sunblind during the closing process, the roller sunblind will open again automatically. The automatic reversing...
function is only an aid and is not a substitute for your attentiveness.

- When closing the roller sunblind, make sure that no body parts are in the range of movement.

**WARNING Risk of becoming trapped despite reversing function**

In particular, the reversing function does not react to soft, light and thin objects, e.g. fingers.

- When closing the roller sunblind, make sure that no body parts are in the range of movement.
- Release the button immediately if somebody becomes trapped.
- Briefly press the button in any direction during the automatic closing process. The closing process will be stopped.

### Anti-theft protection

#### Function of the immobilizer

The immobilizer prevents your vehicle from being started without the correct key.

The immobilizer will automatically be activated when the vehicle is switched off and deactivated when the vehicle is switched on.

When leaving the vehicle, always take the key with you and lock the vehicle. Anyone can start the vehicle if a valid key has been left inside the vehicle.

In the event the engine cannot be started (but the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz center or call 1-800-FOR-MERCEdes (in the USA) or 1-800-387-0100 (in Canada).

### ATA (anti-theft alarm system)

#### Function of the ATA system

If the ATA system is armed, a visual and audible alarm will be triggered in the following situations:

- when a door is opened
- when the tailgate is opened
- when the hood is opened
- when interior protection is triggered (→ page 89)
- when the tow-away alarm is triggered (→ page 88)

The ATA system will be armed automatically after approximately ten seconds in the following situations:

- after you lock the vehicle with the key
- after you lock the vehicle using KEYLESS-GO
Indicator lamp 1 will flash when the ATA system is armed.

The ATA system is deactivated automatically in the following situations:

- after you unlock the vehicle with the key
- after you unlock the vehicle using KEYLESS-GO

If the battery is heavily discharged, the burglar alarm system will automatically be deactivated for the benefit of the next engine start.

Deactivating the ATA

Press the Ú, Í or Û button on the key.

or

Press the start/stop button with the key in the stowage compartment (→ page 140)

Deactivating the alarm using KEYLESS-GO

Grasp the outside door handle with the key outside the vehicle.

Function of tow-away alarm

This function may not be available in all countries.

An audible and visual alarm will be triggered if an alteration to your vehicle’s angle of inclination is detected while the tow-away alarm is armed. The tow-away alarm will automatically be armed after approximately 60 seconds:

- after you lock the vehicle with the key
- after you lock the vehicle using KEYLESS-GO

The tow-away alarm will be armed only when the following components are closed:

- Doors
- Tailgate

The tow-away alarm will automatically be deactivated:

- after you press the Ú or Û button on the key
- after you press the start/stop button with the key in the stowage compartment (→ page 140)
- after you unlock the vehicle using KEYLESS-GO
- when you are using HANDS-FREE ACCESS
Information on collision detection on a parked vehicle (→ page 168).

Activating/deactivating the tow-away alarm

Multimedia system:
[1] Settings ➤ Quick Access
The tow-away alarm is activated again in the following cases:
• The vehicle is unlocked again.
• A door is opened.
• The vehicle is locked again.

If quick access is unavailable, select the Vehicle submenu in the Settings main menu to activate or deactivate the tow-away alarm.

Function of interior protection

This function may not be available in all countries.

When interior protection is armed, a visual and audible alarm is triggered if movement is detected in the vehicle interior.

Interior protection is armed automatically after approximately ten seconds:
• after locking the vehicle with the key
• after locking the vehicle using KEYLESS-GO

Interior protection is armed only when the following components are closed:
• doors
• tailgate

Interior protection is automatically deactivated:
• after pressing the [l] or [m] button on the key
• after pressing the start/stop button with the key in the stowage compartment (→ page 140)
• after unlocking the vehicle using KEYLESS-GO
• when using HANDS-FREE ACCESS

The following situations can lead to a false alarm:
• when there are moving objects such as mascots in the vehicle interior
• if a side window is open
• if the sunroof is open

Activating/deactivating interior protection

Multimedia system:
[1] Settings ➤ Quick Access
[1] Activate or deactivate Interior Motion Sensor.

Interior protection is activated again in the following cases:
• The vehicle is unlocked again.
• A door is opened.
• The vehicle is locked again.

If quick access is unavailable, select the Vehicle menu under Settings to activate or deactivate interior protection.
## Notes on the correct driver's seat position

**WARNING** Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:
- If you adjust the driver's seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion

> Before starting the vehicle: in particular, adjust the driver's seat, head restraint, steering wheel and mirror, and fasten your seat belt.

Ensure the following when adjusting steering wheel 1, seat belt 2 and driver's seat 3:
- You are sitting as far away from the driver’s air bag as possible, taking the following points into consideration:
- You are sitting in an upright position
- Your thighs are slightly supported by the seat cushion
- Your legs are not fully extended and you can depress the pedals properly
- The back of your head is supported at eye level by the center of the head restraint
- You can hold the steering wheel with your arms slightly bent
- You can move your legs freely
- You can see all the displays on the instrument display clearly
- You have a good overview of the traffic conditions
- Observe the notes on correctly fastening the seat belt (→ page 40).

**Vehicles with an AMG performance seat:** if the front passenger seat is unoccupied, this can lead to noise caused by the seat belt tongue knocking against the seat. You can prevent this by sliding the seat belt tongue upwards with the seat belt adjuster clip. If the front passenger seat is occupied, ensure that the seat belt adjuster clip is pushed down. Only then will the seat belt fit snugly against the body.
Notes on grab handles

**WARNING** Risk of injury due to excessive load on the grab handles

If you apply your full body weight to the grab handle or pull it abruptly, the grab handle may be damaged or come loose from its anchorage. This may result in injuries.

- Use the grab handles only to stabilize the seating position or to assist in getting in and out of the seat.

Seats

**Adjusting the front seat manually and electrically**

**WARNING** Risk of becoming trapped if the seats are adjusted by children

Children could become trapped if they adjust the seats, particularly when unattended.

- When leaving the vehicle, always take the SmartKey with you and lock the vehicle.

**WARNING** Risk of becoming trapped when adjusting the seat

When you adjust a seat, you or other vehicle occupants could become trapped, e.g. on the seat guide rail.

- When adjusting a seat, make sure that no one has any part of their body within the sweep of the seat.

Observe the safety notes on "Air bags" and "Children in the vehicle".

**WARNING** Risk of accident due to the driver’s seat not being engaged

The driver’s seat may move unexpectedly while driving.

This could cause you to lose control of the vehicle.

**WARNING** Risk of becoming trapped if the seat height is adjusted carelessly

If you adjust the seat height carelessly, you or other vehicle occupants could be trapped and thereby injured.

Children in particular could accidentally press the electrical seat adjustment buttons and become trapped.

- While moving the seats, make sure that hands or other body parts do not get under the lever assembly of the seat adjustment system.

**WARNING** Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck
area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not rotate the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

**WARNING Risk of injury or death due to an incorrect seat position**

The seat belt does not offer the intended level of protection if you have not moved the seat backrest to an almost vertical position.

In particular, you could slip beneath the seatbelt and become injured.

Adjust the seat properly before beginning your journey.

Always ensure that the seat backrest is in an almost vertical position and that the shoulder belt is routed across the center of your shoulder.

**WARNING Risk of potentially fatal injuries due to objects trapped under the front passenger seat**

Objects trapped under the front passenger seat may interfere with the function of the automatic front passenger air bag shutoff or damage the system.

- Do not stow any objects under the front passenger seat.
- When the front passenger seat is occupied, ensure that no objects have become trapped beneath the front passenger seat.

**To adjust the seat fore-and-aft position:** lift lever 4 and slide the seat into the desired position.
Make sure that the seat is engaged.

To adjust the seat cushion length: lift lever 5 and slide the front section of the seat cushion forwards or backwards.

Adjusting the front seat electrically

1. Head restraint height
2. Seat backrest inclination
3. Seat height
4. Seat cushion length
5. Seat cushion inclination
6. Seat fore-and-aft position

Save the settings with the memory function (→ page 102).

Adjusting the front passenger seat electrically from the driver’s seat

Requirements
- The power supply is switched on.

You can call up the following functions for the front passenger seat:
- Seat adjustment
- Seat heating
- Seat ventilation
- Memory function
To select the front passenger seat: press button 1. When the indicator lamp lights up, the front passenger seat is selected.

Adjust the front passenger seat using the buttons on the driver’s side door operating unit.

Adjusting the 4-way lumbar support

- Adjusting the 4-way lumbar support via the multimedia system (→ page 96).

Adjusting the AMG Performance seat

To adjust the contour of the seat and for improved lateral support, you can adjust the front seats individually.

On the front passenger seat, you can adjust only the seat side bolsters of the seat backrest.

- Adjusting the AMG Performance seat via the multimedia system (→ page 96).

Head restraints

- Adjusting the front seat head restraints manually

**WARNING** Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver’s seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion

**WARNING** Risk of injury due to head restraints not being installed or being adjusted incorrectly

If head restraints have not been installed or have not been adjusted correctly, there is an increased risk of injury in the head and neck area, e.g. in the event of an accident or when braking.

- Always drive with the head restraints installed.
- Before driving off, make sure for every vehicle occupant that the center of the head restraint supports the back of the head at about eye level.

Do not rotate the head restraints of the front and rear seats. Otherwise, you will not be able to adjust the height and angle of the head restraints correctly.

Adjust the head restraint fore-and-aft position so that it is as close as possible to the back of your head.

Before starting the vehicle: in particular, adjust the driver’s seat, head restraint, steering wheel and mirror, and fasten your seat belt.
Adjusting the front seat luxury head restraints manually

To raise: pull the head restraint up.
To lower: press release knob 1 in the direction of the arrow and push the head restraint down.
To move forwards: pull the head restraint forwards.
To move backwards: press release knob 2 and push the head restraint backwards.

To adjust the side bolsters of the head restraint: pull or push right or left side bolster 2.
To move forwards: pull the head restraint forwards.
To move backwards: press release knob 1 and push the head restraint backwards.
Ensure that the head restraint is engaged correctly.

Adjusting the head restraints of the rear seats manually

To raise: pull the head restraint up.
To lower: press release knob 1 in the direction of the arrow and push the head restraint down.

Installing/removing the outer rear seat head restraints

Removing

Release the rear seat backrest and fold it forwards slightly (→ page 107).
Pull the head restraint upwards as far as it will go.
Push release knob 1 in the direction of the arrow and pull out the head restraint.

Installing

Insert the head restraint such that the notches on the bar are on the left when viewed in the direction of travel.
Push the head restraint down until it engages.
Fold the rear seat backrest back until it engages.

Configuring the seat settings

Multimedia system:

Adjusting the backrest contour in the lumbar region of the seat backrest (lumbar)
Select Lumbar.
Select the settings for the desired seat.

Adjust the air cushions.

Adjusting the backrest side bolsters
Select Side Bolsters.
Adjust the air cushions for the desired seat.

Setting the seat heating balance
Select Seat Heating Balance.
Adjust the heat distribution for the desired seat.

Setting automatic seat adjustment

WARNING Risk of becoming trapped during adjustment of the driver’s seat after calling up a driver profile
Selecting a user profile may trigger an adjustment of the driver’s seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.
Make sure that when the position of driver’s seat is being adjusted using the mul-
timedia system, no people or body parts are in the seat's range of movement.
If a person is in danger of becoming trapped, immediately stop the adjustment process by:

- a) Tapping the warning message on the media display.
- or
- b) Pressing a position button of the memory function or a seat adjustment switch in the driver's door.

The adjustment process is stopped.

**Requirements**
- Adapting the driver's seat position to body size: automatic seat adjustment has been switched on.

**Multimedia system:**
- Settings ➤ Vehicle
- ➤ Automatic Seat Adjustment

**Switching automatic seat adjustment on/off**
When the active user profile is changed while the vehicle is stationary, the driver's seat, outside mirrors and seat contour will automatically be adapted to the driver.

- Select On or Off.

This setting is available only for individual user profiles. For the guest profile, automatic seat adjustment cannot be switched on or off.

**Adjusting the driver's seat position to body size**
The vehicle will calculate a suitable driver's seat position on the basis of the driver's body size and set this directly.

- To set the unit of measurement: select cm or ft/in.
- Set the size using the scale.
- Select Start Positioning.
  The driver's seat position will be adjusted to the body size that has been set.

If the driver's seat position calculated by the vehicle is not practical or comfortable, it can be changed manually at any time via the buttons.

The exterior mirrors are not set via this function. Instead, they have to be set manually via the switches.

You can also configure these settings via the Mercedes me portal for your user profile. By synchronizing the profiles in the vehicle and the Mercedes me connect profiles, you can carry over these settings for your vehicle. Further information about synchronizing user profiles.

**Setting the easy entry and exit feature**
- Activate or deactivate the function.

If you use an individual user profile and have set your body size, this information is carried over for the easy entry and exit feature. This causes the driver's seat to automatically move into the correct position.

**Overview of massage programs**
- **Hot Relaxing Back** Combination of heat and massage. It starts by massaging the back. In addition, warm pressure points become noticeable, starting in the pelvic area.
- **Hot Relaxing Shoulder** Combination of heat and massage. It starts by massaging the
shoulders. In addition, warm pressure points become noticeable, starting in the pelvic area.

- **Activating Massage** Activating massage program with upward-moving relaxing waves.
- **Classic Massage** Calming back massage program.
- **Wave Massage** Regenerating massage program via relaxing waves across the back and in the seat cushion.
- **Mobilizing Massage** Mobilizing massage program with upward-moving relaxing waves. Can promote slower, deeper respiration. This can improve the supply of oxygen to cells and the brain.
- **Active Workout, Backrest** and **Active Workout, Cushion** These programs require your cooperation. Alternating between tensing and releasing helps to improve blood flow to your muscles. Press against a pressure point as soon as you feel it.

### Selecting the massage program for the front seats

**Multimedia system:**

- - Comfort - Massage
- Start the program for the desired seat [▶].
- To set the massage intensity: switch High Intensity on or off.

### Resetting seat settings

**Multimedia system:**

- - Comfort - Seat Comfort
- Select - for the desired seat.
- Confirm the prompt.

### Switching the seat heating on/off

**WARNING** Risk of burns due to repeatedly switching on the seat heating

Repeatedly switching on the seat heating can cause the seat cushion and seat backrest padding to become very hot.

In particular, the health of persons with limited temperature sensitivity or a limited ability to react to high temperatures may be affected or they may even suffer burn-like injuries.

- Do not repeatedly switch on the seat heating.

To protect against overheating, the seat heating may be temporarily deactivated after it has been switched on repeatedly.

**NOTE** Damage to the seats caused by objects or documents when the seat heating is switched on

When the seat heating is switched on, overheating may occur due to objects or documents placed on the seats, e.g. seat cushions or child seats. This could cause damage to the seat surface.

- Make sure that no objects or documents are on the seats when the seat heating is switched on.
Requirements:
- The power supply is switched on.

Press button 1 repeatedly until the desired heating level is set. Depending on the heating level, up to three indicator lamps will light up. If all indicator lamps are off, the seat heating is switched off.

The seat heating will automatically switch down from the three heating levels after 8, 10 and 20 minutes until the seat heating is switched off.

Vehicles with the Warmth Comfort Package: you can heat the armrests in the door and the center console. You can also set the panel heating in the multimedia system.

Switching the seat ventilation on/off

Requirements:
- The power supply is switched on.
Press button 1 repeatedly until the desired blower setting has been reached. Depending on the blower setting, up to three indicator lamps will light up. If all indicator lamps are off, the seat ventilation is switched off.

**Steering wheel**

**Adjusting the steering wheel electrically**

The steering wheel can be adjusted when the power supply is disconnected.

1. To adjust the distance to the steering wheel
2. To adjust the height
3. Save the settings with the memory function (→ page 102).

**Switching the steering wheel heater on/off**

**Requirements:**
- The power supply or the ignition is switched on.

Turn the lever in the direction of arrow 1 or 2. If indicator lamp 3 lights up, the steering wheel heater is switched on.
When you switch the ignition off, the steering wheel heater will switch off.

## Easy entry and exit feature

### Using the easy entry and exit feature

- **WARNING** Risk of accident when pulling away during the adjustment process of the easy entry and exit feature

  You could lose control of the vehicle.
  - Always wait until the adjustment process is complete before driving off.

- **WARNING** Risk of becoming trapped during adjustment of the easy entry and exit feature

  You and other vehicle occupants – particularly children – could become trapped.
  - Ensure that no-one has any body parts in the range of movement of the steering wheel.

### Vehichles with memory function:

You can stop the adjustment process by pressing one of the memory function position switches.

If the easy entry and exit feature is active, the steering wheel will move upwards and the driver’s seat will move back in the following situations:

- You switch the ignition off when the driver’s door is open
- You open the driver’s door when the ignition is switched off

- The steering wheel will then move upwards only if it is not already as high as it will go.
- The driver’s seat will then move backwards only if it is not already at the rear of the seat adjustment range.

The steering wheel will move back to the last drive position when:

- You switch the ignition on with the driver’s door closed.
- You close the driver’s door when the ignition is switched on

The last drive position will be saved when:

- You switch the ignition off.
- **Vehicles with memory function:** you save the seat settings via the memory function.

---

### Setting the easy entry and exit feature

Multimedia system:

- Settings
- Vehicle
- Automatic Seat Adjustment
- Easy Entry/Exit
- Activate or deactivate the function.
Memory function

Function of the memory function

**WARNING** Risk of an accident if the memory function is used while driving

If you use the memory function on the driver's side while driving, you could lose control of the vehicle as a result of the adjustments being made.

- Only use the memory function on the driver's side when the vehicle is stationary.

**WARNING** Risk of entrapment when adjusting the seat with the memory function

When the memory function adjusts the seat, you and other vehicle occupants – particularly children – could become trapped.

- During the adjustment process of the memory function, make sure that no one has any body parts in the sweep of the seat.
- If someone becomes trapped, press a preset position button or seat adjustment switch immediately.

**WARNING** Danger of entrapment when memory function is activated by children

When children activate the memory function, they can get trapped, especially if they are unsupervised.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the key with you and lock the vehicle.

You can use the memory function when the vehicle is switched off.

Seat settings for up to three people can be stored and called up using the memory function.

You can save settings for the following systems:

- Seat, backrest and head restraint
- Steering wheel
- Outside mirrors
- Head-up display

### Operating the memory function

#### Storing

- Set the desired position for all systems.
Press the memory button \[M\] and then press memory position switch \[1\], \[2\] or \[3\] within three seconds. An acoustic signal will sound. The settings are stored.

To call up: press or briefly hold memory position switch \[1\], \[2\] or \[3\]. After you release the switch, all systems will be moved into the stored position.

Objects in the deployment space of an air bag may prevent the air bag from functioning correctly. Observe the notes on protection provided by the air bag (→ page 46).

### Stowage areas

#### Notes on loading the vehicle

**DANGER Risk of exhaust gas poisoning**
Combustion engines emit poisonous exhaust gases such as carbon monoxide. Exhaust gases can enter the vehicle interior if the tailgate is open when the engine is running, especially if the vehicle is in motion.

- Always switch off the engine before opening the tailgate.
- Never drive with the tailgate open.

**WARNING Risk of injury from unsecured items in the vehicle**
If objects, luggage or loads are not secured or not secured sufficiently, they could slip, tip over or be thrown around and thereby hit vehicle occupants.
There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always store objects in such a way that they cannot be thrown around.
- Before the journey, secure objects, luggage or loads against slipping or tipping over.

**WARNING Risk of injury due to objects being stowed incorrectly**
If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open storage spaces and mobile phone receptacles cannot always retain all objects within.
There is a risk of injury, particularly in the event of sudden braking or abrupt changes in direction.

- Always store objects such that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from storage spaces, parcel nets or storage nets.
- Close the lockable storage spaces before starting a journey.
- Stow and secure objects that are heavy, hard, pointed, sharp-edged, fragile or too large in the cargo compartment.
**WARNING** Risk of accident from objects in the driver's footwell and front-passenger footwell

Objects in the driver's footwell and front-passenger footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell or front-passenger footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient clearance for the pedals.
- Do not use loose floor mats and do not lay multiple floor mats on top of one another.

**Vehicles with automatic front-passenger air bag shutoff:** objects trapped under the front-passenger seat may interfere with the function of the automatic front-passenger air bag shutoff (→ page 48).

**WARNING** - Risk of accident or injury when using the cup holder while the vehicle is moving

The cup holder cannot secure containers while the vehicle is moving. If you use a cup holder while the vehicle is moving, the container may be flung around and liquids may be spilled. The vehicle occupants may come into contact with the liquid and if it is hot, they could be scalded. You could be distracted from traffic conditions and you may lose control of the vehicle.

- Only use the cup holder when the vehicle is stationary.
- Only use the cup holder for containers of the right size.
- Close the container, particularly if the liquid is hot.

**NOTE** Damage to the cup holder

The cup holder can be damaged when folding back the rear armrest. When open, the cup holder can be damaged by body weight.

- The rear armrest can only be folded back when the cup holder is closed.
- Do not sit or support yourself on the cup holder when it is open.

**NOTE** Damage to the rear armrest due to body weight

When folded out, the rear armrest can be damaged by body weight.

- Do not sit or support yourself on the rear seat armrest.

**WARNING** Risk of injury due to an open cargo compartment floor

If you drive with the cargo compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk
of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always close the cargo compartment floor before a journey.

NOTE Damage to the stowage compartment under the ashtray due to intense heat

The stowage compartment under the ashtray is not heat resistant and could be damaged if you rest a lit cigarette on it.

- Make sure that the ashtray is fully engaged.

WARNING Risk of fire and injury from hot cigarette lighter

- You can suffer burns if you touch the hot heating element or the hot socket of the cigarette lighter.

In addition, flammable materials can catch fire if:

- you drop the hot cigarette lighter.
- children e.g. hold the hot cigarette lighter to objects.
- Always hold the cigarette lighter by the knob.
- Always make sure that the cigarette lighter is out of the reach of children.
- Never leave children unattended in the vehicle.

WARNING Risk of burns from the tailpipe and tailpipe trims

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.

- Allow vehicle parts to cool down before touching them.

- Leather is a natural product. It exhibits natural surface properties, e.g. differences in structure, marks caused by growth and injury or subtle color differences. These surface properties are characteristics of leather and not material malfunctions. Leather is also subject to a natural aging process during which the surface properties change.

The driving characteristics of your vehicle are dependent on the distribution of the load within the vehicle. You should bear the following in mind when loading the vehicle:

- Do not exceed the permissible total mass or the gross axle weight rating of the vehicle (including load and occupants). The values are specified on the vehicle identification plate on the vehicle's B-pillar.
- The load must not protrude above the upper edge of the seat backrests.
- Always place the load behind unoccupied seats if possible.
Secure the load using the cargo tie-down rings and distribute the load evenly.

Notes on driving with a roof load
- Distribute the roof load and the load inside the vehicle evenly, placing heavy objects at the bottom. Also comply with the notes on loading the vehicle.
- Drive attentively, and avoid abrupt starts, braking and steering as well as rapid cornering.
- When transporting roof loads and when the vehicle is fully loaded or fully occupied, select drive programs and . These are designed to focus on stability.

For more information on stowage compartments and stowage areas, please refer to the Digital Operator's Manual.

Stowage spaces in the vehicle interior

Overview of the front stowage compartments

1. Stowage spaces in the doors
2. Stowage compartment in the armrest with a multimedia and a USB port as well as a charging module for wireless charging of mobile phones
3. Stowage compartment in the front center console with a USB port and a 12 V socket
4. Glove box

Locking/unlocking the glove box
- Turn the emergency key a quarter turn clockwise (to lock) or counter-clockwise (to unlock).
Through-loading feature in the rear bench seat (EASY-PACK Quickfold)

Folding the rear seat backrest forwards

**WARNING** Risk of accident if the rear bench seat, rear seat and seat backrest are not engaged

The rear bench seat, rear seat and seat backrest may fold forwards, even when you are driving.

- As a result, the vehicle occupant will be pushed into the seat belt with increased force. The seat belt will not be able to protect as intended and could cause additional injury.
- Objects or loads in the trunk or cargo compartment will not be restrained by the seat backrest.

Make sure that the rear bench seat, the rear seat and the seat backrest are engaged before every trip.

If the left and right seat backrests are not engaged and locked in place, this will be shown on the multifunction display on the instrument cluster. A warning tone will also sound.

If the center seat backrest is not engaged and locked in place, the lock verification indicator will be red.

**Requirements:**
- To fold the center seat backrest forwards: the center seat backrest has been unlocked.

You can fold the center and outer seat backrests forwards separately.

You can unlock the outer seat backrests electrically. The buttons for unlocking are located in the cargo compartment.

Vehicles with a memory function: If necessary, when the seat backrest in the rear passenger compartment is folded forward, the corresponding front seat will move forwards slightly to avoid a collision.

If necessary, fully insert the head restraints into the rear seat backrest.
To fold the left and right seat backrests forward: pull right or left release handle 1.

Vehicles with a center seat backrest: pull release catch 3 of seat backrest 2 forward.

Fold seat backrest 2 forwards.

If necessary, reset the driver’s or front passenger seat.

Folding back the rear seat backrest

**WARNING** Risk of becoming trapped when adjusting the seats

When you adjust a seat, you may trap yourself or a vehicle occupant.

- When adjusting a seat, make sure that no one has any body parts in the sweep of the seat.

**NOTE** Damage caused by trapping the seat belt when folding back the seat backrest

The seat belt could become trapped and thus damaged when the seat backrest is folded back.

- Make sure that the seat belt is not trapped when folding back the seat backrest.

Move the driver’s or front passenger seat forwards, if necessary.

Fold the corresponding seat backrest 1 back until it engages.

**Left and right seat backrests:** if the seat backrest is not engaged and locked in place, this will be shown on the multifunction display on the instrument cluster.

A warning tone will also sound.

**Vehicles with a center seat backrest:** if the seat backrest is not engaged and locked in
place, the red lock verification indicator 2 will be visible.

- Locking the release catch of the center rear seat backrest

Requirements
- The left and center seat backrests are engaged and joined together.

You can lock the center seat backrest release catch if you want to secure the cargo compartment against unauthorized access. The center seat backrest can then only be folded forwards together with the left seat backrest.

- Fold the center and left seat backrests forwards.
- To lock or unlock: slide catch 1 upwards or downwards.

**Overview of the tie-down eyes**

Observe the notes on loading the vehicle (→ page 103).

**Overview of bag hooks**

- **WARNING** Risk of injury when using bag hooks with heavy objects

The bag hooks cannot restrain heavy objects or items of luggage.
Objects or items of luggage may be flung around and hit vehicle occupants.

- Only hang light objects on the bag hooks.
- Never hang hard, sharp-edged or fragile objects on the bag hooks.

Observe the notes on loading the vehicle (→ page 103).

Subject the bag hooks to a maximum load of 6.6 lbs (3 kg) and do not attach any goods to them.

---

**EASY-PACK load-securing kit**

**Notes on the snap-in module for the cargo compartment (telescopic rods)**

The EASY-PACK load-securing kit allows you to use your cargo compartment for a variety of purposes. The components are located in the stowage space under the cargo floor.

---

**WARNING Risk of injury due to an open cargo compartment floor**

If you drive with the cargo compartment floor open, objects could be flung around and hit vehicle occupants as a result. There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.
Always close the cargo compartment floor before a journey.

Open the cargo floor.
Attach holders 1 in the desired position to the side of the cargo floor.
Close the cargo floor.

Insert the mounting elements 2 into the holders 1.
Extend the telescopic rod 3.
Insert the telescopic rod 3 into the mounting elements 2.
Turn both mounting elements 2 to until you feel them engage.

Attaching a roof luggage rack

**WARNING** Risk of accident due to exceeding the maximum roof load

The vehicle center of gravity and the usual driving characteristics as well as the steering and braking characteristics alter.

If you exceed the maximum roof load, the driving characteristics, as well as steering and braking, will be greatly impaired.

Never exceed the maximum roof load and adjust your driving style.

You will find information on the maximum roof load in the "Technical data" section.

**NOTE** Damage to the vehicle due to not observing the maximum permitted headroom clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.
Observe the signposted headroom clearance. If the vehicle height is greater than the permitted headroom clearance, do not enter. Observe the changed vehicle height with add-on roof equipment.

**NOTE** Vehicle damage from non-approved roof luggage racks

The vehicle could be damaged by roof luggage racks that have not been tested and approved for Mercedes-Benz.

- Use only roof luggage racks tested and approved for Mercedes-Benz.
- Depending on the vehicle equipment, ensure that the sliding sunroof can be fully raised when the roof luggage rack is installed.
- Depending on the vehicle equipment, ensure that the tailgate can be fully opened when the roof luggage rack is installed.
- Position the load on the roof luggage rack in such a way that the vehicle will not sustain damage even when it is in motion.

It is not possible to attach a roof luggage rack to vehicles with a carbon roof.

**NOTE** Damage to the covers

The covers may be damaged and scratched when being opened.

- Do not use metallic or hard objects.
- Carefully fold covers upwards in the direction of the arrow.
- Secure the roof luggage rack to the fastening points beneath covers.
- Comply with the installation instructions of the roof luggage rack manufacturer.
- Secure the load on the roof luggage rack.

**Cup holder**

Switching on or off the cooling or heating function for the temperature-controlled cup holder

When the heating function is used, the metal insert of the cup holder is heated. For this reason, you must not reach into the cup holder insert.
To switch on: press button 2 repeatedly until the blue (keep cool) or red (keep warm) indicator lamp on the button lights up.

To switch off: press button 2 repeatedly until the indicator lamp on the button goes out.

Clean the removable rubber mat only with clean, lukewarm water and the temperature-controlled cup holder 1 only with a soft cloth.

Sockets

Using the 12 V socket

Requirements
- Only devices up to a maximum of 180 W (15 A) are permissible.

Depending on the vehicle equipment, the vehicle has the following 12 V sockets:
- In the stowage compartment in the front center console
- In the stowage compartment in the center console of the rear passenger compartment
- In the cargo compartment

Example: 12 V socket in the stowage compartment in the front center console

- Fold up socket cap 1.
- Insert the plug of the device.

If you have connected a device to the 12 V socket, leave the cover of the stowage compartment open.
Using the 115 V socket in the rear passenger compartment

**DANGER Risk of fatal injuries due to a damaged connecting cable or a damaged socket**

You could receive an electric shock if the connecting cable or the 115 V power socket is pulled out of the trim or is damaged or wet.
- Use only connecting cables that are dry and free of damage.
- When the vehicle is switched off, make sure that the 115 V power socket is dry.
- Immediately have the 115 V power socket checked or replaced at a qualified specialized workshop if it is damaged or has been pulled out of the trim.
- Never plug the connecting cable into a 115 V power socket that is damaged or has been pulled out of the trim.

**DANGER Risk of death due to using the socket incorrectly**

In particular, you could receive an electric shock:
- If you touch the inside of the socket
- If you insert unsuitable devices or objects into the socket
- Do not touch the inside of the socket.
- Only connect suitable devices to the socket.

Make sure that no liquids get into the 115 V socket.

When the 115 V socket is not in use, keep the socket flap closed.

**Requirements**
- The device is equipped with a suitable plug which conforms to the standards specific to the country you are in.
- A device up to a maximum of 150 W (1.3 A) is used.
- Do not use multiple socket outlets.

- Open socket flap 3.
- Insert the plug of the device into 115 V socket 1.
  When the on-board electrical system voltage is sufficient, indicator lamp 2 lights up.

**Vehicles with luxury individual rear seats:** the 115 V socket is in the stowage compartment in the center console.
Open socket flap 3.
Insert the plug of the device into 115 V socket 1. When the on-board electrical system voltage is sufficient, indicator lamp 2 lights up.

**USB port in the rear passenger compartment**

Depending on the vehicle equipment, the vehicle has the following USB ports in the rear passenger compartment:

- For vehicles with luxury individual rear seats: in the rear passenger compartment center console
- For vehicles with a rear bench seat: between the rear seats
- In the stowage compartment in the rear passenger compartment armrest

Depending on the vehicle equipment, the design of the stowage compartment and the rear passenger compartment center console may vary.

When the vehicle is switched on, you can charge a USB device, such as a mobile phone, at the USB port using a suitable charging cable.

**Wireless charging of the mobile phone and connection with the exterior antenna**

**Notes on wirelessly charging a mobile phone**

⚠️ WARNING Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk/cargo compartment.

Observe the notes on loading the vehicle.

**WARNING Risk of fire from placing objects in the mobile phone storage compartment**

Placing other objects in the mobile phone storage compartment could constitute a fire hazard.

- Apart from a mobile phone, do not place any other objects in the mobile phone storage compartment, especially those made of metal.

**NOTE Damage to objects caused by placing them in the mobile phone storage compartment**

If objects are placed in the mobile phone storage compartment, these may be damaged by electromagnetic fields.

Do not place credit cards, storage media, ski passes or other objects sensitive to electromagnetic fields in the mobile phone storage compartment.

**NOTE Damage to the mobile phone stowage compartment caused by liquids**

If liquids enter the mobile phone stowage compartment, the compartment may be damaged.

- Ensure that no liquids enter the mobile phone stowage compartment.

The following notes on wirelessly charging the mobile phone must be observed:

- Depending on the vehicle equipment, the mobile phone is connected to the vehicle’s exterior antenna via the charging module.
- The charging function and wireless connection of the mobile phone to the vehicle’s exterior antenna are available only if the vehicle is switched on.

- Small mobile phones may not be able to be charged in every position of the mobile phone stowage compartment.
- Large mobile phones that do not rest flat in the mobile phone stowage compartment may not be able to be charged or connected with the vehicle’s exterior antenna.
- The mobile phone may heat up during the charging process. This may particularly depend on the applications (apps) currently open in the background.
- To ensure more efficient charging and connection with the vehicle’s exterior antenna, remove the protective cover from the mobile phone. Protective covers which are necessary for wireless charging are an exception.

**Charging a mobile phone wirelessly**

**Requirements**

- The mobile phone is suitable for wireless charging (Qi-compatible mobile phone).
Wirelessly charging a mobile phone in the rear passenger compartment

Requirements
- The mobile phone is suitable for wireless charging (Qi-compatible mobile phone).
- A list of Qi-compatible mobile phones can be found at: https://www.mercedes-benz-mobile.com

Example: vehicles with luxury individual rear seats
- Open the stowage compartment in the rear passenger compartment center console.
- Fasten the mobile phone behind rubber strap 1. When the indicator lamp in the upper area of the mobile phone system lights up, the mobile phone is being charged.

Place the mobile phone as close to the center of mat 1 as possible with the display facing upwards.
When the charging symbol is shown in the multimedia system, the mobile phone is being charged.
Malfunctions during the charging process are shown on the central display.

The mat can be removed for cleaning, e.g. using clean, lukewarm water.

A list of Qi-compatible mobile phones can be found at: https://www.mercedes-benz-mobile.com.
Observe the notes on loading the vehicle (→ page 103).

## Installing/removing the floor mats

### WARNING Risk of accident due to objects in the driver’s footwell

Objects in the driver’s footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.

- Stow all objects in the vehicle securely so that they cannot get into the driver's footwell.
- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.
- Do not use loose floor mats and do not place floor mats on top of one another.

### Installation

1. Slide the corresponding seat backwards and lay the floor mat in the footwell.
2. Press studs 1 onto holders 2.
3. Adjust the corresponding seat.

### Removal

1. Slide the corresponding seat backwards and pull the floor mat off holders 2.
2. Remove the floor mat.
Exterior lighting

Information about lighting systems and your responsibility

The various lighting systems of the vehicle are only aids. The driver of the vehicle is responsible for correct vehicle illumination in accordance with the prevailing light and visibility conditions, legal requirements and traffic situation.

Light switch

1. Operating the light switch

<table>
<thead>
<tr>
<th></th>
<th>Light switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>![Light switch icon] Left-hand parking lights</td>
</tr>
<tr>
<td>2</td>
<td>![Light switch icon] Right-hand parking lights</td>
</tr>
<tr>
<td>3</td>
<td>![Light switch icon] Side lamps and license plate lighting</td>
</tr>
<tr>
<td>4</td>
<td>![Light switch icon] Automatic driving lights (preferred light switch position)</td>
</tr>
<tr>
<td>5</td>
<td>![Light switch icon] Low beam/high beam</td>
</tr>
<tr>
<td>6</td>
<td>![Light switch icon] Switches the rear fog light on/off.</td>
</tr>
</tbody>
</table>

When low beam is activated, the ![Light switch icon] indicator lamp for the side lamps will be deactivated and replaced by the ![Light switch icon] low-beam indicator lamp.

Always park your vehicle safely using sufficient lighting, in accordance with the relevant legal stipulations.

**NOTE** Battery discharging by operating the standing lights

Operating the standing lights over a period of hours puts a strain on the battery.

Where possible, switch on the right ![Light switch icon] or left ![Light switch icon] parking light.

If the battery is insufficiently charged, the side lamps or parking lights will be switched off automatically to facilitate the next engine start.
The exterior lighting (except side lamps and parking lights) will switch off automatically when the driver’s door is opened.

- Observe the notes on surround lighting (→ page 124).

**Automatic driving lights function**

When the vehicle is switched on, the side lamps, low beam and daytime running lamps will be switched on automatically depending on the ambient light.

![WARNING Risk of accident when the low beam is switched off in poor visibility](image)

When the light switch is set to [Auto], the low beam may not be switched on automatically if there is fog, snow or other causes of poor visibility such as spray.

- In such cases, turn the light switch to [Off].

The automatic driving lights are only an aid. You are responsible for the vehicle lighting.

### Switching the rear fog light on/off

**Requirements:**
- The light switch is in the [Off] or [Auto] position.

- Press button [Off].

Please observe the country-specific laws on the use of rear fog lamps.

---

### Operating the combination switch for the lights

- **High beam**
- **Turn signal light, right**
- **High-beam flasher**
- **Turn signal light, left**

- Use the combination switch to select the desired function.
Switching on high beam

- Turn the light switch to the "L" or "AUTO" position.
- Push the combination switch beyond the point of resistance in the direction of arrow 1. When high beam is activated, the indicator lamp for low beam "L" will be deactivated and replaced by the indicator lamp for high beam "K".

Switching off high beam

- Move the combination switch back to its starting position.

High-beam flasher

- Pull the combination switch in the direction of arrow 3.

Turn signal light

- To indicate briefly: push the combination switch briefly to the point of resistance in the direction of arrow 2 or 4. The corresponding turn signal light will flash three times.

- To indicate permanently: push the combination switch beyond the point of resistance in the direction of arrow 2 or 4.

Vehicles with Active Lane Change Assist:
- A turn signal indicator activated by the driver may continue to operate for the duration of the lane change.
- If the driver indicated directly beforehand but a lane change was not immediately possible, the turn signal indicator may activate automatically.

Activating/deactivating the hazard warning lights

- Press button 1.

The hazard warning lights will switch on automatically if:
- the air bag has been deployed.
Cornering light

**Cornering light function**

The cornering light improves the illumination of the road over a wide angle in the turning direction, enabling better visibility on tight bends, for example. The cornering light will be activated only when low beam is switched on.

The function will be active in the following cases:

- At speeds below 25 mph (40 km/h) when the turn signal light is switched on or the steering wheel is turned

**Traffic circle and intersection function:** the cornering light will be activated on both sides based on an evaluation of the vehicle’s current navigation position. It will remain active until after the vehicle has left the traffic circle or intersection.

Active headlamps

**Active headlamps function**

- The headlamps follow the steering movements.

- At speeds between 25 mph (40 km/h) and 43 mph (70 km/h) and when the steering wheel is turned

- Relevant areas are better illuminated during a journey.

The functions are active when the low beam is switched on.

Depending on the vehicle’s equipment, the course of the lane in which you are driving will also be evaluated and the active headlamps function will adjust the light in advance.

Adaptive Highbeam Assist

**Adaptive Highbeam Assist function**

- Road users without lights, e.g. pedestrians
- Road users with poor lighting, e.g. cyclists
- Road users whose lighting is obstructed, e.g. by a barrier

On very rare occasions, Adaptive Highbeam Assist may fail to recognize other road users
with their own lighting, or may recognize them too late.
In these, or in similar situations, the automatic high beam will not be deactivated or will be activated despite the presence of other road users.
Always observe the road and traffic conditions carefully and switch off the high beam in good time.

Adaptive Highbeam Assist cannot take into account road, weather or traffic conditions. Detection may be restricted in the following cases:
- In poor visibility, e.g. fog, heavy rain or snow
- If there is dirt on the sensors or the sensors are obscured

Adaptive Highbeam Assist is only an aid. You are responsible for adjusting the vehicle’s lighting to the prevailing light, visibility and traffic conditions.

Adaptive Highbeam Assist automatically switches between the following types of light:
- Low beam
- High beam

At speeds greater than 19 mph (30 km/h):
- If no other road users are detected, the high beam will switch on automatically.

The high beam will switch off automatically in the following cases:
- At speeds below 16 mph (25 km/h)
- If other road users are detected
- If street lighting is sufficient

The system's optical sensor is located behind the windshield near the overhead control panel.

Switching Adaptive Highbeam Assist on/off

Switching on
- Turn the light switch to the [AUTO] position.
- Switch on high beam using the combination switch.
  If Adaptive Highbeam Assist is activated, the [led] indicator lamp will light up in the central display section of the instrument display.

Switching off
- Switch off high beam using the combination switch.
Switching the daytime running lamps on/off

Multimedia system:

Activate or deactivate the function.

Setting the exterior lighting switch-off delay time

Requirements:
- The light switch is in the AUTO position.

Multimedia system:

Set the switch-off delay time.

When the vehicle's engine is switched off, the exterior lighting will be activated for the set time.

Switching the surround lighting on/off

Multimedia system:

When Locator Lighting is active, the exterior lighting lights up for 40 seconds after the vehicle is unlocked. When you start the vehicle, the surround lighting is deactivated and the automatic driving lights are activated.

Activate or deactivate the function.

Interior lighting

Adjusting the interior lighting

Front overhead control panel

To switch on or off: press button 1 – 5 accordingly.
Operating unit in the rear passenger compartment

Rear passenger compartment reading lamp

To switch on or off: press the button.

Adjusting the ambient lighting

Multimedia system:

Setting the color

Select Color.

Set the desired color.

Adjusting the brightness

Select Brightness.

Adjust the brightness.

Activating the brightness for zones

Select Brightness.

Select Brightness Zones.

Activate or deactivate the function.

or

Set the brightness for the desired zones.

Activating multi-color lighting

Select Color.

Select Multi-color.

Select a color combination.

Activating multi-color animation

Select Color.

Select Multi-color Animation.

The chosen color combination will change at predefined intervals.

Activating welcome lighting

Select Color.

Select Welcome.

When the vehicle is unlocked, a special ambient lighting sequence will run.

Activating dependency on air conditioning settings

Select Color.

Select Climate.

If changes are made to the temperature setting in the vehicle, the color of the ambient lighting will change briefly.

Switching the interior lighting switch-off delay time on/off

Multimedia system:

Settings → Light

Interior Lighting Delay

Switch the switch-off delay time on or off.

When this function is active, the interior lighting lights up for a short time after the vehicle is locked.
Windshield wipers and windshield washer system

Switching the windshield wipers on/off

1. Windshield wipers off
2. Intermittent wiping, normal
3. Intermittent wiping, frequent
4. Continuous wiping, slow
5. Continuous wiping, fast

- Turn the combination switch to the corresponding position [1] - [5].
- Single wipe/washing: push the button on the combination switch in the direction of arrow 1.
  - Single wipe
  - Wipes with washer fluid

Observing the notes on washing the vehicle in a car wash (→ page 292).

Replacing the windshield wiper blades

> **WARNING** Risk of becoming trapped if the windshield wipers are switched on while wiper blades are being replaced

If the windshield wipers begin to move while you are changing the wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and vehicle before changing the wiper blades.

Moving the wiper arms into the replacement position

- Switch the vehicle on and then off again immediately.
- Within around 15 seconds, press and hold the button on the combination switch for approximately three seconds (→ page 126). The wiper arms will move into the replacement position.

Removing the wiper blades

- Fold the wiper arms away from the windshield.
Hold the wiper arm with one hand. With the other hand, turn the wiper blade away from the wiper arm in the direction of arrow 1 as far as it will go.

Slide catch 2 in the direction of arrow 3 until it engages in the removal position.

Remove the wiper blade from the wiper arm in the direction of arrow 4.

### Installing the wiper blades

Insert the new wiper blade into the wiper arm in the direction of arrow 1.

Slide catch 2 in the direction of arrow 3 until it engages in the locking position.

Make sure that the wiper blade is seated correctly.

Fold the wiper arms back onto the windshield.

Switch on the vehicle.

Press the button on the combination switch (→ page 126). The wiper arms will return to their original positions.

Switch off the vehicle.

Check the condition of the wiper blades regularly and replace them in the event of visible damage or ongoing smearing.
Maintenance display

- Remove protective film from the maintenance displays on the tips of the newly installed wiper blades.

When the color of the maintenance displays changes from black to yellow, replace the wiper blades.

- The duration until the color changes varies depending on the usage conditions.

Mirrors

Operating the outside mirrors

- **WARNING** Risk of accident due to adjusting the vehicle settings while the vehicle is in motion

You could lose control of the vehicle in the following situations in particular:

- If you adjust the driver’s seat, the head restraint, the steering wheel or the mirror while the vehicle is in motion
- If you fasten your seat belt while the vehicle is in motion

- **WARNING** Risk of accident due to misjudgment of distance when using the front-passenger mirror

The outside mirror on the front passenger side reflects objects on a smaller scale. The objects in view are in fact closer than they appear.

Therefore, always look over your shoulder to check the actual distance between you and the road users traveling behind you.

Before starting the vehicle: in particular, adjust the driver’s seat, head restraint, steering wheel and mirror, and fasten your seat belt.
Folding the outside mirrors in/out

Briefly press button 1.

Readjusting the outside mirrors

If the battery has been disconnected or completely discharged, the outside mirrors must be readjusted. Only then will the automatic mirror folding function work properly.

Briefly press button 1.

Adjusts the outside mirrors

- Press button 3 or 4 to select the outside mirror to be adjusted.
- Press button 2 to adjust the position of the mirror glass.

Engaging the outside mirrors

- Vehicles without electrically folding outside mirrors: manually move the outside mirror into the correct position.
- Vehicles with electrically folding outside mirrors: press and hold button 1. You will hear a click and the mirror will audibly click into place. The outside mirror will now be moved to the correct position.

Automatic anti-glare mirrors function

**WARNING** Risk of acid burns and poisoning due to the anti-glare mirror electrolyte

Electrolyte may escape if the glass in an automatic anti-glare mirror breaks.

The electrolyte is hazardous to health and causes irritation. It must not come into contact with your skin, eyes, respiratory organs or clothing or be swallowed.

- If you come into contact with electrolyte, observe the following:
  - Immediately rinse the electrolyte from your skin with water and seek medical attention.
  - If electrolyte comes into contact with your eyes, immediately rinse them thoroughly with clean water and seek medical attention.
  - If the electrolyte is swallowed, immediately rinse your mouth out thoroughly. Do not induce vomiting. Seek medical attention immediately.
  - Immediately change out of clothing which has been contaminated with electrolyte.
  - If an allergic reaction occurs, seek medical attention immediately.
The inside rearview mirror and the outside mirror on the driver’s side will automatically go into anti-glare mode if light from a headlamp hits the sensor on the inside rearview mirror.

**System limits**
The system will not go into anti-glare mode if:
- The vehicle is switched off.
- Reverse gear is engaged.
- The interior lighting is switched on.

**Front-passenger outside mirror parking position function**
The parking position makes parking easier.
The front-passenger outside mirror will swivel downwards in the direction of the rear wheel on the front passenger's side when:
- The parking position is stored (→ page 130).
- The front-passenger mirror is selected.
- Reverse gear is engaged.

The front-passenger outside mirror will move back to its original position when:
- You shift the transmission to another transmission position.
- You are traveling at a speed greater than 9 mph (15 km/h).
- You press the button for the outside mirror on the driver's side.

**Storing the parking position of the front-passenger outside mirror using reverse gear**

**Storing**

1. Select the front-passenger outside mirror using button 2.
2. Engage reverse gear.
3. Move the front-passenger outside mirror into the desired parking position using button 1.
Calling up

- Select the front-passenger outside mirror using button 2.
- Engage reverse gear. The front-passenger outside mirror will move to the stored parking position.

Activating/deactivating the automatic mirror folding function

Multimedia system:

- Home ➤ Settings ➤ Vehicle
- Activate or deactivate Automatic Folding.

Area permeable to radio waves on the windshield

Radio-controlled equipment such as toll systems can be mounted only on areas 1 of the windshield that are permeable to radio waves.

Areas permeable to radio waves 1 are best visible from outside the vehicle when the windshield is illuminated with an external light source.

Note this position for vehicles with:
- Infra-red reflective windshield

Infrared-reflective windshield function

The infrared-reflective windshield is coated and reduces the build-up of heat in the vehicle interior. The coating shields the vehicle interior from radio waves.
Overview of climate control systems

Notes on climate control

An interior air filter in combination with the prefilter in the engine compartment must always be used so that the air conditioning system, pollution level monitoring and the air filtration work correctly. Use filters recommended and approved by Mercedes-Benz. Always have maintenance work carried out at a qualified specialist workshop.

Overview of the air-conditioning control panel

The indicator lamps on the buttons indicate that the corresponding function is activated.

Control panel for automatic climate control with/without stationary heater (example)

1. ▼▲ Sets the temperature, left
2. ◄ Sets the air distribution
3. ◄🗄 Sets the airflow or switches off climate control
4. AUTO Sets climate control to automatic mode (→ page 134)
5. ◄ MAX Defrosts the windshield

6. Vehicles with control panel for automatic climate control (without stationary heater):
   - [MENU] calls up the air conditioning menu
   - Vehicles with control panel for automatic climate control (with stationary heater or plug-in hybrid) or control panel for 3-zone automatic climate control (with/without stationary heater or plug-in hybrid): [MENU] calls up the air conditioning menu, switches residual heat on/off (→ page 135)

7. ◄ IDataSwitches the rear window heater on/off

8. Vehicles with control panel for automatic climate control without stationary heater:
   - [SYNC] switches synchronization on/off (→ page 134)
   - Vehicles with control panel for 3-zone automatic climate control without stationary heater:
     - [A/C] switches the A/C function on/off (→ page 133)

9. ◄ Switches air-recirculation mode on/off (→ page 135)
Operating the climate control system

Switching climate control on/off

- To switch on: set the airflow to level 1 or higher using the \( \mathcal{H} \) button.
- To switch off: set the airflow to level 0 using the \( \mathcal{H} \) button.

If climate control is switched off, the windows may fog up more quickly. Switch climate control off only briefly.

Switching the A/C function on/off using the air conditioning control panel

The A/C function heats, cools and dehumidifies the vehicle’s interior air.

- Press the \( \mathcal{A/C} \) button.

Switch off the A/C function only briefly; otherwise, the windows may fog up more quickly. Condensation may drip from the underside of the vehicle when cooling mode is active. This is not indicative of a malfunction.

Calling up the air conditioning menu

Calling up the air conditioning menu using the multimedia system

- Select one of the temperature displays at the lower edge of the media display.

Calling up the air-conditioning menu using the button on the climate control panel

- Press the \( \text{MENU} \) button on the climate control panel.

Activating/deactivating the A/C function via the multimedia system

Multimedia system:

- \( \Rightarrow \) Climate Menu  \( \Rightarrow \) First Row of Seats

The A/C function heats, cools and dehumidifies the vehicle’s interior air.

- Select A/C.
Setting climate control to automatic mode
In automatic mode, the set temperature is controlled and maintained at a constant level by the air supply.

- Press button AUTO.
- To switch to manual mode: press the + or - button.

Climate style
- Climate style function
The following climate styles are available in automatic mode:
  - FOCUS: high airflow, slightly cooler setting
  - MEDIUM: medium airflow, standard setting
  - DIFFUSE: low airflow, slightly warmer and draft-free setting
- Setting the climate style
  - Call up the air conditioning menu (→ page 133).
  - Select First Row of Seats or Second Row of Seats.
  - Call up the CLIMATE MODE menu.
  - Select a climate style.

Setting the air distribution
Multimedia system:
- Climate Menu
  - Call up the air conditioning menu (→ page 133).
  - Select a row of seats.
  - To set the air distribution: select [ ], [ ], [ ] or [ ].
  - Set the airflow.

Several air distributions can be selected at the same time, e.g. to air-condition both the windshield and the footwell. The [ ] climate control for the windshield can only be selected for the first seat row.

Activating/deactivating the climate control synchronization function via the air conditioning control panel
Climate control can be set centrally using the synchronization function. The temperature and air distribution settings for the driver's side will be adopted automatically for the front passenger side.

- Press the button.

The synchronization function will be deactivated if the settings for one of the other climate control zones are changed.

Switching the synchronization function on/off via the multimedia system
Multimedia system:
- Climate Menu
- First Row of Seats
Climate control can be set centrally using the synchronization function. The driver's settings for temperature, air quantity and air distribution will be adopted automatically for all climate zones.

- Select SYNC and switch on or off.
Defrosting the windows

Windows fogged up on the inside
► Press the [AUTO] button.
► If the windows remain fogged up: press the [ Hawthorne ] button.

Windows fogged up on the outside
► Switch on the windshield wipers.
► Press the [AUTO] button.

Switching air-recirculation mode on/off
► Press the [Hawthorne] button.
The interior air will be recirculated.

Air-recirculation mode automatically switches to fresh air mode after a while.

If air-recirculation mode is switched on, the windows may fog up more quickly. Switch on air-recirculation mode only briefly.

Switching the residual heat on or off

Requirements:
• The vehicle is parked.

It is possible to make use of the residual heat from the engine to continue heating or ventilating the front compartment of the vehicle for approximately 30 minutes.

► To switch on: press the [MENU] button.

Residual heat is switched off automatically.

Activating/deactivating ionization

Multimedia system:
► Climate Menu ➤ Air Quality

Ionization improves the quality of the vehicle's interior air. Ionization of the interior air is odorless.

► Select IONIZATION and activate or deactivate the function.

Fragrance system

Setting the fragrance system

Requirements
• Automatic climate control is activated.
• The glove box is closed.

Multimedia system:
► Climate Menu ➤ Air Quality

The fragrance system distributes a pleasant fragrance throughout the vehicle interior from a flacon located in the glove box.

► Select AIR FRESHENER.

► Keep pressing until the desired intensity is reached.

Inserting or removing the flacon of the fragrance system

► WARNING Risk of injury from liquid perfume
If children open the flacon, they could drink the liquid perfume or it could come into contact with their eyes.
Do not leave children unattended in the vehicle.
Consult a doctor immediately if liquid perfume has been drunk.
If liquid perfume comes into contact with your eyes or skin, rinse your eyes with clean water.
If symptoms continue, consult a doctor.

**ENVIRONMENTAL NOTE**
Environmental damage due to improper disposal of full flacons

Full flacons must not be disposed of with household waste.

Full flacons must be taken to a harmful substance collection point.

To insert: slide the flacon into the holder as far as it will go.
To remove: pull out flacon.

If you do not use genuine Mercedes-Benz interior perfumes, observe the manufacturers’ safety notices on the perfume packaging.

Dispose of the genuine Mercedes-Benz interior perfume flacon when it is empty and do not refill it.

---

**Refillable flacon**
- Unscrew the cap of the empty flacon.
- Fill the flacon with a maximum of 0.5 fl. oz. (15 ml).
- Screw the cap back onto the flacon.

Always refill the empty refillable flacon with the same perfume. Observe the separate information sheet with the flacon.

---

**Air vents**

**Adjusting the front air vents**

**WARNING** Risk of burns or frostbite due to being too close to the air vents

Very hot or very cold air can flow from the air vents.
Make sure that all vehicle occupants always maintain a sufficient distance from the air vents.

If necessary, direct the airflow to another area of the vehicle interior.

To ensure the flow of fresh air through the air vents into the vehicle interior, note the following:

- Always keep the vents and ventilation grilles in the vehicle interior clear.
- Keep the air inlet free of residue build-up (→ page 292).

To open or close: hold the center of air vent 1 and turn it to the left or right as far as it will go.

To set the airflow direction: hold the center of air vent 1 and move it up or down or to the left or right.

Adjusting the rear air vents

To open or close: hold the center of air vent 1 and turn it to the left or right as far as it will go.

To set the airflow direction: hold the center of air vent 1 and move it up or down or to the left or right.

Opening or closing the air vent in the glove box

NOTE Damage to temperature-sensitive objects in the glove box

Temperature-sensitive objects stored in the glove box may be damaged by the air vent located inside it.

- Close the air vent when you heat the vehicle.
- At high outside temperatures, open the air vent and switch on the A/C function.

The automatic climate control must be switched on to cool the glove box.
1. Air vent controller
2. Air vent

To open or close: turn controller 1 to the right or left.
Driving
Switching on the power supply or the vehicle

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

If you leave children unattended in the vehicle, they could, in particular:
- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:
- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.

Never leave children unattended in the vehicle.

Requirements
- The key is in the vehicle and is recognized.
- The brake pedal is not depressed.

- When leaving the vehicle, always take the key with you and lock the vehicle.
- Keep the key out of reach of children.

**To switch on the power supply:** press button 1 once.
You can, for example, switch on the windshield wipers.

The power supply will be switched off again if the following conditions are met:
- You open the driver's door.
- You press button 1 twice more.

**To switch on the vehicle:** press button 1 twice.
Indicator and warning lamps will light up on the instrument cluster.

The vehicle will be switched off again if one of the following conditions is met:
- You do not start the vehicle within 15 minutes and the transmission is in position P or the electric parking brake is applied.
- You press button 1 once.
Starting the vehicle

Starting the vehicle with the start/stop button

**DANGER** Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

**WARNING** Risk of fire due to flammable materials in the engine compartment or on the exhaust system

Flammable materials may ignite.

- Therefore, regularly check that there are no flammable foreign materials in the engine compartment or on the exhaust system.

Requirements

- The key is in the vehicle and is recognized.
  - Shift the transmission to position \( P \) or \( N \).
  - Depress the brake pedal and press button 1 once.
  - If the vehicle does not start: switch off non-essential consumer equipment and press button 1 once.
  - If the vehicle still does not start and the Place the Key in the Marked Space See Operator’s Manual display message appears on the instrument display: start the vehicle with the key in the marked space (emergency operation mode) (→ page 140).

You can switch off the vehicle while driving. To do this, press and hold button 1 for about three seconds or press button 1 three times within three seconds. Be sure to observe the safety notes concerning this under "Driving tips" (→ page 143).

Observe any information regarding display messages that may be displayed on the instrument display.

Function of Emotion Start

- Start the vehicle with the start/stop button (→ page 140) and simultaneously pull one of steering wheel paddle shifters 1 or 2.
  - The idle speed is increased briefly when starting the engine.
  - The characteristic sound of the exhaust system is sporty (powerful) (→ page 151).

Starting the vehicle with the key in the marked space (emergency operation mode)

If the vehicle does not start and the Place the Key in the Marked Space See Operator’s Manual
message appears on the instrument display, you can start the vehicle in emergency mode.

- Make sure that marked space 2 is empty.
- Remove key 1 from the key ring.
- Place key 1 in stowage compartment 2. The vehicle will start after a short time.
  If you remove key 1 from marked space 2, the vehicle can still be driven. For further engine starts, however, key 1 must be located in marked space 2 during the entire journey.
- Have key 1 checked at a qualified specialist workshop.

### If the vehicle does not start:
- Place key 1 in marked space 2 and leave it there.
- Depress the brake pedal and start the vehicle using the start/stop button.
  - You can switch on the power supply or the vehicle with the start/stop button.
  - Observe any information regarding display messages that may be shown on the instrument display.

### Starting the vehicle via Remote Online Services

#### Cooling or heating the vehicle interior before starting the journey

Ensure the following before starting the engine:
- The legal stipulations in the area where your vehicle is parked allow engine starting via smartphone.
- It is safe to start and run the engine where your vehicle is parked.
- The fuel tank is sufficiently full.

### Charging the starter battery before starting the journey

You can receive a message on your smartphone when the state of charge of the starter battery is low. You can then start the vehicle with the smartphone to charge the battery. The vehicle is automatically switched off after ten minutes.

Ensure the following before starting the engine:
- The legal stipulations in the area where your vehicle is parked allow engine starting via smartphone.
- It is safe to start and run the engine where your vehicle is parked.
- The fuel tank is sufficiently full.

#### Starting the vehicle (Remote Online)

⚠️ **WARNING** Risk of crushing or entrapment due to unintentional starting of the engine

Limbs could be crushed or trapped if the engine is started unintentionally during service or maintenance work.
Always secure the engine against unintentional starting before carrying out maintenance or repair work.

Requirements
- Park position [P] is selected.
- The anti-theft alarm system is not activated.
- The panic alarm is not activated.
- The hazard warning light system is switched off.
- The hood is closed.
- The doors are closed and locked.
- The windows and sliding sunroof are closed.

Start the vehicle using the smartphone.

After every engine start, the engine runs for ten minutes.

You can carry out a maximum of two consecutive starting attempts. You must start the engine with the key before trying to start the vehicle again with the smartphone.

You can switch off the vehicle at any time as follows:
- Via the Smartphone App
- By pressing the [ ] or [ ] button on the key

Further information can be found in the smartphone app.

Securing the vehicle against starting before carrying out maintenance or repair work:
- Switch on the hazard warning light system.
- Unlock the doors.
- Open a side window or the sliding sunroof.

Breaking-in notes
To preserve the engine during the first 1000 miles (1500 km):
- drive at varying road speeds and engine speeds.
- No faster than 85 mph (140 km/h).

- allow the engine to reach a maximum engine speed of 4500 rpm (4500 rpm) only briefly.
- drive the vehicle in drive program [D].
- Shift to the next higher gear at the very latest when the needle reaches the last third before the red area in the tachometer.
- Do not shift down manually in order to brake.
- Avoid overstraining the vehicle, e.g. driving at full throttle.
- Do not depress the accelerator pedal past the pressure point (kickdown).
- only increase the engine speed gradually and accelerate the vehicle to full speed after 1000 miles (1500 km).

This also applies when the engine or parts of the drivetrain have been replaced.

Please also observe the following breaking-in notes:
- In certain handling and driving safety systems, the sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered or after repairs. Full sys-
tem effectiveness is only reached when this teaching-in process has concluded.

- Brake pads, brake disks and tires that are either new or have been replaced achieve optimum braking effect and grip only after driving several hundred kilometers. Compensate the reduced braking effect by applying greater force to the brake pedal.

### Notes on driving

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of accident due to objects in the driver’s footwell</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objects in the driver’s footwell may impede pedal travel or block a depressed pedal. This jeopardizes the operating and road safety of the vehicle.</td>
</tr>
<tr>
<td>- Stow all objects in the vehicle securely so that they cannot get into the driver’s footwell.</td>
</tr>
<tr>
<td>- Always install the floor mats securely and as prescribed in order to ensure that there is always sufficient room for the pedals.</td>
</tr>
<tr>
<td>- Do not use loose floor mats and do not place floor mats on top of one another.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of accident due to incorrect footwear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incorrect footwear includes, for example:</td>
</tr>
<tr>
<td>- Shoes with platform soles</td>
</tr>
<tr>
<td>- Shoes with high heels</td>
</tr>
<tr>
<td>- Slippers</td>
</tr>
<tr>
<td>There is a risk of an accident.</td>
</tr>
<tr>
<td>- Always wear suitable footwear so that you can operate the pedals safely.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of accident if the vehicle is switched off while driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you switch off the vehicle while driving, safety functions are restricted or no longer available.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of death caused by exhaust gases</th>
</tr>
</thead>
<tbody>
<tr>
<td>Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.</td>
</tr>
<tr>
<td>- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of skidding and of an accident due to shifting down on slippery road surfaces</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you shift down on slippery road surfaces to increase the engine braking effect, the drive wheels may lose traction.</td>
</tr>
</tbody>
</table>

This may affect the power steering system and the brake force boosting, for example. You will need to use considerably more force to steer and brake, for example. |
| - Do not switch off the vehicle while driving. |

<table>
<thead>
<tr>
<th><strong>DANGER</strong> Risk of death caused by exhaust gases</th>
</tr>
</thead>
<tbody>
<tr>
<td>Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.</td>
</tr>
<tr>
<td>- Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of accident due to incorrect footwear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incorrect footwear includes, for example:</td>
</tr>
<tr>
<td>- Shoes with platform soles</td>
</tr>
<tr>
<td>- Shoes with high heels</td>
</tr>
<tr>
<td>- Slippers</td>
</tr>
<tr>
<td>There is a risk of an accident.</td>
</tr>
<tr>
<td>- Always wear suitable footwear so that you can operate the pedals safely.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>WARNING</strong> Risk of accident if the vehicle is switched off while driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you switch off the vehicle while driving, safety functions are restricted or no longer available.</td>
</tr>
</tbody>
</table>

This may affect the power steering system and the brake force boosting, for example. You will need to use considerably more force to steer and brake, for example. |
| - Do not switch off the vehicle while driving. |
Do not shift down on slippery road surfaces to increase the engine braking effect.

**DANGER Risk of fatal injury due to poisonous exhaust gases**

If the tailpipe is blocked or sufficient ventilation is not possible, poisonous exhaust gases such as carbon monoxide may enter the vehicle. This is the case, for example, if the vehicle gets stuck in the snow.

- Keep the tailpipe and the area around the vehicle free from snow when the engine or the stationary heater is running.
- Open a window on the side of the vehicle facing away from the wind to ensure an adequate supply of fresh air.

**WARNING Risk of accident and injury due to being under the influence of alcohol and drugs while driving**

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment. The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

- Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

**WARNING Risk of accident and injury due to the brake system overheating**

If you leave your foot on the brake pedal when driving, the brake system may overheat. This increases the braking distance and the brake system can even fail.

- Never use the brake pedal as a footrest.

**WARNING Risk of accident due to incorrect gearshifting**

If the engine speed is higher than the idle speed and you engage the transmission position $D$ or $R$, the vehicle may accelerate sharply.

- If you engage the transmission position $D$ or $R$ when the vehicle is at a standstill, always depress the brake pedal firmly and do not accelerate at the same time.

**NOTE Engine damage due to excessively high engine speeds**

The engine will be damaged if you drive with the engine in the overrevving range.

- Do not drive with the engine in the overrevving range.
**NOTE** Wearing out the brake linings by continuously depressing the brake pedal

- Do not depress the brake pedal continuously whilst driving.
- To use the braking effect of the engine, shift to a lower gear in good time.

**NOTE** Damage to the drivetrain and engine when pulling away

- Do not warm up the engine while the vehicle is stationary. Pull away immediately.
- Avoid high engine speeds and driving at full throttle until the engine has reached its operating temperature.

**NOTE** Damage to the catalytic converter due to non-combusted fuel

The engine is not running smoothly and is misfiring. Non-combusted fuel may get into the catalytic converter.

**NOTE** Reduced battery life due to frequent short-distance trips

The 12 V battery may not be sufficiently charged when the vehicle is used only for short-distance trips. This reduces the life of the battery.

- Drive longer distances regularly to charge the battery.

**NOTE** Damage to the vehicle due to not observing the maximum permitted headroom clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.

- Observe the signposted headroom clearance.
- If the vehicle height is greater than the permitted headroom clearance, do not enter.
- Observe the changed vehicle height with add-on roof equipment.

**Notes on driving with a roof load, trailer or fully laden vehicle**

When driving with a loaded roof luggage rack or trailer as well as with a fully laden or fully occupied vehicle, the vehicle’s driving and steering characteristics change.

You should bear the following in mind:

- Do not exceed the permissible roof load and towing capacity. Also observe the information in the Technical Data.
- Distribute the roof load and the load inside the vehicle evenly, placing heavy objects at the bottom. Also comply with the notes on loading the vehicle (→ page 103).
- Drive attentively, and avoid abrupt starts, braking and steering as well as rapid cornering.
Advice on driving on salt-strewn roads
The braking effect is limited on salt-strewn road surfaces.
Therefore, observe the following notes:
- Salt build-up on the brake disks and brake pads may cause braking distance to increase considerably or lead to one-sided braking.
- Maintain a much greater safety distance to the vehicle in front.

Remove salt build-up as follows:
- Brake occasionally, paying attention to the traffic conditions
- Carefully depress the brake pedal at the end of the journey and when starting the next journey

Notes on hydroplaning
Hydroplaning can occur if a certain depth of water has built up on the road surface.
Observe the following notes in the event of heavy precipitation or in conditions in which hydroplaning may occur:
- Reduce speed
- Avoid tire ruts
- Avoid sudden steering movements
- Brake carefully
- Also observe the notes on regularly checking wheels and tires (→ page 319).

Notes on driving through water on the road
Water ingress can damage the engine, electrics and transmission.
Water can also enter the engine’s air intake fitting and cause engine damage.
Observe the following if you must drive through water:
- The water, when calm, may reach no higher than the lower edge of the vehicle body.
- Drive at a walking pace at most; water can otherwise enter the vehicle interior or engine compartment.
- Vehicles traveling in front, or oncoming vehicles, can create waves which may cause the maximum permissible depth of water to be exceeded.

The braking effect of the brakes is reduced after fording. Brake carefully, paying attention to the traffic conditions until braking power has been fully restored.

Function of rear axle steering
The rear axle steering is an electromechanical auxiliary steering on the rear axle which adjusts the steering of the rear wheels according to the position of the front wheels, depending on the speed. This results in greater maneuverability and improved driving stability, e.g. when cornering.
Rear axle steering has the following characteristics:
- Reduced steering effort and turning radius resulting in reduced parking effort
- Improved driving stability, e.g. when cornering
- More direct steering resulting in improved control of the vehicle
Information on the AMG ceramic high-performance composite brake system

The brake system is designed for heavy loads. This may lead to noise when braking. This effect can also occur after washing the vehicle. The noise depends on the following factors:

- speed
- brake force
- environmental conditions, e.g. temperature and air humidity

Have the brake system checked at a qualified specialist workshop after it has been subjected to extreme loads.

ECO start/stop function

Depending on the engine, the ECO start/stop function is not available in all drive programs. Observe the status display on the instrument display concerning this.

The engine will be switched off automatically in the following situations if all vehicle conditions for an automatic engine stop are met:

- You brake the vehicle to a standstill in transmission position D or N.
- **Vehicles with a 48 V on-board electrical system:** you depress the brake pedal when traveling at a low speed.

If the system has detected one of the following situations, the engine will not stop:

- You stop at a stop sign and there is no vehicle in front of you.
- The vehicle that stopped in front of you starts up again.
- You maneuver, turn the steering wheel sharply or engage reverse gear.

If the system detects an intelligent stop inhibitor, e.g. a stop sign, the engine will not stop. If you activate the HOLD function or engage the park position P, the engine can be switched off in spite of an intelligent stop inhibitor.

The engine will restart automatically in the following cases:

- You engage transmission position D or R.
- You depress the accelerator pedal.
- The vehicle requires an automatic engine start.
- You release the brake pedal.
- **Vehicles with a 48 V on-board electrical system:**
  - You release the brake pedal on a downhill gradient and the vehicle does not roll.
  - The vehicle rolls on a downhill gradient and does not automatically enter glide mode at 15 mph (20 km/h).

ECO start/stop function symbols on the instrument display:

- The symbol (green) appears when the vehicle is at a standstill: the engine was switched off by the ECO start/stop function.
- The symbol (yellow) appears when the vehicle is at a standstill: not all vehicle conditions for an engine stop have been met.

- The symbol (green) appears when the vehicle is at a standstill: the engine was switched off by the ECO start/stop function.
- The symbol (yellow) appears when the vehicle is at a standstill: not all vehicle conditions for an engine stop have been met.
Neither the symbol nor the symbol appears when the vehicle is at a standstill: an intelligent stop inhibitor, e.g. a stop sign, has been detected.

The symbol appears: the ECO start/stop function is deactivated or there is a malfunction.

If the engine was switched off by the ECO start/stop function and you leave the vehicle, a warning tone will sound and the engine will not be restarted. In addition, the following display message will appear on the instrument display:
Vehicle Ready to Drive Switch the Ignition Off Before Exiting
If you do not switch off the vehicle, it will automatically be switched off after three minutes.

Deactivating or activating the ECO start/stop function

Press display button 1.
The display button indicates the current status of the ECO start/stop function:
- (red): deactivated
- (green): activated

ECO display function

The ECO display summarizes your driving characteristics from the start of the journey to its completion and assists you in achieving the most economical driving style.
You can influence consumption by:
- Driving with particular care.
- Driving in drive program A.
- Following the gearshift recommendations.
The inner segment lights up and the outer segment fills up:
1. Moderate acceleration
2. Gentle deceleration and rolling
3. Consistent speed

The inner segment does not light up and the outer segment empties:
1. Sporty acceleration
2. Heavy braking
3. Fluctuations in speed

You have driven economically if:
1. The three outer segments are completely filled simultaneously.
2. The ECO display lights up.

The additional range achieved as a result of your driving style in comparison with a driver with a very sporty driving style is shown under Bonus fr. Start. The range displayed does not indicate a fixed reduction in consumption.

**ECO Assist function (vehicles with 48 V on-board electrical system)**

This function is country-dependent.
ECO Assist analyzes data for the vehicle’s expected route. This allows the system to optimally adjust the driving style for the route ahead, save fuel and recuperate.

ECO Assist is available in the following drive programs:
- 🌧️ (Slippery)
- 🌞 (Comfort)
- 🌙 (Individual): only with the drive setting "Reduced" or "Moderate" (→ page 153)

ECO Assist is displayed on the Assistance menu (→ page 230).

Displayable route events:
1. Event ahead
2. Distance display for the event ahead
3. "Foot off the accelerator" prompt
The segments of distance display show the distance to the event ahead as follows:

- A few segments light up: the event ahead is near.
- Many segments light up: the event ahead is further away.

When the vehicle nears an event, ECO Assist will calculate the optimal speed for maximum fuel economy and recuperative energy based on the distance, speed and gradient. "Foot off the accelerator" symbol will appear on the instrument display.

If you take your foot off the accelerator pedal in good time, the remaining segments on the display will successively turn green until the event shown is reached. The drivetrain will be set for maximum fuel economy. In drive program with the drive setting "Reduced" or "Moderate", the vehicle will coast, with the combustion engine switched off if necessary.

If there is no response to the prompt, the segments will remain white.

The event will be shown for a short time after it has been passed.

If the event involves a vehicle in front and when the coast-down recommendation is given, all segments will immediately turn green once there is a response to the "Foot off the accelerator" prompt.

If the system does not intervene during the event ahead, nothing will be displayed. The system will be passive.

In drive program, only the event "Vehicle in front" is displayed.

System limits
ECO Assist can function even more precisely if the route is adhered to when route guidance is active. The basic function is also available without active route guidance. Not all information and traffic situations can be foreseen. The quality depends on the map data.

ECO Assist is only an aid. The driver is responsible for keeping a safe distance from the vehicle in front, for vehicle speed and for braking in good time. The driver must be ready to brake at all times, irrespective of whether the system intervenes.

The system may be impaired or may not function in the following situations:

- If visibility is poor, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- If there is dirt on the windshield in the area of the multifunction camera or the camera is fogged up, damaged or obscured.
- If road signs are hard to detect, e.g. due to dirt, snow or insufficient lighting, or because they are obscured.
- If the information on the navigation system's digital map is incorrect or out of date.
- If signs are ambiguous, e.g. road signs in roadworks or in adjacent lanes.
AMG Performance exhaust system

### Function of the AMG Performance exhaust system
You can choose between the following sound characteristics for the AMG Performance exhaust system:

- **Balanced**: Comfortable sound characteristic
- **Powerful**: Sporty sound characteristic

#### Operating the AMG Performance exhaust system

- **Press display button 1.**
  - The display button indicates the currently selected sound characteristic 2:
    - Button symbol (blue): Balanced
    - Button symbol (red): Powerful

### Function of the AMG steering-wheel buttons

The AMG steering-wheel buttons are two additional control elements on the steering wheel. You can assign two vehicle functions of your choice to the left control element. You can change between the available functions for corresponding button 1 by pressing the upper or lower part of display button 2 repeatedly. Display buttons 2 show the functions currently selected.

The following functions are available:
- **ESP®** (→ page 172)
- **AMG RIDE CONTROL +** (→ page 205)
If you have assigned specific functions to display buttons 2, you can operate these functions with corresponding button 1. The assignment of display buttons 2 will remain stored even after a new engine start, but the operating status of the respective function will be reset to the basic setting.

You can change between the drive programs with rotary switch 4. The selected drive program will appear on display button 3. By pressing display button 3, you can directly access the drive program (=) (page 152).

### DYNAMIC SELECT switch

#### Function of the DYNAMIC SELECT switch

- Depending on the engine and equipment, the vehicle has different drive programs.

Use the DYNAMIC SELECT switch to change between the following drive programs:

- **Slippery**
  - Optimized pulling away and driving characteristics in wintry and slippery road conditions
- **Comfort**
  - Comfortable and economical driving
- **Individual**
  - Individual settings of drive, suspension, steering and ESP®
- **Sport**
  - Sporty driving
- **Sport+**
  - Particularly sporty driving
- **Race**
  - Maximum sportiness
  - Particularly firm suspension tuning
  - Sporty sound from the exhaust system

Drive program (race) offers driving characteristics suited for the racetrack and may not be used on normal roads. Drive program (city) may be activated and used only on dedicated race circuits, not on public roads.

Mercedes-AMG recommends selecting the drive program (city) when in city traffic or stop-and-go traffic.

Depending on the drive program selected, the following vehicle characteristics will change:

- **Drive**
- **AMG Dynamics**
  - The four agility functions, Basic, Advanced, Pro and Master, are automatically selected depending on the drive program.
  - The steering, shift timing point, all-wheel drive and stabilization functions are adapted to the selected drive program.
- When ESP® is activated, the Pro agility function will be selected in drive program 1. The Master function will be selected automatically when ESP® is deactivated.

  - Sound from the exhaust system
  - Suspension

- You can call up vehicle characteristics via the Performance menu in the multimedia system.

- You can adjust the agility functions of AMG Dynamics using the AMG steering-wheel buttons.

You can also change the following vehicle characteristics using the buttons on the center console:

  - Sound from the exhaust system
  - Suspension
  - ESP®
  - AMG Dynamics
  - Manual gearshifting

---

**Selecting the drive program**

Push DYNAMIC SELECT switch 1 forwards or backwards. The selected drive program will appear on display 2 and on the instrument display.

---

**Configuring DYNAMIC SELECT (multimedia system)**

Multimedia system:

- Settings
- Vehicle
- DYNAMIC SELECT

**Setting drive program I**

- Select Individual Configuration.
- Select and set a category.

**Switching the reset display on or off**

- Switch Request at Start on or off.

**Function on:** the next time the vehicle is started a prompt appears asking whether the last active drive program should be restored. If the ECO start/stop function was deactivated, an additional prompt appears asking if the function should remain deactivated.

  - The prompt only appears if the previously active settings deviate from the standard settings.

**Function off:** the next time the vehicle is started the drive program is set automatically. The
ECO start/stop function is activated automatically. This function must be activated for each user profile separately. Only when this function is activated will the drive program and ECO start/stop setting for the previous journey be saved for the respective user profile.

### Displaying vehicle data
Multimedia system:
- Select Vehicle.
  - The vehicle data is displayed.

### Displaying engine data
Multimedia system:
- Select Engine.
  - The engine data is displayed.

The actual (maximum) values that can be achieved for engine output and engine torque may deviate from the certified values within the country-specific guidelines for permissible tolerances (basis: UN-ECE No. 85 or country-specific guidelines).

Influencing variables that can influence this are, for example:
- Sea level
- Fuel grade
- Outside temperature
- Operating temperature of the engine

The values displayed serve only as orientation. The values for engine output and engine torque shown on the media display may deviate from the actual values.

### Calling up the fuel consumption indicator
Multimedia system:
- Select Consumption.
  - The current and average fuel consumption is displayed.

### Automatic transmission
DIRECT SELECT lever

#### Function of the DIRECT SELECT lever

- **WARNING** Risk of accident due to incorrect gearshifting

If the engine speed is higher than the idle speed and you engage the transmission position D or R, the vehicle may accelerate sharply.

- If you engage the transmission position D or R when the vehicle is at a standstill, always depress the brake pedal firmly and do not accelerate at the same time.
**WARNING Risk of accident and injury due to children left unattended in the vehicle**

If you leave children unattended in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:

- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.

Never leave children unattended in the vehicle.

When leaving the vehicle, always take the key with you and lock the vehicle.

Keep the key out of reach of children.

Use the DIRECT SELECT lever to switch the transmission position. The current transmission position will be shown on the instrument display.

- **P** Park position
- **R** Reverse gear
- **N** Neutral
- **D** Drive position

**Engaging reverse gear R**

- Depress the brake pedal and push the DIRECT SELECT lever upwards past the first point of resistance.

**Engaging neutral N**

- Depress the brake pedal and push the DIRECT SELECT lever up or down to the first point of resistance.

To shift into neutral **N** with the vehicle switched on, push the selector lever up or down for several seconds to the first point of resistance.

Subsequently releasing the brake pedal will allow you to move the vehicle freely, e.g. to push it or tow it away.

Proceed as follows if you want the automatic transmission to remain in neutral **N** even if the vehicle is switched off or the driver's door is opened:

- Depress the brake pedal and engage neutral **N** when the car is stationary.
- Release the brake pedal.
- Switch off the vehicle.
If you then exit the vehicle leaving the key in the vehicle, the automatic transmission remains in neutral N.

### Engaging park position P

**NOTE** Damage due to engaging park position P while the vehicle is rolling

If you shift the transmission into park position P while the vehicle is rolling, the transmission may be damaged.

- If the vehicle is rolling, do not open a door.
- Only engage park position P when the vehicle is stationary.

Observe the notes on parking the vehicle (→ page 161).

Depress the brake pedal until the vehicle comes to a standstill.

When the vehicle is stationary, press button P.

When the transmission position display shows P, the park position is engaged. If the transmission position display P does not appear, apply the parking brake and secure the vehicle to prevent it from rolling away.

Depending on the situation, it may take a short time until P is engaged. Therefore, always pay attention to the transmission position display.

Park position P will be engaged automatically if one of the following conditions is met:

- You switch the stationary vehicle off in transmission position D or R.
- You open the driver's door when the vehicle is stationary in transmission position D or R.
- When the vehicle is rolling, you switch if off in transmission position D or R and bring it to a standstill.
- When the vehicle is rolling, you shift to transmission position N, bring the vehicle to a standstill and open the driver's door when the vehicle is stationary.

Engaging park position P automatically is required by the vehicle.

To maneuver with an open driver's door, open the driver's door while the vehicle is stationary and engage transmission position D or R again.

### Engaging drive position D

Depress the brake pedal and push the DIRECT SELECT lever down past the first point of resistance.

When the automatic transmission is in transmission position D, it will shift gears automatically. This depends, among other things, on the following factors:

- The selected drive program
- The position of the accelerator pedal
- The driving speed

### Notes on the double-clutch function

The double-clutch function is active when changing down in all drive programs. The double-clutch function reduces load change reactions and supports sporty driving. The acoustic perception of the double-clutch function changes depending on the drive program.
Rocking the vehicle free

Rocking the vehicle free may help to free the vehicle if it has become stuck in slush or snow.
To rock the vehicle free, move the DIRECT SELECT lever upwards and downwards past the point of resistance to switch between transmission positions D and R.

1. The maximum design speed for switching between D and R is 6 mph (9 km/h).

Manual gearshifting

To activate/deactivate: press display button 1.

The display button will indicate currently selected transmission position 2:

- M (red): manual gearshifting
- D (blue): automatic transmission

To permanently shift the gears manually in drive program using the steering wheel paddle shifters, select the M (Manual) setting for the transmission.

Shifting up and down

1. NOTE Damage to the engine due to shifting up too late

The automatic transmission does not shift up in manual mode even when the engine’s limiting speed is reached.
The fuel supply is interrupted in order to prevent the engine from overrevving.

Shift up before the engine speed reaches the red area in the tachometer.
To shift up: pull steering wheel paddle shifter 2.
To shift down: pull steering wheel paddle shifter 1.

If the engine speed is too high or too low, you will not be able to change gear using the steering wheel paddle shifters. In this case, segments 1 will light up red.

**Gearshift recommendation**

The gearshift recommendation assists you in adopting an economical driving style.

When gearshift recommendation 1 appears on the instrument display, shift to the recommended gear.

1. The gearshift recommendation is active only if you have enabled manual gearshifting (→ page 157).

**Using kickdown**

- **Maximum acceleration:** depress the accelerator pedal beyond the point of resistance.

The automatic transmission will shift up to the next gear when the maximum engine speed is reached to protect the engine from overrevving.

1. If you have activated manual gearshifting with the button on the center console, the transmission will not react to the kickdown.

**Glide mode function**

With an anticipatory driving style, Glide mode helps you to reduce fuel consumption.

Glide mode is characterized by the following:

- **Mercedes-AMG GT 63 and GT 63 S 4MATIC+**:
  The combustion engine is disconnected from the drivetrain and the vehicle continues to roll.
• All other models: The combustion engine is switched off. All of the vehicle functions remain active.
• The symbol appears in the instrument display.

Glide mode is activated if the following conditions are met:
• ECO start/stop function is switched on.
• Drive program is selected with the drive setting "Moderate" or "Reduced".
• The speed is within a suitable range.
• The road's course is suitable, e.g. no steep uphill or downhill inclines or tight curves.
• Mercedes-AMG GT 43 and GT 53 4MATIC+: The condition of charge of the battery is sufficient.
• Mercedes-AMG GT 43 4MATIC: The condition of charge of the battery is sufficient.
• You are no longer depressing the accelerator or brake pedal.

Glide mode is deactivated again if one of the conditions is no longer met.

**Function of 4MATIC**

4MATIC ensures that all four wheels are driven. Together with ESP® and 4ETS, 4MATIC improves the traction of your vehicle whenever a driven wheel spins due to insufficient traction.

If you fail to adapt your driving style, 4MATIC can neither reduce the risk of an accident nor override the laws of physics. 4MATIC cannot take account of road, weather and traffic conditions. 4MATIC is only an aid. You are responsible especially for maintaining a safe distance from the vehicle in front, for vehicle speed, for braking in good time and for staying in lane.

In wintry road conditions, the maximum effect of 4MATIC can be achieved only if you use winter tires (M+S tires), with snow chains if necessary.

---

**Refueling**

**Refueling the vehicle**

⚠️ **WARNING Risk of fire or explosion from fuel**

Fuels are highly flammable.
- Fire, open flames, smoking and creating sparks must be avoided.
- Before refueling, switch off the vehicle and, if installed, the stationary heater, and leave them switched off during refueling.

⚠️ **WARNING Risk of injury from fuels**

Fuels are poisonous and hazardous to your health.
- Do not swallow fuel or let it come into contact with skin, eyes or clothing.
- Do not inhale fuel vapor.
- Keep children away from fuel.
Keep doors and windows closed during the refueling process.

If you or other people come into contact with fuel, observe the following:

- Immediately rinse fuel off your skin with soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical attention immediately.
- If you swallow fuel, seek medical attention immediately. Do not induce vomiting.
- Change immediately out of clothing that has come into contact with fuel.

**WARNING** Risk of fire and explosion due to electrostatic charge

Electrostatic charge can ignite fuel vapor.

Before you open the fuel filler cap or take hold of the pump nozzle, touch the metallic vehicle body.

To avoid creating another electrostatic charge, do not get into the vehicle again during the refueling process.

**NOTE** Damage caused by the wrong fuel

Vehicles with a gasoline engine:

- Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system.
- Only refuel with low-sulfur spark-ignition engine fuel.

This fuel may contain up to 10% ethanol. Your vehicle is suitable for use with E10 fuel. Never refuel with one of the following fuels:
  - Diesel
  - Gasoline with more than 10% ethanol by volume, e.g. E15, E85, E100

- Gasoline with more than 3% methanol by volume, e.g. M15, M30, M85, M100
- Gasoline with additives containing metal

If you have accidentally refueled with the wrong fuel:

- Do not switch on the vehicle.
- Consult a qualified specialist workshop.

**NOTE** Do not use diesel to refuel vehicles with a gasoline engine

If you have accidentally refueled with the wrong fuel:

- Do not switch on the vehicle. Otherwise fuel can enter the engine.
  - Even small amounts of the wrong fuel could result in damage to the fuel system and the engine. The repair costs are high.
- Consult a qualified specialist workshop.
- Have the fuel tank and fuel lines drained completely.
NOTE Damage to the fuel system caused by overfilled fuel tanks

- Only fill the fuel tank until the pump nozzle switches off.

NOTE Fuel may spray out when you remove the fuel pump nozzle

- Only fill the fuel tank until the pump nozzle switches off.

Requirements
- The vehicle is unlocked.

Observe the notes on service fluids and fuel.

Only refuel with fuel that has at least the octane rating specified in the information label in the fuel filler flap. Otherwise, engine output may be reduced and fuel consumption increased.

Insert fuel filler cap from above into bracket 2.

- Completely insert the pump nozzle into the tank filler neck, hook in place and refuel.
- Only fill the fuel tank until the pump nozzle switches off.
- Replace the cap on the filler neck and turn clockwise until it engages audibly.
- Close fuel filler flap 1.

Parking

Parking the vehicle

WARNING Risk of accident and injury caused by an insufficiently secured vehicle rolling away

If the vehicle is not securely parked sufficiently, it can roll away in an uncontrolled way even at a slight downhill gradient.

- On uphill or downhill gradients, turn the front wheels so that the vehicle rolls towards the curb if it starts moving.
Apply the parking brake.

Switch the transmission to position P.

⚠️ WARNING Risk of fire caused by hot exhaust system parts

Flammable materials such as leaves, grass or twigs may ignite.

- Park the vehicle so that no flammable material can come into contact with hot vehicle components.
- In particular, do not park on dry grassland or harvested grain fields.

⚠️ WARNING Risk of accident and injury due to children left unattended in the vehicle

If you leave children unattended in the vehicle, they could, in particular:

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.

- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:
- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.

- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the key with you and lock the vehicle.
- Keep the key out of reach of children.

- NOTE Damage due to the vehicle lowering

Vehicles with AMG adaptive sport suspension system + or level control: The vehicle can lower because of temperature differences or longer non-operational times. This can cause damage to parts of the body.

- When stopping the vehicle and when driving off, make sure that there are no obstacles such as curbs under or in the immediate vicinity of the body.

- NOTE Damage to the vehicle due to it rolling away

- Always secure the vehicle against rolling away.
Bring the vehicle to a standstill by depressing the brake pedal.

On gradients, turn the front wheels so that the vehicle will roll towards the curb if it starts moving.

Apply the electric parking brake.

- Engage transmission position \textbf{P} in a stationary vehicle with the brake pedal depressed (→ page 156).
- Switch off the vehicle by pressing button 1.
- Release the service brake slowly.
- Get out of the vehicle and lock it.

\textbf{Garage door opener}

- 
  
  Programming buttons for the garage door opener

\textbf{DANGER} Risk of death caused by exhaust gases

Combustion engines emit poisonous exhaust gases such as carbon monoxide. Inhaling these exhaust gases is hazardous to health and leads to poisoning.

Never leave the engine or, if present, the auxiliary heating running in an enclosed space without sufficient ventilation.

\textbf{WARNING} Risk of injury by becoming trapped when opening and closing a garage door

When you operate or program a garage door with an integrated garage door opener, persons can become trapped or struck by the garage door if they stand within its range of movement.

Always make sure that nobody is within the range of the garage door’s movement.

Only operate the following doors using the garage door opener:

- Doors with a safety stop and backing up feature
- Doors which conform to the current U.S. safety standards
Before programming the garage door opener, park the vehicle outside the garage. Make sure that the vehicle is switched on but not started.

**Requirements**
- The vehicle has been parked outside the garage or outside the range of movement of the door.
- The vehicle is switched on.
- The vehicle has not been started.

The garage door opener function is always available when the vehicle is switched on.

Check if the transmitter frequency of the remote control has the frequency range of 280 to 868 MHz.

Radio equipment approval number:
- NZLMUAHL5 (USA)
- 4112A-MUAHL5 (Canada)

Press and hold button 1, 2 or 3 that you wish to program. Indicator lamp 4 flashes yellow.

It can take up to 20 seconds before the indicator lamp flashes yellow.

Release the previously pressed button. Indicator lamp 4 continues to flash yellow.

Point remote control 5 from a distance of 0.4 in (1 cm) to 3 in (8 cm) towards button 1, 2 or 3.

Press and hold button 6 of remote control 5 until one of the following signals appears:
- Indicator lamp 4 lights up green continuously. Programming is complete.
- Indicator lamp 4 flashes green. Programming was successful. Additionally, synchronization of the rolling code with the door system must be carried out.

If indicator lamp 4 does not light up or flash green: repeat the procedure.

Release all of the buttons.
The remote control for the door drive is not included in the scope of delivery of the garage door opener.

**Synchronizing the rolling code**

**Requirements**
- The door system uses a rolling code.
- The vehicle must be within range of the garage door or door drive.
- The vehicle as well as persons and objects are located outside the range of movement of the door.

- Press the program button on the door drive unit. Initiate the next step within approximately 30 seconds.
- Press previously programmed button 1, 2 or 3 repeatedly until the door closes. When the door closes, programming is completed.

Please also read the operating instructions for the door drive.

**Troubleshooting when programming the remote control**
- Check if the transmitter frequency of remote control 5 is supported.
- Replace the batteries in remote control 5.
- Hold remote control 5 at various angles from a distance of 0.4 in (1 cm) to 3 in (8 cm) front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- Hold remote control 5 at the same angles at various distances in front of the inside rearview mirror. You should test every position for at least 25 seconds before trying another position.
- On remote controls that transmit only for a limited period, press button 6 on remote control 5 again before transmission ends.
- Angle the antenna line of the garage door opener unit towards the remote control.

It is possible that older garage doors cannot be operated using the remote control in the inside rearview mirror even after you have successfully performed the measures described above. If this is the case, contact the HomeLink® Hotline.

**Support and additional information on programming:**
- on the toll free HomeLink® Hotline on 1-800-355-3515
- on the Internet at https://www.homelink.com/mercedes

**Opening or closing a garage door**

**Requirements**
- The corresponding button is programmed to operate the door.

- Press and hold button 1, 2 or 3 until the door opens or closes.
- If indicator lamp 4 flashes yellow after approx. 20 seconds: Press the previously pressed button again and hold it down until the door opens or closes.
Clearing the garage door opener memory

Press and hold buttons 1 and 3. Indicator lamp 4 lights up yellow.

If indicator lamp 4 flashes green: release buttons 1 and 3. The entire memory has been deleted.

Electric parking brake

Function of the electric parking brake (applying automatically)

**WARNING** Risk of accident and injury due to children left unattended in the vehicle

- open doors, thereby endangering other persons or road users.
- get out and be struck by oncoming traffic.
- operate vehicle equipment and become trapped, for example.

In addition, the children could also set the vehicle in motion by, for example:
- releasing the parking brake.
- changing the gearbox position.
- starting the vehicle.
- Never leave children unattended in the vehicle.
- When leaving the vehicle, always take the key with you and lock the vehicle.
- Keep the key out of reach of children.

The electric parking brake is applied if the transmission is in position P and one of the following conditions is fulfilled:
- The vehicle is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.

To prevent application: pull the handle of the electric parking brake (→ page 167).

In the following situations, the electric parking brake is also applied:
- The HOLD function is keeping the vehicle stationary.
- Active Parking Assist is keeping the vehicle stationary.
- Active Distance Assist DISTRONIC is bringing the vehicle to a standstill.

In addition, one of the following conditions must be fulfilled:
- The vehicle is switched off.
- The seat belt tongue is not inserted in the seat belt buckle of the driver’s seat and the driver’s door is opened.
- There is a system malfunction.
- The power supply is insufficient.
- The vehicle is stationary for a lengthy period.

When the electric parking brake is applied, the red PARK (USA) or P (Canada) indicator lamp lights up in the Instrument Display.
The electric parking brake is not automatically applied if the vehicle is switched off by the ECO start/stop function.

Function of the electric parking brake (releasing automatically)

The electric parking brake is released when the following conditions are fulfilled:

- The driver's door is closed.
- The vehicle has been started.
- The transmission is in position $\text{D}$ or $\text{R}$ and you depress the accelerator pedal or you shift from transmission position $\text{P}$ to $\text{D}$ or $\text{R}$ when on level ground.
- If the transmission is in position $\text{R}$, the tailgate must be closed.
- The seat belt tongue is inserted into the seat belt buckle of the driver's seat.
  
  If the seat belt tongue is not inserted into the seat belt buckle of the driver's seat, one of the following conditions must be fulfilled:
  - You shift from transmission position $\text{P}$.
  - You have previously driven at speeds greater than 2 mph (3 km/h).

When the electric parking brake is released, the red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp in the Instrument Display goes out.

Applying/releasing the electric parking brake manually

Applying

- Push handle 1.
  
  The red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp lights up in the Instrument Display.

- The electric parking brake is only securely applied if the red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp is lit continuously.

Releasing

- Switch on the vehicle.
- Pull handle 1.
  
  The red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp in the Instrument Display goes out.

Emergency braking

- Press and hold handle 1.
  
  As long as the vehicle is in motion, the Please Release Parking Brake message is displayed and the red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp flashes.

  When the vehicle has been braked to a standstill, the electric parking brake is applied. The red $\text{PARK}$ (USA) or $\text{E}$ (Canada) indicator lamp lights up in the Instrument Display.
Information on collision detection on a parked vehicle

If a collision is detected on the locked vehicle when towing protection is switched on and collision detection is switched on, you will receive a message in the multimedia system when the vehicle is switched on.

You will receive information about the following points:
- The area of the vehicle that may have been damaged.
- The force of the impact.

The following situation may lead to inadvertent activation:
- The parked vehicle is moved in a two-story garage, for example.

Deactivate tow-away protection to prevent inadvertent activation. If you deactivate tow-away protection, collision detection will also be deactivated.

If the battery is heavily discharged, the function for detecting a collision on a parked vehicle will automatically be deactivated to facilitate the next engine start.

System limits
Detection may be restricted in the following situations:
- the vehicle is damaged without impact, such as if an outside mirror is torn off or the paint is damaged by a key
- impact occurs at low speed
- the electric parking brake is not applied

You are responsible for your vehicle. Make sure that your vehicle is free of damage and roadworthy.

Notes on parking the vehicle for an extended period

If you leave the vehicle parked for longer than six weeks, it may suffer damage through disuse. The 12 V battery may also be impaired or damaged by heavy discharging.

Further information can be obtained at a qualified specialist workshop.

Standby mode (extension of the starter battery’s period out of use)

Standby mode function
This function is not available for all models. If standby mode is activated, energy loss will be minimized during extended periods of non-operation.

Standby mode is characterized by the following:
- The starter battery is preserved.
- The maximum non-operational time appears in the media display.
- The connection to online services is interrupted.
- The ATA (anti-theft alarm system) is not available.
- The interior protection and tow-away alarm functions are not available.
- The function for detecting collisions on a parked vehicle is not available.
If the following conditions are fulfilled, standby mode can be activated or deactivated using the multimedia system:

- The vehicle is switched on.
- The vehicle has not been started.

Exceeding the vehicle’s displayed non-operational time may cause inconvenience; i.e. it cannot be guaranteed that the starter battery will reliably start the vehicle.

Charge the starter battery in the following situations:

- The vehicle’s non-operational time must be extended.
- The Battery Charge Insufficient for Standby Mode message appears in the media display.

Standby mode is automatically deactivated when the vehicle is switched on.

Activating/deactivating standby mode (parking up the vehicle)

Requirements

- The vehicle is switched off.

Multimedia system:

- ➜ ➜ Settings ➜ Vehicle
- Activate or deactivate Standby Mode.
- Select Yes.

Driving and driving safety systems

Driving systems and your responsibility

Your vehicle is equipped with driving systems that assist you in driving, parking and maneuvering the vehicle. The driving systems are only aids. They are not a substitute for you paying attention to your surroundings and do not relieve you of your responsibility pertaining to road traffic law. The driver is always responsible for maintaining a safe distance to the vehicle in front, for vehicle speed, for braking in good time and for staying in lane. Pay attention to the traffic conditions at all times and intervene when necessary. Be aware of the limitations regarding the safe use of these systems.

Driving systems can neither reduce the risk of an accident if you fail to adapt your driving style nor override the laws of physics. They cannot always take into account road, weather or traffic conditions.

Some driving systems can regulate or limit the speed to a previously set value. Draw attention to the stored speed when changing drivers.

Information on vehicle sensors and cameras

Some driving and driving safety systems use cameras as well as radar or ultrasonic sensors to monitor the area in front of, behind or next to the vehicle.
WARNING Risk of accident due to restricted detection performance of vehicle sensors and cameras

If the area around vehicle sensors or cameras is covered, damaged or dirty, certain driving and safety systems cannot function correctly. There is a risk of an accident.

- Keep the area around vehicle sensors or cameras clear of any obstructions and clean.
- Have damage to the bumper, radiator grille or stone chipping in the area of the front and rear windows repaired at a qualified specialist workshop.

Particularly, keep the areas around the sensors and cameras free of dirt, ice or slush (→ page 296). The sensors and cameras must not be covered and the detection ranges around them must be kept free. Do not attach additional license plate brackets, advertisements, stickers, foils or foils to protect against stone chippings in the detection range of the sensors and cameras.

Make sure that there are no overhanging loads protruding into the detection range.

If there is damage to a bumper or the radiator grill, or after an impact, have the function of the sensors checked at a qualified specialist workshop. Have damage or stone chipping in the area of the cameras on the front and rear windows repaired at a qualified specialist workshop.

The rear view camera can extend and retract automatically for the purpose of calibration, even though there is no camera image in the display.

Overview of driving systems and driving safety systems

- ABS (Anti-lock Braking System) (→ page 171)
- BAS (Brake Assist System) (→ page 172)
- ESP® (Electronic Stability Program) (→ page 172)
- EBD (Electronic Brakeforce Distribution) (→ page 175)
- STEER CONTROL (→ page 175)
Driving Assistance Package
The following functions are part of the Driving Assistance Package. Certain functions are only available in some countries. Some functions are also available without the Driving Assistance Package, albeit with restricted functionality.

- Cruise control (→ page 178)
- Hill Start Assist (→ page 176)
- HOLD function (→ page 175)
- RACE START (→ page 208)
- DRIFT MODE (→ page 209)
- AMG RIDE CONTROL (→ page 205)
- AMG RIDE CONTROL + (→ page 205)
- ATTENTION ASSIST (→ page 177)
- Traffic Sign Assist (→ page 196)
- Active Distance Assist DISTRONIC (→ page 180)
- Active Speed Limit Assist (country-dependent) (→ page 185)
- Route-based speed adaptation (country-dependent) (→ page 185)

Parking Package
- Parking Assist PARKTRONIC (→ page 217)
- Rear view camera (→ page 212)
- 360° Camera (→ page 214)
- Active Parking Assist (country-dependent) (→ page 221)

Driving and parking

Functions of ABS
The Anti-lock Brake System (ABS) regulates the brake pressure in critical driving situations:
- During braking, for instance, at maximum full-stop braking or if there is insufficient tire traction, the wheels are prevented from locking.
- Vehicle steerability while braking is ensured.

If ABS intervenes when braking, you will feel a pulsing in the brake pedal. The pulsating brake pedal can be an indication of hazardous road conditions and can serve as a reminder to take extra care while driving.

System limits
- ABS is active from speeds of approx. 3 mph (5 km/h).
- ABS may be impaired or may not function if a malfunction has occurred and the yellow ABS warning lamp lights up continuously after the vehicle is started.

- Active Brake Assist (→ page 192)
- Active Steering Assist (country-dependent) (→ page 188)
- Active Emergency Stop Assist (country-dependent) (→ page 190)
- Active Lane Change Assist (country-dependent) (→ page 190)
- Active Stop-and-Go Assist (country-dependent) (→ page 187)
- Blind Spot Assist and Active Blind Spot Assist with exit warning (→ page 200)
- Active Lane Keeping Assist (→ page 203)
Function of BAS

**WARNING Risk of an accident caused by a malfunction in BAS (Brake Assist System)**

If BAS is malfunctioning, the braking distance in an emergency braking situation is increased.

- Depress the brake pedal with full force in emergency braking situations. ABS prevents the wheels from locking.

The Brake Assist System (BAS) supports your emergency braking situation with additional brake force.

If you depress the brake pedal quickly, BAS is activated:
- BAS automatically boosts the brake pressure.
- BAS can shorten the braking distance.
- ABS prevents the wheels from locking.

The brakes will function as usual once you release the brake pedal. BAS is deactivated.

Function of ESP®

You can select between the following modes of the Electronic Stability Program (ESP®):
- ESP® ON
- ESP® SPORT
- ESP® OFF

**Characteristics when ESP® is activated**

ESP® monitors and improves driving stability and traction, particularly in the following situations:
- When pulling away on wet or slippery roads.
- When braking.
- When there is a strong crosswind and a driving speed of approximately 47 mph (75 km/h) to 125 mph (200 km/h).

ESP® can stabilize the vehicle by intervening in the following ways:
- One or more wheels are braked.
- The engine output is adapted according to the situation.

ESP® is activated every time the vehicle is started regardless of whether ESP® was in ESP® SPORT or deactivated before the vehicle was switched off.

If the ESP® warning lamp flashes in the Instrument Display, one or several wheels has reached its grip limit:
- Adapt the driving style to suit the prevailing road and weather conditions.
- Do not deactivate ESP® under any circumstances.
- Only depress the accelerator pedal as far as necessary.

**Characteristics of ESP® SPORT**

**WARNING Risk of skidding if ESP® SPORT is used incorrectly**

When you activate ESP® SPORT, there is an increased risk of skidding and having an accident.

- Activate ESP® SPORT only in the circumstances described below.
When ESP® SPORT is activated, the and warning lamps light up continuously in the Instrument Display.

Select ESP® SPORT when the vehicle’s own oversteering and understeering characteristics are desired, e.g. on cordoned-off roads.

Driving with ESP® SPORT or with ESP® deactivated requires an extremely qualified and experienced driver.

If ESP® SPORT is activated and one or more wheels start to spin, the ESP® warning lamp in the Instrument Display flashes. ESP® then only stabilizes the vehicle to a limited degree.

ESP® SPORT also has the following characteristics:
- ESP® only improves driving stability to a limited degree.
- ETS/4ETS traction control is still active.
- The engine’s torque is only restricted to a limited degree and the drive wheels can spin.
- The spinning of the wheels results in a cutting action for better traction on loose surfaces.
- ESP® continues to provide assistance when the brakes are firmly applied.
- Crosswind Assist is no longer active.

Characteristics when ESP® is deactivated

**WARNING Risk of skidding if ESP® is deactivated**

If you deactivate ESP®, ESP® cannot carry out vehicle stabilization.
- ESP® should only be deactivated in the following situations.

When ESP® is deactivated, the and warning lamps light up continuously in the Instrument Display.

Deactivating ESP® has the following effects:
- Driving stability will no longer be improved.
- The drive wheels could spin.
- ETS/4ETS traction control is still active.
- Crosswind Assist is no longer active.

Even when ESP® is deactivated, you are still assisted by ESP® when braking hard.

It may be best to activate ESP® SPORT or deactivate ESP® in the following situations:
- When using snow chains.
- In deep snow.
- On sand or gravel.

Spinning the wheels results in a cutting action, which enhances traction.

Activate ESP® as soon as the situations described above no longer apply. ESP® will otherwise not be able to stabilize the vehicle if the vehicle starts to skid or a wheel starts to spin.

If the ESP® warning lamp lights up continuously, ESP® is not available due to a malfunction.

Observe any information which is displayed in the Instrument Display:
- Indicator and warning lamps (page 418)
- Display messages (page 363)
ETS/4ETS (Electronic Traction System)

ETS/4ETS traction control is part of ESP®.

ETS/4ETS can improve the vehicle’s traction by intervening in the following ways:

- The drive wheels are braked individually if they spin.
- More drive torque is transferred to the wheel or wheels with traction.

Function of ESP® Crosswind Assist

ESP® Crosswind Assist detects sudden gusts of side wind and helps the driver to keep the vehicle in the lane:

- ESP® Crosswind Assist is active at vehicle speeds between approx. 50 mph (80 km/h) and 125 mph (200 km/h) when driving straight ahead or cornering slightly.
- The vehicle is stabilized by means of individual brake application on one side.

Activating/deactivating ESP® (Electronic Stability Program)

Multimedia system:

Esp® can only be activated/deactivated using quick access when at least one other function is available in quick access. ESP® can otherwise be found in the Assistance menu.

- Select ESP.
- Select On or Off.

ESP® is deactivated if the Esp® OFF warning lamp lights up continuously in the instrument cluster.

Observe the information on warning lamps and display messages which may be shown in the instrument cluster.

To activate ESP® SPORT: press and hold display button until the road in button symbol lights up yellow.

The Esp® and Esp® SPORT warning lamps appear in the Instrument Display.
To deactivate ESP®: press and hold display button 1 until the road in button symbol 2 lights up red. The \(\text{ESP-OFF}\) and \(\text{ESP}^{-}\) warning lamps appear in the Instrument Display.

When you deactivate ESP® in drive program \(\text{Cruise}\), AMG Dynamics automatically switches to the Master level.

To activate ESP®: press and hold display button 1 until the road in button symbol 2 lights up blue. The \(\text{ESP-OFF}\), \(\text{ESP}^{-}\) and \(\text{ESP}^{-}\) warning lamps go out.

If the \(\text{ESP-OFF}\) symbol is shown with a red ! on the display button, ESP® is malfunctioning. Observe the information on warning lamps and display messages which are shown in the Instrument Display.

Function of EBD
Electronic Brakeforce Distribution (EBD) is characterized by the following:
- Monitoring and regulating the brake pressure on the rear wheels.
- Improved driving stability when braking, especially on bends.

Function of STEER CONTROL
STEER CONTROL assists you by transmitting a noticeable steering force to the steering wheel in the direction required for vehicle stabilization.
If you brake and both right wheels or both left wheels are on a wet or slippery road surface, you will receive a steering recommendation.

System limits
STEER CONTROL may be impaired or may not function in the following situations:
- ESP® is deactivated.
- ESP® is malfunctioning.
- The steering is malfunctioning.

If ESP® is malfunctioning, you will be assisted further by the electric power steering.

HOLD function
The HOLD function holds the vehicle at a standstill without requiring you to depress the brake pedal, e.g. while waiting in traffic.
The HOLD function is only an aid. The responsibility for the vehicle safely standing still remains with the driver.

System limits
The HOLD function is only intended to provide assistance when driving and is not a sufficient means of safeguarding the vehicle against rolling away when stationary.
- The incline must not be greater than 30%.
Activating/deactivating the HOLD function

**WARNING** Risk of an accident due to the HOLD function being active when you leave the vehicle

If the vehicle is only braked with the HOLD function it could, in the following situations, roll away:
- If there is a malfunction in the system or in the power supply.
- If the HOLD function is deactivated by depressing the accelerator pedal or brake pedal, e.g. by a vehicle occupant.

Always secure the vehicle against rolling away before you leave it.

**Requirements**
- The vehicle is stationary.
- The driver’s door is closed or the seat belt on the driver’s side is fastened.
- The vehicle has been started or has been automatically switched off by the ECO start/stop function.

- The electric parking brake is released.
- Active Distance Assist DISTRONIC is deactivated.
- The transmission is in position D, R or N.

**Activating the HOLD function**
- Depress the brake pedal, and after a short time quickly depress further until the HOLD display appears in the Instrument Display.
- Release the brake pedal.

**Deactivating the HOLD function**
- Depress the accelerator pedal to pull away.
- or
- Depress the brake pedal until the HOLD display disappears from the Instrument Display.

The HOLD function is deactivated in the following situations:
- Active Distance Assist DISTRONIC is activated.
- The transmission is shifted to position P.
- The vehicle is secured with the electric parking brake.

In the following situations, the vehicle is held by transmission position P and/or by the electric parking brake:
- The seat belt is unfastened and the driver’s door is opened.
- The vehicle is switched off.
- There is a system malfunction.
- The power supply is insufficient.

**Function of Hill Start Assist**

Hill Start Assist holds the vehicle for a short time when you pull away on a hill under the following conditions:
- The transmission is in position D or R.
- The electric parking brake is released.

This gives you enough time to move your foot from the brake pedal to the accelerator pedal and depress it before the vehicle begins to roll away.
WARNING Risk of accident and injury due to the vehicle rolling away

After a short time, Hill Start Assist no longer holds the vehicle.

- Swiftly move your foot from the brake pedal to the accelerator pedal. Do not leave the vehicle when it is being held by Hill Start Assist.

ATTENTION ASSIST

Function of ATTENTION ASSIST

ATTENTION ASSIST assists you on long, monotonous journeys, e.g. on highways and trunk roads. If ATTENTION ASSIST detects indicators of fatigue or increasing lapses in concentration on the part of the driver, it suggests taking a break.

ATTENTION ASSIST is only an aid. It cannot always detect fatigue or lapses in concentration in time. The system is not a substitute for a well-rested and attentive driver. On long journeys, take regular breaks in good time that allow for adequate recuperation.

You can choose between two settings:
- **Standard**: normal system sensitivity.
- **Sensitive**: higher system sensitivity. The driver is warned earlier and the attention level detected by ATTENTION ASSIST is adapted accordingly.

If drowsiness or increasing lapses in concentration are detected, the ATTENTION ASSIST: Take a Break! warning appears in the Instrument Display. You can acknowledge the message and take a break where necessary. If you do not take a break and ATTENTION ASSIST continues to detect increasing lapses in concentration, you will be warned again after a minimum of 15 minutes.

You can have the following status information for ATTENTION ASSIST displayed in the assistance menu of the on-board computer:
- The length of the journey since the last break.
- The attention level determined by ATTENTION ASSIST:
  - the fuller the circle, the higher the attention level determined
  - as your attention wanes, the circle in the center of the display becomes smaller

If ATTENTION ASSIST is unable to calculate the attention level and cannot issue a warning, the System Suspended message appears.

If a warning is given in the Instrument Display, the multimedia system offers to search for a rest area. You can select a rest area and start navigation to this rest area. This function can be activated and deactivated in the multimedia system.

If ATTENTION ASSIST is deactivated, the symbol appears in the assistance graphic in the Instrument Display. After the vehicle is started, ATTENTION ASSIST is automatically activated. The last selected sensitivity level remains stored.
System limits
ATTENTION ASSIST is active in the 37 mph (60 km/h) to 124 mph (200 km/h) speed range. Particularly in the following situations, ATTENTION ASSIST only functions in a restricted manner and warnings may be delayed or not occur:
- If you have been driving for less than approximately 30 minutes.
- If the road condition is poor (uneven road surface or potholes).
- If there is a strong side wind.
- If you adopt a sporty driving style (high cornering speeds or high rates of acceleration).
- If Active Steering Assist is activated and active (→ page 188).
- If the time has been set incorrectly.
- If you change lanes and vary your speed frequently in active driving situations.

The ATTENTION ASSIST drowsiness or alertness assessment is reset and restarted when continuing the journey in the following situations:
- If you switch off the vehicle.
- If you unfasten your seat belt and open the driver’s door (e.g. to change drivers or take a break).
- If you unfasten your seat belt and open the driver’s door (e.g. to change drivers or take a break).

Setting ATTENTION ASSIST
Multimedia system:

Setting options
- Select Standard, Sensitive or Off.

Suggesting rest areas
- Select Suggest Rest Area.
- Activate or deactivate the function.
- If ATTENTION ASSIST detects fatigue or an increasing lack of attention, it will suggest a rest area in the vicinity.
- Select the suggested rest area.
You will be guided to the selected rest area.

Speed control cruise control

Function of cruise control
Cruise control regulates the speed to the value selected by the driver.

If you accelerate to overtake, for example, the stored speed is not deleted. If you remove your foot from the accelerator pedal after overtaking, cruise control will resume speed regulation back to the stored speed.

You can store any speed above 15 mph (20 km/h) up to the maximum design speed.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

Mercedes-AMG vehicles: cruise control is available up to a maximum speed of 155 mph (250 km/h).

Displays in the Instrument Display
- (gray): cruise control is selected but not yet activated.
- (green): cruise control is active.
A stored speed appears along with the display.

1. The segments between the stored speed and the end of the segment display light up in the speedometer.

**System limits**

Cruise control may be unable to maintain the stored speed on uphill gradients. The stored speed is resumed when the gradient evens out. Change into a lower gear in good time on long and steep downhill gradients. Take particular note of this when driving a laden vehicle. By doing so, you will make use of the braking effect of the engine. This relieves the load on the brake system and prevents the brakes from overheating and wearing too quickly.

Do not use cruise control in the following situations:

- in traffic situations which require frequent changes of speed, e.g. in heavy traffic, on winding roads
- on slippery roads. Accelerating can cause the drive wheels to lose traction and the vehicle could then skid.
- when visibility is poor

### Operating cruise control

**WARNING** Risk of accident due to stored speed

If you call up the stored speed and this is lower than your current speed, the vehicle decelerates.

- Take into account the traffic situation before calling up the stored speed.

**Requirements**

- Cruise control is selected.
- ESP® must be activated, but not intervening.
- The vehicle speed is at least 15 mph (20 km/h).
- The transmission is in position D.

### Activating cruise control

- Press M.

Steering wheel control panel for cruise control

- Adopts the stored/detected speed
- Deactivates cruise control
- Activates cruise control
- Deactivates cruise control

Control panel to increase/decrease speed

- Press .
Activating cruise control

- Press \( \text{SET}^+ \) or \( \text{SET}^- \) on control panel 1.
  The current speed is stored and maintained by the vehicle.

- Press \( \text{RES}^- \).
  The last stored speed is called up and maintained by the vehicle.

If the last stored speed has previously been deleted, the current vehicle speed is stored.

When you switch off the vehicle, the last speed stored is deleted.

Increasing/decreasing the stored speed

- To increase the stored speed: swipe upwards from the bottom of control panel 1.
  - The stored speed is increased by 1 mph (1 km/h).

- To decrease the stored speed: swipe downwards from the top of control panel 1.
  - The stored speed is decreased by 1 mph (1 km/h).

Briefly press \( \text{SET}^+ \) or \( \text{SET}^- \) on control panel 1.
  The stored speed is increased or decreased to the following values depending on the unit:
  - \( \text{mph} \): the next value ending in 5
  - \( \text{km/h} \): the next value ending in 0

- Accelerate the vehicle to the desired speed.
  - Press \( \text{SET}^+ \) on control panel 1.

Adopting a detected speed

If cruise control is activated and Traffic Sign Assist has detected a speed restriction sign with a maximum permissible speed and this is displayed in the instrument cluster:

- Press \( \text{RES}^- \).
  The maximum permissible speed shown by the traffic sign is stored and the vehicle maintains this speed.

Deactivating cruise control

- Press \( \text{CANCEL} \).

If you brake, deactivate ESP® or if ESP® intervenes, cruise control is deactivated.

Active Distance Assist DISTRONIC

Function of Active Distance Assist DISTRONIC

Active Distance Assist DISTRONIC maintains the set speed when driving freely. If vehicles are detected ahead, the set distance is maintained, if necessary until the vehicle comes to a standstill. The vehicle accelerates or brakes depending on the distance to the vehicle in front and the set speed. The speed (in the range between 15 mph (20 km/h) and 130 mph (210 km/h)) and the distance to the vehicle in front are set and saved on the steering wheel.

Other features of Active Distance Assist DISTRONIC:

- Adjusts the driving style depending on the selected drive program (fuel-saving, comfortable or dynamic) (→ page 152)
• Reacts to stationary vehicles detected in urban speed ranges (except bicycles and motorcycles)
• Initiates acceleration to the stored speed if the turn signal indicator is switched on to change to the overtaking lane
• Takes one-sided overtaking restrictions into account on highways or on multi-lane roads with separate carriageways (country-dependent)

If the vehicle has been braked to a standstill on multi-lane roads with separate carriageways by Active Distance Assist DISTRONIC, it can automatically follow the vehicle in front when driving off again within 30 seconds. If a critical situation is detected when driving off, a visual and acoustic warning is given indicating that the driver must now take control of the vehicle. The vehicle is not accelerated any further.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

Active Distance Assist DISTRONIC displays on the instrument display

Permanent status display of Active Distance Assist DISTRONIC
- (white): Active Distance Assist DISTRONIC selected, specified distance set
- (white vehicle, green speedometer): Active Distance Assist DISTRONIC active, specified distance set and no vehicle detected
- (green): Active Distance Assist DISTRONIC active, specified distance set and vehicle detected
- : Route-based speed adaptation active (→ page 185).

The stored speed is shown along with the permanent status display and highlighted on the speedometer. When Active Distance Assist DISTRONIC is passive, the speed is grayed out.

On highways or high-speed major roads, the green vehicle symbol is displayed cyclically when the vehicle is ready to pull away.

Driving and parking 181
If you depress the accelerator pedal beyond the setting of Active Distance Assist DISTRONIC, the system is switched to passive mode. The Suspended message will appear on the instrument display.

Display on the speedometer
The stored speed is highlighted on the speedometer. If the speed of the vehicle in front or the speed adjustment for the route event ahead is less than the stored speed, the segments in the speedometer light up. The instrument display shows the deactivation of Active Distance Assist DISTRONIC, as well as alterations to the speed due to manual or automatic adoption of the maximum permissible speed.

System limits
The system may be impaired or may not function in the following situations, for example:
- In snow, rain, fog, heavy spray, direct sunlight or greatly varying ambient light, or if there is glare.
- The windshield in the area of the camera is dirty, fogged up, damaged or covered.
- If the radar sensors are dirty or covered.
- In parking garages or on roads with steep uphill or downhill gradients.
- If there are narrow vehicles in front, such as bicycles or motorcycles.
- If Active Distance Assist DISTRONIC no longer detects a vehicle in front or does not react to relevant objects.

Always carefully observe the traffic conditions and be ready to brake at all times.
- Take into account the traffic situation before calling up the stored speed.

WARNING Risk of accident from acceleration or braking by Active Distance Assist DISTRONIC
Active Distance Assist DISTRONIC may accelerate or brake in the following cases, for example:
- If the vehicle pulls away using Active Distance Assist DISTRONIC.
- If the stored speed is called up and is considerably faster or slower than the currently driven speed.
- If there are narrow vehicles in front, such as bicycles or motorcycles.

WARNING Risk of accident due to insufficient deceleration by Active Distance Assist DISTRONIC
Active Distance Assist DISTRONIC brakes your vehicle with up to 50% of the possible deceleration. If this deceleration is not sufficient, Active Distance Assist DISTRONIC alerts you with a visual and acoustic warning.
- Adjust your speed and maintain a suitable distance from the vehicle in front.
- Brake the vehicle yourself and/or take evasive action.
WARNING Risk of accident if detection function of Active Distance Assist DISTRONIC is impaired

Active Distance Assist DISTRONIC does not react or has a limited reaction:
- when driving on a different lane or when changing lanes
- to pedestrians, animals, bicycles or stationary vehicles, or unexpected obstacles
- to complex traffic conditions
- to oncoming vehicles and crossing traffic

As a result, Active Distance Assist DISTRONIC may neither give warnings nor intervene in such situations.

Always observe the traffic conditions carefully and react accordingly.

Operating Active Distance Assist DISTRONIC

Requirements
- The electric parking brake is released.
- ESP® is activated and is not intervening.
- The transmission is in position D.
- All the doors are closed.
- Check of the radar sensor system has been successfully completed.

Adopts the stored/detected speed
Deactivates Active Distance Assist DISTRONIC

Increases/decreases the speed
Activates/deactivates Active Distance Assist DISTRONIC

To operate Active Distance Assist DISTRONIC: press the respective button with only one finger or swipe on the control panel.

Activating/deactivating Active Distance Assist DISTRONIC

Press H.

Activating Active Distance Assist DISTRONIC

To activate without a stored speed: on control panel press SET on the upper section or SET on the lower section or RES. Remove your foot from the accelerator pedal.

To activate with a stored speed: press J. Remove your foot from the accelerator pedal. The last stored speed is called up and maintained by the vehicle.

If the stored speed has been deleted, the current vehicle speed is stored.
Increasing or reducing the speed

To increase the stored speed: swipe upwards from the bottom of control panel 1.
- The stored speed is increased by 1 mph (1 km/h).

To reduce the stored speed: swipe downwards from the top of control panel 1.
- The stored speed is reduced by 1 mph (1 km/h).

or

Briefly press SET+ on the upper section or SET− on the lower section of control panel 1.
The stored speed is increased or reduced by 5 mph (10 km/h).

or

Accelerate the vehicle to the desired speed.
Press SET+ on the upper section of control panel 1.

Adopting the limit speed shown on the instrument cluster

To activate Active Distance Assist DISTRONIC: press SET+, SET− or RES+.
To accept the displayed speed limit: press RES−.
The limit speed displayed on the instrument cluster is adopted as the stored speed. The vehicle adapts its speed to that of the vehicle in front, but only up to the stored speed.
A speed limit shown on the driver's display is only adopted while driving, not when stationary.

Pulling away with Active Distance Assist DISTRONIC

Activate Active Distance Assist DISTRONIC and remove your foot from the brake pedal.
Press RES−.
or
Depress the accelerator pedal briefly and firmly.
The functions of Active Distance Assist DISTRONIC continue to be carried out.

Reducing or increasing the specified distance from the vehicle in front

Press RES−.
The display appears. The specified distance is reduced by one level.
If the lowest level is already selected, the selection jumps to the highest level.

Deactivating Active Distance Assist DISTRONIC

WARNING Risk of an accident due to Active Distance Assist DISTRONIC being active when you leave the driver's seat

If you leave the driver's seat while the vehicle is being braked by Active Distance Assist DISTRONIC only, the vehicle can roll away.
Always deactivate Active Distance Assist DISTRONIC and secure the vehicle to prevent it from rolling away before you leave the driver's seat.

Press CANCEL.
If you brake, deactivate ESP® or if ESP® intervenes, Active Distance Assist DISTRONIC is deactivated.

Function of Active Speed Limit Assist
If a change in the speed limit of 12 mph (20 km/h) or more is detected and automatic adoption of speed limits is activated, the new speed limit is automatically adopted as the stored speed (➔ page 197).

The driven speed is adjusted when the vehicle is level with the traffic sign at the latest. In the case of signs indicating entry into an urban area, the speed is adapted according to the speed permitted within the urban area. The speed limit display on the instrument display is always updated when the vehicle is level with the traffic sign.

If there is no speed restriction on an unlimited stretch of road (e.g. on a freeway), the recommended speed is automatically adopted as the stored speed. The system uses the speed stored on an unlimited stretch of road as the recommended speed. If you do not alter the stored speed on an unlimited stretch of road, the recommended speed is 80 mph (130 km/h).

If Active Distance Assist DISTRONIC has been put into passive mode by pressing the accelerator pedal, only speed limits which are higher than the set speed are adopted.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (➔ page 169).

System limits
The system limits of Traffic Sign Assist apply to the detection of traffic signs (➔ page 196).

Speed limits below 12 mph (20 km/h) are not automatically adopted by the system as the stored speed. Temporary speed restrictions (e.g. applicable for a certain time or due to weather conditions) cannot be properly detected by the system. The maximum permissible speed applying to a vehicle with a trailer is not detected by the system.

Adjust the speed in these situations.

Function of route-based speed adaptation
When Active Distance Assist DISTRONIC is activated, the vehicle speed will be adapted accordingly to the route events ahead. Depending on the drive program selected, the vehicle negotiates a route event ahead in an economical, comfortable or dynamic manner. When the route event has been passed, the vehicle accelerates again to the stored speed. The set distance to the vehicle in
front, vehicles detected ahead and speed restrictions ahead are taken into account.

You can activate and deactivate route-based speed adaptation in the multimedia system (→ page 187).

The following route events are taken into account:

- Bends
- T-intersections, traffic circles and toll stations
- Turns and exits
- Traffic jams ahead (only with Live Traffic Information)

When the toll station is reached, Active Distance Assist DISTRONIC adopts the speed as the stored speed.

Also, the speed is reduced if the turn signal indicator to change lanes is switched on and one of the following situations is detected:

- Turning at intersections
- Driving on slowing-down lanes
- Driving on lanes adjacent to slowing-down lanes

The driver is responsible for choosing the right speed and observing other road users. This applies in particular to intersections, traffic circles and traffic lights, as route-based speed adaptation does not brake the vehicle to a standstill.

When route guidance is active, the first speed adjustment is carried out automatically. If the turn signal indicator is switched on, the selected route is confirmed and further speed adjustment is activated.

Speed adaptation is canceled in the following cases:

- If the turn signal indicator is switched off before the route event.
- If the driver depresses the accelerator or brake pedal during the process.

**System limits**

Route-based speed adaptation does not take right of way regulations into account. The driver is responsible for complying with road traffic regulations and driving at a suitable speed.

The speed adaptation made by the system may not always be suitable, particularly in the following situations:

- road’s course not clearly visible
- road narrowing
- varying maximum permissible speeds in individual lanes, for example at toll stations
- wet road surfaces, snow or ice

In these situations the driver must intervene accordingly.

**WARNING** Risk of accident in spite of route-based speed adaptation

Route-based speed adaptation can malfunction or be temporarily unavailable in the following situations:

- If the driver does not follow the calculated route
- If map data is not up-to-date or available
- In the event of roadworks
- In bad weather or road conditions
If the accelerator pedal is depressed
In the event of electronically displayed speed limitations
-

- Adapt the speed to the traffic situation.

### Setting route-based speed adaptation

#### Requirements
- Active Distance Assist DISTRONIC is activated.
- ECO Assist is active.

Multimedia system:

- Route-based Speed

- Activate or deactivate the function.

- When the function is active, the vehicle speed is adjusted depending on the route events ahead.

Further information on route-based speed adaptation (→ page 185).

#### Function of Active Stop-and-Go Assist

Active Stop-and-Go Assist helps you when in traffic jams on multi-lane roads with separate roadways by automatically pulling away within up to 60 seconds and with moderate steering maneuvers. It orients itself using the vehicle in front and lane markings. Active Stop-and-Go Assist automatically maintains a safe distance from the vehicle in front and vehicles cutting in.

Active Stop-and-Go Assist requires you, as the driver, to keep your hands on the steering wheel at all times so that you are able to intervene at any time to correct the course of the vehicle and keep it in lane. Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

Active Traffic Jam Assist activates automatically as soon as all of the requirements are met: The status display appears in the instrument cluster when the function is active.

#### System limits

The system limitations of Active Distance Assist DISTRONIC and Active Steering Assist apply to Active Traffic Jam Assist.

#### Activating/deactivating Active Traffic Jam Assist

Multimedia system:

- Quick Access

Select .
Active Steering Assist

Function of Active Steering Assist
Active Steering Assist is only available up to a speed of 130 mph (210 km/h). The system helps you to stay in the center of the lane by means of moderate steering interventions. Depending on the speed driven, Active Steering Assist uses the vehicles ahead and lane markings as a reference.

Depending on the country, in the lower speed range Active Steering Assist can use the surrounding traffic as a reference. If necessary, Active Steering Assist can then also provide assistance by driving outside the center of the lane, for example, to form an emergency corridor.

If the detection of lane markings and vehicles ahead is impaired, Active Steering Assist switches to passive mode. The system provides no support in this case.

Status display of Active Steering Assist
- ![Gray Symbol] (gray): activated and passive
- ![Green Symbol] (green): activated and active
- ![Red Symbol] (red): system limits detected
- ![Hands Symbol] (white, red hands): "hands on the steering wheel" prompt

During the transition from active to passive status, the ![Gray Symbol] symbol is shown as enlarged and flashing. When the passive state is reached, the ![Gray Symbol] symbol is displayed in gray.

Depending on the selected vehicle settings, Active Steering Assist may be unavailable.

Steering and touch detection
The driver is required to keep their hands on the steering wheel at all times and be able to intervene at any time to correct the course of the vehicle and keep it in lane. The driver must expect a change from active to passive mode or vice versa at any time.

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display ![Gray Symbol] appears. If the driver still does not steer the vehicle, a warning tone sounds in addition to the visual warning message.

If the driver does not react to the warning for a considerable period, the system can initiate an emergency stop (→ page 190). The warning does not occur or stops as soon as the system detects that the driver is touching or steering the steering wheel.
Touch detection may be limited or inoperative in the following situations:

- The driver is wearing gloves.
- There is a steering wheel cover on the steering wheel.

If Active Steering Assist detects that a system limit has been reached, a visual warning is issued and a warning tone sounds.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

System limits
Active Steering Assist has a limited steering torque for lateral guidance. In some cases, the steering intervention is not sufficient to keep the vehicle in the lane or to drive through exits.

The system may be impaired or may not function in the following instances:

- There is poor visibility, e.g. due to snow, rain, fog, heavy spray, greatly varying ambient light or strong shadows on the road.
- There is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- Insufficient road illumination.
- The windshield is dirty, fogged up, damaged or covered in the vicinity of the camera, e.g. by a sticker.
- No, or several, unclear lane markings are present for one lane, or the markings change quickly, for example, in a construction area or intersections.
- The lane markings are worn away, dark or covered up, e.g. by dirt or snow.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- The road is narrow and winding.
- There are obstacles on the lane or projecting out into the lane, such as object markers.

The system does not provide assistance in the following conditions:

- On tight bends and when turning.
- When crossing intersections.
- At traffic circles or toll stations.
- When the tire pressure is too low.

**WARNING Risk of accident if Active Steering Assist unexpectedly stops functioning**

If the system limits of Active Steering Assist are reached there is no guarantee that the system will remain active or will keep the vehicle in lane.

- Always keep your hands on the steering wheel and observe the traffic carefully.
- Always steer the vehicle paying attention to traffic conditions.

**WARNING Risk of accident if Active Steering Assist unexpectedly intervenes**

The detection of lane markings and objects may malfunction and cause unexpected steering interventions.

- Steer according to traffic conditions.

**Activating/deactivating Active Steering Assist**

**Requirements**

- ESP® is activated, but is not intervening.
Active Distance Assist DISTRONIC is activated.

Multimedia system:

Settings ➤ Quick Access

Select ➤ Steering Assist.

Function of Active Emergency Stop Assist

If the system detects that the driver has not steered the vehicle for a considerable period of time or has removed their hands from the steering wheel, display 1 appears on the instrument display. If the driver still does not actively steer the vehicle, or provides no confirmation to the system, a warning tone sounds repeatedly in addition to the visual warning message.

If the driver still does not respond to the warning, the Beginning Emergency Stop message appears on the instrument display. If the driver still does not respond, Active Distance Assist DISTRONIC reduces the vehicle's speed. The vehicle is slowed down to a standstill in stages.

Depending on the country, at speeds below 40 mph (60 km/h) the hazard warning light system switches on automatically.

When the vehicle is stationary, the following actions are carried out:

- The vehicle is secured with the electric parking brake.
- Active Distance Assist DISTRONIC is ended.
- The vehicle is unlocked.
- If possible, an emergency call is placed to the Mercedes-Benz emergency call center.

The driver can cancel the deceleration at any time by performing one of the following actions:

- Steering
- Braking or accelerating
- Deactivating Active Distance Assist DISTRONIC

Active Lane Change Assist

Function of Active Lane Change Assist

Active Lane Change Assist supports the driver when changing lanes by applying steering torque if the driver activates a turn signal indicator.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (page 169).

Assistance when changing lanes is provided if all the following conditions are met:

- You are driving on a freeway or road with multiple lanes in the direction of travel.
- The neighboring lane is separated by a broken lane marking.
- No vehicle is detected in the adjacent lane.
- The vehicle speed is between 50 mph (80 km/h) and 110 mph (180 km/h).
• Active Lane Change Assist is switched on in the multimedia system.
• Active Steering Assist is activated and active.

If no vehicle is detected in the adjacent lane and a lane change is permitted, the lane change begins after the driver has activated the turn signal indicator. This is shown to the driver with a green arrow next to the steering wheel symbol. The message Lane Change to the Left, for example, also appears. If Active Lane Change Assist has been activated with the turn signal indicator but a lane change is not immediately possible, a gray arrow appears next to the steering wheel symbol, which remains green.

As soon as the lane change assistance starts, the turn signal indicator is automatically activated.

If a lane change is not possible, the arrow is faded out after a few seconds and a new lane change must be initiated. An immediate lane change is only possible on freeway sections without speed limits.

If the system is impaired, Active Lane Change Assist may be canceled. If it is canceled, the Lane Change Canceled message appears on the instrument display.

In addition, a warning tone may sound, depending on the situation.

⚠️ WARNING Risk of accident when changing lane to an occupied adjacent lane
Lane Change Assist cannot always clearly detect if the adjacent lane is free.
The lane change might be initiated although the adjacent lane is not free.
Before changing lanes, make sure that the neighboring lane is free and there is no danger to other road users.
Monitor the lane change.

⚠️ WARNING Risk of accident if Lane Change Assist unexpectedly stops functioning
If the system limitations for Lane Change Assist have been reached, there is no guarantee that the system will remain active.
Lane Change Assist cannot then assist you by applying steering torque.

Always monitor the lane change and keep your hands on the steering wheel. Observe the traffic conditions and steer and/or brake if necessary.

System limits
The system limits of Active Steering Assist apply to Active Lane Change Assist (→ page 188).

The system may also be impaired or may not function in the following situations:
• The sensors in the rear bumper are dirty, damaged or covered by a sticker or ice and snow, for example.
• The exterior lighting shows a defect.

The Active Lane Change Assist sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered. Active Lane Change Assist is unavailable during this teach-in process; no arrow appears next to the Active Steering Assist symbol when the turn signal indicator is activated.

Driving and parking

191
Selecting Active Lane Change Assist
Multimedia system:
Settings ➤ Assistance ➤ Active Lane Change Assist
Select the function.

Active Brake Assist

Function of Active Brake Assist
Active Brake Assist consists of the following functions:
- Distance warning function
- Autonomous braking function
- Situation-dependent braking assistance
- Vehicles with Driving Assistance Package: Evasive Steering Assist and cornering function

Active Brake Assist can help you to minimize the risk of a collision with vehicles, cyclists or pedestrians or to reduce the effects of such a collision.
If Active Brake Assist has detected a risk of collision, a warning tone sounds and the distance warning lamp lights up in the instrument cluster.
If you do not react to the warning, autonomous braking can be initiated in critical situations.
In especially critical situations, Active Brake Assist can initiate autonomous braking directly. In this case, the warning lamp and warning tone occur simultaneously with the braking application.
If you apply the brake yourself in a critical situation or apply the brake during autonomous braking, situation-dependent braking assistance occurs. The brake pressure increases up to maximum full-stop braking if necessary.
Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (page 169).

If autonomous braking or situation-dependent braking assistance has occurred, display 1 appears in the Instrument Display and then automatically goes out after a short time.

WARNING Risk of an accident caused by limited detection performance of Active Brake Assist

Active Brake Assist cannot always clearly identify objects and complex traffic situations.
In such cases, Active Brake Assist might:
- Give a warning or brake without reason
- Not give a warning or not brake

Driving and parking
Active Brake Assist is only an aid. The driver is responsible for maintaining a sufficiently safe distance to the vehicle in front, vehicle speed and for braking in good time.

- Always pay careful attention to the traffic situation; do not rely on Active Brake Assist alone.
- Be prepared to brake or swerve if necessary.

If Active Brake Assist is deactivated or the functions are restricted, e.g. due to activation of another driving system, the display message appears in the driver’s display.

If the system is unavailable due to dirty or damaged sensors or due to a malfunction, or if the functions are restricted, the warning lamp appears in the driver’s display.

Also observe the system limits of Active Brake Assist.

The individual subfunctions are available in various speed ranges:

The distance warning function can issue a warning in the following situations:

- From approximately 4 mph (7 km/h), if your vehicle is critically close to a vehicle, cyclist or pedestrian, you will hear an intermittent warning tone and the distance warning lamp lights up in the instrument cluster.

Brake immediately or take evasive action, provided it is safe to do so and the traffic situation allows this.

**Distance warning function (vehicles without Driving Assistance Package)**

- At speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- At speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- At speeds up to approximately 50 mph (80 km/h) when approaching moving pedestrians and cyclists ahead
- At speeds up to approximately 43 mph (70 km/h) when approaching stationary pedestrians, crossing vehicles and stationary and crossing cyclists
Autonomous braking function (vehicles without Driving Assistance Package)
If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:
- at speeds up to approximately 124 mph (200 km/h) when approaching vehicles ahead
- at speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching stationary vehicles or moving pedestrians

Autonomous braking function (vehicles with Driving Assistance Package)
If the vehicle is traveling at speeds above approximately 4 mph (7 km/h), the autonomous braking function may intervene in the following situations:
- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 62 mph (100 km/h) when approaching cyclists ahead
- at speeds up to approximately 50 mph (80 km/h) when approaching stationary vehicles and cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching moving pedestrians

Situation-dependent braking assistance (vehicles without Driving Assistance Package)
The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:
- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 50 mph (80 km/h) when approaching stationary vehicles and cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching moving pedestrians

Situation-dependent braking assistance (vehicles with Driving Assistance Package)
The situation-dependent braking assistance can intervene from a speed of approximately 4 mph (7 km/h) in the following situations:
- at speeds up to approximately 155 mph (250 km/h) when approaching vehicles ahead
- at speeds up to approximately 62 mph (100 km/h) when approaching stationary vehicles
- at speeds up to approximately 50 mph (80 km/h) when approaching cyclists ahead
- at speeds up to approximately 37 mph (60 km/h) when approaching stationary and moving pedestrians, crossing vehicles, and stationary and crossing cyclists

Canceling a brake application of Active Brake Assist
You can cancel a brake application of Active Brake Assist at any time by:
- sharply depressing the accelerator pedal or with kickdown
- releasing the brake pedal
Active Brake Assist may cancel the brake application when one of the following conditions is fulfilled:

- You maneuver to avoid the obstacle.
- There is no longer a risk of collision.
- An obstacle is no longer detected in front of your vehicle.

**Evasive Steering Assist (only vehicles with Driving Assistance Package)**

Evasive Steering Assist has the following characteristics:

- The ability to detect stationary or moving pedestrians.
- Assistance through power-assisted steering if it detects a swerving maneuver.
- Activation by an abrupt steering movement during a swerving maneuver.
- Assistance during swerving and straightening of the vehicle.
- Reaction from a speed of approximately 12 mph (20 km/h) up to a speed of approximately 43 mph (70 km/h).

You can prevent the assistance at any time by actively steering.

**Cornering function (only vehicles with Driving Assistance Package)**

If the system detects a risk of a collision with an oncoming vehicle when turning across an oncoming lane, autonomous braking can be initiated at speeds below 9 mph (15 km/h) before you have left the lane in which you are driving.

**WARNING Risk of accident despite Evasive Steering Assist**

Evasive Steering Assist cannot always recognize objects or complex traffic situations clearly.

Moreover, the steering support provided by Evasive Steering Assist is not sufficient to avoid a collision.

- Always pay careful attention to the traffic situation; do not rely on Evasive Steering Assist alone.
- Be prepared to brake or swerve if necessary.

**System limits**

Full system performance is not yet available for a short time after switching on the vehicle or after driving off. As long as the functions are restricted, the warning lamp can also be shown in the driver’s display. Depending on the environmental conditions, it may take a few minutes before full system performance is available.

The system may be impaired or may not function, particularly in the following situations:

- In snow, rain, fog, heavy spray, if there is glare, in direct sunlight or in greatly varying ambient light.
- If the sensors are dirty, fogged up, damaged or covered.
- If the sensors are impaired due to interference from other radar sources, e.g. strong radar reflections in parking garages.

\[\text{End the support by actively steering in non-critical situations.}\]

\[\text{Drive at an appropriate speed if there are pedestrians close to the path of your vehicle.}\]
If a loss of tire pressure or a defective tire has been detected and displayed.

In complex traffic situations where objects cannot always be clearly identified.

If pedestrians or vehicles move quickly into the sensor detection range.

If pedestrians are hidden by other objects.

If the typical outline of a pedestrian cannot be distinguished from the background.

If a pedestrian is not detected as such, e.g. due to special clothing or other objects.

If the driver's seat belt is not fastened.

On bends with a tight radius.

The Active Brake Assist sensors adjust automatically while a certain distance is being driven after the vehicle has been delivered. Active Brake Assist is unavailable or only partially available during the teach-in process.

Activating/deactivating Active Brake Assist

Requirements

• The vehicle is switched on.

Multimedia system:

> Settings > Assistance

> Active Brake Assist

Select the desired setting.

Deactivating Active Brake Assist

It is recommended that you always leave Active Brake Assist activated.

Select Off.

The distance warning function, the autonomous braking function and Evasive Steering Assist are deactivated.

The system is switched on again the next time the vehicle is started.

If Active Brake Assist is deactivated, the symbol appears in the status bar of the Instrument Display.

Traffic Sign Assist

Function of Traffic Sign Assist

Traffic Sign Assist detects traffic signs with the multifunction camera (→ page 169). It assists you by displaying detected speed limits and overtaking restrictions on the instrument display.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

Since Traffic Sign Assist also uses the data stored in the navigation system, it can update the display in the following situations without detecting traffic signs.

The camera also detects traffic signs with a restriction indicated by an additional sign (e.g. when wet). These are only displayed if a restriction applies or if the system cannot clearly determine whether the restriction applies.

Warning when the maximum permissible speed is exceeded

The system can warn you if you unintentionally exceed the maximum permissible speed. Depending on the country, you can set in the multimedia system by how much the maximum permitted speed may be exceeded before a warning is given. You can specify whether the warning is to be just a visual warning or an acoustic one as well.
Display on the instrument display

Instrument display in the widescreen cockpit
1 Maximum permissible speed
2 Maximum permissible speed when there is a restriction
3 Additional sign with restriction

 Vehicles with a standard instrument display: a + symbol next to a traffic sign on the instrument display indicates that additional traffic signs have been detected. These can also be displayed on the media display and optionally on the head-up display.

If Traffic Sign Assist cannot determine the maximum permissible speed (e.g. due to missing signs), the following display appears on the instrument display:

This is displayed continuously if the vehicle is in a country where Traffic Sign Assist is not supported. Traffic Sign Assist is not available in all countries.

Also observe the information on display messages in Traffic Sign Assist (→ page 363).

System limits

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, direct sunlight or reflections.
- If there is dirt on the windshield in the vicinity of the multifunction camera or if the camera is fogged up, damaged or obscured.
- If the traffic signs are hard to detect, e.g. due to dirt, snow or insufficient lighting, or because they are obscured.
- If the information on the navigation system's digital map is incorrect or out of date.
- If signs are ambiguous, e.g. road signs in roadworks or in adjacent lanes.
- If you turn sharply when passing traffic signs outside the camera's field of vision.

Setting Traffic Sign Assist

Requirements:
- Only vehicles with Driving Assistance Package: Active Distance Assist DISTRONIC and ECO Assist must be activated for the automatic adoption of speed limits.
Activating or deactivating automatic adoption of speed limits (only vehicles with Driving Assistance Package)

Select Limit Adoption.
Switch the function on or off.

The speed limits detected by Traffic Sign Assist are automatically adopted by Active Distance Assist DISTRONIC.

If one of the following systems is activated, the detected speed can be manually adopted as the speed limit:
- Active Distance Assist DISTRONIC
- Cruise control
- Variable limiter

Further information about Active Distance Assist DISTRONIC: (page 183).

Displaying detected traffic signs in the media display
Select Display in Central Display.
Switch the function on or off.

Setting the type of warning
Select Visual & Audible, Visual or Off.

Setting the warning threshold
This value determines the speed at which a warning is issued when exceeded.
Select Warning Threshold.
Set the desired speed.

Traffic Light Information service

WARNING Risk of an accident or injury due to distraction, incorrect or missing data

The traffic light information display is an aid and cannot replace the observation of the actual driving situation.

Keep the actual traffic situation constantly in view when approaching a traffic light and when changing lanes.
Avoid looking at the Instrument Display and Head-up Display for a long time.

The Instrument Display and Head-up Display (if available) show the traffic light icon and remaining time until the next green phase as a countdown.

Example representation in the Instrument Display

Traffic light icon and countdown of remaining time until the next green phase time
The display is hidden about five seconds before the traffic lights change to green.

The display also goes out in the following cases:
- When turning off before the intersection into a cross or side street
- When turning before the intersection

The direction arrows are displayed depending on the following functions:
- A turn signal is set
- A lane is recommended during active route guidance

If neither function is active, the remaining time until the next green phase for the lane straight ahead is displayed.

Use of the traffic light information service requires the regular transmission of vehicle positions and driving directions to Mercedes-Benz. The data is immediately anonymized by Mercedes-Benz and forwarded to the provider of the traffic light information service. The vehicle positions and driving directions are deleted after a very short time (a few seconds) and are not permanently saved.

If you do not want to transmit the vehicle positions and driving directions, you have the following options:
- You deactivate the service in the Mercedes me portal.
- You have the service deactivated at an authorized Mercedes-Benz Center.
- You deactivate the service in the Assistance menu in the multimedia system (→ page 200).

This traffic light information service is only available in certain cities and regions.

The function is supported under the following conditions:
- The vehicle is equipped with a multimedia system featuring navigation and a communication module with an activated, integrated SIM card.
- You have a user account for the Mercedes me Portal.
- The vehicle has been connected with the user account.
- The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
- The traffic light data service belongs to the scope of the navigation services.

The current vehicle position and the direction of travel are transmitted via the communication module and aligned with the data from the traffic light data service provider. The provider gathers data from traffic lights which transmit their changing phases. When the vehicle approaches an intersection with networked traffic lights, data is transmitted to the vehicle.

A set turn signal left or right and lane recommendations during active route guidance are taken into account for the display.

The service is for information purposes only and is not linked to any other vehicle functions, systems or components. Please note that the displayed data is not available in all traffic areas and may be incorrect.

Certain light signal systems automatically adapt their switching times to the current traffic situa-
tion. This can lead to a sudden change in the countdown display.

The information in the Instrument Display is shown after selecting the display contents in the Assistance menu. If another menu is selected, the traffic light countdown is not displayed. Also observe the following information:

- select a speed adapted to the traffic, surroundings and weather conditions
- Observe actual traffic signs
- Observe applicable traffic rules and regulations

Please observe the notes on driving systems and your responsibility. You could otherwise fail to recognize dangers.

System limits
The display does not appear in the following situations, for example:

- There is no traffic light data available.
- The time remaining until the next green phase is less than ten seconds.

- Emergency vehicles or local public transport are located in the vicinity of the intersection.
- The data transmission from the vehicle has been interrupted.
- The traffic light systems are located in a construction site area or are undergoing maintenance.
- The light signal system is malfunctioning.
- The subscription to the service has expired.

Switching the traffic light information display on or off

Multimedia system:

Switch Traffic Light Information on [ ] or [ ].

Blind Spot Assist and Active Blind Spot Assist with exit warning

Function of Blind Spot Assist and Active Blind Spot Assist with exit warning

Blind Spot Assist and Active Blind Spot Assist use two lateral, rear-facing radar sensors to monitor the area up to 130 ft (40 m) behind and 10 ft (3 m) next to your vehicle.

If a vehicle is detected at speeds above approximately 8 mph (12 km/h) and this vehicle subsequently enters the monitoring range directly next to your vehicle, the warning lamp in the outside mirror lights up red.

Permanent status display in the instrument cluster:

- (gray): system is activated but inoperative
- (green): system is activated and operational

If a vehicle is detected close to your vehicle and you switch on the turn signal indicator in the corresponding direction, a double warning tone sounds and the red warning lamp in the outside mirror lights up red.

Driving and parking
mirror flashes. If the turn signal indicator remains switched on, all other detected vehicles are indicated only by the flashing of the red warning lamp.

If you overtake a vehicle quickly, no warning is given.

**WARNING Risk of accident despite Active Blind Spot Assist**

Active Blind Spot Assist does not react to the following:
- if you overtake a vehicle too closely so that it is in the blind spot area
- if vehicles traveling at a much faster speed approach and then overtake

Active Blind Spot Assist may not give warnings or intervene in such situations.

- Always pay careful attention to the traffic situation and maintain a safe distance at the side of the vehicle.

Observe the notes on driving systems and your responsibility; you may otherwise fail to recognize dangers (→ page 169).

**Exit warning**

The exit warning is an additional function of Blind Spot Assist and can warn vehicle occupants about approaching vehicles when leaving the vehicle when stationary.

**WARNING Risk of accident despite exit warning**

The exit warning neither reacts to stationary objects nor to persons or road users approaching you at a greatly differing speed. The exit warning cannot warn drivers in these situations.

- Always pay particular attention to the traffic situation when opening the doors and make sure there is sufficient clearance.

If there is a vehicle in the monitoring range, this is indicated in the outside mirror. If a vehicle occupant opens the door on the side with the warning, a warning tone sounds and the warning lamp in the outside mirror starts to flash.

This additional function is only available when Blind Spot Assist is active. When the exit warning is activated, it can warn vehicle occupants for up to three minutes after switching the vehicle off. The exit warning is no longer available once the warning lamp in the outside mirror flashes three times.

The exit warning is only an aid and not a substitute for the attention of vehicle occupants. The responsibility for opening and closing the doors and for leaving the vehicle remains with the vehicle occupants.

**System limits**

Blind Spot Assist and Active Blind Spot Assist may be limited in the following situations, in particular:
- if there is dirt on the sensors or the sensors are obscured
- in poor visibility, e.g. due to fog, heavy rain or snow
- if there are narrow vehicles, e.g. bicycles or motorbikes
• if the road has very wide or narrow lanes
• if vehicles are not driving in the middle of their lane

Warnings may be issued in error when driving close to crash barriers or similar continuous lane borders. Always make sure that there is sufficient distance to the side for other traffic or obstacles.

Warnings may be interrupted when driving alongside long vehicles, for example trucks, for a prolonged time.

Blind Spot Assist is not operational when reverse gear is engaged.

The exit warning may be limited in the following situations:
• when the sensors are covered by adjacent vehicles in narrow parking spaces
• when people approach the vehicle
• in the event of stationary or slowly moving objects

### Function of brake application (Active Blind Spot Assist)
If Active Blind Spot Assist detects a risk of a side impact in the monitoring range, a course-correcting brake application is carried out. This is designed to help you avoid a collision.

The course-correcting brake application is available in the speed range between approximately 20 mph (30 km/h) and 125 mph (200 km/h).

#### WARNING Risk of accident despite brake application of Active Blind Spot Assist
A course-correcting brake application cannot always prevent a collision.

- Always steer, brake or accelerate yourself, especially if Active Blind Spot Assist warns you or makes a course-correcting brake application.
- Always maintain a safe distance at the sides.

If a course-correcting brake application occurs, the red warning lamp flashes in the outside mirror and a warning tone sounds. In addition, display 1 indicating the danger of a side collision appears in the Instrument Display.

In rare cases, the system may make an inappropriate brake application. This brake application may be interrupted at any time if you steer slightly in the opposite direction or accelerate.

### System limits
Note the system limitations of Active Blind Spot Assist; you may otherwise not recognize the dangers (→ page 200).
Either a course-correcting brake application appropriate to the driving situation, or none at all, may occur in the following situations:

- Vehicles or obstacles, e.g. crash barriers, are located on both sides of your vehicle.
- A vehicle approaches too closely on the side.
- You have adopted a sporty driving style with high cornering speeds.
- You brake or accelerate significantly.
- A driving safety system intervenes, e.g. ESP® or Active Brake Assist.
- ESP® is deactivated.
- A loss of tire pressure or a defective tire is detected.

### Activating/deactivating Blind Spot Assist or Active Blind Spot Assist

Multimedia system:

- **Settings** ➔ **Assistance**
- Activate or deactivate **Blind Spot Assist**.
- or
- Activate or deactivate **Act. Blind Spot Assist**.

### Active Lane Keeping Assist

#### Function of Active Lane Keeping Assist

Active Lane Keeping Assist monitors the area in front of your vehicle by means of a multifunction camera (→ page 169). It serves to protect you against unintentionally leaving your lane. You will be warned by vibration pulses in the steering wheel and guided back into your lane by a course-correcting brake application.

Active Lane Keeping Assist is available in the speed range between 37 mph (60 km/h) and 124 mph (200 km/h).

Active Lane Keeping Assist can neither reduce the risk of an accident if you fail to adapt your driving style nor override the laws of physics. It cannot take into account road, weather or traffic conditions. Active Lane Keeping Assist is only an aid. You are responsible for maintaining a safe distance, for vehicle speed, for braking in good time and for staying in lane.

The status of Active Lane Keeping Assist is displayed in the on-board computer:

- ![ ] (green): Active Lane Keeping Assist is active and operating.
- ![ ] (gray): Active Lane Keeping Assist is active but not operating.
- ![ ]: Active Lane Keeping Assist is deactivated or there is a malfunction.

If a lane-correcting brake application occurs, display ![ ] will appear on the instrument display.

The system does not apply the brake on the corresponding side if you activate the turn signal indicator.

### Vehicles with Driving Assistance Package

If the system detects an obstacle, such as another vehicle in the adjacent lane, it will apply the brake regardless of the turn signal indicator.
You will be warned by vibrations in the steering wheel in the following circumstances:

- Active Lane Keeping Assist detects a lane marking.
- A front wheel drives over this lane marking.

**Conditions for a course-correcting brake application (vehicles without Driving Assistance Package)**

Lane markings were detected on both sides of the lane. The front wheel drives over a continuous lane marking.

> A brake application may be interrupted at any time by steering slightly in the opposite direction.

**Conditions for a course-correcting brake application (vehicles with Driving Assistance Package)**

- A continuous lane marking was detected and driven over with the front wheel.
- A lane marking and an oncoming vehicle, an overtaking vehicle or vehicles driving parallel to your vehicle were detected in the adjacent lane. The front wheel drives over the lane marking.

> A brake application may be interrupted at any time by steering slightly in the opposite direction.

**System limits**

No lane-correcting brake application will occur in the following situations:

- You clearly and actively steer, brake or accelerate.
- If a driving safety system intervenes, such as ESP®, Active Brake Assist or Active Blind Spot Assist.
- You have adopted a sporty driving style with high cornering speeds or high rates of acceleration.
- When ESP® is deactivated.
- If a loss of tire pressure or a defective tire is detected and displayed.

If you deactivate the Active Lane Keeping Assist warning and the lane markings were not clearly detected, it is possible that no lane-correcting brake application will take place (→ page 205).

The system may be impaired or may not function particularly in the following situations:

- If there is poor visibility, e.g. due to insufficient illumination of the road, highly variable shade conditions, rain, snow, fog or heavy spray.
- If there is glare, e.g. from oncoming traffic, the sun or reflections.
- If there is dirt on the windshield in the vicinity of the multifunction camera or if the camera is fogged up, damaged or obscured.
- If there are no lane markings or several unclear lane markings are present for one lane, e.g. around roadworks.
- If the lane markings are worn, dark or covered.
- If the distance to the vehicle in front is too short and thus the lane markings cannot be detected.
- If the lane markings change quickly, e.g. lanes branch off, cross one another or merge.
- If the road is very narrow and winding.
- Vehicles with Driving Assistance Package: if the radar sensors in the rear bumper are dirty.
or covered in snow and an obstacle is detected in your lane, no lane-correcting brake application takes place.

Activating/deactivating Active Lane Keeping Assist
Multimedia system:

Settings ➔ Quick Access ➔ Active Lane Keeping Assist
Activate or deactivate the function.

Setting Active Lane Keeping Assist
Multimedia system:

Settings ➔ Assistance ➔ Active Lane Keeping Assist

Activating or deactivating the haptic warning
Select Warning.
Activate or deactivate the function.

DYNAMIC BODY CONTROL function

DYNAMIC BODY CONTROL continuously adjusts the characteristics of the suspension dampers to the current operating and driving conditions.

The damping is individually set for each wheel and is affected by the following factors:
- Road surface conditions
- Vehicle load
- Drive program selected
- Driving style

The drive program can be adjusted using the DYNAMIC SELECT switch.

AMG adaptive sport suspension system

Function of AMG RIDE CONTROL
AMG RIDE CONTROL is an electronically controlled damping system for improved driving comfort and increased driving safety.

The damping is individually set for each wheel and depends on the following factors:
- Driving style, e.g. sporty
- Road condition, e.g. bumps
- Suspension setting selected: COMFORT, SPORT or SPORT PLUS

AMG RIDE CONTROL includes the following components and functions:
- Electronically controlled damping system
- ADS PLUS (Adaptive Damping System with constant damping force adjustment)
- DYNAMIC SELECT switch
- Suspension setting button (→ page 206)

AMG adaptive sport suspension system +

Function of AMG RIDE CONTROL +
AMG RIDE CONTROL + is an air suspension system with variable damping for improved driving characteristics. The all-round level control system ensures the best possible suspension and constant ground clearance, even with a laden vehicle. When driving at speed, the vehicle is automatically lowered to improve driving safety and to reduce fuel consumption. You also have the option of manually adjusting the vehicle level.

The damping is set individually for each wheel and is affected by the following factors:
- Driving style, e.g. sporty
Road condition, e.g. bumps
The individual selection of SPORT, SPORT + or COMFORT
AMG RIDE CONTROL + includes the following components and functions:
- Air suspension with variable spring rate and automatic level control
- Speed-dependent lowering to reduce fuel consumption
- Manually selectable high-level setting for greater ground clearance
- ADS PLUS (Adaptive Damping System with constant damping force adjustment)
- DYNAMIC SELECT switch and level button
- Suspension setting button

Suspension setting and vehicle level per drive program
Drive programs [o], [A], [Î] and [C]:
- The suspension setting is comfortable ([o], [A] and [Î]).
- The vehicle is set to the normal level.
- When driving at speeds of 130 mph (210 km/h) or above, the vehicle is lowered.
- When driving at speeds below 75 mph (120 km/h), the vehicle is raised again.

Drive programs [S] and [I]:
- The suspension setting is even firmer.
- The vehicle is set to the low level.
- The vehicle is not lowered any further if you are traveling at higher speeds.

When the vehicle is started again, the COMFORT setting is activated automatically.

Selecting the suspension setting
You can select from three different suspension settings:
- COMFORT ensures a comfortable suspension setting. Select this suspension setting if you prefer a comfortable driving style.
- SPORT ensures a firmer suspension setting. Select this suspension setting when employing a sporty driving style, e.g. on winding country roads.
- SPORT + ensures a very firm suspension setting.

Press display button [1].
The display button shows currently selected suspension setting [2]:
- [C] (blue): COMFORT
The selected suspension setting is shown in the Instrument Display as a message.

**Setting the vehicle level**

**WARNING** Risk of accident because vehicle level is too high

Driving characteristics may be impaired. The vehicle can drift outwards, for example, when steering or cornering.

- Choose a vehicle level which is suited to the driving style and the road surface conditions.

**WARNING** Risk of entrapment from vehicle lowering

When lowering the vehicle, people could become trapped if their limbs are between the vehicle body and the tires or underneath the vehicle.

- Make sure no one is underneath the vehicle or in the immediate vicinity of the wheel arches when the vehicle is being lowered.

**WARNING** Risk of becoming trapped due to the vehicle lowering

Vehicles with AIR BODY CONTROL or level control system: when you unload luggage or leave the vehicle, the vehicle first rises slightly and then returns to the set level shortly afterwards. You or anyone else in the vicinity of the wheel arches or the underbody could thus become trapped. The vehicle can also be lowered after being locked.

- When leaving the vehicle, make sure that nobody is in the vicinity of the wheel arches or the underbody.

**Requirements:**
- The vehicle is equipped with AMG adaptive sport suspension system + (air suspension) (→ page 205).
- The vehicle has been started.
- The vehicle is not moving faster than 40 mph (65 km/h).

**Raising the vehicle**

- Select in the quick access menu of the multimedia system.

The vehicle is raised to the high level.

Your selection is saved.

The vehicle lowers itself back down to the height of the most recently active drive program:
- When driving faster than 75 mph (120 km/h).
- When driving between 50 mph (80 km/h) and 75 mph (120 km/h) for approximately three minutes.
- After selecting a drive program using the DYNAMIC SELECT switch.
Lowering the vehicle

Select €. The vehicle is adjusted to the height of the last active drive program.

RACE START

Information about RACE START

RACE START is available only for the Mercedes-AMG GT 63 S model or for vehicles with the AMG DYNAMIC PLUS package.

RACE START enables optimal vehicle acceleration from a standstill. A suitably high-grip road surface is required for this, and the tires and vehicle must also be in good condition.

Use RACE START only after the vehicle has been run in.

RACE START must not be used in normal road operation. RACE START may be activated and used only on dedicated race circuits, not on public roads.

Read the safety notes and information on ESP® (→ page 172).

WARNING Risk of skidding and having an accident from wheels spinning

If you use RACE START, depending on the ESP® mode selected, there is an increased risk of skidding and having an accident.

Make sure that no persons or obstacles are in the close vicinity of your vehicle.

Activating RACE START

Requirements:

- The vehicle is switched on and the transmission and the engine are at normal operating temperature.
- The driver’s door is closed.
- The front wheels are in a straight-ahead position.
- The vehicle is on level ground.
- The vehicle is stationary, the brake pedal is depressed (left foot) and the parking brake is released.
- The transmission is in position D.
- DRIFT MODE is deactivated.

- One of drive programs S, SP or is selected (→ page 152).

- Rapidly depress the accelerator pedal fully. The engine speed will increase.

- If the activation conditions are not fulfilled, RACE START cannot be used. The RACE START Not Possible See Operator’s Manual message appears in the Instrument Display.

- The RACE START Release brake to start message appears in the Instrument Display.

- In this phase, you can adjust RACE START depending on the road conditions: you can vary the engine speed by pulling on one of the steering wheel paddle shifters. The segments on the Instrument Display will flicker rapidly.

- If the brake pedal is not released after a short while, RACE START will be canceled. The RACE START Canceled message appears in the Instrument Display.
Take your foot off the brake, but keep the accelerator pedal depressed. The vehicle will pull away at maximum acceleration. The \textit{RACE START Active} message appears in the Instrument Display.

RACE START will be deactivated immediately if you release the accelerator pedal during RACE START or if any of the activation conditions are no longer fulfilled. The \textit{RACE START Canceled} message appears in the Instrument Display.

After using it several times in quick succession, RACE START will be unavailable until a certain distance has been driven.

\section*{DRIFT MODE}

\subsection*{Functions of DRIFT MODE}

\footnote{DRIFT MODE is available only for the Mercedes-AMG GT 63 S model or for vehicles with the AMG DYNAMIC PLUS package.}

DRIFT MODE allows you to intentionally make the vehicle unstable and induce oversteer (drifting). All activation conditions must be fulfilled for this (→ page 209).

\footnote{Only a highly qualified and experienced driver should drive in DRIFT MODE. Read the safety notes and information on ESP\textsuperscript{®} (→ page 172).}

\footnote{\textbf{WARNING} Risk of skidding and having an accident from wheels spinning}

When you use DRIFT MODE, ESP\textsuperscript{®} is not available.

There is an increased risk of skidding and having an accident.

\begin{itemize}
  \item Do not use DRIFT MODE on normal roads.
  \item DRIFT MODE may only be activated and used on closed race circuits, not on public roads.
  \item Make sure that no persons or obstacles are in the close vicinity of your vehicle.
\end{itemize}

When DRIFT MODE is active, drive for the vehicle occurs only at the rear and 4MATIC+ is deactivated.

4MATIC+ will be continuously reactivated from a speed of approximately 70 mph (115 km/h) up to 95 mph (150 km/h). From a speed of 95 mph (150 km/h), 4MATIC+ will be fully active again, but ESP\textsuperscript{®} will remain deactivated. 4MATIC+ will be continuously deactivated again below a speed of 95 mph (150 km/h) to approximately 70 mph (115 km/h).

\footnote{DRIFT MODE is available only after the vehicle has been run in.}

\subsection*{Activating and deactivating DRIFT MODE}

\textbf{Requirements}

\begin{itemize}
  \item ESP\textsuperscript{®} is deactivated (→ page 174).
  \item Drive program \textit{D} is selected (→ page 152).
  \item The doors, the hood and the trunk lid/tailgate are closed.
  \item The vehicle is started and the transmission and the engine are at normal operating temperature.
  \item The transmission is in manual mode – manual shifting is activated (→ page 157).
\end{itemize}
Activating DRIFT MODE

Pull steering wheel paddle shifters 1 and 2 and hold for half a second. If all activation conditions are fulfilled, the instrument display will show a message reading DRIFT MODE Confirm: Paddle UP Cancel: Paddle DOWN and the DRIFT warning lamp will flash.

To confirm: pull steering wheel paddle shifter 2. The instrument display will show a message reading DRIFT MODE Active and the DRIFT warning lamp will light up.

Deactivating DRIFT MODE

Pull steering wheel paddle shifters 1 and 2 and hold for half a second. The message DRIFT MODE Active and the DRIFT warning lamp will go out.

DRIFT MODE will automatically be deactivated in the following situations:

- ESP® is activated.
- Manual shifting is deactivated - the transmission is in position D.
- The drive program is switched off.
- The vehicle is switched off.
- Automatic switch-off is required by the vehicle.

After drifting and before continuing the journey, check the wheels and tires for damage. In particular, check the tire tread depth and tire contact surface over the entire width of the tires (see the vehicle Operator's Manual).

Rear wing

Function of the rear wing

The rear wing improves the vehicle’s driving stability and automatically retracts and extends while the vehicle is in motion. Depending on the selected drive program and the vehicle speed, it adopts different positions and thus adapts the vehicle’s aerodynamics to the driving conditions.

Vehicles with the AMG Aerodynamics package are equipped with a fixed rear wing (→ page 211).

Depending on which drive program has been selected, the rear wing automatically extends at a speed greater than 50 mph (80 km/h).

Depending on the drive program, the rear wing automatically retracts below a speed of approximately 25 mph (40 km/h).

You can retract and extend the rear wing manually for cleaning (→ page 211).
## Extending and retracting the rear spoiler for cleaning

**WARNING** Risk of becoming trapped when you extend and retract the rear wing manually

Parts of the body could become trapped.
- Ensure that there is no one in the sweep of the rear wing.
- If someone does become trapped when the rear wing is extended, press the display switch again immediately. The rear wing will then extend again.

**NOTE** Damage to the rear wing during washing at an automatic car wash

If the rear wing is extended, it may be damaged if the vehicle is washed at an automatic car wash.
- Extend the rear wing manually only when washing the vehicle by hand.
- Before entering an automatic car wash, ensure that the rear wing is retracted.

## Requirements
- The vehicle is switched on.
- The tailgate is closed.

To extend: press display button 1.
To retract: press and hold display button 2. The rear spoiler will extend or retract.

If you extend the rear spoiler when stationary and switch off the vehicle, the rear spoiler will remain in the extended position. The rear spoiler will move automatically to the speed-dependent position only after the vehicle is started again and driven off.

The symbol 2 on the display button and its color indicate the following rear spoiler positions:
- Rear spoiler retracted (blue)
- Rear spoiler extended to different positions (red)
- Rear spoiler extending or retracting (yellow)

The various rear spoiler positions are also shown on the instrument cluster.

### Adjusting the fixed rear wing

**Requirements:**
- There is a socket wrench available for the rear wing’s bolts.
- There is a releasable, medium-strength bolt lock to hand.

Vehicles with the AMG Aerodynamics package are equipped with a fixed rear wing. The position of this rear wing is not adjustable.
The rear wing improves the rear axle output and, therefore, the vehicle’s driving stability. You can move the rear wing into an inclined and a flat position.

When you move the rear wing into the inclined position, the rear axle output and the air resistance increase.

Unscrew bolts 1 with a socket wrench.

Tilt the rear wing as far as it will go, upwards into an inclined position, or downwards into a flat position.

Apply a soluble, medium-strength bolt adhesive to bolts 1 and tighten them.

**Specified tightening torque:** 7.5 lb-ft (10 Nm).

---

**Rear view camera**

**Function of the rear view camera**

The rear view camera is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects, etc. in the maneuvering area while maneuvering and parking.

The guide lines in the media display show the distances to your vehicle. The distances displayed only apply to road level.

Depending on the vehicle equipment, you can select from the following views:

- Normal view
- Wide-angle view

The area behind the vehicle is displayed as a mirror image, as in the inside rearview mirror.

**Vehicles without Parking Assist PARKTRONIC**

The following camera views are available in the multimedia system:

1. **Normal view**
   - Driven surface depending on the current steering angle (dynamic)
2. Guide lines at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area
3. Lane marking the course the tires will take with the current steering angle (dynamic)
4. Bumper
5. Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area
Wide-angle view

Vehicles with Parking Assist PARKTRONIC
The following camera views are available in the multimedia system:

Normal view
1. Yellow warning display: obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)
2. Orange warning display: obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)
3. Guide lines at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area
4. Yellow lanes marking the course the tires will take with the current steering angle (dynamic)

5. Driven surface depending on the current steering angle (dynamic)
6. Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area

The color of warning display 1/2 changes dynamically and is based on the distance to the detected obstacle:
- Blue: no obstacles detected at a distance less than 3.3 ft (1.0 m) detected.
- Yellow: obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)
- Orange: obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)
- Red: obstacles at a very short distance of approximately 1.3 ft (0.4 m) or less

Vehicles with Active Parking Assist: when Active Parking Assist is active, lane markings 4 are displayed in green.
Wide-angle view

Display of Parking Assist PARKTRONIC

System malfunction
If the rear view camera is not operational, the System Inoperative message appears in the media display.

System limits
The rear view camera will not function or will function only partially in the following situations:

- The tailgate is open.
- The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
- The ambient light is poor, e.g. at night.

- Cameras, or vehicle components in which the cameras are installed, are damaged, dirty or covered. Observe the information on vehicle sensors and cameras (→ page 169).

ℹ️ Do not use the rear view camera in these types of situations. You could otherwise injure others or collide with objects when parking the vehicle.

ℹ️ The contrast of the display may be impaired by direct sunlight or by other light sources, e.g. when driving out of a garage. In this case, pay particular attention.

ℹ️ Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.

360° camera

▌ Function of the 360° Camera
The 360° Camera is a system that consists of four cameras that cover the immediate surroundings of the vehicle. The system assists you when you are parking or at exits with reduced visibility, for example.

The views of the 360° Camera are always available when the vehicle is being driven forwards up to a speed of approx. 10 mph (16 km/h) and when it is being backed up.

The 360° Camera is only an aid and may show a distorted view of obstacles, show them incorrectly or not show them at all. It is not a substitute for your attention to the surroundings. Responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects etc., in the maneuvering area while maneuvering and parking.

The system evaluates images from the following cameras:

- Rear view camera
- Front camera
- Two side cameras in the outside mirrors
Views of the 360° Camera

1 Wide-angle view, front
2 Top view with image from the front camera
3 Top view with images from the side cameras in the outside mirrors
4 Wide-angle view, rear
5 Top view with image from the rear view camera
6 Top view with trailer view (vehicles with a trailer hitch)

Function of the guide lines
Guide lines are also displayed in the camera images of the top views. These are based on the current steering angle and show the distance to objects and other vehicles.

1 Guide lines at a distance of approximately 1.6 ft (0.5 m), 3.3 ft (1.0 m), 5 ft (1.5 m) and 9.9 ft (3.0 m) from the rear area
2 Yellow lanes marking the course that the tires will take with the current steering angle (dynamic)
3 Driven surface depending on the current steering angle (dynamic)
4 Guide line at a distance of approximately 1.0 ft (0.3 m) from the rear area

When Active Parking Assist is active, paths are displayed in green. The guide lines show the distances to your vehicle. The distances apply to road level.

In all views, the Parking Assist PARKTRONIC warning display is also shown (→ page 217).

The color of warning display changes dynamically and is based on the distance to the detected obstacle:

- **Blue**: no obstacles detected at a distance less than 3.3 ft (1.0 m)
- **Yellow**: obstacles at a distance between approximately 2.3 ft (0.7 m) and 3.3 ft (1.0 m)
- **Orange**: obstacles at a distance between approximately 1.3 ft (0.4 m) and 2.3 ft (0.7 m)
- **Red**: obstacles at a very short distance of approximately 1.3 ft (0.4 m) or less

When Parking Assist PARKTRONIC is operational and no object is detected, the warning display is shown here in blue.
Wide-angle view, front

Top view with image from the front camera

1 Warning display of Parking Assist PARKTRONIC

The front and rear sides of the vehicle can be seen in this view.

System limits
If the system is not ready for operation, the System Inoperative message appears in the media display.

The 360° Camera will not function or will function only partially in the following situations:

- You are driving forwards at a speed greater than approximately 10 mph (16 km/h).
- The doors are open.
- An outside mirror is not completely folded out.
- The trunk lid is open.
- The weather conditions are poor, e.g. heavy rain, snow, fog, storm or spray.
The ambient light is poor, e.g. at night.
The camera lens is obstructed, dirty or fogged up.
If cameras or vehicle components in which the cameras are installed are damaged. In this event, have the cameras, their positions and their setting checked at a qualified specialist workshop.
Do not use the 360° Camera under such circumstances. You could otherwise injure others or collide with objects when parking the vehicle.

For technical reasons, the standard height of the vehicle may be altered if the vehicle is carrying a heavy load and can result in inaccuracies in the guide lines and in the display of the generated images.
The field of vision and other functions of the camera system may be restricted due to additional attachments on the vehicle (e.g. license plate bracket, bicycle rack).
The contrast of the display may be impaired by abrupt, direct sunlight or by other light sources, e.g. when you are driving out of a garage. In this case, pay particular attention.
Have the display repaired or replaced if, for example, pixel errors considerably restrict its use.
See the notes on cleaning the 360° Camera (→ page 296).

Calling up the view of the 360° Camera using reverse gear
- Engage reverse gear.
- Select the desired view in the multimedia system (→ page 214).
- If the image from the rear view camera is not shown after reverse gear is engaged: switch off the vehicle, press and hold the button, switch on the vehicle and engage reverse gear again.

Opening the camera cover of the rear view camera
Multimedia system:

Parking Assist PARKTRONIC
Function of Parking Assist PARKTRONIC
Parking Assist PARKTRONIC is an electronic parking assistance system which monitors the area surrounding your vehicle and shows you the distance between the vehicle and a detected obstacle visually and audibly.
Parking Assist PARKTRONIC is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that there are no persons, animals or objects in the maneuvering area while maneuvering and parking in/exiting parking spaces.
The passive side impact protection also warns you of obstacles to the side. During the parking procedure or maneuvering, objects are detected as the vehicle drives past. If you steer in the direction of a detected obstacle and there is a risk of a lateral collision, a warning is issued. In order for an object on the side to be detected, the sensors in the front and rear bumper must first detect the object while you are driving past it.

In order for front or rear obstacles to the side to be displayed, the vehicle must first travel a distance of at least half a vehicle length. Once the vehicle has traveled one vehicle length, obstacles on all sides can be shown.

### Displays on the media display

- **Vehicles with 360° camera**: the boundary line shifts dynamically depending on the position and distance of the obstacles detected.

- **Vehicles without 360° camera**: the boundary line is static.

As soon as Parking Assist PARKTRONIC is operational, the respective areas of the display are shown in blue.

1. Operational, front and rear
2. Operational, all around
3. Obstacles detected at the front left and on the right-hand side

The color of the display changes depending on the distance to the detected obstacle:

- **Blue**: > 3.3 ft (1 m) (no obstacles detected)
- **Yellow**: approximately 3.3 ft (1 m) - 2.3 ft (0.7 m)
- **Orange**: approximately 2.3 ft (0.7 m) - 1.2 ft (0.4 m)
- **Red**: <1.2 ft (0.4 m)

**Vehicles with 360° camera**: the boundary line shifts dynamically depending on the position and distance of the obstacles detected.

Depending on the distance to the obstacle detected, an intermittent warning tone also sounds. You can set the timing of the warnings in the multimedia system(→ page 221).
Standard setting:
- **Front and sides:** < 1.2 ft (0.4 m)
- **Rear:** < 3.3 ft (1 m)

Warn Early All Around:
- **Front:** < 3.3 ft (1 m)
- **Sides:** < 2.3 ft (0.7 m)
- **Rear:** < 3.3 ft (1 m)

A continuous warning tone sounds from a distance of approximately 0.7 ft (0.2 m), regardless of the selected setting.

Vehicles without 360° camera

If an obstacle in the vehicle path is detected and the Camera & Parking menu is not open on the media display, pop-up window 1 appears:
- **vehicles without Active Parking Assist:** at speeds below 8 mph (12 km/h)
- **vehicles with Active Parking Assist:** at speeds below 11 mph (18 km/h)

Vehicles with 360° camera

Optionally, obstacles detected by Parking Assist PARKTRONIC from a distance of approximately 3.3 ft (1.0 m) in front 2 and 2.3 ft (0.7 m) on the side 3 can also be displayed on the head-up display.

System limits

Parking Assist PARKTRONIC does not necessarily take into account the following obstacles:
- Obstacles below the detection range, e.g. persons, animals or objects.
- Obstacles above the detection range, e.g. overhanging loads, overhangs or loading ramps of trucks.
Pedestrians or animals approaching the vehicle from the side.

Objects placed next to the vehicle

Obstacles on the sides are not shown in the following situations, for example:

- You park the vehicle and switch it off.
- You open the doors.

After an engine start, obstacles must be detected again by driving past them before a warning can be issued.

Observe the information on vehicle sensors and cameras; the system otherwise cannot function properly (→ page 169).

### Problems with Parking Assist PARKTRONIC

If the Parking Assist PARKTRONIC display lights up red for approximately three seconds before going out, and the symbol appears on the instrument cluster, the system may have been deactivated due to signal interference. Start the vehicle again and check if Parking Assist PARKTRONIC is working at a different location.

<table>
<thead>
<tr>
<th>Vehicular with 360° camera</th>
<th>Vehicular without 360° camera</th>
</tr>
</thead>
</table>

If the symbol appears on the instrument cluster and a warning tone sounds, it may be due to one of the following causes:

- **The sensors are dirty**: clean the sensors and observe the notes on care of vehicle parts (→ page 296).
- **Parking Assist PARKTRONIC has been deactivated due to a malfunction**: restart the vehicle. If the problem persists, consult a qualified specialist workshop.

### Activating/deactivating Parking Assist PARKTRONIC using the multimedia system

**NOTE** Risk of an accident from objects at close range

Parking Assist PARKTRONIC may not detect certain objects at close range.

- **When parking or maneuvering the vehicle**, pay particular attention to any objects which are above or below the sensors, e.g. flower pots or drawbars. The vehicle or other objects could otherwise be damaged.
Requirements
• The camera menu is open.
• Or: Active Parking Assist is active.
• Or: the PARKTRONIC pop-up window appears.

➤ Tap [Parking Assist] on the media display.

If the indicator lamp in the [Parking Assist] button is not lit, Parking Assist PARKTRONIC is active. If the indicator lamp is lit or the [Parking Assist] symbol appears on the instrument cluster, Parking Assist PARKTRONIC is not active.

Parking Assist PARKTRONIC is automatically activated when the vehicle is started. Alternatively, Parking Assist PARKTRONIC can be activated or deactivated in the quick access menu.

Setting the warning tones of Parking Assist PARKTRONIC
Multimedia system: ➤ [Settings] ➤ [Assistance] ➤ [Camera & Parking]

Adjusting the volume of the warning tones
➤ Select Warning Tone Volume.
➤ Set a value.

Adjusting the pitch of the warning tones
➤ Select Warning Tone Pitch.
➤ Set a value.

Specifying the starting point for the warning tones
You can specify whether the Parking Assist PARKTRONIC warning tones should commence when the vehicle is further away from an obstacle.
➤ Select Warn Early All Around.
➤ Activate or deactivate the function.

Activating/deactivating audio fadeout
You can specify whether the volume of a media source in the multimedia system is to be reduced when Parking Assist PARKTRONIC sounds a warning tone.
➤ Select Audio Fadeout During Warning Tones.
➤ Activate or deactivate the function.

Active Parking Assist

Function of Active Parking Assist
Active Parking Assist is an electronic parking assistance system, which uses ultrasound with the assistance of the rear view camera and 360° camera. When you are driving forwards at up to approximately 22 mph (35 km/h), the system automatically measures parking spaces on both sides of the vehicle.

Active Parking Assist offers the following functions:
Vehicles with rear view camera
• Parking in parking spaces parallel to the road

Vehicles with 360° camera
• Parking in parking spaces parallel to the road
• Parking in parking spaces perpendicular to the road (optionally either forwards or reverse)
Parking in parking spaces that can only be detected as such due to markings (forexample at the roadside)

Exiting parking spaces if you have parked using Active Parking Assist

As soon as all requirements are met for searching for parking spaces, the \( \text{P} \) display appears on the instrument display.

When Active Parking Assist has detected parking spaces, the \( \text{E} \) display appears on the instrument display. The arrows show on which side of the road detected parking spaces are located. They are then shown on the media display.

**Vehicles with rear view camera:** the parking space can be selected as desired. The vehicle is parked in reverse.

**Vehicles with 360° camera:** the parking space can be selected as desired. Depending on the location of the parking space, the parking direction (forwards or reverse) can also be selected as desired.

When Active Parking Assist is activated, the turn signal indicators are activated based on the calculated path of your vehicle.

The parking procedure is assisted by accelerating, braking, steering and gear changes.

Active Parking Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range.

Active Parking Assist will be canceled in the following situations:

- Parking Assist PARKTRONIC is deactivated.
- You begin steering.
- You engage transmission position \( \text{P} \).
- ESP\(\textsuperscript{®} \) intervenes.
- You open the driver’s door.
- After activating Active Parking Assist, you press the \( \text{P} \) button again (\( \rightarrow \) page 223).

**System limits**

If the exterior lighting is faulty, Active Parking Assist may not function, depending on the defect.

Also observe the system limits of the following systems:

- Rear view camera (\( \rightarrow \) page 212)
- 360° camera (\( \rightarrow \) page 214)

Objects located above or below the detection range of the sensors, e.g. overhanging loads, overhangs or loading ramps of goods vehicles, or the borders of parking spaces, are not detected during measurement of the parking space. These are also then not taken into account when calculating the parking procedure. In some circumstances, Active Parking Assist may therefore guide you into the parking space incorrectly.
WARNING Risk of accident due to objects located above or below the detection range of Active Parking Assist

If there are objects above or below the detection range, the following situations may arise:

- Active Parking Assist may steer too early.
- The vehicle may not stop in front of these objects.

There is a danger of collision!

In these situations, do not use Active Parking Assist.

Extreme weather conditions, such as snow or heavy rain, may lead to a parking space being measured inaccurately. Parking spaces that are partially occupied by trailer drawbars might not be identified as such or be measured incorrectly. Only use Active Parking Assist on level, high-grip ground.

Do not use Active Parking Assist in the following situations:

- In extreme weather conditions such as ice, packed snow or in heavy rain.
- When transporting a load that protrudes beyond the vehicle.
- On steep uphill or downhill gradients of more than approximately 15%.
- When snow chains are fitted.
- Directly after a tire change or when spare tires are fitted.
- If the tire pressure is too low or too high.
- If the suspension is out of alignment, e.g. afterbottoming out on a curb.

Active Parking Assist may also display parking spaces that are not suitable for parking, such as:

- Parking spaces where parking is prohibited.
- Parking spaces on unsuitable surfaces.

Press button 1.

Parking with Active Parking Assist
Parking spaces detected by the system are shown in the media display. When the vehicle is stationary, indicated vehicle path 2 into currently selected parking space 3 also appears.

- If a parking space is displayed: stop the vehicle.
- If necessary, select another parking space.
- Vehicles with 360° Camera: if necessary, change the parking direction.
- To start the parking procedure: confirm selected parking space 3.

The turn signal indicator is switched on automatically when the parking procedure begins. You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

**WARNING** Risk of accident due to vehicle swinging out while parking or pulling out of a parking space

While parking or exiting a parking space, the vehicle swings out and can drive onto areas of the oncoming lane.
This could cause you to collide with objects or other road users.
- Pay attention to objects and other road users.
- Where necessary, stop the vehicle or cancel the parking procedure with Active Parking Assist.

If, for example, the Please Engage Reverse Gear message appears in the media display: select the corresponding transmission position. The vehicle drives into the selected parking space.

During the parking procedure with Active Parking Assist, the lane markings are displayed in green in the camera image.

On completion of the parking procedure, the Parking Assist Finished, Take Control of Vehicle message appears. Further maneuvering may still be necessary.

- Secure the vehicle against rolling away. When required by legal requirements or local conditions: turn the wheels towards the curb.
- You can stop the vehicle and change the transmission position during the parking procedure. The system then calculates a new vehicle path. If no new vehicle path is available, the transmission position can be changed again, or the process can be canceled.

**Exiting a parking space with Active Parking Assist**

**Requirements**
- The vehicle is equipped with a 360° camera.
- The vehicle has been parked with Active Parking Assist.
Please note that you are responsible for the vehicle and surroundings during the entire parking procedure.

- Start the vehicle.
- Press button 1. The media display shows the view of Active Parking Assist.

- Select Exit Space 2.

or

- If the vehicle has been parked perpendicular to the direction of travel: select direction of travel 3.
- If, for example, the Please Engage Forward Gear message appears on the media display: select the corresponding transmission position. The vehicle moves out of the parking space and is brought to a standstill by Active Parking Assist (at an angle to the direction of travel). The Parking Assist Finished, Take Control of Vehicle message appears.

- Take control of the vehicle and complete the parking process.

The vehicle path shown on the media display may differ from the actual vehicle path. The turn signal indicator is switched on automatically when the exiting procedure begins.

You are responsible for selecting the turn signal indicator in accordance with the traffic conditions. If necessary, select the turn signal indicator accordingly.

Pausing Active Parking Assist
You can interrupt the parking or exiting procedure of Active Parking Assist by performing one of the following actions, for example:

- Depress the brake pedal.
- Open the front passenger door, a rear door, the trunk or the hood.
- Apply the electric parking brake or activating the HOLD function.

To resume the parking or exiting procedure: gently depress the accelerator pedal.
If the electric parking brake was applied before Active Parking Assist was activated, depress the accelerator pedal lightly to start the parking or exiting procedure.

Check the area around your vehicle again before resuming a paused parking procedure. Make sure that persons, animals or objects are no longer in the maneuvering range. Also observe the system limitations of Active Parking Assist.

**Automatic braking function of Active Parking Assist**

Persons or objects detected in the maneuvering range could cause the vehicle to brake sharply and interrupt the parking or exiting procedure. The vehicle will then be held at a standstill. If you depress the accelerator pedal, the parking or exiting procedure is resumed.

Check the area around your vehicle again before resuming the parking or exiting procedure. Make sure that persons, animals or objects are no longer in the maneuvering range. Also observe the system limitations of Active Parking Assist.

**Function of Drive Away Assist**

Drive Away Assist can reduce the severity of an impact when pulling away. If an obstacle is detected in the direction of travel, the vehicle's speed is briefly reduced to approx. 1 mph (2 km/h). If a critical situation is detected, the symbol appears on the media display.

Drive Away Assist can be deactivated or activated in the **Maneuvering Assistance** menu (→ page 227).

You can cancel an intervention by Drive Away Assist at any time by deactivating Parking Assist PARKTRONIC (→ page 220).

**WARNING Risk of accident caused by limited detection performance of Drive Away Assist**

Drive Away Assist cannot always clearly identify objects and traffic situations.

Always pay careful attention to the traffic situation; do not rely on Drive Away Assist alone.

Be prepared to brake or swerve as necessary, provided the traffic situation permits and that it is safe to take evasive action.

Drive Away Assist is only an aid. It is not a substitute for your attention to the surroundings. The responsibility for safe maneuvering and parking remains with you. Make sure that no persons, animals or objects etc. are in the maneuvering range.

There may be a risk of collision in the following situations, for example:

- If the accelerator and brake pedals are mixed up.
- If an incorrect transmission position is engaged.

Drive Away Assist is active under the following conditions:

- If Parking Assist PARKTRONIC is activated.
- If you shift the transmission position to R or D when the vehicle is stationary.
• If the detected obstacle is less than approx. 3.3 ft (1.0 m) away.
• If the maneuvering assistance function is activated in the multimedia system.

System limits
The performance of Drive Away Assist is limited on inclines.

Also observe the system limits of Parking Assist PARKTRONIC (page 217).

Function of Cross Traffic Alert
Cross Traffic Alert is only available for vehicles with Blind Spot Assist or Active Blind Spot Assist.

Cross Traffic Alert can warn drivers of any crossing traffic when backing up and maneuvering out of a parking space. The radar sensors in the bumper also monitor the area adjacent to the vehicle. If a critical situation is detected, the symbol appears on the media display and the vehicle can be braked automatically.

If the radar sensors are obstructed by vehicles or other objects, detection is not possible.

Also observe the instructions on Blind Spot Assist and Active Blind Spot Assist (page 200).

System limits
Cross Traffic Alert is not available on inclines.

Activating/deactivating maneuvering assistance
Multimedia system:
Settings Assistance Camera & Parking
Switch Maneuvering Assistance on or off.

Vehicle towing instructions
The vehicle is not suitable for the use of tow bar systems that are used for flat towing or dinghy towing, for example. Attaching and using tow bar systems can result in damage to the vehicle. When you are towing a vehicle with tow bar systems, safe driving characteristics cannot be guaranteed for the towing vehicle or the towed vehicle. The vehicle-trailer combination may swerve from side to side.

Observe the following information:
• Permitted towing methods (page 311)
• The notes on towing the vehicle with both axles on the ground (page 312)
Notes on the instrument display and on-board computer

⚠️ WARNING Risk of accident if the instrument display fails

If the instrument display has failed or is malfunctioning, function restrictions in systems relevant to safety cannot be detected. The operating safety of your vehicle may be impaired.

- Drive on carefully.
- Have the vehicle checked immediately at a qualified specialist workshop.

⚠️ WARNING Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the on-board computer.

The on-board computer shows only display messages and warnings from specific systems on the instrument display. You must therefore ensure that your vehicle is always reliable.

If the operating safety of your vehicle is impaired, park the vehicle immediately and safely. Contact a qualified specialist workshop.

Operating the on-board computer
Observe the legal requirements for the country in which you are currently driving when operating the on-board computer.
The on-board computer is operated using the left-hand Touch Control and the left-hand back/home button.

To operate Touch Control in the most effective way, use the tip of your thumb if possible.

The following menus are available:

- Assistance
- Phone
- Navigation
- Trip
- Radio
- Media
- Service
- Performance
- Designs

You can find information about the possible settings and selections on the menus in the Digital Operator’s Manual.

The menus can be called up from the menu bar on the instrument display.

- To call up the menu bar: press the left-hand back button until the menu bar is displayed.

Vehicles without Active Distance Assist DISTRONIC: press the button to call up the menu bar of the on-board computer.

- To scroll on the menu bar: swipe to the left or right on the left-hand Touch Control.

- To call up a menu, submenu or possible settings on the menu, or confirm a selection or setting: press the left-hand Touch Control.

- To scroll through displays or lists on the menu, or select display content, a function, an entry or a display: swipe upwards or downwards on the left-hand Touch Control.

To change between displays: swipe upwards or downwards on the left-hand Touch Control.

To exit a submenu: press the left-hand back button.

Operating the head-up display

- To switch on the head-up display: swipe upwards on the menu bar on the left-hand Touch Control.

- To switch to the head-up display: swipe upwards on the left-hand Touch Control.

- To set the display areas of the head-up display: swipe upwards or downwards on the left-hand Touch Control.

Displaying full-screen menus

You can display the following menus full-screen on the instrument display:

- Assistance
- Trip
- Navigation

On the corresponding menu, use the left-hand Touch Control to scroll to the end of the list.
Press the left-hand Touch Control.
The selected menu will be displayed full-screen.

Overview of displays on the instrument display
Displays on the instrument display:
- **Active Parking Assist activated** (page 223)
- **Parking Assist PARKTRONIC deactivated** (page 220)
- **Cruise control** (page 178)
- **Active Distance Assist DISTRONIC** (page 180)
- **Active Stop-and-Go Assist** (page 187)
- **Active Brake Assist** (page 196)
- **Active Steering Assist** (page 188)
- **Active Lane Keeping Assist** (page 203)
- **Active Lane Change Assist** (page 190)
- **ECO start/stop function** (page 147)
- **Mercedes-AMG GT 63**: four-cylinder operation

**Display content**

| 1 | Protection from reaching the overrevving range |
| 2 | Detected instructions and traffic signs |
| 3 | Current speed |
| 4 | Currently selected gear; gearshift options for manual shifting |
| 5 | Current engine speed |

Depending on the vehicle’s equipment, you can select further AMG displays in addition to the standard displays in the Display Content menu.
In vehicles with AMG TRACK PACE, you can display further content depending on the setting, for example:
- Speed and gear display
- Lap and sector times
- Acceleration and braking
- Track layout graphics

The content that can be displayed will vary depending on the settings.

When you receive a call, the Incoming Call message will appear on the head-up display. In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated.

System limits
The visibility is influenced by the following conditions:
- Seat position
- Image position setting
- Ambient light
- Wet road surfaces
- Objects on the display cover
- Polarization in sunglasses

In extreme sunlight, sections of the display may appear washed out. You can correct this by switching the head-up display off and on again.

Setting the head-up display using the on-board computer

On-board computer:

To select the settings menu: swipe to the right on the left-hand Touch Control. Settings menu 0 will be selected.

To call up the Settings menu: press the left-hand Touch Control.

To adjust the position: swipe upwards or downwards on the left-hand Touch Control.

To adjust the brightness: swipe to the left or right on the left-hand Touch Control.

Setting messages, assistance status, telephone, audio and the Voice Control System

Press the left-hand Touch Control. The list of setting options will be displayed.

Swipe upwards or downwards on the left-hand Touch Control.

To choose settings: press the left-hand Touch Control.
Selecting what the head-up display shows

(Example)

1. Switching the head-up display on/off
2. Left display area
   - Navigation system
   - Average consumption
   - G-meter
3. Central display area
   - Speedometer
   - Set speed in the driver assistance system, e.g. cruise control
   - Warnings from driver assistance systems, e.g. distance warning

4. Right display area
   - Traffic Sign Assist
   - Assistant display
5. To adjust the position, brightness and lower display area
6. Index points
7. Lower display area (example: left display area)

You can hide display areas 2 to 4 that are not required.

In audio mode, the station name or track will be shown temporarily when the audio source is being actively operated. In addition, the latest calls will be displayed when the telephone list on the instrument display is actively operated.

- Swipe upwards on left-hand Touch Control.
- Press the left-hand Touch Control.

Switching the Head-up Display on/off via the multimedia system

Multimedia system:

1. Settings
2. Quick Access

Select HUD.
The Head-up Display is activated.
Overview and operation

Notes on the MBUX multimedia system

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

You must observe the legal requirements for the country in which you are currently driving when operating the multimedia system. Depending on the equipment, the scope of function and product designation of your MBUX multimedia system may differ from the description and images in this Operator’s Manual. For example, route guidance with augmented reality is not available in all equipment variants.

### Overview of the MBUX multimedia system

</table>
If Mercedes me connect is active, the vehicle is linked with Mercedes me connect. Vehicle data is then transmitted to the backend system. What data is transmitted depends on which services are activated. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

If transmission of vehicle position is active, Mercedes me connect services have been activated for this vehicle which access the vehicle’s geoposition. In which instances the geoposition is transmitted depends on the particular services. Further details can be found in the Mercedes me connect terms and conditions and data protection information. The function is country-dependent.

Operating the MBUX multimedia system

Using Touch Control

1. ◀ Shows the home screen
2. Touch Control ➖ Swipe in the direction of the arrow (navigate)
3. ◀ Returns to the previous display
4. ✆ Makes or accepts a call
5. ☎ Rejects or ends a call
6. ➖ To increase volume: swipe upwards
   To reduce volume: swipe down
7.  To switch off the sound: press
8.  Calls up favorites (press briefly) or adds favorites and themes (press and hold)
8.  Starts the Voice Control System
9. To operate Touch Control 2 in the most effective way, use the tip of your thumb if possible.

Navigation through the menus is carried out with Touch Control 2 with single-finger swipes.

To select a menu option: swipe and press.
To move the digital map: swipe in any direction.

Using the touchscreen

To Select menu options, symbols or characters by pressing briefly.
To navigate in menus: swipe up, down, left or right.
To use handwriting to enter characters: write the character with one finger on the touchscreen.
To zoom in and out of the map: move two fingers together or apart.
To call up the global menu: press and hold on the touchscreen until the OPTIONS menu appears.

For more information on operation, please refer to the Digital Operator’s Manual.

Using the touchpad

1. Returns to the previous display
2. Calls up the audio control menu
3. Calls up the home screen
4. Touchpad

To select a menu option: swipe and press.

To use handwriting recognition: write a character on the touchpad.
To open or close the Notifications Center: swipe down or up with two fingers.
To zoom in and out of the map: move two fingers together or apart.

Calling up applications using buttons

1. TEL button calls up the telephone
2. button calls up navigation
3. button calls up radio or media
4. button calls up vehicle functions
5. button
Press briefly: calls up favorites
Press and hold: adds a favorite or creates a new theme
Alternatively, tap 🏡 on the touchscreen.
Call up the application (→ page 236).

Functions of the Voice Control System

**WARNING** Risk of distraction from information systems and communications equipment

If you operate information systems and communication devices integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

For your own safety, always observe the following points when operating mobile communications equipment and especially your voice control system:

- Observe the legal requirements for the country in which you are driving.
- If you use the voice control system in an emergency your voice can change and your telephone call, e.g. an emergency call, can thereby be delayed.
- Familiarize yourself with the voice control system functions before starting the journey.

With the Voice Control System, various applications in the MBUX multimedia system are operable using voice input. The Voice Control System is operational approximately thirty seconds after the ignition is switched on and is available for the driver's seat and front passenger seat.

The following multimedia system applications can be operated:

- Telephone
- Text message and e-mail
- Navigation
- Address book
- Radio
- Media
- Vehicle functions

**Starting the Voice Control System**

- Press 1.
- or
- Say "Hello Mercedes".
Overview of the MBUX Interior Assistant

**WARNING** Risk of injury from the camera's laser radiation

This product uses a classification 1 laser system. If the housing is opened or damaged, laser radiation may damage your retina.

- Do not open the housing.
- Always have maintenance work and repairs carried out by a qualified specialist workshop.

This product complies with the requirements of the FDA 21 CFR 1040.10 and 1040.11 with exception of the variations according to the FDA Laser Notice No. 50 from 24. June 2007.

The camera is located in the overhead control panel.

If the vehicle is equipped with the MBUX Interior Assistant, selected functions of the multimedia system can be operated contact-free. The MBUX Interior Assistant can differentiate between driver and front passenger interactions and detects specific hand positions (poses).

**System limits, display messages and notes for rectification**

The system may be impaired or may not function in the following situations:

- The camera in the overhead control panel may heat up due to operating conditions. As a result the camera may switch off temporarily, particularly during longer periods of operation and at high outside temperatures. Do not touch or cover the camera and wait until the camera has cooled down and is available again.

- The camera is covered, dirty, fogged up or scratched. Wait until the camera has cooled down before cleaning the camera lens. Clean the outside of the camera lens with a dry or damp cotton cloth. Do not use microfiber cloths. Do not remove the cover when cleaning.

- Recognition can be impaired by reflective clothing, an adverse color of clothing or by accessories, for example.

- Clothing being worn (hat, shawl, scarf) may be limiting the detection area of the camera. Keep the camera's field of vision clear.

- The camera is not operational. Consult an authorized Mercedes-Benz Center.
The MBUX Interior Assistant supports the following interactions:

<table>
<thead>
<tr>
<th>Interaction area</th>
<th>Interaction</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>In front of the media display or above the touchpad</td>
<td>Proximity to the control element</td>
<td>The Interior Assistant recognizes the approach of the hand towards a control element. Depending on the active application, the display will be adjusted in the media display. Some functions differentiate between driver and front passenger. No specific hand position is required.</td>
</tr>
<tr>
<td>Above the center console</td>
<td>Defined pose</td>
<td>A favorite is called up with a defined pose.</td>
</tr>
<tr>
<td>Below the inside rearview mirror</td>
<td>Brief up and down movements</td>
<td>With brief up and down movements below the inside rearview mirror the reading light for the driver or the front passenger is switched on or off.</td>
</tr>
<tr>
<td>Above the front passenger seat</td>
<td>Stretching out a hand above the front passenger seat</td>
<td>By stretching out a hand above the front passenger seat the search light is switched on. If you withdraw a hand from this area, the search light is switched off again.</td>
</tr>
</tbody>
</table>

**Switching the reading light and search light and on or off**

**Requirements:**
- **For the reading light:**
  - The function is available when it is dark.

- **For the search light:**
  - The function is available when it is dark.

- The hand movement takes place in the interaction area below the inside rearview mirror.

- The hand movement takes place in the interaction area above the front passenger seat.

- The seat belt on the front passenger seat must **not** be inserted in the seat belt buckle.
Switching the reading light on and off

Briefly move a hand up or down beneath the inside rearview mirror. The reading light is switched on or off for the driver or the front passenger.

Switching the search light on and off

To switch on: reach across the front passenger seat with a hand. The search light is switched on for the driver.
To switch off: take a hand back away from the front passenger seat. The search light is switched off again.

Information on profiles, themes, suggestions and favorites

For electrically adjustable seats observe the following notes.

⚠️ WARNING Risk of becoming trapped during adjustment of the driver’s seat after calling up a driver profile

Selecting a user profile may trigger an adjustment of the driver’s seat to the position saved under the user profile. You or other vehicle occupants could be injured in the process.

Make sure that when the position of driver’s seat is being adjusted using the multimedia system, no people or body parts are in the seat’s range of movement.

If a person is in danger of becoming trapped, immediately stop the adjustment process by:

- a) Tapping the warning message on the media display.
- or
- b) Pressing a position button of the memory function or a seat adjustment switch in the driver’s door.

The adjustment process is stopped.

The driver’s seat is equipped with an access preventer.
If the driver’s door is open, the driver’s seat will not be set after calling up the driver’s profile.

Profiles store your vehicle settings and settings for the multimedia system. If the vehicle is used by several drivers, the driver can select their own profile without changing the stored profile settings of other drivers.

Profiles store your vehicle settings and settings for the multimedia system. If the vehicle is used by several drivers, the driver can select their own profile without changing the stored profile settings of other drivers.

Information on profiles from Mercedes me connect can be found in the Digital Operator’s Manual.

Vehicle settings are, for example, driver’s seat, steering wheel and mirror settings, climate control and ambient lighting. For the settings of the multimedia system, you can select, for example, radio stations, previous destinations as well as themes, suggestions and favorites.

For recurring driving situations, such as long drives on the freeway, you can save your preferred settings in a theme in the vehicle. In a theme you can save the display of the digital map, your preferred radio station and preferred drive program, for example.

The vehicle can learn the habits of the driver. It then offers suggestions for the most probable navigation destinations, media sources, radio stations or contacts. The pre-requirements for that are the selection of a profile, your consent to the recording of data and sufficient collected data.

Favorites provide quick access to applications that are used often. You can select favorites from categories or add them directly to an application.

Configuring profiles, themes and suggestions

Multimedia system:

Creating a new profile

Select Create Profile.

Select an avatar.

Enter the name and confirm with OK.

Select Continue.

Select Current Settings.

Select Save.

Activate Bluetooth® and select Connect Phone, to connect a mobile phone with the user profile.

Select Finish.

Selecting profile options

Select [ ] for a profile.

The following functions are available:

- Editing, resetting or deleting a profile
- Resetting themes or favourites
- Configuring suggestions

Configuring suggestions

Select [ ] for a profile.

Select Suggestion Settings.

Switch Allow Destination Suggestions, Allow Music Suggestions and Allow Contact Suggestions on or off.

To deactivate the learning function for one day: activate Deact. Learning for 24 h. For 24 hours no new actions will be trained and no data recorded for the active profile. Suggestions will continue to be shown.

Example: if the option is switched on and a route to a new destination has been calcula-
ted, this destination would not be taken into account for the learning function.

Creating new themes
- Select continue ▶.
- Select THEMES.
- Select + Create Theme .
The settings saved in the theme are shown.
- Select Continue ▶.
- Select Audio and Navigation store the active settings in the theme.
- Select Continue ▶.
- Select an entry screen.
- Select Continue ▶.
- Select an image.
- Enter the names into the entry field and confirm with OK.
- Select Save.

System settings

Overview of the system settings menu
In the system settings menu, you can make settings in the following menus and control elements:
- Display
  - Styles
  - Instrument lighting
  - Display brightness
  - Edge lighting
  - Day/night design
- Control elements:
  - Keyboard language and handwriting recognition
  - Sensitivity of the touchpad
  - Sensitivity of the Touch Controls
- Voice Control System
- Sound
  - Entertainment
  - Navigation and traffic announcements
  - Telephone
  - Voice amplification to the rear
- Connectivity:
  - Wi-Fi, Bluetooth®, NFC
- Time & date
- Language
- Units for distance
- Software updates
- Data import/export
- PIN protection
- System reset

Information on important system updates
Important system updates may be necessary for the security of your multimedia system’s data. Install these updates, or else the security of your multimedia system cannot be ensured.
A system update consists of three steps:
- Downloading or copying of the data required for installation
- Installation of the downloaded system update
Activation of the downloaded system update by restarting the system

If automatic software updates are activated, the system updates will be downloaded automatically.

The multimedia system provides a message when a system update is available.

You have the following selection options:

- **Accept and Install**
  The system update will be downloaded in the background.

- **Information**
  Information about the pending system update is displayed.

- **Later**
  The system update can be downloaded manually at a later time.

**Deep system updates**

Deep system updates access vehicle or system settings and can therefore only be carried out when the vehicle is stationary and the ignition is switched off.

If the download of a deep system update is complete and the downloaded system update is ready for installation, you will be informed of this after the next ignition cycle, for example.

- Park the vehicle safely in a suitable location before starting the installation.

Requirements for the installation:

- The vehicle is switched off.
- Notes and warnings have been read and accepted.
- The electric parking brake has been applied.

If all requirements have been fulfilled, the downloaded system update is installed. The multimedia system cannot be operated while the downloaded system update is being installed and vehicle functions are restricted.

If errors should occur during the installation, the multimedia system automatically attempts to restore the previous version. If restoration of the previous version is not possible, a symbol appears on the media display. Consult a qualified specialist workshop to resolve the problem.

**Setting up a Wi-Fi hotspot**

**Requirements:**

- **To set up the Wi-Fi connection of the multimedia system with external hotspots:** your vehicle does not have a permanently installed communication module.
- The device to be connected supports at least one of the types of connection described.

**Multimedia system:**

1. Press the Home button.  
2. Select Settings.  
3. Select System.  
4. Select Wi-Fi & Bluetooth.

**Activating/deactivating Wi-Fi**

Select Wi-Fi.

**Connecting the multimedia system with an external hotspot using Wi-Fi**

The type of connection established must be selected on the multimedia system and on the device to be connected.
The connection procedure may differ depending on the device. Follow the instructions that are shown in the display. Further information can be found in the manufacturer’s operating instructions.

- Select Internet Settings.
- Select Connect via Wi-Fi.
- Select Add Hotspot.

Connecting using a QR code
- Select the options of the desired Wi-Fi network.
- Select Connect using QR code.
- Scan the displayed QR code with the device to be connected. The Wi-Fi connection is established.

Connecting using a security key
- Select the options of the desired Wi-Fi network.
- Select Connect Using Security Key.

Connecting using a WPS PIN
- Select the options of the desired Wi-Fi network.
- Select Connect via WPS PIN Input. The multimedia system generates an eight-digit PIN.
- Enter this PIN on the device to be connected.
- Confirm the entry.

Connecting using a button
- Select the options of the desired Wi-Fi network.
- Select Connect via WPS PBC.
- Select "Connect via WPS PBC" in the options on the device to be connected (see the manufacturer’s operating instructions).

Press the WPS button on the device to be connected.
- Select Continue in the multimedia system.

Activating automatic connection
- Select Connect via Wi-Fi.
- Select the options of the desired Wi-Fi network.
- Activate Permanent Internet Connection.

Connecting with a known Wi-Fi network
- Select Connect via Wi-Fi.
- Select a Wi-Fi network.
- The connection is established again.

Configuring the multimedia system as a Wi-Fi hotspot for external devices
The type of connection established depends on the device to be connected. The function must be supported by the multimedia system and by the device to be connected. The type of connection established must be selected on the multimedia system and on the device to be connected.
- Select Vehicle Hotspot.
Select Connect Device to Vehicle Hotspot.

Connecting using WPS PIN generation
Select Connect via WPS PIN Generation.
Enter the PIN shown in the media display on the device to be connected and confirm.

Connecting using WPS PIN entry
Select Connect via WPS PIN Input.
Enter the PIN that is shown on the external device’s display on the multimedia system.

Connecting using a button
Select Connect via WPS PBC.
Press the push button on the device to be connected (see the manufacturer’s operating instructions).
Select Continue.

Connecting using a security key
Select Connect Device to Vehicle Hotspot.
A security key is displayed.
Select the vehicle from the device to be connected. The vehicle is displayed with the DIRECT-MBUXX XXXXX network name.
Enter the security key which is shown in the media display on the device to be connected.
Confirm the entry.

Connecting using NFC
Select Connect via NFC.
Activate NFC on the mobile device (see the manufacturer’s operating instructions).
Hold the device to be connected at the vehicle's NFC interface.
Select Finished.
The mobile device is now connected to the multimedia system hotspot via NFC.

Generating a new security key
Select Vehicle Hotspot.
Select Generate Security Key.
A connection will be established with the newly created security key.

To save a security key: select Save.
When a new security key is saved, all existing Wi-Fi connections are then disconnected. If the Wi-Fi connections are being re-established, the new security key must be entered.

System language

Notes on the system language
This function allows you to determine the language for the menu displays and the navigation announcements. The selected language affects the characters available for entry. The navigation announcements are not available in all languages. If a language is not available, the navigation announcements will be in English.

Setting the system language
Multimedia system:
Set the language.
If you are using Arabic map data, the text information can also be shown in Arabic on the navigation map. To do so, select العربية as the language from the language list. Navigation announcements are then also made in Arabic.

Resetting the multimedia system (reset function)

⚠️ WARNING Risk of accidents due to failure of multimedia display functions

While the multimedia system is being reset, its functions such as the rear view camera are not available.

- Only reset the multimedia system when the vehicle is stationary.

Multimedia system:

Settings ➤ System ➤ Reset

Personal data is deleted, for example:
- Station presets
- Connected mobile phones

- Vehicles with rear telephony: handset connection
- Individual user profiles

The guest profile is reset when the settings are restored to the factory settings.

- Vehicles with rear telephony: The handset must be in the cradle while the system is reset.

A prompt appears again asking whether you really wish to reset.

- Select Yes.

The multimedia system is reset to the factory settings. If you have set a PIN for your system, this will also be reset.

AMG TRACK PACE

Function of AMG TRACK PACE

This function is an on-demand feature and can be activated via Mercedes me after you purchase your vehicle. The Digital Operator’s Manual contains further information on Mercedes me and on-demand features.

With AMG TRACK PACE, the driving characteristics on race tracks can be analyzed and optimized. You can drive previously saved race tracks (e.g., Hockenheimring), or record and save new tracks. The driven lap times are stored for every track. These can be analyzed and compared to other lap times to achieve the best possible race results. Additionally, acceleration and braking procedures can be measured and stored.

Note: Use AMG TRACK PACE only on closed-off routes outside the public traffic area. Adapt your driving style to your personal performance and environmental conditions. As the driver, you are solely responsible for driving your vehicle. Park your vehicle safely before operating the application.

Setting Track Race

Multimedia system:

TRACK PACE ➤ Track Race

Recording a new track

- Select New Track.
Select Start Record. at the desired starting point. The track recording starts at this point.

During track recording, sectors can be set to divide up the track.
- Select Set Sector.
- Select Stop Recording to end track recording or cross the starting line again.
- Confirm the prompt with OK.
- Select the weather.

The temperature is determined automatically.
- After ending, select OK to save the track.
- Enter a name.
- Press OK to confirm.

The track is saved under the name entered.

**Searching by track name**
- Select All Tracks.
- Enter the track name.

Tracks with the searched name are displayed.

**Measuring time on a saved track**
- Select All Tracks.
- Select the desired track.
- Select OK.
- Select Start Race if you are already stood at the starting line.
- or
- Select Navigate to for navigation to the starting line.

Timekeeping begins automatically when the starting line has been crossed.

When is selected, the track display can be switched to AR.
- Select Stop Race to end timekeeping.
- Confirm the prompt with OK.
- Select the weather.
- Select Save Track to save the times driven for this track.

**Showing displays during Track Race**
The following displays can be shown:
- Tire temperature
- Mini map
- Sector overview
- Engine data
- G-force display
- Lap overview

**Displaying the analysis**
- Select All Tracks.

An overview of all the driven tracks appears.
- Select a track.
Select a session.
The following data is displayed:
- Lap and sector times
- Average and maximum permissible speed
- Driver

Select Compare to Rec. to use a different session as a reference value.

Select [Diagram] to return to the overview.
Set parameters $P_0$ and $P$.
The analysis is displayed.

The following values can be set for parameters 1 and 2, for example:
- Speed
- Longitudinal/lateral acceleration
- Steering angle
- Engine speed
- Engine oil/tire temperature

Based on the analysis you can check and optimize driving characteristics for any position on the track.

**Exporting tracks (USB)**
- Select Tracks.
  - An overview of all stored tracks appears.
  - Select the desired track.
  - Select options for the desired track.
  - Select Export.
  - The selected track can be exported to a USB storage device connected to the vehicle.

**Editing tracks and recordings**
- Select Tracks.
  - Select the desired track.
  - Select options for the desired track.
  - Select Rename or Delete.
  - Select a track.
  - Highlight the desired recording.
  - Select options.
  - Select Export to... or Delete.

**Setting Drag Race**

Multimedia system:

- TRACK PACE ➤ Drag Race

**Measuring acceleration**
- Select Drag Options.
- Select Acceleration.
- Set a starting speed or select Automatic.
  - Measurement begins as soon as the specified starting speed has been reached.
- Set a target speed.
  - Measurement stops as soon as the specified target speed has been reached.
- Pull away and start the measurement.
  - Measurement begins when the vehicle accelerates.

**Quarter-mile race**

- Select Drag Options.
- Select Quarter Mile.
- Set a target distance.
  - Measurement stops as soon as the specified target distance has been reached.
- Pull away and start the measurement.
  - Measurement begins when the vehicle accelerates. Timing runs until the target distance or a maximum of one mile has been traveled.

**Measuring braking**
- Select Drag Options.
- Select Braking.
- Set a starting speed or select Automatic.
- Pull away and start the measurement.
Brake to a standstill.
Measurement is incremental, in steps of 5 mph (10 km/h) to a standstill. If the braking procedure is started e.g. at a speed of 58 mph (157 km/h), measurement starts as soon as 55 mph (150 km/h) has been reached.

Storing and calling up measurement values
If measurement is completed or canceled, a prompt appears asking whether the measurement should be saved.

Confirm the prompt with \( \checkmark \) to save.

Calling up saved measurements

Select [History].
Select Acceleration, Quarter Mile or Braking.
Select a measurement.
The desired measurement is displayed in detail.

or

Delete a measurement.

Calling up the telemetry display
Multimedia system:

\( \rightarrow \) TRACK PACE \( \rightarrow \) Telemetry

The telemetry display shows current vehicle data as a digital value and as a diagram. Up to three parameters can be selected that are to be shown in the display.
For example:
- Engine speed
- Wheel angle
- Speed
- Steering angle

Set the desired parameters.
Set the time.
The set parameters are evaluated in the diagram for the time set.

Configuring AMG TRACK PACE
Requirements:
To connect a mobile device to the TRACK PACE app:
- The TRACK PACE app is installed on the mobile end device.
- The mobile end device is connected to the multimedia system via Wi-Fi.

Multimedia system:

\( \rightarrow \) TRACK PACE \( \rightarrow \) Options

Connecting a mobile device via the TRACK PACE app
The TRACK PACE app makes it possible to record videos and to synchronize them with stored tracks.

Select TRACK PACE App.
Select AUTHORIZE NEW DEVICE.
Available devices are displayed.
Start the TRACK PACE app on the device to be connected and follow the instructions.
Confirm the authorization prompt.
Scan the QR code on the media display.
The device is authorized.

De-authorizing the mobile device

Select TRACK PACE App.
Select De-authorize device.
Select a device.
Confirm the message prompt with Yes. The device is de-authorized.

Setting the TRACK PACE display in the Head-up Display
Select HUD Content.
Activate or deactivate the desired contents. The contents in the Head-up Display are adapted.

For further information on the Head-up Display, see (→ page 232).

Setting acoustic feedback
Select Acoustic feedback.
A scale with values from 0 to 85 is shown.
Select a setting.

Displaying statistics
Select Statistics.
Statistics on the current user profile are displayed.

The following data is displayed:
• Driving time
• Track driven
• Tracks recorded
• Track Races recorded
• Laps recorded
• Drag Races recorded
• Maximum design speed

Activating the ambient light
If this function is active, the vehicle interior is lit red or green depending on Delta Time.
Select Ambient light.
Activate or deactivate the function.

Navigation
Notes on navigation
Route guidance with augmented reality

WARNING Risk of accident and injury as a result of distraction, incorrect depiction or wrong interpretation of the display

The camera image of the augmented reality display is not suitable as a guide for driving.
Always keep an eye on the actual traffic situation.
Avoid extended observation of the camera image.

WARNING Risk of accident and injury due to imprecise positioning of additional information

The additional information from the augmented reality display may be inaccurate and is not a substitute for observing and assessing the actual driving situation.
Always keep an eye on the actual traffic situation when carrying out all driving maneuvers.

Switching navigation on

Multimedia system:

Alternatively: press the button. The map displays the current vehicle position. The navigation menu is shown. The navigation menu is hidden if route guidance is active.

To show: tap on the touchscreen. The menu is hidden automatically.
Navigation overview

Example: digital map with navigation menu

1. Enters a POI or address and additional destination entry options
2. Interrupts route guidance (if route guidance is active)
3. Repeats a navigation announcement and switch navigation announcements on or off
4. Calls up the ON THE WAY menu

- To show Route Overview
- To select Alternative Routes
- Report Traffic Incident (Car-to-X)
- To call up the TRAFFIC menu
  - To display Traffic Announcements
  - To show Area Alerts
  - To display Provider Information

5. Quick-access and settings
  - To show Route List
  - To call up the POSITION menu
    - Save Position
    - To display Compass
  - To show Traffic
  - To show Parking
• To show Highway Information
• Via Advanced options to use View, Announcements and Route

### Entering a destination
Multimedia system:

1. Federal state or province in which the vehicle is located
2. Enters a POI or address
3. List with additional destination entry options
4. Deletes an entry

5. OK Confirms an entry
6. Switches to handwriting recognition
7. Enters a space
8. Switches to voice input
9. Sets the written language

10. Switches to digits, special characters and symbols
11. Switches to upper-case or lower-case letters

Enter the destination in 2. The entries can be made in any order.
The following entries can be made, for example:
- City, street, house number
- Street, city
- ZIP code
- POI name or POI category, e.g. Parking
- Contact name

Select a search result in list 3.
Calculate the route (→ page 257).

You can find further information about destination entry, e.g. three-word addresses, in the Digital Operator’s Manual.

Changing country
Select the indicator for federal state or province 1.
Select the federal state or the province in 1.
Enter the country indicator.
Select the country on list 3.
Select the federal state or the province from list 3.

Using online search
Requirements: the media display shows an Internet connection in the status line with the symbol.

Destination entry uses online map services. If the on-board search finds no suitable destinations or if you change countries, the online search is available.
For the destination you can enter an address, a POI or a three-word address.

Enter the destination in input line 2.
The search results are displayed.
Select the destination in the list.
The detailed view for the route is displayed.

or
Select country indicator 1.
Select the provider for the online service from the countries list.
Enter the destination in input line 2.
Select the destination in the list.

Calculating a route and using settings for route guidance

Requirements
- The destination has been entered.
- The destination address is shown.

Multimedia system:

1 No route yet.
2 A route has been mapped.
Select 行. The route to the destination is calculated. Route guidance begins.

or

Select 行. Select Set as Waypoint. The destination address is set as the next intermediate destination.

or

Select Start New Route Guidance. The destination address is set as the new destination. The previous destination and the intermediate destinations are deleted. Route guidance to the new destination begins.

Selecting route settings
- Select 行. Select Advanced.
- Select Route.
- Select the route type.
- Take traffic information into consideration with Dynamic Route Guidance 行.

Select route options with Avoid Options.
- Activate Suggest Alternative Route. Alternative routes are calculated for every route.
- Activate Activate Commuter Route. If the requirements are met, the multimedia system automatically detects that the vehicle is on a commuter route. Route guidance begins without voice output.

Activating route guidance with augmented reality
- During route guidance, tap on the camera symbol on the media display. The camera image will be shown instead of the navigation map before a turning maneuver and will show additional information.
- To return to the navigation map: tap on the camera symbol again.

Displaying additional information in the camera image
- Select 行. Select Advanced.
- Select Augmented Reality.

Activate Street Names and House Numbers. During route guidance, street names and house numbers are shown in the camera image.

Using map functions
Multimedia system:

Setting the map scale
- To zoom in: tap twice quickly with one finger on the media display.
- To zoom out: tap with two fingers on the media display.

Moving the map
- Move one finger in any direction on the touchscreen.
- To reset the map to the current vehicle position: press 行 briefly.
Selecting map orientation

- Tap repeatedly on the compass symbol on the map. The view changes in the sequence 3D, 2D Heading Up to 2D North Up.

Switching freeway information on/off

- Select .
- Activate or deactivate Highway Information.

Using services

Requirements
- There is an Internet connection.
- Mercedes me connect is available.
- You have set up a user account in the Mercedes me Portal.
- The vehicle is connected to a user account and you have accepted the conditions of use for the service.
- Further information can be found at: https://www.mercedes.me
- The service is available.
- The service has been activated at an authorized Mercedes-Benz Center.
- The following additional conditions apply to the Parking service:
  - The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
  - The parking service is part of the scope of the Navigation Services.
- The service is available.
- The service has been activated at an authorized Mercedes-Benz Center.
- The following additional conditions apply to the Parking service:
  - The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
  - The parking service is part of the scope of the Navigation Services.
- The service is available.
- The service has been activated at an authorized Mercedes-Benz Center.
- The following additional conditions apply to the Parking service:
  - The navigation services option is available, subscribed to and activated in the Mercedes me Portal.
  - The parking service is part of the scope of the Navigation Services.

Multimedia system:

Navigation

Displaying the traffic situation with Live Traffic Information

- Select .
- Activate Traffic.
- Select Advanced.
- Select View.
- Select Map Elements.

Activating Traffic Incidents, Free Flowing Traffic and Delay.
If traffic information has been received, then traffic incidents such as roadworks, road blocks, local reports (e.g. fog) and warning messages are displayed.
The traffic delay is displayed for the current route. Traffic delays lasting one minute or longer are taken into consideration.

Displaying hazard warnings with Car-to-X-Communication
If hazard warnings are available these can be shown as symbols on the map. The display depends on the settings for the Traffic and Traffic Incidents options.
- Set the options.
- If Traffic is switched off and Traffic Incidents is switched on, the symbols are shown on the prospective route.

Displaying weather information and other map contents

- Select .
- Select Advanced.
Select View.
Select Map Elements.
Scroll up and show the ONLINE MAP CONTENT category.
Switch on a service, e.g. Weather.
Current weather information is displayed on the navigation map, e.g. temperature or cloud cover.

Parking service

NOTE Damage to the vehicle due to not observing the maximum permitted headroom clearance

If the vehicle height is greater than the maximum permitted headroom clearance, the roof and other parts of the vehicle may be damaged.

Observe the signposted headroom clearance.

Observe the changed vehicle height with add-on roof equipment.

NOTE Vehicle damage due to failure to observe local information and parking conditions

The data is based on the information provided by the respective service providers. Mercedes-Benz does not guarantee the accuracy of the information provided in relation to the car park or parking area.

Always observe the local information and conditions.

This service is not available in all countries.

Select P and activate Parking.

Tap on P in the map.

Select a parking option.

The map shows the parking options in the vicinity.

The following information is displayed (if available):

- Destination address, distance from current vehicle position and arrival time
- Information on the parking garage/parking lot, e.g.
  - Opening times
  - Parking charges
  - Current occupancy
  - Maximum parking time
- Maximum access height
  The maximum access height shown by the parking service does not replace the need for observation of the actual circumstances.

- Available payment options (Mercedes pay, coins, bank notes, cards)
- Details on parking tariffs
- Number of available parking spaces
- Payment method (e.g. at parking meters)
- Services/facilities at the parking option
Selecting a USB device for a video recording with the dashcam

Requirements:
- At least one USB device is connected with the multimedia system.

Multimedia system:

- Mercedes me & Apps
- Dashcam

Select the USB device.

When USB devices contain multiple partitions, recorded video files are not always displayed in the recording list.

Mercedes-Benz recommends that you use USB devices with one partition.

Starting or stopping video recording with the dashcam

Requirements:
- A USB device is connected with the multimedia system.
- The vehicle is switched on.

To start: select **Start Recording**.

The length of the recording is shown. The **Please do not remove the storage medium.** message appears. The video file is stored on the USB device.

To end: select **End Recording**.
A report may appear in the following cases:

- For the Individual Recording recording mode: the memory is full or there are only a few minutes recording time available. The video recording stops or will be stopped imminently. Change the USB device or delete a video file.

- If a video recording has started and a national border is detected, the National Border Crossed. Please observe the country-specific regulations on video recording. message appears. This function is not available in all countries.

- The camera is not functional, the Camera Unavailable message appears. Have the camera checked in an authorized Mercedes-Benz Center.

### Telephone

#### Telephony

#### Notes on telephony

**WARNING** Risk of distraction from operating integrated communication equipment while the vehicle is in motion

If you operate communication equipment integrated in the vehicle when driving, you could be distracted from the traffic situation. This could also cause you to lose control of the vehicle.

- Only operate this equipment when the traffic situation permits.
- If you cannot be sure of this, stop the vehicle whilst paying attention to road and traffic conditions and operate the equipment with the vehicle stationary.

**WARNING** Risk of accident from operating mobile communication equipment while the vehicle is in motion

Mobile communication devices distract the driver from the traffic situation. This can also cause the driver to lose control of the vehicle.

- As a driver, only operate mobile communication devices when the vehicle is stationary.
- As a vehicle occupant, use mobile communication devices only in the designated area, e.g. in the rear passenger compartment.

You must observe the legal requirements for the country in which you are currently driving when operating mobile communication equipment in the vehicle.

**WARNING** Risk of injury due to objects being stowed incorrectly

If objects in the vehicle interior are stowed incorrectly, they can slide or be thrown around.
and hit vehicle occupants. In addition, cup holders, open stowage spaces and mobile phone receptacles cannot always retain all objects within.

There is a risk of injury, particularly in the event of sudden braking or a sudden change in direction.

- Always stow objects so that they cannot be thrown around in such situations.
- Always make sure that objects do not protrude from stowage spaces, parcel nets or stowage nets.
- Close the lockable stowage spaces before starting a journey.
- Always stow and secure heavy, hard, pointed, sharp-edged, fragile or bulky objects in the trunk/cargo compartment.

Observe the additional information on stowing mobile communications devices correctly:

- Loading the vehicle (→ page 103)

**Bluetooth® connection:**

The menu view and the available functions in the telephone menu are in part dependent on the Bluetooth® profile of the connected mobile phone. Full functionality is only available if the mobile phone supports both of the following Bluetooth® profiles:

- **PBAP (Phone Book Access Profile)** - The contacts on the mobile phone are shown automatically on the multimedia system.
- **MAP (Message Access Profile)** - The mobile phone message functions can be used on the multimedia system.

Irrespective of this, Bluetooth® audio functionality can be used with any mobile radio unit.

For information on the range of functions of the mobile radio unit to be connected, see the manufacturer's operating instructions.

**Network connection:**

The following cases can lead to the call being disconnected while the vehicle is in motion:

- You switch into a transmission/reception station, in which no communication channel is free.
- The SIM card used is not compatible with the network available
- A mobile phone with "Twincard" is logged into the network with the second SIM card at the same time

The multimedia system supports calls in HD Voice® for improved speech quality. A requirement for this is that the mobile phone and the mobile phone network provider of the person you are calling support HD Voice®. Depending on the quality of the connection, the voice quality may fluctuate.

Further information can be obtained from an authorized Mercedes-Benz Center or at: https://www.mercedes-benz.com/connect
Telephone menu overview

1 Bluetooth® device name of the currently connected mobile phone/of the mobile phone (two phone mode)
2 Bluetooth® device name of the currently connected mobile phone/of the mobile phone (two phone mode)
3 Battery status of the connected mobile phone
4 Signal strength of the mobile phone network
5 Options
6 Device manager
7 Messages
8 Numerical pad
9 Contact search

Telephony operating modes overview

Depending on your equipment, the following telephony operating modes are available:
- A mobile phone is connected to the multimedia system via Bluetooth®.
Two mobile phones are connected with the multimedia system via Bluetooth® (two phone mode).
- You can use all the functions of the multimedia system with the mobile phone in the foreground.
- You can receive incoming calls and messages with the mobile phone in the background.
You can interchange the mobile phone in the foreground and background.

Connecting a mobile phone

Requirements
- Bluetooth® is activated on the mobile phone (see the manufacturer’s operating instructions).
- Bluetooth® is activated on the multimedia system.

Multimedia system:

Searching for a mobile phone

Select Phone.

Select Connect New Device.

Connecting a mobile phone

Authorization follows using secure simple pairing.
Select a mobile phone.
A code is displayed in the multimedia system and on the mobile phone.
If both codes match, confirm the code on the mobile phone.

Functions in the telephony menu

In the telephony menu you have the following functions, for example:

- Making calls, e.g.:
  - Accept a call
  - End Call
  - Create Confer. Call
  - Accept or reject a waiting call

- Managing contacts, e.g.:
  - Downloading mobile phone contacts
  - Managing the format of a contact's name
  - Saving a contact as a favorite
- Receiving and sending messages, e.g.:
  - Using the read-aloud function
  - Dictating a new message
Mercedes me app

Mercedes me calls

Making a call via the overhead control panel

1. me button for service or information calls
2. SOS button cover
3. SOS button (emergency call system)

Making a Mercedes me call

- Press me button 1.

Making an emergency call
- To open the cover of SOS button 2, press it briefly.
- Press and hold SOS button 3 for at least one second.

If a Mercedes me call is active, an emergency call can still be triggered. This has priority over all other active calls.

Information about the Mercedes me call

A call to the Mercedes-Benz Customer Center has been initiated via the me button in the overhead control panel or the multimedia system (→ page 266).

Using the voice dialog system you access the desired service:
- Accident and Breakdown Management
- Mercedes-Benz Customer Center for general information about the vehicle

You can find information on the following topics:
- Activation of Mercedes me connect

- Operating the vehicle
- Nearest authorized Mercedes-Benz Center
- Other products and services from Mercedes-Benz

Data is transferred during the connection to the Mercedes-Benz Customer Center (→ page 268).

Calling the Mercedes-Benz Customer Center using the multimedia system

Requirements
- Access to a mobile phone network is available.
- The contract partner's mobile network coverage is available in the respective region.
- The vehicle must be switched on so that vehicle data can be transferred automatically.

Multimedia system:

Call Mercedes me connect.

After confirmation, the multimedia system sends the required vehicle data. The data transfer is shown in the media display.
Then you can select a service and be connected to a specialist at the Mercedes-Benz Customer Center.

**Calling the Mercedes-Benz customer center after automatic accident or breakdown detection**

**Requirements:**
- The vehicle has detected an accident or breakdown situation.
- The vehicle is stationary.
- The hazard warning lights are switched on.

 niños This function is not available in all countries.

The vehicle can detect accident or breakdown situations under certain circumstances.

Requirements for collision detection in the context of accident management:
- The vehicle is equipped with an anti-theft alarm system (ATA) (code 551).
- The vehicle is equipped with the interior protection (code 882).
- The vehicle is equipped with the Anti-Theft Protection Package (code P54).
- The collision detection service with theft notification has been activated on Mercedes me connect.

If a collision is detected when the tow-away alarm is armed on a locked vehicle, you will receive a notification in the multimedia system when you switch the vehicle on.

Find out at an authorized Mercedes-Benz Center if this function is available in your country.

In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display. This may take a few seconds.

 niño The availability of collision detection depends on the vehicle.

In the event an accident or breakdown is detected, the emergency guide shows safety notes in the multimedia system display.

After quitting the emergency guide display on the multimedia system, a prompt appears asking whether you would like to get support from the Mercedes-Benz customer center.

Select **Call**.
- The vehicle data is sent automatically (→ page 270).
- The Mercedes-Benz customer center takes your call and organizes the breakdown and accident assistance.

You may be charged for these services.

Depending on the severity of the accident, an automatic emergency call can be initiated. This has priority over all other active calls (→ page 274).

In addition, if the Mercedes me connect service "Telediagnostics" is active, a similar prompt can appear after a delay in the event of a breakdown. If you are already in contact with the Mercedes-Benz customer center or have already received support, this prompt can be ignored or declined.

If you answer the prompt for support from the Mercedes-Benz customer center with **Later**, the message will be hidden and appear again later.
The prompt triggered by the Mercedes me connect service "Telediagnostics", can either be confirmed or declined. After being declined, this will not be shown again.

Arranging a service appointment via a Mercedes me call
If you have activated the maintenance management service, relevant vehicle data is transferred automatically to the Mercedes-Benz customer center. You will then receive individual recommendations regarding the maintenance of your vehicle.

Regardless of whether you have consented to the maintenance management service, the multimedia system reminds you after a certain amount of time that a service is due. A prompt appears asking if you would like to make an appointment.

To arrange a service appointment: select Call. After your agreement, the vehicle data is transferred and the Mercedes-Benz customer center takes your preferred appointment date. The information is then sent to your desired service outlet.

This will contact you to confirm the appointment and if necessary consult about the details.

If you select Later after the service message appears, the message is hidden and reappears at a later time.

Data transferred during a Mercedes me call
When you make a service call via Mercedes me, data is transmitted. This enables targeted advice and a smooth service.

The following requirements must be fulfilled for the transfer of the data:
- The vehicle is switched on.
- The required data transfer technology is supported by the mobile phone network provider.
- The quality of the mobile connection is sufficient.

Multi-stage transfer depends on the following factors:
- Reason for the initiation of the call
- The available mobile phone transmission technology
- The activated Mercedes me connect services
- The service selected in the voice control system

The scope of the transmitted data depends on the vehicle model and equipment. For technical reasons, not all data is available at all times.

Data transfer if Mercedes me connect services are not activated
If no Mercedes me connect services are activated, the following data is transferred:
- Vehicle identification number
- Time of the call
- Reason for the initiation of the call
- Country indicator of the vehicle
- Set language for the multimedia system
- Telephone number of the communication platform installed in the vehicle
If a call is made for a service appointment via the service reminder, the following data is also transmitted:
- Current mileage and maintenance data

If a call is made after automatic accident or breakdown detection using the multimedia system, the following data is also transmitted:
- Current mileage and maintenance data
- Current vehicle location

If Accident and Breakdown Management is called via the voice control system, the following data can also be called up from the vehicle by the Mercedes-Benz Customer Center:
- Current vehicle location

**Data transfer if Mercedes me connect services are activated**

An overview of the data transmitted can be found in the respective terms of use for Mercedes me connect services. These can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

**Data processing**

The data transmitted within the scope of the call is deleted from the processing system after the call is finished, in so far as this data is not being used for other activated Mercedes me connect services.

The incident-specific data is processed and stored in the Mercedes-Benz Customer Center and, if required to process the incident, forwarded to the service partner authorized by the Mercedes-Benz Customer Center. Please take note of the data protection information on the Mercedes me Internet page https://www.mercedes.me or in the recorded message immediately after calling the Mercedes-Benz Customer Center.

The recorded message is not available in every country.

**Mercedes me connect**

**Information on Mercedes me connect**

Mercedes me connect consists of multiple services.

You can use the following services via the multimedia system and the overhead control panel, for example:
- Accident and Breakdown Management (me button or situation-dependent display in the multimedia system)
- Mercedes-Benz Emergency Call System (automatic emergency call and SOS button)

The Mercedes me connect Accident and Breakdown Management and the Mercedes-Benz emergency call centers are available to you around the clock.

The me button and the SOS button can be found on the vehicle’s overhead control panel (→ page 266).

You can also call the Mercedes-Benz customer center using the multimedia system (→ page 266).

Please note that Mercedes me connect is a Mercedes-Benz service. In emergencies, first call the national emergency services using the standard national emergency service telephone numbers. In emergencies, you can also use the
Mercedes-Benz emergency call system (→ page 274).
Observe the conditions of use for Mercedes me connect and other services. These can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com
Further information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com

Information on Mercedes me connect Accident and Breakdown Management

Accident and Breakdown Management is not available in every country. Contact an authorized Mercedes-Benz Center to find out whether this function is available in your country.

The Accident and Breakdown Management can include the following functions:

- Supplement to the Mercedes-Benz emergency call system (→ page 274)

  If necessary, the contact person at the Mercedes-Benz emergency call center forwards the call to Mercedes me connect Accident and Breakdown Management. Forwarding the call is however not possible in all countries.

- Breakdown assistance by a technician on location and/or the towing away of the vehicle to the nearest authorized Mercedes-Benz Center

  You may be charged for these services.

- Addition to the emergency guide after automatic accident or breakdown detection (→ page 267)

  In the event of a breakdown or accident, further vehicle data is sent which enables optimal support by the Mercedes-Benz customer center and the authorized service partner or breakdown assistance.

- Addition to the Mercedes me connect service Telediagnostics

  With the Telediagnostics function, specific wear and failure reports are recorded by the service provider, in so far as these can be clearly interpreted and are available through the monitoring of components that are subject to diagnostics.

If your vehicle detects a breakdown or threat of a breakdown, you may be prompted via the multimedia system to contact the Mercedes-Benz customer center for further help. This prompt in the multimedia system only appears when the vehicle is stationary.

These services are subject to technical restrictions such as the mobile phone coverage, mobile network quality and the ability of the processing systems to interpret the transferred data. In some circumstances, this can result in delays or the failure of the information to appear in the multimedia system.

Please note that the service and breakdown call is a Mercedes-Benz service. In emergencies, be sure to contact the usual national emergency number first or use the Mercedes-Benz emergency call system (→ page 273).

More information about Mercedes me connect services can be obtained in the Mercedes me Portal: https://me.secure.mercedes-benz.com
Data transferred during Mercedes me connect call services
The data transferred during a Mercedes me connect call depends on:
- The reason for initiation of the call
- The service that is selected in the voice control system
- The activated Mercedes me connect services

You can find out which data is transferred when using the services in the currently valid Mercedes me connect terms of use and the data protection information for Mercedes me connect. You can find these in your Mercedes me user account.

Overview of the Mercedes me & Apps menu
When you log in with a user account to the Mercedes me Portal, then services and offers from Mercedes-Benz will be available to you.

For more information consult an authorized Mercedes-Benz Center or visit the Mercedes me Portal: https://me.secure.mercedes-benz.com

Make sure you always keep the Mercedes me Apps updated.

You can call up the menu using Mercedes me & Apps in the multimedia system.

In the Mercedes me & Apps menu, the following options can be available:
- Connecting the vehicle with the Mercedes me user account
- Deleting a connection between a user account Mercedes me and the vehicle
- Calling up the Mercedes me services
- Calling up apps such as In-Car Office or the web browser depending on availability

Web browser overview
The web browser is started using the Mercedes me & Apps menu.
Overview of Smartphone Integration

With Smartphone Integration, you can use certain functions on your mobile phone via the multimedia system display. Only one mobile phone at a time can be connected via Smartphone Integration to the multimedia system. Also for use with two phone mode with Smartphone Integration, only one additional mobile phone can be connected via Bluetooth® to the multimedia system. The full range of functions for Smartphone Integration is only possible with an internet connection. The appropriate application must be downloaded on the mobile phone to use Smartphone Integration. The mobile phone must be switched on and connected to a USB port with the symbol on the multimedia system using a suitable cable.
Apps for Smartphone Integration

- Apple CarPlay®
- Android Auto

For safety reasons, the first activation of Smartphone Integration on the multimedia system must be carried out when the vehicle is stationary and the parking brake is applied.

You can start Apple CarPlay® or Android Auto from the device manager.

Mercedes-Benz recommends disconnecting the connecting cable only when the vehicle is stationary.

Overview of transferred vehicle data

When using Smartphone Integration, certain vehicle data is transferred to the mobile phone. This enables you to get the best out of selected mobile phone services. Vehicle data is not directly accessible.

The following system information is transmitted:

- Software release of the multimedia system
- System ID (anonymized)

The transfer of this data is used to optimize communication between the vehicle and the mobile phone.

To do this, and to assign several vehicles to the mobile phone, a vehicle identifier is randomly generated.

This has no connection to the vehicle identification number (VIN) and is deleted when the multimedia system is reset (→ page 248).

The following driving status data is transmitted:

- Transmission position engaged
- Distinction between parked, standstill, rolling and driving
- Day/night mode of the instrument display
- Drive type

The transfer of this data is used to alter how content is displayed to correspond to the driving situation.

The following position data is transmitted:

- Coordinates
- Speed
- Compass direction
- Acceleration direction

This data is used by the mobile phone to improve the accuracy of the navigation (e.g. for continuation in a tunnel).

Mercedes-Benz emergency call system

Information on the Mercedes-Benz emergency call system

Your vehicle is equipped with the Mercedes-Benz emergency call system (*eCall*). This feature can help save lives in the event of an accident. eCall in no way replaces assistance provided from dialing 911.

Mercedes-Benz eCall only functions in areas where mobile phone coverage is available from the wireless service providers. Insufficient network coverage from the wireless service providers may result in an emergency call not being transmitted.

eCall is a standard feature in your Mercedes-Benz vehicle. In order to function as intended, the system relies on the transmission of data detailed in
the "Mercedes-Benz emergency call system data transmission" section that follows (→ page 275).

To disable eCall, a customer must visit an authorized Mercedes-Benz Service department to deactivate the vehicle’s communication module.

Deactivation of this module prevents the activation of any and all Mercedes me connect services. After the deactivation of eCall, automatic emergency call and manual emergency call will not be available.

The vehicle must be switched on before an automatic emergency call can be made. eCall is activated at the factory.

eCall can be deactivated by an authorized Mercedes-Benz dealer. Please note that in the event ownership of the vehicle is transferred to another owner in its deactivated state, eCall will remain deactivated unless the new owner visits an authorized Mercedes-Benz dealership to reactivate the system.

Overview of the Mercedes-Benz emergency call system

eCall can help to reduce the time between an accident and the arrival of emergency services at the site of the accident. It helps locate an accident site in places that are difficult to access. However, even if a vehicle is equipped with eCall, this does not mean the system is ON. As such, eCall does not replace dialing 911 in the event of an accident.

An emergency call can be made automatically or manually. Only make emergency calls if you or others are in need of rescue. Do not make an emergency call in the event of a breakdown or a similar situation.

Messages on the display

SOS NOT READY: the vehicle is not on or eCall not available.

During an active emergency call, <schar> appears in the display.

You can find more information on the regional availability of eCall at: https://www.mercedes-benz-mobile.com/extra/ecall/

If there is a malfunction of the emergency call system, the loudspeakers, microphone, airbag or the SOS button, for example, are faulty. You can recognize a malfunction in the emergency call system by the following displays:

• A corresponding message will also appear in the Instrument Display.
• The Me button lights up red continuously.

Triggering an automatic Mercedes-Benz emergency call

Requirements:

• The vehicle is switched on.
• The starter battery is sufficiently charged.

The Mercedes-Benz emergency call system triggers an emergency call automatically in the following cases:

• After activation of the restraint systems such as airbags or Emergency Tensioning Devices after an accident
• After an emergency stop automatically initiated by Active Emergency Stop Assist
The emergency call has been made:
- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.

The Mercedes-Benz emergency call center can transmit the vehicle position data to one of the emergency call centers.

The SOS button in the overhead control panel flashes until the emergency call is finished. It is not possible to immediately end an automatic emergency call.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

To use the SOS button in the overhead control panel: press the SOS button at least one second long (→ page 266).
To use voice control: use the Voice Control System voice commands.

The emergency call has been made:
- A voice connection is made to the Mercedes-Benz emergency call center.
- A message with accident data is transmitted to the Mercedes-Benz emergency call center.
- Based on the call, the operator decides whether it is necessary to call rescue teams and/or the police to the accident site.
- If no vehicle occupant answers, an ambulance is sent to the vehicle immediately.

If no connection can be made to the emergency services either, a corresponding message appears in the media display.

Dial the local emergency number on your mobile phone.

Ending an unintentionally triggered manual Mercedes-Benz emergency call
Using the multifunction steering wheel: select [ ]. Depress the button for several seconds.

Data transfer of the Mercedes-Benz emergency call system
In the event of an automatic or manual emergency call the following data is transmitted, for example:
- Vehicle's GPS position data
• GPS position data on the route (a few 300 feet (100 m) before the incident)
• Direction of travel
• Vehicle identification number
• Vehicle drive type
• Number of people detected in the vehicle
• Whether Mercedes me connect is available or not
• Whether the emergency call was initiated manually or automatically
• Time of the accident
• Language setting on the multimedia system

Data transmitted is vehicle information. For any questions about the collection, use and sharing of the eCall system data, please contact MBUSA's Customer Assistance Center at 800-FOR-MERC.

For Canada, please contact MBC's Customer Assistance Center at 1-800-387-0100.

Customer requests for covered information should be submitted via the same channels.

For accident clarification purposes, the following measures can be taken up to an hour after the emergency call has been initiated:
• The current vehicle position can be determined.
• A voice connection to the vehicle occupants can be established.
## Overview of the symbols and functions in the media menu

<table>
<thead>
<tr>
<th>Symbol</th>

<td>Select to show or search through available categories (e.g. playback lists, albums, artists, etc.).</td>
</tr>
<tr>
<td>⏯</td>
<td>Search</td>
<td>Select to search in the active menu. You can search for artists, genres or moods, for example.</td>
</tr>
</tbody>
</table>
The following functions and settings are available in the media menu:

- Connecting external data storage media with the multimedia system (e.g. using USB or Bluetooth®)
- Playing back audio or video files

### Authorizing a Bluetooth® audio device for media playback

**Requirements:**
- Bluetooth® is activated on the multimedia system and audio equipment.

**Multimedia system:**

- The audio equipment supports the Bluetooth® audio profiles A2DP and AVRCP.
- The audio equipment is "visible" for other devices.

**With Bluetooth® audio, you can play back music files from an external data storage medium, e.g. your smartphone, using the MBUX multimedia system.**

1. To play back audio files using the multimedia system, authorize the external data storage medium on the MBUX multimedia system.

### Authorizing a new Bluetooth® audio device

1. Select **Connect New Device**.
2. Select an audio device.
3. Authorization starts. A code is displayed on the multimedia system and on the mobile phone.
4. If the codes are identical, confirm on the audio equipment.
5. Select **Only as Bluetooth Audio Device**.

The Bluetooth® audio equipment is connected with the multimedia system.
Connecting previously authorized Bluetooth® audio equipment

Select a Bluetooth® audio device from the list. The connection is being established.

Overview of the symbols and functions in the radio menu

**Additional functions of TuneIn radio**

A relatively large volume of data can be transmitted when using TuneIn radio.
### Additional functions of the satellite radio

SIRIUS XM® satellite radio offers more than 175 digital-quality radio channels providing commercial-free music, sports, news and entertainment, for example. SIRIUS XM® satellite radio employs a fleet of high-performance satellites to broadcast around the clock throughout the USA and Canada. The satellite radio program is available for a monthly fee. Information about this can be obtained from a Sirius XM® Service Center and at [https://www.siriusxm.com](https://www.siriusxm.com) (USA) or [https://www.siriusxm.ca](https://www.siriusxm.ca) (Canada).

SIRIUS, XM and all related marks and logos are trademarks of Sirius XM Radio Inc. and its subsidiaries. All other marks, channel names and logos are the property of their respective owners. All rights reserved.

</tbody>
</table>

Depending on the frequency band selected, different functions are available to you. Select the desired frequency band in the radio menu head runner. **Calling up TuneIn Radio**

Requirements
• The TuneIn Radio service is activated in the Mercedes me Portal.
• The data volume is available. Depending on the country, data volume may need to be purchased.
• A fast Internet connection for data transmission free of interference.

Data volume can be purchased directly from a mobile phone network provider via the Mercedes me Portal.

The functions and services are country-dependent. For more information, consult an authorized Mercedes-Benz Center.

Multimedia system:

- Select TuneIn Radio. The TuneIn menu appears. The last station set starts playing.
- The connection quality depends on the local mobile phone reception.

**Setting up satellite radio**

**Requirements:**
- Satellite radio equipment is available.
- Registration with a satellite radio provider has been completed.
- If registration is not included when purchasing the system, your credit card details will be required to activate your account.

Multimedia system:

- Set a music or sports alert, to be informed of matches in the Live program.

Music and sport alerts

**Multimedia system:**

- Select Music Alerts.

**Setting music and sport alerts**

This function enables you to program an alert for your favorite artists, tracks or sporting events. Music alerts can be saved whilst a track is being played and sport alerts can be saved during a live game. You can also specify sport alerts via the menu option. The system then continuously searches through all the channels.

- Set a music or sports alert, to be informed of matches in the Live program.

Activating the music information function

- Activate Music Alerts.

**Setting a music alert**

- Select Add Alert.

www.siriusxm.com (USA) or https://www.siriusxm.ca (Canada).
Select **Artists** or **Song** in the dialog window. The alert is set for the current artist or track. If a match is found, a prompt appears asking whether you wish to change to the station.

**Activating sports information**
- Activate **Activate Sports Alerts**.

**Setting a sport alert**
- Select **Add Alert**.
- Select the team name or league in the dialog window.

**Deleting individual sports and music alerts**
- Select **Manage Music Alerts**.
- Select **Manage Sports Alerts**.
- Select **Delete Selected Entries**.
- All highlighted alerts are deleted.

**Deleting all sports and music alerts**
- Select **Manage Music Alerts**.
- Select **Manage Sports Alerts**.
- Select **Delete All Entries**.
- All alerts are deleted.

**Sound settings**

### Overview of functions in the sound menu

The setting options and functions available depend on the sound system installed. You can find out which sound system is installed in your vehicle in the Digital Operator’s Manual.

**Standard sound system and Advanced sound system**

The following functions are available:
- **Equalizer**
  - Treble, mid-range and bass
- **Balance and fader**
- **Volume**
  - Automatic adjustment

**Burmester® surround sound system and Burmester® high-end 3D surround sound system**

The following functions are available:
- **Equalizer**
  - Treble, mid-range and bass
- **Balance and fader**
- **Sound focus**
- **VIP seat** *(Burmester® high-end 3D surround sound system only)*
- **Sound profiles**
- **Volume**
  - Automatic adjustment
ASSYST PLUS service interval display

Function of the ASSYST PLUS service interval display

The ASSYST PLUS service interval display on the instrument display informs you of the time or distance remaining before the next service due date. You can hide this service display using the back button on the steering wheel.

Depending on how the vehicle is used, the ASSYST PLUS service interval display may shorten the service interval, e.g. in the following cases:

- Mainly short-distance driving
- When the engine is often left idling for long periods
- In the event of frequent cold start phases

Mercedes-Benz recommends avoiding such operating conditions.

You can obtain information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center.

Displaying the service due date

On-board computer:

Service ➔ ASSYST PLUS

The next service due date is displayed.

To exit the display: press the back button ➔ on the steering wheel.

Bear in mind the following related topic:

- Operating the on-board computer (➔ page 230).

Information on regular maintenance work

NOTE Premature wear through failure to observe service due dates

Maintenance work which is not carried out at the right time or incompletely can lead to increased wear and damage to the vehicle.

Adhere to the prescribed service intervals.

Notes on special service requirements

The prescribed service interval is based on normal operation of the vehicle. Have the maintenance work carried out more often than prescribed if operating conditions are difficult or the vehicle is subject to increased stress.

The ASSYST PLUS service interval display is only an aid. It is the responsibility of the driver of the vehicle to have maintenance work carried out more often than prescribed due to actual operating conditions and/or stresses.

Examples of arduous operating conditions:

- Regular city driving with frequent intermediate stops
- Mainly short-distance driving
- Frequent operation in mountainous terrain or on poor road surfaces

Always have the prescribed maintenance work carried out at a qualified specialist workshop.
• When the engine is often left idling for long periods
• Operation in particularly dusty conditions and/or if air-recirculation mode is frequently used

In these or similar operating conditions, have the interior air filter, air filter, engine oil and oil filter, for example, changed more frequently. If subject to increased stress, check the tires more. Further information can be obtained at a qualified specialist workshop.

Battery disconnection periods

The ASSYST PLUS service interval display can calculate the service due date only when the battery is connected.

Display and note down the service due date on the instrument display before disconnecting the battery (→ page 285).

### Maintenance Management

#### Notes about Maintenance Management

If the Maintenance Management service is activated, relevant data is automatically transferred to the Mercedes-Benz customer center.

The customer center transmits the data to the service partner that you have entered on the Mercedes me website at: http://www.mercedes.me. You will then receive individual recommendations regarding the maintenance of your vehicle.

ℹ️ The calculation of the optimal transmission time of the maintenance request to the service partner is subject to technical limitations that may cause the maintenance recommendation to be perceived as too early or too late or not to be made at all. In this case, you can conveniently arrange a maintenance appointment with the customer center via the maintenance reminder in the multimedia system.

ℹ️ Maintenance Management and the maintenance reminder in the multimedia system are not available in every country. Contact an authorized Mercedes-Benz Center to find out whether this function is available in your country.

#### Data transferred when using Maintenance Management

When the service is activated, relevant data is automatically transferred to determine the required scope of maintenance as well as malfunction detection and malfunction rectification.

Details on data transfer can be found in the data protection information for the Mercedes me connect services. These can be found at: https://www.mercedes.me under "My Mercedes me account", "Terms of use".

ℹ️ Maintenance Management and the maintenance reminder in the multimedia system are not available in every country.

### Telediagnosis

#### Notes about Telediagnosis

ℹ️ This service is not available in all countries.
The vehicle can detect if certain wear parts need to be replaced or if malfunctions have occurred in vehicle systems. If the Telediagnosis service is activated, relevant data is automatically transmitted to the manufacturer. If fault conditions are detected by the vehicle system self-diagnosis, the system transmits recommendations for action to the Mercedes-Benz customer center depending on the fault detected. The customer center transmits the data to the service partner that you have entered on the Mercedes me website at: http://www.mercedes.me.

For selected faults, the notification that a malfunction has been detected may appear in the multimedia system with a request to contact the Mercedes-Benz customer center. From this message, a call can be made directly to the customer center for assistance.

- The transmission of a notification to the multimedia system depends on the country, vehicle model and equipment and requires a fast data connection, over which the service provider has no influence.
- Reliable fault detection is subject to technical limitations. Therefore, only a limited selection of faults can be detected and recommendations for action transmitted to the customer center and the service partners. Mercedes-Benz AG is continuously working on the expansion of this service. The fault detection depends on the country, vehicle model and equipment.

**Data transferred when using Telediagnosis**

When the service is activated, relevant data is automatically transferred to determine the required scope of maintenance as well as malfunction detection and malfunction rectification. Details on data transfer can be found in the data protection information for the Mercedes me connect services. These can be found at: https://www.mercedes.me under "My Mercedes me account", "Terms of use".

- The scope of the data transmitted depends on the vehicle model and equipment. For technical reasons, not all data is available at all times.

### Engine compartment

#### Opening and closing the hood

- **WARNING Risk of accident due to driving with the hood unlocked**: The hood may open and block your view. Never release the hood when driving. Before every trip, ensure that the hood is locked.

- **WARNING Risk of accident and injury when opening and closing the hood**: The hood may suddenly drop into the end position. There is a risk of injury for anyone in the hood's range of movement. Do not open or close the hood if there is a person in the hood's range of movement.
**WARNING Risk of burns when opening the hood**

If you open the hood in the event of an overheated engine or fire in the engine compartment, the following situations may occur:
- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.
- Before opening the hood, allow the engine to cool down.
- In the event of a fire in the engine compartment, keep the hood closed and call the fire service.

**WARNING Risk of injury due to moving parts**

Components in the engine compartment may continue to run or start unexpectedly even when the drive system is switched off. Observe the following if you must open the hood:
- Switch off the vehicle.
- Never touch the danger zones surrounding moving components, e.g. the rotation area of the fan.
- Remove jewelry and watches.
- Keep items of clothing and hair away from moving parts.

**WARNING Risk of injury from touching live components**

The ignition system and the fuel injection system operate with a high voltage. You could receive an electric shock.
- Never touch components of the ignition system or fuel injection system when the vehicle is switched on.

The live components include the following, for example:
- Ignition coils
- Fuel injectors
- Electric lines to the ignition coils and the fuel injectors

**WARNING Risk of burns from hot component parts in the engine compartment**

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
- Allow the engine to cool down and only touch component parts described in the following.

**WARNING Risk of injury from using the windshield wipers when the hood is open**

If the windshield wipers start moving when the hood is open, you could be trapped by the wiper linkage.
- Always switch off the windshield wipers and the vehicle first if you need to open the hood.
Opening the hood

To release the hood, pull on handle 1.

Push handle 2 of the hood catch upwards and lift the hood until it opens automatically.

Closing the hood

Lower the hood and press it firmly into the lock with both hands.

If the hood can still be lifted a little, repeat the procedure until it engages correctly.

Engine oil

I Checking the engine oil level using the on-board computer

Requirements

- The engine has been warmed up.
- The vehicle is parked on a level surface.
- The engine is running at idle speed.
- The hood is closed.

The engine oil level is determined during driving. Determining the engine oil level can take up to 30 minutes with a normal driving style and even longer with an active driving style.

On-board computer:

➡️ Service ➪ Engine Oil Level

One of the following messages will appear on the instrument display:

- Measuring Engine Oil Level...: measurement of the oil level is not yet possible.
- Repeat the request after a maximum of 30 minutes' driving.

Maintenance and care 289
- **Engine Oil Level OK** and the bar display for indicating the oil level on the instrument display is green and is between "min" and "max": the oil level is correct.

- **Engine Oil Level Add 1,1 qts.** and the bar display for indicating the oil level on the instrument display is orange and is below "min":
  - Add 1.1 US qt (1 l) of engine oil.

- **Reduce Engine Oil Level** and the bar display for indicating the oil level on the instrument display is orange and is above "max":
  - Drain off any excess engine oil that has been added. To do so, consult a qualified specialist workshop.

- **For Engine Oil Level Switch Ignition On**
  - Switch on the vehicle to check the engine oil level.

- **Engine Oil Level System Inoperative**: The oil level sensor is defective or not connected.
  - Consult a qualified specialist workshop.

- **Engine Oil Level System Currently Unavail.**

  - Close the hood.
  
  - **Top up engine oil**

    - **WARNING** Risk of burns from hot component parts in the engine compartment
      
      Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
      
      - Allow the engine to cool down and only touch component parts described in the following.

    - **WARNING** Risk of fire and injury from engine oil
      
      If engine oil comes into contact with hot component parts in the engine compartment, it may ignite.
      
      - Make sure that no engine oil is spilled next to the filler opening.
      
      - Allow the engine to cool off and thoroughly clean the engine oil from component parts before starting the vehicle.

- **NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives
  
  - Do not use engine oils or oil filters which do not correspond to the specifications explicitly prescribed for the service intervals.
  
  - Follow the instructions on the service interval display for changing the engine oil and observe the prescribed change intervals.
  
  - Do not use additives.

- **NOTE** Damage caused by refilling too much engine oil
  
  Too much engine oil can damage the engine or the catalytic converter.
  
  - Have excess engine oil removed at a qualified specialist workshop.
Depending on driving style, the vehicle consumes up to 0.9 US qt (0.8 liters) of oil per 600 miles (1,000 km). The oil consumption may also be higher than this when the vehicle is new or if you frequently drive at high engine speeds.

8-cylinder engine

- Turn cap 1 counter-clockwise and remove it.
- Add engine oil.
- Replace cap 1 and turn it clockwise until it engages.
- Check the oil level again (→ page 289).

6-cylinder engine

### Checking the coolant level

**WARNING Risk of scalding from hot coolant**

If you open the cap, you could be scalded.
- Let the motor cool down before opening the cap.
- When opening the cap, wear protective gloves and safety glasses.
- Open the cap slowly to release pressure.

**WARNING Risk of burns from hot component parts in the engine compartment**

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.
- Allow the engine to cool down and only touch component parts described in the following.
- Have the coolant checked or refilled only at a qualified specialist workshop.
Adding washer fluid to the windshield washer system

**WARNING** Risk of burns from hot component parts in the engine compartment

Certain component parts in the engine compartment can be very hot, e.g. the engine, the cooler and parts of the exhaust system.

- Allow the engine to cool down and only touch component parts described in the following.

**WARNING** - Risk of fire and injury from windshield washer concentrate

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.

- Make sure that no windshield washer concentrate spills out next to the filler opening.

- Remove cap 1 by the tab.

- Add washer fluid.

Further information about the windshield washer fluid (→ page 358).

Keeping the air/water duct free

- Keep the area between the hood and the windshield free of deposits, e.g. ice, snow or leaves.

Cleaning and care

Information on washing the vehicle in a car wash

**WARNING** Risk of accident due to reduced braking effect after washing the vehicle

The braking effect is reduced after washing the vehicle.

- After the vehicle has been washed, brake carefully while paying attention to the traffic conditions until the braking effect has been fully restored.
If one of the following functions is activated, the vehicle will brake automatically in certain situations:
- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:
- During towing.
- In a car wash.

To avoid damage to your vehicle when using a car wash, ensure the following beforehand:
- Active Distance Assist DISTRONIC is deactivated.
- The HOLD function is switched off.
- The 360° Camera or the rear view camera is switched off.
- The extendable rear wing is completely retracted.
- The side windows and sliding sunroof are completely closed.
- The blower for the ventilation and heating is switched off.
- The windshield wiper switch is in position g.
- The key is at a minimum distance of 10 ft (3 m) away from the vehicle. Otherwise, the tailgate could open unintentionally.
- For car washes with a conveyor system:
  - Neutral N is engaged.
  - If you would like to leave the vehicle while it is being washed, make sure the key is located in the vehicle. Park position P will otherwise be engaged automatically.

If, after the car wash, you remove the wax from the windshield and wiper rubbers, this will prevent smearing and reduce wiper noise.

Information on using a power washer

WARNING Risk of an accident when using power washers with round-spray nozzles

The water jet can cause externally invisible damage.
Components damaged in this way may unexpectedly fail.
To avoid damage to your vehicle, observe the following when using a power washer:

- The key is at a minimum distance of 10 ft (3 m) away from the vehicle. Otherwise, the tailgate could open unintentionally.
- Maintain a distance of at least 11.8 in (30 cm) to the vehicle.
- Vehicles with decorative films: parts of your vehicle are covered with a decorative film. Maintain a distance of at least 27.6 in (70 cm) between the film-covered parts of the vehicle and the nozzle of the power washer. Move the power washer nozzle around while cleaning. The water temperature of the power washer must not exceed 140°F (60°C).
- Observe the information on the correct distance in the equipment manufacturer’s operating instructions.

Washing the vehicle by hand

- Do not direct the nozzle of the power washer directly at sensitive parts, e.g. tires, gaps, electrical components, batteries, illuminants or louvers.

Observe the relevant legal requirements (e.g. in some countries, washing by hand is permitted only in specially designated wash bays).

- Use a mild cleaning agent (e.g. car shampoo).
- Wash the vehicle with lukewarm water using a soft car sponge. When doing so, do not expose the vehicle to direct sunlight.
- Carefully hose the vehicle off with water and dry using a chamois.

Notes on paintwork/matt finish paintwork care

To avoid damaging the paintwork and interfering with the driving assistance systems, please observe the following notes:

Paint

- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.
- Tree resin, oils, fuels and greases: remove by rubbing gently with a cloth soaked in petroleum ether or lighter fluid.
- Coolant and brake fluid: remove with a damp cloth and clean water.
- Tar stains: use tar remover.
- Wax: use silicone remover.
- Do not attach stickers, films or similar materials. Have film attached to the bumper only at a qualified specialist workshop.
- Remove dirt immediately, where possible.
**Matt finish**
- Use only care products approved for Mercedes-Benz.
- Do not attach stickers, films or similar materials. Have film attached to the bumper only at a qualified specialist workshop.
- Do not polish the vehicle and alloy wheels.
- Use only car washes that correspond to the latest engineering standards.
- Do not use any car wash program with a final hot wax treatment.
- Do not use paint cleaners, buffing or polishing products or gloss preservers, e.g. wax.

In the event of paintwork damage:
- Always have paintwork repairs carried out at a qualified specialist workshop.
- Make sure the radar sensors function (→ page 169).

**Notes on cleaning decorative films**
Observe the "Notes on paintwork/matte finish paintwork care" (→ page 294). They also apply to matte decorative films.
Observe the notes on cleaning decorative films to avoid damage.

**Cleaning**
- For cleaning, use plenty of water and a mild cleaning agent without additives or abrasive substances (e.g. a car shampoo approved for Mercedes-Benz).
- Remove dirt as soon as possible. Avoid rubbing too hard in order not to damage the decorative film irreparably.
- If there is dirt on the finish or if the decorative film is dull: use the paint cleaner recommended and approved for Mercedes-Benz.
- Insect remains: soak with insect remover and rinse off the treated areas afterwards.
- Bird droppings: soak with water and rinse off afterwards.

- To prevent water stains, dry a film-wrapped vehicle with a soft, absorbent cloth after every car wash.

**Avoiding damage to the decorative film**
- The service life and color of decorative films are impaired by:
  - Sunlight
  - Temperature (e.g. hot air blower)
  - Weather conditions
  - Stone chippings and dirt
  - Chemical cleaning agents
  - Oily products
- Do not use polish on matte decorative film. Polishing will have the effect of shining the film-wrapped surface.
- Do not treat matte or structured decorative films with wax. Permanent stains may occur.

Scratches, corrosive deposits, areas affected by corrosion and damage caused by incorrect care cannot always be completely repaired. In this case, contact a qualified specialist workshop.
You can obtain more information on care and cleaning agents from the manufacturer.

In the case of film-wrapped surfaces, visual differences may occur between the surfaces that were not protected by a decorative film after a decorative film has been removed.

Have work or repairs to decorative films carried out at a qualified specialist workshop (e.g. at an authorized Mercedes-Benz Center).

### Notes on care of car parts

**WARNING Risk of entrapment if the windshield wipers are switched on while the windshield is being cleaned**

If the windshield wipers are set in motion while you are cleaning the windshield or wiper blades, you can be trapped by the wiper arm.

- Always switch off the windshield wipers and the vehicle before cleaning the windshield or wiper blades.

**WARNING Risk of burns from the tailpipe and tailpipe trims**

The exhaust tailpipe and tailpipe trims can become very hot. If you come into contact with these parts of the vehicle, you could burn yourself.

- Always be particularly careful around the tailpipe and the tailpipe trims and supervise children especially closely in this area.
- Allow vehicle parts to cool down before touching them.

To avoid damage to the vehicle, observe the notes on cleaning and care of the following car parts:

- **Wheels and rims**
  - Use water and acid-free alloy wheel cleaners.
  - Do not use acidic alloy wheel cleaners to remove brake dust. This could damage wheel bolts and brake components.
  - To avoid corrosion of the brake disks and brakepads, drive the vehicle for a few minutes after cleaning before parking it. The brake disks and brakepads will warm up and dry out.

**Windows**

**NOTE Damage to electronic components due to excess fluids**

When cleaning the windows from the inside, fluids such as cleaning agents or water may run down and get behind trim parts of the vehicle interior and cause damage to electronic components.

- Use cleaning agents as sparingly as possible.
- Immediately absorb any excess fluids.

- Clean the windows inside and outside with a damp cloth and with a cleaning agent recommended for Mercedes-Benz.
- Do not use dry cloths or abrasive or solvent-based cleaning agents to clean the insides of windows.
After changing the wiper blades or treating the vehicle with wax, clean the windshield thoroughly with cleaning agents recommended for Mercedes-Benz. Failure to observe the application instructions may result in damage, smear marks or glare spots.

Remove external fogging or dirt on the windshield in front of the multifunction camera. Otherwise, driving systems and driving safety systems may be impaired or unavailable (→ page 169).

Wiper blades
- Move the wiper arms into the replacement position (→ page 126).
- With the wiper arms folded out, clean the wiper blades with a damp cloth.

Make sure that the wiper blades are coated. The coating may leave residue on a cloth. Do not rub the wiper blades excessively or clean them too often.

Exterior lighting
- Clean the lenses with a wet sponge and mild cleaning agent (e.g. car shampoo).
- Use only cleaning agents or cleaning cloths that are suitable for plastic lenses.

Sensors
- Clean the sensors in the front and rear bumpers with a soft cloth and car shampoo (→ page 169).
- When using a power washer, maintain a minimum distance of 11.8 in (30 cm).

Rear view camera and 360° Camera
- Open the camera cover with the multimedia system (→ page 217).
- Use clean water and a soft cloth to clean the camera lens.
- Do not use a power washer.

Extendable rear wing
- Extend the rear wing when washing by hand (→ page 211).
- Clean the rear wing with a soft car sponge and mild cleaning agent (e.g. car shampoo).
- Retract the rear wing completely after drying (→ page 211).
- Do not use a power washer.

Tailpipes
- Clean with a cleaning agent recommended for Mercedes-Benz, especially in the winter and after washing the vehicle.
- Do not use acidic cleaning agents.

Notes on care of the interior

WARNING Risk of injury from plastic parts breaking off after the use of solvent-based care products

Care and cleaning products containing solvents can cause surfaces in the cockpit to become porous. When the airbags are deployed, plastic parts may break away.
- Do not use any care or cleaning products containing solvents to clean the cockpit.

WARNING Risk of injury or fatal injuries from bleached seat belts

Bleaching or dyeing seat belts can severely weaken them.
This can, for example, cause seat belts to tear or fail in an accident.

Never bleach or dye seat belts.

To avoid damage to the vehicle, observe the following notes on cleaning and care:

**Seat belts**
- Clean with lukewarm soapy water.
- Do not use chemical cleaning agents.
- Do not dry by heating them to over 176°F (80°C) or exposing them to direct sunlight.

**Display:**
- Switch off the display and let it cool down.
- Clean the surface carefully with a microfiber cloth and a suitable display care product (TFT-LCD).
- Do not use any other agents.

**Head-up display**
- Clean with a soft, non-static, lint-free cloth.
- Do not use cleaning agents.

**Plastic trim**
- Clean with a damp microfiber cloth.
- For heavy soiling: use a cleaning agent recommended for Mercedes-Benz.
- Do not attach stickers, films or similar materials.
- Do not allow cosmetics, insect repellent or sun cream to come into contact with the plastic trim.

**Real wood and trim elements**
- Clean with a microfiber cloth.
- Black piano-lacquer look: clean with a damp cloth and soapy water.
- For heavy soiling: use a cleaning agent recommended for Mercedes-Benz.
- Do not use solvent-based cleaning agents, polishes or waxes.

**Headliner**
- Clean with a brush or dry shampoo.

**Carpet**
- Use a carpet and textile cleaning agent recommended for Mercedes-Benz.

**Steering wheel made of genuine leather or DINAMICA**

- Clean with a damp cloth and 1% soapy water solution and then wipe with a dry cloth.
- For heavy soiling: use a cleaning agent recommended for Mercedes-Benz.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.
- Do not allow the leather to become too damp.
- Do not use a microfiber cloth.

**NOTE** Damage caused by wrong cleaners

- Do not use solvent-based cleaning agents such as tar remover or wheel cleaner; neither should you use polishes or waxes. Otherwise you may damage the finish.

**NOTE** Damage caused by wrong cleaners

- Do not use solvent-based cleaning agents such as tar remover or wheel cleaner; neither should you use polishes or waxes. Otherwise you may damage the finish.
Leather is a natural product. It exhibits natural surface properties such as differences in structure, marks caused by growth and injury or subtle color differences. These surface properties are characteristics of leather and not material defects. Leather is also subject to a natural aging process during which the surface properties change.

Genuine leather seat covers
- Vacuum up dirt such as crumbs or dust and then clean the seat covers with a damp cotton cloth and wipe down with a dry cloth. Regularly clean the seat covers.
- For heavy soil: use a leather care agent recommended for Mercedes-Benz aftercare.
- Leather care: use a leather care agent that has been recommended for Mercedes-Benz.
- Do not use a microfiber cloth.
- Do not allow the leather to become too damp.
- Do not use oil-based cleaning and care products.

DINAMICA seat covers
- Vacuum up dirt such as crumbs or dust and then use a damp cloth to clean.
- Do not use a microfiber cloth.

Imitation leather seat covers
- Vacuum up dirt such as crumbs or dust and then use a damp cotton cloth and a 1% soap solution to clean the entire seat cover. Do not spot clean.
- Use cleaning and care products recommended for Mercedes-Benz.
- Do not use a microfiber cloth.
- Do not use oil-based cleaning and care products.

Fabric seat covers
- Vacuum up dirt such as crumbs or dust and then use a damp microfiber cloth and a 1% soap solution to clean the entire seat cover. Do not spot clean.
- Use cleaning and care products recommended for Mercedes-Benz.
- Do not use oil-based cleaning and care products.
Emergency

Removing the safety vest

The safety vests are located in the stowage compartments in the driver’s and front passenger door.

- Pull out the safety vest bag by the loop.
- Open the safety vest bag and pull out the safety vest.
- There are also safety vest compartments in the rear door stowage compartments in which safety vests can be stored.

1. Maximum number of washes
2. Maximum wash temperature
3. Do not bleach
4. Do not iron
5. Do not tumble dry
6. Do not dry clean
7. Class 2 safety vest

The requirements defined by the legal standard are fulfilled only if the safety vest is the correct size and is fully closed.

Replace the safety vest in the following cases:
- The reflective strips are damaged or dirty
- The maximum permissible number of washes is exceeded
- The fluorescence has faded, e.g. due to continued exposure to sunlight.

Dispose of the reflective safety jacket in an environmentally responsible manner:
- To do so, contact your local waste disposal company.

Warning triangle

Removing the warning triangle

1. Open cargo floor
2. Push both sides of warning triangle holder in the direction of the arrow and open it.
3. Remove the warning triangle.
Setting up the warning triangle

Fold side reflectors 1 upwards to form a triangle and attach at the top using upper press-stud 2.

Fold legs 3 down and out to the side.

First-aid kit (soft sided) overview

Depending on the version, first-aid kit (soft-sided) 1 is located on the left or right under the cargo floor.

Flat tire

Notes on flat tires

⚠️ WARNING Risk of accident due to a flat tire

A flat tire severely affects the driving characteristics as well as the steering and braking of the vehicle.

Tires without run-flat characteristics:
- Do not drive with a flat tire.
- Change the flat tire immediately with an emergency spare wheel or spare wheel. Alternatively, consult a qualified specialist workshop.

Tires with run-flat characteristics:
- Observe the information and warning notes on MOExtended tires (run-flat tires).

In the event of a flat tire, the following options are available depending on your vehicle’s equipment:

- **Vehicles with a TIREFIT kit:** you can seal the tire so that it is possible to continue the journey for a short period of time. To do this, use the TIREFIT kit (→ page 302).
- **Vehicles with Mercedes me connect:** you can make a call for breakdown assistance via the overhead control panel in the case of a breakdown (→ page 266).
- **All vehicles:** change the wheel (→ page 342).
The emergency spare wheel is only available in certain countries.

**TIREFIT kit storage location**

The TIREFIT kit is located under the cargo floor.

1. Tire inflation compressor
2. Tire sealant bottle

Depending on the vehicle version, the TIREFIT kit may be located at a different position in the cargo compartment.

---

**Using the TIREFIT kit**

**Requirements**
- Tire sealant bottle and tire inflator compressor are ready for use (→ page 302).
- TIREFIT sticker is present.
- Gloves are present.

You can use TIREFIT tire sealant to seal perforation damage of up to 0.16 in (4 mm), particularly those in the tire tread. You can use TIREFIT in outside temperatures down to -4 °F (-20 °C).

**WARNING Risk of accident when using tire sealant**

The tire sealant may be unable to seal the tire properly, especially in the following cases:
- There are large cuts or punctures in the tire (larger than damage previously mentioned)
- The wheel rims have been damaged
- After journeys with very low tire pressure or with flat tires

---

**WARNING Risk of injury and poisoning from tire sealant**

The tire sealant is harmful and causes irritation. Do not allow it to come into contact with the skin, eyes or clothing, and do not swallow it. Do not inhale tire sealant fumes. Keep the tire sealant away from children.

If you come into contact with the tire sealant, observe the following:
- Do not continue driving.
- Consult a qualified specialist workshop.

- Rinse off the tire sealant from your skin immediately using water.
- If tire sealant gets into your eyes, thoroughly rinse out the eyes using clean water.
- If tire sealant has been swallowed, immediately rinse out the mouth thoroughly and drink plenty of water. Do not induce vomiting and seek medical attention immediately.

---

**Breakdown assistance**

Do not continue driving.
Consult a qualified specialist workshop.
Change out of any clothes contaminated with tire sealant immediately.
If allergic reactions occur, seek medical attention immediately.

**NOTE** Overheating due to the tire inflation compressor running too long

Do not run the tire inflation compressor for longer than ten minutes without interruption.

Comply with the manufacturer's safety notes on the sticker on the tire inflation compressor. Have the tire sealant bottle replaced in a qualified specialist workshop every five years.

Do not remove any foreign objects that have entered the tire.

Affix part 1 of the TIREFIT sticker to the instrument cluster within the driver's field of vision.
Affix part 2 of the TIREFIT sticker near the valve on the wheel with the defective tire.

Pull plug 4 with the cable and hose 5 out of the tire inflation compressor housing.
Push the plug of hose 5 into flange 6 of tire sealant bottle 1 until the plug engages.
Place tire sealant bottle 1 head downwards into recess 2 of the tire inflation compressor.
Remove the valve cap from valve 7 on the faulty tire.

Screw filling hose 8 onto valve 7.

Insert plug 4 into a 12-V-socket in your vehicle.

Switch on the vehicle.

Switch on the tire inflation compressor using On/Off switch 3.

The tire is inflated. First, tire sealant is pumped into the tire. The pressure may briefly rise to approximately 500 kPa (5.0 bar / 73 psi).

Let the tire inflation compressor run for a maximum of ten minutes. The tire should then have attained a tire pressure of at least 200 kPa (2.0 bar / 29 psi).

If tire sealant leaks out, make sure you clean the affected area as quickly as possible. It is preferable to use clean water. If you get tire sealant on your clothing, have it cleaned as soon as possible with perchloroethylene.

**If, after ten minutes, a tire pressure of 200 kPa (2.0 bar / 29 psi) has not been attained:**

- Switch off the tire inflation compressor.
- Unscrew the filling hose from the valve of the defective tire.

Please note that tire sealant may leak out when unscrewing the filling hose.

- Drive forwards or in reverse very slowly for approximately 33 ft (10 m).

Do not switch off the tire inflation compressor during this phase!

Pump up the tire again. After a maximum of ten minutes the tire pressure must be at least 200 kPa (2.0 bar / 29 psi).

**WARNING Risk of accident due to the specified tire pressure not being achieved**

If the specified tire pressure is not achieved after the specified time, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

The braking characteristics as well as the driving characteristics may be greatly impaired.

- Do not continue driving.
- Consult a qualified specialist workshop.

If, after ten minutes, a tire pressure of 200 kPa (2.0 bar / 29 psi) has been attained:

- Switch off the tire inflation compressor.
- Unscrew the filling hose from the valve of the defective tire.
**WARNING** Risk of accident from driving with sealed tires

A tire temporarily sealed with tire sealant impairs the handling characteristics and is not suitable for higher speeds.

- Adapt your driving style accordingly and drive carefully.
- Do not exceed the maximum speed limit with a tire that has been repaired using tire sealant.

Observe the maximum permissible speed of 50 mph (80 km/h) for a tire sealed with tire sealant.

**NOTE** Staining caused by leaking tire sealant

After use, excess tire sealant may leak out from the filling hose.

- Therefore, place the filling hose in the plastic bag that contained the TIREFIT kit.

---

**ENVIRONMENTAL NOTE** Environmental pollution caused by environmentally irresponsible disposal

Tire sealant contains pollutants.

- Have the tire sealant bottle disposed of professionally, e.g. at an authorized Mercedes-Benz Center.

- Stow the tire sealant bottle and the tire inflation compressor.

- Pull away immediately.

- Stop driving after approximately ten minutes and check the tire pressure using the tire inflation compressor.

  The tire pressure must now be at least 130 kPa (1.3 bar/19 psi).

**WARNING** Risk of accident due to the specified tire pressure not being attained

If the specified tire pressure is not reached, the tire is too badly damaged. The tire sealant cannot repair the tire in this instance.

The braking and driving characteristics may be greatly impaired.

- Do not continue driving.

- Consult a qualified specialist workshop.

In cases such as the one mentioned above, contact an authorized Mercedes-Benz Center. Or call 1-800-FOR-MERcedes (in the USA) or 1-800-387-0100 (in Canada).

- Correct the tire pressure if it is still at least 130 kPa (1.3 bar/19 psi). See the Tire and Loading Information placard on the B-pillar on the driver's side or the tire pressure table in the fuel filler flap for values.

- **To increase the tire pressure:** switch on the tire inflation compressor.
To reduce the tire pressure: press pressure release button 1 next to manometer 2 .
When the tire pressure is correct, unscrew the filling hose from the valve of the sealed tire.
Screw the valve cap onto the valve of the sealed tire.
Pull the tire sealant bottle out of the tire inflation compressor. The filling hose stays on the tire sealant bottle.
Drive to the nearest qualified specialist workshop and have the tire, tire sealant bottle and filling hose replaced there.

---

**Battery (vehicle)**

**Notes on the 12 V battery**

**WARNING** Risk of an accident due to work carried out incorrectly on the battery

Work carried out incorrectly on the battery can, for example, lead to a short circuit. This can restrict functions relevant for safety systems and impair the operating safety of your vehicle.

You could lose control of the vehicle in the following situations in particular:

- When braking
- In the event of abrupt steering maneuvers and/or when the vehicle’s speed is not adapted to the road conditions
- In the event of a short circuit or a similar incident, contact a qualified specialist workshop immediately.
- Do not drive on.
- Always have work on the battery carried out at a qualified specialist workshop.

---

**Battery (vehicle)**

**Notes on the 12 V battery**

- Further information on ABS (→ page 171)
- Further information on ESP®

For safety reasons, Mercedes-Benz recommends that you use only batteries that have been approved for your vehicle by Mercedes-Benz.

**All vehicles except vehicles with a lithium-ion battery**

**WARNING** Risk of explosion due to electrostatic charge

Electrostatic charge can ignite the highly explosive gas mixture in the battery.

To discharge any electrostatic charge that may have built up, touch the metal vehicle body before handling the battery.

The highly flammable gas mixture is created while the battery is charging and during starting assistance.

**WARNING** Danger of chemical burns from the battery acid

Battery acid is caustic.
Avoid contact with the skin, eyes or clothing.
Do not lean over the battery.
Do not inhale battery gases.
Keep children away from the battery.
Immediately rinse battery acid off thoroughly with plenty of clean water and seek medical attention immediately.

Dispose of batteries in an environmentally responsible manner.
Take discharged batteries to a qualified specialist workshop or to a collection point for used batteries.

If you have to disconnect the 12 V battery, contact a qualified specialist workshop.
Comply with safety notes and take protective measures when handling batteries.

Risk of explosion if the 12 V battery is used improperly.

Fire, naked flames and smoking are prohibited when you are handling the battery. Avoid creating sparks.
Electrolyte or battery acid is corrosive. Avoid contact with the skin, eyes or clothing. Wear suitable protective clothing, in particular gloves, an apron and a face mask. Immediately rinse electrolyte or acid splashes off with clean water. Consult a doctor immediately.
Do not place heavy objects on the surface of the battery or use the battery to support a person in any way.
Wear safety glasses.

Keep children away.

Observe this Operator's Manual.

Observe the following if you do not intend to use the vehicle over an extended period of time:

- **Non-plug-in hybrid**: switch to standby mode (→ page 168, 169).
- Alternatively: connect the battery to a battery charger approved by Mercedes-Benz or consult a qualified specialist workshop to disconnect the battery.

Batteries contain pollutants. It is illegal to dispose of them with the household rubbish.

**ENVIRONMENTAL NOTE** Environmental damage due to improper disposal of batteries.

**All vehicles**
Notes on starting assistance and charging the 12 V battery

All vehicles
When charging the battery and during starting assistance, always use the jump-start connection point in the engine compartment.

⚠️ NOTE Damage to the battery due to over-voltage
When charging using a battery charger without a maximum charging voltage, the battery or the on-board electronics may be damaged.
- Only use battery chargers with a maximum charging voltage of 14.8 V.

⚠️ WARNING Risk of explosion due to the ignition of hydrogen gas
If there is a short circuit or sparks are created, there is a danger of hydrogen gas igniting when you charge the battery.

⚠️ WARNING Risk of explosion due to a mixture of explosive gases
A mixture of explosive gases can escape from the battery during charging and jump starting.

Make sure that the POSITIVE terminal of a connected battery does not come into contact with vehicle parts.
- Never place metal objects or tools on a battery.
- When connecting and disconnecting the battery, always observe the sequence of battery terminals described.
- During starting assistance, always take care to connect only battery terminals of identical polarity.
- During starting assistance, observe the sequence described for connecting and disconnecting the jumper cables.
- Do not connect or disconnect the battery terminals with the engine running.

⚠️ WARNING Risk of explosion due to a frozen battery
A discharged battery may freeze at temperatures slightly above or below freezing point. During starting assistance or battery charging, battery gas can be released.
- Always allow a battery to thaw before charging it or performing starting assistance.

If the indicator/warning lamps on the instrument cluster do not light up at low temperatures, it is very likely that the discharged battery has frozen. In this case, you may neither jump-start the vehicle nor charge the battery.

The service life of a battery that has been thawed may be dramatically shortened. The starting char-
acteristics may be impaired, especially at low temperatures.
It is recommended that you have a thawed battery checked at a qualified specialist workshop.

**All vehicles**

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Damage caused by numerous or extended attempts to start the engine</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Numerous or extended attempts to start the engine may damage the catalytic converter due to non-combusted fuel.</td>
</tr>
<tr>
<td></td>
<td>Avoid numerous and extended attempts to start the engine.</td>
</tr>
</tbody>
</table>

Observe the following points during starting assistance and when charging the battery:
- Use only undamaged jumper cables/charging cables with a sufficient cross-section and insulated terminal clamps.
- Non-insulated parts of the terminal clamps must not come into contact with other metal parts while the jumper cable/charging cable is connected to the battery/jump-start connection point.
- The jumper cable/charging cable must not come into contact with any parts that may move when the engine is running.
- Always make sure that neither you nor the battery is electrostatically charged.
- Keep away from fire and naked flames.
- Do not lean over the battery.

Observe the additional following points when charging the battery:
- Use only battery chargers tested and approved for Mercedes-Benz.
- Read the battery charger's operating instructions before charging the battery.

Observe the additional following points during starting assistance:
- Starting assistance may be provided only using vehicles, batteries or other jump start devices with a nominal voltage of 12 V.
- The vehicles must not touch.

- Vehicles with gasoline engines: jump-start the vehicle only when the engine and exhaust system are cold.

**Starting assistance and charging the 12 V battery**

**Requirements:**
- The vehicle is secured with the electric parking brake.
- Vehicles with automatic transmission: the transmission is in position P.
- The vehicle and all electrical consumers are switched off.
- The hood is open.
Always begin with POSITIVE contact 2 on your own vehicle.

- **During starting assistance**: start the engine of the donor vehicle and leave it running at idle speed.
- Connect the negative terminal of the donor battery and ground point 3 of your own vehicle by using the jumper cable/charging cable. Begin with the donor battery.
- **During starting assistance**: start the engine of your own vehicle.
- **During the charging process**: start the charging process.
- **During starting assistance**: leave the engines running for several minutes.
- **During starting assistance**: before disconnecting the jumper cable, switch on an electrical consumer on your own vehicle, e.g. the rear window defroster or lighting.

When the starting assistance/charging process is complete, perform the following steps:

- First, remove the jumper cable/charging cable from ground point 3 and the negative terminal of the donor battery, then POSITIVE contact 2 and the positive terminal of the donor battery. Begin each time with the contacts on your own vehicle.
- After removing the jumper cable/charging cable, close cover 1 of POSITIVE contact 2.

Further information can be obtained at a qualified specialist workshop.

### Replacing the 12 V battery

- Observe the notes on the 12 V battery (→ page 306).

Mercedes-Benz recommends that you have the 12 V battery replaced at a qualified specialist workshop, e.g. at an authorized Mercedes-Benz Center.
Observe the following notes if you want to replace the battery yourself:

- Always replace a faulty battery with a battery that meets the specific vehicle requirements. The vehicle is equipped with a battery using AGM (Absorbent Glass Mat) technology or a lithium-ion battery. Full vehicle functionality is guaranteed only with an AGM battery or lithium-ion battery. For safety reasons, Mercedes-Benz recommends that you use only batteries that have been tested and approved for your vehicle by Mercedes-Benz.

- Carry over detachable parts, such as vent hoses, elbow fitting or terminal covers from the battery being replaced.

- Make sure that the vent hose is always connected to the original opening on the side of the battery. Install any existing or supplied cell caps. Otherwise, gases or battery acid could escape.

- Make sure that detachable parts are reconnected in the same way.

### Tow starting or towing away

#### Permitted towing methods

If one of the following functions is activated, the vehicle will brake automatically in certain situations:

- Active Brake Assist
- Active Distance Assist DISTRONIC
- HOLD function
- Active Parking Assist

To avoid damage to the vehicle, deactivate these systems in the following or similar situations:

- when being towed
- in a car wash

Mercedes-Benz recommends transporting your vehicle in the case of a breakdown, rather than towing it away.

For towing with both axles on the ground, use a tow rope or tow rod. Do not use tow bar systems.

#### NOTE Damage from automatic braking

#### NOTE Damage to the vehicle due to towing away incorrectly

Observe the instructions and notes on towing away.
### Permitted towing methods

<table>

</tbody>
</table>

**Towing with a raised axle:** Towing should be performed by a towing company.

**Towing the vehicle with both axles on the ground**

- Make sure that the battery is connected and charged.
- Observe the following points when the battery is discharged:
  - the vehicle cannot be started.
  - the electric parking brake cannot be released or applied
  - **Vehicles with automatic transmission:** the transmission cannot be shifted to position N or P.
- **Vehicles with automatic transmission:** if the transmission cannot be shifted to position N or if the display does not show anything, transport the vehicle (→ page 314). A towing vehicle with lifting equipment is required for vehicle transportation.

**NOTE** Damage due to towing away at excessively high speeds or over long distances

The drivetrain could be damaged when towing at excessively high speeds or over long distances.
A towing speed of 30 mph (50 km/h) must not be exceeded.
A towing distance of 30 miles (50 km) must not be exceeded.

**WARNING Risk of accident when towing a vehicle which is too heavy**

If the vehicle to be tow-started or towed away is heavier than the permissible gross mass of your vehicle, the following situations can occur:
- The towing eye may become detached.
- The vehicle/trailer combination may swerve or rollover.
- Before tow-starting or towing away, check if the vehicle to be tow-started or towed away exceeds the permissible gross mass.

If a vehicle has to be tow-started or towed away, its permissible gross mass must not exceed the permissible gross mass of the towing vehicle.

Information on the permissible gross mass of the vehicle can be found on the vehicle identification plate (page 351).

**Vehicles with automatic transmission:** do not open the driver's door or front passenger door; the transmission otherwise automatically shifts to position \( P \).
- Install the towing eye (page 315).
- Fasten the towing device.

**NOTE** Damage due to incorrect connection of the tow bar
- Only connect the tow rope or tow bar to the towing eyes.

- Deactivate the automatic locking mechanism.
- Do not activate the HOLD function.
- Deactivate tow-away alarm (page 89).
- Deactivate Active Brake Assist (page 196).

**Vehicles with automatic transmission:** shift to position \( N \).
- Release the electric parking brake.

**WARNING Risk of accident due to limited safety-related functions during the towing process**

Safety-related functions are limited or no longer available in the following situations:
- The vehicle is switched off.
- The brake system or power steering system is malfunctioning.
- The energy supply or the on-board electrical system is malfunctioning.

When your vehicle is towed away, significantly more effort may be required to steer and brake than is normally required.
- Use a tow bar.
- Make sure that the steering wheel can move freely before towing the vehicle away.
NOTE Damage due to excessive tractive power

If you pull away sharply, the tractive power may be too high and the vehicles could be damaged.

Pull away slowly and smoothly.

Loading the vehicle for transport

- Observe the notes on towing away (→ page 312).
- Connect the towing device to the towing eye in order to load the vehicle.
- Vehciles with automatic transmission: shift the automatic transmission to position [N].

Vehicles with automatic transmission: the automatic transmission may be locked in position [P] in the event of damage to the electrical system. To shift to [N], provide the onboard electrical system with power (→ page 309).

- Load the vehicle onto the transporter.

Vehicles with automatic transmission: shift the automatic transmission to position [P].
- Use the electric parking brake to secure the vehicle against rolling away.
- Only secure the vehicle by the wheels.

Vehicles with ADS PLUS (Adaptive Damping System PLUS)

WARNING Risk of an accident when transporting vehicles with Adaptive Damping System PLUS

When transporting vehicles with Adaptive Damping System PLUS, the vehicle/trailer combination may begin to rock and start to skid.

- Load the vehicle correctly onto the transporter.
- Secure the vehicle on all four wheels with suitable tensioning straps.
- Do not exceed the maximum permissible speed of 35 mph (60 km/h) when transporting.

NOTE Damage to the vehicle from securing it incorrectly

- After loading, the vehicle must be secured on all four wheels. Otherwise, the vehicle could be damaged.
- A minimum distance of 8 in (20 cm) upwards and 4 in (10 cm) downwards must be kept to the transport platform.

- Secure the vehicle on all four wheels after loading.

4MATIC vehicles/vehicles with automatic transmission
Make sure that the front and rear axles come to rest on the same transportation vehicle.

*NOTE* Damage to the drive train due to incorrect positioning of the vehicle.

Do not position the vehicle above the connection point of the transport vehicle.

**Towing eye storage location**

The towing eye is under the cargo floor under cover 1.

Depending on the vehicle version, the towing eye is in a different position in the cargo compartment.

**Installing and removing the towing eye**

- To install the front towing eye: pull out cover 1.
- To install the rear towing eye: press the mark on cover 1 inwards and remove.
- Screw in the towing eye clockwise as far as it will go and tighten.
- After removing the towing eye, snap cover 1 into the bumper.

*NOTE* Damage to the vehicle due to incorrect use of the towing eye. When recovering the vehicle by towing it out using the towing eye, the vehicle may be damaged.

- Use the towing eye only for towing or unhooking the vehicle.
- Do not use the towing eye for towing out during recovery.
**Tow-starting the vehicle**

**Vehicles with automatic transmission**

⚠️ **NOTE** Damage to the automatic transmission due to tow starting

The automatic transmission may be damaged in the process of tow starting vehicles with automatic transmission.

- Vehicles with automatic transmission must not be tow started.

- Vehicles with automatic transmissions must not be tow-started.

**Electrical fuses**

**Notes on electrical fuses**

⚠️ **WARNING** Risk of accident and injury due to overloaded lines

If you manipulate or bridge a faulty fuse or if you replace it with a fuse with a higher amperage, the electric line could be overloaded.

- This could result in a fire.
- Always replace faulty fuses with specified new fuses containing the correct amperage.

⚠️ **NOTE** Damage due to incorrect fuses

Using incorrect fuses can result in damage to electrical components or systems or their functions being considerably restricted.

- Use only fuses approved for Mercedes-Benz with the respective specified fuse rating.

Blown fuses must be replaced with fuses of the same rating, which you can recognize by the color and the label. The fuse ratings and further information to be observed can be found in the fuse assignment diagram.

**Fuse assignment diagram:** on the fuse box in the cargo compartment (→ page 318).

⚠️ **NOTE** Damage or malfunctions caused by moisture

- Moisture may cause damage to the electrical system or cause it to malfunction.
- When the fuse box is open, make sure that no moisture can enter the fuse box.
- When closing the fuse box, make sure that the seal of the lid is positioned correctly on the fuse box.

If a newly inserted fuse also blows, have the cause traced and rectified at a qualified specialist workshop.

Ensure the following before replacing a fuse:
- The vehicle is secured against rolling away.
- All electrical consumers are switched off.
- The vehicle is switched off.

The electrical fuses are located in various fuse boxes:
- Fuse box in the engine compartment on the driver's side (→ page 317)
• Fuse box on the driver’s side of the cockpit (→ page 318)
• Fuse box in the front passenger footwell (→ page 318)
• Fuse box in the cargo compartment on the right-hand side of the vehicle, when viewed in the direction of travel (→ page 318)

Opening and closing the fuse box in the engine compartment

Requirements
• A dry cloth and a screwdriver are available.

Observe the notes on electrical fuses (→ page 316).

Opening

⚠️ WARNING Risk of injury from using the windshield wipers when the hood is open

If the windshield wipers start moving when the hood is open, you could be trapped by the wiper linkage.

Always switch off the windshield wipers and the vehicle first if you need to open the hood.

Remove any existing moisture from the fuse box using a dry cloth.
Loosen screws 4 and remove fuse box lid 3 from the top.

Closing

Check whether the seal is positioned correctly in lid 6.

Open the hood (→ page 287).
Turn clips 2 on cover 1 a quarter-turn to counter-clockwise.
Pull cover 1 up.
Insert lid 3 into the bracket at the rear of the fuse box.
Fold down lid 3 of the fuse box and tighten screws 4.
Insert cover 1 on both sides.
Turn clips 2 on cover 1 a quarter-turn clockwise.
Close the hood.

Opening and closing the fuse box in the cockpit
- Observe the notes on electrical fuses (→ page 316).

The fuse box is on the driver's side on the side of the cockpit under a cover.
Mercedes-Benz recommends you have the fuse box opened at an authorized Mercedes-Benz Center.

Opening and closing the fuse box in the front passenger footwell
Observe the notes on electrical fuses (→ page 316).

Opening and closing the fuse box in the cargo compartment
Observe the notes on electrical fuses (→ page 316).

Remove cover 1.
The fuse assignment diagram is on the side of the fuse box.

To open: open cover 1 in the direction of the arrow and remove it.
To close: reinsert cover 1.
Notes on noise or unusual handling characteristics

Make sure there are no vibrations, noises or unusual handling characteristics when the vehicle is in motion. This may indicate that the wheels or tires are damaged. Hidden tire damage could also be causing the unusual handling characteristics. If you suspect that a tire is defective, reduce your speed immediately and have the tires and wheels checked at a qualified specialist workshop.

Notes on regularly inspecting wheels and tires

**WARNING Risk of injury through damaged tires**

Damaged tires can cause tire pressure loss. Check the tires regularly for signs of damage and replace any damaged tires immediately.

**WARNING Risk of hydroplaning due to insufficient tire tread**

Insufficient tire tread will result in reduced tire grip. In heavy rain or slush the risk of hydroplaning is increased, in particular where speed is not adapted to suit the conditions. Thus, you should regularly check the tread depth and the condition of the tread across the entire width of all tires.

Minimum tread depth for:
- Summer tires: \( \frac{1}{16} \text{ in (3 mm)} \)
- M+S tires: \( \frac{1}{4} \text{ in (4 mm)} \)

For safety reasons, replace the tires before the legally-prescribed limit for the minimum tread depth is reached.

Carry out the following checks on all wheels regularly, at least once a month or as required, for example, prior to a long journey or driving off-road:
- Check the tire pressure (→ page 320).
- Visually inspect wheels and tires for damage.
- Check the valve caps.
- Visual check of the tire tread depth and the tire contact surface across the entire width. The minimum tread depth for summer tires is \( \frac{1}{16} \text{ in (3 mm)} \) and for winter tires \( \frac{1}{4} \text{ in (4 mm)} \).

Six marks show where the bar indicators (arrow) are integrated into the tire tread. They are visible once a tire tread depth of approximately \( \frac{1}{32} \text{ in (1.6 mm)} \) has been reached.
Notes on snow chains

NOTE Damage to components of the vehicle body or chassis due to mounted snow chains

If you mount snow chains to the front wheels of 4MATIC vehicles, you may damage components of the vehicle body or chassis.

Only mount snow chains to the rear wheels of 4MATIC vehicles.

Snow chains are only permissible for certain wheel/tire combinations. You can obtain information about this from an authorized Mercedes-Benz Center.

For safety reasons, only use snow chains that have been specifically approved for your vehicle by Mercedes-Benz, or snow chains with the same quality standard.

If snow chains are installed, the maximum permissible speed is 30 mph (50 km/h).

Vehicles with Active Parking Assist: do not use Active Parking Assist when snow chains are installed.

You can deactivate ESP® to pull away (→ page 174). This allows the wheels to spin, achieving an increased driving force.

Tire pressure

WARNING Risk of accident due to insufficient or excessive tire pressure

Underinflated or overinflated tires pose in particular the following risks:

- The tires can burst.
- The tires can wear excessively and/or unevenly.
- The driving characteristics as well as the steering and braking characteristics may be greatly impaired.

Comply with the recommended tire pressures and check the tire pressure of all tires, including the spare wheel, regularly:

- Monthly
- When the load changes
- Before embarking on a longer journey
- If operating conditions change, e.g. off-road driving

Adjust the tire pressure, if necessary.

WARNING Risk of accident due to too low a tire pressure

Tires with pressure that is too low can:

- Shorten the service life of the tires.
- Cause increased tire damage.
- Adversely affect driving characteristics and thus driving safety, e.g. due to hydroplaning.

Tire pressure which is too high or too low can:
ing properties and the handling characteristics.

Avoid excessively low tire pressure.

Tire pressure which is too low can cause:
- Tire defects as a result of overheating
- Impaired handling characteristics
- Irregular wear
- Increased fuel consumption

**WARNING** Risk of accident due to too high a tire pressure

Tires with excessively high pressure can burst. In addition, they also suffer from irregular wear, which can significantly impair the braking properties and the handling characteristics.

Avoid excessively high tire pressures.

Tire pressure which is too high can cause:
- Increased braking distance
- Impaired handling characteristics
- Irregular wear
- Impaired driving comfort
- Susceptibility to damage

**WARNING** Risk of accident due to repeated pressure drop in the tires

The wheels, valves or tires could be damaged. Too low a tire pressure can lead to the tires bursting.

- Examine the tires for foreign objects.
- Check whether the tire has a puncture or the valve has a leak.
- If you are unable to rectify the damage, contact a qualified specialist workshop.

You can find information on tire pressure for the vehicle's factory-installed tires on the following labels:
- Tire and loading information placard on the B-pillar of your vehicle (→ page 325).
- Tire pressure table on the inside of the fuel filler flap (→ page 322).

Observe the maximum tire pressure (→ page 332).

Use a suitable pressure gauge to check the tire pressure. The outer appearance of a tire does not permit any reliable conclusion about the tire pressure.

Only correct the tire pressure when the tires are cold. Conditions for cold tires:
- The vehicle has been parked with the tires out of direct sunlight for at least three hours.
- The vehicle has traveled less than 1 mile (1.6 km).

The vehicle's tires heat up when driving. As the temperature of the tires increases, so too does the tire pressure.

**Vehicles with a tire pressure monitoring system:** you can also check the tire pressure using the on-board computer (→ page 324).

The tire pressure recommended for increased load/speed in the tire pressure table can affect the ride comfort.
**WARNING** Risk of accident due to unsuitable accessories on tire valves

If you mount unsuitable accessories onto tire valves, the tire valves may be overloaded and malfunction, which can cause tire pressure loss.

- Only screw standard valve caps or valve caps specifically approved by Mercedes-Benz for your vehicle onto the tire valve.

---

**Tire pressure table**

The tire pressure table is on the inside of the fuel filler flap.

- The data shown in the images is example data.

The tire pressure table shows the recommended tire pressure for all tires approved for this vehicle. The recommended tire pressures are valid for cold tires under various operating conditions according to the load and/or speed of the vehicle.

If one or more tire sizes precede a tire pressure, the following tire pressure information is only valid for those tire sizes and their respective load condition.

The load conditions "partially laden" and "fully laden" are defined in the table for different numbers of passengers and amounts of luggage. The actual number of seats may differ from this.

Some tire pressure tables only show the rim diameter instead of the complete tire size, e.g. **R18**. The rim diameter is part of the tire size and can be found on the tire side wall (→ page 333).

- Tire and loading information placard (→ page 325)
- Maximum tire pressure (→ page 332)
Checking the tire pressure manually

- Read the tire pressure recommended for the current operating conditions from the tire and loading information placard or the tire pressure table. Observe the notes on tire pressure.
- Remove the valve cap of the tire to be checked.
- Press the tire pressure gauge securely onto the valve.
- Read the tire pressure.
- If the tire pressure is lower than the recommended value, increase the tire pressure to the recommended value.
- If the tire pressure is higher than the recommended value, release air. To do so, press down the metal pin in the valve, e.g. using the tip of a pen. Then check the tire pressure again using the tire pressure gauge.
- Screw the valve cap onto the valve.

Further related subjects:
- Notes on tire pressure (→ page 320)
- Tire pressure table (→ page 322)

Tire pressure monitoring system

Function of the tire pressure monitoring system

**DANGER Risk of accident due to incorrect tire pressure**

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.
When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

The system checks the tire pressure and the tire temperature of the tires fitted to the vehicle by means of a tire pressure sensor. The tire pressure and the tire temperature appear on the on-board computer (page 324). If there is a substantial pressure loss or if the tire temperature is excessive, you will be warned with display messages (page 412) or the [ ] warning lamp in the instrument cluster (page 434).

The tire pressure monitoring system is only an aid. It is the driver’s responsibility to set the tire pressure to the recommended cold tire pressure suitable for the operating situation.

In most cases, the tire pressure monitoring system will automatically update the new reference values after you have changed the tire pressure. You can, however, also update the reference values by restarting the tire pressure monitoring system manually (page 325).

System limits
The system may be impaired or may not function particularly in the following situations:

- incorrect reference values were taught in
- sudden pressure loss caused by a foreign object penetrating the tire, for example
- there is a malfunction caused by another radio signal source

Checking the tire pressure with the tire pressure monitoring system

Requirements
- The vehicle is switched on.

On-board computer:

Service ► Tires

One of the following displays will appear:

- Tire pressure will be displayed after driving a few minutes
- Tire Pressure Monitor Active: the teach-in process of the system is not yet complete. The tire pressures are already being monitored.

Compare the tire pressure with the recommended tire pressure for the current operating condition (page 322). Additionally, observe the notes on cold tires (page 320).
The values displayed in the on-board computer may deviate from those of the tire pressure gauge as they refer to sea level. At high elevations, the tire pressure values indicated by a pressure gauge will be higher than those shown by the on-board computer. In this case, do not reduce the tire pressure.

## Restarting the tire pressure monitoring system

### Requirements
- The recommended tire pressure is correctly set for the respective operating status on all of the wheels (→ page 320).

Restart the tire pressure monitoring system in the following situations:
- The tire pressure has changed.
- The wheels or tires have been changed or newly fitted.

### On-board computer:

**Service**  **Tires**

- Swipe downwards on Touch Control on the left-hand side of the steering wheel. The **Use Current Pressures as New Reference Values** message will be shown on the instrument display.
- To restart, press Touch Control on the left-hand side of the steering wheel. The **Tire Press. Monitor Restarted** message will be shown on the instrument display. Current warning messages will be deleted and the yellow [ ] warning lamp will go out.
- After you have been driving for a few minutes, the system will check whether the current tire pressures are within the specified range. The current tire pressures will then be accepted as reference values and monitored.

Be sure also to pay attention to the following related topic:
- Notes on tire pressure (→ page 320)

### Loading the vehicle

**Notes on Tire and Loading Information placard**

**WARNING** Risk of accident from overloaded tires

Overloaded tires may overheat and burst as a consequence. Overloaded tires can also impair the steering and handling characteristics and lead to brake failure.

- Observe the load rating of the tires.
- The load rating must be at least half the permissible axle load of the vehicle.
- Never overload the tires by exceeding the maximum load.

The Tire and Loading Information placard is on the B-pillar on the driver’s side of the vehicle.
The data shown in the illustration is example data. The Tire and Loading Information placard shows the following information:

- **Maximum number of seats**
- **Maximum permissible load** comprises the gross weight of all vehicle occupants, load and luggage.
- **Recommended tire pressure** for cold tires. The recommended tire pressures are valid for the maximum permissible load and up to the maximum permissible vehicle speed.

Please also note:

- Information on permissible weights and loads on the vehicle identification plate (→ page 351).
- Information on tire pressure in the tire pressure table (→ page 322).

Further related subjects:

- Determining the maximum permissible load (→ page 326)
- Notes on tire pressure (→ page 320)

**Steps for Determining Correct Load Limit**

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575, pursuant to
the "National Traffic and Motor Vehicle Safety Act of 1966".

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1,400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1,400 – 750 (5 x 150) = 650 lbs.)

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

Not all vehicles are permitted to tow a trailer. Towing a trailer is only permitted if a trailer-hitch is installed. Please consult an authorized Mercedes-Benz dealer if you have any questions about towing a trailer with your vehicle.

Even if you have calculated the total load carefully, you should still make sure that the maximum permissible gross weight and the maximum gross axle weight rating of your vehicle are not exceeded. Details can be found on the vehicle identification plate.

Have your loaded vehicle – including driver, occupants and load – weighed on a vehicle weighbridge. The measured values may not exceed the maximum permissible values stated on the vehicle identification plate.

Further related subjects:
- Calculation example for determining the maximum load (→ page 327)
- Tire and Loading Information placard (→ page 325)
- Tire pressure table (→ page 322)
- Vehicle identification plate (→ page 351)

Calculation example for determining the maximum load

The following table shows examples of how to calculate total and load capacities with varying seating configurations and different numbers and sizes of occupants. The following examples use a maximum load of 1500 lbs (680 kg). This is for illustration purposes only. Make sure you are using the actual load limit for your vehicle stated on your vehicle’s Tire and Loading Information placard (→ page 325).

The higher the weight of all the occupants, the smaller the maximum load for luggage.
### Step 1

<table>

Tire labeling
Overview of tire labeling

1. Uniform Tire Quality Grading Standards
2. DOT (Department of Transportation), (TIN) Tire Identification Number
3. Manufacturer
4. Characteristics of the tire (→ page 333)
5. Tire name
6. Maximum tire load (→ page 332)
7. Maximum tire pressure (→ page 332)
8. Tire size designation, load-bearing capacity, speed rating and load index (→ page 333)
9. Tire Quality Grading

In accordance with the US Department of Transportation's "Uniform Tire Quality Grading Standards", tire manufacturers are required to grade their tires on the basis of the following three performance factors:

1. Tread wear grade
2. Traction grade
3. Temperature grade

The data shown in the illustration is example data.

The classification is not legally stipulated for Canada, but it is generally stated.

Tread wear grade
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as...
well on the government course as a tire graded 100.
The relative performance of tires depends upon
the actual conditions of their use, however, and
may depart significantly from the norm due to var-
iations in driving habits, service practices and dif-
fferences in road characteristics and climate.

### Traction grade

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of accident from tire overheating and tire failure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.</td>
<td></td>
</tr>
<tr>
<td>Observe the recommended tire pressure.</td>
<td></td>
</tr>
<tr>
<td>Regularly check the pressure of all the tires.</td>
<td></td>
</tr>
<tr>
<td>Adjust the tire pressure, if necessary.</td>
<td></td>
</tr>
</tbody>
</table>

DANGER Risk of accident due to inadequate traction

The traction grade assigned to this tire is based on straight-ahead braking traction tests.

- Always adapt your driving style and drive at a speed to suit the prevailing traffic and weather conditions.

NOTE Damage to the drivetrain from wheelspin

- Avoid wheelspin.

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

### Temperature grade

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of accident from tire over-heat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.</td>
<td></td>
</tr>
<tr>
<td>Observe the recommended tire pressure.</td>
<td></td>
</tr>
<tr>
<td>Regularly check the pressure of all the tires.</td>
<td></td>
</tr>
<tr>
<td>Adjust the tire pressure, if necessary.</td>
<td></td>
</tr>
</tbody>
</table>

DANGER Risk of accident due to inadequate traction

The traction grade assigned to this tire is based on straight-ahead braking traction tests.

- Always adapt your driving style and drive at a speed to suit the prevailing traffic and weather conditions.

NOTE Damage to the drivetrain from wheelspin

- Avoid wheelspin.

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

**DOT, Tire Identification Number (TIN)**

US tire regulations stipulate that every tire manu-
facturer or retreader must imprint a TIN in or on the side wall of each tire produced.
The data shown in the image is example data. The TIN is a unique identification number to identify tires and comprises the following:

- **DOT (Department of Transportation):** tire symbol marks indicating that the tire complies with the requirements of the US Department of Transportation.
- **Manufacturer identification code:** manufacturer identification code contains details of the tire manufacturer. New tires have a code with two symbols. Retreaded tires have a code with four symbols. Further information on retreaded tires (page 337).
- **Tire size:** identifier describes the tire size.
- **Tire type code:** tire type code can be used by the manufacturer as a code to describe specific characteristics of the tire.
- **Manufacturing date:** manufacturing date provides information about the age of a tire. The 1st and 2nd positions represent the calendar week and the 3rd and 4th positions state the year of manufacture (e.g. "3208" represents the 32nd week of 2008).

---

### Information on the maximum tire load

Maximum tire load is the maximum permissible weight for which the tire is approved. Do not overload the tires by exceeding the specified load limit. The maximum permissible load can be found on the vehicle’s tire and loading information placard on the B-pillar on the driver’s side (page 325).

### Specifications for maximum tire pressure

Never exceed maximum tire pressure specified for the tire. Always observe the recommended tire pressure for your vehicle when adjusting the tire pressure (page 322).
**Information on tire characteristics**

The data shown in the image is example data. This information describes the type of tire cord and the number of layers in side wall and under tire tread.

**Tire size designation, load-bearing capacity, speed rating and load index**

- **WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating.

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

- First letter(s)
- Nominal tire width in millimeters
- Aspect ratio in %
- Tire code
- Rim diameter
- Load-bearing index
- Speed rating
- Load index

The data shown in the illustration is example data.

Information about reading tire data can be obtained from any qualified specialist workshop.
Wheels and tires

First letter(s)
- Without: passenger vehicle tires according to European manufacturing standards.
- "P": passenger vehicle tires according to US manufacturing standards.
- "LT": light truck tires according to US manufacturing standards.
- "T": compact emergency spare wheels with high tire pressure that are only designed for temporary use in an emergency.

Aspect ratio
- Ratio between tire height and tire width in percent (tire height divided by tire width).

Tire code
- "R": radial tire
- "D": bias ply tire
- "B": bias radial tires
- "ZR": radial tire with a maximum speed above 149 mph (240 km/h) (optional)

Rim diameter
- The diameter of the bead seat (not the diameter of the rim flange). The rim diameter is specified in inches (in).

Load-bearing index
- Numerical code that specifies the maximum load-bearing capacity of a tire (e.g. "91" corresponds to 1,356 lbs (615 kg)). The load-bearing capacity of the tire must be at least half the gross axle weight rating of your vehicle. Do not overload the tires by exceeding the specified load limit.

See also:
- Maximum permissible load on the tire and loading information placard (→ page 325)
- Maximum tire load (→ page 332)
- Load index

Speed rating
- Specifies the approved maximum speed of the tire.

An electronic speed limiter prevents your vehicle from exceeding a speed of 130 mph (210 km/h).

Make sure that your tires have the required speed rating. You can obtain information on the required speed rating from an authorized Mercedes-Benz Service Center.

Summer tires

<table>
<thead>
<tr>

Index | Speed rating
--- | ---
ZR...Y | up to 186 mph (300 km/h)
ZR...(Y) | over 186 mph (300 km/h)
ZR | over 149 mph (240 km/h)

- Specifying the speed rating as the "ZR" index in tire code is optional for tires up to 186 mph (300 km/h).
- If your tire code includes "ZR" and there is no speed rating, find out what the maximum speed is from the tire manufacturer.
- If load-bearing index and speed rating are in brackets, the maximum speed rating of your tire is above 186 mph (300 km/h). To find out the maximum speed, ask the tire manufacturer.

All-weather tires and winter tires

Index | Speed rating
--- | ---
Q M+S | up to 100 mph (160 km/h)
T M+S | up to 118 mph (190 km/h)
H M+S | up to 130 mph (210 km/h)
V M+S | up to 149 mph (240 km/h)

Winter tires bear the snowflake symbol and fulfill the requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) regarding the tire traction on snow.

Load index:
- No specification given: standard load (SL) tire
- "XL" or "Extra Load": extra load tire or reinforced tire
- "Light Load": light load tire

- "C", "D", "E": a load range that depends on the maximum load that the tire can carry at a certain pressure

**Definition of terms for tires and loading**

**Tire structure and characteristics:** describes the number of layers or the number of rubber-coated belts in the tire contact surface and the tire wall. These are made of steel, nylon, polyester and other materials.

**Bar:** metric unit for tire pressure. 14.5038 pounds per square inch (psi) and 100 kilopascal (kPa) is the equivalent of one bar.

**DOT (Department of Transportation):** DOT-marked tires fulfill the requirements of the U.S. Department of Transportation.

**Average weight of the vehicle occupants:** the number of vehicle occupants for which the vehicle is designed, multiplied by 150 lb (68 kg).

**Uniform Tire Quality Grading Standards:** a uniform standard to grade the quality of tires with regard
to tread quality, tire traction and temperature characteristics. The quality grading assessment is made by the manufacturer following specifications from the U.S. government. The quality grade of a tire is printed on the side wall of the tire.

**Recommended tire pressure:** the recommended tire pressure is the tire pressure specified for the tires mounted on the vehicle at the factory. The tire and information placard contains the recommended tire pressure for cold tires, the maximum permissible load and the maximum permissible vehicle speed.

The tire pressure table contains the recommended tire pressure for cold tires under various operating conditions, i.e. loading and/or speed of the vehicle.

**Increased vehicle weight due to optional equipment:** the combined weight of all standard and optional equipment available for the vehicle, regardless of whether it is actually installed on the vehicle or not.

**Rim:** the part of the wheel on which the tire is installed.

**GAWR (Gross Axle Weight Rating):** the GAWR is the maximum gross axle weight rating. The actual load on an axle must never exceed the gross axle weight rating. The gross axle weight rating can be found on the vehicle identification plate on the B-pillar on the driver’s side.

**Speed rating:** the speed rating is part of the tire identification. It specifies the speed range for which a tire is approved.

**GVW (Gross Vehicle Weight):** the gross vehicle weight comprises the weight of the vehicle including fuel, tools, the spare wheel, any accessories installed, occupants, luggage and the trailer noseweight, if applicable. The gross vehicle weight must not exceed the gross vehicle weight rating GVWR as specified on the vehicle identification plate on the B-pillar on the driver’s side.

**GVWR (Gross Vehicle Weight Rating):** the GVWR is the maximum permitted gross weight of the fully laden vehicle (weight of the vehicle including all accessories, occupants, fuel, luggage and the trailer drawbar noseweight if applicable). The gross vehicle weight rating is specified on the vehicle identification plate on the B-pillar on the driver’s side.

**Maximum weight of the laden vehicle:** the maximum weight is the sum of the curb weight of the vehicle, the weight of the accessories, the maximum load and the weight of optional equipment installed at the factory.

**Kilopascal (kPa):** metric unit for tire pressure. 6.9 kPa corresponds to 1 psi. Another unit for tire pressure is bar. 100 kilopascal (kPa) equals 1 bar.

**Load index:** in addition to the load-bearing index, the load index may also be printed on the side wall of the tire. This specifies the load-bearing capacity of the tire more precisely.

**Curb weight:** the weight of a vehicle with standard equipment including the maximum capacity of fuel, oil and coolant. It also includes the air conditioning system and optional equipment if these are installed on the vehicle, but does not include passengers or luggage.

**Maximum tire load:** the maximum tire load is the maximum permissible weight in kilograms or lbs for which a tire is approved.

**Maximum permissible tire pressure:** maximum permissible tire pressure for one tire.
Maximum load on one tire: maximum load on one tire. This is calculated by dividing the maximum axle load of one axle by two.

PSI (pounds per square inch): standard unit of measurement for tire pressure.

Aspect ratio: ratio between tire height and tire width in percent.

Tire pressure: the pressure inside the tire which applies an outward force to every square inch of the tire. The tire pressure is specified in pounds per square inch (psi), in kilopascals (kPa) or in bar. The tire pressure should only be corrected when the tires are cold.

Cold tire pressure: the tires are cold when the vehicle has been parked for at least 3 hours without direct sunlight on the tires or the vehicle has been driven for less than 1 mile (1.6 km).

Tire contact surface: the part of the tire that comes into contact with the road.

Tire bead: the purpose of the tire bead is to ensure that the tire sits securely on the wheel rim. There are several wire cores in the tire bead to prevent the tire from changing length on the wheel rim.

Side wall: the part of the tire between the tread and the tire bead.

Weight of optional equipment: the combined weight of the optional equipment weighing more than the replaced standard parts and more than 5 lbs (2.3 kg). This optional equipment, such as high-performance brakes, level control system, a roof luggage rack or high-performance batteries, is not included in the curb weight and the weight of the accessories.

TIN (Tire Identification Number): a unique identification number which can be used by a tire manufacturer to identify tires, for example, in a product recall, and thus identify the purchasers. The TIN is made up of the manufacturer’s identity code, tire size, tire type code and the manufacturing date.

Load-bearing index: the load-bearing index is a code that contains the maximum load-bearing capacity of a tire.

Traction: traction is the grip resulting from friction between the tires and the road surface.

Wear indicator: narrow bars (tread wear bars) that are distributed over the tire contact surface. If the tire tread is level with the bars, the wear limit of 1/16 in (1.6 mm) has been reached.

Distribution of vehicle occupants: distribution of vehicle occupants over designated seat positions in a vehicle.

Maximum permissible payload weight: nominal load and luggage load plus 150 lb (68 kg) multiplied by the number of seats in the vehicle.

Changing a wheel

Notes on selecting, installing and replacing tires

WARNING Risk of accident due to incorrect wheel and tire dimensions

If wheels and tires of the wrong size are installed, the service brakes or components in the brake system and in the wheel suspension may be damaged.

Always replace wheels and tires with ones that fulfill the specifications of the original part.
For wheels, pay attention to the following:
- Designation
- Type

For tires, pay attention to the following:
- Designation
- Manufacturer
- Type

**WARNING** Risk of injury through exceeding the specified tire load-bearing capacity or the permissible speed rating

Exceeding the specified tire load rating or the permissible speed rating may lead to tire damage and to the tires bursting.

- Therefore, only use tire types and sizes approved for your vehicle model.
- Observe the tire load rating and speed rating required for your vehicle.

1  **NOTE** Vehicle and tire damage caused by non-approved tire types and sizes

For safety reasons, only use tires, wheels and accessories which have been specially approved by Mercedes-Benz for your vehicle. These tires are specially adapted to the active safety systems, such as ABS, ESP® and 4MATIC, and marked as follows:
- MO = Mercedes-Benz Original
- MOE = Mercedes-Benz Original Extended (run-flat tires only for certain wheels)
- MO1 = Mercedes-Benz Original (only certain AMG tires)

Otherwise, certain properties, such as handling characteristics, vehicle noise emissions, consumption, etc. could be adversely affected. Furthermore, other tire sizes could result in the tires rubbing against the body and axle components when loaded. This could result in damage to the tire or the vehicle.

Only use tires, wheels and accessories that have been checked and recommended by Mercedes-Benz.

1  **NOTE** Risk to driving safety from retreaded tires

Retreaded tires are neither tested nor recommended by Mercedes-Benz, since previous damage cannot always be detected on retreaded tires. For this reason driving safety cannot be guaranteed.

- Do not use used tires if you have no information about their previous usage.

1  **NOTE** Possible wheel and tire damage when driving over obstacles

Large wheels have a smaller section width. As the section width decreases, the risk of wheels and tires being damaged when driving over obstacles increases.
Avoid obstacles or drive especially carefully.

Reduce your speed when driving over curbs, speed bumps, manhole covers and potholes.

Avoid particularly high curbs.

**NOTE** Possible wheel and tire damage when parking on curbs or in potholes

Parking on curbs or in potholes can damage the wheels and tires.

- Only park on as level a surface as possible.
- Avoid curbs and potholes when parking.

**NOTE** Damage to electronic component parts due to the use of tire-installing tools

Vehicles with tire pressure monitoring system: There are electronic component parts in the wheel.

If tire-installing tools are positioned in the area of the valve, the electronic components could be damaged.

- Tire-installing tools should not be applied in the area of the valve.
- Always have tires change at a qualified specialist workshop.

**NOTE** Damage to summer tires at low ambient temperatures

At low ambient temperatures, tears could form when driving with summer tires, causing permanent damage to the tires.

- At temperatures below 45 °F (7 °C) use M+S tires.

Accessory parts which are not approved for your vehicle by Mercedes-Benz, or which are not used correctly, can impair the operating safety.

Before purchasing and using non-approved accessories, visit a qualified specialist workshop and inquire about:

- Suitability
- Legal stipulations
- Factory recommendations

**WARNING** Risk of accident with high-performance tires

The special tire tread in combination with the optimized tire compound means that the risk of skidding and hydroplaning on wet roads is increased.

In addition, the tire grip is greatly reduced at a low outside temperature and tire running temperature.

- Switch on the ESP® and adapt your driving style accordingly.
- Use M+S tires at outside temperatures of less than 50 °F (10 °C).
- Only use the tires for their intended purpose.
Observe the following when selecting, installing and replacing tires:

- Furthermore, the use of certain tire types in certain regions and areas of operation can be highly beneficial.
- Only use tires and wheels of the same type (summer tires, winter tires, MOExtended tires) and the same make.
- Only install wheels of the same size on one axle (left and right).
- It is only permissible to install a different wheel size in the event of a flat tire in order to drive to the specialist workshop.
- Vehicles with a tire pressure monitoring system: all installed wheels must be equipped with functioning sensors for the tire pressure monitoring system.
- At temperatures below 45°F (7°C) use winter tires or all-season tires marked M+S for all wheels.
- Winter tires bearing the snowflake symbol in addition to the M+S marking provide the best possible grip in wintry road conditions.
- For M+S tires, only use tires with the same tread.
- Observe the maximum permissible speed for the M+S tires installed.
- If the tire's maximum speed is below that of the vehicle, this must be indicated by an appropriate label in the driver's field of vision.
- Break in new tires at moderate speeds for the first 60 miles (100 km).
- Replace the tires after six years at the latest, regardless of wear.
- When replacing with tires that do not feature run-flat characteristics: vehicles with MOExtended tires are not equipped with a TIREFIT kit at the factory. Equip the vehicle with a TIREFIT kit after replacing with tires that do not feature run-flat characteristics, e.g. winter tires.

For more information on wheels and tires, contact a qualified specialist workshop.

Be sure to also observe the following further related subjects:
- Notes on tire pressure (→ page 320)
- Tire and Loading Information placard (→ page 325)
- Tire size designation, load-bearing capacity, speed rating and load index (→ page 333)
- Tire pressure table (→ page 322)
- Notes on the emergency spare wheel (→ page 347)

**WARNING** Risk of accident caused by non-approved tire types

If you use tire types that have not been adapted to changes made to the factory speed limit, this can have the following consequences:

- The tires are not suitable for high speeds and the corresponding driving dynamics.
- The tires wear unevenly and affect the roadworthiness of the vehicle.
- ABS, ESP® and cruise control operation are restricted.

This can jeopardize road safety.
Notes on rotating wheels

**WARNING** Risk of injury through different wheel sizes

Rotating the front and rear wheels can severely impair the driving characteristics. The wheel brakes or suspension components may also be damaged.

- Rotate front and rear wheels only if the wheels and tires are of the same dimensions.

Observe the instructions and safety notes on "Changing a wheel" (→ page 337)

The wear patterns on the front and rear wheels differ:
- Front wheels wear more on the tire shoulder
- Rear wheels wear more in the center of the tire

Do not drive with tires that have too little tread depth. This significantly reduces traction on wet roads (hydroplaning).

On vehicles that have the same size front and rear wheels, rotate the wheels according to the intervals in the tire manufacturer’s warranty book in your vehicle documents. If this is not available, rotate the tires every 3,000 to 6,000 miles (5,000 to 10,000 km), depending on the wear. Ensure that the direction of rotation is maintained.

Notes on storing wheels

When storing wheels, observe the following notes:
- After removing wheels, store them in a cool, dry and preferably dark place.
- Protect the tires from contact with oil, grease or fuel.

Overview of the tire-change tool kit

Apart from some country-specific variants, vehicles are not equipped with a tire-change tool kit. For more information on which tire-changing tools are required and approved for performing a wheel change on your vehicle, consult a qualified specialist workshop.

You require the following tools, for example, to change a wheel:
- Jack
- Chock
- Lug wrench
- Alignment bolt

The tire-change tool kit is located in tool bag (1) in the cargo compartment.

When stowing the tool bag, make sure that it is adequately secured.
Preparing the vehicle for a wheel change

Requirements:
- The vehicle is not on a slope.
- The vehicle is on solid, non-slippery and level ground.

Removing and installing the wheel trim/hub caps

Requirements
- The vehicle is prepared for a wheel change (→ page 342).
To remove: position center cap 2 from the tire-change tool kit on hub cap 1.
Position wheel wrench 3 on center cap 2.
Using wheel wrench 3, turn hub cap 1 counter-clockwise and remove it.
To install: follow the instructions above in reverse order.

 Specified tightening torque: 20 lb-ft (27 Nm).

Raising the vehicle when changing a wheel

Requirements
- There are no persons in the vehicle.
- The vehicle has been prepared for a wheel change (→ page 342).
- The wheel trims and hub caps have been removed (→ page 342).

Important notes on using the jack:
- Use only a vehicle-specific jack that has been approved by Mercedes-Benz to raise the vehicle.
- The jack is only designed for raising and holding the vehicle for a short time while a wheel is being changed and not for maintenance work under the vehicle.
- The jack must be placed on a firm, flat and non-slip surface. If necessary, use a large, flat, load-bearing, non-slip underlay.
- The foot of the jack must be positioned vertically under the jack support point.

Rules of conduct when the vehicle is raised:
- Never place your hands or feet under the vehicle.
- Never lie under the vehicle.
- Do not start the vehicle and do not release the electric parking brake.

• Do not open or close any doors or the tailgate.

Using the lug wrench, loosen the wheel bolts on the wheel you wish to change by about one full turn. Do not unscrew the screws completely.
Position of the jack support points

**WARNING** Risk of injury from incorrect positioning of the jack

If you do not position the jack correctly at the appropriate jacking point of the vehicle, the jack could tip with the vehicle raised.

- Only position the jack at the appropriate jacking point of the vehicle. The base of the jack must be positioned vertically under the jacking point of the vehicle.

**NOTE** Damage to the vehicle due to the jack

If you do not position the jack at the jack support points provided for this purpose, you could damage your vehicle.

- Only position the jack at the jack support points provided for this purpose.

- Take the ratchet out of the tire-change tool kit and place it on the hexagon nut of the jack so that the letters "AUF" are visible.

- Position support 2 of jack 4 on jack support point 1.
- Turn ratchet 3 clockwise until support 2 sits completely on jack support point 1 and the base of the jack lies evenly on the ground.
- Turn ratchet 3 until the tire is raised a maximum of 1.2 in (3 cm) from the ground.
- Loosen and remove the wheel (→ page 345).
Removing a wheel

Requirements
- The vehicle is raised (→ page 343).

Vehicles with AMG ceramic high-performance composite braking system:

NOTE Damage to the ceramic brake disc when changing a wheel

Mercedes-AMG vehicles with ceramic brake discs: during removal and repositioning of the wheel, the wheel rim can strike the ceramic-brake disc and damage it.
- Take particular care.
- Ask another person for assistance or use a second alignment bolt.

When changing a wheel, avoid applying any force to the brake discs, as this could impair the level of comfort when braking.

NOTE Damage to threading from dirt on wheel bolts
- Do not place wheel bolts in sand or on a dirty surface.
- Unscrew the uppermost wheel bolt completely.
- Screw centring pin 1 into the thread instead of the wheel bolt.
- Unscrew the remaining wheel bolts completely.
- Remove the wheel.

Installing a new wheel

Requirements
- The wheel to be changed is removed and the alignment bolt is screwed in (→ page 345).

WARNING Risk of accident from losing a wheel

Oiled, greased or damaged wheel bolt/wheel nut threads or wheel hub/wheel mounting bolt threads can cause the wheel bolts/wheel nuts to come loose.
- Never oil or grease the threads.
- In the event of damage to the threads, contact a qualified specialist workshop immediately.
- Have the damaged wheel bolts or damaged hub threads replaced.
- Do not continue driving.
- Observe the information on the choice of tires (→ page 337).
For tires with a specified direction of rotation, an arrow on the side wall of the tire indicates the correct direction of rotation. Observe the direction of rotation when installing.

**Vehicles with AMG ceramic high-performance composite braking system:**

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Damage to the ceramic brake disc when changing a wheel</th>
</tr>
</thead>
</table>

Mercedes-AMG vehicles with ceramic brake discs: during removal and repositioning of the wheel, the wheel rim can strike the ceramic-brake disc and damage it.

- Take particular care.
- Ask another person for assistance or use a second alignment bolt.

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Damage to the wheels’ plastic elements when changing a wheel</th>
</tr>
</thead>
</table>

Plastic elements on wheels may be damaged when removing and repositioning the wheel.

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of injury from tightening wheel bolts and nuts</th>
</tr>
</thead>
</table>

If you tighten the wheel bolts or wheel nuts when the vehicle is raised, the jack could tip.

- Only tighten wheel bolts or wheel nuts when the vehicle is on the ground.

- Be sure to observe the instructions and safety notes on "Changing a wheel" (→ page 337).
- For safety reasons, only use wheel bolts which have been approved by Mercedes-Benz and for the wheel in question.

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Risk of injury from tightening wheel bolts and nuts</th>
</tr>
</thead>
</table>

- Do not raise the wheels by the plastic elements when removing and repositioning.
- Slide the wheel to be mounted onto the alignment bolt and push it on.

<table>
<thead>
<tr>
<th>NOTE</th>
<th>Damage to paintwork of the wheel rim when screwing in the first wheel bolt</th>
</tr>
</thead>
</table>

If the wheel has too much play when screwing in the first wheel bolt, the wheel rim paint can be damaged.

- Press the wheel firmly against the wheel hub when screwing in the first wheel bolt.

- Tighten the wheel bolts evenly in a diagonal pattern in the order indicated until they are finger-tight.
- Unscrew and remove the alignment bolt.
- Tighten the last wheel bolt until it is finger-tight.
- Lower the vehicle (→ page 346).

**Lowering the vehicle after a wheel change**

**Requirements**

- The new wheel has been installed (→ page 345).
To lower the vehicle: place the ratchet onto the hexagon nut of the jack so that the letters "AB" are visible and turn counter-clockwise.

Tighten the wheel bolts evenly in a diagonal pattern in the order indicated 1 to 5 with an initial maximum force of 59 lb-ft (80 Nm).

Tighten the wheel bolts evenly in a diagonal pattern in the order indicated 1 to 5 with the specified tightening torque of 111 lb-ft (150 Nm).

WARNING: Risk of accident due to incorrect tightening torque

The wheels could come loose if the wheel bolts or wheel nuts are not tightened to the prescribed torque.

- Ensure that the wheel bolts or wheel nuts are tightened to the prescribed tightening torque.
- If you are not sure, do not move the vehicle. Contact a qualified specialist workshop and have the tightening torque checked immediately.

Check the tire pressure of the newly installed wheel and adjust it if necessary.

The following does not apply if the new wheel is an emergency spare wheel.

Vehicles with a tire pressure monitoring system: restart the tire pressure monitoring system (→ page 325).

WARNING: Risk of accident caused by incorrect wheel and tire dimensions

The wheel or tire sizes and the tire type of the emergency spare wheel or spare wheel and the wheel to be replaced may differ. The emergency spare wheel or spare wheel can significantly impair driving characteristics of the vehicle.

To prevent hazardous situations:

- Drive carefully.
- Never install more than one emergency spare wheel or spare wheel that differs in size.
- Only use an emergency spare wheel or spare wheel briefly.
- Do not deactivate ESP®.
- Have the emergency spare wheel or spare wheel of a different size replaced at the nearest qualified specialist work-
Observe the following notes on installing an emergency spare wheel:

- The maximum permissible speed with an emergency spare wheel installed is 50 mph (80 km/h).
- Do not install the emergency spare wheel with snow chains.
- Replace the emergency spare wheel after six years at the latest, regardless of wear.
- Use the wheel bolts that are included with the emergency spare wheel.
- Check the tire pressure of the emergency spare wheel installed. Correct the pressure as necessary.

- The specified tire pressure is stated on the label of the emergency spare wheel.

- Vehicles with a tire pressure monitoring system: if an emergency spare wheel is installed, the tire pressure monitoring system cannot function reliably. For a few minutes after an emergency spare wheel is installed, the system may still display the tire pressure of the removed wheel. Only restart the system again when the emergency spare wheel has been replaced with a new wheel.

Be sure to also observe the following further related subjects:

- Notes on tire pressure (→ page 320)
- Tire and Loading Information placard (→ page 325)
- Tire pressure table (→ page 322)
- Notes on installing tires (→ page 337)
- Installing an emergency spare wheel (→ page 342)
Notes on technical data
The data stated only applies to vehicles with standard equipment. You can obtain further information from an authorized Mercedes-Benz Center.

Vehicle electronics
Two-way radios

Notes on installing two-way radios

WARNING Risk of accident due to improper work on two-way radios
If two-way radios are manipulated or retrofitted incorrectly, the electromagnetic radiation from the two-way radios can interfere with the vehicle electronics and jeopardize the operating safety of the vehicle.

- You should have all work on electrical and electronic components carried out at a qualified specialist workshop.

WARNING Risk of accident due to improper operation of two-way radios
If you use two-way radios in the vehicle improperly, their electromagnetic radiation can disrupt the vehicle’s electronics. This is the case in the following situations, in particular:

- The two-way radio is not connected to an exterior antenna.
- The exterior antenna is installed incorrectly or is not a low-reflection antenna.

This could jeopardize the operating safety of the vehicle.

- Have the low-reflection exterior antenna installed at a qualified specialist workshop.
- When operating two-way radios in the vehicle, always connect them to the low-reflection exterior antenna.

NOTE Invalidation of the operating permit due to failure to comply with the instructions for installation and use
The operating permit may be invalidated if the instructions for installation and use of two-way radios are not observed.

- Only use approved frequency bands.
- Observe the maximum permissible output power in these frequency bands.
- Only use approved antenna positions.
On the rear fenders, it is recommended that you install the antenna on the side of the vehicle closest to the center of the road. Use Technical Specification ISO/TS 21609 (Road Vehicles – "EMC guidelines for installation of aftermarket radio frequency transmitting equipment") when retrofitting two-way radios. Comply with the legal requirements for detachable parts.

If your vehicle has two-way radio equipment installed, use the power supply and antenna connectors provided in the pre-installation. Observe the manufacturer's supplements when installing.

### Two-way radio transmission output
The maximum transmission output (PEAK) at the base of the antenna must not exceed the values in the following table.

#### Frequency band and maximum transmission output

<table>
<thead>
<tr>
<th>Frequency band</th>
<th>Maximum transmission output</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short wave 3 - 54 MHz</td>
<td>100 W</td>
</tr>
<tr>
<td>4-m- frequency band 74 - 88 MHz</td>
<td>30 W</td>
</tr>
</tbody>
</table>

The following can be used in the vehicle without restrictions:

- two-way radios with a maximum transmission output of up to 100 mW
- RF transmitters with transmitter frequencies in the 380 - 410 MHz frequency band and a maximum transmission output of up to 2 W (TETRA)
There are no restrictions when positioning the antenna on the outside of the vehicle for the following frequency bands:
- Terrestrial Trunked Radio (TETRA)
- 70-cm-frequency band
- 2G/3G/4G

**Regulatory radio identification and notes**

**Regulatory radio identification of small components**

Manufacturer information about radio-based vehicle components can be found using the key phrase "Regulatory radio identification" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

**Regulatory radio identification – Indonesia and Israel**

Manufacturer information about radio-based vehicle components for Indonesia and Israel can be found using the key phrase "Regulatory radio identification – Indonesia and Israel" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

*These are not small components. Information about small components can be found using the key phrase "Regulatory radio identification of small components".*

**Information on installation clearances**

Information on installation clearances of wireless vehicle components can be found using the key phrase "Installation clearances" in the Digital Operator's Manual in the vehicle.

**Further component-specific information**

Further component-specific information can be found using the key phrase "further component-specific information" in the Digital Operator's Manual in the vehicle, on the Internet and in the app.

</tr>
</tbody>
</table>

Never exceed the maximum permissible gross vehicle weight or the maximum gross axle weight rating for the front- or rear axle.

**VIN in front of the right-hand front seat**

- Imprinted VIN (vehicle identification number)
- Floor covering
Plate with information about emissions testing, including confirmation of emissions guidelines at the U.S. federal level as well as for California.

Engine number stamped onto the crankcase.

VIN (vehicle identification number) as a label at the lower edge of the windshield.

### Operating fluids

<table>
<thead>
<tr>
<th>Notes on operating fluids</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>WARNING</strong> Risk of injury due to harmful operating fluids</td>
</tr>
</tbody>
</table>

- Operating fluids can be toxic.
- When using, storing and disposing of operating fluids, observe the imprints on the respective original containers.
- Always keep operating fluids in the sealed original container.
- Always keep children away from operating fluids.

<table>
<thead>
<tr>
<th>ENVIRONMENTAL NOTE</th>
</tr>
</thead>
</table>

- Pollution of the environment due to irresponsible disposal of operating fluids

- Incorrect disposal of operating fluids can cause considerable damage to the environment.
- Dispose of operating fluids in an environmentally responsible manner.

Operating fluids include the following:
- Fuels
- Lubricants
- Coolant
- Brake fluid
- Windshield washer fluid
- Climate control system refrigerant

Only use products approved by Mercedes-Benz. Damage caused by the use of products that have not been approved is not covered by the Mercedes-Benz warranty or goodwill gestures.

The operating fluids approved by Mercedes-Benz can be identified by the following inscriptions on the container:
- MB-Freigabe (e.g. MB-Freigabe 229.51)
- MB-Approval (e.g. MB-Approval 229.51)

Further information on approved operating fluids:
- in the Mercedes-Benz Specifications for Operating Fluids by entering the designation
- At https://operatingfluids.mercedes-benz.com
At a qualified specialist workshop

**WARNING** Risk of fire or explosion from fuel

Fuels are highly flammable.
- Fire, open flames, smoking and creating sparks must be avoided.
- Before and during refueling, switch off the vehicle and, if installed, the stationary heater.

**WARNING** Risk of injury from fuels

Fuels are poisonous and hazardous to your health.
- Do not swallow fuel or let it come into contact with skin, eyes or clothing.
- Do not inhale fuel vapor.
- Keep children away from fuel.
- Keep doors and windows closed during the refueling process.

If you or other people come into contact with fuel, observe the following:
- Immediately rinse fuel off your skin with soap and water.
- If fuel comes into contact with your eyes, immediately rinse them thoroughly with clean water. Seek medical attention immediately.
- If you swallow fuel, seek medical attention immediately. Do not induce vomiting.
- Change immediately out of clothing that has come into contact with fuel.

Flexible-fuel vehicles can be identified by the **Ethanol up to E85** sticker on the inside of the fuel filler flap.

Depending on the country, the fuels you can use in your vehicle may differ from the information in the Operator’s Manual. The fuels that have been approved for your vehicle can be found on the instruction label on the inside of the fuel filler flap.

**Fuel**

**Notes on fuel quality**

Observe the notes on operating fluids (→ page 353).

**NOTE** Damage caused by the wrong fuel

Even small amounts of the wrong fuel could result in damage to the fuel system, the engine and the emission control system.
- Only refuel with low-sulfur spark-ignition engine fuel.

Flexible-fuel vehicles can be refueled with the following fuel types:
- premium-grade unleaded gasoline
- E85 fuel
- a mixture of E85 fuel and premium-grade unleaded gasoline
This fuel may contain up to 10% ethanol by volume. Your vehicle is suitable for use with E10 fuel.

Never refuel with one of the following fuels:
- diesel
- Gasoline with more than 10% ethanol by volume, e.g., E15, E85, E100
- Gasoline with more than 3% methanol by volume, e.g., M15, M30, M85, M100
- Gasoline with additives containing metal

If you have accidentally refueled with the wrong fuel:
- Do not switch on the vehicle.
- Consult a qualified specialist workshop.

If the available fuel is not sufficiently low in sulfur, it may produce unpleasant odors.

**Vehicles with M256 gasoline engine:** if you are using 91 AKI/95 RON, there may be slight limitations in performance that have no further consequences.

Refuel only with premium-grade unleaded gasoline with an octane number of at least 91 AKI/95 RON.

As a temporary measure, if the recommended fuel is not available, you may also use regular unleaded gasoline. Note the octane number on the information label on the fuel filler flap (→ page 159). Filling up with regular unleaded gasoline can reduce engine output and increase fuel consumption.

Never refuel using gasoline of an even lower RON.

**NOTE** Premature engine wear through unleaded regular gasoline

Impairment of the longevity and performance of the engine.

If unleaded premium grade gasoline is unavailable and you have to refuel using unleaded regular gasoline:
- Only fill the fuel tank to half full with unleaded regular gasoline and refill as soon as possible with unleaded premium grade gasoline.

Further information on fuel is available in the following locations:
- At a gas station
- At a qualified specialist workshop
- USA only: on the https://www.mbusa.com

**Information on additives in gasoline (vehicles with gasoline engine)**

Observe the notes on operating fluids (→ page 353).

**NOTE** Damage from use of unsuitable additives

Even small amounts of the wrong additive may lead to malfunctions occurring.
- Only add cleaning additives recommended by Mercedes-Benz to the fuel.
Mercedes-Benz recommends that you use brand-name fuels with additives. In some countries, the fuel available may not have sufficient additives. Deposits could build up in the fuel injection system as a result. In this case, in consultation with a qualified specialist workshop (e.g. an authorized Mercedes-Benz Service Center), mix the fuel with the cleaning additive recommended by Mercedes-Benz. Observe the notes and mixing ratios indicated on the tank.

### Tank content and fuel reserve

<td>3.1 gal (12.0 liters)</td>
</tr>
</tbody>
</table>

### Engine oil

#### Notes on engine oil

Observe the notes on operating fluids (→ page 353).

**NOTE** Engine damage caused by an incorrect oil filter, incorrect oil or additives

- Do not use engine oils or oil filters other than those which meet the specifications necessary for the prescribed service intervals.
- Do not alter the engine oil or oil filter in order to achieve longer change intervals than prescribed.
- Do not use additives.
- Have the engine oil changed after the prescribed intervals.
Mercedes-Benz recommends having the oil changed at a qualified specialist workshop. Only use engine oils approved for your vehicle by Mercedes-Benz.

**Engine oil quality and filling capacity**
The following values refer to an oil change, including the oil filter.

**Engine oil filling capacity**

<table>
<thead>
<tr>
<th>Model</th>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mercedes-AMG GT 43 4-door Coupe 4MATIC +</td>
<td>9.0 US qt (8.5 liters)</td>
</tr>
<tr>
<td>Mercedes-AMG GT 53 4-door Coupe 4MATIC +</td>
<td>9.5 US qt (9.0 liters)</td>
</tr>
</tbody>
</table>

**Notes on brake fluid**

Observe the notes on operating fluids (→ page 353).

**WARNING** Risk of an accident due to vapor pockets forming in the brake system

The brake fluid constantly absorbs moisture from the air. This lowers the boiling point of the brake fluid. If the boiling point is too low, vapor pockets may form in the brake system when the brakes are applied hard. This causes the braking effect to be impaired.

Have the brake fluid renewed at the specified intervals.

Have the brake fluid regularly replaced at a qualified specialist workshop. Only use a brake fluid approved by Mercedes-Benz according to MB-Freigabe or MB-Approval 331.0.

**Coolant**

**Notes on coolant**

Observe the notes on operating fluids (→ page 353).

**WARNING** - Risk of fire and injury from antifreeze

If antifreeze comes into contact with hot component parts in the engine compartment, it may ignite.

- Allow the engine to cool down before adding antifreeze.
- Make sure that no antifreeze spills out next to the filler opening.
- Thoroughly clean off any antifreeze from component parts before starting the vehicle.

**NOTE** Damage caused by incorrect coolant

- Only use coolant that has been premixed with the required antifreeze protection.
Information on coolant is available at the following locations:
- In the Mercedes-Benz Specification for Operating Fluids 320.1
  - At https://operatingfluids.mercedes-benz.com
- At a qualified specialist workshop

**NOTE** Overheating at high outside temperatures

If an inappropriate coolant is used, the cooling system is not sufficiently protected against overheating and corrosion at high outside temperatures.
- Only use coolant approved for Mercedes-Benz.
- Observe the instructions in the Mercedes-Benz Specifications for Operating Fluids 320.1.

Have the coolant regularly replaced at a qualified specialist workshop.

Proportion of antifreeze concentrate in the cooling system:
- A minimum of 50% (antifreeze protection down to about -35°F (-37°C))
- A maximum of 55% (antifreeze protection down to -49°F (-45°C))

### Coolant filling capacity

</tr>
<tr>
<td>4-door Coupe 4MATIC +</td>
<td></td>
</tr>
</tbody>
</table>

### Notes on windshield washer fluid

Observe the notes on operating fluids (→ page 353).

**WARNING - Risk of fire and injury from windshield washer concentrate**

Windshield washer concentrate is highly flammable. It could ignite if it comes into contact with hot engine component parts or the exhaust system.
- Make sure that no windshield washer concentrate spills out next to the filler opening.

**NOTE** Damage to the exterior lighting due to unsuitable windshield washer fluid

Unsuitable windshield washer fluid may damage the plastic surface of the exterior lighting.
- Only use windshield washer fluid which is also suitable for use on plastic surfaces, e.g. MB SummerFit or MB WinterFit.
NOTE Blocked spray nozzles caused by mixing windshield washer fluids

- Do not mix MB SummerFit and MB WinterFit with other windshield washer fluids.

Do not use distilled or de-ionised water. Otherwise, the fill level sensor may be triggered erroneously.

Recommended windshield washer fluid:
- Above freezing point: e.g. MB SummerFit
- Below freezing point: e.g. MB WinterFit

For the correct mixing ratio, refer to the information on the antifreeze container.
Mix washing water with windshield washer fluid all year round.

Refrigerant

- Notes on refrigerant
Observe the notes on operating fluids (→ page 353).

NOTE Damage due to incorrect refrigerant

If a non-approved refrigerant is used, the climate control system may be damaged.
- USA: use only R-134a refrigerant.
- Canada: use only R-1234yf refrigerant.

NOTE Damage to the climate control system due to incorrect refrigerant compressor oil

- Only use refrigerant compressor oil that has been approved by Mercedes-Benz.
- Do not mix the approved refrigerant compressor oil with a different refrigerant compressor oil.

Work on the climate control system may be carried out only at a qualified specialist workshop. All applicable regulations as well as SAE standard J639 must be adhered to.

The information label for the climate control system regarding the refrigerant type and the refrigerant compressor oil (PAG oil) is located on the inside of the hood.

### Vehicle data

**Information regarding the vehicle data**

The vehicle data specified may vary as a result of the following factors:

- Tires
- Load
- Condition of the suspension
• Special equipment
In addition, the following applies to the specified vehicle data:
• Items of special equipment increase the curb weight and reduce the payload.
• Vehicle-specific weight information can be found on the vehicle identification plate (→ page 351).

Display messages

Introduction

Information about display messages
Display messages appear on the instrument display.

Display messages with graphic symbols are simplified in the Operator’s Manual and may differ from the symbols on the instrument display. The instrument display shows high-priority display messages in red. Certain display messages are accompanied by a warning tone.

Please act in accordance with the display messages and follow the additional notes in the Operator’s Manual.

For some display messages, symbols will also be shown:
-  Further information
-  Hide display message

With the left-hand Touch Control, you can select the respective symbol by swiping to the left or right. Pressing  displays further information on the media display. Press the symbol to hide the display message.

Display messages to be acknowledged can be hidden by pressing the back button or with the left-hand Touch Control. The display messages will then be stored in the message memory.

Rectify the cause of a display message as quickly as possible.

High-priority display messages cannot be hidden. The instrument display will show these display messages permanently until the cause of the display message has been rectified.

Calling up saved display messages
On-board computer:

Scrolling up or down on the left-hand Touch Control.

To exit the message memory: press the back button.
### Occupant safety

<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| Front Passenger Airbag Disabled See Operator’s Manual | * The front passenger airbag and the front passenger knee airbag have been disabled even though an adult or a person of adult build is on the front passenger seat. If additional forces are applied to the seat, the weight the system detects may be too low.  

⚠️ **WARNING** Risk of injury or fatal injury due to a disabled front passenger airbag  

If the front passenger airbag is disabled, the front passenger airbag will not be deployed in the event of an accident and cannot perform its intended protective function.  

A person in the front passenger seat could then, for example, come into contact with the vehicle’s interior, especially if the person is sitting too close to the cockpit.  

- Make sure, both before and during the journey, that the status of the front passenger airbag is correct.  

- Stop the vehicle immediately in accordance with the traffic conditions.  
- Make sure that no objects are trapped under the front passenger seat.  
- Check the status of the automatic front passenger airbag shutoff (→ page 49).  
- If necessary, consult a qualified specialist workshop immediately. |
| Front Passenger Airbag Enabled See Operator’s Manual | * The front passenger airbag and the front passenger knee airbag will be enabled while the vehicle is in motion in the following situations:  
- even when a child, a small adult or an object weighing less than the system weight threshold is located on the front passenger seat  
- even when the front passenger seat is not occupied |
<table>

Driving systems and driving safety systems may be malfunctioning or temporarily unavailable. The brake system, steering and drive system will continue to function normally.

▶ Drive on carefully.

Once the causes of the problem are no longer present, the driving systems and driving safety systems will be available again and the corresponding symbols will be switched off.

If the display message does not disappear:

▶ Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions.
▶ Clean all sensor covers from outside (→ page 169).
▶ Restart the vehicle.

### Warning and indicator lamps

#### Overview of indicator and warning lamps

Some systems will perform a self-test when the vehicle is switched on. Some indicator and warning lamps may briefly light up or flash. This behavior is non-critical. These indicator and warning lamps indicate a malfunction only if they light up or flash after the vehicle has been started or during a journey.

#### Instrument display

Depending on the display settings, the positions of the indicator lamps on the instrument display may differ from the example shown.

#### Supersport setting

If you select the Supersport display setting, the positions of the indicator lamps on the instrument display will change.

<td>* The restraint system red warning lamp is lit while the vehicle is on. The restraint system is malfunctioning (→ page 39).</td>
</tr>
<tr>
<td><strong>Seat belt warning lamp flashes</strong></td>
<td>* The red seat belt warning lamp flashes and an intermittent warning tone sounds. The driver or front passenger has not fastened his/her seat belt while the vehicle is in motion.</td>
</tr>
</tbody>
</table>

**WARNING** Risk of injury due to malfunctions in the restraint system

- Components in the restraint system may be activated unintentionally or not deploy as planned in an accident.
- Have the restraint system checked and repaired immediately at a qualified specialist workshop.

- Drive on carefully.
- Note the messages on the instrument display.
- Visit a qualified specialist workshop immediately.

- Fasten your seat belt (→ page 43).
- There are objects on the front passenger seat.
- Remove the objects from the front passenger seat.
### Seat belt warning lamp
*The red seat belt warning lamp lights up for six seconds once the vehicle has started.*

In addition, an intermittent warning tone may sound.

The red seat belt warning lamp reminds the driver and front passenger to fasten their seat belts.

- **Fasten your seat belt (→** page 43).
- If you have placed objects on the front passenger seat, the red seat belt warning lamp may remain lit.

### Power steering warning lamp (red)
*The red power steering warning lamp is lit while the vehicle is running.*

The power assistance or the steering itself is malfunctioning.

- **WARNING** Risk of accident if steering capability is impaired

  If the steering does not function as intended, the vehicle’s operating safety is jeopardized.

  - Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
  - Consult a qualified specialist workshop.
  - Note the messages on the instrument display.
### Engine

<table>
<thead>
<tr>
<th>Warning/indicator lamp</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| Coolant warning lamp (red) | * The red coolant warning lamp is lit while the engine is running.  
Possible causes:  
- The temperature sensor is malfunctioning  
- The coolant level is too low  
- The air supply to the radiator is obstructed  
- The radiator fan is faulty  
- The engine coolant pump is faulty  
If there is an additional warning tone, the coolant temperature has exceeded the maximum permissible temperature. |

**WARNING** Risk of burns when opening the hood

If you open the hood in the event of an overheated engine or fire in the engine compartment, the following situations may occur:

- You may come into contact with hot gases.
- You may come into contact with other escaping hot operating fluids.

Before opening the hood, allow the engine to cool down.

In the event of a fire in the engine compartment, keep the hood closed and call the fire service.

Stop immediately in accordance with the traffic conditions and switch off the vehicle. Do not continue driving.
Note the messages on the instrument display.

If the coolant temperature display is at the lower end of the temperature scale:
- Consult a qualified specialist workshop.

If the coolant temperature display is at the upper end of the temperature scale:
- Exit the vehicle and keep a safe distance from it until the engine has cooled down.
- Check the coolant level (→ page 291).
- Make sure that the air supply to the radiator is not obstructed.
- Avoiding high loads on the engine, drive to the nearest qualified specialist workshop. In doing so, ensure that the coolant temperature display remains below the red area.

* The yellow coolant warning lamp is lit while the engine is running.

Possible causes:
- The temperature sensor is malfunctioning
- The charge air, transmission oil or battery cooling is faulty
- The radiator shutters are blocked or defective
- Avoiding high loads on the engine, drive to the nearest qualified specialist workshop.

*The yellow **RBS** warning lamp (USA only) or the yellow ** (!) ** brake warning lamp (Canada only) is lit while the vehicle is running.

⚠️ **WARNING** Risk of an accident due to a brake system malfunction

- If the brake system is malfunctioning, braking characteristics may be impaired.
  - Drive on carefully.
  - Have the brake system checked immediately at a qualified specialist workshop.

- Adjust your speed and drive on carefully, leaving a suitable distance to the vehicle in front.
- If the instrument display shows a display message, observe it.
- Consult a qualified specialist workshop.
### Brake Warning Lamp (USA only)

*The red brake warning lamp is lit while the vehicle is running.*

**Possible causes:**
- The brake force boosting is malfunctioning and the braking characteristics may be affected.
- There is insufficient brake fluid in the brake fluid reservoir.

**Note the messages on the instrument display.**

#### WARNING Risk of accident and injury if brake force boosting is malfunctioning

If brake force boosting is malfunctioning, increased brake pedal force may be necessary for braking. The braking characteristics may be impaired. The braking distance can increase in emergency braking situations.

- Stop in a safe location immediately. Do not continue driving.
- Consult a qualified specialist workshop.

#### WARNING Risk of an accident due to low brake fluid level

If the brake fluid level is too low, the braking effect and the braking characteristics may be impaired.

- Pull over and stop the vehicle safely as soon as possible, paying attention to road and traffic conditions. Do not continue driving under any circumstances.
- Consult a qualified specialist workshop.
- Do not add brake fluid.

</tbody>
</table>

#### ESP® warning lamp lights up

- Note the messages on the instrument display.

- **WARNING** Risk of skidding if ESP® is malfunctioning
  - If ESP® is malfunctioning, ESP® cannot carry out vehicle stabilization. In addition, other driving safety systems are switched off.
  - Drive on carefully.
  - Have ESP® checked at a qualified specialist workshop.

#### ESP OFF

- Drive on carefully.
- Deactivate ESP® only for as long as the situation requires.
If ESP® cannot be activated, ESP® is malfunctioning.

- Have ESP® checked immediately at a qualified specialist workshop.

- Observe the notes on deactivating ESP® (→ page 172).

* ESP® SPORT is activated while the vehicle is running. When ESP® SPORT is activated, ESP® will stabilize the vehicle only to a limited extent.

**WARNING** Risk of skidding if ESP® SPORT is used incorrectly

When you activate ESP® SPORT, there is an increased risk of skidding and having an accident.

- Activate ESP® SPORT only in the circumstances described below.

- Observe the notes on activating ESP® SPORT (→ page 172).
### Tire pressure monitor

<table>
<thead>
<tr>
<th>Warning/indicator lamp</th>
<th>Possible causes/consequences and Solutions</th>
</tr>
</thead>
</table>
| Tire pressure monitoring system warning lamp flashes | *The yellow tire pressure monitor warning lamp (pressure loss/malfunction) flashes for approximately one minute and then remains lit. The tire pressure monitoring system is malfunctioning.**

**WARNING** There is a risk of an accident if the tire pressure monitoring system is malfunctioning

- The tire pressure monitoring system cannot issue a warning if there is pressure loss in one or more of the tires.
- Tires with insufficient tire pressure may impair the driving characteristics as well as steering and braking.
- Have the tire pressure monitoring system checked at a qualified specialist workshop.

| Tire pressure monitoring system warning lamp lights up | *The yellow tire pressure monitoring system warning lamp (pressure loss/malfunction) is lit. The tire pressure monitoring system has detected tire pressure loss in at least one of the tires.**

**WARNING** Risk of an accident due to insufficient tire pressure

- The tires can burst.
- The tires can wear excessively and/or unevenly.
- The driving characteristics as well as the steering and braking may be greatly impaired.

You could then lose control of the vehicle.

- Observe the recommended tire pressures.
- Adjust the tire pressure if necessary.
