ML 55 AMG
Our company and staff congratulate you on the purchase of your new Mercedes-Benz.

Your selection of our product is a demonstration of your trust in our company name. Further, it exemplifies your desire to own an automobile that will be as easy as possible to operate and provide years of service.

Your Mercedes-Benz represents the efforts of many skilled engineers and craftsmen. To help assure your driving pleasure, and also the safety of you and your passengers, we ask you to make a small investment of time:

- Please read this manual carefully before putting it aside. Then return it to your vehicle where it will be handy for your reference.
- Please follow the recommendations contained in this manual. They are designed to acquaint you with the operation of your Mercedes-Benz.
- Please pay attention to the warnings and cautions contained in this manual. They are designed to help improve the safety of the vehicle operator and occupants.

We extend our best wishes for many miles of safe, pleasurable driving.

Mercedes-Benz USA, LLC

Product information

Please observe the following in your own best interest:

We recommend using Mercedes-Benz original parts as well as conversion parts and accessories explicitly approved by us for your vehicle model.

We have tested these parts to determine their reliability, safety and their special suitability for Mercedes-Benz vehicles.

We are unable to make an assessment for other products and therefore cannot be held responsible for them, even if in individual cases an official approval or authorization by governmental or other agencies should exist. Use of such parts and accessories could adversely affect the safety, performance or reliability of your vehicle. Please do not use them.

Mercedes-Benz original parts as well as conversion parts and accessories approved by us are available at your authorized Mercedes-Benz Light Truck Center where you will receive comprehensive information, also on permissible technical modifications, and where proper installation will be performed.
Introduction

Operator's Manual

This Operator’s Manual contains a great deal of useful information. We urge you to read it carefully and familiarize yourself with the vehicle before driving.

For your own safety and longer service life of the vehicle, we urge you to follow the instructions and warnings contained in this manual. Ignoring them could result in damage to the vehicle or personal injury to you or others. Vehicle damage caused by failure to follow instructions is not covered by the Mercedes-Benz Limited Warranty.

Your vehicle may have some or all of the equipment described in this manual. Therefore, you may find explanations for optional equipment not installed in your vehicle. If you have any questions about the operation of any equipment, your authorized Mercedes-Benz Light Truck Center will be glad to demonstrate the proper procedures.

We continuously strive to improve our product, and ask for your understanding that we reserve the right to make changes in design and equipment. Therefore, information, illustrations and descriptions in this Operator’s Manual might differ from your vehicle.

Optional equipment is also described in this manual, including operating instructions wherever necessary. Since they are special-order items, the descriptions and illustrations herein may vary slightly from the actual equipment of your vehicle.

If there are any equipment details that are not shown or described in this Operator's Manual, your authorized Mercedes-Benz Light Truck Center will be glad to inform you of correct care and operating procedures.

The Operator's Manual and Service Booklet are important documents and should be kept with the vehicle.

Service and warranty information

The Service and Warranty Information Booklet contains detailed information about the warranties covering your Mercedes-Benz, including:

- New Light Truck Limited Warranty,
- Emission System Warranty,
- Emission Performance Warranty,
- California, Maine, Massachusetts, and Vermont Emission Control System Warranty (California, Maine, Massachusetts, and Vermont only),
- State Warranty Enforcement Laws (Lemon Laws).
Important notice for California retail buyers and lessees of Mercedes-Benz automobiles

Under California law you may be entitled to a replacement of your vehicle or a refund of the purchase price or lease price, if Mercedes-Benz USA, LLC and/or its authorized repair or service facilities fail to fix one or more substantial defects or malfunctions in the vehicle that are covered by its express warranty after a reasonable number of repair attempts. During the period of 18 months from original delivery of the vehicle or the accumulation of 18,000 miles (approx. 29,000 km) on the odometer of the vehicle, whichever occurs first, a reasonable number of repair attempts is presumed for a retail buyer or lessee if one or more of the following occurs:

(1) the same substantial defect or malfunction results in a condition that is likely to cause death or serious bodily injury if the vehicle is driven, that defect or malfunction has been subject to repair two or more times, and you have directly notified Mercedes-Benz USA, LLC in writing of the need for its repair,

(2) the same substantial defect or malfunction of a less serious nature than category (1) has been subject to repair four or more times and you have directly notified us in writing of the need for its repair, or

(3) the vehicle is out of service by reason of repair of the same or different substantial defects or malfunctions for a cumulative total of more than 30 calendar days. Written notification should be sent to us, not a dealer, at Mercedes-Benz USA, LLC, Customer Assistance Center, One Mercedes Drive, Montvale, NJ 07645-0350.
Introduction

Operator's Manual

Maintenance

The Service Booklet describes all the necessary maintenance work which should be performed at regular intervals.

Always have the Service Booklet with you when you take the vehicle to your authorized Mercedes-Benz Light Truck Center for service. The service advisor will record each service in the booklet for you.

Roadside Assistance

The Mercedes-Benz Roadside Assistance Program provides factory-trained technical help in the event of a breakdown. Calls to the toll-free Roadside Assistance number 1-800-FOR-MERCedes (in the USA) 1-800-387-0100 (in Canada) will be answered by Mercedes-Benz Customer Assistance Representatives 24 hours a day, 365 days a year.

Roadside Assistance will be provided in accordance with standard program guidelines which include providing service to the vehicle up to a reasonable distance from a paved roadway. We will make every effort to assist in a breakdown situation, however, the accessibility of your vehicle will be determined by our authorized Mercedes-Benz Light Truck Center technician or the tow service provider on a case-by-case basis and may be a factor in our ability to respond.

Additional charges may be applicable for a breakdown location determined not to be a reasonably accessible roadside location as determined by our authorized technician and tow service provider.

For additional information refer to the Mercedes-Benz Roadside Assistance Program brochure in your glove box.

Change of address or ownership

If you change your address, be sure to send in the “Change of Address Notice” found in the Service and Warranty Information Booklet, or simply call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERCedes, or Customer Service (in Canada) at 1-800-387-0100. It is in your own interest that we can contact you should the need arise.

If you sell your Mercedes, please leave all literature with the vehicle to make it available to the next operator.

If you bought this vehicle used, be sure to send in the “Notice of Purchase of Used Car” found in the Service and Warranty Information Booklet, or call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERCedes, or Customer Service (in Canada) at 1-800-387-0100.
Operating your vehicle outside the USA or Canada

If you plan to operate your vehicle in foreign countries, please be aware that:

- Service facilities or replacement parts may not be readily available,
- unleaded gasoline for vehicles with catalytic converters may not be available; the use of leaded fuels will damage the catalysts,
- gasoline may have a considerably lower octane rating, and improper fuel can cause engine damage.
Introduction

Operator's Manual

Warning!

This Sport Utility Vehicle is designed for both on-road and off-road use. It can go places and perform tasks for which conventional 2-wheel drive passenger cars were not intended. This vehicle will handle and maneuver differently from conventional passenger cars in driving conditions which may occur on streets, highways and off-road use.

This vehicle has a higher ground clearance and a higher center of gravity than many passenger cars. As with other vehicles of this type, if you make sharp turns at excessive speeds or abrupt maneuvers, the vehicle may roll over or may go out of control and crash. Utility vehicles have a significantly higher rollover rate than other types of vehicles. Failure to operate this vehicle safely may result in an accident, rollover of the vehicle, and severe or fatal injury.

Before you start to drive this vehicle, read the Operator's Manual. Take time to become familiar with the driving characteristics of this vehicle. Be sure you are familiar with all vehicle controls. Learn how your vehicle handles on different road surfaces. Do not attempt sharp turns at excessive speeds or abrupt maneuvers or other unsafe driving actions that can cause loss of vehicle control. When driving off-road or working the vehicle hard, do not overload it. And, always wear your seat belts at all times. In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt.
Where to find it

This Operator’s Manual is designed to provide comprehensive support information for you, the vehicle operator. Each section has its own reference color so you can find information quickly.

Controls in detail
Here you will find detailed information about the equipment installed on your vehicle. This section expands on the “Getting started” section and also describes technical innovations. If you are already familiar with the basic functions of your vehicle, this section will be of particular interest to you.

Operation
Here you will find all the information you need for the proper operation of your vehicle.

Practical hints
This section provides fast assistance for dealing with problems you may encounter.

At a glance
Here you will find an overview of all the controls that can be operated from the driver’s seat.

Getting started
Here you will find all the information you need for your first drive. You should read this section first if this is your first Mercedes-Benz vehicle or if you are renting or borrowing this vehicle.

Safety and Security
Here you will find descriptions of the safety features of your vehicle.

Technical data
All important technical data for your vehicle can be found in this section.

Indexes
The glossary provides explanations of the most important technical terms.
The table of contents and the index are designed to help you find information quickly and easily.
The following publications are part of your vehicle documentation:
- this Operator’s Manual
- the Service Booklet
Separate operating instructions will be provided as required depending on the equipment options installed in your vehicle.
Introduction

Symbols

The following symbols are found in this Operator’s Manual:

* Optional equipment is identified with an asterisk. Since standard equipment varies between models, the descriptions and illustrations in this manual may differ slightly from the actual equipment of your vehicle.

![Warning!]

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

![Highlight]

Highlights hazards that may result in damage to your vehicle.

![Hint]

Helpful hints or further information you may find useful.

► This symbol points to instructions for you to follow.

► A number of these symbols appearing in succession indicates a multiple-step procedure.

➤ Page This symbol tells you where to look for further information on a topic.

➤➤ This continuation symbol marks an interrupted procedure which will be continued on the next page.

-> In the glossary of technical terms, this symbol is used to cross-reference term definitions.

Display Words appearing in the multi-function display are printed in the type shown here.
Introduction

Operating safety

Proper use of the vehicle

Proper use of the vehicle requires that you are familiar with the following information and rules:

- the safety precautions in this manual
- the “Technical data” section in this manual
- traffic rules and regulations
- motor vehicle laws and safety standards

Warning!

Work improperly carried out on electronic components and associated software could cause them to cease functioning. Because the vehicle’s electronic components are interconnected, any modification made may produce an undesired effect on other systems.

Electronic system malfunctions could seriously impair the operating safety of your vehicle.

Ensure that any repairs or modifications to electronic components are carried out by an authorized Mercedes-Benz Light Truck Center.

Other improper work or modifications on the vehicle could also have a negative impact on the operating safety of the vehicle.

Some safety systems only function while the engine is running. You should therefore never turn off the engine while driving.
Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to immediately contact your authorized Mercedes-Benz Light Truck Center to have the problem diagnosed and corrected if required. If the matter is not handled to your satisfaction, please discuss the problem with the Mercedes-Benz Light Truck Center management, or if necessary contact us at one of the following addresses:

In the USA:
Customer Assistance Center
Mercedes-Benz USA, LLC
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada:
Customer Relations Department
Mercedes-Benz Canada, Inc.
849 Eglinton Avenue East
Toronto, Ontario, M4G 2L5
Reporting safety defects

For the USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.

Reporting safety defects

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-888-327-4236 (or 366-0123 in Washington, D.C. area) or write to: NHTSA, U.S. Department of Transportation, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.

Getting started

Unlocking

Adjusting

Driving

Parking and locking
Getting started

Unlocking

The “Getting started” section provides an overview of the vehicle’s most basic functions. First-time Mercedes-Benz owners should pay special attention to the information given here.

If you are already familiar with the basic functions described here, the “Controls in detail” section will help you with further information. The corresponding page references are at the end of each segment.

Unlocking

Remote control with folding key

Press unlock button \( \text{\textsuperscript{1}} \) on the remote control.

The indicator lamps light up for a short time. The locking knobs in the doors move up.

Press release button \( \text{\textsuperscript{4}} \) on the remote control.

The key folds out.

Get in the vehicle and insert the key in the steering lock (> page 33).

More information can be found in the “Controls in detail” section (> page 84).
### Steering lock positions

**Warning!**

When leaving the vehicle always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

#### Steering lock

- **0** For removing key
  The steering is locked when the key is removed from the steering lock. If necessary, move steering wheel slightly to allow the key to be turned clockwise to position **1**.
  - A warning sounds when the driver’s door is opened and the key is in steering lock position **0** or **1**.

- **1** Unlocking steering. Power supplies to some electrical consumers, such as seat adjustment

- **2** Ignition (power supply for all electrical consumers) and driving position (selector lever is unlocked)

- **3** Starting position

---

To prevent accelerated battery discharge and a possible dead battery, always remove the key from the steering lock.

The key can only be withdrawn in position **0**.

If necessary, move steering wheel slightly to allow the key to be turned clockwise to position **1**.

More information can be found in the “Controls in detail” section (=> page 84).
Getting started

Adjusting

Adjusting Seats

Depending on the vehicle’s equipment, you can adjust the seats manually or electrically.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>All seat, head restraint, steering wheel, and rear view mirror adjustments, as well as fastening of seat belts, must be done before the vehicle is put into motion.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Seats</th>
</tr>
</thead>
</table>

That could cause serious or fatal injuries. The seat back and seat belts provide the best restraint when the wearer is in an upright position and belts are properly positioned on the body. Your seat must be adjusted so that you can correctly fasten your seat belt (> page 40).

Never place hands under the seat or near any moving parts while a seat is being adjusted.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>When leaving the vehicle always remove the key from the steering lock and lock your vehicle. Do not leave children unattended in the vehicle or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Children 12 years old and under must never ride in the front seat, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger side front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result. According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions. Infants and small children must ride in back seats and be seated in an appropriate infant or child restraint system, which is properly secured with the vehicle’s seat belt and top tether strap, or secured via lower anchors and top tether strap, fully in accordance with the child seat manufacturer’s instructions.</td>
</tr>
</tbody>
</table>

Never ride in a moving vehicle with the seat back reclined. Sitting in an excessively reclined position can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>Do not adjust the driver’s seat while driving. Adjusting the seat while driving could cause the driver to lose control of the vehicle. Never ride in a moving vehicle with the seat back reclined. Sitting in an excessively reclined position can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck.</td>
</tr>
</tbody>
</table>
Getting started

Adjusting manual seats

Seat height

- Raise lever 1.
- The seat moves downward.
- Lean forward to raise the seat.

ℹ️ If necessary, hold onto the steering wheel while adjusting the seat height in order to take weight off the seat.

- Release lever 1.

Seat fore and aft adjustment

- Lift handle 2.
- Slide seat to desired position.

Adjust a comfortable seating position that still allows you to reach the accelerator/brake pedal safely. The position should be as far rearward as possible, consistent with ability to properly operate controls.

- Release handle 2.

The seat must be properly engaged.

A child's risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.
Getting started

Adjusting

**Backrest tilt**
- Turn handwheel 3 until your hands are slightly angled when holding the steering wheel.

**Head restraint height**
- Pull up or push down on head restraint until it is in desired position.

**Head restraint tilt**
- Manually adjust the angle of the head restraint. Push or pull on the lower edge of the head restraint cushion.

**Adjusting power seats**

*Warning!*
- For your protection, drive only with properly positioned head restraints.
- Adjust head restraint to support the back of the head approximately at ear level.
- Do not drive the vehicle without the seat head restraints. Head restraints are intended to help reduce injuries during an accident.

- Switch on the ignition by turning the key in the steering lock to position 2 (page 33).
- The seat adjustment switch is located on the entry side of each front seat base.
- All the lights in the instrument cluster light up.

1 Seat height
2 Seat fore and aft adjustment
3 Seat cushion tilt
4 Backrest tilt

**Seat height**
- Press the switch up or down in the direction of arrow 1.
Getting started

Adjusting

Seat fore and aft adjustment
► Press the switch forward or backward in the direction of arrow 2 until you can comfortably press the pedals all the way to the floor.

Seat cushion tilt
► Press the switch up or down in the direction of arrow 3 until your upper legs are lightly supported.

Backrest tilt
► Press the switch forward or backward in the direction of arrow 4 until your hands are slightly angled when holding the steering wheel.

Head restraint height

Warning!
For your protection, drive only with properly positioned head restraints.
Adjust head restraint to support the back of the head approximately at ear level.
Do not drive the vehicle without the seat head restraints. Head restraints are intended to help reduce injuries during an accident.

► Pull up or push down on head restraint until it is in desired position.

Head restraint tilt
► Manually adjust the angle of the head restraint. Push or pull on the lower edge of the head restraint cushion.

More information can be found in the “Controls in detail” section (► page 91).

Steering wheel

Warning!
Do not adjust the steering wheel while driving. The steering wheel must be locked while driving. Adjusting the steering wheel while driving, or driving without the steering column locked could cause the driver to lose control of the vehicle.

With the front door open, the seats can still be adjusted approx. 30 minutes after the ignition has been turned off.
Getting started

Adjusting

- Move lever 1 to its stop down.
- Move steering wheel up or down to desired position.
- Move lever 1 to its stop up.
  The steering column is locked.

Mirrors

Adjust the inside and exterior rear view mirrors before driving so that you have a good view of the road and traffic conditions.

Warning!

In the case of an accident, liquid electrolyte may escape the mirror housing if the mirror glass breaks. Electrolyte has an irritating effect. Do not allow the liquid to come into contact with eyes, skin, clothing, or the respiratory system. In case it does, immediately flush affected area with water, and seek medical help if necessary.

Inside rear view mirror

- Manually adjust the inside rear view mirror.

Exterior rear view mirrors

Warning!

Exercise care when using the passenger side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your inside rear view mirror or glance over your shoulder before changing lanes.

Electrolyte drops coming into contact with the vehicle paint finish can only be completely removed while in their liquid state and by applying plenty of water.
Getting started

Adjusting

The buttons are on the lower part of the center console.

1 Driver's side mirror
2 Passenger side mirror
3 Adjustment button

- Switch on the ignition by turning the key in the steering lock to position 2 (> page 33)
All the lights in the instrument cluster light up.
- Press button 1 for the left mirror or button 2 for the right mirror.
- Push adjustment button 3 up, down, left or right according to the setting desired.

With the front doors closed, the exterior mirrors can still be adjusted approx. 30 minutes after the ignition has been turned off.

At low outside temperatures, the exterior mirrors will be automatically heated.

More information can be found in the “Controls in detail” section (> page 119).
Driving

Fastening the seat belts

Warning!

Always fasten your seat belt before driving off. Always make sure your passengers are properly restrained, even those sitting in the rear and pregnant women.

Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident. You and your passengers should always wear seat belts.

If you are ever in an accident, your injuries can be considerably more severe without your seat belt properly buckled. Without your seat belt buckled, you are much more likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed.

In the same crash, the possibility of injury or death is lessened if you are wearing your seat belt. The airbags can only protect as expected if the occupants are using their seat belts (▷ page 54).

Warning!

Children 12 years old and under must never ride in the front seat, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.

According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions. Infants and small children must ride in back seats and be seated in an appropriate infant or child restraint system, which is properly secured with the vehicle’s seat belt and top tether strap, or secured via lower anchors and top tether strap, fully in accordance with the child seat manufacturer’s instructions.
A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.

Warning!

Never ride in a moving vehicle with the backrest reclined. Sitting in an excessively reclined position can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The backrest and seat belt provide the best restraint when the wearer is in an upright position and the belt is properly positioned on the body.

Warning!

Never let more people ride in the vehicle than there are seat belts available. Be sure everyone riding in the vehicle is correctly restrained with a separate seat belt.

Warning!

Read and observe the additional warning notices printed in the “Safety and Security” section (> page 57) and (> page 60).
Getting started

Driving

- With a smooth motion, pull the belt from seat belt housing 4.
- Place the belt over your shoulder.
- Push latch plate 1 into buckle 2 until it clicks.
- If necessary, tighten the lap portion to a snug fit by pulling shoulder portion up.
- If necessary, adjust the seat belt to the correct height (page 43).

Proper use of seat belts:
- Do not twist the belt when fastening.
- Adjust the seat belt so that the shoulder portion is located as close as possible to the middle of the shoulder (it should not touch the neck or pass under the arm).
- Position the lap belt as low as possible on your hips (over hip joint) and not across the abdomen.
- Place the seat backrest in a nearly upright position.
- Each seat belt should never be used for more than one person at a time.
- Do not fasten a seat belt around a person and another object at the same time.
- Check your seat belt during travel to ensure that it is properly positioned.
- Ensure that the seat belt is always fitted snugly. You should avoid wearing bulky clothing, such as winter coats, when traveling in the vehicle.

Warning!

- Do not pass belts over sharp edges. They could tear.
- Do not allow the belt to get caught in the door or in the seat adjustment mechanism. This could damage the belt.
- Never attempt to make modifications to seat belts. This could impair the effectiveness of the belts.
- Damaged seat belts or belts that were highly stressed in an accident must be replaced by an authorized Mercedes-Benz Light Truck Center.
Seat belt height adjustment

Seat belt height can be adjusted for the following seats:

- Driver’s seat
- Passenger seat
- Outer rear seats

Adjust seat belt so that the shoulder portion is located as close as possible to the middle of the shoulder (it should not touch the neck or pass under the arm).

Adjusting seat belt higher

- Slide belt outlet upward.
  
  The belt outlet engages in various positions.

Adjusting seat belt lower

- Press and hold release button 1.

- Slide belt outlet in desired position and let go of release button 1.
Getting started

Driving

Starting the engine

Warning!

Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide, and inhaling it can cause unconsciousness and lead to death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open.

For more information on “Automatic transmission” ( page 113).

Make sure that the gear selector lever is set to P.

Do not depress the accelerator.

Turn the key in the steering lock to position 3 and hold until the engine starts ( page 33).

Depress the brake pedal.

The selector lever lock is released.

For information on turning off the engine with the key, see “Turning off engine” ( page 51).

Gearshift pattern for automatic transmission

- P Park position with selector lever lock
- R Reverse gear
- N Neutral
- D Drive position

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open.
Getting started

Starting difficulties

Ensure that the brake pedal is depressed when starting the engine.

If the engine does not start as described, carry out the following steps:

- Turn key in starter to position 0 and repeat starting procedure.
  Remember that extended starting attempts can drain the battery.
- Get a jump start (> page 264).

If the engine does not start after several starting attempts, there could be a malfunction in the engine electronics or in the fuel supply system.
- Notify an authorized Mercedes-Benz Light Truck Center.

Parking brake

Warning!

When leaving the vehicle always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could release the parking brake, which could result in an accident and/or serious personal injury.

Driving

- Place the gear selector lever in position D or R.

Wait for the gear selection process to complete before setting the vehicle in motion.

- Release the parking brake by pulling on handle 2.
  The indicator lamp in the instrument cluster goes out.

- Release the brake pedal.

- Carefully depress the accelerator pedal.

Parking brake pedal

1 Parking brake pedal
2 Release handle
Getting started

Driving

If you hear a warning signal when driving off, you have forgotten to release the parking brake.

Release the parking brake.

After a cold start the transmission engages at a higher revolution. This allows the catalytic converter to reach its operating temperature earlier.

Warning!

It is dangerous to shift the selector lever out of P or N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

Warning!

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

More information can be found in the “Operation” section (page 177).

For information on off-road driving, see Driving instructions (page 186).

Switching on headlamps

The combination switch is on the left of the steering column.

Combination switch

1 Off
2 Low beam headlamps on
3 High beam lamps on

Turn the switch to

Low beam headlamps on.
Getting started

Driving

High beam

Push the exterior lamp switch forward. The high beam symbol in the instrument cluster lights up.

More information can be found in the “Controls in detail” section (> page 102)

Turn signals

The combination switch is on the left of the steering column.

Press the combination switch up 1 or down 2.

The switch is automatically cancelled when the steering wheel is turned to a large enough degree.

To signal minor directional changes, move combination switch to point of resistance only and release. The turn signal blinks three times.

Windshield wipers

The combination switch is on the right of the steering column.

Wiper switch

0 Windshield wipers off
1 Intermittent wiping
2 Normal wiper speed
3 Fast wiper speed
4 Wiping with windshield wiper fluid
Switching on windshield wipers

- Make sure that the ignition is switched on.
- Turn the wiper switch to the desired position 1, 2 or 3, depending on the intensity of the rain.

**Single wipe**

- Press switch briefly in the direction of arrow 2.
  The windshield wipers wipe one time without washer fluid.

**Wiping with windshield washer fluid**

- Pull and hold wiper switch in direction of arrow 4.
  The windshield wiper operates with washer fluid.

More information on windshield wipers can be found in the “Controls in detail” section (> page 122).

---

**Rear window wiper**

The button is on the upper part on the center console.

1 Intermittent wiping
2 Indicator lamp
3 Wiping with washer fluid

---

**Switching on intermittent wiping**

Make sure that the ignition is switched on.

- Press upper half 1 of the button.

**Switching off intermittent wiping**

- Press upper half 1 of the button again.

**Wiping with washer fluid**

- Press and hold lower half 3 of the button.
  After releasing the button the wiper operates for additional five seconds.
Problems while driving

The engine runs erratically and misfires
- An ignition cable may be damaged.
- The engine electronics may not be operating properly.
- Unburned gasoline may have entered the catalytic converter and damaged it.

► Give very little gas.
► Have the problem repaired by an authorized Mercedes-Benz Center as soon as possible.

The coolant temperature is over 248°F (120°C)
The coolant is too hot and is no longer cooling the engine.
- Stop the vehicle as soon as possible and turn off the engine. Allow engine and coolant to cool.
- Check the coolant level and add coolant if necessary (► page 206).

In case of accident
If the vehicle is leaking gasoline:
- Do not start the engine under any circumstances.
- Notify local fire and/or police authorities.

If the extent of the damage cannot be determined:
- Notify an authorized Mercedes-Benz Center.

If no damage can be determined on the
- major assemblies
- fuel system
- engine mount:

► Start the engine in the usual manner.
Parking and locking

You have now completed your first drive. You have properly stopped and parked your vehicle. End your drive as follows.

**Warning!**

Wait until the vehicle is stationary before removing the key from the steering lock. The vehicle cannot be steered when the key is removed.

**Warning!**

With the engine not running, there is no power assistance for the steering system. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to steer the vehicle.

**Warning!**

Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

To reduce the risk of personal injury as a result of vehicle movement, before turning off the engine and leaving the vehicle always:

- Keep right foot on brake pedal.
- Firmly depress parking brake pedal.
- Move the selector lever to position P.
- Slowly release brake pedal.
- When parked on an incline, turn front wheel towards the road curb.
- Turn the key to starter switch position 0 and remove.
- Take the key and lock vehicle when leaving.

When the engine is running, the indicator lamp in the instrument cluster will be illuminated.

1 Parking brake
2 Release handle

► Step firmly on parking brake 1.
Getting started

Parking and locking

Switching off headlamps

Turn the combination switch to 1 (page 46).

More information can be found in the “Controls in detail” section (page 102).

Warning!

Getting out of your vehicle with the selector lever not fully engaged in position P is dangerous. Also, when parked on an incline, position P alone may not prevent your vehicle from moving, possibly hitting people or objects.

Always set the parking brake in addition to shifting to position P (page 50).

When parked on an incline, also turn front wheel towards the road curb.

Turning off engine

Place the gear selector lever in P.

Turn the key in the steering lock (page 33) to position 0 and remove it.

The immobilizer is activated.

Always set the parking brake in addition to shifting to position P.

To prevent accelerated battery discharge and a possible dead battery, always remove the key from the steering lock.

Warning!

When leaving the vehicle always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could release the parking brake and/or move the gear selector lever from position P, either of which could result in an accident and/or serious personal injury.

Warning!

Getting out of your vehicle with the selector lever not fully engaged in position P is dangerous. Also, when parked on an incline, position P alone may not prevent your vehicle from moving, possibly hitting people or objects.

Always set the parking brake in addition to shifting to position P (page 50).

When parked on an incline, also turn front wheel towards the road curb.

Always set the parking brake in addition to shifting to position P.

To prevent accelerated battery discharge and a possible dead battery, always remove the key from the steering lock.
Getting started

Parking and locking

The key can only be removed from the steering lock with the gear selector lever in position P.

With the key removed and the driver’s door open, a warning sounds if the vehicle’s exterior lamps are not switched off.

- Press the seat belt release button (>
  page 40).
- Move the steering wheel slightly to allow the locking mechanism to engage.
- After exiting the vehicle press the lock button on the remote control (>
  page 32).

The turn signals lamps blink three times and the locking knobs on the doors move down.

Warning!

To prevent possible personal injury, always keep hands and fingers away from the door openings when closing the doors. Be especially careful when small children are around.

Before closing doors, ensure that there is no possibility of someone getting caught in a door during closing.

More information on parking and locking can be found in the “Controls in detail” section (> page 84).
Safety and Security

- Occupant safety
- Panic alarm
- Driving and safety systems
- Anti-theft systems
Safety and Security

Occupant safety

In this section you will learn the most important facts about the restraint systems of the vehicle.

The restraint systems are:
- Seat belts
- Emergency tensioning device
- Airbags
- Child seats
- Child seat recognition
- Lower anchors and tethers for children (LATCH)

As independent systems their protective effects work in conjunction with each other.

The warning lamp[SRSm] in the instrument cluster (> page 26) lights up for about 4 seconds when the key is turned to position 2. It goes out when you start the engine. This shows that the restraint systems are operational.

If the lamp does not come on at all or if it fails to extinguish after approximately 4 seconds or if it comes on thereafter, a malfunction in the system has been detected.

More information can be found in the “Practical hints” section (> page 227).

Warning!

In the event that the SRS malfunction indicator lamp lights up during driving or does not come at all, the SRS may not be operational. For your safety, we strongly recommend that you visit an authorized Mercedes-Benz Light Truck Center immediately to have the system checked; otherwise the SRS may not be activated when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in injury.

Improper work on the restraint systems can lead to unintentional deployment or operational failure.

All work on these systems should therefore only be carried out by an authorized Mercedes-Benz Light Truck Center.

For information on infants and children traveling with you in the vehicle and restraint systems for infants and children, see “Children in the vehicle” (> page 63).
Airbags

Warning!

Airbags are designed to reduce the potential of injury in certain frontal (front airbags) impacts, or side (side impact and head protection window curtain airbags) impacts which may cause significant injuries. However, no system available today can totally eliminate injuries and fatalities.

The activation of the SRS temporarily releases a small amount of dust from the airbags. This dust, however, is neither injurious to your health, nor does it indicate a fire in the vehicle. The dust might cause some temporary breathing difficulty for people with asthma or other breathing trouble. To avoid this, you may wish to get out of the vehicle as soon as it is safe to do so. If you have any breathing difficulty but cannot get out of the vehicle after the airbag inflates, then get fresh air by opening a window or door.

Warning!

To reduce the risk of injury when the front airbags inflate, it is very important for the driver and passenger to always be in a properly seated position and to wear your seat belt.

For maximum protection in the event of a collision always be in normal seated position with your back against the backrest. Fasten your seat belt and ensure that it is properly positioned on your body (> page 40).

Since the airbag inflates with considerable speed and force, a proper seating and hands on steering wheel position will help to keep you at a safe distance from the airbag. Occupants who are unbelted, out of position or too close to the airbag can be seriously injured by an airbag as it inflates with great force in the blink of an eye:

- Sit properly belted in an upright position with your back against the backrest.

- Adjust the driver seat as far as possible rearward, still permitting proper operation of vehicle controls. The distance from the center of the driver’s breastbone to the center of the airbag cover on the steering wheel must be at least ten inches (25 cm) or more. You should be able to accomplish this by a combination of adjustments to the seat and steering wheel. If you have any problems, please see your authorized Mercedes-Benz Light Truck Center.

- Do not lean with your head or chest close to the steering wheel or dashboard.

- Keep hands on the outside of steering wheel rim. Placing hands and arms inside the rim can increase the risk and potential severity of hand/arm injury when driver front airbag inflates.

- Adjust the passenger seat as far as possible rearward from the dashboard when the seat is occupied.
Safety and Security

Occupant safety

- Occupants, especially children, should never lean their heads in the area of the door where the side impact airbag inflates. This could result in serious injuries or death should the airbag be triggered. Always sit upright, properly use the seat belts and appropriate size infant or child restraint system.

- Children 12 years old and under must never ride in the front seat, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger side front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.

Failure to follow these instructions can result in severe injuries to you or other occupants.

If you sell your vehicle you are responsible to make the buyer aware of these points. Be sure to give the buyer this Operator’s Manual.

Warning

Accident research shows that the safest place for children in an automobile is in the rear seat. Should you choose to place a child 12 years old or under in the passenger seat of your vehicle, you must properly use a BabySmart™ child restraint which will turn off the passenger side front airbag (▷ page 65). BabySmart™ will not, however, turn off any side impact airbag.

It should be noted that with respect to both front and rear side impact airbags there is a possibility for a side airbag related injury if occupants, especially children, are not properly seated or restrained when next to a side airbag which needs to deploy rapidly in a side impact in order to do its job.

To help avoid the possibility of injury, please follow these guidelines: (1) occupants, especially children, should never place their bodies or lean their heads in the area of the door where the side airbag inflates. This could result in serious injuries or death should the side airbag be activated; (2) always sit upright, properly use the seat belts and use an appropriately sized infant or child restraint system for all children 12 years old or under; and (3) always wear seat belts properly.

If you believe that, even with the use of these guidelines, it would be safer for your rear seat occupants to have both rear door mounted side airbags deactivated, then deactivation can be accomplished upon your written election to do so at your authorized Mercedes-Benz Light Truck Center at an additional cost. Please contact your local authorized Mercedes-Benz Light Truck Center or call our Customer Assistance Center at 1-800-FOR-MERcedes (1-800-367-6372) for details.
Airbags are designed to activate only in certain frontal (front airbags) impacts, or side (side impact and head protection window curtain airbags) impacts which exceed preset thresholds.

Only during these types of impacts, if of sufficient severity to meet the deployment thresholds, will they provide their supplemental protection.

The driver and passenger should always wear their seat belts. Otherwise it is not possible for the airbags to provide their supplemental protection.

In cases of other frontal impacts, angled impacts, roll-overs, other side impacts, rear collisions, or other accidents, the airbags will not be activated. The driver and passengers will then be protected by the fastened seat belts.

We caution you not to rely on the presence of the airbags in order to avoid wearing your seat belt.

Your vehicle was originally equipped with airbags that are designed to activate in certain impacts exceeding a preset threshold to reduce the potential and severity of injury. It is important to your safety and that of your passenger that you replace deployed airbags and repair any malfunctioning airbags to ensure that the vehicle will continue to provide supplemental crash protection for occupants.

Safety guidelines for the seat belt, emergency tensioning device and airbag

**Warning**

- Damaged seat belts or belts that were highly stressed in an accident must be replaced and their anchoring points must also be checked. Use only belts installed or supplied by an authorized Mercedes-Benz Light Truck Center.
- No modifications of any kind may be made to any components or wiring of the SRS. This includes changing or removing any component or part of the SRS, the installation of additional trim material, badges, etc. over the steering wheel hub, passenger front airbag cover, or door trim panels, and installation of additional electrical/electronic equipment on or near SRS components and wiring. Keep area between airbags and occupants free from objects (e.g. packages, purses, umbrellas, etc.).
Safety and Security

Occupant safety

- Airbags and ETDs are designed to function on a one-time-only basis. An airbag or emergency tensioning device (ETD) that was activated must be replaced.
- Do not pass belts over sharp edges. They could tear.
- Do not make any modification that could change the effectiveness of the belts.
- Do not hang items such as coat hangers from the coat hooks or handles over the door. These items may turn into projectiles and cause head and other injuries when curtain airbag is deployed.
- An airbag system component within the steering wheel gets hot after the airbag has inflated. Do not touch.
- Improper work on the system, including incorrect installation and removal, can lead to possible injury through an unintended activation of the SRS.

- In addition, through improper work there is a risk of rendering the SRS inoperative or causing unintended airbag deployment. Work on the SRS must therefore only be performed by an authorized Mercedes-Benz Light Truck Center.
- For your protection and the protection of others, when scrapping the airbag unit or emergency tensioning device, our safety instructions must be followed. These instructions are available from your authorized Mercedes-Benz Light Truck Center.
- Given the considerable deployment speed and the textile structure of the airbags, there is the possibility of abrasions or other injuries resulting from airbag deployment.

Warning!

In the event that the SRS malfunction indicator lamp lights up while driving, the SRS may not be operational. For your safety, we strongly recommend that you visit an authorized Mercedes-Benz Light Truck Center immediately to have the system checked; otherwise the SRS may not be activated when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in injury.

When you sell your vehicle, we strongly urge you to give notice to the subsequent owner that it is equipped with an SRS by alerting them to the applicable section in the Operator’s Manual.
### Front airbags

1. Driver airbag
2. Passenger airbag
3. Side impact airbag

Driver and passenger airbags are deployed:
- in the event of a frontal impact
- if impact exceeds a preset deployment threshold
- independently of the side impact airbags

The airbags will not deploy in impacts which do not exceed the system’s deployment thresholds. You will then be protected by the fastened seat belts.

The passenger airbag will only be deployed if:
- the passenger seat is occupied
- the indicator lamp in the instrument cluster is not lit (> page 26)

Do not place objects heavier than 20 lbs (9 kg) on the front passenger seat. This could cause the front or side impact airbag on the front passenger side to deploy in a crash which exceeds the system’s deployment threshold.

### Side impact airbags and window curtain airbags

1. Window curtain airbags
2. Side impact airbag, rear
3. Side impact airbag, front

Side impact airbags and window curtain airbags are deployed:
- on the impacted side of the vehicle
- in impacts exceeding a preset deployment threshold
- independently of the front airbags
The side impact airbags and window curtain airbags are not deployed in impacts which do not exceed the system’s deployment threshold.

The passenger airbag will only be deployed if:
- the passenger seat is occupied
- the indicator lamp in the instrument cluster is not lit (>). page 26)

### Seat belts

After starting the engine, a warning sounds and the seat belt warning lamp \(^{2}\) remains illuminated for approx. six seconds if the driver’s seat is not fastened.

The use of seat belts and infant and child restraint systems is required by law in all 50 states and all Canadian provinces. Even where this is not the case, all vehicle occupants should have their seat belts fastened whenever the vehicle is in motion.

Information on fastening seat belts is found in the “Getting started” section (>). page 40).

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always fasten your seat belt before driving off. Always make sure your passengers are properly restrained, even those sitting in the rear and pregnant women. Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident. You and your passengers should always wear seat belts. If you are ever in an accident, your injuries can be considerably more severe without your seat belt properly buckled. Without your seat belt buckled, you are much more likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed. In the same crash, the possibility of injury or death is lessened if you are properly wearing your seat belt. Airbags can only protect as they are designed if the occupants are properly wearing their seat belts.</td>
</tr>
</tbody>
</table>

For information on infants and children traveling with you in the vehicle and restraint systems for infants and children, see “Children in the vehicle” (>). page 63)
Warning!

Never ride in a moving vehicle with the backrest reclined. Sitting in an excessively reclined position can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The backrest and seat belt provide the best restraint when the wearer is in an upright position and the belt is properly positioned on the body.

Warning!

Damaged seat belts or belts that were highly stressed in an accident must be replaced and their anchoring points must also be checked.

Only use seat belts which have been approved by Mercedes-Benz.

Do not make any modifications to the seat belts. This can lead to unintended activation or to failure.

Have all work carried out only by an authorized Mercedes-Benz Light Truck Center.

Warning!

Never let more people ride in the vehicle than there are seat belts available. Be sure everyone riding in the vehicle is correctly restrained with a separate seat belt.

Warning!

USE SEAT BELTS PROPERLY

- Seat belts can only work when used properly. Never wear seat belts in any other way than as described in this section, as that could result in serious injuries in case of an accident.

- Each occupant should wear their seat belt at all times, because seat belts help reduce the likelihood of and potential severity of injuries in accidents, including rollovers. The integrated restraint system includes SRS (driver airbag, front passenger airbag, front and rear door mounted side impact airbags and window curtain airbags), ETD (seat belt emergency tensioning device for the outboard passenger seats [except in the optional 3rd row seats]), and front seat knee bolsters. The system is designed to enhance the protection offered to properly belted occupants in certain frontal (front airbags) and side (side impact airbags and window curtain airbags) impacts which exceed preset...
Safety and Security

Occupant safety

- Emergency tensioning device, seat belt force limiter

The front seat belts are equipped with emergency tensioning devices and belt force limiters. The outboard passenger seats belts (except in the third row seats*) are equipped with emergency tensioning devices.

The ETD is designed to activate only when the seat belt is fastened and in the following cases:

- in frontal or rear-end impacts exceeding a preset severity level
- if the restraint systems are operational and functioning correctly, see SRS indicator lamp (page 54)

In an impact, emergency tensioning devices remove slack from the belts in such a way that the seat belts fit more snugly against the body. Belt force limiters reduce the force exerted by the seat belts on occupants during a crash.

- Never wear the shoulder belt under your arm, against your neck or off your shoulder. In a crash, your body would move too far forward. That would increase the chance of head and neck injuries. The belt would also apply too much force to the ribs or abdomen, which could severely injure internal organs such as your liver or spleen.
- Never wear belts over rigid or breakable objects in or on your clothing, such as eyeglasses, pens, keys, etc., as these might cause injuries.
- Position the lap belt as low as possible on your hips and not across the abdomen. If the belt is positioned across your abdomen, it could cause serious injuries in a crash.
- Each seat belt should never be used for more than one person at a time. Do not fasten a seat belt around a person and another person or other objects.
- Belts should not be worn twisted. In a crash, you wouldn’t have the full width of the belt to manage impact forces. The twisted belt against your body could cause injuries.
- Pregnant women should also use a lap-shoulder belt. The lap belt portion should be positioned as low as possible on the hips to avoid any possible pressure on the abdomen.
- Never place your feet on the instrument panel or on the seat. Always keep both feet on the floor in front of the seat.

- Pregnant women should also use a lap-shoulder belt. The lap belt portion should be positioned as low as possible on the hips to avoid any possible pressure on the abdomen.

- Never place your feet on the instrument panel or on the seat. Always keep both feet on the floor in front of the seat.
Occupant safety

Children in the vehicle

If an infant or child is traveling with you in the vehicle:

- Secure the child using an infant or child restraint appropriate to the age and size of the child and recommended for use by Mercedes-Benz.
- Ensure that the infant or child is properly secured by a belt at all times while the vehicle is in motion.

Infant and child restraint seats and information on choosing an appropriate restraint system can be obtained from any Mercedes-Benz Light Truck Center.

To fasten a child restraint, follow child restraint instructions for mounting. Then pull shoulder belt out completely and let it retract. During the seat belt retraction a ratcheting sound can be heard to indicate that the special seat belt retractor is activated. The belt is now locked. Push down on child restraint to take up any slack.

To deactivate, release seat belt buckle and let seat belt retract completely. The seat belt can again be used in the usual manner.

Infant and child restraint systems

Use only a BabySmart™ compatible child restraint for the front passenger seat in this vehicle.

We recommend that all infants and children be properly restrained at all times while the vehicle is in motion. All lap-shoulder belts except the driver's seat belt have special seat belt retractors for secure fastening of child restraints.

To fasten a child restraint, follow child restraint instructions for mounting. Then pull shoulder belt out completely and let it retract. During the seat belt retraction a ratcheting sound can be heard to indicate that the special seat belt retractor is activated. The belt is now locked. Push down on child restraint to take up any slack.

To deactivate, release seat belt buckle and let seat belt retract completely. The seat belt can again be used in the usual manner.

BabySmart™ is a trademark of Siemens Automotive Corp.

Warning!

An emergency tensioning device (ETD) that was activated must be replaced.

When scrapping the emergency tensioning device, our safety instructions must be followed. These are available at your authorized Mercedes-Benz Light Truck Center.

Do not place objects heavier than 20 lbs (9 kg) on the front passenger seat. This could cause the front or side impact airbag on the front passenger side to deploy in a crash which exceeds the system's deployment threshold.
Occupant safety

Information on child seats with mounting fittings for tether anchorages (page 67).
For information on child seat mounts – “LATCH” type (page 68).

Warning!
Never release the seat belt buckle while the vehicle is in motion, since the special seat belt retractor will be deactivated.

The use of infant or child restraints is required by law in all 50 states, the District of Columbia, the U.S. territories and all Canadian provinces.

Infants and small children should be seated in an appropriate infant or child restraint system properly secured by a lap-shoulder belt or, if so equipped, a child restraint lower anchorage system that complies with U.S. Federal Motor Vehicle Safety Standards 213 and 225 and Canadian Motor Vehicle Safety Standard 213 and 210.2. A statement by the child restraint manufacturer of compliance with this standard can be found on the instruction label on the restraint and in the instruction manual provided with the restraint.

When using any infant or child restraint system, be sure to carefully read and follow all manufacturer’s instructions for installation and use.

Please read and observe warning labels affixed to inside of vehicle and to infant or child restraints.

Warning!
Children 12 years old and under must never ride in the front seat, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ System installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury can result.

According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions. Infants and small children must ride in back seats and be seated in an appropriate infant or child restraint system, which is properly secured with the vehicle’s seat belt and top tether strap, or secured via lower anchors and top tether strap, fully in accordance with the child seat manufacturer’s instructions.
Infants and small children should never share a seat belt with another occupant. During an accident, they could be crushed between the occupant and seat belt.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.

Warning!

Children too big for child restraint systems must ride in back seats using regular seat belts. Position shoulder belt across chest and shoulder, not face or neck. A booster seat may be necessary to achieve proper belt positioning for children from 41 lbs. to the point where a lap/shoulder belt fits properly without one.

When the child restraint is not in use, remove it from the vehicle or secure it with the seat belt to prevent the child restraint from becoming a projectile in the event of an accident.

Do not leave children unattended in the vehicle, even if the children are secured in a child restraint system. Unsupervised children in a child restraint system may use vehicle equipment and may cause an accident and/or serious personal injury.

BabySmart™ airbag deactivation system

Special BabySmart™ compatible child seats, designed for use with the Mercedes-Benz system and available at any authorized Mercedes-Benz Center, are required for use with the BabySmart™ airbag deactivation system. With the special seat properly installed, the passenger front airbag will not deploy.

The indicator lamp located in the instrument cluster will be illuminated, except with the key removed or in the steering lock position 0.

The system does not deactivate the door mounted side impact airbag, the window curtain airbags and the emergency tensioning device.
Safety and Security

Occupant safety

Self-test BabySmart™ without special child seat installed

After turning key in steering lock to position 1 or 2, the indicator lamp located in the instrument cluster comes on for approximately 6 seconds, extinguishes, then blinks once.

If the indicator lamp should not come on or is continuously lit, the system is not functioning. You must see an authorized Mercedes-Benz Light Truck Center before seating any child on the front passenger seat.

More information can be found in the “Practical hints” section (page 232).

Warning!

The BabySmart™ airbag deactivation system will ONLY work with a special child seat designed to operate with it. It will not work with child seats which are not BabySmart™ compatible.

Never place anything between seat cushion and child seat (e.g. pillow), since it reduces the effectiveness of the deactivation system. The bottom of the child seat must make full contact with the passenger seat cushion. An incorrectly mounted child seat could cause injuries to the child in case of an accident, instead of protecting the child.

Follow the manufacturer’s instructions for installation of special child seats.

When using a BabySmart™ compatible child seat on the front passenger seat, the front passenger airbag will not deploy only if the indicator lamp remains illuminated.

BabySmart™ is a trademark of Siemens Automotive Corp.

Please be sure to check the indicator every time you use the special system child seat.

Should the light go out while the restraint is installed, please check installation. If the light remains out, do not use the BabySmart™ restraint to transport children on the passenger seat until the system has been repaired.

Warning!

Do not place powered-on laptops, cell phones and like electronic devices on the passenger seat. Signals from such devices may interfere with the BabySmart™ system. Such signal interference may cause the indicator lamp not to come on during self-test or be continuously lit, indicating that the system is not functioning.
Installation of infant and child restraint system

- Guide top tether strap between head restraint and top of seat back. Head restraint must be installed and positioned such that the top tether strap can pass freely between the head restraint and top of seat back.

1 Hook
2 Anchorage ring

- Securely fasten the hook 1 to the anchorage ring 2.

For safety, make sure that the hook has attached to the ring beyond the safety catch, as illustrated.

Vehicle without third row seats

- Anchorage rings for second row seats
- Anchorage rings for third row seats

This vehicle is provided with three tether anchorages 3 for a top tether strap behind the second row seats.

Vehicle with third row seats *

- Anchorage rings for second row seats
- Anchorage rings for third row seats*

This vehicle is provided with tether anchorages for a top tether strap behind the second row seats 3 and the third row seats 4.

When using the third row observe the following:

- Installation of infant and child restraint systems with a top tether strap is allowed only on both third row seats plus the center second row seat.
Safety and Security

Occupant safety

- When using the center second row seat for a top tether strap, the left third row seat should only be used for a child restraint system, since exiting the vehicle may not be possible in an emergency due to the routing of the top tether strap.

- When installing an infant or child restraint system with a top tether strap on the left second row seat, the left third row seat should not be occupied.

Child seat anchors – “LATCH” type

This vehicle is provided with two “LATCH” (LOWER Anchors and Tethers for CHildren) type anchors (at each of the outer rear seats and in the optional third row seats) for installation of a “LATCH” seat with matching mounting fittings.

An infant and child restraint system must not be installed on the right second row seat while a passenger rides in a third row seat. An infant and child restraint system installed on the right second row seat will prevent the use of the easy-entry/exit feature (> page 95).

With a child seat installed in the left rear seat, the seat belt for the center seat occupied by a passenger must operate freely. Guide seat belt between its seat cushion mount and backrest mount along outside of right side child seat mount.

Non-“LATCH” type child seats may also be used and can be installed using the vehicle’s seat belt system. Install child seat according to the manufacturer’s instructions.

Install a “LATCH” type child seat according to the manufacturer’s instructions.
Safety and Security

Occupant safety

Blocking of rear door window operation

1 Switch for rear door window override

- Slide the switch to the right.
  A dot becomes visible. The rear windows can no longer be operated using the switch in the rear doors.

Warning!

Install child seat according to manufacturer's instructions.

The child seat must be firmly attached in the right and left side anchors 1.

An incorrectly mounted child seat may come loose during an accident.

Damaged or impact damaged child seats or child seat mounting fittings must be replaced.

Do not leave children unattended in the vehicle, even if the children are secured in a child restraint system.

Children too big for child restraint systems must ride in back seats using regular seat belts. Position shoulder belt across chest and shoulder, not face or neck. A booster seat may be necessary to achieve proper belt positioning for children from 41 lbs. to the point where a lap/shoulder belt fits properly without one.

Warning!

Activate the override switch in the rear when children are riding in the car. The children could otherwise injure themselves, e.g., by becoming trapped in the window opening.

When leaving the vehicle, always remove the key from the steering lock, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

For more information on power windows, see the "Controls in detail" section (page 134).
Safety and Security

Panic alarm

An audible alarm and blinking turn signal lamps will operate for approximately 2 ½ minutes.

Activating

► Press and hold button 1 for at least one second.

Deactivating

► Press button 1. again or insert key in steering lock.

or

► Insert key in steering lock.

For operation in the USA only: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

• This device may not cause harmful interference, and

• this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.
Driving and safety systems

In this section you will find information on the following driving safety systems:

- ABS (Antilock Brake System)
- BAS (Brake Assist System)
- 4-ETS (Electronic Traction System)
- EBP (Electronic Brake Proportioning)
- ESP (Electronic Stability Program)

In winter operation, the maximum effectiveness of the ABS, ESP, EBP and 4-ETS is only achieved with winter tires (M+S tires), or snow chains as required.

ABS

The ABS regulates the brake pressure so that the wheels do not lock during braking. This allows you to maintain the ability to steer your vehicle.

The ABS is functional above a speed of approximately 5 mph (8 km/h) independent of road surface conditions.

On slippery road surfaces, the ABS will respond even with light brake pressure.

The warning lamp in the instrument cluster (> page 25) lights up when you turn the key to position 2. It goes out when the engine is running.

Warning!

Do not pump the brake pedal. Use firm, steady brake pedal pressure instead. Pumping the brake pedal defeats the purpose of ABS and significantly reduces braking effectiveness.

The following factors increase the risk of accidents:

- Excessive speed, especially in turns
- Wet and slippery road surfaces
- Following another vehicle too closely

ABS, BAS, ESP and 4-ETS cannot reduce this risk.

Always adjust your driving style to the prevailing road and weather conditions.

Warning!
Braking

At the instant one of the wheels is about to lock up, a slight pulsation can be felt in the brake pedal, indicating that the ABS is in the regulating mode.

- Keep firm and steady pressure on the brake pedal while experiencing the pulsation.

Emergency brake maneuver

- Keep continuous full pressure on the brake pedal.

With the ABS malfunctioning, the BAS, EBP ESP and 4-ETS are also switched off. Normal driving and braking functions are still available.

LOW RANGE– ABS

During off-road driving a special low range system for the antilock brake system (ABS) is operational with transmission in LOW RANGE mode (> page 118).

When applying the service brakes at speeds below approximately 18 mph (30 km/h), the front wheels are locked cyclically to shorten the braking distance (dig in effect). This affects steering the vehicle.

Warning!

The ABS cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking or steering efficiency beyond what is afforded by the condition of the vehicle brakes and tires or the traction afforded. The ABS cannot prevent accidents, including those resulting from excessive speed in turns, following another vehicle too closely, or aquaplaning. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of an ABS equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

More information can be found in the “Practical hints” section (> page 225).
BAS

The Brake Assist System (BAS) operates in emergency situations. If you apply the brakes very quickly, the BAS automatically provides full brake boost, thereby potentially reducing braking distance. Apply continuous full braking pressure until the emergency braking situation is over. The ABS will prevent the wheels from locking. When you release the brake pedal the brakes function again as normal. The BAS is then deactivated.

The warning lamp in the instrument cluster (page 25) lights up when you turn the key to position 2. It goes out when the engine is running.

More information can be found in the “Practical hints” section (page 225).

Warning!

The BAS cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded. The BAS cannot prevent accidents, including those resulting from excessive speed in turns, following another vehicle too closely, or aquaplaning. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of a BAS equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

4-ETS

The 4-Electronic Traction System (4-ETS) improves vehicle’s ability to utilize available traction, especially under slippery road conditions. The brakes are applied to the spinning wheel and power is transferred to the wheel(s) with traction.

The traction control engages at vehicle speeds up to approximately 24 mph (40 km / h), and switches off at 50 mph (80 km / h).

The warning lamp in the instrument cluster (page 25) lights up when you turn the key to position 2. It goes out when the engine is running.

The 4-ETS/ESP warning lamp, located in the speedometer dial, starts to flash at any vehicle speed, as soon as the tires lose traction and the wheels begin to spin.
Safety and Security

Driving and safety systems

Warning!

When you see the 4-ETS/ESP-warning lamp \[\text{\textbullet} \text{\textbullet} \text{\textbullet}\] flashing in the speedometer dial, then proceed as follows:

- While driving off, apply as little throttle as possible.
- While driving ease up on the accelerator.
- Adapt your speed and driving style to the prevailing road conditions.

Failure to observe these guidelines could cause the vehicle to skid.

The 4-ETS cannot prevent accidents resulting from excessive speed.

The engine must be shut off when
- the parking brake is being tested on a brake test dynamometer.
- the vehicle is being towed with the front axle raised.

Otherwise, the 4-ETS will engage the brakes and seriously damage the brake system.

If the yellow 4-ETS malfunction indicator lamp \[\text{\textbullet} \text{\textbullet} \text{\textbullet}\] comes on while the 4-ETS/ESP warning lamp \[\text{\textbullet} \text{\textbullet} \text{\textbullet}\] flashes, the electronic traction system is being switched off temporarily to prevent overheating of the drive wheel brakes.

LOW RANGE 4-ETS

During off-road driving a special low range system for the 4-ETS is operational with transmission in LOW RANGE mode.

More information can be found in the “Practical hints” section (\(>\) page 224) and (\(>\) page 226).

EBP

The EBP enhances braking effectiveness by allowing the rear brakes to supply a greater proportion of the braking effort without a loss of vehicle stability.
ESP

The Electronic Stability Program (ESP) monitors the vehicle's traction (force of adhesive friction between the tires and the road surface) and handling.

The ESP recognizes when a wheel is spinning or if the vehicle starts to skid. By applying brakes to the appropriate wheel and by limiting engine output, the ESP works to stabilize the vehicle.

The 4-ETS/ESP warning lamp in the speedometer dial flashes when the ESP is engaged.

The warning lamp in the instrument cluster (→ page 25) and the 4-ETS/ESP warning lamp in the speedometer light up when you turn the key to position 2. They go out when the engine is running.

Warning!

Never switch off the ESP when you see the 4-ETS/ESP-warning lamp flashing in the speedometer dial. In this case proceed as follows:
- While driving off, apply as little throttle as possible.
- While driving ease up on the accelerator.
- Adapt your speed and driving style to the prevailing road conditions.

Failure to observe these guidelines could cause the vehicle to skid.

The ESP cannot prevent accidents resulting from excessive speed.

Warning!

The ESP cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded. The ESP cannot prevent accidents, including those resulting from excessive speed in turns, following another vehicle too closely, or aquaplaning. Only a safe, attentive, and skillful driver can prevent accidents.

The capabilities of a ESP equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user's safety or the safety of others.
Safety and Security

Driving and safety systems

LOW RANGE – ESP

During off-road driving a special low range system for the ESP is operational with transmission in LOW RANGE mode (> page 118).

In the LOW RANGE mode ESP operates in a traction improving fashion specifically adapted for off-road driving. At speeds below 27 mph (45 km/h), the ESP assists in over-/understeering, thus improving vehicle traction.

Switching off the ESP

To improve the vehicle’s traction, turn off the ESP in driving situations where it would be advantageous to have drive wheels spin and thus cut into surfaces for better grip such as:

- starting out on slippery surfaces and in deep snow in conjunction with snow chains
- in sand or gravel
- when driving off-road

When the ESP is turned off
- engine torque is not limited.
- the drive wheels can spin.

This helps the wheels cut into surfaces for a better grip.

Warning!

The ESP should not be switched off during normal driving other than in the circumstances described below. Disabling of the system will reduce vehicle stability in standard driving maneuvers.

Avoid spinning of a drive wheel for an extended period with the ESP switched off. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Turn ESP on immediately if the aforementioned circumstances do not apply anymore.

The engine must be shut off when
- the parking brake is being tested on a brake test dynamometer.
- the vehicle is being towed with the front axle raised.

Otherwise, the ESP will engage the brakes and seriously damage the brake system.

The ESP will only function properly if you use wheels of the recommended tire size (> page 279).

The engine must be shut off when
- the parking brake is being tested on a brake test dynamometer.
- the vehicle is being towed with the front axle raised.

When the ESP is turned off
- engine torque is not limited.
- the drive wheels can spin.

This helps the wheels cut into surfaces for a better grip.

Warning!

The ESP should not be switched off during normal driving other than in the circumstances described below. Disabling of the system will reduce vehicle stability in standard driving maneuvers.

Avoid spinning of a drive wheel for an extended period with the ESP switched off. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Turn ESP on immediately if the aforementioned circumstances do not apply anymore.
The button is located in the upper center console.

1 ESP on/off

- Press upper half of button.

The 4-ETS/ESP warning lamp ▼ in the speedometer dial comes on.

Even if the ESP has been turned off, it is still active in the following situations:
- when braking
- at vehicle speeds between approximately 24 mph (40 km/h) and 50 mph (80 km/h), if one drive wheel loses traction and begins to spin.

The brake is applied until the wheel regains sufficient traction.

The 4-ETS/ESP warning lamp ▼, located in the speedometer dial, starts to flash at any speed as soon as the tires lose traction.

Warning!

When the 4-ETS / ESP warning lamp ▼ is illuminated continuously, the ESP is switched off.

Adapt your speed and driving to the prevailing road conditions and to the non-operating status of the ESP.

Switching on the ESP

- Press lower half of button.

The 4-ETS/ESP warning lamp ▼ in the speedometer goes out. You are now again in normal driving mode.

More information can be found in the “Practical hints” section (→ page 224).
Safety and Security

Anti-theft systems

**Immobilizer**

The immobilizer prevents unauthorized persons from starting your vehicle.

**Activating**

Removing the key from the steering lock activates the immobilizer.

**Deactivating**

Switch on the ignition by turning the key in the steering lock to position 2.

**Anti-theft alarm**

Once the alarm system has been armed, a visual and audible alarm is triggered when someone:

- opens a door
- opens the liftgate
- opens the hood

The alarm will stay on even if the activating element (a door, for example) is immediately closed.

The alarm system will also be triggered when

- someone attempts to raise the vehicle
- unlocking and opening the driver's door with the mechanical key

**If** the alarm stays on for more than 20 seconds, an emergency call is initiated automatically by the Tele Aid system (> page 159) provided Tele Aid service was subscribed to and properly activated.

**Arming the alarm system**

The alarm system is armed after locking the vehicle with the remote control. The turn signal lamps blink three times to indicate that the alarm system is activated. A red lamp in the center console will blink after approximately 10 seconds when the alarm system is completely armed (> page 27).
Safety and Security
Anti-theft systems

Disarming the alarm system
The alarm system is disarmed when you unlock your vehicle with the remote control. The turn signal lamps blink once to indicate that the alarm system is deactivated.

To cancel the alarm:
- Switch on the ignition by turning the key in the steering lock to position 2.
- Press the or button on the remote control.

Canceling the alarm

Tow-away alarm, glass breakage sensor
The tow-away alarm and the glass breakage sensor are part of the anti-theft alarm system.

Once the tow-away alarm is armed, a visual and audible alarm will be triggered when someone:
- attempts to raise the vehicle
- breaks a window and reaches into the passenger compartment

If the turn signal lamps do not blink three times, the tow-away glass breakage sensor is malfunctioning or one of the following elements may not be properly closed:
- a door
- the liftgate
- the hood

Close the respective element and lock the vehicle again.

If the alarm stays on for more than 20 seconds, an emergency call is initiated automatically by the Tele Aid system (page 159) provided Tele Aid service was subscribed to and properly activated.
Safety and Security

Anti-theft systems

Arming tow-alarm and glass breakage sensor
When you lock your vehicle, the tow-away and glass breakage sensor alarm is automatically armed.

Disarming tow-alarm and glass breakage sensor
To prevent triggering the tow-away alarm feature, switch off the tow-away alarm and glass breakage sensor before towing the vehicle, or when parking on a surface subject to movement, such as a ferry or auto train.

Vehicles with trip computer*
The buttons are located in the overhead control panel.

- Turn key in steering lock to position 1 (page 33).
- Press button 2.
- Return key to position 0 and remove it from the steering lock.
- Within 30 seconds press button 1 or 2. The display shows OFF.
- Exit vehicle and lock vehicle with remote control (page 32).

The tow-away alarm and glass breakage sensor remain switched off until the key is inserted in steering lock and turned to position 1.

1 Reset button
2 Mode button
3 Display
4 Glass breakage sensor
Safety and Security

Anti-theft systems

**Vehicles without trip computer**

The buttons are located in the overhead control panel.

[1] Switching off tow-away alarm and glass breakage sensor

- Turn key in steering lock to position 1 (→ page 33).
- Press the button 2.
- Return key to position 0 and remove it from the steering lock.
- Within 30 seconds press button 1 on the right or left side.
- Exit vehicle and lock vehicle with remote control (→ page 32).

The tow-away alarm and glass breakage sensor remain switched off until the key is inserted in steering lock and turned to position 1.

Locking and unlocking

Remote control with folding key

More information on the remote control with folding key can be found in the “Getting started” section (› page 32).

Your vehicle comes supplied with two remote controls with folding key.

The remote control provides an extended operating range. To prevent theft, however, it is advisable to only unlock the vehicle when you are in close proximity to it.

The key centrally locks and unlocks:
- the doors
- the liftgate
- the fuel filler flap

If the key is inserted in the steering lock, the vehicle cannot be locked or unlocked with the remote control.

To prevent possible malfunction, avoid exposing the key to high levels of electromagnetic radiation.
Unlocking

Unlocking the vehicle with the remote control deactivates the anti-theft alarm.
The vehicle will lock again automatically and reactivate the anti-theft system within approximately 40 seconds of unlocking if neither door nor liftgate is opened.

Unlocking the driver’s door and fuel filler flap

- Press button once.
  All turn signal lamps blink once to indicate that the driver’s door and the fuel filler flap are unlocked.

Global unlocking

- Press button twice.
  All turn signal lamps blink once to indicate that all doors, fuel filler flap and liftgate are unlocked.

Unlocking the liftgate

- Press button.
  Only the liftgate unlocks.

Locking

- Press button once.
  All turn signal lamps blink three times to indicate that all doors, the liftgate and the fuel filler flap are unlocked.

Global locking

If the turn signal lamps do not blink three times, one of the following elements may not be properly closed:
- a door
- the liftgate
- the hood
Close the respective element and lock the vehicle again.

Warning!

When leaving the vehicle, always remove the key from the steering lock, and lock your vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.
Controls in detail

Locking and unlocking

Loss of remote control with folding key

If you lose a remote control or the folding key, you should do the following:

- Have the remote control deactivated by an authorized Mercedes-Benz Light Truck Center.
- Report the loss of the remote control or the folding key immediately to your car insurance company.
- If necessary have the mechanical lock replaced.

Your authorized Mercedes-Benz Light Truck Center will be glad to supply you with a replacement.

Opening the doors from the inside

You can open a locked door from the inside. Open door only when conditions are safe to do so.

1 Locking knob
2 Inside door handle

Pull on door handle 2.

If a door was locked, locking knob 1 will move up.

If you can no longer lock or unlock the vehicle with the remote control, then the batteries in the remote control are discharged, the remote control is malfunctioning or the vehicle battery is drained.

- Use the folding key to unlock or lock the doors and the liftgate.
- Check the vehicle battery (▷ page 261).
- Replace batteries (▷ page 243).
- Synchronize the remote control (▷ page 244).

If the remote control is malfunctioning, contact an authorized Mercedes-Benz Light Truck Center.
If the vehicle has previously been locked from the outside with the remote control, opening a door from the inside will trigger the alarm.

### Opening the liftgate

#### Warning!

Only drive with the liftgate closed as, among other dangers such as visibility blockage, exhaust fumes may enter the vehicle interior.

A minimum height clearance of 7 ft. (2.15 m) is required to open the liftgate.

#### Opening the liftgate from outside

1. **Grip molding**
2. **Handle**

   - Pull on handle 2.
   - Swing the liftgate upward by using the grip molding.

#### Opening the liftgate from inside

The release lever is located on the inside of the liftgate.

1. **Handle**
2. **Catch**

   - For unlocking the liftgate move the catch 2 to the right.
   - Pull handle 1 down and swing liftgate upward.

   - For locking the liftgate move the catch 2 to the left.
Controls in detail

Locking and unlocking

Warning!

When leaving the vehicle, always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle. Children could open the liftgate from inside, which could result in an accident and/or serious personal injury.

Closing the liftgate

Warning!

When closing the liftgate, use extreme caution not to catch hands or fingers. Be especially careful when small children are around.

Do not close the liftgate from the inside by pulling on the handle.

1 Recessed grip
2 Grip molding

- Pull down on recessed grip 1.
- Close liftgate by using grip molding 2.
Controls in detail

Locking and unlocking

Automatic central locking

The doors and the liftgate automatically lock when the ignition is switched on and the left front wheel turns at vehicle speeds of approximately 9 mph (15 km/h) or more.

If one of the front doors is then opened from the inside, the vehicle is unlocked centrally unless only the driver’s door was previously unlocked.

The central locking button is located on the lower center console.

Activating

1. Check that the ignition is switched on. All the lamps in the instrument cluster light up.
2. Press and hold upper part 1 of the central locking button for approximately six seconds. The automatic central locking is activated.

Deactivating

1. Check that the ignition is switched on. All the lamps in the instrument cluster light up.
2. Press and hold lower part 2 of the central locking button for approximately six seconds. The automatic central locking is deactivated.

The doors unlock automatically after an accident if the force of the impact exceeds a preset threshold.

To prevent the vehicle door locks from locking, deactivate the automatic central locking when the vehicle

- is pushed or
- is on a test stand
Controls in detail

Locking and unlocking

Locking and unlocking from the inside

You can lock or unlock the vehicle from inside using the central locking switches. This can be useful, for example, if you want to unlock the passenger door from the inside or want to lock the vehicle before starting to drive.

**Locking**

- Press upper part 1 of central locking button (> page 89).
  
  If all the doors are closed, the vehicle locks.

**Unlocking**

- Press lower part 2 of central locking button (> page 89).
  
  The vehicle unlocks, if the vehicle was not previously centrally locked with the remote control.

---

**Warning!**

When leaving the vehicle, always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

---

You can open a locked door from the inside. Open door only when conditions are safe to do so.

If you have locked the vehicle with the remote control, the central locking switch does not work.
Seats

Information on seat adjustment can be found in the “Getting started” section (page 34).

Seat heater*

The seat heaters can only be switched on with the engine running.
The switches are located on the upper center console.

[Diagram of seat heater]

Switching on normal seat heating mode
► Press upper part 1 of switch.
One indicator lamp in the switch lights up.

Switching off normal seat heating mode
► Press upper part 1 of switch again.
The indicator lamp in the switch goes out.

Switching on rapid seat heating mode
► Press lower part 2 of switch.
Both indicator lamps in the switch light up.

Switching off rapid seat heating mode
► Press lower part 2 of switch again.
Both indicator lamps in the switch go out.

The seat heater will be automatically switched off after approximately 20 minutes.

The system switches over to normal heating mode after approximately five minutes. Only one indicator lamp remains lit.

If one or both of the lamps on the seat heater switch are blinking, there is insufficient voltage available since too many electrical consumers are turned on. The seat heater switches off automatically.

The seat heater will switch back on again automatically as soon as sufficient voltage is available.
Removing and installing head restraints

Warning!
For your protection, drive only with properly positioned head restraints.
Adjust head restraint to support the back of the head approximately at ear level.
Do not drive the vehicle without the seat head restraints. Head restraints are intended to help reduce injuries during an accident.

Removing head restraint

1 Lock button
- Pull head restraint to its highest position
- Press lock button 1 and pull out head restraint.

Installing head restraint
- Insert head restraint and push it down to the stop.
- Press lock button 1 and adjust head restraint down to the desired position (> page 36).

The head restraint(s) should be stored beneath the cargo floor plates (> page 144).
Rear seats

Warning!

Do not adjust the rear seats while driving. Always seat in an upright position and the seat belts are properly positioned on the body. Your seat must be adjusted so that you can correctly fasten your seat belt. Adjust head restraint to support the back of the head approximately at ear level. Never place hands under the seat or near any moving parts while a seat is being adjusted.

The rear seats are divided asymmetrically. To enlarge the cargo area you can adjust the left and right part separately. The following changes are possible:

- moving the seat fore and aft
- folding down the backrest
- lowering the seat

Adjusting rear seat fore and aft

1 Release lever
- Pull release lever 1 in direction of arrow.
- Slide seat to the desired position until it locks in place.

Warning!

Failure to assure that seats are locked into place could result in an increased chance of injury in an accident.

Folding down the backrest

1 Lock button
- Close cup holder in rear center console (> page 155).
- Move front seats forward. Manual seat (> page 35) or power seat (> page 37).
- Slide seat forward.
- Remove head restraint(s) (> page 92).
- Pull lock button 1 up and fold backrest forward until it locks in place.

The red backrest lock indicator at lock button 1 is not visible in the locked position.
Controls in detail

Seats

Folding up the backrest

- Pull lock button 1 up and unfold backrest until it locks in place.
- Make sure that the seat belt is not caught in the seat.
- Check for secure locking by pulling and pushing on the backrest.
  The red backrest lock indicator at lock button 1 is not visible in the locked position.
- Install head restraint (> page 92).
- Slide seat rearward to desired position (> page 93).
- Adjust front seats to desired position.
  Manual seats (> page 35) and power seats (> page 37).

Lowering the rear seat

1 Release button
2 Lever
3 Release lever

- Close cup holder in rear center console (> page 155).
- Move front seats forward. Manual seat (> page 35) or power seat (> page 37).
- Press and hold release button 1 to unlock lever 2.

- Pull lever 2 in direction of arrow.
- Pull release lever 3 and push down rear seat until it locks in place.
- Fold down the backrest (> page 93).
- Adjust front seats to desired position.
  Manual seats (> page 35) and power seats (> page 37).

Folding up the rear seat

- Move front seats forward. Manual seat (> page 35) or power seat (> page 37).
- Pull release lever 3 and raise rear seat until it locks in place.

Warning!

Failure to assure that seats are locked into place could result in an increased chance of injury in an accident.
Easy entry/exit feature*

The easy entry/exit feature allows access to the third row seats*. The right cargo floor plate must be removed (> page 144).

Warning!

Never drive with the second row right seat folded forward (easy entry/exit feature). It could open and fold back unintentionally.

Folding rear seat forward

- Move right seat forward. Manual seats (> page 35) and power seats (> page 37).
- Move rear seat forward (> page 93).
- Push head restraint fully down and tilt it forward.
- Fold backrest forward (> page 93).
- Pull lever 1 up and fold the rear seat forward.

Resetting rear seat

- Pull lock button 1 (> page 93) up and unfold backrest until it locks into place.
- Pull down on seat bench until it locks into place.
- Check for secure locking by pulling and pushing on the backrest.

The red backrest lock indicator at lock button 1 (> page 93) is not visible in the locked position.
- Move the rear and front seats in desired position.
- Pull up and adjust head restraint (> page 36).
Controls in detail

Seats

Third row seats *

Warning!

For your protection, drive only with properly positioned head restraints.
Adjust head restraint to support the back of the head approximately at ear level.
Failure to assure that seats are locked into place could result in an increased chance of injury in an accident.
Never place hands under seat or near any moving parts while a seat is being adjusted.

Folding down single seat

1 Head restraint
2 Hook
3 Tensioner
4 Hook and loop strip
5 Backrest release
6 Seat release

- Attach belt at hook and loop strip 4 on underside of seat.
- Remove cargo floor plate (page 144).
- Remove head restraint 1 from seat cushion.
- Lift tensioner 3 upward to a horizontal position to release tension of the belt.
- Disengage hook 2 while holding onto the seat firmly with one hand.
- Fold seat down until it locks securely in place.
- The red marking on the seat release should 6 not be visible.
- Store cargo floor plates inside the backrest (page 144).
- Pull backrest release 5 and unfold backrest until it locks securely in place.
- Install head restraint 1 in backrest (page 92).

Warning!

For your protection, drive only with properly positioned head restraints.
Adjust head restraint to support the back of the head approximately at ear level.
Failure to assure that seats are locked into place could result in an increased chance of injury in an accident.
Never place hands under seat or near any moving parts while a seat is being adjusted.
**Storing single seat**

- Remove head restraint from backrest (**page 92**).
- Pull backrest release 5 and fold backrest forward until it locks securely in place.
- Remove cargo floor plates from the backrest.
- Pull seat release 6 (**page 96**) and fold seat up.
- Disengage belt and engage hook 2 (**page 96**) in ceiling mount.
- Pull on free end of belt until tight.
- Install head restraint in openings provided in seat cushion.
- Install cargo floor plates (**page 144**).

**Warning!**

After folding the seats up, manually place the lap belt portion of the seat belt behind the seat (arrow). Otherwise, the lap belt may be subject to damage and could rip.
Removing single seat

- Lift tensioner 2 upward to a horizontal position to release tension of the belt.
- Disengage hook 2 while holding onto the seat firmly with one hand.
- Attach belt at hook and loop strip 3 on underside of seat.
- Move release lever 4 upward and remove seat.

Installing single seat

- Place seat into the mounting clamps and click the seat into place.

1 Hook
2 Tensioner
3 Hook and loop strip
4 Release lever
Memory function*

Prior to operating the vehicle the driver should check and adjust the seat height, seat position fore and aft, and seat backrest angle if necessary, to ensure adequate control, reach and comfort. The head restraint should also be adjusted for proper height. Also see airbag section (> page 55) for proper seat positioning.

In addition, adjust the steering wheel to ensure adequate control, reach, operation and comfort. Both the inside and outside rear view mirrors should be adjusted for adequate rear vision.

With the memory button you can store up to three different settings for the driver-and passenger seat.

Together with the driver’s seat you can store the exterior rear view mirrors.

For the front passenger seat you can store the seat position.

Warning!

Do not activate the memory function while driving. Activating the memory function while driving could cause the driver to lose control of the vehicle.
Controls in detail

Memory function*

Storing positions in memory

► Adjust the seat (> page 36) and exterior rear view mirrors (> page 38) to the desired position.
► Push memory button 2.
► Release memory button and press one of the position buttons 1 within three seconds.

All the settings are stored at the selected position.

Recalling positions from memory

► Do not operate the power seats using the memory button if the seat backrest is in an excessively reclined position. Doing so could cause damage to front or rear seats.

► Press and hold one of the position buttons 1 until seat and rear view mirrors have fully moved to the stored positions.

Releasing the button immediately stops movement to the stored positions.

Exterior rear view mirror parking position (passenger side)

For easier parking, you can adjust the passenger exterior rear view mirror so that you can see the right rear wheel as soon as you engage reverse gear R.
Controls in detail
Memory function*

Activating parking position
The buttons are on the lower part of the center console.

1 Deactivating parking position
2 Activating parking position
3 Adjustment button

► Switch ignition on (if not already on).
► Press button 2.
  The passenger side exterior rear view mirror is selected.
► Engage reverse gear R.
  The passenger side exterior rear view mirror moves automatically to the stored parking position.

The exterior rear view mirror returns to its stored driving position:
• 10 seconds after you put the gear selector lever in position D
• immediately once you exceed a speed of approx. 6 mph (10 km/h)
• immediately when you press the button 1 for driver’s side mirror

If the button 1 is pressed, the automatic passenger side exterior rear view parking position is deactivated.

Storing parking position
► Stop the vehicle.
► Switch ignition on (if not already on).
► Press button 2.
  The passenger side exterior rear view mirror is selected.
► Adjust the exterior rear view mirror with button 3 so that you see the rear wheel and the curb.
► Press memory button 2 (> page 99).
► Within three seconds, press bottom of adjustment button 3.
  The parking position is stored if the mirror does not move.

If the mirror does move, repeat the above steps. After the setting is stored you can move the mirror again.
  The selected position will be stored relative to the position button 1 (> page 99) pressed.
Controls in detail

Lighting

For notes on how to switch on the headlamps (> page 46) and use the turn signals (> page 47), see the “Getting started” section.

Combination switch

The combination switch is on the left of the steering column.

1 High beam
2 High beam flasher
0 Off
AUTO Automatic headlamp mode

Parking lamps, license plate lamps and instrument panel lamps
Canada only: With the engine running, the low beam headlamps additionally switched on.
Low beam or high beam headlamps
Left or right standing lamps (symbol on underside of switch)

Switching on high beams
► Turn the switch to 0.
► Push the exterior lamp switch forward.
The high beam symbol in the instrument cluster lights up.

High beam flasher
► Pull the combination switch briefly in direction 2.

If you remove the key and open the driver’s door while the parking lamps or low beam headlamps are switched on, then a warning sounds.
Automatic headlamp mode

The parking lamps, low beam headlamps and license plate lamps switch on and off automatically depending on the brightness of the ambient light.

**Warning!**

In automatic headlamp mode, the headlamps will not be automatically switched on under foggy conditions. To minimize risk to you and to others, activate headlamps by turning combination switch to 🧪 🧪.

The driver is responsible for the operation of the vehicle’s lights at all times. The automatic headlamp feature is only an aid to the driver. Switch on the vehicle lights manually when driving or when traffic conditions require you to do so.

► Turn the combination switch to AUTO.

If the automatic headlamp mode is activated, the fog lamps can also be switched on (> page 105). The low beam headlamp and parking lamps are activated simultaneously.

 ► If the automatic headlamp mode is activated, the fog lamps can also be switched on (> page 105). The low beam headlamp and parking lamps are activated simultaneously.

If you drive in countries where vehicles drive on the other side of the road than the country where the vehicle is registered, you must have the headlamps modified for symmetrical low beams. Relevant information can be obtained at your authorized Mercedes-Benz Light Truck Center.

Daytime running lamp mode

**Canada only:**

► Turn combination switch to position 0 or AUTO.

When the engine is running, the low beam headlamps are automatically switched on. In low ambient light conditions the parking lamps will also switch on.

When you shift from a driving position to position N or P, the low beam switches off (3 minutes delay).

For nighttime driving you should turn the combination switch to position to permit activation of the high beam headlamps.

The high beam flasher is always available.
Controls in detail

Lighting

Night security illumination
When you turn off the engine and the last door has been closed, the following lamps will remain lit:
- Parking lamps
- Tail lamps
- License plate lamps
- Front fog lamps
The combination switch must be set to position U (page 102).

Deactivating night security illumination temporarily
- Before leaving the vehicle turn the key in the steering lock to position 0 then turn it to position 2 and back to 0.
  The night security illumination is deactivated. It will reactivate as soon as you reinsert the key in the steering lock.

Setting illumination time
- Stop the vehicle.
- Make sure that the ignition is switched on.
  All the lamps in the instrument cluster light up.
- Turn combination switch to position M.
- Press upper part 1 of switch until the clock, located in the instrument cluster, displays the actual illumination time.
- Press upper part 1 of switch again.
  Each time the switch is pressed, the illumination time increases by 15 seconds. You can set the illumination time between 0 (off) and 60 seconds.
Approximately five seconds after pressing the switch, the illumination time is set and the clock is displayed again.
Locator lighting
During darkness, the following lamps will come on when the vehicle is unlocked by remote control:
• Parking lamps
• Tail lamps
• License plate lamps
• Front fog lamps
The combination switch must be set to position AUTO (page 102).
The locator lighting switches off when the driver’s door is opened. It switches off automatically after a period of approximately 40 seconds.

Fog lamps
The fog lamps can be switched on with combination switch in position AUTO or U. Consult your state Motor Regulations regarding allowable lamp operation.
The switch is located on the upper center console.

Switching on front fog lamps
► Check that the low beam headlamps are switched on.
► Press upper part 1 of switch.
The green indicator lamp ‡ in the instrument cluster lights up.

Switching on front fog lamps and rear fog lamp
► Check that the low beam headlamps are switched on.
► Press lower part 3 of switch.
The green indicator lamp ‡ in the instrument cluster lights up in addition to the yellow indicator lamp 2 in the switch.

Switching off front fog lamps and rear fog lamp
► Press lower part 3 of switch.
The green indicator lamp ‡ in the instrument cluster and the yellow indicator lamp 2 in the switch go out.
Controls in detail

Lighting

Switching off rear fog lamp

Press upper part 1 of switch.
The yellow indicator lamp 2 in the switch goes out.

Switching off front fog lamps

Press upper part 1 of switch.
The green indicator lamp 10 in the instrument cluster goes out.

Hazard warning flasher

The hazard warning flasher can be activated with the ignition switched on or off. It is activated automatically when an airbag is deployed.
The switch is located on top of the steering column.

Switching on hazard warning flasher

Press the hazard warning flasher switch.
All the turn signals will blink.

Switching off hazard warning flasher

Press hazard warning flasher switch again.

If the hazard warning flasher was activated automatically, press the hazard warning flasher switch twice to deactivate.
Controls in detail

Automatic control

Activating

- Bring the rocker switch in center position 4.

Interior lamps (except cargo compartment lamp) are switched on in darkness when you
  - unlock the vehicle
  - open a door
  - remove the key from the steering lock

In addition, the entry/exit lamps in the door trays will come on when you open a door.
When all doors are closed and no key is inserted in the steering lock, the interior lamps are switched off after a brief delay.

Deactivating

- Press lower part 3 of rocker switch.

The interior lighting and the entry/exit lamps remain switched off in darkness, even when you
  - unlock the vehicle
  - open a door
  - remove the key from the steering lock

If the door remains open, the interior lamps (except cargo compartment lamp) switch off automatically after approximately 30 minutes.
Controls in detail

Lighting

**Manual control**

If a lamp is switched on manually, it will not go out automatically. This could cause the battery to become discharged.

**Switching on front interior lamps**

- Press on lamp lens 1 or 2.
  - The respective lamp switches on.

**Switching off front interior lamps**

- Press on lamp lens 1 or 2 again.
  - The respective lamp switches off.

**Operating rear interior lighting with rocker switch**

- Press on upper part 5 of rocker switch again.
  - The rear interior lighting goes off.

  If the switch is pressed while the rear interior lighting is on, the function is reversed.

**Operating rear interior lighting with lamp lens**

- Press on upper part 5 of rocker switch.
  - The rear interior lighting goes on.

  **Reading lamps in inside rear view mirror**

- Press button 2.
  - Reading lamps on/off

**Switching on reading lamp**

- Press button 2.

**Switching off reading lamp**

- Press button 2 again.
Controls in detail

Lighting

Cargo compartment lamp

1 Switched off

Instrument cluster

Coolant temperature gauge

Under normal driving conditions, the coolant temperature may rise to 248°F (120°C). The coolant temperature may climb to the red marking:

- at high outside temperatures
- during stop-and-go city traffic
- when driving on hilly terrain

The engine should not be operated with the coolant temperature in the red zone. Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.

Warning!

Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until it cools down.

Display in the speedometer

Changing display

- Press the left knob 1 in the instrument cluster (page 110).

The display changes between main odometer and trip odometer.

- Press the left knob 1 twice.

The next scheduled service is displayed (page 215).
Controls in detail

Instrument cluster

Resetting trip odometer

- Press the left knob 1 (> page 110) repeatedly until you see the trip odometer display.
- Press and hold the left knob 1 until the trip odometer is reset.

Tachometer

To help protect the engine, the fuel supply is interrupted if the engine is operated above its specified limit.

Outside temperature indicator

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose.</td>
</tr>
</tbody>
</table>

Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges.

When moving the vehicle into colder ambient temperatures (e.g. when leaving your garage), you will notice a delay before the lower temperature is displayed.

A delay also occurs when ambient temperatures rise. This prevents inaccurate temperature indications caused by heat radiated from the engine during idling or slow driving.

Setting the clock

Hour

- Pull out the right knob 2 in the instrument cluster (> page 110) and turn it counterclockwise.

Minutes

- Pull out the right knob 2 in the instrument cluster (> page 110) and turn it clockwise.

To set the clock by a single hour or a few minutes, turn knob 2 just a few degrees in the direction indicated for hours or minutes.
Automatic transmission

Information for driving with an automatic transmission is found in the “Getting started” section (page 44).

Your transmission adapts its gear shifting process to your individual driving style by continually adjusting the shift points up or down. These shift point adjustments are performed based on current operating and driving conditions.

If the operating conditions change, the automatic transmission reacts by adjusting its gear shift program.

The automatic transmission selects individual gears automatically, dependent upon:

- the selector lever position D with gear ranges 4, 3, 2, 1
- the position of the accelerator pedal (page 117)
- the vehicle speed

### Warning!

It is dangerous to shift the selector lever out of P or N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

When the selector lever is in position D, you can influence transmission shifting by:

- limiting the gear range
- changing gears yourself

### One-touch gearshifting

Even with an automatic transmission you can change the gears yourself when the selector lever is in position D.

### Downshifting

- Briefly press the selector lever to the left in the D– direction.

The transmission will shift from the current gear to the next lower gear. This action simultaneously limits the gear range of the transmission (page 114).

### Warning!

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.
Controls in detail

Automatic transmission

To avoid overrevving the engine when the selector lever is moved to the D– direction, the transmission will not shift to a lower gear if the engine's max. speed would be exceeded.

**Upshifting**

- Briefly press the selector lever to the right in the D+ direction.

  The transmission will shift from the current gear to the next higher gear as permitted by the shift program. This action simultaneously extends the gear range of the transmission.

**Canceling gear range limit**

- Press and hold the selector lever in the D+ direction until D reappears in the tachometer display field.

**Shifting into optimal gear range**

- Press and hold the gear selector lever in the D– direction.

  The transmission will automatically select the gear range suited for optimal acceleration and deceleration. This will involve shifting down one or more gears.

**Gear ranges**

With the selector lever in position D, you can limit the transmission's gear range by pressing the lever to the left (D–), and reverse the gear range limit by pressing the lever to the right (D+).

The selected gear range will appear in the tachometer display field. If you press on the accelerator when the engine has reached its rpm limit, the transmission will upshift beyond any gear range limit selected.
### Gear selector lever position

<table>
<thead>
<tr>
<th>Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>P    Park position</td>
</tr>
<tr>
<td>R    Place selector lever in position R only when vehicle is stopped.</td>
</tr>
</tbody>
</table>

### Gear selector lever position

<tr>
<td>1</td>
<td>The transmission operates only in first gear For maximum use of engine’s braking effect on very steep or lengthy downgrades.</td>
</tr>
</tbody>
</table>

### Automatic transmission

- **Gear selector lever position**
  - **Effect**
  - **P** Park position
    - Selector position when the vehicle is parked. Only place selector lever in position P when vehicle is stopped. The park position is not intended to serve as a brake when the vehicle is parked. Rather, the driver should always set the parking brake in addition to placing the selector lever in position P to secure the vehicle.
    - The key can only be removed from the steering lock with the selector lever in position P. With the key removed the selector lever is locked in position P.
    - If the vehicle electrical system is malfunctioning, the selector lever could remain locked in position P (page 245).
  - **R** Place selector lever in position R only when vehicle is stopped.
## Controls in detail

### Automatic transmission

<table>
<thead>
<tr>
<th>Effect</th>
<th>Neutral</th>
</tr>
</thead>
<tbody>
<tr>
<td>No power is transmitted from the engine to the drive axle. When the brakes are released, the vehicle can be moved freely (pushed or towed). To avoid damage to the transmission, never engage N while driving. If the ESP is deactivated or malfunctioning: Only move selector lever to N if the vehicle is in danger of skidding (e.g. on icy roads).</td>
<td></td>
</tr>
</tbody>
</table>

| D | The transmission shifts automatically. All five forward gears are available. |

---

**Warning!**

Coasting the vehicle, or driving for any other reason with selector lever in N can result in transmission damage that is not covered by the Mercedes-Benz Limited Warranty.

---

**Warning!**

When leaving the vehicle always remove the key from the steering lock and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could move the selector lever from position P, which could result in an accident and/or serious personal injury.

---

Getting out of your vehicle with the selector lever not fully engaged in position P is dangerous. Also, position P alone is not intended to or capable of preventing your vehicle from moving, possibly hitting people or objects.

Always set the parking brake in addition to shifting to position P (> page 50).

When parked on an incline, turn the front wheels towards the road curb.
## Controls in detail

### Automatic transmission

#### Accelerator position

Your driving style influences the transmission’s shifting behavior:

<table>
<thead>
<tr>
<th>Less throttle</th>
<th>Earlier upshifting</th>
</tr>
</thead>
<tbody>
<tr>
<td>More throttle</td>
<td>Later upshifting</td>
</tr>
</tbody>
</table>

#### Kickdown

Use kickdown when you want maximum acceleration:

- Press the accelerator past the point of resistance.
  
  The transmission shifts into a lower gear.

- Ease on the accelerator when you have reached the desired speed.
  
  The transmission shifts up again.

#### Towing a trailer

If you tow a trailer, note the following points:

- Manually shift to a lower gear range (4, 3, 2, 1), if the transmission hunts between gears on inclines (>
  
  page 114).

  A lower gear range and reduction of speed reduces the change to overload or overheat the engine.

- At very steep inclines switch transfer case to LOW RANGE mode (>
  
  page 118).

  For more information on trailer towing, see the “Operation” section (>
  
  page 192).

#### Emergency operation (Limp Home Mode)

If the vehicle acceleration worsens or the transmission no longer shifts, the transmission is most likely operating in limp home mode. In this mode only 2nd gear and reverse gear can be activated.

- Stop the vehicle.
- Move selector lever to position P.
- Turn off the engine.
- Wait at least ten seconds before restarting.
- Move selector lever to position D (for 2nd gear) or R.
- Have the transmission checked at an authorized Mercedes-Benz Light Truck Center as soon as possible.
Transmission control – LOW RANGE mode

In the following situations you should switch to LOW RANGE mode:

- during off-road driving
- when crossing water
- when towing up or down on steep gradients

Only switch the LOW RANGE mode on or off, when the vehicle is
- at a complete standstill
- the engine speed is less than 1500 rpm

Failure to do so may result in transmission or engine damage which is not covered by the Mercedes-Benz Limited Warranty.

Switching on LOW RANGE mode

- Press on the upper part of the switch.
  During the changeover the indicator lamp (> page 25) blinks three times.
  Once the changeover is complete, the indicator lamp lights up continuously.

Switching off LOW RANGE mode

- Stop the vehicle.
- Move the selector lever to position N.
- Press on the upper part of the switch.
  During the changeover the indicator lamp (> page 25) blinks three times.
  Once the changeover is complete, the indicator lamp goes out.

For information on driving safety systems during LOW RANGE mode see the “Safety and Security” section (> page 71).
Good visibility

Information on the windshield wipers (> page 47) and for adjusting the rear view mirrors (> page 38) is found in the “Getting started” section.

Rear view mirror

Manually dimming inside rear view mirror

1 Lever

Press lever 1 backward.

The interior rear view mirror is dimmed.

Automatic antiglare rear view mirror*

The reflection brightness of the exterior rear view mirror on the driver’s side and the inside rear view mirror will respond automatically to glare when:

- the automatic antiglare function is activated (> page 120)
- the ignition is switched on
- incoming light from headlamps falls on the sensor in the inside rear view mirror

The rear view mirror will not react if

- reverse gear is engaged
- the interior light is turned on

Warning!

The automatic antiglare function does not react if incoming light is not aimed directly at sensors in the inside rear view mirror.

The inside rear view mirror and the exterior rear view mirror on the driver’s side do not react, for example, if the cargo area is fully loaded.

Glare can endanger you and others.

Warning!

Exercise care when using the passenger side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your inside rear view mirror or glance over your shoulder before changing lanes.
Controls in detail

Good visibility

Warning!

In the case of an accident, liquid electrolyte may escape the mirror housing if the mirror glass breaks.

Electrolyte has an irritating effect. Do not allow the liquid to come into contact with eyes, skin, clothing, or the respiratory system. In case it does, immediately flush affected area with water, and seek medical help if necessary.

Electrolyte drops coming into contact with the vehicle paint finish can only be completely removed while in their liquid state and by applying plenty of water.

Activating

1 Button
2 Indicator lamp

Press button 1.
The indicator lamp 2 comes on.

Deactivating

Press button 1 again.
The indicator lamp 2 goes out.

Folding exterior mirrors in and out*

The exterior rear view mirrors can vibrate if they are not completely folded out.

The buttons are located on the upper center console.

1 Folds the exterior mirrors in
2 Folds the exterior mirrors out

Check that the ignition is switched on.

All the lamps in the instrument cluster light up.
Controls in detail

Good visibility

Folding in

- Briefly press button 1.
  The mirrors fold in.

- Before you drive the vehicle through an automatic car wash, fold the exterior mirrors in, otherwise they may get damaged.

- If you are driving at more than 9 mph (15 km/h), you will not able to fold the exterior mirrors in.

Folding out

- Briefly press button 2.
  The mirrors fold out.

- If an exterior mirror housing is forcibly pushed forward (hit from the rear), re-position it manually by applying firm pressure until it snaps back into place.

- If an exterior mirror is forcibly pushed rearward (hit from the front) press button 1 to fold mirrors in, then press button 2 to fold mirrors out. Do not force mirror by hand.

  The mirror housing is now properly positioned and you can adjust the mirror normally.

Headlamp cleaning system*

The switch is located on the right side of the dashboard.

Headlamp washer switch

- Switch on ignition.

- Briefly press the upper part of switch.
Controls in detail

Good visibility

Windshield wipers

Information on the windshield wipers (> page 47) is found in the “Getting started” section.

If leaves, snow, etc. block the windshield wipers, the wiper motor turns off.

- For safety reasons, withdraw key from steering lock. Remove blockage.
- Turn the windshield wipers on again.

If windshield wipers fail to function at all in switch position 1,

- set the wiper switch to the next highest wiper speed.
- have the windshield wipers checked at the nearest authorized Mercedes-Benz Light Truck Center.

Intermittent wiping

Intermittent wiping is interrupted when the vehicle is at standstill and a front door is opened.

Windshield wipers without rain sensor

At speeds of approximately 105 mph (170 km/h) the wiper switches automatically to continuous wiping. Always obey local speed limits.

Windshield wipers with rain sensor*

The rain sensor controls the windshield wipers automatically according to the amount of water on the windshield.

- Switch ignition on.
- Set the wiper switch to position 1 (> page 47).

One initial wipe, pauses between wipes are automatically controlled by the rain sensor monitoring wetness of windshield.

To prevent damage of the windshield wipers, do not leave the wiper switch in intermittent setting, when the vehicle is taken to an automatic car wash or when cleaning the windshield.

The switch should not be left in intermittent setting as the wipers will wipe the windshield once every time the engine is started. Dust that accumulates on the windshield might scratch the glass when wiping occurs on a dry windshield!

When intermittent wiping is on and the key is turned from position 1 to position 2 in the steering lock (> page 33), and kept in that position for longer than 2 seconds, the wipe interval will be set to approximately 5 seconds.
Controls in detail

Good visibility

<tr>
<td>9 Rear window defroster</td>
<td></td>
</tr>
<tr>
<td>10 Rear passenger compartment ventilation on/off</td>
<td></td>
</tr>
</tbody>
</table>
The automatic climate control is operational whenever the engine is running. You can operate the climate control system in either the automatic or manual mode. The system cools or heats the interior depending on the selected interior temperature and the current outside temperature.

Nearly all dust particles, pollutants and odors are filtered out before outside air enters the passenger compartment through the air distribution system.

**Warning!**

Follow the recommended settings for heating and cooling given on the following pages. Otherwise the windows could fog up, impairing visibility and endangering you and others.

Severe conditions (e.g. strong air pollution) may require replacement of the filter before its scheduled interval. A clogged filter will reduce the air volume to the interior.

If the vehicle interior is hot, ventilate the interior before driving off.

Keep the air intake grille in front of the windshield free of snow and debris.

Do not touch the interior temperature sensor to maintain a precise temperature.

The set value is indicated by a lighted segment on the control wheels.

### Automatic mode

**Switching on**

- Briefly press button [Auto](page 125).

  The indicator lamp lights up. The temperature, air volume and distribution are controlled automatically.

- Adjust the temperature with the temperature control [4](page 125).

  Temperature control is switched off in the extreme position (blue or red dot).
Controls in detail

Automatic climate control

Switching off

- Briefly press button AUTO (> page 125).
  The indicator lamp goes out. The automatic mode is switched off.

Air volume control 1 is set to fan speed 2 and air distribution is set to S.

Activating basic setting

- Press button AUTO at least three seconds.

All functions are switched to automatic mode and temperature is set to 72°F (22°C).

Changing basic setting

- Set temperature control 4 (> page 125) to desired temperature.
- Press button AUTO for ten seconds.
  The selected temperature value is stored and set.

Adjusting air volume and air distribution manually

- Adjust temperature settings in small increments.

Adjusting air volume

- Turn air volume control 1 to one of five air volume settings.

When set to 0, the system is fully deactivated and no fresh air is supplied. This setting should only be selected for short periods of time.
Adjusting air distribution

- Turn air distribution control 8 (>
  page 125) to one of the following symbols:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>h</td>
<td>Directs air to the center and side air outlets</td>
</tr>
<tr>
<td>j</td>
<td>Directs air to the windshield and side air outlets</td>
</tr>
<tr>
<td>V</td>
<td>Directs air into the entire vehicle interior</td>
</tr>
<tr>
<td>k</td>
<td>Directs air to the footwells and side air outlets</td>
</tr>
</tbody>
</table>

Defrosting

These settings should only be selected for a short time.

When the defrost setting has been selected, only the rear window defroster can be switched on. No other settings are possible.

Activating

- Press button  
  (>
  page 125).
  The indicator lamp on the button lights up.

Deactivating

- Press button   again.
  or
- Press button   (>
  page 125).
  The indicator lamp on the button lights up.
  The indicator lamp on the button lights up.

Air recirculation mode

Switch to air recirculation mode to prevent unpleasant odors from entering the vehicle from the outside. This setting cuts off the intake of outside air and recirculates the air in the passenger compartment.

Warning!

When the outside temperature is below 41°F (5°C), only switch to air recirculation mode for short periods to prevent window fogging.

Windshield fogged on the outside

- Switch the windshield wipers on.
- Turn air distribution control 8 to  or  .
Activating

- Press button \( \text{button} \) (page 125).
  The indicator lamp on the button lights up.

To achieve the fastest possible cooling of the interior, the automatic climate control automatically switches to air recirculation. The indicator lamp in the button is not illuminated when the system automatically switches to air recirculation.

Deactivating

- Press button \( \text{button} \) (page 125).
  The indicator lamp on the button goes out.

The air recirculation mode is activated automatically after
- 30 minutes if the automatic climate control is switched on
- after five minutes if the air conditioning is switched off
- after five minutes if the outside temperature is above approximately 45°F (7 °C)

Air conditioning

The air conditioning is operational while the engine is running and cools the interior air to the temperature set by the operator.

Condensation may drip out from underneath the vehicle. This is normal and not an indication of a malfunction.

Deactivating

It is possible to deactivate the air conditioning (cooling) function of the automatic climate control system. The air in the vehicle will then no longer be cooled or dehumidified.

- Press button \( \text{button} \) (page 125).
  The indicator lamp on the button lights up.
Activating

Moist air can fog up the windows. You can dehumidify the air with the air conditioning.

- Press button \( \text{AC} \) again.
  The indicator lamp on the button \( \text{AC} \) goes out.

The air conditioning system uses the refrigerant R134A. This refrigerant is free of CFCs which are harmful to the ozone layer.

- If the \( \text{AC} \) button on the automatic climate control panel starts to blink, this indicates that the air conditioning system is losing refrigerant. The compressor has turned itself off. The air conditioning cannot be turned on again.

Have the air conditioning system checked at the nearest authorized Mercedes-Benz Light Truck Center.

Residual heat and ventilation

With the engine switched off, it is possible to continue to heat or ventilate the interior for up to 30 minutes. This feature makes use of the residual heat produced by the engine.

- How long the system will provide heating depends on the coolant temperature and the temperature set in the climate control. The blower will run at lower speed regardless of the air volume control setting.

Deactivating

- Press button \( \text{AC} \).
  The indicator lamp on button \( \text{AC} \) goes out.

The residual heat is automatically turned off:
- when the ignition is switched on
- after about 30 minutes
- if the coolant temperature is too low
- if the battery voltage drops
Rear window defroster

The rear window defroster uses a large amount of power. To keep the battery drain to a minimum, switch off the defroster as soon as the rear window is clear. The defroster is automatically deactivated after approximately 6 to 17 minutes of operation depending on the outside temperature.

Activating

► Switch ignition on.
► Press button \[F\] (page 125).

The indicator lamp on the button lights up.

Deactivating

► Press button \[F\] again.

The indicator lamp on the button goes out.

Warning!

Any accumulation of snow and ice should be removed from the rear window before driving. Visibility could otherwise be impaired, endangering you and others.

If the rear window defroster switches off too soon and the indicator lamp starts blinking, this means that too many electrical consumers are operating simultaneously and there is insufficient voltage in the battery. The system responds automatically by deactivating the rear window defroster.

As soon as the battery has sufficient voltage, the rear window defroster automatically turns itself back on.

Rear passenger compartment ventilation and rear automatic climate control

Deactivating

For an improved cooling or heating output in the front passenger compartment, you can switch off the rear passenger compartment ventilation.

► Press button \[§\] (page 125).

The indicator lamp on the button lights up.

The operation of the rear automatic climate control and the fresh air supply to the rear compartment is shut off.

Activating

► Press button \[§\] again.

The indicator lamp on the button goes out.

The rear automatic climate control switches to automatic mode and fresh air enters the rear compartment.
Automatic climate control

Automatic mode
The automatic climate control panel for the rear is located on the rear center console.

1 Air volume control
2 Air distribution control
3 Automatic control (air distribution, air volume)

Press button AUTO.
The indicator lamp on the button lights up.
The automatic climate control cools or heats the interior depending on the temperature selected on the front climate control unit.

Adjusting air volume and air distribution manually

When the air volume or air distribution control is pressed, the automatic mode is switched off. The indicator lamp in button AUTO is turned off. Temperature setting remains in automatic mode.

Adjusting air volume

- Press upper part of button ➡. The blower setting is increased each time the button is pressed.
- Press lower part of button ⬅. The blower setting is decreased each time the button is pressed.

Adjusting air distribution

- Press ▲, upper part of button 2. Air is directed upwards.
- Press ▼, lower part of button 2. Air is directed to the footwell.

Front and rear air outlets

For draft-free ventilation, adjust the air outlets upwards.
To allow unrestricted operation of the automatic climate control, the air outlets should remain open.
Adjusting side air outlets

- Turn thumbwheel 4 (> page 125), to one of the following positions:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Symbol]</td>
<td>Open</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>Ventilation of side windows in area of exterior mirror</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>Closed</td>
</tr>
</tbody>
</table>

Center air outlets

**Opening**

- Turn thumbwheel center air outlet 1 (> page 125) upward to position ![Symbol].

**Closing**

- Turn thumbwheel center air outlet 1 downward to position ![Symbol].

Use the left thumbwheel to adjust the center air outlets on the left and in the center. Use the right thumbwheel to adjust the right center air outlet.

Rear passenger compartment air outlets

1 Adjustable center air outlet, left
2 Adjustable center air outlet, right

The temperature at the air outlets for the rear passenger compartment is the same as at the dashboard center air outlets.
Controls in detail

Power windows

Opening and closing the side windows

The power window switches are on the front center console.

1 Left front
2 Right front
3 Switch for rear door window override (▶ page 69)
4 Left rear
5 Right rear

Additional switches for the rear windows are located on the rear center console.

6 Left rear
7 Right rear

Warning!

When closing the windows, make sure that there is no danger of anyone being harmed by the closing procedure.

When leaving the vehicle, always remove the key from steering lock and lock your vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

To operate the power windows, turn key to position 2 (▶ page 33) in the steering lock.
Opening the windows

- Press switch $k$ to resistance point.
  The window will move downwards until you release the switch.

Closing the windows

- Press switch $j$ to resistance point.
  The window will move upwards until you release the switch.

Fully opening the windows

- Press switch $k$ past the point of resistance and release.

Fully closing the windows

- Press switch $j$ past the point of resistance and release.

  If the side window is blocked in the upper area, the closing process is interrupted and the window opens slightly.

  Remove the obstruction, press switch $j$ past the point of resistance again and release.

  If the window still does not close without an object having been trapped, then hold the $j$ switch down. The side window will then close without the obstruction sensor function.

Warning!

When closing the windows, make sure that there is no danger of anyone being harmed by the closing procedure.

Stopping the windows

- Briefly press switch $k$ or $j$. 

  If the driver's window cannot be automatically closed without an object having been trapped, press the $j$ switch past the point of resistance again within five seconds and release. The side windows will now close without the obstruction sensor function.
Power windows

Synchronizing power windows
The side power windows must be resynchronized

• after the battery has been disconnected
• if the windows cannot be fully opened or closed

- Switch ignition on.
- Press switch until the window is completely closed and hold down for approximately 1 second. Repeat procedure for each window.

Opening the windows
- Press and hold the upper part of switches 1 or 2.
  The window will open.

Closing the windows
- Press and hold the lower part of switches 1 or 2.
  The window will close.

Rear quarter windows*
The switches are on the upper part of the center console.

Warning!
When closing the windows, make sure that there is no danger of anyone being harmed by the closing procedure.

When leaving the vehicle, always remove the key from the steering lock, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

1 Left side
2 Right side

To operate the power windows, turn key to position 2 (page 33) in the steering lock.
Controls in detail

Sliding/pop-up roof*

Opening and closing the sliding/pop-up roof

1 raise roof at rear
2 slide roof open
3 lower roof at rear
4 slide roof closed

With the roof closed or tilted open, a screen can be slid into the roof opening to guard against sun rays. When sliding the roof open, the screen will also retract.

To operate the sliding/pop-up roof, turn key to position 1 or 2 (→ page 33) in the steering lock.

Opening the roof

► Press and hold the switch in direction 2.

The sliding/pop-up roof slides open until the switch is released.

Warning!

When closing the sliding/pop-up roof, make sure that there is no danger of anyone being harmed by the closing procedure.

The closing procedure can be immediately reversed by moving the switch in direction 1 or 2.

When leaving the vehicle, always remove the key from steering lock and lock your vehicle.

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle.

Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

Closing the roof

► Press and hold the switch in direction 4.

The sliding/pop-up roof closes until the switch is released.

Stopping the roof

► Briefly press the switch in any direction.

The movement of the roof will stop.

Raising the roof

► Press and hold the switch in direction 1.

The roof is raised at rear.

Lowering the roof

► Pull and hold the switch in direction 3.

The sliding/pop-up roof is lowered and closed.
Controls in detail

Sliding/pop-up roof*

Opening the roof automatically

- Briefly press the switch in direction 2.
  The roof will not open to the fully open position.
  To open the roof fully, press switch again in direction 2.

ℹ️ To interrupt procedure, briefly move switch in any direction.

ℹ️ To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the sliding/pop-up roof.

The sliding/pop-up roof can be opened or closed manually should an electrical malfunction occur (> page 246).

Synchronizing the sliding/pop-up roof

The power sliding/pop-up roof must be re-synchronized each time after the battery has been disconnected, the sliding/pop-up roof has been closed manually or the sliding/pop-up roof does not open smoothly or malfunctions (> page 246).
Loading

Loading instructions

Warning!

Always fasten items being carried as securely as possible using cargo tie-down rings and fastening materials appropriate for the weight and size of the load.

In an accident, during hard braking or sudden maneuvers, loose items will be thrown around inside the vehicle, and can cause injury to vehicle occupants unless the items are securely fastened in the vehicle.

To help avoid personal injury during a collision or sudden maneuver, always use partition net when transporting cargo.

Never drive vehicle with the liftgate open. Deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

The total load weight including vehicle occupants and luggage/cargo should not exceed the vehicle capacity weight indicated on the certification label which can be found on the left door pillar.

The handling characteristics of a fully loaded vehicle depend greatly on the load distribution. It is therefore recommended to load the vehicle according to the illustrations shown, with the heaviest items being placed towards the front of the vehicle.

Please pay attention to and comply with the following instructions when loading the vehicle and transporting cargo:

- Always place items being carried against front or rear seat backrests, and fasten them as securely as possible.
- The heaviest portion of the cargo should always be kept as low as possible against front or rear seat backrests.

For additional safety when transporting cargo while the rear seats are unoccupied, fasten the outer seat belts crosswise into the opposite side buckles.
Controls in detail

Loading

Carefully secure cargo by applying even load on all rings with rope of sufficient strength to hold down the cargo.

Hooks

Four hooks located on the rear compartment trim panels, two on each side.

i

The trunk is the preferred place to carry objects. The enlarged cargo area should only be used for items which do not fit in the trunk alone.

Careo tie-down rings

The cargo area is provided with four tie-down rings. Additional two rings are located at the rear of front seats.

While the partition net (> page 141) will help protect you from smaller objects, it cannot prevent the movement of large, heavier objects into the passenger area in an accident. Such items must be properly secured using the cargo tie-down rings in the cargo area floor.

Hooks

Use the hooks to secure light weight items. The maximum permissible weight per hook is 9 lbs. (4 kg).
Partition net*

Warning!

Always lock backrest in its upright position when rear seat bench is occupied by passengers, or cargo is being carried behind the seat bench.

To help avoid personal injury from smaller objects flying in the occupant area during a collision or sudden maneuver, always use partition net when transporting cargo.

The partition net cannot prevent the movement of large, heavier objects into the passenger area in an accident. Such items must be properly secured using the cargo tie-down rings in the cargo area floor (> page 140).

Passenger use of seats behind installed partition net is restricted because of the footwell being taken up by the net.

Use of the partition net is a particularly important safety factor when the vehicle is loaded higher than the top of the seat backrests with smaller objects.

The partition net can be installed behind the backrests of the front or rear seats.

Engaging partition net

One after the other, press the two mounting hooks 2 inward against the spring pressure and turn them.

The mounting hooks are locked in this position and you can move the net into position more easily.

Turn one of the mounting hooks 2 in the opposite direction.

The spring pressure will push it out.

Engage mounting hook 2 in holder 1.

Turn the other mounting hook and engage it in the opposite holder.

Push both mounting hooks 2 forward into holder 1.

1 Holder
2 Mounting hook

Tightening partition net

Before tightening the partition net, remove the cargo floor plates.

Installation behind the front seats

1 Tie-down hook
2 Ring

Installation behind the rear seats

1 Tie-down hook
2 Ring
3 Tensioner

- Insert tie-down hook 1 in rings 2.
- Pull on loose ends of tie-down straps until net is tight.
- After driving a short distance, check the tension on the net and retighten if necessary.

Removing partition net

- Lift tensioner 3 upward to a horizontal position to release tensioning of the strap.
- Disengage tie-down hooks 1 from rings 2.
- Remove mounting hooks 2 (> page 141) from holder 1 (> page 141).
- Roll up and close the partition net.
- Store partition net behind rear seat bench.

Before tightening the partition net, remove the cargo floor plates.
**Cargo area cover blind**

1 Handle
2 Holder

**Warning!**

Passenger use of third row seats with cargo area cover blind installed is restricted.

**Closing blind**

- Pull blind on handle 1 across the cargo area.
- Guide blind into holders 2.

**Opening blind**

- Disengage blind and guide retraction by its handle.

**Removing blind**

3 Button
4 Mounting sleeve

- Roll the blind up.
- Push mounting sleeve 4 inward against spring pressure until it engages.
- Remove blind from mounts.

**Installing blind**

- Place left side of blind in left mount.
- Position right side of blind over right mount.
- Push button 3, releasing mounting sleeve to slide into mount.

Cargo floor plates

Removing cargo floor plates

Before you can remove the cargo floor plates, it is possible that the third row seats* (▷ page 96) must be removed.

- Lift cargo floor plate at rear edge (arrow).
  Cargo floor plate unhinges automatically.
- Remove cargo floor plate by pulling it rearwards.

Storing cargo floor plates

1 Hook and loop strip
- Fold the left cargo floor plate together.
- Open the hook and loop strip at the bottom of backrest of the third row seats* and insert cargo floor plate.
- Close the hook and loop strip.

Installing cargo floor plates

1 Opening
2 Pins
3 Attachment opening
4 Latch
- Grip into opening 1 and guide pins 2 into attachment opening 3.
- The center pin must snap into place in latch 4.

* Before you can remove the cargo floor plates, it is possible that the third row seats must be removed.

Attach roof racks to the roof rails only.

Use only those roof racks approved by Mercedes-Benz for your vehicle model. Follow manufacturer’s installation instructions.

The vehicle could otherwise be damaged.

For further information inquire at your Mercedes-Benz Light Truck Center.
Driving systems

Cruise control

Cruise control automatically maintains the speed you set for your vehicle.

Use of cruise control is recommended for driving at a constant speed for extended periods of time. You can set any speed over 20 mph (30 km/h).

The cruise control function is operated by means of the cruise control lever.

The cruise control lever is the uppermost lever found on the left-hand side of the steering column (> page 23).

Warning!

Cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must remain responsible for the vehicle speed and for safe brake operation.

Only use cruise control if the road, traffic and weather conditions make it advisable to travel at a steady speed.

- The use of cruise control can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a steady speed.
- The use of cruise control can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control.
- Deactivate cruise control when driving in fog.

The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.
1. Set current or higher speed
2. Set current or lower speed
3. Cancel cruise control
4. Resume at previously set speed

**Saving current speed**
- Accelerate or decelerate to the desired speed.
- Briefly lift 1 or depress 2 the cruise control lever.
  The current speed is set.
- Remove your foot from the accelerator pedal.
  Cruise control is activated.

**Canceling cruise control**

There are several ways to cancel cruise control:
- Step on the brake pedal.
  or
- Briefly push the cruise control lever to position 3.
  Cruise control will be canceled. The last speed set will be stored for later use.

- On uphill or downhill grades, cruise control may not be able to maintain the set speed. Once the grade eases, the set speed will be resumed.

- Moving gear selector lever to position N while driving also cancels cruise control. However, the gear selector lever should not be moved to position N while driving except to coast when the vehicle is in danger of skidding (e.g. on icy roads).

- The last stored speed is canceled when you turn off the engine.
Setting stored speed ("Resume" function)

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>The speed stored in memory should only be set again if prevailing road conditions permit. Possible acceleration or deceleration differences arising from returning to preset speed could cause an accident and/or serious injury to you and others.</td>
</tr>
</tbody>
</table>

- Briefly push the cruise control lever to position 4.
  - Cruise control will resume the last previously set speed.
- Remove your foot from the accelerator pedal.

Setting a higher speed

- Lift the cruise control lever to position 1 and hold it up until the desired speed is reached.
- Release the cruise control lever.
  - The new speed is set.

Fine adjustment in 1.0 mph (1 km/h) increments

- Faster
  - Briefly tip the cruise control lever in the direction of arrow 1.

- Slower
  - Briefly tip the cruise control lever in the direction of arrow 2.

Transmission in LOW RANGE mode

- The cruise control should not be used during off-road driving.
**Parktronic system* (Parking assist)**

**Warning!**

Parktronic is a supplemental system. It is not intended to nor does it replace the need for extreme care. The responsibility during parking and other critical maneuvers rests always with the driver.

Make sure that no persons or animals are located in the area in which you are maneuvering. They could otherwise be injured.

Special attention must be paid to objects with smooth surfaces or low silhouettes (e.g. trailer couplings, painted posts, or street curbs). Such objects may not be detected by the system and can damage the vehicle.

The operational function of the Parktronic can be affected by dirty sensors, especially at times of snow and ice. For notes on cleaning the Parktronic system sensors (▷ page 220).

Interference caused by other ultrasonic signals (e.g. working jackhammers or the air brakes of trucks) can cause the system to send erratic indications, and should be taken into consideration.

The Parktronic system assists the driver during parking maneuvers. It visually and audibly indicates the distance between the vehicle and an obstacle.

With the ignition on, Parktronic engages automatically at speeds up to approximately 10 mph (15 km/h) and deactivates during higher speeds.

Parktronic monitors your vehicle’s environment by means of six sensors in the front bumper and four sensors in the rear bumper.

1 Sensors located in front bumper
Monitoring reach of sensors

The sensors must be free of dirt, ice and snow or they will be unable to function properly. Clean the sensors regularly without scratching or damaging them.

**Front sensors**
- Center: 40 in (100 cm)
- Corner: 24 in (60 cm)

**Rear sensors**
- Center: 48 in (120 cm)
- Corner: 32 in (80 cm)

**Minimum distance**
- Center: 6 in (15 cm)
- Corner: 8 in (20 cm)

When an obstacle is located in this area, all warning displays will light up and a warning tone will sound. If the vehicle moves closer than the minimum distance to an object, the distance may no longer be displayed.

**Warning indicators**

The warning indicators show the distance between the sensor and the obstacle. The warning indicators for the front area are located above the center air outlets in the dashboard. The warning indicator for the rear area is located in the rear passenger compartment lamp.

1. Segments, left side of vehicle
2. Segments, right side of vehicle

Each warning indicator has 6 yellow and 2 red segments.
The selector lever position determines which warning indicator is activated.

<table>
<thead>
<tr>
<th>Selector lever position</th>
<th>Warning indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>R</td>
<td>Rear area activated</td>
</tr>
<tr>
<td>N or P</td>
<td>No area activated</td>
</tr>
</tbody>
</table>

As soon as the sensors detect an obstacle, one or more segments light up, depending on the distance. An intermittent acoustic warning will also sound as the seventh segment lights up and a constant acoustic warning lasting a maximum of 3 seconds will sound for the eighth segment.

If all red segments light up in the warning indicators, a dirty sensor or an ultrasonic signal could be the reason.
- Clean the sensors (> page 220).
- After cleaning the sensors, switch the ignition on.

### Switching Parktronic on/off

You can switch Parktronic off manually. The switch is located on the lower part of the center console.

**Switching Parktronic off**

- Press switch on the upper part 1.
- Indicator lamp 2 lights up.

**Switching Parktronic on**

- Press switch on the upper part 3.
- The indicator lamp 2 goes out.

If you switch the ignition on, Parktronic will be automatically switched on. The rear Parktronic sensors will not automatically disengage when towing a trailer. Therefore switch Parktronic off.

If Parktronic is malfunctioning, all red segments of the warning indicators light up and an additional warning sounds.
- Contact your Mercedes-Benz Light Truck Center as soon as possible.
**Useful features**

**Interior storage spaces**

**Warning!**

To help avoid personal injury during a collision or sudden maneuver, exercise care when stowing objects in the vehicle. Put luggage or cargo in the cargo compartment if possible. Do not pile luggage or cargo higher than the seat backs.

Always use partition net when transporting cargo.Partition net cannot secure hard or heavy objects.

Parcel nets cannot secure hard or heavy objects.

Keep compartment lids closed. This will help to prevent stored objects from being thrown about and injuring vehicle occupants during an accident.

---

**Glove box**

1 Glove box lid release
2 Glove box lid

The opened glove box is illuminated with the key in steering lock position 1 (page 33).

**Opening the glove box**

- Grab in recess and pull lid release 1.
  - The glove box lid 2 opens downward.

**Closing the glove box**

- Push glove box lid up to close.

---

**Storage compartment under front passenger seat**

The storage compartment is lockable with its separate key.

1 Lock cylinder
2 Handle

**Locking and unlocking the storage compartment**

- Turn the key clockwise.
  - The storage compartment is locked.
- Turn the key counterclockwise.
  - The storage compartment is unlocked.
Opening the storage compartment

► Press the lock cylinder in and pull storage compartment out using handle 2.

Closing the storage compartment

► Push the storage compartment in until the lock engages.

Armrest storage spaces

A flat storage tray with a deeper storage compartment underneath is located below the armrest. Both can be opened separately.

Opening the storage tray

► Press button 1 and lift up armrest.
   The armrest contains two coin holders.

Opening the storage compartment

► Press button 2 and lift up armrest.
**Controls in detail**

**Useful features**

**Opening the storage compartment in front of armrest**

- Slide the cover 3 rearward.

  The storage compartment below contains a cup holder (> page 155).

---

**Cup holders**

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>When not in use, keep the cup holder closed. Place only containers that fit into the cup holder to prevent spills. Use lids on open containers and do not fill containers to a height where the contents, especially hot liquids, could spill during vehicle maneuvers.</td>
</tr>
</tbody>
</table>

---

**Cup holder in instrument panel**

A cup holder is located on both the right and left side of the instrument panel.

---

**Opening the cup holder**

- Briefly touch top of cover.

  The cup holder opens automatically.

---

**Closing the cup holder**

- Fold the cup holder upwards and press on it until it engages.
Cup holder in front of armrest

**Opening the cup holder**
- Slide cover rearward (> page 154).
- Fold the cup holder forward.

**Closing the cup holder**
- Fold the cup holder backward.
- Slide cover forward.

Cup holder in rear center console

**Opening the cup holder**
- Briefly touch the cover.
  - The cup holder opens automatically.

**Closing the cup holder**
- Press the cup holder forward and press on it until it engages.

> Close the cup holder before folding the rear seat bench.

Armrest in rear seat bench

> Pull the armrest down by its top.
Controls in detail

Useful features

Ashtrays and cigarette lighter

Warning!

Never touch the heating element or sides of the cigarette lighter; they are extremely hot. Hold the knob only.

When leaving the vehicle always remove the key from the steering lock. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

ℹ️
The cigarette lighter socket can be used to accommodate electrical accessories up to a maximum of 50 W.

If the engine is off, the battery may become discharged when used for long periods of time.

Ashtray and cigarette lighter in the front center console

1 Ashtray
2 Cigarette lighter
3 Cover plate

Opening the ashtray

- Briefly touch cover plate 3.
  The ashtray opens automatically.

Removing ashtray insert

Warning!

Remove ashtray only with vehicle standing still. Set the parking brake to secure vehicle from movement. Move gear selector lever to position N. With gear selector lever in position N, turn off the engine.

- Secure vehicle from movement by setting the parking brake. Move the selector lever to position N.
  Now you have more room to take out the insert.

- Grip the insert on the sides and pull it out upwards.

Reinstalling ashtray insert

- Install ashtray insert.
- Close the ashtray.
Cigarette lighter

- Switch on the ignition.
- Push in cigarette lighter 2 (> page 156).

The cigarette lighter will pop out automatically when hot.

Ashtray and cigarette lighter in the rear center console

- Close the ashtray in the rear center console before folding the rear seat bench.

Opening the ashtray

- Briefly touch cover plate 3.

The ashtray opens automatically.

Removing ashtray insert

- Grip the insert on the sides and pull it out upwards.

Reinstalling ashtray insert

- Install ashtray insert.
- Close the ashtray.

Cigarette lighter

- Switch on the ignition.
- Push in cigarette lighter 2.

The cigarette lighter will pop out automatically when hot.
**Electrical outlet**

One outlet is located in the front passenger footwell and another on the right-hand side of the luggage compartment.

- Flip up cover and insert electrical plug (cigarette lighter type).

**Useful features**

- The outlets function even if the key is not in the ignition.
- The electrical outlet can be used to accommodate electrical consumers (e.g. air pump, auxiliary lamps) up to a maximum of 180 W.
- If the engine is off, the battery may become discharged if used for long periods of time.

**Telephone**

- NEVER operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or serious personal injury.

**Warning!**

Radio transmitters, such as a portable telephone or a citizens band unit, should only be used inside the vehicle if they are connected to an antenna that is installed on the outside of the vehicle.

The external antenna must be approved by Mercedes-Benz. Please contact an authorized Mercedes-Benz Light Truck Center for information on the installation of an approved external antenna. Refer to the radio transmitter operation instructions regarding use of an external antenna.
You can take and place telephone calls using the MCS unit. See separate instruction manual for information on how to operate the telephone.

**Warning!**

Please do not forget that your primary responsibility is to drive the vehicle. A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call.

If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when road, weather and traffic conditions permit. Some jurisdictions prohibit the driver from using a cellular telephone while driving a vehicle.

Only operate the MCS (Modular Control System) if road, weather and traffic conditions permit.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of approx. 44 feet (approximately 13.5 m) every second.

**Tele Aid**

The initial activation of the Tele Aid system may only be performed by completing the subscriber agreement and placing an acquaintance call using the SOS button. Failure to complete either of these steps will result in a system that is not activated. If the system is not activated, the indicator lamp in the SOS button stays on after turning key in steering lock to position 2 and the message **TELE AID – NOT ACTIVATED** will be shown in the MCS display for approximately 10 seconds.

If you have any questions regarding activation, please call the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada).
The Tele Aid system

(Telematic Alarm Identification on Demand)

The Tele Aid system consists of three types of response:

- automatic and manual emergency
- roadside assistance and
- information.

The Tele Aid system is operational providing that the vehicle’s battery is charged, properly connected, not damaged and cellular and GPS coverage is available.

The speaker volume of a Tele Aid call can be adjusted using the volume control on the MCS unit.

To activate, press the SOS button, the Roadside Assistance button or the Information button, depending on the type of response required.

Shortly after the completion of your acquaintance call, you will receive a user ID and password via first call mail. By visiting www.mbusa.com and selecting “Tele Aid” (USA only), you will have access to account information, remote door unlock, profile and more.

The SOS button, the Roadside Assistance button and the Information button are located in the overhead control panel.

The Tele Aid system utilizes the cellular network for communication and the GPS (Global Positioning System) satellites for vehicle location. If either of these signals are unavailable, the Tele Aid system may not function and if this occurs, assistance must be summoned by other means.

System self-check

Initially, after turning the key in the steering lock to position 2, malfunctions are detected and indicated (the indicator lamps in the SOS button, the Roadside Assistance button and the Information button stay on longer than 10 seconds or do not come on). The message Tele Aid – Visit workshop! appears for approx. 10 seconds in the MCS display.
Emergency calls

An emergency call is initiated automatically:

- following an accident in which the emergency tensioning detractors (ETDs) or airbags deploy,
- if the anti-theft alarm or the tow-away alarm stays on for more than 20 seconds. See anti-theft alarm system (\(\Rightarrow\) page 78) and tow-away alarm (\(\Rightarrow\) page 79).

An emergency call can also be initiated manually by opening the cover next to the inside rear view mirror labeled SOS, then briefly pressing the button located under the cover. See below for instructions on initiating an emergency call manually.

Warning!

The Tele Aid control unit is located under the front passenger seat. If there is accumulation of water or other liquid in this area, the Tele Aid control unit could suffer an electrical short circuit making the system inoperative. In this case the indicator lamp in the SOS button will not illuminate during or will remain illuminated after the system self-check. Have the system checked at the nearest Mercedes-Benz Light Truck Center as soon as possible.

If the indicator lamps in the SOS button, in the Roadside Assistance button and/or in the Information button do not come on during the system self-check or if any of these indicators remain illuminated constantly in red and/or the message **TELE AID - VISIT WORKSHOP** is displayed in the MCS display after the system self-check, a malfunction in the system has been detected.

If a malfunction is indicated as outlined above, the system may not operate as expected. Have the system checked at the nearest Mercedes-Benz Light Truck Center as soon as possible.
Once the emergency call is in progress, the indicator lamp in the SOS button will begin to flash. The message **EMERGENCY CALL – CONNECTING CALL** appears in the MCS display. When the connection is established, the message **EMERGENCY CALL – CALL CONNECTED** appears in the MCS display. All information relevant to the emergency, such as the location of the vehicle (determined by the GPS satellite location system), vehicle model, identification number and color are generated.

A voice connection between the Response Center and the occupants of the vehicle will be established automatically soon after the emergency call has been initiated. When a voice connection is established the audio system mutes and the message **TELE AID – EMERGENCY CALL ACTIVE** appears in the MCS display. The Response Center will attempt to determine more precisely the nature of the accident provided they can speak to an occupant of the vehicle.

The Tele Aid system is available if:

- it has been activated and is operational. Activation requires a subscription for monitoring services, connection and cellular air time,
- the relevant cellular phone network and GPS signals are available and pass the information on to the response center.

![Location of the vehicle on a map is only possible if the vehicle is able to receive signals from the GPS satellite network and pass the information on to the response center.](image)

**Warning!**

If the indicator lamp in the SOS button is illuminated continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate an emergency call (e.g. the relevant cellular phone network is not available). The message **EMERGENCY CALL – Call FAILED** appears in the MCS display for approx. 10 seconds. Should this occur, assistance must be summoned by other means.
Initiating an emergency call manually

1 Cover
2 SOS button

- Briefly press on cover 1.
  The cover will open.
- Press SOS button 2 briefly.
  The indicator lamp in SOS button 2 will flash until the emergency call is concluded.
- Wait for a voice connection to the Response Center.
- Close cover 1 after the emergency call is concluded.

Warning!

If you feel at any way in jeopardy when in the vehicle (e.g. smoke or fire in the vehicle, vehicle in a dangerous road location), please do not wait for voice contact after you have pressed the emergency button. Carefully leave the vehicle and move to a safe location. The Response Center will automatically contact local emergency officials with the vehicle’s approximate location if they receive an automatic SOS signal and cannot make voice contact with the vehicle occupants.

Roadside Assistance button

1 Cover
2 Roadside Assistance button

- Briefly press on cover 1.
  The cover will open.
- Press and hold the button 2 (for longer than 2 seconds)
  A call to a Mercedes-Benz Roadside Assistance dispatcher will be initiated. The button will flash while the call is in progress. The message ROADSIDE ASSISTANCE – CONNECTING CALL will appear in the MCS display.
When the connection is established, the message ROADSIDE ASSISTANCE – CALL CONNECTED appears in the MCS display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).

While the call is connected you can change to navigation menu by pressing NAVI button on the MCS unit.

A voice connection between the Roadside Assistance dispatcher and the occupants of the vehicle will be established. When a voice connection is established the audio system mutes and the message TELE AID – ROADSIDE ASSISTANCE CALL ACTIVE appears in the MCS display.

- Describe the nature of the need for assistance.

The Mercedes-Benz Roadside assistance dispatcher will either dispatch a qualified Mercedes-Benz technician or arrange to tow your vehicle to the nearest Mercedes-Benz Light Truck Center. For services such as labor and/or towing, charges may apply. Refer to the Roadside Assistance manual for more information.

These programs are only available in the USA:

- Sign and Drive services: Services such as jump start, a few gallons of fuel or the replacement of a flat tire with the vehicle spare tire are obtainable,
- Remote Vehicle Diagnostics: This function permits the Mercedes-Benz Roadside Assistance dispatcher to download malfunction codes and actual vehicle data.

The indicator lamp in the Roadside Assistance button remains illuminated in red for approx. 10 seconds during the system self-check after turning the key in the steering lock to position 2 (together with the SOS button and the Information button ).

See system self-check (> page 160) when the indicator lamp does not light up in red or stays on longer than approximately 10 seconds.
If the indicator lamp in the Roadside Assistance button is illuminated continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate a Roadside Assistance call (e.g. the relevant cellular phone network was not available). The message ROADSIDE ASSISTANCE - CALL FAILED appears in the MCS display.

Roadside Assistance calls can be terminated using the END Button on the MCS unit.

When the connection is established, the message INFO - CALL CONNECTED appears in the MCS display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).

While the call is connected, you can change to navigation menu by pressing NAVI button on the MCS unit.

A voice connection between the Customer Assistance Center representative and the occupants of the vehicle will be established. When a voice connection is established the audio system mutes and the message TELE AID - INFO CALL ACTIVE appears in the MCS display. Information regarding the operation of your vehicle, the nearest Mercedes-Benz Light Truck Center or Mercedes-Benz USA products and services is available to you.
For more details concerning the Tele Aid system, please visit www.mbusa.com and use your ID and password (sent to you separately) to learn more (USA only).

**Upgrade signals**

The Tele Aid system processes calls using the following priority.

- Automatic emergency – First priority
- Manual emergency – Second priority
- Roadside assistance – Third priority
- Information – Fourth priority

Should a higher priority call be initiated while you are connected, an upgrade (alternating) tone will be heard and the appropriate indicator lamp will flash. If certain information such as vehicle identification number or customer information is not available, the operator may need to retransmit.

During this time you will hear a beep and voice contact will be interrupted. Voice contact will resume once the retransmission is completed. Once a call is concluded, a beep will be heard and the appropriate indicator lamp will stop flashing. The MCS system operation will resume.

The indicator lamp in the Information button remains illuminated in red for approx. 10 seconds during the system self-check after turning key in the steering lock to position 2 (together with the SOS button and the Roadside Assistance button).

See system self-check (page 160) when the indicator lamp does not light up in red or stays on longer than approximately 10 seconds.

If the indicator lamp in the Information button is illuminated continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate an Information call (e.g. the relevant cellular phone network is not available).

The message INFO CALL FAILED appears in the MCS display.

Information calls can be terminated using the END button on the MCS.

If the indicator lamps do not start flashing after pressing one of the buttons or remains illuminated (in red) at any time, the Tele Aid system has detected a fault or the service is not currently active, and may not initiate a call. Visit your Mercedes-Benz Center and have the system checked or contact the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada) as soon as possible.
Remote door unlock

In case you have locked your vehicle unintentionally (e.g. key inside vehicle), and no other key is available:

- Contact the Mercedes-Benz Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada).

  You will be asked to provide your password which you provided when you completed the subscriber agreement.

- Then return to your vehicle and pull outside handle of the liftgate for minimum of 20 seconds until the SOS button is flashing.

  The message EMERGENCY CALL – CALL CONNECTED appears in the MCS display.

  As an alternative, you may unlock the vehicle via Internet using the ID and password sent to you shortly after the completion of your acquaintance call.

i If the indicator lamp continues to flash or the system does not reset, contact the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada), or Mercedes-Benz Customer Assistance at 1-800-FOR-MERCEDES (1-800-367-6372) in the USA or Customer Service at 1-800-387-0100 in Canada.

i The indicator lamp in the respective button flashes until the call is concluded. Calls can only be terminated by a Response Center or Customer Assistance Center representative, except Roadside Assistance and Information calls, which can also be terminated by using the END button on the MCS unit.

i When a Tele Aid call has been initiated, the MCS system audio is muted and the selected mode (radio, tape or CD) pauses. The optional cellular phone (if installed) switches off. If you must use this phone, the vehicle must be parked. Disconnect the coiled cord and place the call. The navigation system (if engaged) will continue to run. A pop-up window will appear in the MCS display to indicate that a Tele Aid call is in progress.
The Response Center will then unlock your vehicle with the remote door unlocking feature. The remote door unlock feature is available if the relevant cellular phone network is available.

The SOS button will flash and the message EMERGENCY CALL - CALL CONNECTED will appear in the MCS display to indicate receipt of the door unlock command. Once the vehicle is unlocked, a Response Center specialist will attempt to establish voice contact with the vehicle occupants. If the outside liftgate handle was pulled for more than 20 seconds before door unlock authorization was received by the Response Center, you must wait 15 minutes before pressing the outside liftgate handle again.

**Stolen vehicle tracking services**

In the event your vehicle was stolen:
- Report the incident to the police
  - The police will issue a numbered incident report.
- Pass this number on to the Mercedes-Benz Response Center along with your password issued to you when you subscribed to the service.

The Response Center will then attempt to covertly contact the vehicle’s TeleAid system. Once the vehicle is located, the Response Center will contact the local law enforcement and you. The vehicle’s location will only be provided to law enforcement.

If the outside liftgate handle was pulled for more than 20 seconds before door unlock authorization was received by the Response Center, you must wait 15 minutes before pressing the outside liftgate handle again.

**Garage door opener**

The built-in remote control is capable of operating up to three separately controlled objects.

- Hand-held remote control transmitter
- Signal transmitter key
- Indicator lamp
Controls in detail

Useful features

Programming or reprogramming the integrated remote control

- Turn key in the steering lock to position 1 or 2.
- Hold the end of the hand-held transmitter of the device you wish to train approximately 2 to 5 inches (5 cm to 12 cm) away from the surface of the integrated remote control located on the inside rear view mirror, keeping the indicator lamp in view.
- Using both hands, simultaneously push the hand-held transmitter button and the desired integrated remote control button. Do not release the buttons until completing next step.
- The indicator lamp on the integrated remote control will flash, first slowly and then rapidly. The rapid flashing lamp indicates successful programming of the new frequency signal.

Warning!

When programming a garage door opener, the door moves up or down.
When programming or operating the remote control make sure there is no possibility of anyone being injured by the moving door.

For operation in the USA only: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Certain types of garage door openers are incompatible with the integrated opener. If you should experience difficulties with programming the transmitter, contact your authorized Mercedes-Benz Center, or call Mercedes-Benz Customer Assistance Center (in the USA only) at 1-800-FOR-MERCEdes, or Customer Service (in Canada) at 1-800-387-0100.
Controls in detail

Useful features

- When the indicator lamp flashes rapidly, release both buttons.
- To program the remaining two buttons, repeat the steps above.

**Rolling code programming**

To train a garage door opener (or other rolling code devices) with the rolling code feature, follow these instructions after completing the “Programming” portion of this text. (A second person may make the following training procedures quicker and easier.)

- Locate training button on the garage door opener motor head unit.
  - Exact location and color of the button may vary by garage door opener brand. If there is difficulty locating the transmitting button, reference to garage door opener operator’s manual.
- Press "training" button on the garage door opener motor head unit.
  - The “training light” is activated.

You have 30 seconds time to initiate the following step.

- Firmly press and release the programmed integrated remote control transmit button.
- Press and release same button a second time to complete the training process.

Some garage door openers may require you to do this procedure a third time to complete the training.

- Confirm the garage door operation by pressing the programmed button on the integrated remote control transmitter.

**Canadian programming**

During programming, your hand-held transmitter may automatically stop transmitting.

- Continue to press and hold the integrated remote control transmitter button (refer to steps two through four in the “Programming” portion) while you press and re-press (“cycle”) your hand-held transmitter every two seconds until the frequency signal has been learned.

Upon successful training, the indicator lamp will flash slowly and then rapidly after several seconds.

**Operation of remote control**

- Turn key in steering lock to position 1 or 2.
- Select and press the appropriate button to activate the remote controlled device.

The integrated remote control transmitter continues to send the signal as long as the button is pressed – up to 20 seconds.

**Erasing the remote control memory**

- Turn key in steering lock to position 1 or 2.
- Simultaneously hold down the left and right side buttons for approximately 20 seconds, or until the indicator lamp blinks rapidly.

The codes of all three channels are erased.

- If you sell your vehicle, erase the codes of all three channels.
Trip computer*

The trip computer is located in the overhead console.

1. Press MODE 2 repeatedly until the desired display appears.
2. The functions are displayed in the following order:
   - Date
   - Compass
   - Stop watch
   - Present fuel consumption
   - Average fuel consumption
   - Distance remaining
   - Country
   - Switching off trip computer

Switching on the trip computer

- Switch on ignition.
  - Display 3 shows one of the available functions.
- If a function display does not appear, press MODE 2.

Setting the date

- Press MODE 2 repeatedly until the date appears.
- Press RESET 1.
  - The month shown blinks.
- Press MODE 2 to advance to selected month.
- Press RESET 1.
  - The day shown blinks.
- Press MODE 2 to advance to selected day.
- Press RESET 1.
  - The year shown blinks.
- Press MODE 2 to advance to selected year.
- Press RESET 1.
  - The display stops blinking and the date is set.

With engine not running, the display switches off automatically 30 seconds after the last entry.
Compass

The compass displays the direction the vehicle is traveling. The display will show you N, NE, E, SE, S, SW, W or NW.

The presence of buildings, bridges, power lines and large antenna masts can influence the displayed values. Metallic or magnetic objects in or on the vehicle can influence the accuracy of the compass.

To ensure the display is correct, the compass must be set to the proper geographic zone (page 174). It may also be necessary to calibrate the compass (page 174).
Controls in detail

Useful features

Setting the compass zone

- Determine the geographical point of the vehicle with the aid of the zone maps.
- Switch on the ignition.
- Press MODE 2 (page 172) repeatedly until the compass display appears in the trip computer display 3.
- Press RESET 1 (page 172) to select the compass zone mode.
- The zone selected last is shown in the display.
- Press RESET 1 repeatedly until the correct compass zone, as determined from the zone map, is shown in the display.
- Press MODE 2 twice.

The new compass zone is activated and the compass display will be shown.

Calibrating the compass

If the vehicle was exposed to a significant magnetic zone, such as high voltage power lines, the compass may have to be calibrated.

To calibrate the compass correctly, observe the following:
- Calibrate the compass in an area free of steel superstructures and power lines.
- Switch off all electrical consumers (e.g. exterior lamps, climate control, rear window defroster etc.).
- Do not open or close the sliding/pop-up roof.
- Close doors and liftgate.

Start and run the engine.
- Press MODE 2 (page 172) repeatedly until the compass display appears in the trip computer display 3.
- Press RESET 1 and afterwards press MODE 2.

In the display appears CAL-.
- Press and hold RESET 1 for approximately two seconds.

The calibration mode is activated and the display shows CAL.
- Drive without interruption two full circles at a speed between 3 mph (5 km/h) and 7 mph (10 km/h).

The message CAL goes out after a short time. The calibration is now complete.

An open liftgate triggers the display ---.
Stop watch

- Press MODE 2 (► page 172) repeatedly until the stop watch display appears in the trip computer display 3.

Counting

- Press RESET 1 (► page 172) to start counting.

Stopping

- Press RESET 1 again to stop counting.

Resetting

- Press and hold RESET 1 until the display shows “0:00”.

Average fuel consumption

- Press MODE 2 (► page 172) repeatedly until the average fuel consumption display appears in the trip computer display 3.

Distance remaining with fuel presently in tank

- Press MODE 2 (► page 172) repeatedly until the distance remaining display appears in the trip computer display 3.

If CAL remains in the display, calibration was not successfully completed. You have to recalibrate:

- Remove the key from the steering lock.
- Start the vehicle and start the calibration procedure described before.

When the fuel supply drops to reserve level the display flashes distance remaining.

- USA only: The display alternates between FUEL and distance remaining until supply is consistently below the reserve level. When the fuel supply is very low [approximately 1.5 gal (5.5 l)] FUEL is displayed continuously.

We recommend that you have the compass calibrated at a Mercedes-Benz Light Truck Center.

Distance remaining with fuel presently in tank

- Press MODE 2 (► page 172) repeatedly until the distance remaining display appears in the trip computer display 3.

If CAL remains in the display, calibration was not successfully completed. You have to recalibrate:

- Remove the key from the steering lock.
- Start the vehicle and start the calibration procedure described before.

When the fuel supply drops to reserve level the display flashes distance remaining.

- USA only: The display alternates between FUEL and distance remaining until supply is consistently below the reserve level. When the fuel supply is very low [approximately 1.5 gal (5.5 l)] FUEL is displayed continuously.

We recommend that you have the compass calibrated at a Mercedes-Benz Light Truck Center.

Distance remaining with fuel presently in tank

- Press MODE 2 (► page 172) repeatedly until the distance remaining display appears in the trip computer display 3.

If CAL remains in the display, calibration was not successfully completed. You have to recalibrate:

- Remove the key from the steering lock.
- Start the vehicle and start the calibration procedure described before.

When the fuel supply drops to reserve level the display flashes distance remaining.

- USA only: The display alternates between FUEL and distance remaining until supply is consistently below the reserve level. When the fuel supply is very low [approximately 1.5 gal (5.5 l)] FUEL is displayed continuously.

We recommend that you have the compass calibrated at a Mercedes-Benz Light Truck Center.
Country

- Press MODE 2 (page 172) repeatedly until the country display appears in the trip computer display.
- Press and hold RESET 1 a minimum of five seconds to change the country unit system.

Canada units system selection
You can choose between CAN-English or CAN-French.

Setting CAN-English
- Press RESET 1 repeatedly until CAN is displayed.
- Press MODE 2 to select -ENG.
- Press MODE 2 again to set CAN-English.

Setting CAN-French
- Press RESET 1 repeatedly until CAN is displayed.
- Press MODE 2.
- -ENG is displayed.
- Press RESET 1 to select -Fr.
- Press MODE 2 to set CAN-French.

The language selected determines how the various displays are presented, see table.

Operation

The first 1000 miles (1500 km)
Driving instructions
At the gas station
Engine compartment
Tires and wheels
Winter driving
Maintenance
Vehicle care
The first 1000 miles (1500 km)

The more cautiously you treat your vehicle during the break-in period, the more satisfied you will be with its performance later on.

- Drive your vehicle during the first 1000 miles (1500 km) at varying but moderate vehicle and engine speeds.
- During this period, avoid heavy loads (full throttle driving) and excessive engine speeds (no more than 2/3 of maximum rpm in each gear).
- Avoid accelerating by kick-down.
- Do not attempt to slow the vehicle down by shifting to a lower gear using the selector lever.
- Select positions 3, 2 or 1 only when driving at moderate speeds (for hill driving).

After 1000 miles (1500 km) you may gradually increase vehicle and engine speeds to the permissible maximum.
## Driving instructions

### Drive sensibly – save fuel

Fuel consumption, to a great extent, depends on driving habits and operating conditions.

To save fuel you should:

- Keep tires at the recommended inflation pressures
- Remove unnecessary loads
- Allow engine to warm up under low load use
- Avoid frequent acceleration and deceleration
- Have all maintenance work performed at regular intervals by an authorized Mercedes-Benz Light Truck Center

Fuel consumption is also increased by driving in cold weather, in stop-and-go traffic, on short trips and in hilly country.

---

### Drinking and driving

**Warning!**

Drinking and driving and/or taking drugs and driving are a very dangerous combination. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgement.

The possibility of a serious or even fatal accident is sharply increased when you drink or take drugs and drive.

Don’t drink or take drugs and drive or allow anyone to drive after drinking or taking drugs.

---

### Pedals

**Warning!**

Keep driver’s foot area clear at all times. Objects stored in this area may impair pedal movement.

---

### Power assistance

**Warning!**

When the engine is not running, there is no power assistance for the steering system. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to steer the vehicle.
Brakes

To help prevent brake disk corrosion after driving on wet road surfaces (particularly salted roads), it is advisable to brake the vehicle with considerable force prior to parking. The heat generated serves to dry the brakes.

If your brake system is normally only subjected to moderate loads, you should occasionally test the effectiveness of the brakes by applying above-normal braking pressure at higher speeds. This will also enhance the grip of the brake pads.

Resting your foot on the brake pedal will cause excessive and premature wear of the brake pads.

It can also result in the brakes overheating, thereby significantly reducing their effectiveness. It may not be possible to stop the vehicle in sufficient time to avoid an accident.

If the parking brake is released and the brake warning lamp in the instrument cluster stays on and there is no audible warning (EBP), the brake fluid level in the reservoir is too low.

Brake pad wear or a leak in the system may be the reason for low brake fluid in the reservoir.

Have the brake system inspected at an authorized Mercedes-Benz Light Truck Center immediately.

All checks and service work on the brake system should be carried out by an authorized Mercedes-Benz Light Truck Center.

Warning!

After driving in heavy rain for some time without applying the brakes or through water deep enough to wet brake components, the first braking action may be somewhat reduced and increased pedal pressure may be necessary to obtain expected braking effect. Maintain a safe distance from vehicles in front.

Be very careful not to endanger other road users when you apply the brakes.

Refer to the description of the Brake Assist System (BAS) (> page 73).

If the parking brake is released and the brake warning lamp in the instrument cluster stays on and there is no audible warning (EBP), the brake fluid level in the reservoir is too low.

Brake pad wear or a leak in the system may be the reason for low brake fluid in the reservoir.

Have the brake system inspected at an authorized Mercedes-Benz Light Truck Center immediately.

All checks and service work on the brake system should be carried out by an authorized Mercedes-Benz Light Truck Center.
Install only brake pads and brake fluid recommended by Mercedes-Benz.

Warning!

If other than recommended brake pads are installed, or other than recommended brake fluid is used, the braking properties of the vehicle can be degraded to an extent that safe braking is substantially impaired. This could result in an accident.

When driving down long and steep grades, relieve the load on the brakes by shifting into a lower gear to use the engine’s braking power. This helps prevent overheating of the brakes and reduces brake pad wear.

After hard braking, it is advisable to drive on for some time, rather than immediately parking, so the air stream will cool down the brakes faster.

Driving off

Apply the brakes to test them briefly after driving off. Perform this procedure only when the road is clear of other traffic.

Warm up the engine smoothly. Do not place full load on the engine until the operating temperature has been reached.

When starting off on a slippery surface, do not allow one drive wheel to spin for an extended period with the ESP switched off. Doing so may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.
Tires

Warning!

If you feel a sudden significant vibration or ride disturbance, or you suspect that possible damage to your vehicle has occurred, you should turn on the hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road.

Inspect the tires and the vehicle underbody for possible damage. If the vehicle or tires appear unsafe, have it towed to the nearest Mercedes-Benz Light Truck Center or tire dealer for repairs.

Tire wear indicators (TWI) are required by law. These indicators are located in six places on the tread circumference and become visible at a tread depth of approximately $\frac{1}{16}$ in (1.5 mm), at which point the tire is considered worn and should be replaced.

Parking

Warning!

Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

To reduce the risk of personal injury as a result of vehicle movement, before turning off the engine and leaving the vehicle always:

- Keep right foot on brake pedal.
- Firmly depress parking brake pedal.
- Move the selector lever to position P.
- Slowly release brake pedal.
- When parked on an incline, turn front wheel towards the road curb.
- Turn the key to steering lock position 0 and remove.
- Take the key and lock vehicle when leaving.

Set the parking brake whenever parking or leaving the vehicle. In addition, move selector lever to position P.

In addition, when parking on hills, turn front wheel towards the curb.

182
The tread wear indicator appears as a solid band across the tread.

**Warning!**

Do not allow your tires to wear down too far. As tread depth approaches \( \frac{1}{16} \) in (1.5 mm), the adhesion properties on a wet road are sharply reduced.

Depending upon the weather and/or road surface (conditions), the tire traction varies widely.

Specified tire pressures must be maintained. This applies particularly if the tires are subjected to high loads (e.g., high speeds, heavy loads, high ambient temperatures).

**Warning!**

Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You may lose control of the vehicle. Continued driving with a flat tire or driving at high speed with a flat tire will cause excessive heat build-up and possibly a fire.

**Hydroplaning**

Depending on the depth of the water on the road, hydroplaning may occur even at low speeds and with new tires. Reduce vehicle speed, avoid track grooves in the road and apply brakes cautiously in the rain.

**Tire traction**

The safe speed on a wet, snow covered or icy road is always lower than on a dry road.

You should pay particular attention to the condition of the road whenever the outside temperatures are close to the freezing point.

**Warning!**

If ice has formed on the road, tire traction will be substantially reduced. Under such weather conditions, drive, steer and brake with extreme caution.

Mercedes-Benz recommends M+S rated radial-ply tires for the winter season for all four wheels to insure normal balanced handling characteristics. On packed snow, they can reduce your stopping distance as compared with summer tires. Stopping distance, however, is still considerably greater than when the road is not covered with snow or ice. Exercise appropriate caution.
Operation
Driving instructions

Tire speed rating

Additional information on winter tires can be found under "Winter tires" (page 213).

ML 320, ML 350
Your vehicle is factory equipped with "H"-rated tires, which have a speed rating of 130 mph (210 km/h).

ML 500
Your vehicle is factory equipped with "V"-rated tires, which have a speed rating of 150 mph (240 km/h).

An electronic speed limiter prevents your vehicle from exceeding the speed rating.

ML 55 AMG
Your vehicle is factory equipped with "W"-rated tires, which have a speed rating of 168 mph (270 km/h).

Despite of the tire speed rating, local speed limits should be obeyed. Use prudent driving speeds appropriate to prevailing conditions.

Warning!

Even when permitted by law, never operate a vehicle at speeds greater than the maximum speed rating of the tires.

Exceeding the maximum speed for which tires are rated can lead to sudden tire failure, causing loss of vehicle control and possibly resulting in an accident and/or serious injury and possible death, for you and for others.

Winter driving instructions

The most important rule for slippery or icy roads is to drive sensibly and to avoid abrupt acceleration, braking and steering maneuvers. Do not use the cruise control system under such conditions.

When the vehicle is in danger of skidding, move selector lever to position N. Try to keep the vehicle under control by corrective steering action.

Warning!

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle's ABS will not prevent this type of control loss.

Do not use LOW RANGE mode when driving on ice or packed snow. At speeds below 18 mph (30 km/h) vehicle steering is adversely affected by the LOW RANGE ABS (page 72).

Road salts and chemicals can adversely affect braking efficiency. Increased pedal force may become necessary to produce the normal brake effect.

We therefore recommend depressing the brake pedal periodically when traveling at length on salt-strewn roads.

Information on driving with snow chains (page 214).
This can bring road salt impaired braking efficiency back to normal. Be very careful that you carry out these braking maneuvers without endangering any other road users.

If the vehicle is parked after being driven on salt-treated roads, the braking efficiency should be tested as soon as possible after driving is resumed while observing the safety rules in the previous paragraph.

Warning!

If the vehicle becomes stuck in snow, make sure that snow is kept clear of the exhaust pipe and from around the vehicle with the engine running. Otherwise, deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

To assure sufficient fresh air ventilation, open a window slightly on the side of the vehicle not facing the wind.

Warning!

The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose. Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice.

For more information on winter driving (▷ page 213).

Standing water

Warning!

Do not drive through flooded areas or water of unknown depth. Before driving through water, determine its depth. It should not be deeper than approximately 20 inches (50 cm).

If you must drive through standing water, drive slowly to prevent water from entering the passenger compartment or the engine compartment. Water in these areas could cause damage to electrical components or wiring of the engine or transmission, or could result in water being ingested by the engine through the air intake causing severe internal engine damage. Any such damage is not covered by the Mercedes-Benz Limited Warranty.
Read this chapter carefully before you begin off-road travel. Familiarize yourself with the vehicle characteristics and gear changing before you attempt any difficult terrain off-road driving. We recommend that you start out with easy off-road travel.

**Warning!**

Drive slowly in unknown terrain. This will make it easier to recognize unexpected obstacles and avoid damage to the vehicle. To help avoid the vehicle rolling over, never turn it around on steep inclines. If the vehicle cannot complete the attempted climb, back it down in reverse gear.

Do not drive along the side of a slope (danger of vehicle rollover). The vehicle might otherwise rollover. If in doing so the vehicle begins to show a tendency to roll, immediately steer into a line of gravity (straight up or downhill).

Never let the vehicle roll backwards in idle or when the clutch is disengaged. You may lose control of the vehicle if you use only the service brake.

**Special driving features for off-road driving**

The following driving features are available for specific kind of operation:

- LOW RANGE mode (>
  page 118)
- LOW RANGE – ABS (>
  page 72)
- LOW RANGE – 4-ETS (>
  page 74)
- LOW RANGE – ESP (>
  page 76)

**Off-road driving rules**

Engage the LOW RANGE mode before driving under off-road conditions (>
page 118).

Fasten items being carried as securely as possible (>
page 139).

We recommend keeping doors, liftgate, windows, and sliding/pop-up roof* closed whenever driving in off-road mode.
Operation
Driving instructions

Checklist before off-road driving

**Tires**
- Check the tread depth and maintain specified tire pressure (see tire pressure label inside the fuel filler flap).
- Check tires for possible damage and remove foreign objects.
- Replace missing valve caps.

**Rims**
- Dented or bent rims can cause tire pressure loss and damage the tire beads. For this reason, check and, if necessary, change rims before driving off-road.

**Vehicle tool kit**
- Check if the vehicle jack is functional.
- In all cases take the vehicle tool kit, a strong tow rope, a shovel and a small plank (to put under the vehicle jack on sandy soil) with you.

**Driving in steep terrain**

- Observe the following during off-road driving:
  - Adjust vehicle speed to condition of terrain. The more uneven, rutty and steeper the terrain, the lower the speed should be.
  - Watch out for obstacles, such as rocks, holes, tree stumps and ruts.
  - Be especially careful when driving in unknown territory. It may be necessary to get out of the vehicle and scout the path you intend to take.
  - Continuous and speedy driving in sandy soil overcomes the vehicle rolling resistance, and helps to prevent the vehicle from sinking into the ground.

**Slope angle**
1 25° (ML 320, ML 350, ML 500)
21° (ML 55 AMG)
2 26° (ML 320, ML 350, ML 500)
23° (ML 55 AMG)
Operation

Driving instructions

- Switch to LOW RANGE mode before starting to drive up or down steep inclines (> page 118).
- Driving on embankments, slopes and other steep inclines should only be done straight up or downhill, i.e. in the line of gravity. Maximum vehicle climbing ability is a 60% grade.
- Do not drive along the side of a slope (danger of vehicle rollover). If in doing so, the vehicle begins to show a tendency to roll, immediately steer into a line of gravity (straight up or downhill).
- To help avoid the vehicle rolling over, never turn it around on steep inclines. If the vehicle cannot complete the attempted climb, back it down in reverse gear.
- Utilize the engine’s braking power when descending a slope, observe the engine speed (do not overrev the engine). Apply the service brake as needed.
- Check the brakes after a lengthy down-grade drive.

Driving across a hilltop

- Decelerate just ahead of a hilltop (do not select gear range N), to prevent the vehicle from speeding up too much after climbing a hill.
- Use the momentum of the vehicle to drive across the hilltop.
- Driving in this manner prevents the vehicle from jumping across the hilltop and thus loosing its forward momentum.

Traction in steep terrain

- Be easy on the accelerator and watch for continuous wheel traction when driving in steep terrain.
  
  The 4-ETS helps greatly when starting out on a steep incline when the front wheels have then the tendency to slip due to the weight shifting away the front axle.
  
  The 4-ETS recognizes the situation and limits the torque for the front wheels by braking them. Simultaneously the torque for the rear wheels is increased.

  Avoid excessive engine speeds – drive with moderate engine speeds (max. 3000 RPM).
  Select gear range 2 or 1 on the automatic transmission (> page 114).
Driving downhill

- Select gear range 1 on the automatic transmission (page 114).
- Drive downhill observing the same rules as driving uphill (page 187).
- The special LOW RANGE – ABS setting allows for precise and brief (cyclical) blocking of the front wheels, permitting them to dig into loose ground.

Remember that the front wheels when stopped, slide across a surface, thus loose their ability to steer the vehicle.

Driving through water

- Switch off the exterior lamps as well as the climate control.
- Enter the water only at a shallow spot. Never take a running start.
- Drive slowly, avoiding a bow wave.
- Do not stop vehicle immersed in water, and do not shut off the engine.
- To dry the brakes, apply pressure to the brake pedal several times after leaving the water.

1 20 in (50 cm)
- Before driving through water, determine its depth. It should not be deeper than approximately 20 inches (50 cm).
- Switch to LOW RANGE mode before driving through water (page 118).
Operation

Driving instructions

Crossing obstacles

- Select gear range 1 on the automatic transmission (> page 114).
- Check the vehicle clearance before crossing obstacles.
- Cross obstacles (e.g. tree stumps or big rocks) very slowly by aiming one of the front wheels at the center of the obstacle, and repeat same with the rear wheel.
- Special attention is needed when you cross obstacles on a steep incline. The vehicle could slide sideways as a result of its possible slanted position.

Ruts

A number of off-road tracks or other byways have deep ruts which can cause the undercarriage to come in contact with the ground.

- Select gear range 1 on the automatic transmission (> page 114).
- Drive next to the ruts rather than through them if at all possible.

Obstacles can damage the vehicle undercarriage or suspension components. If possible use the assistance of a second person.

After off-road driving or crossing obstacles, inspect vehicle for any damage, especially vehicle undercarriage and suspension components. Failure to do so can adversely affect the vehicle’s future performance, including increased chance of an accident.
Returning from off-road driving

Off-road driving increases strain on the vehicle.
We recommend that you inspect the vehicle for possible damage after each off-road trip. Recognizing any damage and a subsequent timely repair reduces the chance of a possible breakdown or accident later on.

Proceed as follows:

- Switch off the LOW RANGE mode (> page 118).
- Remove excessive dirt from tires, wheels, wheel housings, and underbody.
- For instance, after driving in mud, clean the radiator, chassis, engine, brakes, and wheels from extreme dirt using a strong jet of water.

• Inspect frame, oil pan, brake hoses, etc., as well as vehicle underbody for possible damage.
• Check tires for possible damage, clean all exterior lamps, and conduct a brake test.
• Check for brush or branches caught in the undercarriage.

They could increase the possibility of a fire, as well as cut fuel and/or brake lines, puncture rubber bellows of the axles or drive shafts.
• After continued operation in mud, sand, water or other dirty conditions clean the brake discs, wheels, brake pads and check and clean axle joints.

Warning!

If you feel a sudden significant vibration or ride disturbance, or you suspect that possible damage to your vehicle has occurred, you should turn on the hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the roadway.

Inspect the tires and under the vehicle for possible damage. If the vehicle or tires appear unsafe, have it towed to the nearest Mercedes-Benz Light Truck Center or tire dealer for repairs.
Operation

Driving instructions

Trailer towing

Warning!

Failure to use proper equipment and driving technique can result in a loss of vehicle control when towing a trailer.

Improper towing or failure to follow the instructions contained in this guide can result in serious injury. Follow the guidelines below carefully to assure safe trailer operation.

Ask your authorized Mercedes-Benz Light Truck Center should you require an explanation of information contained in this guide.

Trailer hitches

- Only install a trailer hitch receiver approved for your vehicle.
- For information on availability and installation, see your authorized Mercedes-Benz Light Truck Center.
- The bumpers on your vehicle are not designed for use with clamp-type hitches.
- Do not attach rental hitches or other bumper-type hitches to them.
- To reduce the possibility of damage, remove the hitch ball adaptor from the receiver when not in use.

Electrical connections

The vehicle is prewired to accept the seven-wire harness included in the Mercedes-Benz approved trailer hitch receiver kit.

An additional four-pole conversion plug is included in the Mercedes-Benz supplied trailer hitch receiver kit.

For further information, see your authorized Mercedes-Benz Light Truck Center.
Vehicle and trailer weights and ratings

**Gross Vehicle Weight Rating (GVWR)** is the maximum permissible vehicle weight: 6614 lbs. (3000 kg).

**Gross Vehicle Weight (GVW):** Comprises weight of vehicle including fuel, tools, spare wheel, installed accessories, passengers, cargo and trailer tongue. It must never exceed the GVWR.

**Gross Axle Weight Rating (GAWR)** is the maximum permissible axle weight:

- front 2976 lbs. (1350 kg)
- rear 3858 lbs. (1750 kg)

**Gross Trailer Weight (GTW)** is the maximum permissible trailer weight to be towed: 5000 lbs. (2260 kg)

**Trailer Tongue Weight Rating (TWR)** is the maximum permissible weight on the trailer tongue: 500 lbs. (225 kg) limit for Mercedes-Benz approved hitch receiver

### Loading a trailer

- When loading a trailer, you should observe that neither the permissible GTW, nor the GVWR are exceeded.

  Maximum permissible values are listed on the safety compliance certification labels for the vehicle and for the trailer to be towed.

  The lowest value listed must be selected when determining how the vehicle and trailer are loaded.

- The tongue weight at the hitch ball must be added to the GVW to prevent exceeding your Mercedes-Benz tow vehicle’s rear GAWR.

### Checking weights of vehicle and trailer

- To assure that the tow vehicle and trailer are in compliance with the maximum permissible weight limits have the loaded rig (tow vehicle including driver, passengers and cargo, trailer fully loaded) weighed on a commercial scale.

- Check the vehicle’s front and rear Gross Axle Weight (GAW), the GTW and TWR. The values as measured must not be exceeded, according to the weight listed under “Vehicle and trailer weight and ratings”.

We recommend loading the trailer in such a manner that it has a tongue weight (TW) between 10% and 15% of the GTW.
Operation

Driving instructions

**Attaching a trailer**

Observe maximum permitted trailer dimensions (width and length).

Most states and all Canadian provinces require:

- safety chains between your tow vehicle and the trailer.

The chains should be crisscrossed under the trailer tongue. They must be attached to the hitch receiver, and not to the vehicle’s bumper or axle.

Be sure to leave enough slack in the chains to permit turning corners.

- a separate brake system at various trailer weights.

- a break-away switch on trailers with a separate brake system.

The switch activates the trailer brakes in the possible event that the trailer might separate from the tow vehicle.

**Towing a trailer**

There are many different laws, including speed limit restrictions, having to do with trailer towing. Make sure that your rig will be legal, not only for where you reside, but also for where you will be driving. A good source for this information can be the police or local authorities.

Note the following points, when driving with the trailer:

- In order to gain skill and an understanding of the vehicle’s behavior, you should practice turning, stopping and backing up in an area which is free from traffic.

- Before you start driving check the:
  - trailer hitch
  - break-away switch
  - safety chains
  - electrical connections
  - lighting and tires

Do not connect a trailer brake system (if trailer is so equipped) directly to the vehicle’s hydraulic brake system, as your vehicle is equipped with antilock brakes. If you do, neither the vehicle’s brakes nor the trailer’s brakes will function properly.

The provided vehicle electrical wiring harness for trailer towing has a brake signal wire (color orange) for hook-up to a brake controller.

You should consider using a trailer sway control system. For further information see your authorized Mercedes-Benz Light Truck Center.
Adjust the mirrors to permit unobstructed view beyond rear of trailer.

- If the trailer has electric brakes, start your vehicle and trailer moving slowly, and then apply only the trailer brake controller by hand to be sure the brakes are working properly.
- Always secure items in the trailer to prevent load shifts while driving.
- When towing a trailer, check occasionally to be sure that the load is secure, and that lighting and trailer brakes (if so equipped) are functioning properly.
- Take into consideration that when towing a trailer, the handling characteristics are different and less stable from those when operating the vehicle without a trailer.

It is important to avoid sudden maneuvers.

- The vehicle and trailer combination is heavier, and therefore is limited in acceleration and climbing ability, and requires longer stopping distances. It is more prone to reacting to side wind gusts, and requires more sensitive steering input.
- If possible, do not brake abruptly, but rather engage the brake slightly at first to permit the trailer to activate its brake. Then increase the braking force.

If the trailer should begin to sway, reduce the vehicle’s speed and use the brake controller by hand to straighten out the vehicle and trailer.

In no case should you attempt to straighten out the tow vehicle and trailer by increasing the speed or oversteering and stepping on the brakes.

- If the transmission hunts between gears on inclines, manually shift to a lower gear (select 4, 3, 2 or 1).

A lower gear and reduction of speed reduces the chance of engine overloading and/or overheating.

- On very steep inclines, not manageable with selector lever in position 1, switch transfer case to LOW RANGE mode (> page 118).

- When going down a long hill, shift into a lower gear and use the engine’s braking effect. Avoid riding the brakes, thus over heating the vehicle and trailer brakes.
Operation

Driving instructions

- If the engine coolant rises to an extremely high temperature (coolant temperature needle approaching the red zone) when the air conditioning is on, turn off the air conditioning system.

  Engine coolant heat can be additionally vented by opening the windows, switching the climate control fan speed to high and setting the temperature control to the maximum hot position.

- Extreme care must be exercised since your vehicle with a trailer will require additional passing distance ahead than when driving without a trailer.

  Because your vehicle and trailer is longer than your vehicle alone, you will also need to go much farther ahead of the passed vehicle before you can return to your lane.

### Parking

**Warning!**

To reduce the risk of personal injury, or damage to the vehicle powertrain, as a result of vehicle/trailer movement, always:

- Keep right foot on brake pedal.
- Shift gear selector lever to position N.
- Have a second person place wheel chocks on downhill side of left and right trailer wheels.
- Slowly release brake pedal and let vehicle and trailer roll into chocks until stopped.
- Firmly depress parking brake pedal.
- Move gear selector lever to position P.
- When parked on an incline, turn front wheel towards the road curb.

### Passenger compartment

**Warning!**

Always fasten items being carried as securely as possible.

In an accident, during hard braking or sudden maneuvers, loose items will be thrown around inside the vehicle, and cause injury to vehicle occupants unless the items are securely fastened in the vehicle.

The trunk is the preferred place to carry objects. Always use partition net when transporting cargo. Partition net cannot secure hard or heavy objects.
Driving abroad

Abroad, there is a widely-spread Mercedes-Benz service network at your disposal. If you plan to drive into areas which are not listed in the index of your Mercedes-Benz Light Truck Center directory, you should request pertinent information from your authorized Mercedes-Benz Light Truck Center.

Control and operation of radio transmitters

MCS, radio and telephone*

Warning!

Do not forget that your primary responsibility is to drive the vehicle. Only operate the MCS, radio or telephone1 if road, weather and traffic conditions permit.

Bear in mind that at a speed of just 30 mph (approximately 50 km / h), your vehicle is covering a distance of approximately 44 feet (approximately 13.5 m) every second.

1 Observe all legal requirements.

Telephones and two-way radios

Warning!

Never operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or personal injury.

Radio transmitters, such as a portable telephone or a citizens band unit should only be used inside the vehicle if they are connected to an antenna that is installed on the outside of the vehicle.

Refer to the radio transmitter operation instructions regarding use of an external antenna.
Operation
Driving instructions

Catalytic converter

Your Mercedes-Benz is equipped with monolithic type catalytic converters, an important element in conjunction with the oxygen sensors to achieve substantial control of the pollutants in the exhaust emissions. Keep your vehicle in proper operating condition by following our recommended maintenance instructions as outlined in your Service Booklet.

⚠️ To prevent damage to the catalytic converters, use only premium unleaded gasoline in this vehicle.

Any noticeable irregularities in engine operation should be repaired promptly. Otherwise, excessive unburned fuel may reach the catalytic converter, causing it to overheat and start a fire.

⚠️ Warning!
As with any vehicle, do not idle, park or operate this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

Emission control

Certain engine systems serve to keep the toxic components of the exhaust gases within permissible legal limits.

These systems, of course, will function properly only when maintained strictly according to factory specifications. Any adjustments on the engine should, therefore, be carried out only by qualified Mercedes-Benz Light Truck Center authorized technicians. Engine adjustments should not be altered in any way. Moreover, the specified service jobs must be carried out regularly according to Mercedes-Benz servicing requirements. For details refer to the Service Booklet.

⚠️ Warning!
Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide, and inhaling it can cause unconsciousness and lead to death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open at all times.
Coolant temperature

During severe operating conditions and stop-and-go city traffic, the coolant temperature may rise to approx. 248°F (120°C).

The engine should not be operated with the coolant temperature in the red zone. Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.

Warning!

- Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned
- Steam from an over heated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until it cools down.
Operation

At the gas station

The fuel filler flap is located on the left-hand side of the vehicle towards the rear. Locking/unlocking the vehicle with the remote control automatically locks/unlocks the fuel filler flap.

- Remove the key from the steering lock.
- Open the fuel filler flap 1 by pulling in direction of the arrow.
- Turn the fuel cap 2 to the left and hold on to it until possible pressure is released.
- Take off the cap.
- Only fill your tank until the filler nozzle unit cut out – do not top up or overfill.

! The fuel filler cap is tethered to the fuel filler neck. Do not drop the cap. It could damage the vehicle paint finish.

! To prevent damaging the lens of the plastic tail lamp, make certain that no gasoline comes into contact with it.

Warning!

Gasoline is highly flammable and poisonous. It burns violently and can cause serious injury. Whenever you are around gasoline, avoid inhaling fumes and skin contact, extinguish all smoking materials. Never allow sparks, flame or smoking materials near gasoline.

If the fuel filler cap is not replaced after fueling, the vehicle will not operate. If the fuel filler cap is loose, the vehicle warning lamp will flash.

Replace the fuel cap by turning it to the right. You will hear when the fuel cap is tightened.

Close the fuel filler flap.

Warning!

Overfilling of the fuel tank may create pressure in the system which could cause a gas discharge. This could cause the gas to spray back out when removing the fuel pump nozzle, which could cause personal injury.

Replace the fuel cap by turning it to the right. You will hear when the fuel cap is tightened.

Use only premium unleaded gasoline with a minimum Posted Octane Rating of 91 (average of 96 RON/86 MON). Information on gasoline quality can normally be found on the fuel pump. More information on gasoline can be found in the Factory Approved Service Products pamphlet.
At the gas station

Check regularly and before a long trip

1 Engine oil level
   More information on engine oil can be found in the “Operation” section (>
   page 203).

2 Coolant level
   For normal replenishing, use water (potable water quality). More information
   on the coolant level can be found in the “Operation” section (>
   page 206).

3 Brake fluid
   More information on brake fluid can be found in the “Technical data” section
   (>
   page 284).

4 Windshield washer and headlamp cleaning system
   More information on filling the reservoir can be found in the “Operation”
   section (>
   page 208).

Vehicle lighting
   Check function and cleanliness. More information on replacing light bulbs can be
   found in the “Practical hints” section (>
   page 247).
   Combination switch (>
   page 102).

Tire inflation pressure
   More information on tire inflation pressure can be found in the “Operation” section
   (>
   page 211).

Leaving the engine running and the fuel cap open can cause the lamp to illuminate.
See also “Practical hints” section (>
page 232).
Operation

Engine compartment

Hood

Pull lever 1 downwards.

The hood is unlocked. Handle 2 protrudes slightly from the radiator trim. If not, lift the hood slightly.

1 Hood release

2 Handle for opening the hood

Pull handle 2 to its stop out of the radiator grill.

Pull up on the hood and then release it.

The hood will be automatically held open at shoulder height by gas-filled struts.

Warning!

Do not pull the release lever while the vehicle is in motion. Otherwise the hood could be forced open by passing air flow.

To avoid damage to the windshield wipers or hood, never open the hood if the wiper arms are folded forward away from the windshield.

Warning!

To help prevent personal injury, stay clear of moving parts when the hood is open and the engine is running. Make sure the hood is properly closed before driving. When closing the hood, use extreme caution not to catch hands or fingers.

The radiator fan may continue to run for approximately 30 seconds or even restart after the engine has been turned off. Stay clear of fan blades.
Operation

Engine compartment

Warning!
If you see flames or smoke coming from the engine compartment, or if the coolant temperature gauge indicates that the engine is overheated, do not open the hood. Move away from vehicle and do not open the hood until the engine has cooled. If necessary, call the fire department.

Warning!
The engine is equipped with a transistorized ignition system. Because of the high voltage it is dangerous to touch any components (ignition coils, spark plug sockets, diagnostic socket) of the ignition system
• with the engine running
• while starting the engine
• if ignition is “on” and the engine is turned manually

Closing

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Be careful that you do not close the hood on anyone.</td>
</tr>
</tbody>
</table>

- Let the hood drop from a height of approximately 1 ft (30 cm).
  The hood will lock audibly.
- Check to make sure that the hood is fully closed.

If you can raise the hood at a point above the headlamps, then it is not properly closed. Open it again and let it drop with somewhat greater force.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not push the hood closed manually, as this could damage it.</td>
</tr>
</tbody>
</table>

Engine oil

The amount of oil your engine needs will depend on a number of factors, including driving style. Higher oil consumption can occur when
• the vehicle is new
• the vehicle is driven frequently at higher engine speeds.

Engine oil consumption checks should only be made after the vehicle break-in period.

Checking engine oil level

When checking the oil level the vehicle must
• be parked on level ground
• be at normal operating temperature
• have been stationary for at least five minutes with the engine turned off
Operation
Engine compartment

Engine oil level display

Switch on the ignition and wait until the display - - - - - - appears in the speedometer display 2.

Within one second press knob 1 twice.

One of the following messages will subsequently appear in the display:

- **OIL i.O**
  - The oil level is correct. Engine oil does not need to be added.

- **- 1.0 L**
  - Add 1 liter of engine oil.

- **- 1.5 L**
  - Add 1.5 liters of engine oil.

- **- 2.0 L**
  - Add 2 liters of engine oil.

- **OIL HI**
  - The oil level is too high.
  - Have excess oil siphoned.

The display - - - - - - flashes in the speedometer display if a proper oil level check cannot be performed.

Repeat the engine oil level check after a few minutes.

Excessive oil must be siphoned or drained off. It could cause damage to the engine and catalytic converter not covered by the Mercedes-Benz Limited Warranty.

If the engine oil level check cannot be performed again via the display field, use the dipstick to perform the engine oil level check (page 205).

In this case we recommend that you have the system checked at a Mercedes-Benz Light Truck Center.
Operation

Engine compartment

Oil dipstick

1 Oil dipstick
2 Oil filler cap

- Remove the oil dipstick 1.
- Wipe the oil dipstick clean.
- Fully insert dipstick in tube, and remove after three seconds.

The engine oil level must be between the lower (min) and upper (max) mark of the dipstick.

- Add engine oil if necessary.

Fill quantity between upper and lower dipstick marking, the level is approximately 2.1 US qt (2.0 l).

Adding engine oil

- Unscrew the oil filler cap 2 from the filler neck. Be careful not to overfill with oil.

Be careful not to spill any oil when adding. Avoid environmental damage caused by oil entering the ground or water.

Excessive oil must be siphoned or drained off. It could cause damage to the engine and catalytic converter not covered by the Mercedes-Benz Limited Warranty.

- Screw the oil filler cap back on the filler neck.

More information on engine oil can be found in the “Technical data” section (page 286).
Transmission fluid level

The transmission fluid level does not need to be checked. If you notice transmission fluid loss or gear shifting malfunctions, have an authorized Mercedes-Benz Light Truck Center check the automatic transmission.

Coolant

The engine coolant is a mixture of water and anticorrosion/antifreeze. To check the coolant level, the vehicle must be parked on level ground and the engine must be cool.

Warning!

In order to avoid any possibly serious burns:

- Use extreme caution when opening the hood if there are any signs of steam or coolant leaking from the cooling system, or if the coolant temperature gauge indicates that the coolant is overheated.
- Do not remove pressure cap on coolant reservoir if engine temperature is above 194°F (90°C). Allow engine to cool down before removing cap. The coolant reservoir contains hot fluid and is under pressure.
- Using a rag, slowly open the cap approximately ½ turn to relieve excess pressure. If opened immediately, scalding hot fluid and steam will be blown out under pressure.
- Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts.

1 Cap
2 COLD LEVEL mark

The coolant level should reach the COLD LEVEL mark 2 in the reservoir.

If the engine is already at its regular operating temperature, the coolant may be approximately 0.6 in (1.5 cm) above the COLD LEVEL mark.

Using a rag, turn the cap slowly approximately one half turn to the left to release any excess pressure.
Continue turning the cap to the left and remove it.

Add coolant as required.

Replace and tighten cap.

More information on coolant can be found in the “Technical data” section (page 287).

Battery

The battery is located in the engine compartment.

The battery should always be sufficiently charged in order to achieve its rated service life.

If you use your vehicle mostly for short distance trips, you will need to have the battery charge checked more frequently.

When replacing batteries, always use batteries approved by Mercedes-Benz.

If you do not intend to operate your vehicle for an extended period of time, consult an authorized Mercedes-Benz Light Truck Center about steps you need to observe.

Batteries contain materials that can harm the environment if disposed of improperly. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.

- Wear eye protection.
- Keep children away.
- Follow the instructions in this Operator’s Manual.

Observe all safety instructions and precautions when handling automotive batteries.

Risk of explosion

Keep flames or sparks away from battery. Do not smoke.

Battery acid is caustic. Do not allow it to come into contact with skin, eyes or clothing.

In case it does, immediately flush affected area with clear water and seek medical help if necessary.

Keep children away.

Follow the instructions in this Operator’s Manual.
Windshield washer system and headlamp cleaning system

The windshield washer reservoir is located in the engine compartment.

1 Cap

Fluid for the windshield washer system and the headlamp cleaning system* is supplied from the windshield washer reservoir. It has a capacity of 8.0 US qt (7.6 l).

During all seasons, add MB Windshield Washer Concentrate and water (or commercially available premixed windshield washer solvent/antifreeze, depending on ambient temperatures).

Always use washer solvent/antifreeze where temperatures may fall below freezing. Failure to do so could result in damage to the washer system/reservoir.

Use the tab to pull cap 1 upwards (arrow).

Refill the reservoir with MB Windshield Washer Concentrate and water (or commercially available premixed windshield washer solvent/antifreeze, depending on ambient temperatures).

More information can be found in the “Technical data” section (> page 290).

Warning!

Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite. You could be seriously burned.

Only use washer fluid which is suitable for plastic lenses. Improper washer fluid can damage the plastic lenses of the headlamps.
Tires and wheels

See your authorized Mercedes-Benz Light Truck Center for information on tested and recommended rims and tires for summer and winter operation. They can also offer advice concerning tire service and purchase.

Warning!

Replace rims or tires with the same designation, manufacturer and type as shown on the original part. See your authorized Mercedes-Benz Light Truck Center for further information. If incorrectly sized rims and tires are mounted:

- The wheel brakes or suspension components can be damaged
- The correct operating clearance of the wheels and the tires are no longer guaranteed

Rented tires are not tested or recommended by Mercedes-Benz, since previous damage cannot always be recognized on retreads. Mercedes-Benz can therefore not assure the operating safety of the vehicle when such tires are used.

See your authorized Mercedes-Benz Light Truck Center for information on tested and recommended rims and tires for summer and winter operation.

Important guidelines

- Use only sets of tires and rims of the same type and make.
- Tires must be of the correct size for the rim.
- Break in new tires for approximately 60 miles (100 km) at moderate speeds.
- Regularly check the tires and rims for damage.
- If vehicle is heavily loaded, check tire pressure and correct as required.
- Do not allow your tires to wear down too far. Adhesion properties on wet roads are sharply reduced at tread depths under \( \frac{1}{8} \) in (3 mm).
- When replacing individual tires, you should mount new tires on the front wheels first.
When the wheels are heavily soiled, e.g. after driving through mud, clean the inside of the wheels with a jet of water.

Life of tire

The service life of a tire is dependent upon varying factors including but not limited to:

- Driving style
- Tire pressure
- Distance driven

Warning!

Tires and spare tire should be replaced after six years, regardless of the remaining tread.

Direction of rotation

Unidirectional tires offer added advantages, such as better hydroplaning performance. To benefit, however, you must ensure that the tires rotate in the direction specified.

An arrow on the sidewall indicates the intended direction of rotation of the tire.

Keep unmounted tires in a cool, dry place with as little exposure to light as possible. Protect tires from contact with oil, grease and gasoline.
Checking tire inflation pressure

**Warning!**

If the tire pressure repeatedly drops:
- Check the tires for punctures from foreign objects
- Check to see whether air is leaking from the valves or from around the rim

Correct the tire pressure only when tires are cold.

Regularly check your tire pressure at intervals of no more than 14 days.

If the tires are warm, you should only correct the tire pressure if it is too low for current operating conditions.

A table on the fuel filler flap lists the specified tire inflation pressures for warm and cold tires as well as for various operating conditions.

Tire pressure changes by approximately 1.5 psi (0.1 bar) per 18°F (10°C) of air temperature change. Keep this in mind when checking tire pressure where the temperature is different from the outside temperature.

Tire temperature and tire pressure are also increased while driving, depending on the driving speed and the tire load.

The pressures listed for light loads are minimum values offering high driving comfort.

Increased inflation pressures listed for heavier loads may also be used for light loads. These higher pressures produce favorable handling characteristics. The ride of the vehicle, however, will be somewhat harder. Never exceed the max. values or inflate tires below the min. values listed in the fuel filler flap.

**Warning!**

Follow recommended inflation pressures. Do not overinflate tires. Overinflated tires can result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not underinflate tires. Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overload the tires by exceeding the specified vehicle capacity weight (as indicated by the label on the pillar in the driver’s door opening). Overloading the tires can overheat them, possibly causing a blowout.

Check the spare tire periodically for condition and inflation. Spare tire will age and become worn over time even if never used, and thus should be inspected and replaced when necessary.
Operation

Tires and wheels

Rotating wheels

The wheels can be rotated every 3000 to 6000 miles (5000 to 10000 km) or sooner if necessary, according to the degree of tire wear. The same direction of tire rotation must be retained.

Rotate the wheels before the characteristic tire wear pattern becomes visible (shoulder wear on front wheels and tread center wear on rear wheels).

Thoroughly clean the inner side of the wheels after each rotation. Check and ensure proper tire inflation pressure.

Warning!

Rotate front and rear wheels only if they are of the same size.

Warning!

Have the tightening torque checked after changing a wheel. Wheels could become loose if not tightened with a torque of 110 ft.lb. (150 Nm).

Use only genuine Mercedes-Benz wheel bolts specified for your vehicle’s rims.

Information on changing a wheel can be found in the “Practical hints” section (> page 255).
Winter driving

Before the onset of winter, have your vehicle winterized at an authorized Mercedes-Benz Light Truck Center. This service includes:

- Check of anticorrosion and antifreeze concentration.
- Addition of cleaning concentrate to the water of the windshield and headlamp cleaning system. Add MB Concentrate “S” to a premixed windshield washer solvent/antifreeze which is formulated for below freezing temperatures (> page 290).
- Battery test. Battery capacity drops with decreasing ambient temperature. A well charged battery helps to ensure that the engine can be started even at low ambient temperatures.
- Tire change. We recommend M+S rated radial-ply tires on all four wheels for the winter season.

Winter tires

Always use winter tires at temperatures below 39°F (4°C) and whenever wintry road conditions prevail. Use of winter tires is the only way to achieve the maximum effectiveness of the ABS, ESP, 4-ETS and EBP in winter operation.

For safe handling, ensure that all winter tires mounted are of the same make and have the same tread design.

Always observe the speed rating of the winter tires installed on your vehicle. If the maximum speed for which your tires are rated is below the speed rating of your vehicle, you must place a notice to this effect where it will be seen by the driver. Such notices are available from your tire dealer or from any authorized Mercedes-Benz Light Truck Center.

Warning!

Winter tires with a tread depth under 0.16 in (4 mm) must be replaced. They are no longer suitable for winter operation.

Warning!

If you use your spare tire when winter tires are fitted on the other wheels, be aware that the difference in tire characteristics may very well impair turning stability and that overall driving stability may be reduced. Adapt your driving style accordingly.

Have the spare tire replaced with a winter tire at the nearest authorized Mercedes-Benz Light Truck Center.
Operation

Winter driving

Block heater (Canada only)

The engine is equipped with a block heater.

The electrical cable may be installed at your authorized Mercedes-Benz Center.

Snow chains

Snow chains should only be driven on snow-covered roads at speeds not to exceed 30 mph (50 km/h). Remove chains as soon as possible when driving on roads without snow.

When driving with snow chains, you may wish to deactivate the ESP (> page 76) before setting the vehicle in motion. This will improve the vehicle’s traction.

ML 55 AMG

Do not use snow chains with tire size 285/50 R 18.

Observe the following guidelines when using snow chains:

- Chains should only be used on all four wheels. With only two chains available, they should be mounted on the rear wheels. Follow the manufacturer’s mounting instructions.
- Use only snow chains that are approved by Mercedes-Benz. Your authorized Mercedes-Benz Light Truck Center will be glad to advise you on this subject.
Maintenance
We strongly recommend that you have your vehicle serviced by your authorized Mercedes-Benz Light Truck Center, in accordance with the Service Booklet at the times called for by the FSS (Flexible Service System).

Failure to have the vehicle maintained in accordance with the Service Booklet at the designated times/mileage called for by the FSS may result in vehicle damage not covered by the Mercedes-Benz Limited Warranty.

FSS will notify you when your next service is due.

The interval between services depends on your driving habits. A gentle driving style, moderate engine speeds and the avoidance of short distance trips will lengthen the interval between services.

Clearing the service indicator
The service indicator is automatically cleared after 10 seconds when you switch on the ignition or when reaching the service threshold while driving. You can also clear it yourself.

Press knob 1.

Service term exceeded
If you have exceeded the suggested service term:

- the symbol appears in the display for 30 seconds and a signal sounds after switching on the ignition.
- it is preceded by a “–” (minus symbol).
The Mercedes-Benz Light Truck Center will reset the service indicator following a completed service.

**Calling up the service indicator**

- Within 1 second press knob 1 twice.
  The FSS display will appear for ten seconds.

**Resetting the service indicator**

In the event that the service on your vehicle is not carried out by an authorized Mercedes-Benz Light Truck Center, you can reset the service indicator yourself.

- Switch ignition on and immediately press knob 1 twice within one second.
  The present status for days or distance is displayed.
- Within ten seconds turn the key in steering lock to position 0 (> page 33).
- Press and hold knob 1 while switching the ignition on.
  The present status for days or distance is displayed once more.
- Continue to hold knob 1.
  After approximately 10 seconds a signal sounds, and the display shows 10 000 miles (Canada: 15 000 km) for approximately 10 seconds.
- Release knob 1.

If the service indicator was inadvertently reset, have a Mercedes-Benz Light Truck Center correct it.

Only reset if the proper service has been performed. Resetting the system without performing the proper service as called for by the FSS will cause the FSS to incorrectly determine the next service interval which will result in engine damage not covered by the Mercedes-Benz Limited Warranty.

If the battery is disconnected, the days of disconnection will not be included in the count shown by the service indicator. To arrive at the true service deadline, you will need to subtract these days from the days shown in the service indicator.

Do not confuse the service indicator with the engine oil level indicator.

If the battery is disconnected, the days of disconnection will not be included in the count shown by the service indicator. To arrive at the true service deadline, you will need to subtract these days from the days shown in the service indicator.

Do not confuse the service indicator with the engine oil level indicator.
Vehicle care

Cleaning and care of the vehicle

While in operation, even while parked, your vehicle is subjected to varying external influences which, if gone unchecked, can attack the paintwork as well as the underbody and cause lasting damage.

Such damage is caused not only by extreme and varying climatic conditions, but also by:
- Air pollution
- Road salt
- Tar, gravel and stone chipping

To avoid paint damage, you should immediately remove:
- Grease and oil
- Fuel
- Coolant
- Brake fluid
- Bird droppings
- Insects
- Tree resins, etc.

Frequent washing reduces and/or eliminates the aggressiveness and potency of the above adverse influences.

More frequent washings are necessary to deal with unfavorable conditions, for example:
- Near the ocean
- In industrial areas (smoke, exhaust emissions)
- During winter operation

You should check your vehicle from time to time for stone chipping or other damage. Any damage should be repaired as soon as possible to prevent corrosion.

In doing so, do not neglect the underbody of the vehicle. A prerequisite for a thorough check is a washing of the underbody followed by a thorough inspection. Damaged areas need to be re-undercoated.

Warning!

Many cleaning products can be hazardous. Some are poisonous, others are flammable. Always follow the instructions on the particular container. Always open your vehicle’s doors or windows when cleaning the inside. Never use fluids or solvents that are not designed for cleaning your vehicle.
Operation

Vehicle care

Your vehicle has been treated at the factory with a wax-base rustproofing in the body cavities which will last for the lifetime of the vehicle. Post-production treatment is neither necessary nor recommended by Mercedes-Benz because of the possibility of incompatibility between materials used in the production process and others applied later.

We have selected car-care products and compiled recommendations which are specially matched to our vehicles and which always reflect the latest technology. You can obtain Mercedes-Benz approved car-care products at your authorized Mercedes-Benz Light Truck Center.

Scratches, corrosive deposits, corrosion or damage due to negligent or incorrect care cannot always be removed or repaired with the car-care products recommended here. In such cases it is best to seek aid at your authorized Mercedes-Benz Light Truck Center.

The following topics deal with the cleaning and care of your vehicle and give important “how-to” information as well as references to Mercedes-Benz approved car-care products.

Additional information can be found in the booklet entitled “Vehicle Care Guide”.

Power washer

When using a power washer for cleaning the vehicle, always observe manufacturer’s operating instructions.

Never use a round nozzle to power wash tires. The intense jet of water can result in damage to the tire.

Always replace a damaged tire.

Always keep the jet of water moving across the surface. Do not aim directly at electrical parts, electrical connectors, seals, or other rubber parts.

Tar stains

Quickly remove tar stains before they dry and become more difficult to remove. A tar remover is recommended.
Paintwork, painted body components

Mercedes-Benz approved Paint Care should be applied when water drops on the paint surface do not “bead up”, normally every 3 to 5 months, depending on climate and washing detergent used.

Mercedes-Benz approved Paint Cleaner should be applied if the paint surface shows signs of dirt embedding (i.e. loss of gloss).

Do not apply any of these products or wax if your vehicle is parked in the sun or if the hood is still hot.

Use the appropriate MB-Touch-Up Stick for quick and provisional repairs of minor paint damage (i.e. chips from stones, vehicle doors, etc.).

Engine cleaning

Prior to cleaning the engine compartment, make sure to protect electrical components and connectors from the intrusion of water and cleaning agents.

Corrosion protection, such as MB Anticorrosion Wax should be applied to the engine compartment after every engine cleaning. Before applying, all control linkage bushings and joints should be lubricated. The poly-V-belt and all pulleys should be protected from any wax.

Vehicle washing

Do not use hot water or wash your vehicle in direct sunlight. Use only a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo.

Thoroughly spray the vehicle with a diffused jet of water. Direct only a very weak spray towards the ventilation intake. Use plenty of water and rinse the sponge and chamois frequently.

Rinse with clear water and thoroughly dry with a chamois. Do not allow cleaning agents to dry on the finish.

Due to the width of the vehicle, fold in outside mirrors prior to running the vehicle through an automatic car wash to prevent damage to the mirrors.

In the winter, thoroughly remove all traces of road salt as soon as possible.

When washing the underbody, do not forget to clean the inner sides of the wheels.
Ornamental moldings
For regular cleaning and care of very dirty chrome-plated parts, use a chrome cleaner.

Headlamps, tail lamps, turn signal lenses
Use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water.
To prevent scratches, never apply strong force and use only a soft, non-scratchy cloth when cleaning the lenses. Do not attempt to wipe dirty lenses with a dry cloth or sponge.

Cleaning the Parktronic* system sensor
Use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water to clean the sensor 1.
When using a steam cleaner or power washer, aim nozzle only briefly from a minimum distance of 4 in. (10 cm) at sensors 1.
To prevent scratches, never apply strong force and use only a soft, non-scratchy cloth when cleaning the sensor. Do not attempt to wipe dirty sensors with a dry cloth or sponge.

Wiper blades
Clean the wiper blade inserts with a clean cloth and detergent solution.

For safety reasons, remove key from steering lock before cleaning the wiper blades, otherwise the wiper motor can suddenly turn on and cause injury.

Window cleaning
Use a window cleaning solution on all glass surfaces. An automotive glass cleaner is recommended.

For safety reasons, switch off wipers and remove key from steering lock before cleaning the windshield, otherwise the wiper motor can suddenly turn on and cause injury.
Light alloy wheels
Mercedes-Benz approved Wheel Care should be used for regular cleaning of the light alloy wheels.
If possible, clean wheels once a week with Mercedes-Benz approved Wheel Care, using a soft bristle brush and a strong spray of water.
Follow instructions on container.

Steering wheel and gear selector lever
Wipe with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care.

Cup holder
Use a gentle dishwashing detergent or mild detergent for delicate fabrics as a washing solution. Wipe with a cloth moistened in lukewarm solution. Do not use scouring agents.

Hard plastic trim items
Pour Mercedes-Benz approved Interior Care onto soft lint-free cloth and apply with light pressure.

Headliner
Clean with soft bristle brush, or use a dry-shampoo cleaner in case of excessive dirt.

Seat belts
The webbing must not be treated with chemical cleaning agents. Use only clear, lukewarm water and soap. Do not dry the webbing at temperatures above 176°F (80°C) or in direct sunlight.

Warning!
Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.

Instrument cluster
Use a gentle dishwashing detergent or mild detergent for delicate fabrics as a washing solution. Wipe with a cloth moistened in lukewarm solution. Do not use scouring agents.

i
Use only acid-free cleaning materials. The acid could lead to corrosion.
Operation
Vehicle care

**Upholstery**
Using aftermarket seat covers or wearing clothing that have the tendency to give off coloring (e.g. when wet etc.) may cause the upholstery to become permanently discolored. By lining the seats with a proper intermediate cover, contact-discoloration will be prevented.

**Leather upholstery**
Wipe leather upholstery with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care. Exercise particular care when cleaning perforated leather as its underside should not become wet.

**MB Tex upholstery**
Pour Mercedes-Benz approved Interior Care onto soft lint-free cloth and apply with light pressure.

**Plastic and rubber parts**
Do not use oil or wax on these parts.

<tr>
<td>![Warning] The red brake warning lamp lights up while driving</td>
<td>You are driving with the parking brake set.</td>
<td>▶ Release the parking brake (&gt; page 45).</td>
</tr>
<tr>
<td>![Warning] The red brake warning lamp lights up while driving.</td>
<td>There is insufficient brake fluid in the reservoir.</td>
<td>▶ Risk of accident! Carefully stop the vehicle and notify an authorized Mercedes-Benz Light Truck Center. Do not add brake fluid! This will not solve the problem.</td>
</tr>
</tbody>
</table>

---

**Warning!**

Driving with the brake warning lamp illuminated can result in an accident. Have your brake system checked immediately if the brake warning lamp stays on. Don’t add brake fluid before checking the brake system. Overfilling the brake fluid reservoir can result in spilling brake fluid on hot engine parts and the brake fluid catching fire. You can be seriously burned.

If you find that the brake fluid in the brake fluid reservoir has fallen to the minimum mark or below, have the brake system checked for brake pad thickness and leaks.

| ![lamp](230) The yellow coolant warning lamp lights up when the engine is running. | The coolant is too hot.  
The coolant level is too low. | ▶ Stop as soon as possible and allow the engine and coolant to cool down.  
▶ Check the coolant level and add coolant if necessary (▷ page 206).  

If the warning lamp lights up frequently, there is a leak in the cooling system. | Have the cooling system checked by an authorized Mercedes-Benz Light Truck Center. |
| The coolant temperature gauge is above 248 °F (120 °C). | The coolant level is too low. | ▶ Stop as soon as possible and allow the engine and coolant to cool down.  
▶ Add coolant to prevent engine from overheating (▷ page 206).  

If the coolant level is correct, the electrical radiator fan may be broken. | If the coolant temperature is below the red zone, drive on to the nearest authorized Mercedes-Benz Light Truck Center.  
Avoid high engine loads (e.g. driving uphill) and stop-and-go driving. |
Warning!

Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until it cools down.

Warning!

Do not ignore the coolant warning lamps. Extended driving with the symbol displayed may cause serious engine damage not covered by the Mercedes-Benz Limited Warranty.

Do not drive without sufficient amount of coolant. The engine will overheat, causing major engine damage.

Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts. You can be seriously burned.

Practical hints

Where will I find ...?

Where will I find ...?

First aid kit

Check expiration dates and contents for completeness at least once a year and replace missing/expired items.

ML 320, ML 350, ML 500

The first aid kit is stored in the liftgate.

- Open and fold down panel 1.

The first aid kit can be removed.

ML 55 AMG

The first aid kit is stored inside the spare wheel cover located in the rear cargo compartment.

- Remove the cargo area cover blind 1 (⇒ page 143).
- Open the clamps 2 and remove the cover 3.

1 Fixing strap
2 First aid kit

⇒ Release the fixing strap 1.

The first aid kit 2 can be removed.

i Check expiration dates and contents for completeness at least once a year and replace missing/expired items.
Vehicle tool kit

The vehicle tool kit is stored in the cargo area behind the right trim panel.

- Turn handles 1 90° in direction of arrows.
- Fold down the panel 2.

3 Screw
4 Vehicle jack with tool kit
  - Turn screw 3 counterclockwise.
  - Remove vehicle jack.

Vehicles with CD-changer* (> page 238).

The jack is exclusively designed for lifting the vehicle during a wheel change. Always lower the vehicle on sufficient capacity jackstands before working under the vehicle.

1 Vehicle jack
2 Wheel bolt wrench
3 Screwdriver
4 Interchangeable slot

Screwdriver 3 is placed inside the wheel-bolt wrench handle.
Practical hints

Where will I find ...?

Vehicle jack

Please also observe the safety guidelines in the "Flat tire" section (> page 255) when using the jack.

Warning!

The jack is designed exclusively for jacking up the vehicle at the jack take-up brackets built into both sides of the vehicle. To help avoid personal injury, use the jack only to lift the vehicle during a wheel change. Never get beneath the vehicle while it is supported by the jack. Keep hands and feet away from the area under the lifted vehicle. Always firmly set parking brake and block wheels before raising vehicle with jack.

Do not disengage parking brake while the vehicle is raised. Be certain that the jack is always vertical (plumb line) when in use, especially on hills. Always try to use the jack on level surface.

Make sure that the jack arm is fully seated in the jack take-up bracket. Always lower the vehicle onto sufficient capacity jack-stands before working under the vehicle.

Vehicle with CD-changer*

To access the vehicle tool kit, swing the CD-changer out of the panel.

1 Screw
2 CD-changer

► Turn screw 1 counterclockwise.
► Swing the CD-changer 2 out of the panel.

Electric air pump (ML 55 AMG)

The electric air pump is located behind the spare wheel.

► Remove the spare wheel (> page 240).

1 Electric air pump

► Open the strap and remove the electric air pump.
**Practical hints**

Where will I find ...?

**Spare wheel (space-saver tire)**

Use the spare wheel only temporarily, while observing the following restrictions:

- Do not exceed vehicle speed of 50 mph (80 km/h).
- Drive to the nearest repair facility to have the flat tire repaired or replaced as appropriate.
- Do not operate vehicle with more than one spare wheel mounted.

**Warning!**

The dimensions of the spare wheel are different from those of the road wheels. As a result, the vehicle handling characteristics change when driving with a mounted spare wheel.

Please comply with the instructions for "Mounting the spare wheel" (> page 255).

**Removing spare wheel (except ML 55 AMG)**

**Warning!**

Exercise care when removing or installing spare wheel to prevent personal injury.

The spare wheel is located behind the rear bumper.

1 Cover

- Hold left and right side of cover 1 and pull away from bumper.

2 Screw
3 Spare wheel carrier
4 Lever

- Turn screw 2 counterclockwise using the wrench (> page 237).
- Screw 2 remains in spare wheel carrier 3.
- Lift spare wheel carrier slightly and push lever 4 to the right using screwdriver (> page 237).
- Swing spare wheel carrier down and pull it out from under the bumper.
Practical hints

Where will I find ...?

5 Bayonet lock

- Turn the bayonet lock 90° to the left.
- Pull off bayonet lock 5.
- Remove the spare wheel cover and the spare wheel.
- Store bayonet lock 5 and spare wheel cover in cargo area.
- Replace the spare wheel carrier and secure it in place.
- Fasten handle 1 to the bumper.

When storing the space-saver spare wheel in its holder, secure it using the bayonet lock.

Removing spare wheel with collapsible tire (ML 55 AMG)
The spare wheel is located on the left side in the rear cargo compartment.

1 Cargo area cover blind
2 Clamp
3 Cover

- Remove the cargo area cover blind 1 (› page 143).
- Open the clamps 2 and remove the cover 3.
Practical hints

Where will I find ...?

Unscrew the three wheel bolts using the wrench (\textit{\textgreater} page 237).

Take out the spare wheel.

Remove the electric air pump from its holder (\textit{\textgreater} page 238).

\textbf{After using the spare wheel, have it de-flate at an authorized Mercedes-Benz Light Truck Center. Store the deflated spare wheel in its holder and tighten the three wheel bolts with a tightening torque of 37 ft.lb. (50 Nm).}
Unlocking/locking in an emergency

Unlocking the vehicle

Unlocking the driver's door

If you are unable to unlock the driver's door using the remote control, open the door using the key.

1 Release button

- Press release button 1 on the remote control.
  The key folds out.

3 Unlocking

4 Locking

- Remove the protective cap from the door lock.
- Unlock the door with the mechanical key. To do so, push the mechanical key in the lock until it stops and turn it to the left.

Unlocking and opening the driver's door with the mechanical key will trigger the anti-theft alarm system. To cancel the alarm, do one of the following:

- Press button \( \text{\textsuperscript{6}} \) or \( \text{\textsuperscript{9}} \) on the remote control.
- Insert the key in the steering lock.
Unlocking/locking in an emergency

**Locking the vehicle**

If you are unable to lock the vehicle with the remote control, lock it with the mechanical key as follows:

- Close the passenger doors and the liftgate.
- Press the upper part of the central locking button in the cockpit (> page 89).
- Check to see whether the locking knobs on the passenger doors are still visible. If necessary push them down manually.
- Lock the liftgate if necessary from inside (> page 87).
- Lock the driver’s door with the mechanical key.

**Changing batteries**

If the batteries in the remote control are discharged, the vehicle can no longer be locked or unlocked. It is recommended to have the batteries replaced at an authorized Mercedes-Benz Light Truck Center.

**Warning!**

Keep the batteries out of reach of children.
If a battery is swallowed, seek medical help immediately.

Batteries contain materials that can harm the environment if disposed of improperly. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.

> Release button
> Battery cover

Replacement batteries: Lithium, type CR 2025 or equivalent.

- Unfold the key by pressing release button 1.
Practical hints
Unlocking/locking in an emergency

Pull off battery cover 2 in direction of arrow.
Remove the batteries.
Using a lint-free cloth, insert new batteries under the contact spring with the plus (+) side facing up.
Press battery cover onto housing until locked in place.
Push each button to assure proper operation of the remote control.

Synchronizing remote control
Turn key in steering lock to position 2, then to position 0 and remove.
Within 10 seconds, push and hold button ◀ while pushing button ◀ five times.
Release the button, and press ◀, ◀ or ◀ once.
The remote control is resynchronized.
Recheck all of the remote control functions.

If it is not possible to resynchronize the remote control, have the system checked at your authorized Mercedes-Benz Light Truck Center.

ML 55 AMG: First remove the spare wheel from its holder (> page 240).

Fuel filler flap
Open cover 1 in cargo area behind the left trim panel.
Open the fuel filler flap.

Turn lock rod 2 clockwise (arrow) to the end stop.
Practical hints
Unlocking/locking in an emergency

Manually unlocking the transmission selector lever

In the case of power failure the transmission selector lever can be manually unlocked, e.g. to tow the vehicle.

1. Insert a pin 1, e.g. pencil, into the covered opening below the position D of the shift pattern.
2. Push the pin down.
3. Move selector lever from position P.
4. Remove the pin from the opening.

The cover returns to its closed position after moving the selector lever to position D.

The selector lever is locked again when moving it to position P.

1 Pencil
Practical hints

Opening/closing in an emergency

Opening/closing in an emergency

Sliding/pop-up roof*

The sliding/pop-up roof drive is located behind the cover between the front interior lamps.

You can open or close the sliding/pop-up roof manually should an electrical malfunction occur.

1. Pry off cover 3 using a flat blade screwdriver.
2. Obtain crank 2 (supplied with vehicle) and insert in hexagon drive 1.
3. Push crank 2 upward while turning it, to disengage the electric motor.

Turn crank 2 clockwise to:
- slide roof closed
- raise roof at the rear

Turn crank 2 counterclockwise to:
- slide roof open
- lower roof at the rear

The sliding/pop-up roof must be synchronized if it has been operated manually (> page 138).

1 Hexagon drive hole
2 Crank
3 Cover
Replacing bulbs

Safe vehicle operation depends on proper exterior lighting and signaling. It is therefore essential that all bulbs and lamp assemblies are in good working order at all times.

Correct headlamp adjustment is extremely important. Have headlamps checked and readjusted at regular intervals and when a bulb has been replaced. See your authorized Mercedes-Benz Light Truck Center for headlamp adjustment.

If the headlamps are fogged up on the inside as a result of high humidity, driving the vehicle a distance should clear out the fogging.

Notes on bulb replacement

**Warning!**

Keep bulbs out of reach of children.
Bulbs and bulb sockets can be very hot. Allow the lamp to cool down before changing a bulb.

Halogen lamps contain pressurized gas. A bulb can explode if you:
- touch or move it when hot
- drop the bulb
- scratch the bulb

Wear eye and hand protection.
Because of high voltage in xenon lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.

- Use only 12-volt bulbs of the same type and with the specified watt rating.
- Switch lights off before changing a bulb to prevent short circuits.
- Always use a clean lint-free cloth when handling bulbs.
- Your hands should be dry and free of oil and grease.
- If the newly installed bulb does not light up, visit an authorized Mercedes-Benz Light Truck Center.
- Have the LEDs and bulbs for the following lamps replaced by an authorized Mercedes-Benz Light Truck Center:
  - Additional turn signals in the exterior rear view mirrors
  - Bi-Xenon lamps*
  - Front fog lamps (vehicles with sport package)*
Replacing bulbs for front lamps

Replacing low beam bulbs

1 Low beam halogen or Bi-Xenon* headlamp cover with locking tab

2 Electrical connector

Bi-Xenon* headlamp

Warning!

Do not remove the cover 1 for the Bi-Xenon headlamp. Because of high voltage in xenon lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.

Halogen headlamp

- Switch off the lights.
- Open the hood (› page 202).
- Push down tab at top end of cover 1 and remove.
- Pull electrical connector 2 off.
- Unclip the retainer springs and take out the bulb.
- Insert the new bulb so that the base locates in the recess on the holder.
- Clip the retainer springs.
- Plug the connector 2 onto the bulb.
- Align headlamp cover and click into place.
Practical hints
Replacing bulbs

High beam bulbs

1 High beam headlamp cover with locking tab
- Switch off the lights.
- Open the hood (page 202).
- Twist cover 1 counterclockwise and remove.

2 Electrical connector
- Pull electrical connector 2 off.
- Unclip the retainer springs and take out the bulb.
- Insert the new bulb so that the base locates in the recess on the holder.
- Clip the retainer springs.
- Plug the connector 2 onto the bulb.
- Align headlamp cover and click into place.

Turn signal, parking, standing and side marker lamp bulbs

1 Bulb socket
- Switch off the lights.
- Open the hood (page 202).
- Twist bulb socket 1 counterclockwise and pull out.
- Push bulb into socket, turn counterclockwise and remove.
- Insert new bulb in socket, push in and twist clockwise.
- Reinstall the bulb socket.
Practical hints
Replacing bulbs

Fog lamp bulbs

1 Fog lamp

- Align headlamp cover and click into place.
- Switch off the lights.
- Use a suitable object (e.g. screwdriver) to press on the release lever behind the front panel.
- Front fog lamp 1 releases.
- Remove fog lamp out of bumper.

2 Bulb socket
3 Tabs
- Twist bulb socket 2 counterclockwise to its end stop and pull out.
- Pull bulb out of the bulb socket.
- Insert new bulb in socket.
- Reinstall bulb socket 2.
- Twist bulb socket 2 clockwise to its end stop.
- Reinstall fog lamp into the bumper.
  Make sure that tabs 3 firmly seat into the slots of holder.

Replacing bulbs for rear lamps

Tail lamp assemblies

- Switch off the lights.
- Open liftgate.

1 Screws
2 Tail, parking and standing lamp
   Fog lamp, driver’s side
3 Side marker lamp
4 Turn signal lamp
5 Backup lamp
6 Brake lamp
- Remove screws 1.
- Remove tail lamp.
Practical hints

Replacing bulbs

License plate lamp

1. License plate lamp
2. Screws
   - Switch off the lights.
   - Loosen both screws 1 and remove lamp.
   - Replace the tubular lamp and reinstall lamp.
   - Retighten the screws.

High mounted brake lamp

1. Cover
2. Tab
   - Switch off the lights.
   - Squeeze both sides of cover 1, fold it forward and remove.
   - Press tab 2 on reflector and remove reflector.
   - Gently push bulb into socket, turn counterclockwise and remove.
   - Insert new bulb in socket, push in and turn clockwise.

7 Tabs
- Squeeze tabs 7 together and remove bulb holder.
- Gently push bulb into socket, turn counterclockwise and remove.
- Insert new bulb in socket, push in and turn clockwise.
- Reinstall bulb holder. You should hear it engage.
- Insert the tail lamp in the body, lower edge first. Make sure that it engages.
- Retighten screws with washers on them.

Switch off the lights.

Loosen both screws 1 and remove lamp.

Replace the tubular lamp and reinstall lamp.

Retighten the screws.
Practical hints
Replacing bulbs

Insert reflector from the left so that it engages on the right.
Position tabs of cover in slots and re-install cover until properly seated.

Correct headlamp adjustment is extremely important. To check and readjust a headlamp, follow the steps described:

- Park the vehicle on a level surface 25 feet (7.6 m) from a vertical test screen or wall.
- Switch the headlamps on (> page 102).

If the beam does not show a beam pattern as indicated in the figure left, then follow the steps below:
- Open hood (> page 202).

Adjusting headlamp aim

- Always turn adjustment screws 2 and 3 simultaneously for vertical adjustment until the headlamp is adjusted as shown 1. Turn clockwise for upward movement and counterclock-wise for downward movement.

Graduations:
screw 2: 0.50° pitch
screw 3: 0.67° pitch

The left and right headlamps must be adjusted individually.

If it is not possible to obtain a proper headlamp adjustment, have the system checked at your authorized Mercedes-Benz Light Truck Center.

V Vertical centerline
H Headlamp mounting high, measured from the center

High beam adjustments simultaneously aim the low beam.
Vehicle should have a normal trunk load.
Practical hints
Replacing wiper blades

Warning!
For safety reasons, remove key from steering lock before replacing a wiper blade, otherwise the motor could suddenly turn on and cause injury.

Removal

- Fold the wiper arm forward.
- Turn wiper blade at a right angle to wiper arm.
- Press safety tab down 2.
- Push wiper blade downward 1 and remove.

Installation

- Slide wiper blade into end of wiper arm until it locks in place.
- Never open the hood when the wiper arm is folded forward.
- Do not allow the wiper arms to contact the windshield glass without a wiper blade inserted.
- Make certain that the wiper blades are properly installed. Improperly installed wiper blades may cause windshield damage.
- For your convenience, we recommend that you have this work carried out by an authorized Mercedes-Benz Light Truck Center.
Flat tire

Mounting the spare wheel

### Warning!

The dimensions of the spare wheel are different from those of the road wheels. As a result, the vehicle handling characteristics change when driving with a mounted spare wheel. Adapt your driving style accordingly.

The spare wheel is for temporary use only. When driving with spare wheel mounted, ensure proper tire pressure and do not exceed vehicle speed of 50 mph (80 km/h).

Drive to the nearest Mercedes-Benz Light Truck Center as soon as possible to have the spare wheel replaced with a regular road wheel.

Never operate the vehicle with more than one spare wheel mounted.

### Preparing the vehicle

- Park the vehicle as far as possible from moving traffic on a hard surface.
- Turn on the hazard warning flashers.
- Engage the steering wheel lock in the straight ahead position and set the parking brake.
- Move the selector lever to P.
- Have any passenger exit the vehicle at a safe distance from the roadway.
- Take the spare wheel out of its carrier (page 239).
- ML 55 AMG: (page 240).

### Lifting the vehicle

- Prevent the vehicle from rolling away by blocking wheels with wheel chocks (not included) or other sizable objects.

When changing wheel on a level surface:

- Place one chock in front of and one behind the wheel that is diagonally opposite to the wheel being changed.

When changing wheel on a hill:

- Place chocks on the downhill side blocking both wheels of the other axle.
- Take the two-piece wheel wrench and the jack out of the rear compartment area (page 237). Assemble wheel wrench.
Practical hints

Flat tire

Warning!

The jack is designed exclusively for jacking up the vehicle at the jack take-up brackets built into both sides of the vehicle. To help avoid personal injury, use the jack only to lift the vehicle during a wheel change. Never get beneath the vehicle while it is supported by the jack. Keep hands and feet away from the area under the lifted vehicle. Always firmly set parking brake and block wheels before raising vehicle with jack.

Do not disengage parking brake while the vehicle is raised. Be certain that the jack is always vertical (plumb line) when in use, especially on hills. Always try to use the jack on level surface. Make sure that the jack arm is fully seated in the jack take-up bracket. Always lower the vehicle onto sufficient capacity jackstands before working under the vehicle.

- On wheel to be changed, loosen but do not yet remove the wheel bolts (approximately one full turn with wrench).

The jack take-up brackets are located directly behind the front wheel housings and in front of the rear wheel housings.

- Do not position the jack on the body of the vehicle, as this may cause damage to the vehicle.

1 Take-up bracket
2 Jack

- Place jack on firm ground.

- Position jack 2 under the take-up bracket 1 so that it is always vertical (plumb-line) as seen from the side, even if the vehicle is parked on an incline.

- Jack up the vehicle until the wheel is a maximum of 1.2 in (3 cm) from the ground. Never start engine while vehicle is raised.
Removing the wheel

► Unscrew and remove all wheel bolts.
► Remove the remaining bolts.

⚠️ Do not place wheel bolts in sand or dirt. This could result in damage to the bolt and wheel hub threads.

► Grip the wheel from the sides and remove it.

Mounting the new wheel

► Clean contact surfaces of wheel and wheel hub.
► Install spare wheel on wheel hub.
► Insert wheel bolts and tighten them slightly.
► ML 55 AMG:
  Inflate the spare wheel with collapsible tire using the electric air pump (> page 259) before lowering the vehicle.

⚠️ To avoid paint damage, place wheel flat against hub and hold it there while installing first wheel bolt.

Warning!

ML 55 AMG:
Inflate the spare wheel with collapsible tire only after the wheel is properly mounted.
Inflate the spare wheel tire using the electric air pump (> page 259) before lowering the vehicle.

Warning!

Always replace wheel bolts that are damaged or rusted.

Never apply oil or grease to wheel bolts.

Damaged wheel hub threads should be repaired immediately. Do not continue to drive under these circumstances! Contact an authorized Mercedes-Benz Light Truck Center or call Roadside Assistance.

Incorrect mounting bolts or improperly tightened mounting bolts can cause the wheel to come off. This could cause an accident. Be sure to use the correct mounting bolts.
Practical hints

Flat tire

Warning!

Use only genuine equipment Mercedes-Benz wheel bolts. They are identified by the Mercedes star. Other wheel bolts may come loose.

Do not tighten the wheel bolts when the vehicle is raised. Otherwise the vehicle could tip over.

Lowering the vehicle

▶ Lower vehicle by turning crank counterclockwise until vehicle is resting fully on its own weight.
▶ Remove the jack.

1 - 5 Wheel bolts

▶ Tighten the five wheel bolts evenly, following the diagonal sequence illustrated (1 to 5), until all bolts are tight. Observe a tightening torque of 110 ft lb (150 Nm).

Warning!

Have the tightening torque checked after changing a wheel. The wheels could come loose if they are not tightened to a torque of 110 ft lb (150 Nm).

➤ Store jack and tool kit.

The removed road wheel cannot be stored in the spare wheel carrier or inside the storage compartment in the rear cargo area (ML 55 AMG), but should be transported in the rear cargo compartment wrapped in a protective cover supplied with the vehicle.

The protective cover is located in the rear cargo compartment behind the cover in the right side trim panel.
Inflating the spare wheel with collapsible tire

- Take the electric air pump out of the rear cargo compartment (> page 238).

WARNING!

Observe instructions on air pump label.

1 Union nut
2 Electrical plug
3 Air hose with pressure gauge
4 Vent screw

- Open flap on air pump.
- Pull out electrical plug 2 and air hose with the pressure gauge 3.
- Close the vent screw 4.
- Remove the valve cap from the spare wheel tire valve.
- Screw the union nut 1 with air hose 3 on to the tire valve.
- Insert electrical plug 2 into the electrical outlet in the front passenger foot-well or rear cargo compartment (> page 158).
- Start the engine.
- Switch on the air pump.
- Operate air pump until the pressure gauge displays 61 psi (4.2 bar)

This takes about eight minutes for the collapsible tire. The air hose 3 and the union nut 1 can become hot during inflation. Please exercise appropriate caution.

- Switch off the air pump.
- Turn off the engine.
- If the tire pressure is above 61 psi (4.2 bar), release excess tire pressure using the vent screw 4.

Warning!

Do not operate the electric air pump longer than eight minutes without interruption. Otherwise it may overheat.

You may operate the air pump again after it has cooled off.
**Practical hints**

**Flat tire**

- Detach the electric air pump.
- Reinstall tire valve cap.
- Store the electrical plug and the air hose behind the flap and place the air pump back in the rear cargo compartment.

---

**Warning!**

Follow recommended inflation pressures. Do not overinflate tires. Overinflated tires can result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not underinflate tires. Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overload the tires by exceeding the specified vehicle capacity weight (as indicated by the label on the driver’s door latch post). Overloading the tires can overheat them, possibly causing a blowout.
Battery

The battery is located in the engine compartment on the right-hand side.

**Warning!**

Failure to follow these instructions can result in severe injury or death.

Never lean over batteries while connecting, you might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking etc.

Never loosen or detach battery terminal clamps while the engine is running or the key is in the steering lock. Otherwise the alternator and other electronic components could be severely damaged.

Have the battery checked regularly by an authorized Mercedes-Benz Light Truck Center.

Refer to Service Booklet for maintenance intervals or contact your authorized Mercedes-Benz Light Truck Center for further information.

**Warning!**

Do not place metal objects on the battery as this could result in a short circuit.

Use leak-proof battery only to avoid the risk of acid burns in the event of an accident.

**Warning!**

With a disconnected battery

- you will no longer be able to turn the key in the steering lock
- the selector lever will remain locked in position P

**Disconnecting the battery**

- Turn off all electrical consumers.
- Open the hood (> page 202).
- Disconnect the battery negative lead.
- Remove the cover from the positive terminal.
- Disconnect the battery positive lead.
Practical hints

Battery

Removing the batteries

► Remove the screw securing the battery.
► Remove the battery support and bracket. Take out the battery.

Charging and reinstalling batteries

► Charge battery in accordance with the instructions of the battery charger manufacturer.
► Reinstall the charged battery. Follow the previously described steps in reverse order.

Reconnecting the batteries

► Turn off all electrical consumers.
► Connect the positive lead and fasten its cover.
► Connect the negative lead.

⚠️ Never invert the terminal connections!

The battery, its filler caps and the vent tube must always be securely installed when the vehicle is in operation.

Warning!

Never charge a battery while still installed in the vehicle. Gases may escape during charging and cause explosions that may result in paint damage, corrosion or personal injury.

The following procedures must be carried out following any interruption of battery power (e.g. due to reconnection):

► Set the clock (▶ page 112).
► Set the date in trip computer (▶ page 172).
► Calibrate the compass (▶ page 174).
► Resynchronize the ESP (▶ page 225).
► Resynchronize side windows (▶ page 136).
► Resynchronize sliding/pop-up roof* (▶ page 138).
Batteries contain materials that can harm the environment if disposed of improperly. Large 12-volt storage batteries contain lead. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.
Practical hints

Jump starting

If the battery is discharged, the engine can be started with jumper cables and the battery of another vehicle. Observe the following:

- Jump starting should only be performed when the engine and catalytic converter are cold.
- Do not start the engine if the battery is frozen. Let the battery thaw out first.
- Only jump start from batteries with the same voltage rating (12V). Jump starting with a more powerful battery could damage the vehicle's electrical system, which will not be covered by the Mercedes-Benz Limited Warranty.
- Use only jumper cables with sufficient cross-section, insulated terminal clamps and polarity reversal protection.

Warning!

Failure to follow these directions will cause damage to the electronic components, and can lead to a battery explosion and severe injury or death.

Never lean over batteries while connecting or jump starting, you might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water, and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and very explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking etc.

Attempting to jump start a frozen battery can result in it exploding, causing personal injury.

Read all instructions before proceeding.

Jumper cables with polarity reversal protection are available at any authorized Mercedes-Benz Light Truck Center.
Jump starting may only be performed on the battery installed in the engine compartment.
Avoid repeated and lengthy starting attempts.
Do not attempt to start the engine using a battery quick charge unit.
If engine does not run after several unsuccessful starting attempts, have it checked at the nearest authorized Mercedes-Benz Light Truck Center.
Excessive unburned fuel generated by repeated failed starting attempts may damage the catalytic converter.
Make sure the jumper cables do not have loose or missing insulation.
Make sure the cable clamps do not touch any other metal part while the other end is still attached to a battery.

**Warning!**

Keep flames or sparks away from battery.
Do not smoke.
Observe all safety instructions and precautions when handling automotive batteries (> page 261).

The battery is located in the engine compartment.

- Make sure that the two vehicles do not touch.
- Turn off all electrical consumers.
- Apply parking brake.
- Shift selector lever to position P.

Remove cover 4 from positive terminal on both vehicles.
Connect positive terminals 1 on the batteries with the jumper cables. Start with the charged battery.
Jump starting

- Let the engine of the assisting vehicle run at idle speed.
- Connect the negative terminals of the batteries with the jumper cables. Start with the charged battery.
- Start the engine of the disabled vehicle.

Now you can again turn on the electrical consumers. Do not turn on the lights under any circumstances.

- Remove the jumper cables first from the negative terminals of the batteries and then from the positive terminals.
- Have the battery checked at the nearest authorized Mercedes-Benz Center.

ℹ️
The vehicle cannot be started via tow-start.
**Towing the vehicle**

Mercedes-Benz recommends that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment. This method is preferable to other types of towing.

- Use flatbed or wheel lift/dolly equipment, with key in steering lock turned to position 0.
- Do not tow with sling-type equipment. Towing with sling-type equipment over bumpy roads will damage radiator and supports.
- To prevent damage during transport, do not tie down vehicle by its chassis or suspension parts. Use the towing eyes.
- Switch off the ESP (page 76), tow-away alarm (page 80) and the automatic central locking (page 89).

When circumstances do not permit the recommended towing methods, the vehicle may be towed with all wheels on the ground only so far as necessary to have the vehicle moved to a safe location where the recommended towing methods can be employed.

- When towing the vehicle with all wheels on the ground, the selector lever must be in position N and the key must be in steering lock position 2.
- When towing the vehicle with all wheels on the ground, the vehicle may be towed only for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h).
- If the vehicle is towed with the front axle raised (observe instructions regarding flexible drive shaft), the engine must be shut off (key in steering lock position 1). Otherwise, the 4-ETS may become engaged which may cause loss of towing control.

To be certain to avoid additional damage to the vehicle powertrain, however you should observe the following:
- With damage to the front axle
  - raise front axle
  - remove flexible drive shaft between rear axle and transfer case
- With damage to the rear axle
  - raise rear axle
  - tow vehicle with wheel lift or dolly placed under front wheels
- With damage to the transfer case
  - remove flexible drive shaft to the drive axles

Always install new self-locking nuts when reinstalling flexible drive shaft.
Practical hints

Towing the vehicle

Warning!

If circumstances require towing the vehicle with all wheels on the ground, always tow with a tow bar if:

- the engine will not run
- there is a malfunction in the power supply or in the vehicle’s electrical system

Prior to towing the vehicle with all wheels on the ground, make certain that the key is in steering lock position 2.

If the key is left in steering lock position 0 for an extended period of time, it can no longer be turned in the switch. In this case, the steering is locked. To unlock, remove key from steering lock and reinsert.

Warning!

With the engine not running, there is no power assistance for the braking and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle. Adapt your driving accordingly.

To signal turns while being towed with hazard warning flasher in use, turn key in steering lock to position 2 and activate combination switch for left or right turn signal in usual manner – only the selected turn signal will operate.

Upon canceling the turn signal, the hazard warning flasher will operate again.

The vehicle cannot be started via tow-start.

When towing the vehicle with all wheels on the ground, note the following:

With the automatic central locking activated and the key in steering lock position 2, the vehicle doors lock if the left front wheel is turning at vehicle speeds of approx. 9 mph (15 km/h) or more.

To prevent the vehicle doors from locking, deactivate the automatic central locking (>).

Towing of the vehicle should only be done using the towing eye. Never attach tow cable, tow rope or tow rod to vehicle chassis, frame or suspension parts.
Practical hints

Towing the vehicle

Front towing eye

The front towing eye is located on the passenger side below the bumper.

![Front towing eye](image)

1 Towing eye

Rear towing eye

The rear towing eye is located behind the right side cover in the bumper panel.

![Rear towing eye](image)

ML 320, ML 350, ML 500

1 Cover
2 Towing eye

To remove cover:
- Pry out the cover 1 using a flat blade screwdriver (> page 237).

To reinstall cover:
- Engage cover at bottom and press in top securely.

Warning!

In order to avoid possible serious burns or injury, use extreme caution when removing the cover, because the rear exhaust pipe is extremely hot.

The selector lever will remain locked in position P and the key will not turn in the steering lock if the battery is disconnected or discharged. See notes on the battery (> page 261) or on jump starting (> page 264).

Manual unlocking of transmission selector lever (> page 245)
Practical hints

Towing the vehicle

ML 55 AMG and vehicles with sport package*

1 Cover
2 Towing eye

To remove cover:

► Grip cover at bottom and securely pull out.

To reinstall cover:

► Engage cover and press in securely.

Stranded vehicle

Freeing a stranded vehicle, on which the wheels are dug into sand or mud, should be done with the greatest of care, especially if the vehicle is heavily loaded.

Avoid pulling the vehicle jerkily or diagonally, since it could result in damage to the chassis alignment.

Never try to free a vehicle that is still coupled to a trailer.

If possible, a vehicle equipped with trailer hitch receiver should be pulled backward in its own previously made tracks.
Fuses

Only install fuses that have been tested and approved by Mercedes-Benz and that have the specified amperage rating.

Never attempt to repair or bridge a blown fuse. Have the cause determined and remedied by an authorized Mercedes-Benz Light Truck Center.

The fuse chart is printed on the corresponding fuse box cover. The amperages of the fuses are also indicated there.

Fuse box in engine compartment

The fuse box is located in the engine compartment on the left-hand side.

1 Clamps
2 Fuse box cover

Removing/installing cover

- Release clamps 1
- Lift fuse box cover 2 up.
- Install cover 1 in reverse order.

3 Fuse chart
4 Fuse extractor
5 Spare fuses
**Practical hints**

**Fuses**

**Auxiliary fuse box in front passenger footwell**

The auxiliary fuse box is located in the front passenger compartment.

**Removing/installing cover**

- Turn both locks 1 90° counterclockwise.
- Remove cover 2 in direction of arrow.
- Install cover 2 in reverse order.

Technical data

Spare parts service

The “Technical data” section provides the necessary technical data for your vehicle.

Spare parts service

All authorized Mercedes-Benz Centers maintain a stock of original spare parts required for maintenance and repair work. In addition, strategically located parts distribution centers provide quick and reliable parts service.

More than 300 000 different spare parts for Mercedes-Benz models are available.

Mercedes-Benz original spare parts are subjected to stringent quality inspections. Each part has been specifically developed, manufactured or selected for and adapted to Mercedes-Benz vehicles.

Therefore, Mercedes-Benz original spare parts should be installed.

The use of non-genuine parts and accessories not authorized by Mercedes-Benz could damage the vehicle, which is not covered by the Mercedes-Benz Limited Warranty, or could compromise the vehicle’s durability or safety.
**Warranty coverage**

Your vehicle is covered under the terms of the “warranties” printed in the Service and Warranty Information booklet. Your authorized Mercedes-Benz Light Truck Center will exchange or repair any defective parts originally installed on the vehicle in accordance with the terms of the following warranties:

- New Vehicle Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Maine, Massachusetts, and Vermont Emission Control Systems Warranty

Replacement parts and accessories are covered by the Mercedes-Benz Spare Parts and Accessories warranties, copies of which are available at any Mercedes-Benz Center.

**Loss of Service and Warranty Information Booklet**

Should you lose your Service and Warranty Information booklet, have your authorized Mercedes-Benz Center arrange for a replacement. It will be mailed to you.
Technical data

Identification labels

When ordering spare parts, please specify vehicle identification and engine numbers.

1 Certification label and Paintwork number
2 Engine number (engraved on engine)
3 VIN, visible (lower edge of windshield)
4 Emission control label
   Vacuum line routing for emission control system
5 Information label, California version
Layout of poly-V-belt drive

1 Automatic belt tensioner
2 Power steering pump
3 Air conditioning compressor
4 Crankshaft
5 Coolant pump
6 Generator/Alternator
7 Idler pulley

<sup>1</sup> The quoted data apply only to the standard vehicle. See an authorized Mercedes-Benz Center for the corresponding data of all special bodies and special equipment.
**Rims and tires**

Use only tires and rims which have been specifically developed for your vehicle and tested and approved by Mercedes-Benz. Other tires and rims can have detrimental effects, such as

- poor handling characteristics
- increased noise
- increased fuel consumption

Moreover, tires and rims not approved by Mercedes-Benz may, under load, exhibit dimensional variations and different tire deformation characteristics under load that could cause them to come into contact with the vehicle body or axle parts. Damage to the tires or the vehicle may be the result.

Further information on tires and rims is available at any authorized Mercedes-Benz Light Truck Center. A tire inflation pressure table is located on the fuel filler cap of the vehicle. The tire pressure should be checked regularly and should only be adjusted on cold tires. Follow tire manufacturer’s maintenance recommendation included with vehicle.

Technical data

Fuels, coolants, lubricants etc.

Engine oils

Engine oils are specifically tested for their suitability in our engines. Therefore, use only engine oils recommended by Mercedes-Benz. Information on recommended brands is available in the Factory Approved Service Products pamphlet, or at your authorized Mercedes-Benz Light Truck Center.

Engine oil additives

Do not blend oil additives with engine oil. They may be harmful to the engine operation.

Damage or malfunctions resulting from blending oil additives are not covered by the Mercedes-Benz Limited Warranty.

Air conditioning refrigerant

R-134a (HFC) refrigerant and special PAG lubricating oil is used in the air conditioning system.

Never use R-12 (CFC) or mineral-based lubricating oil, otherwise damage to the system will occur.

Brake fluid

During vehicle operation, the boiling point of the brake fluid is continuously reduced through the absorption of moisture from the atmosphere. Under extremely strenuous operating conditions, this moisture content can lead to the formation of bubbles in the system, thus reducing the system’s efficiency.

Therefore, the brake fluid must be replaced every two years, preferably in the spring.

Only brake fluid approved by Mercedes-Benz is recommended. Your authorized Mercedes-Benz Center will provide you with additional information.

Premium unleaded gasoline

To maintain the engine’s durability and performance, premium unleaded gasoline must be used. If premium unleaded is not available and low octane fuel is used, follow these precautions:

- Have the fuel tank only partially filled with unleaded regular and fill up with premium unleaded as soon as possible.
- Avoid full throttle driving and abrupt acceleration.
- Do not exceed an engine speed of 3000 rpm if the vehicle is loaded with a light load such as two persons and no luggage.
- Do not exceed 2/3 of maximum accelerator pedal position if the vehicle is fully loaded or operating in mountainous terrain.
Fuel requirements

Use only premium unleaded meeting ASTM standard D 439:

- The octane number (posted at the pump) must be 91 min. It is an average of both the Research (R) octane number and the Motor (M) octane number: \((R+M)/2\). This is also known as the ANTI-KNOCK INDEX.

Unleaded gasoline containing oxygenates such as ethanol, IPA, IBA and TBA can be used provided the ratio of any one of these oxygenates to gasoline does not exceed 10%; MTBE not to exceed 15%.

The ratio of methanol to gasoline must not exceed 3% plus additional cosolvents.

Using mixtures of ethanol and methanol is not allowed. Gasohol, which contains 10% ethanol and 90% unleaded gasoline, can be used.

These blends must also meet all other fuel requirements, such as resistance to spark knock, boiling range, vapor pressure etc.

Gasoline additives

A major concern among engine manufacturers is carbon build-up caused by gasoline. Mercedes-Benz recommends only the use of quality gasoline containing additives that prevent the build up of carbon deposits.

After an extended period of using fuels without such additives, carbon deposits can build up especially on the intake valves and in the combustion area, leading to engine performance problems such as:

- Warm-up hesitation
- Unstable idle
- Knocking/pinging
- Misfire
- Power loss

Do not blend other specific fuel additives with fuel. This only results in unnecessary costs and may be harmful to the engine operation.

Damage or malfunctions resulting from poor fuel quality or from blending specific fuel additives are not covered by the Mercedes-Benz Limited Warranty.

Coolants

The engine coolant is a mixture of water and anticorrosion/antifreeze, which provides:

- Corrosion protection
- Freeze protection
- Boiling protection (by increasing the boiling point)

The cooling system was filled at the factory with a coolant providing freeze protection to approximately -35°F (-37°C) and corrosion protection.

If the antifreeze mixture is effective to -22°F (-30°C), the boiling point of the coolant in the pressurized cooling system is reached at approximately 266°F (130°C).
Technical data
Fuels, coolants, lubricants etc.

The coolant solution must be used year round to provide the necessary corrosion protection and increase in boil-over protection. You should have it replaced every 3 years.

To provide important corrosion protection, the solution must be at least 45% anticorrosion/antifreeze (equivalent to freeze protection to approx. -22°F [-30°C]). If you use a solution that is more than 55% anticorrosion/antifreeze (freeze protection to approx. -49°F [-45°C]), the engine temperature will increase due to the lower heat transfer capability of the solution. Therefore, do not use more than this amount of anticorrosion/antifreeze.

If the coolant level is low, water and MB anticorrosion/antifreeze should be used to bring it up to the proper level (have cooling system checked for signs of leakage). Please make sure that the mixture is in accordance with label instructions.

The water in the cooling system must meet minimum requirements, which are usually satisfied by normal drinking water. If you are not sure about the water quality, consult your authorized Mercedes-Benz Light Truck Center.

Anticorrosion/antifreeze

Your vehicle contains a number of aluminum parts. The use of aluminum components in motor vehicle engines necessitates that anticorrosion/antifreeze coolant used in such engines be specifically formulated to protect the aluminum parts. (Failure to use such anticorrosion/antifreeze coolant will result in a significantly shortened service life.)

Therefore, the following product is strongly recommended for use in your vehicle: Mercedes-Benz Anticorrosion/Antifreeze agent.

Before the start of the winter season (or once a year in hot southern regions), you should have the anticorrosion/antifreeze concentration checked. The coolant is also regularly checked each time you bring your vehicle to your authorized Mercedes-Benz Light Truck Center for service.
### Anticorrosion/antifreeze quantity

<table>
<thead>
<tr>
<th>Model</th>
<th>Approx. freeze protection</th>
<th>– 35°F (– 37°C)</th>
<th>– 49°F (– 45°C)</th>
</tr>
</thead>
<tbody>
<tr>

<td>6.4 US qt (6.0 l)</td>
<td>7.0 US qt (6.6 l)</td>
<td></td>
</tr>
</tbody>
</table>
Windshield and headlamp washer system

Both the windshield and headlamp washer systems are supplied from the windshield washer fluid reservoir.

The windshield and headlamp washer fluid reservoir has a capacity of approx. 8.0 US qt. (7.6 l).

- Refill the reservoir with MB Windshield Washer Concentrate and water (or concentrate and commercially available premixed windshield washer solvent / antifreeze, depending on ambient temperatures).

Warning!

Washer solvent / antifreeze is highly flammable. Do not spill washer solvent / antifreeze on hot engine parts, because it may burn. You can be seriously burned.

Windshield and headlamp washer fluid mixing ratio

For temperatures above freezing use MB Windshield Washer Concentrate “S” and water:

- 1 part “S” to 100 parts water (40 ml “S” to 4 l water)

For temperatures below freezing, use MB Windshield Washer Concentrate “S” and commercially available premixed windshield washer solvent / antifreeze:

- 1 part “S” to 100 parts solvent (40 ml “S” to 4 l solvent).
Consumer information

This has been prepared as required of all manufacturers of passenger cars under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.

Uniform tire quality grading

Quality grades can be found, where applicable, on the tire sidewall between tread shoulder and maximum section width. For example:

<table>
<thead>
<tr>
<th>Tread wear</th>
<th>Traction</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>AA</td>
<td>A</td>
</tr>
</tbody>
</table>

All passenger car tires must conform to federal safety requirements in addition to these grades.

Tread wear

The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire rated 150 would wear one and one-half (1 1/2) times as well on the government course as a tire rated 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction

The traction grades, from highest to lowest are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning!

The traction grade assigned to this tire is based on straightahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.
Temperature

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning!

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.
**ABS**
(Antilock Brake System)
Prevents the wheels from locking up during braking so that the vehicle can continue to be steered.

**BabySmart™ airbag deactivation system**
This system detects if a special system compatible child restraint seat is installed on the front passenger seat. The system will automatically deactivate the passenger front airbag when such a seat is properly installed (indicator lamp in the instrument cluster lights up). See your authorized Mercedes-Benz Light Truck Center for availability.

**BabySmart™ compatible child seats**
Special restraint system for children. The sensor system for the passenger seat prevents deployment of the passenger front airbag if a BabySmart™ compatible child seat is installed.

**BAS**
(Brake Assist System)
System for potentially reducing braking distances in emergency braking situations. The system is activated when it senses an emergency based on how fast the brake is applied.

**Bi-Xenon headlamps**
Headlamps which use an electric arc as the light source and produce a more intense light than filament headlamps. Bi-Xenon headlamps produce low beam and high beam.

**CAC**
(Customer Assistance Center)
Mercedes-Benz customer service center, which can help you with any questions about your vehicle and provide assistance in the event of a breakdown.

**CAN system**
(Controller Area Network)
Data bus network serving to control vehicle functions such as door locking or windshield wiping.

**Cockpit**
All instruments, switches, buttons and indicator/warning lamps in the passenger compartment needed for vehicle operation and monitoring.

**Cruise control**
Driving convenience system for automatically maintaining the vehicle speed set by the driver.

**Engine number**
The number set by the manufacturer and placed on the cylinder block to uniquely identify each engine produced.
**Engine oil viscosity**
Measurement for the inner friction (viscosity) of the oil at different temperatures. The higher the temperature an oil can tolerate without becoming thin, or the lower the temperature it can tolerate without becoming viscous, the better the viscosity.

**ESP (Electronic Stability Program)**
Improves vehicle handling and directional stability.

**ETD (Emergency Tensioning Device)**
Device which deploys in certain frontal and rear collisions exceeding the system’s threshold to tighten the seat belts.

**FSS (Flexible Service System)**
Service indicator in the speedometer display that informs the driver when the next vehicle maintenance service is due.

**Gear range**
Number of gears which are available to the automatic transmission for shifting. The automatic gear shifting process can be adapted to specific operating conditions using the selector lever.

**GPS (Global Positioning System)**
Satellite-based system for relaying geographic location information to and from vehicles equipped with special receivers. Employs CD digital maps for navigation.

**Instrument cluster**
The displays and indicator/warning lamps in the driver’s field of vision, including the tachometer, speedometer, engine temperature and fuel gauge.

**Kickdown**
Depressing the accelerator past the point of resistance shifts the transmission down to the lowest possible gear. This very quickly accelerates the vehicle and should not be used for normal acceleration needs.

**Line of fall**
The direct line that an object moves downhill when influenced by the force of gravity alone.

**Lock button**
Button on the door which indicates whether the door is locked or unlocked. Pushing the lock button down on an individual door from inside will lock that door.

**MCS (Modular Control System)**
Information and operating center for vehicle sound and communications systems, including the radio and the radio and navigation system, as well as for other optional equipment (CD changer, telephone, etc.).
Memory function*
Used to store three individual seat, steering wheel and mirror positions.

MON
(Motor Octane Number)
The Motor Octane Number for gasoline as determined by a standardized method. It is an indication of a gasoline's ability to resist undesired detonation (knocking). The average of both the MON (Motor Octane Number) and RON (Research Octane Number) is posted at the pump, also known as ANTI-KNOCK INDEX.

Multifunction display
A display field in the instrument cluster used to present information provided by the control system.

Parktronic*
System which uses visual and acoustic signals to assist the driver during parking maneuvers.

Poly-V-belt drive
Drives engine-components (alternator, AC compressor, etc.) from the engine.

Power train
Collective term designating all components used to generate and transmit motive power to the drive axles, including:
- engine
- clutch/torque converter
- transmission
- transfer case
- drive shaft
- differential
- axle shafts/axles

Remote Vehicle Diagnostics
Transmission of vehicle data and current location to the Mercedes-Benz Customer Assistance Center for subscribers to Tele Aid service.

REST
(Residual engine heat utilization)
Feature that uses the engine heat stored in the coolant to heat the vehicle interior for a short time after the engine has been turned off.

Restraint system
Seat belts, belt tensioner, airbags and child seat restraint systems. As independent systems, their protective functions complement one another.
Technical terms

RON
(Research Octane Number)
The Research Octane Number for gasoline as determined by a standardized method. It is an indication of a gasoline's ability to resist undesired detonation (knocking). The average of both the ->MON (Motor Octane Number) and RON (Research Octane Number) is posted at the pump, also known as ANTI-KNOCK INDEX.

Shift lock
When the vehicle is parked, this lock prevents the transmission selector lever from being moved out of position P without key turned and brake pedal depressed.

SRS
(Supplemental Restraint System)
Seat belts, emergency tensioning device and airbags. Though independent systems, they are closely interfaced to provide effective occupant protection.

Tele Aid System*
(TElematic AId Identification on Demand)
The Tele Aid system consists of three types of response: automatic and manual emergency, roadside assistance and information. Tele Aid is initially activated by completing a subscriber agreement and placing an acquaintance call.
The Tele Aid system is operational providing that the vehicle's battery is charged, properly connected, not damaged and cellular and GPS coverage is available.

Telematics*
A combination of the terms "telecommunications" and "informatics".

Tightening torque
Force times lever arm (e.g. a lug wrench) with which threaded fasteners such as wheel bolts are tightened.

Tire speed rating
Part of tire designation; indicates the speed range for which a tire is approved.

Traction
Force exerted by the vehicle on the road via the tires.

Transfer case
Speed of rotation/torque converter that works together with the ->automatic transmission. In the LOW mode off-road position, the transfer case decreases the output rotational speed of the ->automatic transmission by approximately half. This results in a corresponding increase of torque on the drive axles.
The vehicle then has nearly double the driving force but drives only approximately half as fast.
VIN  
(Vehicle Identification Number)  
The number set by the manufacturer and placed on the body to uniquely identify each vehicle produced.

Voice control system*  
Voice control system for car phones, portable cell phones and audio systems (radio, CD, etc.).

Service and Literature

Your authorized Mercedes-Benz Center has trained technicians and original Mercedes-Benz parts to service your vehicle properly. For expert advice and quality service, see your authorized Mercedes-Benz Light Truck Center.

If your are interested in obtaining service literature for your vehicle, please contact your authorized Mercedes-Benz Light Truck Center.

We consider this the best way for you to obtain accurate information for your vehicle.

For further information you can find us on the Mercedes-Benz web-site www.mbusa.com or www.mercedes-benz.ca.
