Operator's Manual
SL-Class

Mercedes-Benz
SL 500
SL 55 AMG
SL 600
SL 65 AMG
Our company and staff congratulate you on the purchase of your new Mercedes-Benz.

Your selection of our product is a demonstration of your trust in our company name. Furthermore, it exemplifies your desire to own an automobile that will be as easy as possible to operate and provide years of service.

Your Mercedes-Benz represents the efforts of many skilled engineers and craftsmen. To help assure your driving pleasure, and also the safety of you and your passengers, we ask you to make a small investment of time:

- Please read this manual carefully, then return it to your vehicle where it will be handy for your reference.
- Please follow the recommendations contained in this manual. They are designed to acquaint you with the operation of your Mercedes-Benz.
- Please pay attention to the warnings and cautions contained in this manual. They are designed to help improve the safety of the vehicle operator and occupants.

We extend our best wishes for many miles of safe, pleasurable driving.

Product information

Please observe the following in your own best interest:

We recommend using Genuine Mercedes-Benz parts as well as conversion parts and accessories explicitly approved by us for your vehicle model.

We have tested these parts to determine their reliability, safety and special suitability for Mercedes-Benz vehicles.

We are unable to make an assessment for other products and therefore cannot be held responsible for them, even if in individual cases an official approval or authorization by governmental or other agencies should exist. Use of such parts and accessories could adversely affect the safety, performance or reliability of your vehicle. Please do not use them.

Genuine Mercedes-Benz parts as well as conversion parts and accessories approved by us are available at your authorized Mercedes-Benz Center where you will receive comprehensive information, also on permissible technical modifications, and where proper installation will be performed.
This Operator’s Manual contains a great deal of useful information. We urge you to read it carefully and familiarize yourself with the vehicle before driving.

For your own safety and longer service life of the vehicle, we urge you to follow the instructions and warnings contained in this manual. Ignoring them could result in damage to the vehicle or personal injury to you or others. Vehicle damage caused by failure to follow instructions is not covered by the Mercedes-Benz Limited Warranty.

Your vehicle may have some or all of the equipment described in this manual. Therefore, you may find explanations for optional equipment not installed in your vehicle. If you have any questions about the operation of any equipment, your authorized Mercedes-Benz Center will be glad to demonstrate the proper procedures.

We continuously strive to improve our product, and ask for your understanding that we reserve the right to make changes in design and equipment. Therefore, information, illustrations, and descriptions in this Operator’s Manual might differ from your vehicle.

Optional equipment is also described in this manual, including operating instructions wherever necessary. Since they are special-order items, the descriptions and illustrations herein may vary slightly from the actual equipment of your vehicle.

If there are any equipment details that are not shown or described in this Operator’s Manual, your authorized Mercedes-Benz Center will be glad to inform you of correct care and operating procedures.

The Operator’s Manual and Maintenance Booklet are important documents and should be kept with the vehicle.

Service and warranty information

The Service and Warranty Information Booklet contains detailed information about the warranties covering your Mercedes-Benz, including:

- New Car Limited Warranty,
- Emission System Warranty,
- Emission Performance Warranty,
- California, Maine, Massachusetts, and Vermont Emission Control System Warranty (California, Maine, Massachusetts, and Vermont only),
- State Warranty Enforcement Laws (Lemon Laws).
Important notice for California retail buyers and lessees of Mercedes-Benz automobiles

Under California law you may be entitled to a replacement of your vehicle or a refund of the purchase price or lease price, if Mercedes-Benz USA, LLC and/or its authorized repair or service facilities fail to fix one or more substantial defects or malfunctions in the vehicle that are covered by its express warranty after a reasonable number of repair attempts. During the period of 18 months from original delivery of the vehicle or the accumulation of 18,000 miles (approx. 29,000 km) on the odometer of the vehicle, whichever occurs first, a reasonable number of repair attempts is presumed for a retail buyer or lessee if one or more of the following occurs:

1. The same substantial defect or malfunction results in a condition that is likely to cause death or serious bodily injury if the vehicle is driven, that defect or malfunction has been subject to repair two or more times, and you have directly notified Mercedes-Benz USA, LLC in writing of the need for its repair,

2. The same substantial defect or malfunction of a less serious nature than category (1) has been subject to repair four or more times and you have directly notified us in writing of the need for its repair, or

3. The vehicle is out of service by reason of repair of the same or different substantial defects or malfunctions for a cumulative total of more than 30 calendar days.

 Written notification should be sent to us, not a dealer, at Mercedes-Benz USA, LLC, Customer Assistance Center, One Mercedes Drive, Montvale, NJ 07645-0350.
## Maintenance

The Maintenance Booklet describes all the necessary maintenance work which should be performed at regular intervals.

Always have the Maintenance Booklet with you when you take the vehicle to your authorized Mercedes-Benz Center for service. The service advisor will record each service in the booklet for you.

## Roadside Assistance

The Mercedes-Benz Roadside Assistance Program provides factory trained technical help in the event of a breakdown. Calls to the toll-free Roadside Assistance number:

- **1-800-FOR-MERcedes (in the USA)**
- **1-800-387-0100 (in Canada)**

will be answered by Mercedes-Benz Customer Assistance Representatives 24 hours a day, 365 days a year.

For additional information refer to the Mercedes-Benz Roadside Assistance Program brochure in your vehicle literature portfolio.

## Change of address or ownership

If you change your address, be sure to send in the “Change of Address Notice” found in the Service and Warranty Information Booklet, or simply call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERcedes, or Customer Service (in Canada) at 1-800-387-0100. It is in your own interest that we can contact you should the need arise.

If you sell your Mercedes, please leave all literature with the vehicle to make it available to the next operator.

If you bought this vehicle used, be sure to send in the “Notice of Purchase of Used Car” found in the Service and Warranty Information Booklet, or call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERcedes, or Customer Service (in Canada) at 1-800-387-0100.
Operating your vehicle outside the USA or Canada

If you plan to operate your vehicle in foreign countries, please be aware that:

- Service facilities or replacement parts may not be readily available,
- Unleaded gasoline for vehicles with catalytic converters may not be available; the use of leaded fuels will damage the catalysts,
- Gasoline may have a considerably lower octane rating, and improper fuel can cause engine damage.

Certain Mercedes-Benz models are available for delivery in Europe under our European Delivery Program. For details, consult an authorized Mercedes-Benz Center or write to:

In the USA:
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada:
Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9
Introduction

Where to find it

This Operator’s Manual is designed to provide comprehensive support information for you, the vehicle operator. Each section has its own reference color:

At a glance
Here you will find an overview of all the controls that can be operated from the driver’s seat.

Getting started
Here you will find all the information you need for your first drive. You should read this section first if this is your first Mercedes-Benz vehicle or if you are renting or borrowing this vehicle.

Safety and Security
Here you will find descriptions of the safety and security features in your vehicle.

Controls in detail
Here you will find detailed information about the equipment installed on your vehicle. This section expands on the “Getting started” section and also describes technical innovations. If you are already familiar with the basic functions of your vehicle, this section will be of particular interest to you.

Operation
Here you will find all the information you need for the proper operation of your vehicle.

Practical hints
This section provides fast assistance for dealing with problems you may encounter.

Technical data
All important technical data for your vehicle can be found in this section.

Indexes
The glossary provides explanations of the most important technical terms.

The table of contents and the index are designed to help you find information quickly and easily.

The following publications are part of your vehicle documentation:
- this Operator’s Manual
- the Maintenance Booklet

Separate operating instructions will be provided as required depending on the equipment options installed in your vehicle.
Symbols

Trademarks:
- ESP® is a registered trademark of DaimlerChrysler.
- HomeLink® is a registered trademark of Prince, a Johnson Controls Company.
- BabySmart™ is a trademark Siemens Automotive Corp.

The following symbols are found in this Operator’s Manual:
* Optional equipment is identified with an asterisk. Since standard equipment varies between models, the descriptions and illustrations in this manual may differ slightly from the actual equipment of your vehicle.

Warning!

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

! Highlights hazards that may result in damage to your vehicle.

Helpful hints or further information you may find useful.

This symbol points to instructions for you to follow.

A number of these symbols appearing in succession indicates a multiple-step procedure.

Page This symbol tells you where to look for further information on a topic.

This continuation symbol marks an interrupted procedure which will be continued on the next page.

In the glossary of technical terms, this symbol is used to indicate cross-references to term definitions.

Display Words appearing in the multi-function display are printed in the type shown here.
Proper use of the vehicle

Proper use of the vehicle requires that you are familiar with the following information and rules:

- the safety precautions in this manual
- the “Technical data” section in this manual
- traffic rules and regulations
- motor vehicle laws and safety standards

Warning!

Various warning labels are attached to your vehicle. These warning labels are intended to make you and others aware of various risks. You should not remove any of these warning labels unless explicitly instructed to do so by information on the label itself. Removal of any of these labels may cause you and others to be unaware of certain risks which may result in an accident and/or personal injury.

Warning!

Heavy blows against the vehicle underbody or tires/wheels, for example when running over an obstacle, road debris or a pothole, may cause serious damage and impair the operating safety of your vehicle. If you feel a sudden significant vibration or ride disturbance, or you suspect that damage to your vehicle has occurred, you should turn on your hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road.

Inspect the vehicle underbody and tires/wheels for possible damage. If the vehicle appears unsafe, have it towed to the nearest authorized Mercedes-Benz Center or other qualified maintenance or repair facility for further inspection or repairs.

Warning!

Work improperly carried out on electronic components and associated software could cause them to cease functioning. Because the vehicle’s electronic components are interconnected, any modifications made may produce an undesired effect on other systems. Electronic malfunctions could seriously impair the operating safety of your vehicle.

See an authorized Mercedes-Benz Center for repairs or modifications to electronic components.

Other improper work or modifications on the vehicle could also have a negative impact on the operating safety of the vehicle.

Some safety systems only function while the engine is running. You should therefore never turn off the engine while driving.
Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to immediately contact an authorized Mercedes-Benz Center to have the problem diagnosed and corrected if required. If the matter is not handled to your satisfaction, please discuss the problem with the Mercedes-Benz Center management, or if necessary contact us at one of the following addresses:

In the USA:
Customer Assistance Center
Mercedes-Benz USA, LLC
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada:
Customer Relations Department
Mercedes-Benz Canada, Inc.
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9
Introduction

Reporting safety defects

For the USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.

Reporting safety defects

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-888-327-4236 (or 366-0123 in Washington, D.C. area) or write to: NHTSA, U.S. Department of Transportation, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.
Vehicle data recording

Information regarding electronic recording devices

( Including notice pursuant to California Code § 9951 )

Please note that your vehicle is equipped with devices that can record vehicle systems data and, if equipped with the Tele Aid system, may transmit some data in certain accidents.

This information helps, for example, to diagnose vehicle systems after a collision and to continuously improve vehicle safety.

DaimlerChrysler may access the information and share it with others

- for safety research or vehicle diagnosis purposes
- with the consent of the vehicle owner or lessee
- in response to an official request by law enforcement or other government agency
- for use in dispute resolution involving DaimlerChrysler, its affiliates or sales/service organization and/or
- as otherwise required or permitted by law.

Please check the Tele Aid subscription service agreement for details regarding the information that may be recorded or transmitted via that system.

The “Getting started” section provides an overview of the vehicle’s most basic functions. First-time Mercedes-Benz owners should pay special attention to the information given here.

If you are already familiar with the basic functions described here, the “Controls in detail” section will provide you with further information. The corresponding page references are located at the end of each segment.

Unlocking with the SmartKey

Enter the vehicle and insert the SmartKey in the starter switch.

**Warning!**

When leaving the vehicle, always remove the SmartKey from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

Opening a door causes the windows on that side of the car to open slightly. They will return to the up-position when the door is closed.

For more information, see “SmartKey” (▶ page 96).

Unlocking with the SmartKey

1. Lock button
2. Unlock button for trunk lid
3. Unlock button
4. Panic button

Press unlock button on the SmartKey.

All turn signal lamps flash once. The locking knobs in the doors move up. The anti-theft alarm system is disarmed.

The electro-hydraulic brake system is activated.

Warning!

When leaving the vehicle, always remove the SmartKey from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

Opening a door causes the windows on that side of the car to open slightly. They will return to the up-position when the door is closed.

For more information, see “SmartKey” (▶ page 96).
Unlocking with KEYLESS-GO*

With the KEYLESS-GO function, you can lock and unlock the vehicle without using the remote control buttons on the SmartKey and start the engine without inserting the SmartKey in the starter switch. The function of the SmartKey overrules the KEYLESS-GO function.

Warning!

When leaving the vehicle, always take the SmartKey with KEYLESS-GO* with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

- To unlock the vehicle, the SmartKey with KEYLESS-GO must be outside the vehicle, no further than approx. 3 feet (1 meter) away from the door.
  - Grasp an outside door handle.
  - All turn signal lamps flash once. The locking knobs on the doors move up. The anti-theft alarm system is disarmed.
  - The electro-hydraulic brake system is activated.

- If the vehicle has been parked for more than 72 hours, you must pull an outside door handle in order to activate the KEYLESS-GO function.

If the SmartKey with KEYLESS-GO is inside the vehicle, pressing the KEYLESS-GO start/stop button on the gear selector lever corresponds to turning the SmartKey to the various starter switch positions (> page 37).

Opening a door causes the windows on that side of the car to open slightly. They will return to the up-position when the door is closed.

For more information, see “SmartKey with KEYLESS-GO*” (> page 100).
Getting started
Unlocking

Starter switch positions

**Warning!**
When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

### SmartKey

- **0** For removing SmartKey
- **1** Power supply for some electrical consumers, such as seat adjustment
- **2** Ignition (power supply for all electrical consumers) and driving position
- **3** Starting position

When you switch on the ignition, the indicator and warning lamps (except high beam headlamp indicator lamp and turn signal indicator lamps unless activated) in the instrument cluster come on. The indicator and warning lamps (except high beam headlamp indicator lamp and turn signal indicator lamps if activated) should go out when the engine is running. This indicates that the respective systems are operational.

- The SmartKey can only be removed from the starter switch with the gear selector lever in position P.

If a lamp in the instrument cluster remains on after starting the engine or comes on while driving, refer to “Lamps in the instrument cluster” (▶ page 332).

### Starter switch

- **0** For removing SmartKey
- **1** Power supply for some electrical consumers, such as seat adjustment
- **2** Ignition (power supply for all electrical consumers) and driving position
- **3** Starting position

All lamps (except high beam headlamp indicator lamp and turn signal indicator lamps unless activated) in the instrument cluster come on. If a lamp in the instrument cluster fails to come on when the ignition is switched on, have it checked and replaced if necessary.
Unlocking SmartKey with KEYLESS-GO*

You can also use the SmartKey with KEYLESS-GO like a normal SmartKey.

Position 0

Before you press the KEYLESS-GO start/stop button, the vehicle’s on-board electronics have the status 0 (as with SmartKey removed).

Position 1

Press the KEYLESS-GO start/stop button once.

This supplies power for some electrical consumers, such as seat adjustment.

![KEYLESS-GO start/stop button](image)

1 USA only
2 Canada only

The SmartKey with KEYLESS-GO must be located in the vehicle.

- Make sure the gear selector lever is set to P.
- Do not depress the brake pedal.

If the SmartKey cannot be turned in the starter switch, the starter battery may not be sufficiently charged.

- Check the starter battery and charge it if necessary (> page 413).
- Get a jump start (> page 419).

To prevent accelerated battery discharge or a completely discharged battery, always remove the SmartKey from the starter switch when the engine is not in operation.

If the SmartKey cannot be turned in the starter switch, the starter battery may not be sufficiently charged.

- Check the starter battery and charge it if necessary (> page 413).
- Get a jump start (> page 419).

To prevent accelerated battery discharge or a completely discharged battery, always remove the SmartKey from the starter switch when the engine is not in operation.

If the SmartKey cannot be turned in the starter switch, the starter battery may not be sufficiently charged.

- Check the starter battery and charge it if necessary (> page 413).
- Get a jump start (> page 419).

To prevent accelerated battery discharge or a completely discharged battery, always remove the SmartKey from the starter switch when the engine is not in operation.
Getting started

Unlocking

**Ignition (or Position 2)**

▶ Press the KEYLESS-GO start/stop button twice.

This supplies power for all electrical consumers. All lamps (except high beam headlamp indicator lamp and turn signal indicator lamps unless activated) in the instrument cluster come on.

ℹ️ If you now press the KEYLESS-GO start/stop button once, the power supply is again switched off.

ℹ️ When you switch on the ignition, the indicator and warning lamps (except high beam headlamp indicator lamp and turn signal indicator lamps unless activated) in the instrument cluster come on. The indicator and warning lamps (except high beam headlamp indicator lamp and turn signal indicator lamps if activated) should go out when the engine is running. This indicates that the respective systems are operational.

For more information, see “SmartKey with KEYLESS-GO*” (> page 100).

For information on starting the engine using the KEYLESS-GO start/stop button, see “Starting with KEYLESS-GO*” (> page 50).
### Adjusting

**Warning!**

All seat, head restraint, steering wheel, and rear view mirror adjustments, as well as fastening of seat belts, must be done before the vehicle is put into motion.

**Warning!**

Do not adjust the driver’s seat while driving. Adjusting the seat while driving could cause the driver to lose control of the vehicle.

Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck. That could cause serious or fatal injuries. The seat backrest and seat belts provide the best restraint when the wearer is in a nearly upright position and belts are properly positioned on the body. Your seat must be adjusted so that you can correctly fasten your seat belt (page 46).

Never place hands under the seat or near any moving parts while a seat is being adjusted.

---

**Warning!**

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle.

Even with the SmartKey or the SmartKey with KEYLESS-GO* removed from the starter switch or the SmartKey with KEYLESS-GO* removed from the vehicle, the power seats can be operated when the respective door is open. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.
Getting started

Adjusting

Seat adjustment

The seat adjustment switch is located in the door.

1. Head restraint height
2. Seat height
3. Seat cushion tilt
4. Seat cushion depth
5. Seat fore and aft adjustment
6. Backrest tilt

- Switch on the ignition (page 36).
- Open the respective door.

Warning!

Children 12 years old and under must never ride in this vehicle, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.

Infants and small children must be seated in an appropriate infant or child restraint system, which is properly secured with the vehicle’s seat belt, fully in accordance with the child seat manufacturer’s instructions.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.

Seat fore and aft adjustment

- Press the switch forward or backward in direction of arrow 5.

Adjust seat to a comfortable seating position that still allows you to reach the accelerator / brake pedal safely. The position should be as far to the rear as possible, consistent with ability to properly operate controls.

- Switch on the ignition (page 36).
- Open the respective door.

The memory function (page 121) lets you store the settings for the seat position together with the settings for the steering wheel and the exterior rear view mirrors.

When moving the seats, make sure there are no items in the footwell or behind the seats. Otherwise you could damage the seats.
Getting started

Adjusting

Seat height

▶ Press the switch up or down in direction of arrow ②.

Seat cushion tilt

▶ Press the switch up or down in direction of arrow ③ until your upper legs are lightly supported.

Seat cushion depth

▶ Press the switch forward or backward in direction of arrow ④ until your legs are supported comfortably.

Seat backrest tilt

▶ Press the switch forward or backward in direction of arrow ⑥ until your arms are slightly angled when holding the steering wheel.

Head restraint height

▶ Press the switch up or down in direction of arrow ①.

Head restraint tilt

Manually adjust the angle of the head restraint.

▶ Push or pull on the lower edge of the head restraint cushion.

For more information on seats, see “Seats” (page 115).

Warning!

For your protection, drive only with properly positioned head restraints. Adjust head restraint so that the center of the head restraint supports the back of the head at eye level. This will reduce the potential for injury to the head and neck in the event of an accident or similar situation. Do not drive the vehicle without the seat head restraints. Head restraints are intended to help reduce injuries during an accident.

When moving the seat fore or aft after adjusting the head restraints, the head restraints may readjust automatically.
Getting started

Adjusting

Steering wheel

**Warning!**

Do not adjust the steering wheel while driving. Adjusting the steering wheel while driving could cause the driver to lose control of the vehicle.

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle.

Even with the SmartKey or the SmartKey with KEYLESS-GO* removed from the starter switch or the SmartKey with KEYLESS-GO* removed from the vehicle, the steering wheel adjustment feature can be operated when the driver’s door is open. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

Steering wheel adjustment

The stalk for steering wheel adjustment is located on the lower left of the steering column.

1 Adjusting steering column, in or out
2 Adjusting steering column, up or down

- Switch on the ignition (p. 36).
- Open the driver’s door.

**Adjusting steering column in or out**

- Move stalk forward or back in direction of arrow 1 until a comfortable steering wheel position is reached with your arms slightly bent at the elbow.

**Adjusting steering column up or down**

- Move stalk up or down in direction of arrow 2.

Make sure your legs can move freely and all the displays (including malfunction and indicator lamps) on the instrument cluster are clearly visible.

The memory function (p. 121) lets you store the settings for the steering wheel together with the settings for the seat position and the exterior rear view mirrors.

For more information, see “Heated steering wheel**” (p. 235).
Easy-entry/exit feature

This feature allows for easier entry into and exit from the vehicle. When entering and exiting the vehicle, the steering wheel is in its uppermost position.

The easy-entry/exit feature can be activated or deactivated in the Convenience submenu of the control system (> page 156).

### Warning!

You must make sure no one can become trapped or injured by the moving steering wheel when the easy-entry/exit feature is activated.

To stop steering wheel adjustment, do one of the following:

- Move steering column stalk (> page 42).
- Press one of the memory position buttons* or the memory button M* (> page 121).

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could open the driver’s door and unintentionally activate the easy-entry/exit feature, which could result in an accident and/or serious personal injury.

With the easy-entry/exit feature activated, the steering wheel will return to its last set position when you:

- close the driver’s door with the ignition switched on
- or
- insert the SmartKey into the starter switch or press the KEYLESS-GO* start/stop button (> page 37) once with the driver’s door closed

The last set steering wheel position is stored when

- the ignition is switched off (> page 36)
- the position is stored in memory (> page 121)

With the easy-entry/exit feature activated, the steering wheel tilts upwards when you

- remove the SmartKey from the starter switch, or
- open the driver’s door with the SmartKey in starter switch position 0 or 1 or the KEYLESS-GO* start/stop button in position 1 (> page 37)
Getting started

Adjusting

Adjust the interior and exterior rear view mirrors before driving so that you have a good view of the road and traffic conditions.

**Warning!**

Let the system complete the adjustment procedure before setting the vehicle in motion. All steering wheel adjustment must be completed before setting the vehicle in motion. Driving off with the steering wheel still adjusting could cause the driver to lose control of the vehicle.

**Exterior rear view mirrors**

Electrolyte drops coming into contact with the vehicle paint finish can only be completely removed while in their liquid state and by applying plenty of water.

**Warning!**

Exercise care when using the passenger side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your interior rear view mirror or glance over your shoulder before changing lanes.

**Interior rear view mirror**

- Manually adjust the interior rear view mirror.

For more information, see “Rear view mirrors” (> page 177).

**Warning!**

In case of an accident, liquid electrolyte may escape the mirror housing if the mirror glass breaks.

Electrolyte has an irritating effect. Do not allow the liquid to come into contact with eyes, skin, clothing, or respiratory system. In case it does, immediately flush affected area with water, and seek medical help if necessary.

Electrolyte drops coming into contact with the vehicle paint finish can only be completely removed while in their liquid state and by applying plenty of water.

**Warning!**

Let the system complete the adjustment procedure before setting the vehicle in motion. All steering wheel adjustment must be completed before setting the vehicle in motion. Driving off with the steering wheel still adjusting could cause the driver to lose control of the vehicle.
Getting started

Adjusting

The buttons are located on the lower part of the center console.

1. Driver’s side exterior rear view mirror button
2. Passenger-side exterior rear view mirror button
3. Adjustment button

- Switch on the ignition (page 36).
- Press button 1 for the left mirror or button 2 for the right mirror.
- Push adjustment button 3 up, down, left, or right according to the desired setting.

If an exterior rear view mirror was forcibly pushed forward (hit from the rear) or forcibly pushed rearward (hit from the front), reposition it by applying firm pressure until it snaps into place. The mirror housing is then properly positioned and you can adjust the mirror in the usual manner.

The memory function (page 121) lets you store the setting for the exterior rear view mirrors together with the settings for the steering wheel and the seat position.

For more information, see “Good visibility” (page 177).
Getting started

Driving

**Warning!**

Do not lay any objects in the driver’s footwell. Be careful that floor mats or carpets in the driver’s footwell have sufficient clearance for the pedals.

During sudden driving or braking maneuvers, the objects could get caught between the pedals. You could then no longer brake or accelerate.

**Warning!**

Always fasten your seat belt before driving off. Always make sure your passengers are properly restrained, even pregnant women.

Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident. You and your passenger should always wear seat belts.

If you are ever in an accident, your injuries can be considerably more severe without your seat belt properly buckled. Without your seat belt buckled, you are much more likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed.

**Warning!**

In the same crash, the possibility of injury or death is lessened if you are wearing your seat belt. The airbags can only provide the protection they were designed to afford if the occupants are using their seat belts (> page 64).

**Warning!**

Children 12 years old and under must never ride in this vehicle, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.
Infants and small children must be seated in an appropriate BabySmart™ compatible infant or child restraint system, which is properly secured with the vehicle’s seat belt, fully in accordance with the child seat manufacturer’s instructions.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.

**Warning!**

Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The seat backrest and seat belt provide the best restraint when the wearer is in a nearly upright position and the belt is properly positioned on the body.

**Warning!**

Never let more people ride in the vehicle than there are seat belts available. Be sure everyone riding in the vehicle is correctly restrained with a separate seat belt. Never use a seat belt for more than one person at a time.

**Warning!**

Read and observe the additional warning notices in the “Safety and Security” section (> page 71).
Getting started

Driving

- With a smooth motion, pull the belt from seat belt housing ①.
- Place the shoulder portion of the belt across the top of your shoulder and the lap portion across your hips.
- Push latch plate ② into buckle ③ until it clicks.
- If necessary, tighten the lap portion to a snug fit by pulling shoulder portion up.

Proper use of seat belts
- Do not twist the belt when fastening.
- Adjust seat belt so that the shoulder portion is located as close as possible to the middle of the shoulder (it should not touch the neck). Never pass the shoulder portion of the belt under your arm.
- Position the lap belt as low as possible on your hips (over hip joint) and not across the abdomen.

- Place the seat backrest in a nearly upright position.
- Never use a seat belt for more than one person at a time.
- Do not fasten a seat belt around a person and another object at the same time.
- Check your seat belt during travel to ensure that it is properly positioned.
- Make sure the seat belt is always fitted snugly. Take special care of this when wearing loose clothing.

Warning!

Do not pass belts over sharp edges. They could tear.
Do not allow the belt to get caught in the door or in the seat adjustment mechanism. This could damage the belt.
Never attempt to make modifications to seat belts. This could impair the effectiveness of the belts.
Do not bleach or dye seat belts as this may severely weaken them. In a crash, they may not be able to provide adequate protection.
Damaged seat belts or belts that were highly stressed in an accident must be replaced.
Contact an authorized Mercedes-Benz Center.
Getting started  
Driving

Starting the engine

**Warning!**

Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide, and inhaling it can cause unconsciousness and possible death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive with at least one window fully open.

**Gearshift pattern for automatic transmission**

- P Park position with gear selector lever lock
- R Reverse gear
- N Neutral
- D Drive position

For more information, see “Automatic transmission” (> page 162).

**Starting with the SmartKey**

- Make sure the gear selector lever is set to P.
- Do not depress the accelerator.
- Turn the SmartKey in the starter switch to position 3 and hold until the engine starts (> page 36).

You can also use the “touch-start” function. Turn the SmartKey to position 3 and release it again immediately. The engine then starts automatically.

For information on turning off the engine with the SmartKey, see “Turning off with the SmartKey” (> page 60).
Getting started

Driving

Starting with KEYLESS-GO*

You can start your vehicle without the SmartKey in the starter switch using the KEYLESS-GO start/stop button on the gear selector lever.

KEYLESS-GO start/stop button
1 USA only
2 Canada only

- Make sure the gear selector lever is set to P.

- Depress the brake pedal during the starting procedure. Do not depress accelerator.
- The selector lever lock is released.
- Press KEYLESS-GO start/stop button 1 once.
- The engine starts if the SmartKey with KEYLESS-GO is in the vehicle.

For information on turning off the engine with KEYLESS-GO, see “Turning off with KEYLESS-GO*” (page 60).

Starting difficulties

If the engine does not start as described, carry out the following steps:

- If you are starting the engine with the SmartKey: Turn SmartKey in starter switch to position 0 and repeat starting procedure.
- If you are starting the engine with KEYLESS-GO*: Close any doors that may be open to allow for better detection of the SmartKey with KEYLESS-GO.
- Or:
  - Start the engine with the SmartKey as radio signals from another source may be interfering with the SmartKey with KEYLESS-GO*.
  - Repeat the starting procedure (page 49). Remember that extended starting attempts can drain the battery.
  - Get a jump start (page 419).

If the engine does not start after several starting attempts, there could be a malfunction in the engine electronics or in the fuel supply system.

- Notify an authorized Mercedes-Benz Center.
Getting started
Driving

Parking brake

1 Parking brake pedal
2 Release handle

Warning!

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could release the parking brake, which could result in an accident and/or serious injury.

Driving off

- Depress the brake pedal.
- Place the gear selector lever in position D or R.

Warning!

It is dangerous to shift the gear selector lever out of P or N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

- Release the parking brake by pulling on release handle 2.

The indicator lamp BRAKE (USA only) or (Canada only) in the instrument cluster goes out.
Getting started

Driving

Warning!

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

In order to avoid damage to the transmission:

- Wait for the gear selection process to complete before setting the vehicle in motion.
- Place the gear selector lever in position D or R only when the vehicle is stopped.

- Release the brake pedal.
- Carefully depress the accelerator pedal.

Once the vehicle is in motion, the automatic central locking system engages and the locking knobs drop down.

If you hear a warning signal and the message Release parking brake appears in the multifunction display when driving off, you have forgotten to release the parking brake.

Release the parking brake.

After a cold start, the transmission engages at a higher revolution. This allows the catalytic converter to reach its operating temperature earlier.

Simultaneously depressing the accelerator pedal and applying the brake reduces engine performance and causes premature brake and drivetrain wear.

You can open a locked door from the inside. Open door only when conditions are safe to do so.

You can deactivate the automatic locking using the control system (> page 155).

Do not run cold engine at high engine speed. Running a cold engine at high engine speed may shorten the service life of the engine.
Switching on headlamps

Low beam headlamps
The exterior lamp switch is located on the dashboard to the left of the steering wheel.

Exterior lamp switch
1 Off
2 Low beam headlamps on

Turn the exterior lamp switch to position 2.
The low beam headlamps come on.

High beam
The combination switch is located on the left of the steering column.

Combination switch
1 High beam
2 High beam flasher

Push the combination switch in direction of arrow 1.
The high beam headlamps come on.
The high beam headlamp indicator in the instrument cluster comes on (> page 27).

For more information, see “Lighting” (> page 123).

Turn signals
The combination switch is located on the left of the steering column.

Combination switch
1 Turn signals, right
2 Turn signals, left

Press the combination switch in direction of arrow 1 or 2.
The corresponding turn signal indicator lamp or in the instrument cluster flashes (> page 25).
The combination switch resets automatically after major steering wheel movements.

1. To signal minor directional changes such as changing lanes, press combination switch only to point of resistance and release. The corresponding turn signals will flash three times.

**Windshield wipers**

The combination switch is located on the left of the steering column.

<table>
<thead>
<tr>
<th>Combination switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Single wipe</td>
</tr>
<tr>
<td>Wiping with windshield washer fluid</td>
</tr>
<tr>
<td>2 Switching on windshield wipers</td>
</tr>
<tr>
<td>► Switch on the ignition (► page 36).</td>
</tr>
</tbody>
</table>

**Switching on windshield wipers**

- Turn the combination switch to the desired position depending on the intensity of the rain.

  - 0 Windshield wipers off
  - I Intermittent wiping
  - II Normal wiper speed
  - III Fast wiper speed

**Warning**

Do not operate the windshield wipers when the windshield is dry. Dust that accumulates on a windshield might scratch the glass and/or damage the wiper blades when wiping occurs on a dry windshield. If it is necessary to operate the windshield wipers in dry weather conditions, always operate the windshield wipers with windshield washer fluid (► page 55).
Getting started
Driving

Intermittent wiping

Do not leave windshield wipers in intermittent setting when vehicle is taken to an automatic car wash or during windshield cleaning. Windshield wipers will operate in the presence of water sprayed on the windshield, and windshield wipers may be damaged as a result.

The intermittent wiping interval is dependent on the wetness of the windshield.

- Turn the combination switch to position I.

After the initial wipe, pauses between wipes are controlled by the rain sensor.

Single wipe

- Press the combination switch briefly in direction of arrow ① to the resistance point.

The windshield wipers wipe one time without washer fluid.

Wiping with windshield washer fluid

- Push the combination switch in direction of arrow ① past the resistance point.

The windshield wipers operate with washer fluid.

To prevent smears on the windshield, wipe with windshield washer fluid every now and then even when it is raining.

For information on filling up the washer reservoir, see “Windshield washer system and headlamp cleaning system” (＞ page 280).
Getting started

Driving

Problems while driving

The engine runs erratically and misfires

- An ignition cable may be damaged.
- The engine electronics may not be operating properly.
- Unburned gasoline may have entered the catalytic converter and damaged it.
  - Give very little gas.
  - Have the problem repaired by an authorized Mercedes-Benz Center as soon as possible.

If anything blocks the windshield wipers (leaves, snow, etc.), switch them off immediately.

- For safety reasons, stop the vehicle in a safe location and
  - remove the SmartKey from the starter switch
  or
  - turn off the engine by pressing the KEYLESS-GO* start/stop button and open the driver’s door (with the driver’s door open, the starter switch is in position 0, same as with the SmartKey removed from the starter switch)

before attempting to remove any blockage.

• Remove blockage.
• Turn the windshield wipers on again.
If the windshield wipers fail to function at all in switch position I,
• set the combination switch to the next higher wiper speed
• have the windshield wipers checked at the nearest authorized Mercedes-Benz Center
The coolant temperature gauge is above 248°F (120°C)

The coolant is too hot and is no longer cooling the engine.

- Stop the vehicle as soon as possible in a safe location and turn off the engine. Allow engine and coolant to cool.
- Check the coolant level and add coolant if necessary (▶ page 278).

In case of accident

If the vehicle is leaking gasoline:

- Do not start the engine under any circumstances.
- Notify local fire and/or police authorities.

If the extent of the damage cannot be determined:

- Notify an authorized Mercedes-Benz Center.

If no damage can be determined on the

- major assemblies
- fuel system
- engine mount:

- Start the engine in the usual manner.
You have now completed your first drive. You have properly stopped and parked your vehicle. End your drive as follows.

**Warning!**

With the engine not running, there is no power assistance for the brake and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle.

- Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

To reduce the risk of personal injury as a result of vehicle movement, before turning off the engine and leaving the vehicle always:

- Keep right foot on brake pedal.
- Firmly depress parking brake pedal.
- Move the gear selector lever to position P.
- Slowly release brake pedal.

- When parked on an incline, turn front wheels towards the road curb.
- Turn the SmartKey in the starter switch to position 0 and remove the SmartKey from the starter switch, or press the start/stop button (vehicles with KEYLESS-GO*).
- Take the SmartKey or the SmartKey with KEYLESS-GO* and lock vehicle when leaving.
Parking brake

1 Parking brake pedal
2 Release handle

- Step firmly on parking brake pedal 1.

When the engine is running, the indicator lamp (USA only) or (Canada only) in the instrument cluster will be illuminated.

Warning!

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could release the parking brake and/or move the gear selector lever from position P, either of which could result in an accident and/or serious injury.

Warning!

Getting out of your vehicle with the gear selector lever not fully engaged in position P is dangerous. Also, when parked on an incline, position P alone may not prevent your vehicle from moving, possibly hitting people or objects.

Always set the parking brake in addition to shifting to position P (> page 164).

When parked on an incline, also turn front wheels towards the road curb.

Switching off headlamps

- Turn the exterior lamp switch to position 0 (> page 53).

For more information, see “Exterior lamp switch” (> page 123).
Parking and locking

Turning off the engine

► Place the gear selector lever in position P.
► Apply the parking brake (> page 59).

💡 Always set the parking brake in addition to shifting to position P.
On slopes, turn the front wheels towards the road curb.

Turning off with the SmartKey

► Turn the SmartKey in the starter switch to position 0 (> page 36).
► Remove the SmartKey from the starter switch.
The immobilizer is activated.

💡 The SmartKey can only be removed from the starter switch with the gear selector lever in position P.

💡 With the SmartKey removed and the driver’s door open, a warning sounds if the vehicle’s exterior lamps are not switched off.

Turning off with KEYLESS-GO*

► Place the gear selector lever in P.
► Press the KEYLESS-GO start/stop button (> page 37) to turn off the engine.
With the driver’s door closed, the starter switch is now in position 1. With the driver’s door opened, the starter switch is set to position 0, same as SmartKey removed from starter switch (> page 36).
Releasing seat belts

Press the seat belt release button (> page 47).

Allow the retractor to completely rewind the seat belt by guiding the latch plate.

Make sure the seat belt retracts fully so that the seat belt and/or latch plate cannot get caught or pinched in the door or in the seat mechanism. This can damage the seat belt and impair the effectiveness of the seat belt, and/or cause damage to the door and/or door trim panel. Such damage is not covered by the Mercedes-Benz Limited Warranty.

Damaged seat belts must be replaced. Contact an authorized Mercedes-Benz Light Truck Center.

Locking

Warning!

To prevent possible personal injury, always keep hands and fingers away from the door openings when closing the doors. Be especially careful when small children are around.

Before closing doors, make sure that there is no possibility of someone getting caught in a door during closing.

Warning!

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

If you hear a warning signal you have either

- forgotten to turn off the lights before opening the driver’s door
  In addition the message Turn off lamps appears in the multifunction display.
  or
- tried to turn off the engine while the gear selector lever is not in P
  In addition the message Gear selector lever to P appears in the multifunction display.

Turn off the lights or place the gear selector lever in P.
Exit the vehicle and close the doors and the trunk.

Opening a door causes the windows on that side of the car to open slightly. They will return to the up position when the door is closed.

**Locking with the SmartKey**

- Press the lock button [on the SmartKey](page 34).
  
  With the trunk and all doors closed, all turn signal lamps flash three times. The locking knobs on the doors move down. The anti-theft alarm system is armed.

  For more information, see “Locking and unlocking” [page 96].

**Locking with KEYLESS-GO**

- Press lock button 1 on a door handle or the lock button on the trunk lid ([page 105]).
  
  With the trunk and all doors closed, the turn signal lamps flash three times. The locking knobs on the doors move down. The anti-theft alarm system is armed.

  For more information, see “Locking and unlocking” ([page 96]).
Safety and Security

- Occupant safety
- Panic alarm
- Driving safety systems
- Anti-theft systems
In this section you will learn the most important facts about the restraint systems of the vehicle.

The restraint systems are:
- Seat belts
- Emergency tensioning device
- Airbags
- Child seats
- Child seat recognition

As independent systems, their protective effects work in conjunction with each other.

The **SRS** indicator lamp in the instrument cluster comes on:
- for about 4 seconds when you turn the SmartKey in the starter switch to position 1 or press the KEYLESS-GO* start/stop button once. It then goes out briefly, comes on again and remains lit until you start the engine, turn the SmartKey to position 2 or press the KEYLESS-GO start/stop button once more (page 37).
- for about 4 seconds when you start the engine by turning the SmartKey in the starter switch or by pressing the KEYLESS-GO* start/stop button once with the brake pedal depressed (page 49).

The **SRS** indicator lamp goes out shortly after you start the engine. This shows that the restraint systems are operational.

A malfunction in the system has been detected if the **SRS** indicator lamp:
- fails to go out after approximately 4 seconds
- does not come on at all
- comes on after the engine was started or while driving

For more information, see the "Practical hints" section (page 341).

For information on infants and children traveling with you in the vehicle and restraint systems for infants and children, see "Children in the vehicle" (page 76).
Safety and Security

Occupant safety

Airbags

Warning!
In the event that the indicator lamp comes on during driving or does not come on at all, the SRS self-check has detected a malfunction. For your safety, we strongly recommend that you visit an authorized Mercedes-Benz Center immediately to have the system checked; otherwise the SRS may not be activated when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in injury.

In addition, improper work on the SRS creates a risk of rendering the SRS inoperative or causing unintended airbag deployment. Work on the SRS must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.

Warning!
Airbags are designed to reduce the potential of injury and fatality in certain frontal impacts (front airbags, driver-side knee bag) or side impacts (head-thorax airbags). However, no system available today can totally eliminate injuries and fatalities.

The activation of the airbags temporarily releases a small amount of dust from the airbags. This dust, however, is neither injurious to your health, nor does it indicate a fire in the vehicle. The dust might cause some temporary breathing difficulty for people with asthma or other breathing trouble. To avoid this, you may wish to get out of the vehicle as soon as it is safe to do so. If you have any breathing difficulty but cannot get out of the vehicle after the airbag inflates, then get fresh air by opening a window or door.

Warning!
To reduce the risk of injury when the front airbags inflate, it is very important for the driver and passenger to always be in a properly seated position and to wear your seat belts.

For maximum protection in the event of a collision always be in normal seated position with your back against the backrest. Fasten your seat belt and ensure that it is properly positioned on your body (page 46).

Since the airbag inflates with considerable speed and force, a proper seating and hands on steering wheel position will help to keep you at a safe distance from the airbag. Occupants who are unbelted, out of position or too close to the airbag can be seriously injured or killed by an airbag as it inflates with great force in the blink of an eye:

- Sit properly belted in a nearly upright position with your back against the seat backrest.
### Occupant safety

- Adjust the driver seat as far as possible rearward, still permitting proper operation of vehicle controls. The distance from the center of the driver’s breast-bone to the center of the airbag cover on the steering wheel must be at least 10 inches (25 cm) or more. You should be able to accomplish this by a combination of adjustments to the seat and steering wheel. If you have any problems, please see an authorized Mercedes-Benz Center.

- Do not lean with your head or chest close to the steering wheel or dashboard.

- Keep hands on the outside of steering wheel rim. Placing hands and arms inside the rim can increase the risk and potential severity of hand/arm injury when driver front airbag inflates.

- Adjust the passenger seat as far as possible rearward from the dashboard when the seat is occupied.

- Occupants, especially children, should never lean their heads in the area of the door where the head-thorax airbag inflates. This could result in serious injuries or death should the airbag be triggered. Always sit nearly upright, properly use the seat belts and appropriate size infant or child restraint system.

- Children 12 years old and under must never ride in this vehicle, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.

Failure to follow these instructions can result in severe injuries to you or other occupants.

If you sell your vehicle, it is important that you make the buyer aware of this safety information. Be sure to give the buyer this Operator’s Manual.
Safety and Security

Occupant safety

Warning!
Should you choose to place a child 12 years old or under in the passenger seat of your vehicle, you must properly use a BabySmart™ child restraint which will turn off the passenger front airbag (page 76). BabySmart™ will not, however, turn off any side impact airbag.

It should be noted, however, that there is a possibility for a head-thorax airbag related injury if occupants, especially children, are not properly seated or restrained when next to a head-thorax airbag which needs to deploy rapidly in a side impact in order to do its job.

To help avoid the possibility of injury, please follow these guidelines:

1. Occupants, especially children, should never place their bodies or lean their heads in the area of the door where the head-thorax airbag inflates. This could result in serious injuries or death should the head-thorax airbag be activated.

2. Always sit nearly upright, properly use the seat belts and use an appropriately sized infant or child restraint system for all children 12 years old or under.

3. Always wear seat belts properly.

If you believe that, even with the use of these guidelines, it would be safer for your passenger seat occupants to have the passenger side head-thorax airbag deactivated, then deactivation can be accomplished upon your written election to do so at an authorized Mercedes-Benz Center at an additional cost. Please contact your local authorized Mercedes-Benz Center or call our Customer Assistance Center at 1-800-FOR-MERcedes (1-800-367-6372) for details.
Safety and Security
Occupant safety

Airbags are designed to activate only in certain frontal impacts (front airbags, driver-side knee bag) and side impacts (head-thorax airbags) which exceed preset thresholds. Only during these types of impacts, if of sufficient severity to meet the deployment threshold, will they provide their supplemental protection.

The driver and passengers should always wear their seat belts. Otherwise it is not possible for the airbags to provide their intended supplemental protection.

In cases of other frontal impacts, angled impacts, roll-overs, other side impacts, rear collisions, or other accidents and impacts below airbag deployment thresholds, the airbags will not be activated. The driver and passenger will then be protected to the extent possible by a properly fastened seat belt.

We caution you not to rely on the presence of the airbags in order to avoid wearing your seat belt.

Your vehicle was originally equipped with airbags which are designed to activate in certain impacts exceeding a preset threshold to reduce the potential and severity of injury. It is important to your safety and that of your passenger that you replace deployed airbags and repair any malfunctioning airbags to ensure that the vehicle will continue to provide supplemental crash protection for occupants.
Safety guidelines for the seat belt, emergency tensioning device and airbag

**Warning!**

- Damaged seat belts or belts that were highly stressed in an accident must be replaced and their anchoring points must also be checked. Only use belts installed or supplied by an authorized Mercedes-Benz Center.
- Airbags and ETDs (Emergency Tensioning Devices) are designed to function on a one-time-only basis. An airbag or ETD that was activated must be replaced.
- No modifications of any kind may be made to any components or wiring of the SRS. This includes changing or removing any component or part of the SRS, the installation of additional trim material, badges, etc. over the steering wheel hub, passenger front airbag cover, outboard sides of the front seat backrests, door trim panels, or door frame trims, and installation of additional electrical/electronic equipment on or near SRS components and wiring. Keep area between airbags and occupants free from objects (e.g. packages, purses, umbrellas, etc.).
- Do not pass belts over sharp edges. They could tear.
- Do not make any modification that could change the effectiveness of the belts.
- Do not bleach or dye seat belts as this may severely weaken them. In a crash, they may not be able to provide adequate protection.
- Never place your feet on the instrument panel, dashboard, or on the seat. Always keep both feet on the floor in front of the seat.

- In addition, improper repair work on the SRS creates a risk of rendering the SRS inoperative or causing unintended airbag deployment. Work on the SRS must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.
- For your protection and the protection of others, when scrapping the airbag unit or emergency tensioning device, our safety instructions must be followed. These instructions are available from your authorized Mercedes-Benz Center.
- Given the considerable deployment speed and the textile structure of the airbags, there is the possibility of abrasions or other injuries resulting from airbag deployment.

When you sell your vehicle, we strongly urge you to give notice to the subsequent owner that it is equipped with an SRS by alerting them to the applicable section in the Operator’s Manual.
Safety and Security

Occupant safety

Front airbags
Driver and passenger airbags are deployed:
- in the event of certain frontal impacts
- if impact exceeds a preset deployment threshold
- independently of the head-thorax airbags

The airbags will not deploy in impacts which do not exceed the system’s deployment thresholds. You will then be protected by the fastened seat belts.

The passenger airbag will only be deployed if:
- the passenger seat is occupied
- the indicator lamp on the glove box is not lit (> page 78)
- the impact exceeds a preset deployment threshold

Knee bag
The knee bag is located on the driver-side lower instrument panel. It is designed to operate together with the driver airbag in certain frontal impacts exceeding a preset threshold. The knee bag operates best in conjunction with a properly positioned and fastened seat belt.

Do not place objects heavier than 20 lbs (9 kg) on the front passenger seat. This could cause the front airbag or the head-thorax airbag on the front passenger side to deploy in a crash which exceeds the system’s deployment threshold.

1 Driver airbag
2 Passenger airbag
3 Knee bag
Head-thorax airbags

The head-thorax airbags are deployed:

- on the impacted side of the vehicle
- in impacts exceeding a preset deployment threshold
- independently of the front airbags

The head-thorax airbags are not deployed in impacts which do not exceed the system’s deployment threshold.

The passenger head-thorax airbag will only deploy if the system senses that the passenger seat is occupied.

Seat belts

When the engine is started, the seat belt telltale \(\text{\textbullet}\) illuminates for a maximum of 6 seconds and a warning chime sounds to remind you and your passenger to fasten your seat belts.

If after these 6 seconds, the driver’s or the passenger’s seat belt (with the passenger seat occupied) are not fastened with all doors closed,

- and the vehicle speed does not exceed 15 mph (25 km/h), the seat belt telltale \(\text{\textbullet}\) remains illuminated for as long as either the driver’s or passenger’s seat belt is not fastened
- and the vehicle speed exceeds 15 mph (25 km/h), the seat belt telltale \(\text{\textbullet}\) starts flashing and a warning chime sounds with increasing intensity until both the driver’s and passenger’s seat belt are fastened, or for a maximum of 60 seconds from the time the vehicle speed exceeded 15 mph (25 km/h) if either the driver’s or passenger’s seat belt remains unfastened.

If the driver’s or passenger’s seat belt remains unfastened after 60 seconds, the seat belt telltale \(\text{\textbullet}\) stops flashing and the warning chime stops sounding. The seat belt telltale \(\text{\textbullet}\) then continues to be illuminated for as long as either the driver’s or passenger’s seat belt are not fastened.

The seat belt telltale \(\text{\textbullet}\) will only go out if both the driver’s and the passenger’s seat belt (with the front passenger seat occupied) are fastened, or the vehicle is standing still and a front door is opened.

For more information, see the “Practical hints” section (\(\text{\textbullet}\) page 340).
Always wear your seat belt. All vehicle occupants always need to have their seat belts fastened and wear them properly.

In addition, applicable motor vehicle safety laws require you to wear seat belts. Even where this is not the case, we strongly recommend that all vehicle occupants have their seat belts fastened and wear them properly.

For information on fastening seat belts, see “Fastening the seat belts” (page 46).

Warning!
Always fasten your seat belt before driving off. Always make sure your passengers are properly restrained, even pregnant women.
Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident. You and your passenger should always wear seat belts.
If you are ever in an accident, your injuries can be considerably more severe without your seat belt properly buckled. Without your seat belt buckled, you are much more likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed.
In the same crash, the possibility of injury or death is lessened if you are properly wearing your seat belt. Airbags can only protect as they are designed if the occupants are properly wearing their seat belts (page 65).

Warning!
Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the belt would apply force at the abdomen or neck. This could cause serious or even fatal injuries. The seat backrest and seat belt provide the best restraint when the wearer is in a nearly upright position and the belt is properly positioned on the body.
Keep door storage compartments closed while vehicle is in motion. Failure to do so may cause the seat belt to catch at the rear and prevent proper positioning of the seat belt.
Safety and Security

Occupant safety

**Warning!**

Never let more people ride in the vehicle than there are seat belts available. Be sure everyone riding in the vehicle is correctly restrained with a separate seat belt. Never use a seat belt for more than one person at a time.

**Warning!**

Damaged seat belts or belts that were highly stressed in an accident must be replaced and their anchoring points must also be checked.

Only use seat belts which have been approved by Mercedes-Benz.

Do not make any modifications to the seat belts. This can lead to unintended activation or to failure.

Do not bleach or dye seat belts as this may severely weaken them. In a crash, they may not be able to provide adequate protection.

Have all work carried out only by qualified technicians. Contact an authorized Mercedes-Benz Center.

**Warning!**

USE SEAT BELTS PROPERLY

- Seat belts can only work when used properly. Never wear seat belts in any other way than as described in this section, as that could result in serious injuries in case of an accident.

- Each occupant should wear their seat belt at all times, because seat belts help reduce the likelihood of and potential severity of injuries in accidents, including rollovers. The integrated restraint system includes SRS (driver airbag, driver-side knee bag, passenger airbag, head-thorax airbags) and ETD (seat belt emergency tensioning device). The system is designed to enhance the protection offered to properly belted occupants in certain frontal (front airbags, driver-side knee bag and ETD) and side (head-thorax airbags and ETD) impacts which exceed preset deployment thresholds.
Safety and Security

Occupant safety

- Never wear the shoulder belt under your arm, against your neck or off your shoulder. In a crash, your body would move too far forward. That would increase the chance of head and neck injuries. The belt would also apply too much force to the ribs or abdomen, which could severely injure internal organs such as your liver or spleen.
- Never wear belts over rigid or breakable objects in or on your clothing, such as eyeglasses, pens, keys, etc., as these might cause injuries.
- Position the lap belt as low as possible on your hips and not across the abdomen. If the belt is positioned across your abdomen, it could cause serious injuries in a crash.
- Never use a seat belt for more than one person at a time. Do not fasten a seat belt around a person and another person or other objects.
- Belts should not be worn twisted. In a crash, you would not have the full width of the belt to manage impact forces. The twisted belt against your body could cause injuries.
- Pregnant women should also use a lap-shoulder belt. The lap belt portion should be positioned as low as possible on the hips to avoid any possible pressure on the abdomen.
- Never place your feet on the instrument panel, dashboard or on the seat. Always keep both feet on the floor in front of the seat.

Emergency tensioning device (ETD), seat belt force limiter

The seat belts are equipped with emergency tensioning devices, belt force limiters, and automatic comfort-fit.

The ETD is designed to activate in the following cases:
- in frontal or rear-end impacts exceeding a preset severity level
- if the restraint systems are operational and functioning correctly, see \( \text{indicator lamp (}] \) page 64).

The ETDs will only activate if the respective seat belt is fastened (latch plate properly inserted into buckle).

In an impact, emergency tensioning devices remove slack from the belts in such a way that the seat belts fit more snugly against the body. Belt force limiters reduce the force exerted by the seat belts on occupants during a crash.
Safety and Security

Occupant safety

Automatic comfort-fit feature seat belt
The automatic comfort-fit feature reduces the retracting force of the seat belts when they are in normal use.

Roll bar

Warning!
An emergency tensioning device (ETD) that was activated must be replaced.
When disposing of the emergency tensioning device, our safety instructions must be followed. These are available at your authorized Mercedes-Benz Center.

Warning!
This vehicle is a two occupant vehicle. The rear storage area is not intended for use by occupants and is not equipped for properly seating or restraining occupants. Thus this area should never be used by any persons. Before operating the roll bar switch make sure that the roll bar’s path is clear and no persons are injured by the moving roll bar due to inattention. Raising or lowering of the roll bar could injure someone inadvertently occupying the rear storage area.
For your own safety, we recommend to drive with the roll bar raised if the outside temperature is below +5°F (-15°C).

Do not place objects heavier than 20 lbs (9 kg) on the front passenger seat. This could cause the front or side impact airbag on the passenger side and, with the seat belt fastened to secure the object, the ETD to deploy in a crash which exceeds the system’s deployment threshold.

If the outside temperature falls below +5°F (-15°C), the roll bar must be raised manually using the buttons provided to avoid damaging the hydraulics.

The roll bar raises automatically in an accident or in a critical driving situation. You can also raise and lower the roll bar manually using the buttons provided.

When the roll bar is raised automatically, you will hear a ratcheting sound.

The buttons for the roll bar are on the center console under the roof switch.

① Lower roll bar
② Raise roll bar
The roll bar can be moved manually when the ignition is switched on (▷ page 36).
Safety and Security

Occupant safety

Warning!

If the roll bar warning light \( \bigcirc \) in the tachometer remains lit after starting the engine, there is a malfunction. In the display you see the message **Raise the roll-over bar.**

For safety reasons, drive only with the roll bar upright until the malfunction is repaired. Have your vehicle checked at an authorized Mercedes-Benz Center.

Raising the roll bar

- Lift the switch for the retractable hardtop.
- Press and hold button 2 until the roll bar is raised.

Lowering the roll bar

If the roll bar was raised manually:
- Lift the switch for the retractable hardtop.
- Press and hold button 1 until the roll bar is lowered.

If the roll bar was raised automatically:
- Press and hold button 2 until you hear the roll bar lock into place.
- Press and hold button 1 until the roll bar is lowered.

If you raised the roll bar manually using the button, the roll bar will be automatically lowered and then raised again when you close and open the retractable hardtop.

Children in the vehicle

If an infant or child is traveling with you in the vehicle:

- Secure the child using an infant or child restraint appropriate to the age and size of the child.
- Make sure the infant or child is properly secured by a belt at all times while the vehicle is in motion.

Infant and child restraint seats and information on choosing an appropriate restraint system can be obtained from any Mercedes-Benz Center.
Infant and child restraint systems

Only use a BabySmart™ compatible child restraint for the front passenger seat in this vehicle.

We recommend all infants and children be properly restrained at all times while the vehicle is in motion.

The passenger lap-shoulder belt has a special seat belt retractor for the secure fastening of child restraints.

To fasten a child restraint follow child restraint instructions for mounting. Then pull the shoulder belt out completely and let it retract. During the seat belt retraction a ratcheting sound can be heard to indicate that the special seat belt retractor is activated. The belt is now locked. Push down on child restraint to take up any slack.

To deactivate, release seat belt buckle and let seat belt retract completely. The seat belt can again be used in the usual manner.

The use of infant or child restraints is required by law in all 50 states, the District of Columbia, the U.S. territories, and all Canadian provinces.

Infants and small children should be seated in an appropriate infant or child restraint system which is properly secured by a lap-shoulder belt and that complies with U.S. Federal Motor Vehicle Safety Standard 213 and Canadian Motor Vehicle Safety Standard 213.

A statement by the child restraint manufacturer of compliance with this standard can be found on the instruction label on the restraint and in the instruction manual provided with the restraint.

Warning!

Never release the seat belt buckle while the vehicle is in motion, since the special seat belt retractor will be deactivated.

Warning!

Children 12 years old and under must never ride in this vehicle, except in a Mercedes-Benz authorized BabySmart™ compatible child seat, which operates with the BabySmart™ system installed in the vehicle to deactivate the passenger front airbag when it is properly installed. Otherwise they will be struck by the airbag when it inflates in a crash. If this happens, serious or fatal injury will result.
**Safety and Security**

**Occupant safety**

Infants and small children must be seated in an appropriate BabySmart™ compatible infant or child restraint system, which is properly secured with the vehicle’s seat belt, fully in accordance with the child seat manufacturer’s instructions.

Infants and small children should never share a seat belt with another occupant. During an accident, they could be crushed between the occupant and seat belt.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and the child is not properly secured in the child restraint.

Adjust the passenger seat as far as possible rearward from the dashboard when the seat is occupied.

---

**Warning!**

Children too big for child restraint systems should use regular seat belts. Position the shoulder belt across chest and shoulder, not face or neck. A booster seat may be necessary to achieve proper belt positioning for children from 41 lbs until they reach a height where a lap/shoulder belt fits properly without a booster.

When the child restraint is not in use, remove it from the vehicle or secure it with the seat belt to prevent the child restraint from becoming a projectile in the event of an accident.

Do not leave children unattended in the vehicle, even if the children are secured in a child restraint system. Unsupervised children in a child restraint system may use vehicle equipment and cause an accident and/or serious personal injury.

---

**BabySmart™ airbag deactivation system**

Special BabySmart™ compatible child seats, designed for use with the Mercedes-Benz system and available at any authorized Mercedes-Benz Center, are required for use with the BabySmart™ airbag deactivation system. With the special child seat properly installed, the passenger front airbag will not deploy.
The indicator lamp located on the glove box will be illuminated, except with the SmartKey removed or in starter switch position 0.

The system does not deactivate the head-thorax airbag and the emergency tensioning device.

**Self-test BabySmart™ without special child seat installed**

After turning the SmartKey in the starter switch to position 1 or 2 or pressing the KEYLESS-GO* start/stop button once or twice, the indicator lamp located on the glove box comes on for approximately 6 seconds and then goes out.

If the indicator lamp should not come on or is continuously lit, the system is not functioning. You must see an authorized Mercedes-Benz Center before seating any child on the passenger seat.

**Warning!**

The BabySmart™ airbag deactivation system will ONLY work with a special child seat designed to operate with it. It will not work with child seats which are not BabySmart™ compatible.

Never place anything between seat cushion and child seat (e.g. pillow), since it reduces the effectiveness of the deactivation system. The bottom of the child seat must make full contact with the passenger seat cushion. An incorrectly mounted child seat could cause injuries to the child in case of an accident, instead of protecting the child.

Follow the manufacturer’s instructions for installation of special child seats.

**Warning!**

When using a BabySmart™ compatible child seat on the front passenger seat, the passenger front airbag will not deploy only if the indicator lamp remains illuminated.

Please be sure to check the indicator every time you use the special system child seat. Should the light go out while the restraint is installed, please check installation. If the light remains out, do not use the BabySmart™ restraint to transport children on the passenger seat until the system has been repaired.
Safety and Security

Occupant safety

Warning!

Do not place powered-on laptops, cell phones, electronic tags such as those used on ski passes, and like electronic devices on the passenger seat. Signals from such devices may interfere with the BabySmart™ system. Such signal interference may cause the indicator lamp not to come on during self-test or be continuously lit, indicating that the system is not functioning.
Panic alarm

An audible alarm and flashing exterior lamps will operate for approximately 2 1/2 minutes.

- **Activating**
  - Press and hold button 1 for at least 1 second.

- **Deactivating**
  - Press button 1 again.
  - Insert SmartKey or the SmartKey with KEYLESS-GO* in starter switch.
  - Press the KEYLESS-GO* start/stop button on the gear selector lever.

The SmartKey with KEYLESS-GO* must be in the vehicle.

USA only: This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Canada only: This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. This device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.
Safety and Security

Driving safety systems

In this section you will find information on the following driving safety systems:

- ABS (Antilock Brake System)
- BAS (Brake Assist System)
- ESP® (Electronic Stability Program)
- Electro-hydraulic brake system

⚠️ Warning!

The following factors increase the risk of accidents:

- Excessive speed, especially in turns
- Wet and slippery road surfaces
- Following another vehicle too closely

The ABS, BAS, ESP®, and the electro-hydraulic brake system cannot reduce this risk.

Always adjust your driving style to the prevailing road and weather conditions.

In winter operation, the maximum effectiveness of the ABS, the BAS, the ESP®, and the electro-hydraulic brake system is only achieved with winter tires (> page 315) or snow chains as required.
The Antilock Brake System (ABS) regulates the brake pressure so that the wheels do not lock during braking. This allows you to maintain the ability to steer your vehicle.

The ABS is functional above a speed of approximately 5 mph (8 km/h) independent of road surface conditions. On slippery road surfaces, the ABS will respond even to light brake pressure.

Braking
If the ABS activates during braking, the ABS/ESP® warning lamp in the instrument cluster dial flashes. Because of the electro-hydraulic brake system, you will not feel any pulsation in the brake pedal.

- Keep firm and steady pressure on the brake pedal.

Continuous, steady brake pedal pressure yields the advantages provided by the ABS, namely braking power and the ability to steer the vehicle.

The ABS/ESP® warning lamp flashes whenever the ABS is activated which can be an indication of hazardous road conditions and functions as a reminder to take extra care while driving.

Emergency brake maneuver
- Keep continuous, full pressure on the brake pedal.

Warning!
When the ABS is malfunctioning, the BAS and the ESP® are also switched off.
When the ABS is malfunctioning, the wheels may lock during hard braking, reducing steering capability and extending the braking distance.

ABS

Warning!
Do not pump the brake pedal. Use firm, steady brake pedal pressure instead. Pumping the brake pedal defeats the purpose of the ABS and significantly reduces braking effectiveness.
Safety and Security
Driving safety systems

BAS

The Brake Assist System (BAS) operates in emergency situations. If you apply the brakes very quickly, the BAS automatically provides full brake boost, thereby potentially reducing the braking distance.

- Apply continuous full braking pressure until the emergency braking situation is over.
  
  The ABS will prevent the wheels from locking.

When you release the brake pedal, the brakes function again as normal. The BAS is then deactivated.

Warning!

The ABS cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking or steering efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded. The ABS cannot prevent accidents, including those resulting from excessive speed in turns, following another vehicle too closely, or hydroplaning. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of an ABS equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

Warning!

If the BAS is malfunctioning, the brake system is still functioning normally, but without the additional brake boost available that BAS would normally provide in an emergency braking maneuver. Therefore, the braking distance may increase.

Warning!

BAS cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded. The BAS cannot prevent accidents, including those resulting from excessive speed in turns, following another vehicle too closely, or hydroplaning. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of a BAS equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.
**ESP®**

The Electronic Stability Program (ESP®) is operational as soon as the engine is running and monitors the vehicle’s traction (force of adhesive friction between the tires and the road surface) and handling.

The ESP® recognizes when a wheel is spinning or if the vehicle starts to skid. By applying brakes to the appropriate wheel and by limiting engine output, the ESP® works to stabilize the vehicle. The ESP® is especially useful while driving off and on wet or slippery road surfaces. The ESP® also stabilizes the vehicle during braking maneuvers.

The ABS/ESP® warning lamp in the instrument cluster (page 25) flashes when the ESP® is engaged.

The ABS/ESP® warning lamp in the instrument cluster comes on when you switch on the ignition. It goes out when the engine is running.

**Warning!**

Never switch off the ESP® when you see the ABS/ESP® warning lamp flashing in the instrument cluster. In this case proceed as follows:

- While driving off, apply as little throttle as possible.
- While driving, ease up on the accelerator.
- Adapt your speed and driving style to the prevailing road conditions.

Failure to observe these guidelines could cause the vehicle to skid.

The ESP® cannot prevent accidents resulting from excessive speed.

**Warning!**

The ESP® cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded. The ESP® cannot prevent accidents, including those resulting from excessive speed in turns, or hydroplaning. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of an ESP® equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

The ESP® will only function properly if you use wheels of the recommended tire size (page 434).
Switching off the ESP®

**Warning!**

ESP® should not be switched off during normal driving other than in the circumstances described below. Disabling of the system will reduce vehicle stability in standard driving maneuvers.

Do not switch off the ESP® when a spare wheel is mounted.

To improve the vehicle's traction, turn off the ESP® in driving situations where it would be advantageous to have the drive wheels spin and thus cut into surfaces for better grip such as:

- when driving with snow chains
- in deep snow
- in sand or gravel

When you switch off the ESP®

- the ESP® does not stabilize the vehicle
- the engine output is not limited, which allows the drive wheels to spin and thus cut into surfaces for better grip
- the traction control will still brake a spinning wheel
- the ESP® continues to operate when you are braking
- you cannot activate Distronic®

When the ESP® is switched off and one or more drive wheels are spinning, the ABS/ESP® warning lamp in the speedometer flashes. However, the ESP® will then not stabilize the vehicle.

For more information, see the “Practical hints” section (> page 332).
The switch is located in the lower part of the center console.

ESP® switch

1. Press ESP® switch 1 until the ABS/ESP® warning lamp in the instrument cluster comes on. ESP® is deactivated.

**Warning!**

When the ABS/ESP® warning lamp is illuminated continuously, the ESP® is switched off. Adapt your speed and driving to the prevailing road conditions and to the non-operating status of the ESP®.

Avoid spinning of a drive wheel for an extended period with the ESP® switched off. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

**Switching on the ESP®**

1. Press ESP® switch 1.

The ABS/ESP® warning lamp in the instrument cluster goes out. You are now again in normal driving mode with the ESP® switched on.
Safety and Security
Driving safety systems

Electro-hydraulic brake system

The electro-hydraulic brake system combines a hydraulic brake circuit with electronically controlled brake servo assistance. You have increased braking safety and improved braking comfort.

Warning!

Never ignore a brake malfunction indicated in the speedometer display, for example by the (USA only) or (Canada only) indicator lamp. Refer to the “Practical hints” section (page 334). Also read and observe the messages in the instrument cluster multifunction display (page 361).

Warning!

The electro-hydraulic brake system requires electrical power to operate.

A malfunction in the vehicle’s power supply or electrical system may impair brake system operation and switch it into its emergency operation mode. In such a case, the red brake warning lamp (page 334) comes on and warning messages (page 361) appear in the multifunction display while driving. To brake, the driver must then apply significantly greater brake pedal pressure and depress the pedal much further to obtain the expected braking effect. If necessary, apply full pressure to the brake pedal. Brakes are only applied to the front wheels. Stopping distance is increased!

If there is a malfunction in the electro-hydraulic brake system, we recommend that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment.

A tow bar must be used if circumstances do not permit the use of the recommended towing methods and the vehicle requires towing with all four wheels on the ground. Towing the vehicle with all four wheels on the ground is only permissible for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h). For more information, see “Towing the vehicle” (page 421).
The electro-hydraulic brake system is automatically activated when you
- unlock the vehicle with the SmartKey or the SmartKey with KEYLESS-GO*
- open the driver’s or passenger door
- turn the SmartKey in the starter switch to position 1
- in vehicles with KEYLESS-GO*, press the start/stop button on the gear selector lever once
- depress the brake pedal
- release the parking brake

If the electro-hydraulic brake system is activated as the brake pedal is first depressed, you may feel a reduced pedal resistance and longer pedal travel than normal. When releasing the pedal, you may also feel the brake pedal pulsate and you may hear a sound which is caused by the activation of the electro-hydraulic brake system pump. This is normal and not an indication of a malfunction. Pedal travel returns to normal when you release the brake pedal and the sound soon ceases.

If you experience the above while driving and the red brake warning lamp (» page 334) illuminates and/or warning messages appear in the multifunction display (» page 361), the brake system is malfunctioning. Follow the instructions of the warning message(s) and have the brake system checked immediately.

**Warning!**

Have brake pad replacement and other work on the electro-hydraulic brake system carried out by qualified technicians only. Contact an authorized Mercedes-Benz Center for further information. The electro-hydraulic brake system must be deactivated prior to working on the system. High pressure is intermittently built up in the system as part of its automatic self-test. In addition, the system is automatically activated when the vehicle is unlocked by remote control, when the driver or passenger door is opened, when the SmartKey in the starter switch is turned to position 1 or the KEYLESS-GO* start/stop button is pressed once, when the brake pedal is depressed or when the parking brake is released. Failure to deactivate the system prior to maintenance will cause brake pistons to extend and brake fluid to leak, which may result in injuries (contusions and acid burns). Extended brake pistons may also cause injury.
The electro-hydraulic brake system switches off automatically

- approximately 2 minutes after you turned the SmartKey in the starter switch to position 0 or removed the SmartKey
- approximately 2 minutes after you pressed the KEYLESS-GO* start/stop button to turn off the engine or power supply and opened the driver’s door (with driver’s door open, the starter switch is set to position 0, same as SmartKey removed from starter switch)
- approximately 20 seconds after you locked the vehicle from outside

### Note on driving with the electro-hydraulic brake system

- Following extended periods of only minor loads to your brake system, you should occasionally apply the brakes when traveling at high speeds. This improves the grip of the brake pads.
- After driving on wet or snow-covered roads, you should apply your brakes firmly before parking your vehicle. This produces heat which serves to dry the brake disks and help prevent corrosion.
- On long and steep grades, shift to a lower gear (gear range 1, 2, or 3) to prevent the brakes from overheating and to reduce brake wear.
- After hard braking, it is advisable to drive on for some time so that the air stream will cool down the brakes faster.
- Only Mercedes-Benz approved components (e.g. brake pads) should be installed on your vehicle. Brake pads not approved by Mercedes-Benz may impair the safety of your vehicle.

### Warning!

Be very careful not to endanger other road users when you apply the brakes.
Anti-theft systems

**Immobilizer**

The immobilizer prevents unauthorized persons from starting your vehicle.

**Activating**

*With the SmartKey*

- Remove the SmartKey from the starter switch.

*With KEYLESS-GO*

- Press the start/stop button on the gear selector lever once.

  The engine is turned off.

- Open the driver’s door.

**Deactivating**

*With the SmartKey*

- Turn the SmartKey in the starter switch to position 2 (page 36).

*With KEYLESS-GO*

- Switch on the ignition (page 38).

Starting the engine will also deactivate the immobilizer.

In case the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCedes (in the USA), or 1-800-387-0100 (in Canada).

**Anti-theft alarm system**

Once the alarm system has been armed, a visual and audible alarm is triggered when someone opens

- a door
- the trunk lid
- the hood
- a storage compartment in the rear
- the glove box
- the storage compartment under the armrest

The alarm will stay on, even if the activating element (a door, for example) is immediately closed.
Safety and Security

Anti-theft systems

The alarm system will also be triggered when

- someone attempts to raise the vehicle
- unlocking and opening the driver’s door with the mechanical key
- someone opens a door from the inside
- someone opens the trunk lid with the emergency release button

Arming the alarm system

The alarm system is armed after locking the vehicle with the SmartKey or KEYLESS-GO*. The turn signal lamps flash three times to indicate that the alarm system is activated. The indicator lamp in the central locking switch (page 29) begins to flash after arming the alarm system.

If the turn signal lamps do not flash three times, a door or the trunk lid may not be properly closed. Close the respective element and lock the vehicle again.

Disarming the alarm system

The alarm system is disarmed when you unlock your vehicle with the SmartKey or KEYLESS-GO*. The turn signal lamps flash once to indicate that the alarm system is disarmed.

If the alarm stays on for more than 30 seconds, a call to the Response Center is initiated automatically by the Tele Aid system (page 240) provided Tele Aid service was subscribed to and properly activated, and that necessary cellular service and GPS coverage are available.

i The alarm system will rearm automatically again after approximately 40 seconds if no door was opened.
Canceling the alarm

To cancel the alarm:

**With the SmartKey**

- Insert the SmartKey in the starter switch.
  - or
- Press the Œ or ‹ button on the SmartKey.

**With KEYLESS-GO**

- Grasp an outside door handle.
  - The SmartKey with KEYLESS-GO must be within 3 ft. (1 m) of the vehicle.
  - or
- Press the KEYLESS-GO start/stop button (Œ page 37).
  - The SmartKey with KEYLESS-GO must be inside the vehicle.

---

Tow-away alarm

Once the tow-away alarm is armed, a visual and audible alarm will be triggered when someone attempts to raise the vehicle.

- The tow-away protection alarm is triggered, for example, if the vehicle is lifted on one side.
- If the alarm stays on for more than 30 seconds, a call to the Response Center is initiated automatically by the Tele Aid system (Œ page 240) provided Tele Aid service was subscribed to and properly activated, and that necessary cellular service and GPS coverage are available.

Arming tow-away alarm

When you lock your vehicle, the tow-away alarm is automatically armed after about 30 seconds.

When you unlock your vehicle, the tow-away protection disarms automatically.

Disabling tow-away alarm

To prevent triggering the tow-away alarm, disable the tow-away alarm feature before towing the vehicle, or when parking on a surface subject to movement, such as a ferry or auto train.

The button is located on the center console between the driver’s seat and the passenger seat.
Safety and Security

Anti-theft systems

Press button 1.
The indicator lamp 2 in the switch comes on briefly.

Exit and lock your vehicle with the SmartKey or (vehicles with KEYLESS-GO*) with the lock button on each door handle or trunk lid.
The tow-away alarm remains disarmed until you lock your vehicle again.

Canceling the alarm
To cancel the alarm:

With the SmartKey

Insert the SmartKey in the starter switch.
or
Press the or button on the SmartKey.

With KEYLESS-GO*

Grasp an outside door handle.
The SmartKey with KEYLESS-GO must be within 3 ft. (1 m) of the vehicle.
or
Press the KEYLESS-GO start/stop button (> page 37).
The SmartKey with KEYLESS-GO must be inside the vehicle.
Controls in detail

- Locking and unlocking
- Seats
- Memory function
- Lighting
- Instrument cluster
- Control system
- Automatic transmission
- Good visibility
- Automatic climate control
- Power windows
- Retractable hardtop
- Driving systems
- Useful features
In the “Controls in detail” section you will find detailed information on how to operate the equipment installed on your vehicle. If you are already familiar with the basic functions of your vehicle, this section will be of particular interest to you.

To quickly familiarize yourself with the basic functions of the vehicle, refer to the “Getting started” section of this manual. The corresponding page numbers are given at the beginning of each segment.

For more information on locking and unlocking, see the “Getting started” section (page 34).

SmartKey
Your vehicle comes supplied with two SmartKeys, each with remote control and a removable mechanical key.

The locking tabs for the mechanical key portion of the two SmartKeys are a different color to help distinguish each SmartKey unit.

The SmartKey provides an extended operating range. To prevent theft, however, it is advisable to only unlock the vehicle when you are in close proximity to it.

The SmartKey centrally locks and unlocks:
- the doors
- the trunk lid
- the glove box
- the storage compartment under the armrest
- the storage compartment in the rear
- the fuel filler flap

SmartKey with remote control
1. Lock button
2. Unlock button for the trunk lid
3. Mechanical key locking tab
4. Unlock button
5. Battery check lamp
6. Panic button (page 81)
Warning!

When leaving the vehicle, always remove the SmartKey from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. It is possible for children to open a locked door from the inside, which could result in an accident and/or serious injury.

To prevent possible malfunction, avoid exposing the SmartKey to high levels of electromagnetic radiation.

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
(1) This device may not cause interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

You can also open and close the power windows (> page 192) and the retractable hardtop using the SmartKey (> page 199).
Factory setting

Global unlocking

► Press button  .

All turn signals flash once. The locking knobs in the doors move up. The anti-theft alarm system is disarmed.

The vehicle will lock again automatically and reactivate the alarm system within approximately 40 seconds of unlocking if:

• neither door nor trunk is opened
• the SmartKey is not inserted in the starter switch
• the central locking switch is not activated

Global locking

► Press button  .

With the trunk and all doors closed, all turn signals flash three times. The locking knobs in the doors move down. The anti-theft alarm system is armed.

Selective setting

If you frequently travel alone, you may wish to reprogram the SmartKey so that pressing  only unlocks the driver’s door, interior lockable storage compartments and the fuel filler flap.

► Press and hold buttons  and  simultaneously for about 6 seconds until battery check lamp  flashes twice.

The SmartKey will then function as follows:

Unlocking driver’s door and fuel filler flap

► Press button  once.

All turn signals flash once. The locking knob in the driver’s door moves up. The anti-theft alarm system is disarmed.

Global unlocking

► Press button  twice.

All turn signals flash once. The locking knobs in the doors move up. The anti-theft alarm system is disarmed.

Global locking

► Press button  .

All turn signals flash three times. The locking knobs in the doors move down. The anti-theft alarm system is armed.

Restoring to factory setting

► Press and hold buttons  and  simultaneously for about 6 seconds until battery check lamp  (page 96) flashes twice.
Locking and unlocking

Checking the batteries

- Press button \[ \text{µ} \text{ or } \text{µ} \].

Battery check lamp \[ \text{L} \] (\(>\) page 96) comes on briefly to indicate that the SmartKey batteries are in order.

- If battery check lamp \[ \text{L} \] does not come on briefly during check, then the SmartKey batteries are discharged.
  - Replace the batteries (\(>\) page 389).
  - You can obtain the required batteries at any authorized Mercedes-Benz Center.

Unlocking the trunk

You can unlock the trunk separately.

A minimum height clearance of 6.2 ft (1.88 m) is required to open the trunk lid.

- Press and hold button \[ \text{µ} \] on the SmartKey until trunk unlocks.

- If the trunk does not unlock, it is still locked separately (\(>\) page 110).

If you can no longer lock or unlock the vehicle with the SmartKey, then the batteries in the SmartKey are discharged, the SmartKey is malfunctioning or the vehicle battery is drained.

- Check the batteries in the SmartKey (\(>\) page 99) and replace them if necessary (\(>\) page 389).
- Use the mechanical key to unlock the driver’s door (\(>\) page 385) and the trunk (\(>\) page 110).
- Have the vehicle batteries and their connections checked (\(>\) page 413).
- Use the mechanical key to lock or unlock the doors (\(>\) page 387).

If the SmartKey is malfunctioning, contact an authorized Mercedes-Benz Center.
Controls in detail

Locking and unlocking

Loss of SmartKey or mechanical key
If you lose a SmartKey or mechanical key, you should do the following:

► Have the SmartKey deactivated by an authorized Mercedes-Benz Center.
► Report the loss of the SmartKey or the mechanical key to your car insurance company immediately.
► If necessary, have the mechanical lock replaced.

Your authorized Mercedes-Benz Center will be glad to supply you with a replacement.

SmartKey with KEYLESS-GO*

Vehicles equipped with KEYLESS-GO come with two SmartKeys with KEYLESS-GO, each with remote controls and a removable mechanical key.

The locking tabs for the mechanical key portion of the two SmartKeys with KEYLESS-GO are a different color to help distinguish each SmartKey with KEYLESS-GO unit.

The function of the SmartKey overrules the KEYLESS-GO function.

The KEYLESS-GO function is integrated into the SmartKey. On these vehicles, the validity of the SmartKey with KEYLESS-GO is checked every time you grasp a door handle.

If the SmartKey with KEYLESS-GO is valid, your vehicle unlocks

- the doors
- the trunk lid
- the glove box
- the storage compartment under the armrest
- the storage compartment in the rear
- the fuel filler flap
Controls in detail

Locking and unlocking

SmartKey with KEYLESS-GO

1 Lock button
2 Unlock button for the trunk lid
3 Mechanical key locking tab
4 Unlock button
5 Battery check lamp
6 PANIC Panic button (page 81)

For information on using the SmartKey buttons, see “SmartKey” (page 96).

Warning!

When leaving the vehicle, always take the SmartKey with KEYLESS-GO with you and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.

USA only:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.
Controls in detail

Locking and unlocking

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. This device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Important notes on using KEYLESS-GO

- You can also use the SmartKey with KEYLESS-GO like a normal SmartKey (> page 96).
- You can combine KEYLESS-GO functions with normal SmartKey functions (e.g. unlocking with KEYLESS-GO and locking with the button).
- Always carry the SmartKey with KEYLESS-GO with you.
- Never store the SmartKey with KEYLESS-GO together with:
  - Electronic items such as a cellular phone or another SmartKey with KEYLESS-GO
  - Metallic objects such as coins or metal foil

Doing so could impair the function of the KEYLESS-GO system.

To lock or unlock the vehicle, the SmartKey with KEYLESS-GO must be located outside the vehicle within approximately 3 ft (1 m) of a door or the trunk.

In order to start the engine with the SmartKey with KEYLESS-GO:

- The SmartKey with KEYLESS-GO must be located in the vehicle.
- All doors must be closed.
- The brake pedal must be firmly depressed. Do not depress the accelerator.

If you have started the engine with the KEYLESS-GO start/stop button (> page 37), you can only turn it off again with this button, even if you have put the SmartKey in the starter switch in the meantime.

You can also close the power windows (> page 192) and the retractable hardtop using the SmartKey with KEYLESS-GO (> page 199).
• This does not apply if, after starting, the selector lever is still in position P and the SmartKey is then inserted in the starter switch. The SmartKey will then have priority over the KEYLESS-GO function and the vehicle’s electrical system will operate according to the position of the SmartKey in the starter switch, even stopping the engine.

• If the SmartKey with KEYLESS-GO is positioned farther away from the vehicle, the system may no longer recognize the SmartKey with KEYLESS-GO. The vehicle then cannot be locked or the engine started via the KEYLESS-GO system.

• If the SmartKey with KEYLESS-GO is removed from the vehicle while the engine is running (e.g. if passenger exits the vehicle with the SmartKey with KEYLESS-GO), the message Key not detected! will appear in the multifunction display while driving off.

Find the SmartKey or change its present location immediately (e.g. place it on the front passenger seat or insert it in shirt pocket).

• Remember that the engine can be started by anyone with a SmartKey with KEYLESS-GO that is left inside the vehicle. If you leave the SmartKey with KEYLESS-GO behind when exiting and locking the vehicle, the message Key detected in vehicle! will appear in the multifunction display.

Factory setting

Global unlocking

• Grasp an outside door handle.

All turn signals flash once. The locking knobs in the doors move up. The anti-theft alarm system is disarmed.

The vehicle will lock again automatically and reactivate the alarm system within approximately 40 seconds of unlocking if neither a door nor the trunk is opened.

• an door handle is splashed with water

or

• you attempt to clean an outside door handle

If the vehicle has been parked for more than 72 hours, you must pull an outside door handle in order to activate the KEYLESS-GO function.

The vehicle could inadvertently unlock if the SmartKey with KEYLESS-GO is within 3 ft (1 m) of the vehicle and

i

If the vehicle is parked for more than 72 hours, you must pull an outside door handle in order to activate the KEYLESS-GO function.
Controls in detail

Locking and unlocking

Global locking
- Press lock button on an outside door handle (> page 62) or trunk (> page 105).

With the trunk and all doors closed, all turn signals flash three times. The locking knobs in the doors move down. The anti-theft alarm system is armed.

Selective setting
If you frequently travel alone, you may wish to reprogram the SmartKey with KEYLESS-GO so that grasping a door handle only unlocks the driver’s door, interior lockable storage compartments and the fuel filler flap.
- Press and hold buttons and simultaneously for about 6 seconds until battery check lamp (5) (> page 101) flashes twice.

The SmartKey with KEYLESS-GO will then function as follows:

Unlocking the driver’s door and fuel filler flap
- Grasp the driver’s door handle.

All turn signals flash once. The locking knob in the driver’s door moves up. The anti-theft alarm system is disarmed.

Global unlocking
- Grasp the door handle on the passenger side.

All turn signals flash once. The locking knobs in the doors move up. The anti-theft alarm system is disarmed.

Global locking
- Press lock button on an outside door handle or trunk lid.

With the trunk and all doors closed, all turn signals flash three times. The locking knobs in the doors move down. The anti-theft alarm system is armed.

Restoring to factory setting
- Press and hold buttons and simultaneously for about 6 seconds until battery check lamp (5) (> page 101) flashes twice.

If you can no longer lock or unlock the vehicle with the SmartKey with KEYLESS-GO, then the battery in the SmartKey is discharged, the SmartKey with KEYLESS-GO is malfunctioning or the vehicle battery is drained.
- Check the battery in the SmartKey with KEYLESS-GO (> page 99) and replace it if necessary (> page 389).
Global locking using the lock button on the trunk lid

Vehicles with KEYLESS-GO*: To prevent a possible inadvertent lockout, the trunk lid will open automatically if a SmartKey with KEYLESS-GO is recognized inside the trunk.

When the hardtop is retracted, it must be completely lowered in the trunk before the trunk lid can be closed (> page 236).

You can also lock the vehicle using the lock button on an outside door handle (> page 62).
Controls in detail

Locking and unlocking

Checking the battery
- Press button ⦿ or ⦿.

Battery check lamp ⑤ ([> page 101]) comes on briefly to indicate that the SmartKey batteries are in order.

- If battery check lamp ⑤ ([> page 101]) does not come on briefly during check, then the SmartKey battery is discharged.
  - Replace the battery ([> page 389]).
  - You can obtain the required battery at any authorized Mercedes-Benz Center.

Unlocking the trunk
You can unlock the trunk separately.
A minimum height clearance of 6.2 ft (1.88 m) is required to open the trunk lid.
The handle is located above the rear license plate recess.

![Image](image.png)

① Handle
- Pull on handle ①.
  - The vehicle unlocks the trunk lid only.

Loss of SmartKey with KEYLESS-GO
If you lose your SmartKey with KEYLESS-GO, you should do the following:
- Have the SmartKey with KEYLESS-GO deactivated by an authorized Mercedes-Benz Center.
- Report the loss of the SmartKey with KEYLESS-GO or the mechanical key to your car insurance company immediately.
- Have the mechanical lock replaced if necessary.

Your authorized Mercedes-Benz Center will be glad to supply you with a replacement.

If the trunk does not unlock, it is still locked separately ([> page 110]).
Opening the doors from the inside

You can open a locked door from the inside. Open door only when conditions are safe to do so.

![Diagram of door handle and locking knob]

1 Locking knob
2 Inside door handle

Pull on door handle 2.

If the door was locked, locking knob 1 will move up.

If you open a door, the side windows on that side of the vehicle will lower slightly. The windows close again when you close the door.

If the vehicle has previously been locked with the SmartKey or KEYLESS-GO*, opening a door from the inside will trigger the anti-theft alarm system.

To cancel the alarm, do one of the following:

- Press button 🇺🇸 or 🇺🇸 on the SmartKey.
- Insert the SmartKey in the starter switch.

Vehicles with KEYLESS-GO*

- Grasp an outside door handle.
  The SmartKey with KEYLESS-GO must be within 3 ft. (1 m) of the vehicle.
- Press the KEYLESS-GO* start/stop button ( page 37).
  The SmartKey with KEYLESS-GO must be inside the vehicle.
Controls in detail

Locking and unlocking

Opening the trunk

A minimum height clearance of 6.2 ft (1.88 m) is required to open the trunk lid.

Always make sure that there is sufficient overhead clearance.

Opening the trunk from the outside

The handle is located above the rear license plate recess.

Vehicles without KEYLESS-GO*: The vehicle must be unlocked.

Pull on handle ① and lift the trunk lid.

To facilitate trunk loading and unloading when the hardtop is retracted, you can raise the hardtop from its storage position in the trunk using the load assist feature (page 236). You may also unhook the luggage cover.

Remember to resecure the luggage cover after loading/unloading the trunk. Otherwise you will not be able to lower the retractable hardtop.

Vehicles without KEYLESS-GO*: If the trunk lid does not open, the entire vehicle is still locked globally (page 96) or it is still locked separately (page 110).

The trunk can also be opened using

- the SmartKey, see “Locking and unlocking” (page 96)
- the remote trunk lid release switch, see “Opening the trunk from the inside” (page 108)
- the trunk lid emergency release button, see “Trunk lid emergency release” (page 111)

Opening the trunk from the inside

You can open the trunk from the inside if the vehicle is stationary and the retractable hardtop is fully opened or closed.

The switch is located on the driver’s door.
Controls in detail

Locking and unlocking

Remote trunk lid release switch
Indicator lamp

- Pull remote trunk lid release switch ①.
  The trunk lid unlocks. Indicator lamp ② comes on and remains lit until the trunk is closed again.
- Lift the trunk lid.

Closing the trunk

To facilitate trunk loading and unloading when the hardtop is retracted, you can raise the hardtop from its storage position in the trunk using the loading aid feature (► page 236). You may also unhook the luggage cover.

Remember to resecure the luggage cover after loading/unloading the trunk. Otherwise you will not be able to lower the retractable hardtop.

The trunk can also be opened using
- the SmartKey, see “Locking and unlocking” (► page 96)
- the remote trunk lid release switch, see “Opening the trunk from the inside” (► page 108)
- the trunk lid emergency release button, see “Trunk lid emergency release” (► page 111)

Warning!

To prevent possible personal injury, always keep hands and fingers away from the trunk opening when closing the trunk lid. Be especially careful when small children are around.

Lower trunk lid by firmly pulling on handle ①.
Controls in detail

Locking and unlocking

Close trunk lid with hands placed flat on trunk lid.

Warning!

Only drive with the trunk closed. Among other dangers, such as blocked visibility, exhaust fumes may enter the vehicle interior.

If the vehicle was previously centrally locked, the trunk lid will lock automatically when closed (>
page 109). The turn signals will flash three times to confirm locking.

To prevent an inadvertent lockout, do not place the SmartKey in the trunk.

Vehicles with KEYLESS-GO*: To prevent a possible inadvertent lockout, the trunk lid will open automatically if a SmartKey with KEYLESS-GO is recognized inside the trunk.

When the hardtop is retracted, it must be completely lowered in the trunk before the trunk lid can be closed (> page 236).

Valet locking

To deny any unauthorized person access to the trunk, e.g. when you valet park the vehicle, lock it separately with the mechanical key. Leave only the SmartKey or SmartKey with KEYLESS-GO* less its mechanical key with the vehicle.

The lock is located next to the handle above the rear license plate recess.
Controls in detail

Locking and unlocking

1. Neutral position
2. Locked

- Close the trunk (▷ page 109).
- Pull the mechanical key out of the SmartKey (▷ page 385).
- Insert the mechanical key in the trunk lid lock.
- Turn the mechanical key clockwise to position 2 and remove the mechanical key in that position to lock the trunk.

The trunk remains locked even when the vehicle is centrally unlocked.

You can only cancel the separate trunk locking mode by means of the mechanical key.

- Insert the mechanical key in the trunk lid lock.
- Turn the mechanical key counterclockwise to neutral position 1 and remove the mechanical key in that position to unlock the trunk.

You can now open the trunk (▷ page 108).

## Trunk lid emergency release

With the trunk lid emergency release button, the trunk can be opened from inside the trunk.

The emergency release button is located on the left side of the trunk.

- Briefly press emergency release button 1.

The trunk unlocks and the trunk lid opens slightly.

- Push up the trunk lid to fully open.
Controls in detail

Locking and unlocking

The emergency release button unlocks the trunk while the vehicle is standing still or in motion.

Illumination of the emergency release button:
- The button flashes for 30 minutes after opening the trunk.
- The button flashes for 60 minutes after closing the trunk.

The emergency release button does not open the trunk lid if the vehicle battery is discharged or disconnected.

If the vehicle has previously been locked with the SmartKey or KEYLESS-GO*, opening the trunk from the inside using the emergency release button will trigger the alarm system. To cancel the alarm, do one of the following:
- Insert the SmartKey in the starter switch.
Vehicles with KEYLESS-GO*
- Grasp an outside door handle. The SmartKey with KEYLESS-GO must be within 3 ft. (1 m) of the vehicle.
- Press the KEYLESS-GO* start/stop button (page 37).

The SmartKey with KEYLESS-GO must be inside the vehicle.

Automatic central locking

The doors and the trunk lid lock automatically when the vehicle is set into motion. You can open a locked door from the inside. Open door only when conditions are safe to do so.

The doors unlock automatically after an accident if the force of the impact exceeds a preset threshold. The vehicle locks automatically when the ignition is switched on and the wheels are turning at vehicle speeds of approximately 9 mph (15 km/h) or more. You could therefore lock yourself out when the vehicle
- is pushed
- is on a test stand

You can deactivate the automatic locking using the control system (page 155).
Locking and unlocking from the inside

You can lock or unlock the vehicle from inside using the central locking switches. This can be useful, for example, if you want to unlock the passenger door from the inside or want to lock the vehicle before starting to drive.

The central locking switch does not lock or unlock the fuel filler flap.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause an accident and/or serious personal injury.</td>
</tr>
</tbody>
</table>

The switches are located above and between the center air vents of the air conditioning.

<table>
<thead>

Central locking switches

① Locking
② Unlocking
Controls in detail

Locking and unlocking

If the vehicle was previously centrally locked using the SmartKey or the SmartKey with KEYLESS-GO*, it will not unlock using the central locking switch.

If the vehicle was previously locked with the central locking switch

- while in the global remote control mode, the complete vehicle is unlocked when a door is opened from the inside
- while in the selective remote control mode, only the door opened from the inside is unlocked
\section*{Seats}

For more information on seat adjustment, see “Seat adjustment” (page 40).

\section*{Moving the seats forward and backward}

You can move the seats forward and backward to facilitate loading and unloading.

\textbf{Warning!}

When moving the seats, be sure that no one can be caught by them. Never place hands under seat or near any moving parts during a seat adjustment procedure. To stop the seat from moving when potential danger exists:

- press the switch again
- move the seat adjustment switch on the door (page 39)

\begin{itemize}
  \item \textbf{Moving the seat forward}
    \begin{itemize}
      \item Press switch at ①.
    \end{itemize}
  \item \textbf{Moving the seat backward}
    \begin{itemize}
      \item Press switch at ②.
    \end{itemize}
\end{itemize}

The switch is located on the top side of the seat.
Controls in detail

Seats

Lumbar support
You can adjust the contour of the seat’s lumbar support to help enhance support to your spine.
The thumbwheel is located on the lower side of the seat.

1 Thumb wheel
► Switch on the ignition (► page 36).
► Set the lumbar support between 0 and 5.

Multicontour backrest*
The multicontour backrest has inflatable air cushions built into the seat backrest to provide additional lumbar and side support.
The seat backrest cushion height and curvature can be continuously varied with switches on the lower side of the seat when the ignition is switched on.

1 Shoulder region support
2 Side bolsters adjustment
3 Massage function (PULSE)
4 Lumbar region support
► Switch on the ignition (► page 36).

Shoulder region support
► Press [+ or -] on switch 1.
The air cushion inflates or deflates.

Lumbar region support
► Press [B or A] on rocker switch 4.
This selects the air cushion you wish to adjust.
► Press [+ or -] on rocker switch 4.
The air cushion inflates or deflates.

Side bolsters adjustment
► Press switch 2 to the right or left.
The lateral support increases or decreases.
Controls in detail
Seats

Massage function (PULSE)
You can reduce muscle tension during long trips by periodically using the massage function.

► Press button ③.

The indicator lamp on button ③ comes on. The air cushions in the lumbar region inflate and deflate rhythmically.

The massage function switches off automatically after approximately 8 minutes. The indicator lamp goes out.

Seat heating

Vehicles without seat ventilation*
The switch is located on the door.

Switching on seat heating
► Press lower switch position ①.

A red indicator lamp on the switch comes on.

Switching off seat heating
► Press lower switch position ① once more.

The seat heating will be switched off automatically after approximately 30 minutes.

① Normal heating
② Rapid heating
► Switch on the ignition (page 36).
**Switching on rapid seat heating**

- Press upper switch position ②.
  
  Both red indicator lamps on the switch come on.

- The system switches to normal heating mode after approximately 5 minutes. Only the right-hand indicator lamp remains lit.

**Switching off rapid seat heating**

- Press upper switch position ② again.

  If one or both of the lamps on the seat heating switch are flashing, there is insufficient voltage available since too many electrical consumers are turned on. The seat heating switches off automatically.

  The seat heating will switch back on again automatically as soon as sufficient voltage is available.

**Vehicles with seat ventilation**

The switch is located on the door. The red indicator lamps on the switch indicate the selected heating level:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>off</td>
<td>No indicator lamp on</td>
</tr>
<tr>
<td>1</td>
<td>One indicator lamp on</td>
</tr>
<tr>
<td>2</td>
<td>Two indicator lamps on</td>
</tr>
</tbody>
</table>

1. Seat heating switch

- Switch on the ignition (› page 36).
Switching on seat heating
► Press upper switch position 1 twice. A red indicator lamp on the switch comes on.

Switching off seat heating
► Press upper switch position 1 again.

Switching on rapid seat heating
► Press upper switch position 1 once.
Both indicator lamps on the switch come on.

Switching off rapid seat heating
► Press upper switch position 1 twice.

If one or both of the lamps on the seat heating switch are flashing, there is insufficient voltage available since too many electrical consumers are turned on. The seat heating switches off automatically.

The seat heating will switch back on again automatically as soon as sufficient voltage is available.

The seat heating will be automatically switched off after approximately 30 minutes.
Seats

Seat ventilation*

The switch is located on the door. The blue indicator lamps on the switch indicate the selected ventilation level:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Three indicator lamps on (highest level)</td>
</tr>
<tr>
<td>2</td>
<td>Two indicator lamps on</td>
</tr>
<tr>
<td>1</td>
<td>One indicator lamp on (lowest level)</td>
</tr>
<tr>
<td>off</td>
<td>No indicator lamp on</td>
</tr>
</tbody>
</table>

Switching on seat ventilation

- Press switch ①.
  Three blue indicator lamps on the switch come on.
- Continue pressing switch ① until the desired seat ventilation level is reached.

Switching off seat ventilation

- Press switch ① repeatedly until all indicator lamps go out.

If one or all of the lamps on the seat ventilation switch are flashing, there is insufficient voltage available since too many electrical consumers are turned on. The seat ventilation switches off automatically.

The seat ventilation will switch back on again automatically as soon as sufficient voltage is available.
Memory function

Prior to operating the vehicle, the driver should check and adjust the seat height, seat position fore and aft, and seat backrest angle if necessary, to ensure adequate control, reach and comfort. The head restraint should also be adjusted for proper height. See also the section on airbags (page 65) for proper seat positioning.

In addition, adjust the steering wheel to ensure adequate control, reach, operation and comfort. Both the interior and exterior rear view mirrors should be adjusted for adequate rear vision.

With the memory switch you can store up to three different settings.

The following settings are stored when using the buttons on the driver’s door:

- Driver’s seat and backrest position
- Steering wheel position
- Driver’s side exterior rear view mirror position
- Passenger side exterior rear view mirror position

The following settings are stored when using the buttons on the passenger door:

- Passenger seat and backrest position

Warning!

Do not activate the memory function while driving. Activating the memory function while driving could cause the driver to lose control of the vehicle.

The memory switch is located on the door control panel.

M Memory button

1, 2, 3 Stored positions

- Switch on the ignition (page 36).

or

- Open the respective door.
Controls in detail
Memory function

Storing positions into memory

► Adjust the seats, steering wheel and exterior rear view mirrors to the desired position (> page 39).
► Press memory button M.
► Release memory button and press a stored position button 1, 2, or 3 within 3 seconds.
   All the settings are stored at the selected position.

Recalling positions from memory

► On memory switch, press and hold stored position button 1, 2 or 3 until the seat, steering wheel and exterior rear view mirrors have fully moved to the stored positions.

1 Releasing the button immediately stops movement to the stored positions.
Lighting

For information on how to switch on the headlamps and use the turn signals, see “Switching on headlamps” (page 53) and “Turn signals” (page 53).

If you drive in countries where vehicles drive on the other side of the road than the country in which the vehicle is registered, you must have the headlamps modified for symmetrical low beams. Relevant information can be obtained at any authorized Mercedes-Benz Center.

Exterior lamp switch

The exterior lamp switch is located on the dashboard to the left of the steering wheel.

- Off
- Daytime running lamp mode (page 125)
- Automatic headlamp mode
- Daytime running lamp mode (page 125)

- Parking lamps (also tail lamps, license plate lamps, side marker lamps, instrument panel lamps)
- Canada only: When the engine is running, the low beam headlamps are also switched on.
- Low beam headlamps (or high beam headlamps when the combination switch is pushed forward) and parking lamps
- Standing lamps, right (turn left one stop)
- Standing lamps, left (turn left two stops)
- Indicator lamp for parking lamps
- Indicator lamp for front fog lamps
- Indicator lamp for rear fog lamp
Controls in detail

Lighting

Manual headlamp mode
The low beam headlamps and parking lamps can be switched on or off with the exterior lamp switch.

Automatic headlamp mode
The following lamps switch on and off automatically depending on the brightness of the ambient light:
- Low beam headlamps
- Tail lamps
- Parking lamps
- License plate lamps
- Side marker lamps

Warning!
If the exterior lamp switch is set to AUTO,
- the headlamps may switch off unexpectedly when the system senses bright ambient light, for example light from oncoming traffic.
- the headlamps will not be automatically switched on under foggy conditions.

To minimize risk to you and to others, activate headlamps by turning exterior lamp switch to \( \text{U} \) when driving or when traffic and/or ambient lighting conditions require you to do so.

In low ambient lighting conditions, only switch from position AUTO to \( \text{B} \) with the vehicle at a standstill in a safe location. Switching from AUTO to \( \text{B} \) will briefly switch off the headlamps. Doing so while driving in low ambient lighting conditions may result in an accident.

The automatic headlamp feature is only an aid to the driver. The driver is responsible for the operation of the vehicle’s lights at all times.

With the SmartKey removed from the starter switch or the engine turned off with KEYLESS-GO* and the driver’s door open, a warning sounds if the parking lamps or the low beam headlamps are switched on.

The message \( \text{Turn off lamps} \) appears in the multifunction display.

Warning!
If the exterior lamp switch is set to \( \text{U} \), the headlamps may switch off unexpectedly when the system senses bright ambient light, for example light from oncoming traffic.

The automatic headlamp feature is only an aid to the driver. The driver is responsible for the operation of the vehicle’s lights at all times.
Controls in detail
Lighting

Turn the exterior lamp switch to position AUTO.

With the SmartKey in starter switch position 1 or the KEYLESS-GO start/stop button pressed once, only the parking lamps will switch on and off automatically.

When the engine is running, the low beam headlamps, the tail and parking lamps, the license plate lamps, and the side marker lamps will switch on and off automatically.

Daytime running lamp mode

Turn the exterior lamp switch to position 0 or AUTO.

When the engine is running, the low beam headlamps are switched on automatically.

In low ambient light conditions, the following lamps will switch on additionally:
- Tail lamps
- Side marker lamps
- Parking lamps
- License plate lamps

For nighttime driving you should turn the exterior lamp switch to position B to permit activation of the high beam headlamps.

With the daytime running lamp mode activated and the exterior lamp switch in position AUTO, the highbeam headlamps cannot be switched on.

The highbeam flasher is available at all times.

i
Canada only:
The daytime running lamp mode is mandatory and therefore in a constant mode.
When the engine is running and you shift from a driving position to position N or P, the low beam headlamps will switch off with a three-minute delay.
When the engine is running and you

- turn the exterior lamp switch to position C, the parking lamps switch on additionally
- turn the exterior lamp switch to position D, the manual headlamp mode has priority over the daytime running lamp mode

The corresponding exterior lamps switch on (page 123).

USA only:
By default, the daytime running lamp mode is deactivated. Activate the daytime running lamp mode using the control system, see “Setting daytime running lamp mode (USA only)” (page 152).
When the engine is running and you turn the exterior lamp switch to position C or D, the manual headlamp mode has priority over the daytime running lamp mode.
The corresponding exterior lamps switch on (page 123).

Locator lighting and night security illumination
Locator lighting and night security illumination are described in the control system section, see “Setting locator lighting” (page 153) and “Setting night security illumination” (page 154).

Fog lamps

Warning!
In low ambient lighting or foggy conditions, only switch from position AUTO to D with the vehicle at a standstill in a safe location. Switching from AUTO to D will briefly switch off the headlamps. Doing so while driving in low ambient lighting conditions may result in an accident.

Fog lamps will operate with the parking lamps and/or the low beam headlamps on. Fog lamps should only be used in conjunction with low beam headlamps. Consult your State or Province Motor Vehicle Regulations regarding permissible lamp operation.
The fog lamps cannot be switched on with the exterior lamp switch in position AUTO. To switch on the fog lamps, turn the exterior lamp switch to position B first.

Front fog lamps

- Switch on the low beam headlamps (> page 53).
- Pull out the exterior lamp switch to first stop. The front fog lamps are switched on. The green indicator lamp in the exterior lamp switch comes on (> page 123).
- Push in the exterior lamp switch. The front fog lamps are switched off. The green indicator lamp in the exterior lamp switch goes out.

Rear fog lamp (driver’s side only)

- Switch on the front fog lamps (> page 127).
- Pull out the exterior lamp switch to second stop. The rear fog lamp is switched on. The yellow indicator lamp in the lamp switch comes on (> page 123).
- Push in the exterior lamp switch to first stop. The rear fog lamp is switched off. The yellow indicator lamp in the exterior lamp switch goes out. The front fog lamps remain lit.

Corner-illuminating front fog lamps*

(vehicles with Bi-Xenon* headlamps and without Sport Package*)

The corner-illuminating front fog lamps improve illumination of the road into which you are turning. The corner-illuminating front fog lamps will operate with the engine running and with:

- the exterior lamp switch in position B (> page 123) or
- the exterior lamp switch in position AUTO (> page 123) or
- the daytime running lamp mode activated (> page 125)
Controls in detail

Lighting

Driving forward

Switching on corner-illuminating front fog lamps

- Depending on whether you are turning left or right, switch on the left or right turn signal (> page 53).
  The respective front fog lamp comes on and illuminates the road onto which you are turning.

Switching off corner-illuminating front fog lamps

- The combination switch for the turn signal resets automatically after major steering wheel movements. This will switch off the corner-illuminating front fog lamps if they were activated by switching on the left or right turn signal.
  If the turn signal should stay on after making the turn, the turn signal and corner-illuminating front fog lamp can be switched off by returning the combination switch to its original position.

Driving rearward

Switching on corner-illuminating front fog lamps

- Place the gear selector lever in position R.
  The inverse front fog lamp comes on automatically depending on the steering direction and steering angle.

Switching off corner-illuminating front fog lamps

- Place the gear selector lever out of position R.
  The respective front fog lamp goes out.

Corner-illuminating front fog lamps will only come on in low ambient lighting conditions.
The corner-illuminating front fog lamps function is not available at a vehicle speed above 25 mph (40 km/h).
Controls in detail

Lighting

Combination switch
The combination switch is located on the left of the steering column.

1. High beam
2. High beam flasher

High beam
- Turn the exterior lamp switch to or to \( \text{AUTO} \) (> page 123).
- Push the combination switch in direction of arrow 1 to switch on the high beam headlamps. The high beam indicator lamp A in the instrument cluster comes on.
- Pull the combination switch in direction of arrow 2 to its original position to switch off the high beam headlamps. The high beam indicator lamp A in the instrument cluster goes out.

High beam flasher
- Pull the combination switch briefly in direction of arrow 2.

Hazard warning flasher
The hazard warning flasher can be switched on at all times, even with the SmartKey removed from the starter switch or with the SmartKey with KEYLESS-GO* removed from the vehicle.

The hazard warning flasher switches on automatically when an airbag deploys.

The switch is located on the dashboard between the center air vents.
Switching on the hazard warning flasher

► Press hazard warning flasher switch ①.

All turn signals are flashing.

With the hazard warning flasher activated and the combination switch set for either left or right turn, only the respective turn signals will operate when the ignition is switched on.

Switching off the hazard warning flasher

► Press hazard warning flasher switch ① again.

If the hazard warning flasher was switched on automatically because of an airbag that has deployed, press hazard warning flasher switch ① once to switch it off.

Interior lighting

Interior lamps are switched on in darkness when you
• unlock the vehicle
• open a door
• remove the SmartKey from the starter switch
• open the trunk

In addition, the entry/exit lamps in the door trays will come on when you open a door.

The interior lamps are switched off after a preset time (» page 155).

If the door remains open, the interior lamps switch off automatically after approximately 5 minutes.

Automatic control

Activating

► Slide switch ④ to the left.

Interior lamps are switched on in darkness when you
• unlock the vehicle
• open a door
• remove the SmartKey from the starter switch
• open the trunk

In addition, the entry/exit lamps in the door trays will come on when you open a door.

The interior lamps are switched off after a preset time (» page 155).

If the door remains open, the interior lamps switch off automatically after approximately 5 minutes.
Deactivating

- Slide switch ① to the right.
- The interior lighting and the entry/exit lamps remain switched off in darkness, even when you
  - unlock the vehicle
  - open a door
  - remove the SmartKey from the starter switch
  - open the trunk

Manual control

Switching lamps on

- Press switch ③.
- The interior lighting switches on.

Switching lamps off

- Press switch ③ again.
- The interior lighting switches off.

The setting selected for the interior lighting is used for the trunk lighting as well.

If you leave the trunk lid open for an extended period of time, the trunk lighting will switch off automatically after approximately 10 minutes.

Courtesy lighting

For better orientation in the dark, courtesy lamps will illuminate the interior of your vehicle as follows:

With parking lamps switched on:
- the door handles
- the driver and passenger footwells

With SmartKey in starter switch position 1:
- the door handles
- the center console

If you turn the SmartKey in the starter switch to position 0 and switch off the exterior headlamps, the door handle lamps will remain lit for approximately 5 minutes.
Controls in detail

Instrument cluster

For a full view illustration of the instrument cluster, see “Instrument cluster” (▷ page 24).

The instrument cluster is activated when you
- open a door
- switch on the ignition
- press the reset button (▷ page 24)
- switch on the exterior lamps

Opening a door will activate the instrument cluster only for about 30 seconds.

You can change the instrument cluster settings in the Instrument cluster submenu of the control system (▷ page 149).

Instrument cluster illumination

Use the reset button to adjust the illumination brightness for the instrument cluster and the switches on the center console.

To brighten illumination
- Turn reset button ① in the instrument cluster clockwise.
  The instrument cluster illumination will brighten.

To dim illumination
- Turn reset button ① in the instrument cluster counterclockwise.
  The instrument cluster illumination will dim.

The instrument cluster illumination is dimmed or brightened to suit ambient light conditions.

① Reset button
Coolant temperature gauge

**Warning!**

- Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.
- Steam from an overheated engine can cause serious burns and can occur just by opening the hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

Excessive coolant temperature triggers the coolant temperature warning lamp (› page 336) and a warning in the multifunction display (› page 366).

During severe operating conditions, e.g. stop-and-go traffic, the coolant temperature may rise close to 248°F (120°C). The engine should not be operated with the coolant temperature above 248°F (120°C). Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.

**Trip odometer**

- Make sure you are viewing the trip odometer display (› page 135).
- If it is not displayed, press the \( \square \) or \( \heartsuit \) button on the multifunction steering wheel repeatedly until the trip odometer appears.
- Press and hold reset button \( 1 \) (› page 132) until the trip odometer is reset.

**Tachometer**

The red marking on the tachometer denotes excessive engine speed.

Avoid driving at excessive engine speeds, as it may result in serious engine damage that is not covered by the Mercedes-Benz Limited Warranty.

To help protect the engine, the fuel supply is interrupted if the engine is operated within the red marking.
Outside temperature indicator

Warning!
The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose.
Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges.

The temperature sensor is located in the front bumper area. Due to its location, the sensor can be affected by road or engine heat during idling or slow driving. Therefore, the accuracy of the displayed temperature can only be verified by comparison to a thermometer placed next to the sensor, not by comparison to external displays, e.g. bank signs, etc.

When moving the vehicle into colder ambient temperatures (e.g. when leaving your garage), you will notice a delay before the lower temperature is displayed.
A delay also occurs when ambient temperatures rise. This prevents inaccurate temperature indications caused by heat radiated from the engine during idling or slow driving.

The outside temperature is displayed in the left or right multifunction display (> page 24), depending on the setting (> page 149).
Control system

The control system is activated as soon as the SmartKey in the starter switch is turned to position 1 or as soon as the KEYLESS-GO start/stop button is in position 1. The control system enables you to

- call up information about your vehicle
- change vehicle settings

For example, you can use the control system to find out when your vehicle is next due for service, to set the language for messages in the instrument cluster display, and much more.

Warning!

A driver’s attention to the road and traffic conditions must always be his/her primary focus when driving.

For your safety and the safety of others, selecting features through the multifunction steering wheel should only be done by the driver when traffic and road conditions permit it to be done safely.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

The control system relays information to the multifunction display.

Multifunction display

The multifunction display consists of the display fields in the speedometer and the tachometer. In its default state, the left multifunction display shows the main odometer and the digital speedometer, while the trip odometer appears in the right multifunction display. This default setting is referred to as the standard display.

1 Main odometer
2 Outside temperature
3 Current gear selector lever position
4 Trip odometer
5 Automatic transmission program mode
Controls in detail
Control system

Multifunction steering wheel

The displays in the multifunction display and the settings in the control system are controlled by the buttons on the multifunction steering wheel.

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Left multifunction display in the speedometer</td>
</tr>
<tr>
<td>2</td>
<td>Right multifunction display in the tachometer</td>
</tr>
<tr>
<td>3</td>
<td>Selecting the submenu or setting the volume: Press button ↓ for decrease, ↑ for increase</td>
</tr>
<tr>
<td>4</td>
<td>Telephone*: Press button ☎ to take a call, ☑ to end a call</td>
</tr>
<tr>
<td>5</td>
<td>Menu systems: Press button ← for previous menu, → for next menu</td>
</tr>
<tr>
<td>6</td>
<td>Moving within a menu: Press button  for next display,  for previous display</td>
</tr>
</tbody>
</table>

Pressing any of the buttons, except for the telephone buttons, on the multifunction steering wheel will alter what appears in the multifunction display.

The information available in the multifunction display is arranged in menus, each containing a number of functions or sub-menus.
The individual functions are then found within the relevant menu (radio or CD operations under AUDIO, for example). These functions serve to call up relevant information or to customize the settings for your vehicle.

It is helpful to think of the menus, and the functions within each menu, as being arranged in a circular pattern.

- If you press button \( \text{\textbullet} \) \( \text{\textbullet} \) or \( \text{\textbullet} \) \( \text{\textbullet} \) repeatedly, you will pass through each menu one after the other.
- If you press button \( \text{\textbullet} \) \( \text{\textbullet} \) or \( \text{\textbullet} \) \( \text{\textbullet} \) repeatedly, you will pass through each function display, one after the other, in the current menu.

In the Settings menu, instead of functions you will find a number of submenus for calling up and changing settings. For instructions on using these submenus, see “Settings menu” (p. page 146).

The number of menus available in the system depends on which optional equipment is installed in your vehicle.

The menus are described on the following pages.
**Controls in detail**

**Control system**

**Menus**

This is what you will see when you scroll through the menus.

The table below provides an overview of the individual menus.

---

**Controls in detail**

**Control system**
The headings used in the menus table are designed to facilitate navigation within the system and are not necessarily identical to those shown in the control system displays.

The first function displayed in each menu will automatically show you which part of the system you are in.

Press button $\text{a}$ or $\text{b}$ repeatedly until you see the standard display menu in the multifunction display.

You can modify the standard display menu. Instead of the outside temperature, you can choose the digital speedometer to be displayed by changing the setting in the Select display function of the Inst. cluster submenu (page 149).

Press button $\text{c}$ or $\text{d}$ to select the functions in the standard display menu.

The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calling up digital speedometer</td>
<td>140</td>
</tr>
<tr>
<td>Calling up maintenance service indicator</td>
<td>319</td>
</tr>
<tr>
<td>Checking tire inflation pressure</td>
<td>293</td>
</tr>
<tr>
<td>Checking engine oil level</td>
<td>274</td>
</tr>
</tbody>
</table>

**Display digital speedometer**

Press button $\text{c}$ or $\text{d}$ until the digital speedometer appears in the multifunction display.

The current vehicle speed appears in the right multifunction display if selected (page 149).
The functions in the AUDIO menu operate the audio equipment which you currently have turned on.

If no audio equipment is currently turned on, the message AUDIO off appears in the right multifunction display.

The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selecting radio station</td>
<td>141</td>
</tr>
<tr>
<td>Selecting satellite radio station* (USA only)</td>
<td>141</td>
</tr>
<tr>
<td>Operating CD player</td>
<td>142</td>
</tr>
</tbody>
</table>

Selecting radio station

- Turn on COMAND and select radio. Refer to the separate operating instructions.
- Press button  or  repeatedly until you see the currently tuned station in the right multifunction display.

Selecting satellite radio station* (USA only)

- The satellite radio is treated as a radio application.
- Select satellite radio with the corresponding key on the COMAND control panel (SAT).
- Press button  or  repeatedly until you see the currently tuned station in the right multifunction display.

You can only store new stations using the designated feature on the radio. Refer to the separate operating instructions.
Controls in detail
Control system

Operating the CD player

Selecting CD track
- Turn on COMAND and select CD. Refer to the separate COMAND operating instructions.
- Press button 📀 or 📀 repeatedly until the settings for the CD currently being played appear in the right multifunction display.

Selecting MP3-CD track
- Turn on COMAND and select MP3-CD. Refer to the separate COMAND operating instructions.
- Press button 📀 or 📀 repeatedly until the settings for the MP3-CD currently being played appear in the right multifunction display.

Press button 📀 or 📀 repeatedly until the desired track is selected.

Additional optional satellite radio equipment and a subscription to satellite radio service provider are required for satellite radio operation. Contact an authorized Mercedes-Benz Center for details and availability for your vehicle. For more information, refer to separate COMAND operating instructions.
**NAV menu**

The NAV menu contains the functions needed to operate your navigation system.

The message shown in the multifunction display depends on the status of the navigation system:

- With COMAND switched off, the message NAV off appears in the multifunction display.
- With COMAND switched on but route guidance not activated, the direction of travel and, if applicable, the name of the street currently traveled on appear in the multifunction display.
- With COMAND switched on and route guidance activated, the direction of travel and maneuver instructions appear in the multifunction display.

Please refer to the COMAND manual for instructions on how to activate the route guidance system.

**Distronic* menu**

Use the Distronic menu to display the current settings for your Distronic system. What information is given in the left multifunction display depends on whether the Distronic system is active or inactive.

Please refer to the “Driving systems” section of this manual (page 207) for instructions on how to activate Distronic.

- Press button [5] or [6] repeatedly until you see one of the following two displays in the multifunction display.

**Distronic deactivated**

When Distronic is deactivated you will see the standard display in the left multifunction display.

1. Vehicle ahead, if detected
2. Actual distance to vehicle ahead
3. Preset distance threshold to vehicle ahead
4. Your vehicle
5. Symbol for activated distance warning function
Controls in detail

Control system

Distronic activated
When Distronic is activated the DTR symbol and the set speed appear in the left multifunction display.

Vehicle status message memory menu
Use the vehicle status message memory menu to scan malfunction and warning messages that may be stored in the system. Such messages appear in the multifunction display and are based on conditions or system status the vehicle’s system has recorded.

The vehicle status message memory menu only appears, if messages have been stored.

Warning!
Malfunction and warning messages are only indicated for certain systems and are intentionally not very detailed. The malfunction and warning messages are simply a reminder with respect to the operation of certain systems and do not replace the owner’s and/or driver’s responsibility to maintain the vehicle’s operating safety by having all required maintenance and safety checks performed on the vehicle and by bringing the vehicle to an authorized Mercedes-Benz Center to address the malfunction and warning messages (▷ page 345).

Press button or repeatedly until the vehicle status message memory menu appears in the multifunction display.

If the vehicle status message memory menu does not appear, no messages have been stored.
Vehicle status messages have been recorded

If conditions have occurred causing status messages to be recorded, the number of messages appears in the right multifunction display:

![Number of recorded status messages](image)

Press button or .

The stored messages will now be displayed in the order in which they have occurred. For malfunction and warning messages, see “Vehicle status messages in the multifunction display” (> page 345).

After you have scrolled through all recorded status messages, the first recorded message appears again.

Should the vehicle’s system record any conditions while driving, the number of messages will reappear in the multifunction display:

- when the SmartKey in the starter switch is turned to position 0 or removed from the starter switch

or

- when you turn off the engine by pressing the KEYLESS-GO* start/stop button on the gear selector lever once and open the driver’s door (this puts the starter switch in position 0, same as with the SmartKey removed from the starter switch)

The vehicle status message memory will be cleared when you then turn the SmartKey in the starter switch to position 1 or 2, or when you press the KEYLESS-GO* start/stop button once or twice without depressing the brake pedal. You will then only see high priority messages in the multifunction display (> page 345).
Controls in detail

Control system

Settings menu

In the Settings menu there are two functions:

- The function Reset, with which you can reset all the settings to those set at the factory.
- A collection of submenus with which you can make individual settings for your vehicle.

Press button \( \text{\textbullet} \) or \( \text{\textbullet} \) repeatedly until the Settings... menu appears in the left multifunction display.

The following settings and submenus are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resetting all settings</td>
<td>146</td>
</tr>
<tr>
<td>Submenus in the Settings menu</td>
<td>147</td>
</tr>
<tr>
<td>Resetting the functions of a submenu</td>
<td>147</td>
</tr>
<tr>
<td>Instrument cluster submenu</td>
<td>149</td>
</tr>
<tr>
<td>Time submenu</td>
<td>150</td>
</tr>
<tr>
<td>Lighting submenu</td>
<td>152</td>
</tr>
<tr>
<td>Vehicle submenu</td>
<td>155</td>
</tr>
<tr>
<td>Convenience submenu</td>
<td>156</td>
</tr>
</tbody>
</table>

Resetting all settings

You can reset all the functions of all submenus to the factory settings.

- Press the reset button in the instrument cluster for approximately 3 seconds.

  In the right multifunction display you will see the request to press the reset button again to confirm.

- Press the reset button again.

  The functions of all the submenus will reset to factory settings.

  The settings you have changed will not be reset unless you confirm the action by pressing the reset button a second time.
Submenus in the Settings menu

- Press button ．
  
  In the right multifunction display you see the collection of submenus.

- Press button ．
  
  The selection marker moves to the next submenu.

The submenus are arranged by hierarchy.

Scroll down with the ． button, scroll up with the ． button.

With the selection marker on the desired submenu, use the ． button to access the individual functions within that submenu. Once within the submenu, you can use the ． button to move to the next function or the ． button to move to the previous function within that submenu.

The actual settings are made with button ． or ．.

Resetting the functions of a submenu

For each submenu you can reset all the functions to the factory settings.

- Move to a function in the submenu.

- Press the reset button in the instrument cluster for approximately 3 seconds.
  
  In the right multifunction display you will see the request to press the reset button again to confirm.

- Press the reset button again.
  
  All functions of the submenu will reset to factory settings.
The table below shows what settings can be changed within the various menus. Detailed instructions on making individual settings can be found on the following pages.

<table>
<thead>
<tr>
<th>Instrument cluster</th>
<th>Time</th>
<th>Lighting</th>
<th>Vehicle</th>
<th>Convenience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selecting standard display</td>
<td>Synchronizing time with head unit</td>
<td>Setting daytime running lamp mode (USA only)</td>
<td>Setting automatic locking</td>
<td>Activating easy-entry/exit feature</td>
</tr>
<tr>

<td>Setting the time (minutes)</td>
<td>Setting night security illumination</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Setting interior lighting delayed switch-off</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Access the Inst. cluster submenu via the Settings menu. Use the Inst. cluster submenu to change the instrument cluster display settings. The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selecting standard display</td>
<td>149</td>
</tr>
<tr>
<td>Selecting speedometer display mode</td>
<td>149</td>
</tr>
<tr>
<td>Selecting language</td>
<td>150</td>
</tr>
</tbody>
</table>

**Selecting standard display**

- Move the selection marker with button + or - to the Inst. cluster submenu.
- Press button + or - repeatedly until you see this message in the left multifunction display: Select display.
- The selection marker is on the current setting.
- Press + or - to select the desired setting.
- The selected option appears in the left multifunction display.
- The option not selected will appear in the right multifunction display when scrolling through the standard display (> page 140).

**Selecting speedometer display mode**

- Move the selection marker with button + or - to the Inst. cluster submenu.
- Press button + or - repeatedly until you see this message in the left multifunction display:
  - Digital speedometer.
- The selection marker is on the current setting.
- Press + or - to set the speedometer units to Kilometres or Miles.
Controls in detail

Control system

Selecting language

- Move the selection marker with button ↑ or ↓ to the Inst. cluster submenu.
- Press button → or ← repeatedly until the message Text appears in the multifunction display.
  The selection marker is on the current setting.
- Press ↓ or ↑ to select the language to be used for the multifunction display messages.

Available languages:
- German (Deutsch)
- English (English)
- French (français)
- Italian (italiano)
- Spanish (Español)
- Dutch (Nederlands)
- Swedish (Svenska)
- Danish (Dansk)
- Turkish (Türkçe)
- Portuguese (Português)

Time submenu

Access the Time submenu via the Settings menu. Use the Time submenu to change the time and date settings. The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Synchronizing time with head unit</td>
<td>150</td>
</tr>
<tr>
<td>Setting the time (hours)</td>
<td>151</td>
</tr>
<tr>
<td>Setting the time (minutes)</td>
<td>151</td>
</tr>
</tbody>
</table>

Synchronizing time with head unit

- Move the selection marker with the ↑ or ↓ button to the Time submenu.
- Press button → or ← repeatedly until the message Time sync. with head unit appears in the multifunction display.
  The selection marker is on the current setting.
Controls in detail

Control system

Press \( \text{ã} \) or \( \text{ç} \) to enable or disable this feature.

When you set this feature to On, the time displayed in the multifunction display is automatically synchronized with the time of the COMAND system.

\[ \text{Setting the time (hours)} \]

This function is only available if the function Time sync. with head unit (\( \text{L52932} \) page 150) has been set to Off. The time is then not set automatically by the COMAND and must be set manually if required.

- Move the selection marker with the \( \text{ã} \) or \( \text{ç} \) button to the Time submenu.
- Press button \( \text{ã} \) or \( \text{ç} \) repeatedly until the message Set time Hours appears in the multifunction display.
  The selection marker is on the hour setting.
- Press button \( \text{ã} \) or \( \text{ç} \) to set the hour.

\[ \text{Setting the time (minutes)} \]

This function is only available if the function Time sync. with head unit (\( \text{L52932} \) page 150) has been set to Off. The time is then not set automatically by the COMAND and must be set manually if required.

- Move the selection marker with the \( \text{ã} \) or \( \text{ç} \) button to the Time submenu.
- Press button \( \text{ã} \) or \( \text{ç} \) repeatedly until the message Set time Minutes appears in the multifunction display.
  The selection marker is on the minute setting.
- Press button \( \text{ã} \) or \( \text{ç} \) to set the hour.

For information on setting the time, refer to the separate COMAND operating instructions.
Controls in detail

Control system

Lighting submenu

Access the Lighting submenu via the Settings menu. Use the Lighting submenu to change the lamp and lighting settings on your vehicle. The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setting daytime running lamp mode (USA only)</td>
<td>152</td>
</tr>
<tr>
<td>Setting locator lighting</td>
<td>153</td>
</tr>
<tr>
<td>Setting night security illumination</td>
<td>154</td>
</tr>
<tr>
<td>Setting interior lighting delayed switch-off</td>
<td>155</td>
</tr>
</tbody>
</table>

**Setting daytime running lamp mode (USA only)**

- Move the selection marker with button or to the Lighting submenu.
- Press button or repeatedly until you see **Light circuit Headlamp mode** in the multifunction display.
- The selection marker is on the current setting.

- Press button or to select manual operation (Manual) or daytime running lamp mode (Constant).

With daytime running lamp mode activated and the exterior lamp switch at position 0 or the low beam headlamps are switched on when the engine is running.

In low ambient light conditions the following lamps will switch on additionally:
- Parking lamps
- Tail lamps
- License plate lamps
- Side marker lamps
Controls in detail
Control system

Setting locator lighting

With the locator lighting feature activated and the exterior lamp switch in position Auto, the following lamps will switch on during darkness when the vehicle is unlocked with the SmartKey:

- Parking lamps
- Tail lamps
- License plate lamps
- Front fog lamps

The locator lighting switches off when the driver’s door is opened.

If you do not open a door after unlocking the vehicle with the SmartKey, the lamps will switch off automatically after approximately 40 seconds.

For safety reasons, resetting the Lighting submenu to factory settings while driving (› page 147) will not deactivate the daytime running lamp mode.

The following message appears in the multifunction display: Cannot be fully reset to factory settings when driving.

Move the selection marker with button △ or ▽ to the Lighting submenu.

Press button □ or □ repeatedly until you see Locator lighting in the multifunction display.

The selection marker is on the current setting.

Press button △ or ▽ to switch the locator lighting feature to On.

Turn the exterior lamp switch to position Auto when exiting the vehicle.

The locator lighting feature is activated.
Control system

Setting night security illumination (Exterior lamps delayed switch-off)

Use this function to set whether you would like the exterior lamps to illuminate during darkness after exiting the vehicle and closing the doors.

With the delayed switch-off feature activated and the exterior lamp switch in position AUTO before the engine is turned off, the following lamps will switch on when the engine is turned off and remain lit for approximately 15 seconds:

- Parking lamps
- Tail lamps
- License plate lamps
- Side marker lamps
- Front fog lamps

If after turning off the engine you do not open a door or do not close an opened door, the lamps will switch off automatically after 60 seconds.

You can reactivate this function within 10 minutes by opening a door.

- Move the selection marker with button + or - to the Lighting submenu.
- Press button + or - repeatedly until you see Headlamps delayed switch-off in the multifunction display.

The selection marker is on the current setting.

Press button + or - to switch the delayed switch-off feature On or Off.

- Turn the exterior lamp switch to position AUTO before turning off the engine (> page 49).

You can temporarily deactivate the delayed switch-off feature:

- Before exiting the vehicle turn the SmartKey in the starter switch to position 0.
- Then turn it to position 2 and back to 0.

The delayed switch-off feature is deactivated. It will reactivate as soon as you reinsert the SmartKey in the starter switch.
**Interior lighting delayed switch-off**

Use this function to set whether you would like the interior lighting to remain lit during darkness for approximately 10 seconds after you have removed the SmartKey from the starter switch.

- Move the selection marker with button $\Rightarrow$ or $\Leftarrow$ to the Lighting submenu.
- Press button $\Rightarrow$ or $\Leftarrow$ repeatedly until you see Int. lighting delayed switch-off in the multifunction display.

The selection marker is on the current setting.

- Press $\Rightarrow$ or $\Leftarrow$ to switch the interior lighting delayed switch-off feature On or Off.

**Vehicle submenu**

Access the Vehicle submenu via the Settings menu. Use the Vehicle submenu to make general vehicle settings. The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setting automatic locking</td>
<td>155</td>
</tr>
</tbody>
</table>

**Setting automatic locking**

Use this function to activate or deactivate the automatic central locking. With the automatic central locking system activated, the vehicle is centrally locked at a vehicle speed of approximately 9 mph (15 km/h).

- Move the selection marker with the $\Rightarrow$ or $\Leftarrow$ button to the Vehicle submenu.

- Press button $\Rightarrow$ or $\Leftarrow$ repeatedly until you see this message in the left multifunction display: Automatic door lock.

The selection marker is on the current setting.

- Press $\Rightarrow$ or $\Leftarrow$ to switch Automatic door lock On or Off.
Controls in detail

Control system

Convenience submenu

Access the Convenience submenu via the Settings menu. Use the Convenience submenu to change the settings for a number of convenience features. The following functions are available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activating easy-entry/exit feature</td>
<td>156</td>
</tr>
</tbody>
</table>

**Activating easy-entry/exit feature**

Use this function to activate and deactivate the easy-entry/exit feature (> page 43).

**Warning!**

You must make sure no one can become trapped or injured by the moving steering wheel when the easy-entry/exit feature is activated.

To stop steering wheel adjustment, do one of the following:

- Move steering column stalk (> page 42).
- Press the memory button (> page 121).

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could open the driver’s door and unintentionally activate the easy-entry/exit feature, which could result in an accident and/or serious personal injury.

- Move the selection marker with the + or - button to the Convenience submenu.
- Press button + or - repeatedly until you see Activate Easy-entry feature in the multifunction display. The selection marker is on the current setting.

- Press + or - to switch the easy-entry/exit feature On or Off.
Trip computer menu

Use the trip computer menu to call up statistical data on your vehicle. The following information is available:

<table>
<thead>
<tr>
<th>Function</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel consumption statistics after start</td>
<td>157</td>
</tr>
<tr>
<td>Fuel consumption statistics since last reset</td>
<td>158</td>
</tr>
<tr>
<td>Calling up range (distance to empty)</td>
<td>158</td>
</tr>
</tbody>
</table>

The last function called up will reappear the next time you enter the trip computer menu.

Fuel consumption statistics after start

- Press button $\text{or } \text{ or \text{ repeatedly until you see the first function of the trip computer menu.}$
- Press button $\text{ or } \text{ repeatedly until you see this message in the left multifunction display: From start.}$

1. Distance driven since start
2. Average speed since start
3. Time elapsed since start
4. Average fuel consumption since start

All statistics stored since the last engine start will be reset approximately 4 hours after the SmartKey in the starter switch is turned to position 0 or removed from the starter switch.

Resetting will not occur if you turn the SmartKey back to position 1 or 2 within this time period.
Fuel consumption since last reset

- Press button â– or â‡ or â– or â‡ repeatedly until you see the first function of the trip computer menu.
- Press button â– or â‡ or â– or â‡ repeatedly until you see this message in the left multifunction display: From reset.

1. Distance driven since last reset
2. Average speed since last reset
3. Time elapsed since last reset
4. Average fuel consumption since last reset

Resetting fuel consumption statistics

- Press button â– or â‡ or â– or â‡ repeatedly until you see the first function of the trip computer menu.
- Press button â– or â‡ or â– or â‡ repeatedly until you see the reading that you want to reset in the left multifunction display.
- Press and hold the reset button in the instrument cluster (see page 25) until the value is reset to 0.

Calling up range (distance to empty)

- Press button â– or â‡ or â– or â‡ repeatedly until you see the first function of the trip computer menu.
- Press button â– or â‡ or â– or â‡ repeatedly until you see this message in the left multifunction display: Range.

In the right multifunction display you will see the calculated range based on the current fuel tank level.
Controls in detail
Control system

TEL menu∗

Warning!

A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call. If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when weather, road, and traffic conditions permit.

Some jurisdictions prohibit the driver from using a cellular telephone while driving a vehicle.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

Never operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or personal injury.

You can use the functions in the TEL menu to operate your telephone, provided it is connected to a hands-free system and switched on.

- Switch on the telephone and COMAND.
- Press button ì or í on the steering wheel repeatedly until you see the TEL menu in the left multifunction display.

Which messages will appear in the right multifunction display depends on whether your telephone is switched on or off:

- If the telephone is off, the message in the multifunction display is: TEL off.
- If the telephone is on:
  The telephone will then search for a network. During this time the right multifunction display is empty.

As soon as the telephone has found a network, READY is indicated in the right multifunction display.

- This standby message indicates that your telephone is ready for use and you can operate it using the control system.
Controls in detail

Control system

Rejecting a call
If you do not wish to receive the call, you can choose to reject it.

► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\).

You have rejected the call. The caller receives a busy signal.

Answering a call
When your telephone is ready to receive calls, you can answer a call at any time. In the right multifunction display you will then see the message:

► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\).

You have answered the call. In the right multifunction display you see the length of the call.

Ending a call
► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\).

You have ended the call. In the right multifunction display you will again see the standby message.

Dialing a number from the phone book
If your telephone is ready to receive calls, you may select and dial a number from the phone book at any time.

► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) or \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) repeatedly until you see the TEL menu in the left multifunction display.

In the right multifunction display you will see the standby message.

► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) or \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\).

The control system reads the phone book which is stored in the telephone. This may take up to 30 seconds. In the right multifunction display you will see the message Please wait!.

When the message Please wait! disappears, the phone book has been loaded.

► Press button \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) or \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) repeatedly until the desired name appears in the right multifunction display.

The stored names are displayed in ascending or descending alphabetical order.

If you press and hold \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) or \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\) for longer than one second, the system scrolls rapidly through the list of names until you release the button again.

Cancel the quick search mode by pressing \(\text{\textsuperscript{\textcircled{2}}\text{\textsuperscript{\textcircled{2}}}}\).
Controls in detail

Control system

Press button 🔄.

The system dials the selected phone number.

- If the connection is successful, the name of the party you called and the duration of the call will appear in the display.

- If no connection is made, the control system stores the dialed number in the redial memory.

Redialing

The control system stores the most recently dialed phone numbers. This eliminates the need to search through your entire phone book.

- Press button 🔄 or 🔄 repeatedly until you see the TEL menu in the left multifunction display.

  In the right multifunction display you will see the standby message.

- Press button 🔄.

  In the right multifunction display you see the first number in the redial memory.

- Press button 🔄 or 🔄 repeatedly until the desired name appears in the right multifunction display.

- Press button 🔄.

  The control system dials the selected phone number.
Controls in detail

Automatic transmission

For more information on driving with an automatic transmission, see “Automatic transmission” ())-> page 49).

Your vehicle’s transmission adapts its gear shifting process to your individual driving style by continually adjusting the shift points up or down. These shift point adjustments are performed based on current operating and driving conditions.

If the operating conditions change, the automatic transmission reacts by adjusting its shift program.

During the brief warm-up, transmission upshifting is delayed. This allows the catalytic converter to heat up more quickly to operating temperature.

The automatic transmission selects individual gears automatically, depending on:

- the gear selector lever position D ( )-> page 164) with gear ranges ( )-> page 167)
- the selected program mode:
  - (C/S) ( )-> page 168)
  - or
  - (MANUAL/C/S) (SL 55 AMG and SL 65 AMG only) ( )-> page 173)
- the position of the accelerator pedal ( )-> page 166)
- the vehicle speed
Controls in detail

Automatic transmission

1. Current gear range/gear selector lever position
2. Current program mode

The current gear range/gear selector lever position and program mode (C/S) or (M/C/S) appear in the right multifunction display.

Warning!

It is dangerous to shift the gear selector lever out of P or N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

Allow engine to warm up under low load use. Do not place full load on the engine until the operating temperature has been reached.

Shift into reverse gear R or parking position P only when the vehicle is stopped.

Avoid spinning of a drive wheel for an extended period when driving off on slippery road surfaces. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

When the gear selector lever is in position D, you can influence transmission shifting by:

- limiting the gear range
- changing gears manually
## Controls in detail

### Automatic transmission

#### Gear selector lever position

<table>
<thead>
<tr>
<th>Effect</th>
<th>Description</th>
</tr>
</thead>
</table>
| **P** Park position  
Gear selector lever position when the vehicle is parked. Place gear selector lever in position **P** only when vehicle is stopped. The park position is not intended to serve as a brake when the vehicle is parked. Rather, the driver should always set the parking brake in addition to placing the gear selector lever in position **P** to secure the vehicle.  
| **Effect**  
The SmartKey can only be removed from the starter switch with the gear selector lever in position **P**. With the SmartKey removed, the gear selector lever is locked in position **P**. |
| **R** Reverse gear  
Place gear selector lever in position **R** only when vehicle is stopped.  
| **Effect**  
| **N** Neutral  
No power is transmitted from the engine to the drive axle. When the brakes are released, the vehicle can be moved freely (pushed or towed).  
To avoid damage to the transmission, never engage **N** while driving.  
If the ESP® is deactivated or malfunctioning: Move gear selector lever to **N** only if the vehicle is in danger of skidding, e.g. on icy roads.  
| **D** Drive  
The transmission shifts automatically. All forward gears are available. |
Coasting the vehicle, or driving for any other reason with gear selector lever in N can result in transmission damage that is not covered by the Mercedes-Benz Limited Warranty.

**Warning!**

Getting out of your vehicle with the gear selector lever not fully engaged in position P is dangerous. Also, position P alone is not intended to or capable of preventing your vehicle from moving, possibly hitting people or objects. Always set the parking brake in addition to shifting to position P (▷ page 59).

When parked on an incline, turn the front wheels towards the road curb.

Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

**Warning!**

When leaving the vehicle, always remove the SmartKey or SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could move the gear selector lever from position P, which could result in an accident and/or serious personal injury.
Controls in detail

Automatic transmission

Driving tips

Accelerator position
Your driving style influences the transmission's shifting behavior:
- Less throttle → Earlier upshifting
- More throttle → Later upshifting

Kickdown
Use kickdown when you want maximum acceleration.
- Press the accelerator past the point of resistance.
  The transmission shifts into a lower gear.
- Ease on the accelerator when you have reached the desired speed.
  The transmission shifts up again.

Stopping
When you stop briefly, e.g. at traffic lights:
- Leave the transmission in gear.
- Hold the vehicle with the brake.
When you stop longer with the engine idling and/or on a hill:
- Set the parking brake.
- Move the gear selector lever to position P.

Maneuvering
When you maneuver in tight areas, e.g. when pulling into a parking space:
- Control the vehicle speed by gradually releasing the brakes.
- Accelerate gently.
- Never abruptly step on the accelerator.

Working on the vehicle

Warning!
When working on the vehicle, set the parking brake and move gear selector lever to position P. Otherwise the vehicle could roll away.
## Gear ranges

With the gear selector lever in position D and driving in the automatic shift program C or S (page 168), you can select a gear range for the automatic transmission to operate within:

### Gear selector lever (page 169):
- You can limit the gear range by pressing the gear selector lever to the left (D−), and reverse the gear range limit by pressing the gear selector lever to the right (D+).

### Steering wheel gearshift control (page 170):
- You can limit the gear range by pressing the respective downshift button on the steering wheel gearshift control, and reverse the gear range limit by pressing the respective upshift button on the steering wheel gearshift control.

The selected gear range appears in the right multifunction display (page 163). If you press on the accelerator when the engine has reached its rpm limit, the transmission will upshift beyond any gear range limit selected.

<table>
<thead>
<tr>
<th>Effect</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>The transmission operates in first gear only. For maximum use of engine’s braking effect on very steep or lengthy downgrades.</td>
</tr>
</tbody>
</table>
| 2      | The transmission shifts through second gear only. Allows the use of engine’s braking power when driving:  
- on steep downgrades  
- in mountainous regions  
- under extreme operating conditions |
| 3      | The transmission shifts through third gear only. With this selection you can use the braking effect of the engine. |
| 4      | The transmission shifts through fourth gear only. |
| 5      | The transmission shifts through fifth gear only (applies to vehicles with 7-speed automatic transmission only). |
| 6      | The transmission shifts through sixth gear only (applies to vehicles with 7-speed automatic transmission only). |

**Effect**

- 6: The transmission shifts through sixth gear only (applies to vehicles with 7-speed automatic transmission only).
- 5: The transmission shifts through fifth gear only (applies to vehicles with 7-speed automatic transmission only).
- 4: The transmission shifts through fourth gear only.
- 3: The transmission shifts through third gear only.
- 2: The transmission shifts through second gear only.
- 1: The transmission operates in first gear only.

The transmission will upshift beyond any gear range limit selected.
Controls in detail
Automatic transmission

Automatic shift program

The program mode selector switch is located on the lower part of the center console.

![Program mode selector switch](image)

Press program mode selector switch 1 repeatedly until the letter of the desired program mode appears in the right multifunction display.

- Select C for comfort driving:
  - The vehicle starts out in second gear (both forward and reverse) for gentler starts. This does not apply if full throttle is applied or gear range 1 is selected.
  - Traction and driving stability are improved on icy roads.
  - Upshifts occur earlier even when you give more gas. The engine then operates at lower rpms and the wheels are less likely to spin.

Never change the program mode when the gear selector lever is out of position P. This could result in a change of driving characteristics for which you may not be prepared.

The last selected program mode (C or S) is switched on when the engine is restarted.

<table>
<thead>
<tr>
<th>Program mode selector switch</th>
<th>C Comfort</th>
<th>For comfort driving</th>
<th>S Sport</th>
<th>For standard driving</th>
</tr>
</thead>
</table>

The current gear selector lever position and the selected program mode (C/S) are indicated in the right multifunction display (▶ page 163).
Controls in detail

Automatic transmission

Gear selector lever one-touch gearshifting

Even with an automatic transmission, you can change the gears manually and limit or extend the gear range for automatic shifting with the gear selector lever in position D and driving in the automatic program mode C or S.

⚠ Allow engine to warm up under low load use. Do not place full load on the engine until the operating temperature has been reached.

Shift into reverse gear R or parking position P only when the vehicle is stopped.

Avoid spinning of a drive wheel for an extended period when driving off on slippery road surfaces. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Downshifting

**Warning!**

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

- Briefly press the gear selector lever to the left in the D- direction.

The transmission will shift from the current gear to the next lower gear as permitted by the shift program. This action simultaneously limits the gear range of the transmission (▶ page 167).

⚠ To avoid overrevving the engine when the gear selector lever is moved to the D- direction, the transmission will not shift to a lower gear if the engine’s max. speed would be exceeded.

Upshifting

- Briefly press the gear selector lever to the right in the D+ direction.

The transmission will shift from the current gear to the next higher gear as permitted by the shift program. This action simultaneously extends the gear range of the transmission.

Canceling gear range limit

- Press and hold the gear selector lever in the D+ direction until D reappears in the right multifunction display.

The transmission will shift from the current gear range directly to gear range D.

Shifting into optimal gear range

- Press and hold the gear selector lever in the D- direction.

The transmission will automatically select the gear range suited for optimal acceleration and deceleration. This may involve shifting down one or more gears.
Controls in detail

Automatic transmission

Steering wheel gearshift control

one-touch gearshifting

Steering wheel gearshift control is available on vehicles with Sport Package*, on SL 55 AMG, and on SL 65 AMG only.

The steering wheel gearshift control provides an alternative method for changing the gears manually and limiting or extending the gear range for automatic shifting with the gear selector lever in position D and driving in the automatic program mode C or S.

To avoid overrevving the engine when downshifting with steering wheel gearshift buttons, the transmission will not shift to a lower gear if the engine’s max. speed would be exceeded.

Allow engine to warm up under low load use. Do not place full load on the engine until the operating temperature has been reached.

Shift into reverse gear R or parking position P only when the vehicle is stopped.

Avoid spinning of a drive wheel for an extended period when driving off on slippery road surfaces. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Steering wheel gearshift control

SL 500 with Sport Package* and SL 600 with Sport Package*

The steering wheel gearshift buttons are located to the left and right of the steering wheel.

1 Button, outside: upshift
2 Button, inside: downshift

For information on using the steering wheel gearshift control in program mode MANUAL (SL 55 AMG and SL 65 AMG only), see “Manual shift program” (► page 173).
Controls in detail
Automatic transmission

**Controls in detail**

**Automatic transmission**

**Downshifting**

Briefly press the inside 2 of one of the buttons on the steering wheel. The transmission will shift to the next lower gear as permitted by the shift program. This action simultaneously limits the gear range of the transmission (page 167).

**Upshifting**

Briefly press the outside 1 of one of the buttons on the steering wheel. The transmission will shift to the next higher gear as permitted by the shift program. This action simultaneously extends the gear range of the transmission.

**Canceling gear range limit**

Press and hold the outside 1 of one of the buttons on the steering wheel until D reappears in the right multifunction display. The transmission will shift from the current gear range directly to gear range D.

**Shifting into optimal gear range**

Press and hold the inside 2 of one of the buttons on the steering wheel. The transmission will automatically select the gear range suited for optimal acceleration and deceleration. This may involve shifting down one or more gears.

---

**i**

You cannot shift with the steering wheel gearshift buttons when the gear selector lever is in position P, N or R. The last selected program mode (C or S) is switched on when the engine is restarted.

**Warning!**

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.
**Automatic transmission**

**Steering wheel gearshift control**

SL 55 AMG and SL 65 AMG

The steering wheel gearshift buttons are located to the left and right of the steering wheel.

1. Left button: downshift
2. Right button: upshift

**Downshifting**

You cannot shift with the steering wheel gearshift buttons when the gear selector lever is in position P, N or R.

The following instructions describe operation of the steering wheel gearshift control when driving in the automatic program mode C or S.

The last selected program mode (C or S) is switched on when the engine is restarted in the automatic program mode.

- Briefly press button 1 on the left side of the steering wheel.

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

The transmission will shift to the next lower gear as permitted by the shift program. This action simultaneously limits the gear range of the transmission (> page 167) when you are driving in the automatic program mode (C or S).

**Warning!**

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.
**Upshifting**

- Briefly press button 2 on the right side of the steering wheel. The transmission will shift to the next higher gear as permitted by the shift program. This action simultaneously extends the gear range of the transmission when you are driving in the automatic program mode (C or S).

**Canceling gear range limit**

- Press and hold button 2 on the right side of the steering wheel until D reappears in the right multifunction display. The transmission will shift from the current gear range directly to gear range D.

**Shifting into optimal gear range**

- Press and hold button 1 on the left side of the steering wheel. The transmission will automatically select the gear range suited for optimal acceleration and deceleration. This will involve shifting down one or more gears.

**Manual shift program SL 55 AMG and SL 65 AMG**

In addition to the automatic shift program C or S, your vehicle is equipped with the manual shift program MANUAL.

In the MANUAL program mode, system-controlled automatic gearshifting is switched off and you need to change the gears by manually upshifting or downshifting using the steering wheel gearshift buttons to the left and right of the steering wheel (> page 172) or the gear selector lever.
Controls in detail

Automatic transmission

The program mode selector switch is located on the lower part of the center console.

1 
Program mode selector switch

MANUAL For manual gear shifting
C Comfort For comfort driving
S Sport For standard driving

Allow engine to warm up under low load use. Do not place full load on the engine until the operating temperature has been reached.

Shift into reverse gear R or parking position P only when the vehicle is stopped.

Avoid spinning of a drive wheel for an extended period when driving off on slippery road surfaces. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

The current gear selector lever position and the selected program mode (M/C/S) are indicated in the right multifunction display (>).

For information on automatic program modes C or S, see “Automatic shift program” (>). “Gear selector lever one-touch gearshifting” (>) and “Steering wheel gearshift control one-touch gearshifting” (>).
Activating manual shift program

Press program mode selector switch 1 repeatedly until the \textit{M} for MANUAL program mode appears in the right multifunction display.

The transmission switches to the MANUAL program mode. Automatic shifting is switched off. The gear range is not limited.

You can change the gears manually when the gear selector lever is in position D. You can upshift or downshift through the gears in succession.

\textit{The MANUAL program mode will not be stored. When the engine is turned off with the MANUAL program mode selected, the transmission will go to the automatic program mode (C or S) when the engine is restarted.}

Upshifting

\textbf{Briefly press the gear selector lever to the right in the D^+ direction.}

\textbf{or}

\textbf{Briefly press button 2 on the right side of the steering wheel (\(\text{\textfrak{p}}\) page 172).}

The transmission shifts to the next higher gear.

If, instead of the manual program mode symbol \textit{M}, the symbol \textit{p} appears in the right multifunction display (\(\text{\textfrak{p}}\) page 163), shift to the next higher gear. The fuel supply will otherwise be interrupted to prevent the engine from overrevving.

\textbf{i} The MANUAL program mode will not be stored. When the engine is turned off with the MANUAL program mode selected, the transmission will go to the automatic program mode (C or S) when the engine is restarted.
Controls in detail

Automatic transmission

Downshifting

Warning!

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

► Briefly press the gear selector lever to the left in the D-direction.

or

► Briefly press button 1 on the left side of the steering wheel (> page 172).

The transmission shifts to the next lower gear.

i When you brake or stop, the transmission shifts down to a gear from which you can easily accelerate or take off.

Kickdown

Using the kickdown when driving in the MANUAL program mode is not possible.

Deactivating manual shift program

► Press the program mode selector switch (> page 174) repeatedly until C or S appears in the right multifunction display.

or

► Restart the engine.

The transmission will go to the automatic program mode (C or S). The MANUAL program mode is not stored.

Emergency operation

(Limp Home Mode)

If vehicle acceleration worsens or the transmission no longer shifts, the transmission is most likely operating in limp home (emergency operation) mode. In this mode only second gear and reverse gear can be activated.

► Stop the vehicle in a safe location.

► Move gear selector lever to P.

► Turn off the engine.

► Wait at least 10 seconds before restarting.

► Restart the engine.

► Move gear selector lever to position D (for second gear) or R.

► Have the transmission checked at an authorized Mercedes-Benz Center as soon as possible.
Good visibility

For information on windshield wiper opera-
tion, see “Windshield wipers” (p. 54).

Headlamp cleaning system

The button is located on the left side of the
dashboard.

Press button 1.
The headlamps are cleaned with a
high-pressure water jet.

The headlamps will automatically be
converted when you have
• switched on the headlamps
• operated the windshield wipers
  with windshield washer fluid
  fifteen times

When you switch off the ignition, the
counter resets.

For information on filling up the washer flu-
id reservoir, see “Windshield washer sys-
tem and headlamp cleaning system”
(p. 280).

Rear view mirrors

For information on setting the rear view
mirrors, see “Mirrors” (p. 44).

Auto-dimming rear view mirror

The reflection brightness of the exterior
rear view mirror on the driver’s side and
the interior rear view mirror will respond
automatically to glare when
• the ignition is switched on
• incoming light from headlamps falls on
  the sensor in the interior rear view mir-
  ror.

The interior rear view mirror will not react if
• reverse gear is engaged
• the interior lighting is switched on
Controls in detail

Good visibility

Warning!
The auto-dimming function does not react if incoming light is not aimed directly at sensors in the interior rear view mirror.
The interior rear view mirror and the exterior rear view mirror on the driver’s side do not react, for example, if the windscreen is installed.
Glare can endanger you and others.

Warning!
The sun visors protect you from sun glare while driving.

Warning!
Electrolyte drops coming into contact with the vehicle paint finish can be completely removed only while in the liquid state by applying plenty of water.

Warning!
Do not use the vanity mirror while driving. Keep the mirrors in the sun visors closed while vehicle is in motion. Reflected glare can endanger you and others.

→ Swing sun visors down when you experience glare.

Electrolyte has an irritating effect. Do not allow the liquid to come into contact with eyes, skin, clothing, or respiratory system. In case it does, immediately flush affected area with water, and seek medical help if necessary.

Warning!
Exercise care when using the passenger-side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your interior rear view mirror or glance over your shoulder before changing lanes.

1. Mounting
2. Mirror cover
3. Mirror lamp
4. Holder for gas cards

→ To use mirror, lift up cover ②.
### Good visibility

#### Rear window defroster

The rear window defroster uses a large amount of power. To keep the battery drain to a minimum, switch off the defroster as soon as the rear window is clear. The defroster is automatically deactivated after approximately 6 to 17 minutes of operation depending on the outside temperature.

### Activating

- Switch on the ignition (> page 36).
- Press button [F] on the automatic climate control panel (> page 181).

The indicator lamp on the button comes on.

### Deactivating

- Press button [F] (> page 181) once more.

The indicator lamp on the button goes out.

#### Warning!

Any accumulation of snow and ice should be removed from the rear window before driving. Visibility could otherwise be impaired, endangering you and others.

---

The rear window defroster cannot be switched on when the retractable hard-top is open. The indicator lamp will start flashing if the hardtop is open.

- Close the retractable hardtop.

The rear window defroster can then be switched on.

If the rear window defroster switches off too soon and the indicator lamp starts flashing, too many electrical consumers are operating simultaneously and there is insufficient voltage in the battery. The system responds automatically by switching the rear window defroster off.

As soon as the battery has sufficient voltage, the rear window defroster automatically switches back on automatically.

</tr>
</tbody>
</table>
The automatic climate control is operational whenever the engine is running. You can operate the climate control system in either the automatic or manual mode. The system cools or heats the interior depending on the selected interior temperature and the current outside temperature.

Nearly all dust particles, pollutants and odors are filtered out before outside air enters the passenger compartment through the air distribution system.

The air conditioning will not engage (no cooling) if the A/C mode is deactivated (> page 189).

**Warning!**

When operating the automatic climate control, the air that enters the passenger compartment through the air vents can be very hot or very cold (depending on the set temperature). This may cause burns or frostbite on unprotected skin in the immediate area of the air vents. Always keep sufficient distance between unprotected parts of the body and the air vents. If necessary, use the air distribution control (> page 181) to direct the air to air vents in the vehicle interior that are not in the immediate area of unprotected skin.

**Warning!**

Follow the recommended settings for heating and cooling given on the following pages. Otherwise the windows could fog up, impairing visibility and endangering you and others.

Severe conditions (e.g. strong air pollution) may require replacement of the filter before its scheduled interval. A clogged filter will reduce the air volume to the interior.

If the vehicle interior is hot, ventilate the interior before driving off. The climate control will then adjust the interior temperature to the set value much faster.

Keep the air intake grille in front of the windshield free of snow and debris.

When the retractable hardtop is closed, do not obstruct air flow by placing objects on the air flow-through exhaust slots below the rear window.
Deactivating the automatic climate control system

Deactivating

- Press button OFF (page 181).
  The indicator lamp on the button goes out.

  When the automatic climate control system is switched off, the outside air supply and circulation are also switched off. Only choose this setting when the retractable hardtop is open. Otherwise the windows could fog up.

Reactivating

- Press button OFF (page 181).
  The indicator lamp on the button goes out.
  The previous settings are in effect again.

  or

- Turn one of the temperature controls on the automatic climate control panel (page 181).
  The indicator lamp on button OFF goes out.

Operating the climate control system in automatic mode

Air distribution and air volume can be adjusted automatically by the automatic climate control system. You can also adjust the settings for air distribution and air volume manually.

- When operating the climate control system in automatic mode, you will only rarely need to adjust the temperature, air volume and air distribution.
  In automatic mode, cooling with dehumidify is switched on. This function can be switched off if necessary (page 181).
Controls in detail

Automatic climate control

Air distribution in automatic mode
You can separately adjust the air distribution for each side of the passenger compartment.

Activating
► Press control button ② or ⑥ (▶ page 181).

The control button is engaged. The AUTO symbol on the control button comes on. Air distribution for the respective side of the passenger compartment is adjusted automatically.

Deactivating
► Press control button ② or ⑥ (▶ page 181) once more.

The control button sticks up slightly. The AUTO symbol on the control button goes out. Automatic air distribution for the respective side of the passenger compartment is switched off. Adjust the air distribution manually (▶ page 185).

Air volume in automatic mode
The air volume settings are the same for the entire passenger compartment.

Activating
► Press control button ⑪ (▶ page 181).

The control button is engaged. The AUTO symbol on the control button comes on.

Deactivating
► Press control button ⑪ (▶ page 181) again.

The control button sticks up slightly. The AUTO symbol on the control button goes out. Adjust the air volume manually (▶ page 186).

Setting the temperature

Use temperature controls ① and ⑦ (▶ page 181) to separately adjust the air temperature on each side of the passenger compartment. You should raise or lower the temperature setting in small increments, preferably starting at 72°F (22°C). The automatic climate control will adjust to the set temperature as fast as possible.

Increasing
► Turn temperature control ① and/or ⑦ (▶ page 181) slightly clockwise.

The automatic climate control system will correspondingly adjust the interior air temperature.

Decreasing
► Turn temperature control ① and/or ⑦ (▶ page 181) slightly counterclockwise.

The automatic climate control system will correspondingly adjust the interior air temperature.

Automatic climate control

Adjusting air distribution

Use air distribution controls 2 and 6 (page 181) to separately adjust the air distribution on each side of the passenger compartment. The following symbols are found on the controls:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>h</td>
<td>Directs air through the center and side air vents</td>
</tr>
<tr>
<td>j</td>
<td>Directs air to the windows</td>
</tr>
<tr>
<td>V</td>
<td>Directs air into the entire vehicle interior</td>
</tr>
<tr>
<td>k</td>
<td>Directs air to the footwells</td>
</tr>
</tbody>
</table>

- Press control button 2 or 6 (page 181) until the control button sticks up slightly and the symbol on the control button is out.

Automatic air distribution for the respective side of the passenger compartment is switched off.

- Turn control button to the desired symbol.

The air distribution is adjusted according to the chosen setting.

You can also turn the air distribution control to a position between two symbols.

Opening the center air vents

- Turn the thumbwheel 7 (page 180) upward to the first stop.

Center air vents 1 and 5 (page 180) are open.

Opening the cockpit air vent and center air vents

- Turn the thumbwheel 7 (page 180) upward all the way.

Cockpit air vent 2 and center air vents 1 and 5 (page 180) are open.

Closing the cockpit air vent and center air vents

- Turn the thumbwheel 7 (page 180) downward.

Cockpit air vent 2 and center air vents 1 and 5 (page 180) are closed.

Opening the side air vents

- Turn the thumbwheel 6 and 8 (page 180) upward.

The corresponding side air vent is open.

Closing the side air vents

- Turn the thumbwheel 6 and 8 (page 180) upward.

The corresponding side air vent is closed.

The air vents are continuously variable.
### Controls in detail

#### Automatic climate control

<table>
<thead>
<tr>
<th>Adjusting air volume</th>
<th>Maximum cooling MAXCOOL</th>
<th>Front defroster</th>
</tr>
</thead>
</table>
| Use air volume control (page 181) for both automatic (page 183) and manual air volume adjustment. Nine blower speeds are available.  
- Press control button (page 181).  
The control button sticks up slightly.  
The symbol on the control button goes out.  
Automatic air volume control is switched off.  
The air volume is adjusted corresponding to the set blower speed. | If the left and right air distribution controls as well as the airflow volume control are set to AUTO and there is a high need for cooling, MAXCOOL is activated.  
“MAXCOOL” appears on the temperature controls 1 and 7 (page 181).  
This provides the fastest possible cooling of the vehicle interior (when retractable hardtop is closed). | You can use this setting to defrost the windshield, for example if it is iced up.  
You can also defog the windshield and the side windows.  
Keep this setting selected only until the windshield or the side windows are clear again. |
Controls in detail

Automatic climate control

**Activating**

- Press button [ ] (page 181).
The indicator lamp on the button comes on.

The air conditioning switches to the following functions automatically:
- cooling on to dehumidify
- maximum blower speed and heating power
- air flows onto the windshield and the front side windows
- the air recirculation mode is switched off

**Windshield fogged on the outside**

- The cooling remains switched on.

**Deactivating**

- Press button [ ] (page 181).
The indicator lamp on the button goes out. Defrosting is turned off.

The previous settings are in effect again.

**Air recirculation mode**

Switch to air recirculation mode to prevent unpleasant odors from entering the vehicle from the outside. This setting cuts off the intake of outside air and recirculates the air in the passenger compartment.

**Warning!**

Fogged windows impair visibility, endangering you and others. If the windows begin to fog on the inside, switching off the air recirculation mode immediately should clear interior window fogging. If interior window fogging persists, make sure the air conditioning (page 189) is activated, or press button [ ].

i

The cooling remains switched on.

i

Keep this setting selected only until the windshield is clear again.

i

Switch the windshield wipers on (page 54).

If the automatic air distribution and air volume are switched off:

- Turn air distribution controls [ ] and [ ] (page 181) to position [ ] or [ ].

or

- Press control buttons [ ], [ ] and [ ] (page 181).

The control buttons are engaged. The symbol on the control buttons come on. Air distribution and air volume are adjusted automatically.
Controls in detail

Automatic climate control

Activating

- Briefly press button (page 181).
  - The indicator lamp on the button comes on.

- The air recirculation mode is activated automatically
  - at high outside temperatures
  - if the concentration of carbon monoxide and nitrogen oxide in the outside air increases, for example in a tunnel

- The indicator lamp on button is not lit when the air recirculation mode is automatically switched on.

- A quantity of outside air is added after approximately 30 minutes.

Deactivating

- Briefly press button (page 181).
  - The indicator lamp on the button goes out.

- The air recirculation mode is deactivated automatically
  - after five minutes if the outside temperature is below approximately 41°F (5°C)
  - after five minutes if the air conditioner is turned off
  - after 30 minutes if the outside temperature is above approximately 41°F (5°C)

Warning!

- Never operate the side windows if there is the possibility of anyone being harmed by the closing procedure.
- In the event that the procedure causes potential danger, the closing of the side windows can be immediately halted by releasing the button.
- Press and hold button. The windows will close.
- The closing of the windows can be immediately halted by releasing button.
Controls in detail

Automatic climate control

At outside temperatures above 79°F (26 °C) the system will not automatically switch back to outside air.

**Air conditioning**

The air conditioning (cooling) function is operational when the engine is running and cools the vehicle interior down to the selected temperature. In addition, the cooling function dehumidifies the air in the vehicle interior, thus preventing the windows from fogging up.

**Deactivating**

It is possible to deactivate the cooling function of the automatic climate control system. The air in the vehicle will then no longer be cooled or dehumidified.

Press and hold button \[button\]. The indicator lamp on the button goes out. The cooling function switches off after a short delay.

Condensation may drip out from underneath the vehicle. This is normal and not an indication of a malfunction.

**Warning!**

If you turn off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.

Press and hold button \[button\]. The windows will open.

The opening of the windows can be immediately halted by releasing button \[button\].

If you turn off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.
Controls in detail

Automatic climate control

Activating

Moist air can fog up the windows. You can dehumidify the air with the air conditioning.

- Press button \( \text{A/C} \) once more (> page 181).
  
  The indicator lamp on the button comes on.

The air conditioning uses the refrigerant R134A. This refrigerant is free of CFCs which are harmful to the ozone layer.

If the \( \text{A/C} \) button on the automatic climate control panel starts to flash, this indicates that the air conditioning is losing refrigerant. The compressor has turned off. The air conditioning cannot be turned on again.

- Have the air conditioning checked at the nearest authorized Mercedes-Benz Center.

Residual heat and ventilation

With the engine switched off, it is possible to continue to heat or ventilate the interior for up to 30 minutes. This feature makes use of the residual heat produced by the engine.

How long the system will provide heating depends on the coolant temperature and the selected temperature. The blower will run at low speed regardless of the air distribution control setting.

Activating

With the SmartKey:

- Turn the SmartKey in the starter switch to position 1 or 0, or remove it from the starter switch.

- Press button \( \text{REST} \) (> page 181).
  
  The indicator lamp on the button comes on.

With KEYLESS-GO*:

- Turn off the engine by pressing the KEYLESS-GO* start/stop button and open the driver's door (with the driver's door open, the starter switch is in position 0, same as with the SmartKey removed from the starter switch)

- Press button \( \text{REST} \) (> page 181).
  
  The indicator lamp on the button comes on.
Deactivating

► Press button REST (page 181).

The indicator lamp on the button goes out.

The residual heat is automatically turned off:

- when the ignition is switched on
- after about 30 minutes
- if the battery voltage drops
- when the coolant temperature is too low

Ventilated storage compartments

The glove box and the armrest storage compartment have their own air vents that allow for cooling ventilation when the automatic climate control system is activated.

Opening the air vent

► Turn thumbwheel 1 upwards.

Closing the air vent

► Turn thumbwheel 1 downwards.

Storage compartment under the armrest

1 Thumbwheel
2 Air vent

Opening the air vent

► Turn thumbwheel 1 to the right.

Closing the air vent

► Turn thumbwheel 1 to the left.
Controls in detail

Power windows

Opening and closing the windows

The windows are opened and closed electrically. The switches for all the windows are on the driver’s door. The switch for the passenger side windows is on the passenger door.

1. Left door and rear side windows
2. Right door and rear side windows

The closing of the door windows can be immediately halted by releasing the switch or, if the switch was pulled past the resistance point and released, by either pressing or pulling the respective switch.

The closing of the rear side windows can be immediately halted by releasing the switch.

If a door window encounters an obstruction that blocks its path in a circumstance where you pulled the switch past the resistance point and released it to close the door window, the automatic reversal function will stop the door window and open it slightly.

If the door window encounters an obstruction that blocks its path in a circumstance where you are closing the door window by pulling and holding the switch, by pressing and holding button \( \text{on the SmartKey, by pressing and holding the lock button (vehicles with KEYLESS-GO* on an outside door handle, by pressing and holding the retractable hardtop switch, or by pressing and holding button } \) on the climate control panel, the automatic reversal function will not operate.

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment can cause an accident and/or serious personal injury.

Switc on the ignition (\( \text{page 36}.\)

Depending on the current position, the windows may also open or close when the air recirculation button \( \text{on the control panel of the automatic climate control (\( \text{page 187}\) is pressed and held.}
### Controls in detail

#### Power windows

#### Opening the door windows
- Press switch 1 or 2 to the resistance point.
  The corresponding door window will move downwards until you release the switch.

  - If the hardtop is open, the respective rear side window will open automatically as soon as the door window is completely open.

#### Opening the rear side windows if the hardtop is closed:
- Open the door window.
- Press switch 1 or 2 to the resistance point again.
  The corresponding rear side window will open completely.

#### Closing the door windows
- Pull switch 1 or 2 to the resistance point.
  The corresponding door window will move upwards until you release the switch.

#### Closing the rear side windows if the hardtop is closed:
- Close the door window.
- Pull and hold switch 1 or 2.
  The corresponding rear side window will move upwards until you release the switch.

#### Fully opening the door windows (Express-open)
- Press switch 1 or 2 past the resistance point and release.
  The corresponding door window opens completely.

  - If the hardtop is open, the respective rear side window will open automatically as soon as the door window is completely open.
Controls in detail

Power windows

Fully closing the door windows (Express-close)

► Pull switch 1 or 2 past the resistance point and release.

The corresponding door window closes completely.

If the upward movement of the door window is blocked during the closing procedure, the door window will stop and open slightly.

**Warning!**

Driver’s door only: If within 5 seconds the switch is again pulled past the resistance point and released, the automatic reversal will not operate.

Stopping windows

► Press or pull the respective switch again.

Closing the windows with KEYLESS-GO*

► Press and hold lock button on an outside door handle (> page 62) until the windows are closed.

**Warning!**

When closing the windows make sure that there is no danger of anyone being harmed by the closing procedure.

The windows will not automatically re-open if blocked during convenience closing.

If potential danger exists, proceed as follows:

- Release the lock button.
- Pull on the door handle and hold firmly. The side windows open for as long as the door handle is held but the door not opened.

Synchronizing power windows

The power window must be resynchronized each time

- after the battery has been disconnected
- if the power windows cannot be fully opened (Express-open) or closed (Express-close)

Synchronizing the power windows

► Switch on the ignition (> page 36).

► Pull the power window switches until the side windows are closed.

Hold the switches for approximately 1 second.

The power windows are synchronized.
Retractable hardtop
Opening and closing the retractable hardtop

For safety reasons, the retractable hardtop can only be opened and closed when the vehicle is standing still.

Warning!

Before operating the switch for the retractable hardtop, make sure there is no danger of anyone being injured by the moving parts (retractable roof, roof frame, and trunk lid) due to inattention.

Hands must never be placed near the roof frame, upper windshield area, hardtop, shelf behind roll bars, or trunk lid while the retractable hardtop is being raised or lowered. Serious personal injury may occur.

If potential danger exists, release the retractable hardtop switch. This immediately interrupts the raising or lowering procedure. You then can operate the hardtop switch to raise or lower the hardtop away from the danger zone.

Warning!

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment can cause an accident and/or serious personal injury.

Never sit or place heavy objects on the rear shelf. Doing so could cause damage to the retractable hardtop and the rear shelf.

Otherwise the roof and trunk of the vehicle could be damaged.
Luggage cover
The luggage cover is located in the trunk.

1 Handle
2 Holders

Closing luggage cover
- Pull out the luggage cover using handle 1.
- Hook the luggage cover into left and right side holders 2.

Opening luggage cover
- Unhook luggage cover from side holders.
- While holding on to handle 1, guide luggage cover back into its storage compartment.

To prevent damage to the hardtop or luggage/cargo when lowering the roof:
- Load trunk only to the height of the luggage cover.
- Do not permit luggage/cargo to push up the closed luggage cover.
- Do not load anything on top of or in front of the luggage cover.
- Do not place anything on the shelf behind the roll bar.

Opening the retractable hardtop with the switch

Hardtop switch
Before pulling on the hardtop switch, you must make sure
- the parking brake is engaged (> page 51)
- the luggage cover is closed, see Luggage cover
- the trunk lid is closed
- the ignition is switched on
Pull up on the hardtop switch as indicated by the arrow until the hardtop is completely lowered into its trunk storage compartment and the indicator lamp in the hardtop switch goes out.

The multifunction display will briefly show the message in operation.

Be sure that the roof is dry before you open it. Otherwise water may enter the trunk interior.

Closing the retractable hardtop with the switch

Before pressing the hardtop switch, you must make sure

- the parking brake is engaged (\(\Rightarrow\) page 51)
- the luggage cover is closed (\(\Rightarrow\) page 196)
- the trunk lid is closed
- the ignition is switched on

Press the hardtop switch as indicated by the arrow until the hardtop is completely closed and locked and the indicator lamp in the hardtop switch goes out.

The multifunction display will briefly show the message in operation.

Warning!

If the retractable hardtop is not fully opened or closed, a warning will sound after 15 seconds, pressure in the hardtop’s hydraulic system will drop and the hardtop will lower.

Be sure to keep the hardtop switch pulled or pressed until the hardtop is fully opened or closed. The hydraulic pump will then shut off.

To prevent possible accidents, drive the vehicle only with the hardtop either completely closed and locked, or fully lowered into its storage compartment.
Controls in detail

Retractable hardtop

Locking the retractable hardtop after raising/lowering

**Warning!**
The hardtop is not fully closed and locked or not fully opened and locked if:
- the indicator lamp in the hardtop switch remains lit
- the message "in operation" appears in the multifunction display and the indicator lamp in the hardtop switch does not go out
- the indicator lamp in the hardtop switch flashes and a warning sounds for 10 seconds and the message "Lock retractable roof" appears in the multifunction display when starting to drive

If the retractable hardtop is not properly locked, lock it as described below.

**Unlocked status noticed when stopped**
- Switch on the ignition.
- To lock the hardtop in its fully closed position, press hardtop switch forward.
  or:
- To lock the hardtop in its fully opened position, pull up on the hardtop switch.

**Unlocked status noticed while driving**
- Stop the vehicle in a safe location or as soon as it is safe to do so and lock the hardtop before continuing to drive. You could otherwise endanger yourself and others.
- Stop the vehicle in a safe location or as soon as it is safe to do so.
- Leave the ignition switched on.
- To lock the hardtop in its fully closed position, press hardtop switch forward.
  or:
- To lock the hardtop in its fully opened position, pull up on the hardtop switch.
Opening the retractable hardtop with the SmartKey (Summer opening feature)

Aim the transmitter eye at the door handle. The SmartKey must be in close proximity to the outside door handle.

Press and hold button ${\text{button}}$ until the retractable hardtop is completely open.

The seat ventilation for the driver’s seat switches on. The rear side windows open.

Release button ${\text{button}}$ to interrupt procedure.

Warning!

If the retractable hardtop does not completely open or close, the roof hydraulics will lose pressure and the retractable hardtop is lowered

- after approximately 7 minutes when the ignition is switched on
- after approximately 15 seconds when the ignition is switched off

Shortly before the hardtop is lowered, a warning will sound and the hardtop switch lamp will flash. In the speedometer display you will see ${\text{message}}$ in the tachometer display you will see the message being lowered.

Properly lock the retractable hardtop (page 198) before continuing to drive.

Warning!

Before operating the retractable hardtop, make sure there is no danger of anyone being injured by the moving parts (retractable roof, roof frame, and trunk lid) due to inattention.

Hands must never be placed near the roof frame, upper windshield area, hardtop, shelf behind roll bars, or trunk lid while the retractable hardtop is being raised or lowered. Serious personal injury may occur.

If potential danger exists, release the respective button on the SmartKey. This immediately interrupts the raising or lowering procedure. You then can operate ${\text{button}}$ or ${\text{button}}$ to raise or lower the hardtop away from the danger zone.
Closing the retractable hardtop with the SmartKey (Convenience feature)

- Aim the transmitter eye at the door handle.
  The SmartKey must be in close proximity to the outside door handle.
- Press and hold button \( \text{[button]} \) until the retractable hardtop is completely closed.

The retractable hardtop and the side windows close. In the tachometer display you will see the message \textit{Retractable roof Closed}. 

Problems when operating the retractable hardtop

\textbf{Indicator lamp in the retractable hardtop switch is flashing}

Several conditions may cause the indicator lamp in the hardtop switch to flash when activated:
- The luggage cover in the trunk is not closed.
  - Close the luggage cover in the trunk.
- The trunk lid is open.
  - Close the trunk lid.
- The battery voltage is too low.
  - Start engine and let run while activating switch.

\textbf{Warning!}

If the retractable hardtop does not completely open or close, a warning sounds and the retractable hardtop switch flashes. In the speedometer display you will see \( \text{[indicator]} \), in the tachometer display you will see the message \textit{being lowered}. After about 15 seconds the roof hydraulics lose pressure.

Properly lock the retractable hardtop (\( \text{[page]} 198 \)) before continuing to drive.
• The hardtop drive system has shut itself down. For safety reasons, no more than five consecutive attempts may be made to raise or lower the hardtop.
  ▶ After about 10 minutes you may again attempt to open or close the retractable hardtop.

If the indicator lamp in the retractable hardtop switch flashes when starting off or while driving and you hear a warning sound for a maximum of 10 seconds, the retractable hardtop is not locked.

▶ Properly lock the retractable hardtop (> page 198) before continuing to drive.

If the indicator lamp continues to flash after you have carried out the above actions, there is a malfunction.

▶ Have the retractable hardtop system checked at an authorized Mercedes-Benz Center.

**Indicator lamp in the retractable hardtop switch is on when vehicle is stopped**
If the indicator lamp in the retractable hardtop switch comes on while the vehicle is standing still and the switch was not activated, then the retractable hardtop is not locked.

▶ Properly lock the retractable hardtop (> page 198) before continuing to drive.

**The retractable hardtop will not lock**
There is a malfunction in the retractable hardtop system.

▶ Notify an authorized Mercedes-Benz Center.

**Wind screen**

**Warning!**
The wind screen can restrict the driver’s vision to the rear of the vehicle. To prevent a possible accident when visibility is limited (e.g. in darkness), the upper part of the wind screen should be folded back.

The wind screen deflects drafts away from the driver and passenger when the hardtop is lowered. It is stored in a separate storage bag.

**Installing**

▶ Leave the wind screen folded and place it on the roll bar.
Retractable hardtop

Guide tabs
- Slide the wind screen into the roll bar until the guide tabs on each side latch underneath the roll bar. Make sure the fastening straps do not get caught.
- Raise the roll bar slightly (▷ page 75).

Buckle
- Guide the fastening straps around the top of the roll bar and close buckles ②.
- Tighten the fastening straps if necessary.
- Lower the roll bar.
- Fold the upper section of the wind screen up towards the head restraints until it stops.

Removing
- Fold the upper section of the wind screen back down.
- Raise the roll bar slightly (▷ page 75).
- Release button
- Undo the buckles on the upper section of the roll bar by pressing release button ①.
 ► Lower the roll bar. Make sure the fastening straps do not get caught.
 ► Pull the wind screen out towards the front of the vehicle. Be careful not to damage interior trim with the guide tabs.
 ► Place the wind screen back into the bag.

**Sunshade for panorama roof**

The sunshade protects you from excessive sunlight coming in through the panorama roof.

**Warning!**

Do not operate the sunshade while driving. Adjusting the sunshade while driving could cause the driver to lose control of the vehicle.

**Opening**

 ► Squeeze stop buttons ① and guide the sunshade towards the rear.

**Closing**

 ► Using handle ②, slide the sunshade towards the front of the vehicle.
The driving systems of your vehicle are described on the following pages:

- Cruise control and Distronic®, with which the vehicle can maintain a preset speed
- ABC with vehicle level control systems, with which you can change vehicle suspension characteristics
- Parktronic*, which assists the driver during parking maneuvers

For information on the BAS, ABS, and ESP®, see “Driving safety systems” (▶ page 82).

### Cruise control

The cruise control automatically maintains the speed you set for your vehicle.

Use of cruise control is recommended for driving at a constant speed for extended periods of time. Cruise control can be set at any speed above 20 mph (30 km/h).

The cruise control function is operated by means of the cruise control lever.

The cruise control lever is the uppermost lever found on the left-hand side of the steering column (▶ page 22).

### Warning!

The cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must remain at all times responsible for the vehicle speed and for safe brake operation.

Only use the cruise control if the road, traffic, and weather conditions make it advisable to travel at a steady speed.

- The use of cruise control can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a steady speed.
- The use of cruise control can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control.
- Deactivate the cruise control when driving in fog.

The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.
Setting current speed

- Accelerate or decelerate to the desired speed.
- Briefly lift ① or depress ② the cruise control lever.
  The current speed is set.
- Remove your foot from the accelerator pedal.
  The cruise control is activated.

The selected speed appears in the multifunction display.

Canceling cruise control

There are several ways to cancel the cruise control:

- Step on the brake pedal.
  The cruise control is canceled. The last speed set is stored for later use.

or

- Briefly push the cruise control lever in direction of arrow ③.
  The cruise control is canceled. The last speed set is stored for later use.

Warning!

Cruise control brakes automatically so that the set speed is not exceeded.
Keep in mind that cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must remain at all times responsible for the vehicle speed and for safe brake operation.

On uphill or downhill grades, the cruise control may not be able to maintain the set speed. Once the grade eases, the set speed will be resumed.

On downhill grades, the cruise control maintains the set speed with active braking action. In addition, on longer downhill grades, the automatic transmission will automatically downshift.
Controls in detail
Driving systems

Setting a higher speed
- Lift the cruise control in direction of arrow ① (▶ page 205) and hold it there until the desired speed is reached.
- Release the cruise control lever.
  The new speed is set.

Setting a lower speed
- Depress the cruise control in direction of arrow ② (▶ page 205) and hold it there until the desired speed is reached.
- Release the cruise control lever.
  The new speed is set.

The cruise control switches off automatically if
- you step on the brake pedal
- you depress the parking brake pedal

The cruise control also switches off automatically when
- the vehicle speed is below 20 mph (30 km/h) (▶ page 204)
- the ESP® is in operation or switched off with the ESP® switch (▶ page 86)
- you move the gear selector lever to position N while driving
  An acoustic warning sounds and the message CC Off appears in the multifunction display for approximately 5 seconds.

Depressing the accelerator pedal does not deactivate the cruise control. After brief acceleration (e.g. for passing), the cruise control will resume the last speed set.

The last stored speed is canceled when you turn off the engine.

Moving the gear selector lever to position N while driving also cancels cruise control. However, the gear selector lever should not be moved to position N while driving except to coast when the vehicle is in danger of skidding (e.g. on icy roads).

When you use the cruise control lever to decelerate, the brake system will automatically brake the vehicle if the engine’s braking power does not brake the vehicle sufficiently.
Controls in detail
Driving systems

Fine adjustment in 1 mph (Canada: 1 km/h) increments

**Faster**

> Briefly tip the cruise control lever in direction of arrow 1 (▷ page 205).

**Slower**

> Briefly tip the cruise control lever in direction of arrow 2 (▷ page 205).

**Setting to last stored speed (“Resume” function)**

> Briefly pull the cruise control lever in direction of arrow 3 (▷ page 205).

The cruise control will resume the last set speed.

> Remove your foot from the accelerator pedal.

The selected speed appears in the multifunction display.

**Distronic**

When activated, the Distronic adaptive cruise control system increases the driving convenience afforded by the cruise control during travel on expressways and other major roads.

- If the Distronic distance sensor detects a slower moving vehicle directly ahead, your vehicle speed will be reduced so that you follow that vehicle at a preset distance.
- If there is no vehicle directly ahead of you, Distronic will function in the same way as cruise control (▷ page 204).

**Warning!**

Distronic adaptive cruise control is no substitute for active driving involvement. It does not react to stationary objects, nor recognize or predict the curvature and lane layout or the movement of vehicles ahead. Distronic can only apply a maximum of 20% of the vehicle’s braking power.
Controls in detail

Driving systems

It is the driver’s responsibility at all times to be attentive to road, weather and traffic conditions and to provide the steering, braking and other driving inputs necessary to retain control of the vehicle.

**Warning!**

Distronic is a convenience system, its speed adjustment reduction capability is intended to make cruise control more effective and usable when traffic speeds vary. It is not however, intended to, nor does it, replace the need for extreme care. The responsibility for the vehicle speed and the distance to the vehicle ahead, including most importantly brake operation to assure safe stopping distance, always rests with the driver. Distronic cannot take street and traffic conditions into account.

---

**Warning!**

Distronic requires familiarity with its operational characteristics. We strongly recommend that you review the following information carefully before operating the system.

---

**Info**

USA only:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

---

**Info**

Canada only:

This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

(1) This device may not cause interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

---

**Warning!**

Distronic cannot take street and traffic conditions into account. Only use Distronic if the weather and traffic conditions make it advisable to travel at a steady speed.
Controls in detail
Driving systems

**Warning!**

Use of Distronic can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control. Distronic does not act upon adverse sight distance conditions. Do not use Distronic during conditions of fog and heavy rain, snow or sleet.

**Warning!**

Close attention to road and traffic conditions is imperative at all times, regardless of whether or not Distronic is activated.

Use of Distronic can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a steady speed.

Distronic will not react to stationary objects in the roadway (e.g. a stopped vehicle in a traffic jam or a disabled vehicle). Distronic will also not respond to oncoming vehicles.

**Warning!**

The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.

**Switch off Distronic:**

- when changing from the left to the right lane if vehicles are moving more slowly in the left lane
- when entering a turn lane or highway off ramp
- in complex driving situations, such as in highway construction zones

In these situations, Distronic will continue to maintain the set speed unless deactivated. Distronic is designed and intended only to maintain a set speed and keep a set distance from moving objects in front of it.

**Warning!**

The DTR indicator lamp 🚙 in the speedometer dial comes on white.

If Distronic detects a vehicle directly ahead, the DTR indicator lamp 🚙 in the speedometer dial comes on white.

If Distronic calculates that there is a danger of collision

- the DTR warning lamp 🚙 in the speedometer comes on red
- an intermittent warning sound
  - Immediately brake the vehicle to avoid a collision.

Under no circumstances should the driver await the intermittent warning sound before braking. See the following warning note.

The intermittent warning sound ceases and the red DTR warning lamp 🚙 goes out when the necessary distance to the vehicle ahead is again established.

Distronic displays in the speedometer dial

The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.
Driving systems

Red DTR warning lamp

**Warning!**

An intermittent warning sounds and the DTR warning lamp (red) in the speedometer dial is illuminated if the Distronic system calculates that the distance to the vehicle ahead and your vehicle’s current speed indicate that Distronic will not be capable of slowing the vehicle sufficiently to maintain the preset following distance, which creates a danger of a collision.

Immediately brake the vehicle to increase the distance to the vehicle in front of you. The warning sound is intended as a final caution that you have not interceded with your own braking inputs to avoid a potentially dangerous situation. Do not wait for the operation of the warning signal to intercede with your own braking, as that will result in potentially dangerous emergency braking which will not always result in an impact being avoided.

Tailgating increases the risk of an accident.

**Warning!**

The Distronic brakes your vehicle with a maximum of 6.5 ft/s² (2 m/s²). This corresponds to about 20% of the maximum deceleration ability of your vehicle.

Distronic brakes the vehicle in an effort to restore the preset distance or to maintain the speed.
Distronic menu in the control system

In the Distronic menu you can read the current settings for Distronic. What appears in the left multifunction display depends on whether the Distronic is turned on or off.

- Press button $\text{A}$ or $\text{B}$ repeatedly until you see one of the following displays.

Distronic deactivated

When Distronic is deactivated, you will see the standard display in the left multifunction display.

1. Vehicle ahead, if detected
2. Actual distance to vehicle ahead
3. Preset distance threshold to vehicle ahead
4. Your vehicle
5. Symbol for activated distance warning function

Distronic activated

When Distronic is activated, the DTR symbol and the set speed appear in the left multifunction display.

1. Symbol for activated Distronic
2. Set speed
Controls in detail
Driving systems

Cruise control lever
The Distronic system is operated by means of the cruise control lever.

The cruise control lever is the uppermost lever found on the left-hand side of the steering column.

1. Set current or higher speed
2. Set current or lower speed
3. Deactivate Distronic
4. Resume at last set speed

Activating Distronic
You can activate Distronic if
- the vehicle speed is within a certain range. The range is between 20 mph (30 km/h) and 110 mph (180 km/h).
- the ESP® is activated (> page 85).

When Distronic is activated the speedometer display will show a message such as DTR 60 mph.

If Distronic is deactivated, the speedometer display will show the message DTR --- mph.

In the following cases you cannot activate Distronic:
- up to 2 minutes after starting the engine
- when you brake
- if you have set the parking brake
- if the gear selector lever is in position P, R, or N.
- if the ESP® is switched off

Setting the current speed
- Accelerate or decelerate to the desired speed.
Briefly lift or depress the cruise control lever.
The current speed is set.
Remove your foot from the accelerator pedal.

Setting a higher speed
Briefly tip the cruise control in direction of arrow 1 (page 212) to increase the vehicle speed in increments of 5 mph (Canada: 10 km/h).
The new speed is set.

Setting a lower speed
Briefly tip the cruise control in direction of arrow 2 (page 212) to decrease the vehicle speed in increments of 5 mph (Canada: 10 km/h).
The new speed is set.

If you do not take your foot off of the accelerator completely, the following message will appear in the speedometer display field:
DTR Override.
The distance to slower moving vehicles in front of you will not be set. Your vehicle speed will then be determined only by the accelerator pedal position.

Depressing the accelerator pedal does not deactivate Distronic. After brief acceleration (e.g. for passing), the cruise control will resume the last speed set.

When you use the cruise control lever to decelerate, the brakes will be applied to support deceleration.
In addition, the transmission will automatically downshift on long downhill grades.

Fine adjustment in 1 mph (Canada: 1 km/h) increments

Faster
Briefly tip the cruise control lever in direction of arrow 4 (page 212).
Controls in detail

Driving systems

Setting to last stored speed
("Resume" function)

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>The speed stored in memory should only be set again if prevailing road conditions permit. Possible acceleration or deceleration differences arising from returning to the preset speed could endanger yourself and others.</td>
</tr>
</tbody>
</table>

- Briefly tip the cruise control lever in direction of arrow ③ (page 212).
  Distronic is set to the last stored speed.
- Remove your foot from the accelerator pedal.

Deactivating Distronic

There are several ways to deactivate the Distronic system:
- Briefly tip the cruise control lever in direction of arrow ③ (page 212),
  or
- Step on the brake pedal.

Distronic will be deactivated. The last speed set will be stored into memory.

- The last stored speed is deleted when you turn off the engine.

Distronic deactivates automatically when
- you set the parking brake
- you drive slower than 20 mph (30 km/h) (page 212)
- the ESP® is active (page 85) or you deactivate the ESP®
- You move the gear selector lever into position N.

A signal will sound. The DTR off message appears in the speedometer display for approximately 5 seconds.

<table>
<thead>
<tr>
<th>Warning!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distronic switches off and releases the brakes when the vehicle decelerates below the minimum speed of 25 mph (40 km/h) or, depending on vehicle production date, 20 mph (30 km/h) by operation of the system. At that time the driver must apply the brakes in order to reduce vehicle speed further or bring it to a stop.</td>
</tr>
</tbody>
</table>
Setting the following distance in Distronic

You can set the specified following distance for Distronic by varying the time setting between 1.0 and 2.0 seconds. Using this time setting and the current speed of your vehicle, Distronic calculates and sets the required following distance to the vehicle ahead. The set distance will be shown in the speedometer display field.

The thumbwheel for making the time setting is located on the lower section of the center console.

Warning!
It is up to the driver to exercise discretion to select the appropriate setting given road conditions, traffic, driver’s preferred driving style and applicable laws and driving recommendations for safe following distance.

Increasing distance

Increasing the distance setting tells Distronic to maintain a greater following distance to the vehicle ahead.

- Turn thumbwheel 2 towards ®.

Decreasing distance

Decreasing the distance setting tells Distronic to maintain a smaller following distance to the vehicle ahead.

- Turn thumbwheel 2 towards ™.

Distance warning function

When Distronic is deactivated, this function will continue to warn you when recognizing a stationary obstacle or a slower vehicle moving in your vehicle’s path and the danger of a collision exists:

- The DTR warning lamp E comes on red.
- An intermittent warning will sound if necessary.

If these warnings are issued, you must brake manually to maintain a safe distance and avoid a collision with the vehicle ahead.
When pressing the brake pedal, the warning sound ceases. The warning sound will also cease when the distance to the vehicle ahead is sufficient again without applying the brakes. In this case, the distance warning lamp will also go out.

**Warning!**

If the DTR warning lamp (red) in the speedometer dial comes on while driving and/or an intermittent warning sounds, immediate attention on the part of the driver is required.

As required by the traffic situation, apply the brakes and navigate around a possible obstacle. However, do not drive by relying on the distance warning function, as this will result in an emergency braking application. Especially depending on road surface conditions and driver reaction, this will not always enable you to avoid a collision.

**Activating**

- Press switch ①.
  The indicator lamp on the switch comes on. A loudspeaker symbol appears in the speedometer display (> page 211).

**Deactivating**

- Press switch ① once more.
  The indicator lamp on the switch goes out. No loudspeaker symbol appears in the speedometer display.

**Driving with Distronic**

This section describes a number of driving situations where special precaution is required on the part of the driver. Be prepared to brake in such situations. This will deactivate the Distronic system.

**Warning!**

Distronic works to maintain the speed selected by the driver unless a moving obstacle proceeding directly ahead of it in the same travel direction is detected (e.g. following another vehicle ahead of you at a distance set by Distronic). This means that:

- Your vehicle can pass another vehicle after you change lanes.
- While in a sharp turn or if the vehicle in front is in a sharp turn, Distronic could lose sight of a vehicle traveling in front of it. Your vehicle could then accelerate to the previously selected speed.
The most likely cause for a malfunctioning system is a dirty sensor (located behind the hood grille), especially at times of snow and ice or heavy rain. In such a case, Distronic will switch off, and the message Distronic Currently unavailable. See Oper. Manual appears in the multifunction display. For cleaning and care of the Distronic sensor, see “Cleaning the Distronic* system sensor cover” (> page 325).

**Warning!**

Distronic should not be used in snowy or icy road conditions.

In turns or bends, Distronic may not detect a moving vehicle in front, or it may detect one too soon. This may cause your vehicle to brake late or unexpectedly.
A vehicle traveling in your lane but offset from your direct line of travel may not be detected by Distronic. There will be insufficient distance to the vehicle ahead.

Distronic has not yet detected the vehicle changing lanes. There will be insufficient distance to the vehicle ahead.

Because of their narrow profile, the vehicles traveling near the outer edges of the lane have not yet been detected by Distronic. There will be insufficient distance to the vehicles ahead.
Active Body Control (ABC)

The ABC system automatically selects the optimum suspension tuning and ride height for your vehicle.

Suspension tuning

The suspension tuning is set according to:
- Your driving style
- Road surface conditions
- The vehicle loading
- Your choice of suspension style

You can set the following suspension styles:
- Regular (Comfort)
- Sporty

The selected setting is stored, even if the engine is turned off.

Start the engine (page 49).

Suspension for sporty driving style

The setting for sporty driving is selected when indicator lamp 2 is illuminated.

Press button 1.

Indicator lamp 2 comes on.

The message ABC Active Body Control SPORT appears in the multifunction display for a short time.

Suspension for regular driving style

The setting for regular driving is selected when the indicator lamp 2 is off.

Press button 1.

Indicator lamp 2 goes out.

The message ABC Active Body Control COMFORT appears in the multifunction display for a short time.
Vehicle level control

Your vehicle automatically adjusts its ride height to:

- increase vehicle safety
- reduce fuel consumption

The vehicle chassis ride height is raised or lowered according to the selected level setting and to the vehicle speed:

- With increasing speed, ride height is reduced by up to approximately 1 inch (25 mm).
- With decreasing speed, the ride height is again raised to the selected vehicle level.

Warning!

To help avoid personal injury, keep hands and feet away from wheel housing area, and stay away from under the vehicle when lowering the vehicle chassis.

These height adjustments are so small that you may not notice any change.

Select the level 1 and level 2 settings only when required by current driving conditions. Otherwise:

- Fuel consumption may increase.
- Handling may be impaired.
The following vehicle level settings can be selected when the vehicle is stationary:

<table>
<thead>
<tr>
<th>Vehicle level when stationary</th>
<th>Use for</th>
<th>Height increase over normal</th>
<th>Automatic lowering</th>
<th>Indicator lamps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>Normal operation</td>
<td>None</td>
<td>Max. approx. 0.5 in (12 mm)</td>
<td>Both lamps off</td>
</tr>
<tr>
<td>Level 1</td>
<td>Driving with snow chains (p. 317)</td>
<td>Max. 0.6 in (15 mm)¹</td>
<td>Max. approx. 0.6 in (15 mm)</td>
<td>One lamp on</td>
</tr>
<tr>
<td>Level 2</td>
<td>Very rough road surface conditions</td>
<td>Max. 1.0 in (25 mm)¹</td>
<td>Max. approx. 1.0 in (25 mm)</td>
<td>Both lamps on</td>
</tr>
</tbody>
</table>

¹ Dependent on loading
Controls in detail

Driving systems

The button with the indicator lamps is located in the lower section of the center console.

1. Indicator lamp 1
2. Indicator lamp 2
3. Vehicle level control button

- Briefly press button 3 to change from one level setting to the next.
  - The normal level is selected if both indicator lamps are off.
  - At level 1, indicator lamp 1 is on.
  - At level 2, both indicator lamps are on.

The message ABC Vehicle being raised appears in the multifunction display for a short time.

When the vehicle is at level 2, pressing the button will return the vehicle to normal level.

Pressing the button twice in quick succession will cause the vehicle to immediately raise or lower to the new vehicle level as selected.

The selected setting is stored, even if the engine is turned off.

Start the engine (page 49).
**Parktronic* (Parking assist)**

**Warning!**

Parktronic is a supplemental system. It is not intended to, nor does it replace, the need for extreme care. The responsibility during parking and other critical maneuvers always rests with the driver.

Special attention must be paid to objects with smooth surfaces or low silhouettes (e.g. trailer couplings, painted posts, or road curbs). Such objects may not be detected by the system and can damage the vehicle.

The operational function of the Parktronic system can be affected by dirty sensors, especially at times of snow and ice. See “Cleaning the Parktronic* system sensors” (> page 326).

Interference caused by other ultrasonic signals (e.g. working jackhammers, car wash, or the air brakes of trucks) can cause the system to send erratic indications, and should be taken into consideration.

The Parktronic system monitors the surroundings of your vehicle with six sensors in the front bumper and four sensors in the rear bumper.

The Parktronic system is an electronic aid designed to assist the driver during parking maneuvers. It visually and audibly indicates the relative distance between the vehicle and an obstacle.

The Parktronic system is automatically activated when you switch on the ignition, release the parking brake, or place the gear selector lever in position D, R, or N. The Parktronic system deactivates at speeds above 11 mph (18 km/h). At lower speeds the Parktronic system turns on again.

The Parktronic system also deactivates when you place the gear selector lever in position P or depress the brake pedal.
## Controls in detail

### Driving systems

#### Range of the sensors

To function properly, the sensors must be free of dirt, ice, snow, and slush. Clean the sensors regularly, being careful not to scratch or damage the sensors, see “Cleaning the Parktronic system* sensors” (> page 326).

<table>
<thead>
<tr>
<th>Front sensors</th>
<th>Rear sensors</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Center</strong></td>
<td>approx. 48 in (120 cm)</td>
</tr>
<tr>
<td><strong>Corners</strong></td>
<td>approx. 32 in (80 cm)</td>
</tr>
</tbody>
</table>

*Ultrasonic signals from outside sources (e.g. truck air brakes, car wash, or jackhammers) may impair the operation of the Parktronic system.*

During parking maneuvers, pay special attention to objects located above or below the height of the sensors (e.g. planters or trailer hitches). The Parktronic system will not detect such objects at close range and damage to your vehicle or the object may result.
Minimum distance

<table>
<thead>
<tr>
<th>Center</th>
<th>approx. 8 in (20 cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Corners</td>
<td>approx. 6 in (15 cm)</td>
</tr>
</tbody>
</table>

If the system detects an obstacle in this range, all the distance warning segments illuminate and you hear a warning signal. If the obstacle is closer than the minimum distance, the actual distance may no longer be indicated by the system.

Warning indicators

Visual signals indicate to the driver the relative distance between the sensors and an obstacle. The warning indicator for the front area is located above the center air vents in the dashboard. The warning indicator for the rear area is integrated in the rear trim.

Front area warning indicator

- 1 Left side of the vehicle
- 2 Right side of the vehicle

Each warning indicator is divided into six yellow and two red distance segments for either side of the vehicle. The Parktronic system is ready when the border around the indicator is illuminated.

The position of the gear selector lever determines which warning indicators will be activated.

<table>
<thead>
<tr>
<th>Gear selector lever position</th>
<th>Warning indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>R or N</td>
<td>Front and rear area activated</td>
</tr>
<tr>
<td>P</td>
<td>Neither activated</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Gear selector lever position</th>
<th>Warning indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>R or N</td>
<td>Front and rear area activated</td>
</tr>
<tr>
<td>P</td>
<td>Neither activated</td>
</tr>
</tbody>
</table>
As your vehicle approaches an object, one or more distance segments will illuminate, depending on the distance. When the eighth distance segment illuminates, you have reached the minimum distance.

- **Front area:** An intermittent acoustic warning will sound as the first red distance segment illuminates and a constant acoustic warning lasting a maximum of two seconds will sound for the second distance segment. The signal is canceled when the gear selector lever is placed in position P or the parking brake is set.

- **Rear area:** An intermittent acoustic warning will sound when the first distance segment illuminates. This signal quickens with each additional distance segment lit. When the eighth distance segment illuminates, the acoustic warning becomes a constant signal. The signal is canceled when the gear selector lever is placed in position D or P or the parking brake is set.

### Switching the Parktronic system on/off
You can switch off the Parktronic system manually.

The Parktronic switch is located in the lower part of the center console (› page 30).

#### Switching off the Parktronic system
- Press Parktronic switch ①.
- Indicator lamp ② comes on.

#### Switching on the Parktronic system
- Press Parktronic switch ① again.
- Indicator lamp ② goes out.

The Parktronic system switches on automatically when you switch on the ignition (› page 36).
Parktronic system malfunction

If only the red distance segments illuminate and a warning sounds, there is a malfunction in the Parktronic system. The Parktronic system will automatically switch off after 20 seconds and the indicator lamp in the Parktronic switch comes on.

- Have the Parktronic system checked by an authorized Mercedes-Benz Center as soon as possible.

If only the red distance segments illuminate and no warning sounds, the Parktronic system sensors are dirty or there is an interference from other radio or ultrasonic signals. The Parktronic system will automatically switch off after 20 seconds and the indicator lamp in the Parktronic switch comes on.

- Switch off the ignition.
- Clean Parktronic system sensors (▷ page 326).
- Switch on the ignition (▷ page 36).
- or
- Check the Parktronic system operation at another location to rule out interference from outside radio or ultrasonic signals.
**Storage compartments**

**Warning!**

To help avoid personal injury during a collision or sudden maneuver, exercise care when storing objects in the vehicle. Put luggage or cargo in the trunk if possible. Do not pile luggage or cargo higher than the seat backs. Do not place anything on shelf behind roll bar.

Parcel nets cannot secure hard or heavy objects.

Keep compartment lids closed. This will help to prevent stored objects from being thrown about and injuring vehicle occupants during an accident.

---

**Glove box**

1. Glove box lid release
2. Glove box lid

**Opening glove box**

- Press glove box lid release 1.
- Glove box lid 2 opens downward.

**Closing glove box**

- Push glove box lid 2 up to close.

---

**Door storage compartments**

**Warning!**

Keep the door storage compartments closed while vehicle is in motion. Failure to do so may cause the seat belt to catch at the rear and prevent proper positioning of the seat belt.

---

1. Release button
2. Storage compartment lid
Opening

► Press release button ①.
  Storage compartment lid ② lid opens upwards.

Armrest storage compartments
The buttons are located under the cushion of the armrest.

Opening storage tray

► Press button ① and lift the armrest.

Opening storage compartment

► Press button ② and lift the armrest.

Rear storage compartments
The CD changer is located in the left storage compartment.
For instructions on the CD changer, see separate COMAND Operator’s Manual.

Press release button ①.
Storage compartment lid ② lid opens upwards.

Locking storage compartments
The storage compartments are centrally locked when you lock the vehicle from the outside.
You can also lock the storage compartments separately, see “Locking the storage compartments separately” (page 230).
Useful features

Locking the storage compartments separately
You can lock the storage compartments separately, e.g. when the vehicle is in the shop for service.

1. Separately unlocking storage compartments
2. Separately locking storage compartments

- Insert the mechanical key into the glove box lock.
- Turn the mechanical key to position 2.

The following storage compartments will be locked. They remain locked, even when the vehicle is unlocked with the SmartKey or with the SmartKey with KEYLESS-GO*:
  - Glove box
  - Armrest storage compartments
  - Rear storage compartments

The separate locking status of these storage compartments can only be canceled with the mechanical key.
The storage compartments in the doors cannot be locked.

If the glove box cannot be unlocked using the SmartKey or SmartKey with KEYLESS-GO*, see “Unlocking the glove box” (> page 386).

Unlocking the storage compartments separately
- Insert the mechanical key into the glove box lock.
- Turn the mechanical key to position 1.

You can now open the storage compartments.
Parcel net in passenger footwell
A small convenience parcel net is located in the passenger footwell. It is for small and light items, such as road maps, mail, etc.

**Warning!**

The parcel net is intended for storing light-weight items only.
Heavy objects, objects with sharp edges or fragile objects may not be transported in the parcel net. In an accident, during hard braking, or sudden maneuvers, they could be thrown around inside the vehicle and cause injury to vehicle occupants.

The parcel net cannot protect transported goods in the event of an accident.

Parcel net in trunk
There are three nets available in the trunk to secure loads:
- a pocket net on each side of the right and left trunk side walls
- a trunk floor net
- Pull the trunk floor net from the trunk back wall towards the front over the luggage.
- Hang the hooks of the net on the eyes on the trunk floor.

Luggage compartment in the rear

**Warning!**

Secure all pieces of luggage in the rear with the luggage straps. Unsecured pieces of luggage can otherwise cause injury during a braking maneuver and can increase the risk of injury in an accident.

Never allow anyone to ride in the rear.

The luggage straps can only secure light luggage items. Carry heavy pieces of luggage in the trunk.

The rear compartment area is not designed or intended to accommodate occupants. Severe personal injury or death may be the result in an accident.
Controls in detail

Useful features

Pull strap ② out of holder ①.
Secure the luggage with the strap so that it cannot move.
Insert strap ② into latch ③.

Releasing strap
Press release button ④ and guide strap ② back to holder ①.

Cup holders

Warning!
The shelf below the rear window should not be used to carry objects. This will avoid such objects from being thrown about and injuring vehicle occupants during an accident or sudden maneuver.
The trunk is the preferred place to carry objects.

Warning!
In order to help prevent spilling liquids on vehicle occupants and/or vehicle equipment, only use containers that fit into the cup holder. Use lids on open containers and do not fill containers to a height where the contents, especially hot liquids, could spill during braking, vehicle maneuvers, or in an accident. Liquids spilled on vehicle occupants may cause serious personal injury. Liquids spilled on vehicle equipment may cause damage not covered by the Mercedes-Benz Limited Warranty.

When not in use, keep the cup holder closed. An open cup holder may cause injury to or others when contacted during braking, vehicle maneuvers, or in an accident.
Keep in mind that objects placed in the cup holder may come lose during braking, vehicle maneuvers, or in an accident and be thrown around in the vehicle interior. Objects thrown around in the vehicle interior may cause an accident and/or serious personal injury.

**Ashtray**

1. **Cover plate**
2. **Sliding knob**

**Opening ashtray**

- Briefly touch cover plate 1. The ashtray opens automatically.

**Closing ashtray**

- Press cover plate 1 down until it latches.

**Removing the ashtray insert**

**Warning!**

Remove ashtray only with vehicle standing still. Set the parking brake to secure vehicle from movement. Move gear selector lever to position N. With gear selector lever in position N, turn off the engine.

- Secure vehicle from movement by setting the parking brake. Move the gear selector lever to position N.
  Now you have more room to take out the insert.

- Press sliding knob 2 to the right. The insert will eject a short distance.

**Replacing the ashtray insert**

- Press the insert into the frame until it snaps into place.
Warning!

Never touch the heating element or sides of the lighter; they are extremely hot. Hold the knob only.

When leaving the vehicle, always remove the SmartKey or the SmartKey with KEYLESS-GO* from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Unsupervised use of vehicle equipment may cause serious personal injury.

Switch on the ignition (► page 36).

Cigarette lighter

Push in cigarette lighter ①.
The lighter will pop out automatically when hot.

The lighter socket can accommodate 12V DC electrical accessories (up to a maximum of 85 W) designed for use with the standard “cigarette lighter” plug type. Keep in mind, however, that connecting accessories to the lighter socket (for example extensive connecting and disconnecting, or using plugs that do not fit properly) can damage the lighter socket. With the socket damaged, the lighter may no longer be able to be placed in the heating (pushed-in) position, or the lighter may pop out too early with the lighter not hot enough.

To help avoid damaging the cigarette lighter socket, we recommend connecting 12V DC electrical accessories designed for use with the standard “cigarette lighter” plug type to the 12V power outlet (► page 237) in your vehicle whenever possible.
Heated steering wheel*

The steering wheel heating warms up the leather area of the steering wheel.

The stalk is on the lower left-hand side of the steering wheel.

Switching on

▶ Switch on the ignition (page 36).
▶ Turn the switch at the tip of the stalk in direction of arrow 1.

The steering wheel is heated. Indicator lamp 2 comes on.

The steering wheel heating is temporarily suspended while indicator lamp 2 remains on when

- the temperature of the vehicle interior is above 86°F (30°C)
- the temperature of the steering wheel is above 95°F (35°C)

When these conditions do not apply anymore, steering wheel heating continues.

Switching off

▶ Turn switch at the tip of the stalk in direction of arrow 3.

The steering wheel heating is switched off. Indicator lamp 2 goes out.

Indicator lamp 2 flashes or switches off

- in case of power surge or undervoltage
- in case of a steering wheel heating malfunction

The steering wheel heating switches off automatically when you remove the SmartKey from the starter switch or, on vehicles with KEYLESS-GO*, when you switch off the ignition (page 37) and open the driver’s door.

For more information on the steering wheel, see “Multifunction steering wheel” (page 136).
**Useful features**

**Load assist in the trunk**

To facilitate trunk loading after opening the lid, use the load assist feature to raise the retracted hardtop from its storage position in the trunk.

1. Retracted hardtop
2. Luggage cover
3. Load assist button

**Raising the hardtop**

The hardtop can only be raised when the luggage cover is closed and the trunk lid is completely opened.

- Press button 3.

The hardtop rises a short distance. Button 3 comes on brightly. You can now open the luggage cover.

**Warning!**

To prevent injuries, make sure that there is no possibility of body parts getting caught in moving parts. If potential danger exists, press the switch again. This will immediately stop the movement of the hardtop.

**Lowering the hardtop**

The hardtop can only be lowered when the luggage cover is closed and the trunk lid is completely opened.

- Close the luggage cover.
- Press button 3.

The hardtop lowers. Button 3 is dimly lit.

⚠️ Only close the trunk if the roof is completely lowered. Otherwise you could damage the hardtop.

If you begin to close the trunk lid before the hardtop is completely lowered, button 3 will flash and a warning will sound.
Power outlet

An electrical outlet is located on the right side of the trunk.

- Switch on the ignition (> page 36).
- Flip up cover and insert electrical plug (cigar lighter type).

The electrical outlet can be used to accommodate electrical consumers (e.g. air pump, auxiliary lamps) up to a maximum of 180 W.

Telephone*

Radio transmitters, such as a portable telephone or a citizens band unit, should only be used inside the vehicle if they are connected to an antenna that is installed on the outside of the vehicle.

The external antenna must be approved by Mercedes-Benz. Please contact an authorized Mercedes-Benz Center for information on the installation of an approved external antenna. Refer to the radio transmitter operation instructions regarding use of an external antenna.

Warning!

Never operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or serious personal injury.

Warning!

G  Please do not forget that your primary responsibility is to drive the vehicle. A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call.

If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when road, weather, and traffic conditions permit.

Some jurisdictions prohibit the driver from using a cellular telephone while driving a vehicle.

Only operate the COMAND (Cockpit Management and Data System) if road, weather, and traffic conditions permit.

1 Observe all legal requirements.
Controls in detail

Useful features

Tele Aid

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

You can take and place telephone calls using the and buttons on the steering wheel. To carry out other telephone functions, use the control system (> page 159).

See separate instruction manual for instructions on how to operate the telephone.

The initial activation of the Tele Aid system may only be performed by completing the subscriber agreement and placing an acquaintance call using the button. Failure to complete either of these steps will result in a system that is not activated.

If you have any questions regarding activation, please call the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada).

The speaker volume of a Tele Aid call can be adjusted when using the volume control on the multifunction steering wheel. To raise, press button and to lower, press button or use the volume knob on your COMAND headunit.

To activate, press the SOS button, the Roadside Assistance button or the Information button , depending on the type of response required.

The Tele Aid system

( Telematic Alarm Identification on Demand )

The Tele Aid system consists of three types of response:

- Automatic and manual emergency
- Roadside Assistance
- Information

The Tele Aid system is operational providing that the vehicle's battery is charged, properly connected, not damaged and cellular and GPS coverage is available.

The Tele Aid system is operational providing that the vehicle's battery is charged, properly connected, not damaged and cellular and GPS coverage is available.

The speaker volume of a Tele Aid call can be adjusted when using the volume control on the multifunction steering wheel. To raise, press button and to lower, press button or use the volume knob on your COMAND headunit.

To activate, press the SOS button, the Roadside Assistance button or the Information button , depending on the type of response required.
Shortly after the completion of your Tele Aid acquaintance call, you will receive a user ID and password. By visiting www.mbusa.com and selecting “Tele Aid” (USA only), you will have access to account information, remote door unlock, and more.

System self-check
Initially, after switching on the ignition, malfunctions are detected and indicated (the indicator lamps in the SOS button, the Roadside Assistance button and the Information button stay on longer than 10 seconds or do not come on). The message TeleAid malfunction – Visit workshop appears for approximately 10 seconds in the multifunction display.

Warning!
If the indicator lamps in the SOS button, in the Roadside Assistance button, and/or in the Information button do not come on during the system self-check, or if any of these indicators remain illuminated continuously in red and/or the message TeleAid malfunction – Visit workshop is displayed in the multifunction display after the system self-check, a malfunction in the system has been detected.

If a malfunction is indicated as outlined above, the system may not operate as expected. Have the system checked at the nearest Mercedes-Benz Center as soon as possible.
Emergency calls

An emergency call is initiated automatically following an accident in which the emergency tensioning devices (ETDs) or airbags deploy.

An emergency call can also be initiated manually by opening the cover next to the interior rear view mirror labeled SOS, then briefly pressing the button located under the cover. See (page 241) for instructions on initiating an emergency call manually.

Once the emergency call is in progress, the indicator lamp in the SOS button will begin to flash. The message Connecting call appears in the multifunction display and the audio system is muted. When the connection is established, the message Call connected appears in the multifunction display. All information relevant to the emergency, such as the location of the vehicle (determined by the GPS satellite location system), vehicle model, identification number and color are generated.

A voice connection between the Response Center and the occupants of the vehicle will be established automatically soon after the emergency call has been initiated. The Response Center will attempt to determine more precisely the nature of the emergency provided they can speak to an occupant of the vehicle.

The Tele Aid system is available if

- it has been activated and is operational

Activation requires a subscription for monitoring services, connection and cellular air time.

- the relevant cellular phone network and GPS signals are available and pass the information on to the Response Center

Location of the vehicle on a map is only possible if the vehicle is able to receive signals from the GPS satellite network and pass the information on to the Response Center.

Warning!

If the indicator lamp in the SOS button is flashing continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate an emergency call (e.g. the relevant cellular phone network is not available). The message Call failed appears in the multifunction display for approximately 10 seconds.

Should this occur, assistance must be summoned by other means.
Controls in detail
Useful features

Initiating an emergency call manually

1 Cover
2 SOS button

- Briefly press on cover 1.
  The cover opens.
- Press SOS button 2 briefly.
  The indicator lamp in SOS button 2 will flash until the emergency call is concluded.
- Wait for a voice connection to the Response Center.
- Close cover 1 after the emergency call is concluded.

Warning!

If you feel at any way in jeopardy when in the vehicle (e.g. smoke or fire in the vehicle, vehicle in a dangerous road location), please do not wait for voice contact after you have pressed the emergency button. Carefully leave the vehicle and move to a safe location. The Response Center will automatically contact local emergency officials with the vehicle’s approximate location if they receive an automatic SOS signal and cannot make voice contact with the vehicle occupants.

Roadside Assistance button

The Roadside Assistance button is located below the center armrest cover.

- Press and hold the button (for longer than 2 seconds)
  A call to a Mercedes-Benz Roadside Assistance dispatcher will be initiated. The button will flash while the call is in progress. The message Connecting call will appear in the multifunction display and the audio system is muted.

When the connection is established, the message Call connected appears in the multifunction display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).
A voice connection between the Roadside Assistance dispatcher and the occupants of the vehicle will be established.

- Describe the nature of the need for assistance.

The Mercedes-Benz Roadside Assistance dispatcher will either dispatch a qualified Mercedes-Benz technician or arrange to tow your vehicle to the nearest authorized Mercedes-Benz Center. For services such as labor and/or towing, charges may apply. Refer to the Roadside Assistance Manual for more information.

The following is only available in the USA:

- Sign and Drive services: Services such as jump start, a few gallons of fuel or the replacement of a flat tire with the vehicle spare tire are obtainable.

The indicator lamp in the Roadside Assistance button remains illuminated in red for approximately 10 seconds during the system self-check after switching on the ignition (together with the SOS button and the Information button). See system self-check (page 239) if the indicator lamp does not come on in red or stays on longer than approximately 10 seconds.

If the indicator lamp in the Roadside Assistance button is flashing continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate a Roadside Assistance call (e.g. the relevant cellular phone network is not available). The message Call failed appears in the multifunction display.

Roadside Assistance calls can be terminated using the button on the multifunction steering wheel or the respective button for ending a telephone call on the COMAND headunit.
Information button

The Information button is located below the center armrest cover.

Press and hold the button (for longer than 2 seconds).

A call to the Customer Assistance Center will be initiated. The button will flash while the call is in progress. The message **Connecting call** will appear in the multifunction display and the audio system is muted.

When the connection is established, the message **Call connected** appears in the multifunction display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).

A voice connection between the Customer Assistance Center representative and the occupants of the vehicle will be established. Information regarding the operation of your vehicle, the nearest Mercedes-Benz Center or Mercedes-Benz USA products and services is available to you.

For more details concerning the Tele Aid system, please visit www.mbusa.com and use your ID and password (sent to you separately) to learn more (USA only).

The indicator lamp in the Information button remains illuminated in red for approximately 10 seconds during the system self-check after switching on the ignition (together with the SOS button and the Roadside Assistance button).

See system self-check (> page 239) if the indicator lamp does not come on in red or stays on longer than approximately 10 seconds.

If the indicator lamp in the Information button is flashing continuously and no voice connection to the
Response Center was established, then the Tele Aid system could not initiate an Information call (e.g. the relevant cellular phone network is not available). The message Call failed appears in the multifunction display.

Information calls can be terminated using the button on the multifunction steering wheel or the respective button for ending a telephone call on the COMAND headunit.

Call priority

If other service calls such as a Roadside Assistance call or Information call are active, an Emergency call is still possible. In this case, the Emergency call will take priority and override all other active calls.

The indicator lamp in the respective button flashes until the call is concluded. Calls can only be terminated by a Response Center or Customer Assistance Center representative except Roadside Assistance and Information calls, which can also be terminated by pressing button on the multifunction steering wheel or the respective button for ending a telephone call on the COMAND headunit.
Remote door unlock

In case you have locked your vehicle unintentionally (e.g. SmartKey inside vehicle), and the reserve SmartKey is not handy:

- Contact the Mercedes-Benz Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada).
- You will be asked to provide your password which you provided when you completed the subscriber agreement.
- Then return to your vehicle and pull the trunk recessed handle for a minimum of 20 seconds until the SOS button is flashing.

The message Call connected appears in the multifunction display.

As an alternative, you may unlock the vehicle via Internet using the ID and password sent to you shortly after the completion of your acquaintance call.

If the indicator lamp continues to flash or the system does not reset, contact the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada), or Mercedes-Benz Customer Assistance at 1-800-FOR-MERCEdes (1-800-367-6372) in the USA or Customer Service at 1-800-387-0100 in Canada.

When a Tele Aid call has been initiated, the COMAND system audio is muted and the selected mode (radio or CD) pauses. The optional cellular phone (if installed) switches off. If you must use this phone, the vehicle must be parked. Disconnect the coiled cord and place the call. The COMAND navigation system (if engaged) will continue to run. The display in the instrument cluster is available for use and spoken commands are only available by pressing the RPT button on the COMAND unit. A pop-up window will appear in the COMAND display to indicate that a Tele Aid call is in progress.
The Response Center will then unlock your vehicle with the remote door unlocking feature.

The remote door unlock feature is available if the relevant cellular phone network is available.

The SOS button will flash and the message Call connected will appear in the multifunction display to indicate receipt of the door unlock command.

Once the vehicle is unlocked, a Response Center specialist will attempt to establish voice contact with the vehicle occupants.

If the trunk recessed handle was pulled for more than 20 seconds before door unlock authorization was received by the Response Center, you must wait 15 minutes before pulling the trunk recessed handle again.

Stolen Vehicle Recovery services

In the event your vehicle was stolen:

- Report the incident to the police. The police will issue a numbered incident report.
- Pass this number on to the Mercedes-Benz Response Center along with your password issued to you when you subscribed to the service.

The Response Center will then attempt to covertly contact the vehicle’s Tele Aid system. Once the vehicle is located, the Response Center will contact the local law enforcement and you. The vehicle’s location will only be provided to law enforcement.

If the anti-theft alarm or the tow-away alarm stays on for more than 30 seconds, a call to the Response Center is initiated automatically by the Tele Aid system provided Tele Aid service was subscribed to and properly activated, and that necessary cellular service and GPS coverage are available. See anti-theft alarm system (page 91) and tow away alarm (page 93).
Garage door opener

The integrated remote control is capable of operating up to three separately controlled devices. It provides a convenient way to replace up to three hand-held remote controls used to operate devices such as garage door openers, gate operators, or other devices compatible with HomeLink® or some other systems.

Before the integrated remote control can be used, it must be programmed to the garage door opener, gate operator or other device you wish to operate. See the following instructions for programming information.

Interior rear view mirror with integrated remote control

1. Indicator lamp
2. Signal transmitter button

Needed for programming (not part of vehicle equipment):

3. Hand-held remote control of garage door opener, gate operator or other device
4. Hand-held remote control button

Warning!

Before programming the integrated remote control to a garage door opener or gate operator, make sure people and objects are out of the way of the device to prevent potential harm or damage. When programming a garage door opener, the door moves up or down. When programming a gate operator, the gate opens or closes.

Do not use the integrated remote control with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982).

A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards.
When programming a garage door opener, it is advised to park outside the garage. Do not run the engine while programming the integrated remote control. Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide, and inhaling it can cause unconsciousness and possible death.

Programming the integrated remote control

Step 1:

- Switch on the ignition (> page 36).

Step 2:

- If you have previously programmed a signal transmitter button and wish to retain its programming, proceed to step 3.
- If you are programming the integrated remote control for the first time, press and hold the two outer signal transmitter buttons 2 and 4 and release them only when the indicator lamp 1 begins to flash after approximately 20 seconds (do not hold the button for longer than 30 seconds). This procedure erases any previous settings for all three channels and initializes the memory.

If you later wish to program a second and/or third hand-held transmitter to the remaining two signal transmitter buttons, do not repeat this step and begin directly with step 3.

Step 3:

- Hold the end of the hand-held remote control 5 of the device you wish to train approximately 2 to 5 in (5 to 12 cm) away from the signal transmitter button (2, 3 or 4) to be programmed, while keeping the indicator lamp 1 in view.

Step 4:

- Using both hands, simultaneously press the hand-held remote control button 6 and the desired signal transmitter button (2, 3 or 4). Do not release the buttons until step 5 is completed.

The indicator lamp 1 will flash, first slowly and then rapidly.
Step 5:
- After the indicator lamp ① changes from a slow to a rapidly flashing light, release the hand-held remote control button and the signal transmitter button.

Step 6:
- Press and hold the just-trained signal transmitter button (②, ③ or ④) and observe the indicator lamp ①.

Step 7:
- To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.

If the indicator lamp ① stays on constantly, programming is complete and your device should activate when the respective signal transmitter button (②, ③ or ④) is pressed and released.

If the indicator lamp ① flashes rapidly for about 2 seconds and then turns to a constant light, continue with programming steps 8 through 12 as your garage door opener may be equipped with the “rolling code” feature.

Step 8:
- Locate “training” button on the garage door opener motor head unit.

Rolling code programming
To train a garage door opener (or other rolling code devices) with the rolling code feature, follow these instructions after completing the “Programming” portion (steps 1 through 6) of this text. (A second person may make the following training procedures quicker and easier.)

Exact location and color of the button may vary by garage door opener brand. Depending on manufacturer, the “training” button may also be referred to as “learn” or “smart” button. If there is difficulty locating the transmitting button, refer to the garage door opener operator’s manual.
Useful features

Step 9:
- Press the “training” button on the garage door opener motor head unit.
  
The “training light” is activated.
You have 30 seconds to initiate the following two steps.

Step 10:
- Return to the vehicle and firmly press, hold for 2 seconds and release the programmed signal transmitter button (2, 3 or 4).

Step 11:
- Press, hold for 2 seconds and release same signal transmitter button a second time to complete the training process.

Step 12:
- Confirm the garage door operation by pressing the programmed signal transmitter button (2, 3 or 4).

Step 13:
- To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.

Gate operator/Canadian programming

Canadian radio-frequency laws require transmitter signals to “time-out” (or quit) after several seconds of transmission which may not be long enough for the integrated signal transmitter to pick up the signal during programming. Similar to this Canadian law, some U.S. gate operators are designed to “time-out” in the same manner.

If you live in Canada or if you are having difficulties programming a gate operator (regardless of where you live) by using the programming procedures, replace step 4 with the following:

Step 4:
- Press and hold the signal transmitter button (2, 3 or 4). Do not release this button until it has been successfully trained.

Some garage door openers (or other rolling code equipped devices) may require you to press, hold for 2 seconds and release the same signal transmitter button a third time to complete the training process.

i

250
While still holding down the signal transmitter button (2, 3 or 4), "cycle" your hand-held remote control button 6 as follows: Press and hold button 6 for 2 seconds, then release it for 2 seconds, and again press and hold it for 2 seconds. Repeat this sequence on the hand-held remote control until the frequency signal has been learned. Upon successful training, the indicator lamp 1 will flash slowly and then rapidly after several seconds.

Proceed with programming step 5 and step 6 to complete.

Upon completion of programming the integrated remote control, make sure you retain the hand-held remote control that came with the garage door opener, gate operator or other device. You may need it for use in other vehicles, for future programming of an integrated remote control, or simply for continued use as a hand-held remote control to operate the respective device in other situations.

Reprogramming a single signal transmitter button

To program a device using a signal transmitter button previously trained, follow these steps:

- Switch on the ignition (> page 36).
- Press and hold the desired signal transmitter button (2, 3 or 4). Do not release the button.
- The indicator lamp 1 will begin to flash after 20 seconds. Without releasing the signal transmitter button, proceed with programming starting with step 3.
Controls in detail
Useful features

Operation of integrated remote control
- Switch on the ignition (> page 36).
- Select and press the appropriate integrated signal transmitter button (2, 3 or 4) to activate the remote controlled device.

The integrated remote control transmitter continues to send the signal as long as the button is pressed – up to 20 seconds.

Erasing the integrated remote control memory
- Switch on the ignition (> page 36).
- Simultaneously press and hold down the outer signal transmitter buttons 2 and 4, for approximately 20 seconds, until the indicator lamp 1 flashes rapidly. Do not hold for longer than 30 seconds.

The codes of all three channels are erased.

If you sell your vehicle, erase the codes of all three channels.

Programming tips
If you are having difficulty programming the integrated remote control, here are some helpful tips:

- Check the frequency of the hand-held remote control 5 (typically located on the reverse side of the remote). The integrated remote control is compatible with radio-frequency devices operating between 288-399 MHz.
- Put a new battery in the hand-held remote control 5. This will increase the likelihood of the hand-held remote control sending a faster and more accurate signal to the integrated remote control.
- While performing step 3, hold the hand-held remote control 5 at different lengths and angles from the signal transmitter button (2, 3 or 4) you are programming. Attempt varying angles at the distance of 2 to 5 inches (5 to 12 cm) away or the same angle at varying distances.
• If another hand-held remote control is available for the same device, try the programming steps again using that other hand-held remote control. Make sure new batteries are in the hand-held remote control before beginning the procedure.

• Straighten the antenna wire from the garage door opener assembly. This may help improve transmitting and/or receiving signals.

Certain types of garage door openers are incompatible with the integrated remote control. If you should experience further difficulties with programming the integrated remote control, contact an authorized Mercedes-Benz Center, or call Mercedes-Benz Customer Assistance Center (in the USA only) at 1-800-FOR-MERCedes, or Customer Service (in Canada) at 1-800-387-0100.

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
(1) This device may not cause interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.
Operation

The first 1000 miles (1500 km)

Driving instructions

At the gas station

Engine compartment

Tires and wheels

Winter driving

Maintenance

Vehicle care
The more cautiously you treat your vehicle during the break-in period, the more satisfied you will be with its performance later on.

- Drive your vehicle during the first 1000 miles (1500 km) at varying but moderate vehicle and engine speeds.
- During this period, avoid heavy loads (full throttle driving) and excessive engine speeds (no more than \( \frac{2}{3} \) of maximum rpm in each gear).
- Avoid accelerating by kickdown.
- Do not attempt to slow the vehicle down by shifting to a lower gear using the gear selector lever.
- Select positions 3, 2 or 1 only when driving at moderate speeds (for hill driving).
- Select C as the preferred shift program ( \( \Rightarrow \) page 163) for the first 1000 miles (1500 km).

After 1000 miles (1500 km), you may gradually increase vehicle and engine speeds to the permissible maximum.

<table>
<thead>
<tr>
<th>Additional instructions for AMG vehicles:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- During the first 1000 miles (1500 km), do not exceed a speed of 85 mph (140 km/h).</td>
</tr>
<tr>
<td>- During this period, avoid engine speeds above 4500 rpm (SL 55 AMG) or 4000 rpm (SL 65 AMG) in each gear.</td>
</tr>
</tbody>
</table>

All of the above instructions, as may apply to your vehicle type, also apply when driving the first 1000 miles (1500 km) after the engine or the rear differential has been replaced.

| Always obey applicable speed limits. |
Driving instructions

Drive sensibly – save fuel

Fuel consumption, to a great extent, depends on driving habits and operating conditions.

To save fuel you should:

- Keep tires at the recommended inflation pressures.
- Remove unnecessary loads.
- Allow engine to warm up under low load use.
- Avoid frequent acceleration and deceleration.
- Have all maintenance work performed at the intervals specified in the Maintenance Booklet and as required by the maintenance system. Contact an authorized Mercedes-Benz Center.

Fuel consumption is also increased by driving in cold weather, in stop-and-go traffic, on short trips and in hilly area.

Drinking and driving

Warning!

Drinking and driving and/or taking drugs and driving are a very dangerous combination. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment. The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

Pedals

Warning!

Keep driver’s foot area clear at all times. Objects stored in this area may impair pedal movement.
### Power assistance

**Warning!**

The brake system requires electrical energy for operation.

A malfunction in the vehicle's power supply or electrical system may impair brake system operation and switch it into its emergency operation mode. In such a case, the red brake warning lamp (> page 334) and warning messages (> page 345) in the instrument cluster come on while driving. To brake, the driver must then apply significantly greater brake pedal pressure and depress the pedal much further to obtain the expected braking effect. If necessary, apply full pressure to the brake pedal. Brakes are only applied to the front wheels. Stopping distance is increased! If there is a malfunction in the electro-hydraulic brake system, we recommend that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment.

---

### Brakes

**Warning!**

After driving in heavy rain for some time without applying the brakes or through water deep enough to wet brake components, the first braking action may be somewhat reduced and increased pedal pressure may be necessary to obtain expected braking effect. Maintain a safe distance from vehicles in front.

Resting your foot on the brake pedal will cause excessive and premature wear of the brake pads.

It can also result in the brakes overheating thereby significantly reducing their effectiveness. It may not be possible to stop the vehicle in sufficient time to avoid an accident.
To help prevent brake disk corrosion after driving on wet road surfaces (particularly salted roads), it is advisable to brake the vehicle with considerable force prior to parking. The heat generated serves to dry the brakes.

If your brake system is normally only subjected to moderate loads, you should occasionally test the effectiveness of the brakes by applying above-normal braking pressure at higher speeds. This will also enhance the grip of the brake pads.

If the parking brake is released and the brake warning lamp in the instrument cluster stays on, there is a malfunction in the electro-hydraulic brake system (\(\text{page 88}\)) or the brake fluid level in the reservoir is too low.

Brake pad wear or a leak in the system may be the reason for low brake fluid in the reservoir.

Have the brake system inspected immediately.

All checks and service work on the brake system should be carried out by qualified technicians only. Contact an authorized Mercedes-Benz Center.

Only install brake pads and brake fluid recommended by Mercedes-Benz.

After hard braking, it is advisable to drive on for some time, rather than to park immediately, so the air stream will cool down the brakes faster.

Refer to the description of the Brake Assist System (BAS) (\(\text{page 84}\)).

Warning!

Make sure not to endanger any other road users when carrying out these braking maneuvers.

![Warning!]

If other than recommended brake pads are installed, or other than recommended brake fluid is used, the braking properties of the vehicle can be degraded to an extent that safe braking is substantially impaired. This could result in an accident.

Be certain to read and observe the warning notices on brake pad replacement (\(\text{page 89}\)).

When driving down long and steep grades, relieve the load on the brakes by shifting into a lower gear to use the engine’s braking power. This helps prevent overheating of the brakes and reduces brake pad wear.
High-performance brake system
(SL 65 AMG only)

The high-performance brake system is designed to operate under the extremely high operating demands required to accommodate the performance capabilities of the vehicle. The brakes may produce a squeaking-type noise depending on the

- vehicle speed
- brake force applied
- ambient conditions, e.g. temperature and humidity

As with any brake system, the wear of individual brake system components such as brake pads or disks strongly depends on your driving style and the conditions under which you operate the vehicle. Thus, a driving style calling for high demand braking will cause your vehicle’s brakes to wear more quickly.

**Warning!**

New vehicle brake pads and discs, and replacement brake pads and discs may take several hundred miles of driving until they provide optimum braking efficiency. Until that time, you may need to use increased brake pedal pressure while braking. Please be aware of this and adjust your driving and braking accordingly during this break-in period.

Excessive high demand braking will cause correspondingly high brake wear. Please be attentive to the brake warning lamp in the instrument cluster and brake condition messages in the multifunction display. Especially for high performance driving, it is important to maintain and have the brake system checked regularly.

**Driving off**

Apply the brakes to test them briefly after driving off. Perform this procedure only when the road is clear of other traffic.

Warm up the engine smoothly. Do not place full load on the engine until the operating temperature has been reached.

When starting off on a slippery surface, do not allow a drive wheel to spin for an extended period with the ESP® switched off. Doing so may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Simultaneously depressing the accelerator pedal and applying the brake reduces engine performance and causes premature brake and drivetrain wear.
Treadwear indicators (TWI) are required by law. These indicators are located in six places on the tread circumference and become visible at a tread depth of approximately $\frac{1}{16}$ in (1.6 mm), at which point the tire is considered worn and should be replaced.

Warning!

Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

To reduce the risk of personal injury as a result of vehicle movement, before turning off the engine and leaving the vehicle always:

- Keep right foot on brake pedal.
- Firmly depress parking brake pedal.
- Move the gear selector lever to position P.
- Slowly release brake pedal.

Set the parking brake whenever parking or leaving the vehicle. In addition, move gear selector lever to position P. When parking on hills, turn front wheels towards the road curb.

Warning!

If you feel a sudden significant vibration or ride disturbance, or you suspect that possible damage to your vehicle has occurred, you should turn on the hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road.

Inspect the tires and the vehicle underbody for possible damage. If the vehicle or tires appear unsafe, have the vehicle towed to the nearest Mercedes-Benz Center or tire dealer for repairs.
Operation
Driving instructions

The treadwear indicator appears as a solid band across the tread.

**Warning!**

Although the applicable federal motor vehicle safety laws consider a tire to be worn when the treadwear indicators (TWI) become visible at approximately \( \frac{1}{16} \text{ in} \) (1.6 mm), we recommend that you do not allow your tires to wear down to that level. As tire tread depth approaches \( \frac{1}{8} \text{ in} \) (3 mm), the adhesion properties on a wet road are sharply reduced. Depending upon the weather and/or road surface (conditions), the tire traction varies widely.

Specified tire inflation pressures must be maintained. This applies particularly if the tires are subjected to extreme operating conditions (e.g. high speeds, heavy loads, high ambient temperatures).

**Warning!**

Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You may lose control of the vehicle. Continued driving with a flat tire or driving at high speed with a flat tire will cause excessive heat build-up and possibly a fire.

**Hydroplaning**

Depending on the depth of the water layer on the road, hydroplaning may occur, even at low speeds and with new tires. Reduce vehicle speed, avoid track grooves in the road and apply brakes cautiously in the rain.
### Tire traction

The safe speed on a wet, snow covered or icy road is always lower than on a dry road. You should pay particular attention to the condition of the road whenever the outside temperatures are close to the freezing point.

**Warning!**

If ice has formed on the road, tire traction will be substantially reduced. Under such weather conditions, drive, steer and brake with extreme caution.

Mercedes-Benz recommends winter tires (page 315) with a minimum tread depth of approximately 1/4 in (4 mm) on all four wheels for the winter season to ensure normal balanced handling characteristics. On packed snow, they can reduce your stopping distance as compared with summer tires. Stopping distance, however, is still considerably greater than when the road is not covered with snow or ice. Exercise appropriate caution.

### Tire speed rating

Regardless of the tire speed rating, local speed limits should be obeyed. Use prudent driving speeds appropriate to prevailing conditions.

**Warning!**

Even when permitted by law, never operate a vehicle at speeds greater than the maximum speed rating of the tires. Exceeding the maximum speed for which tires are rated can lead to sudden tire failure, causing loss of vehicle control and possibly resulting in an accident and/or personal injury and possible death, for you and for others.
Operation
Driving instructions

SL 500
SL 500 with Sport Package*
Your vehicle is factory equipped with "W"-rated tires, which have a speed rating of 168 mph (270 km/h).
An electronic speed limiter prevents your vehicle from exceeding a speed of 155 mph (250 km/h).

SL 600
SL 600 with Sport Package*
SL 55 AMG
SL 65 AMG
Your vehicle is factory equipped with "Y"-rated tires, which have a speed rating of 186 mph (300 km/h).
An electronic speed limiter prevents your vehicle from exceeding a speed of 186 mph (300 km/h).

SL 55 AMG
with Performance Package*
Your vehicle is factory equipped with "Y"-rated tires, which have a speed rating of 186 mph (300 km/h).
An electronic speed limiter prevents your vehicle from exceeding a speed of 186 mph (300 km/h).

Winter driving instructions
The most important rule for slippery or icy roads is to drive sensibly and to avoid abrupt acceleration, braking and steering maneuvers. Do not use the cruise control system under such conditions.
When the vehicle is in danger of skidding, move gear selector lever to position N. Try to keep the vehicle under control by corrective steering action.

For information on tire speed rating for winter tires, see “All-season and winter tires” (› page 304).
For additional general information on tire speed markings on tire sidewall, see “Tire speed rating” (› page 303).

Warning!
On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of control loss.
Road salts and chemicals can adversely affect braking efficiency. Increased pedal force may become necessary to produce the normal brake effect.

Depressing the brake pedal periodically when traveling at length on salt-strewn roads can bring road-salt-impaired braking efficiency back to normal.

If the vehicle is parked after being driven on salt-treated roads, the braking efficiency should be tested as soon as possible after driving is resumed.

**Warning!**

Make sure not to endanger any other road users when carrying out these braking maneuvers.

**Warning!**

If the vehicle becomes stuck in snow, make sure that snow is kept clear of the exhaust pipe and from around the vehicle with the engine running. Otherwise, deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

To assure sufficient fresh air ventilation, open a window slightly on the side of the vehicle not facing the wind.

**Warning!**

The outside temperature indicator is not designed to serve as an Ice-Warning Device and is therefore unsuitable for that purpose. Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice.

For more information, see “Winter driving” (▷ page 315).

---

**Standing water**

⚠️ Do not drive through flooded areas or water of unknown depth. Before driving through water, determine its depth. Never accelerate before driving into water. The bow wave could force water into the engine and auxiliary equipment, thus damaging them.

If you must drive through standing water, drive slowly to prevent water from entering the passenger compartment or the engine compartment. Water in these areas could cause damage to electrical components or wiring of the engine or transmission, or could result in water being ingested by the engine through the air intake, causing severe internal engine damage. Any such damage is not covered by the Mercedes-Benz Limited Warranty.
Operation
Driving instructions

Passenger compartment

Warning!

Always fasten items being carried as securely as possible.

In an accident, during hard braking or sudden maneuvers, loose items will be thrown around inside the vehicle, and cause injury to vehicle occupants unless the items are securely fastened in the vehicle.

The trunk is the preferred place to carry objects.

Driving abroad

Abroad, there is an extensive Mercedes-Benz service network at your disposal. If you plan to drive into areas which are not listed in the index of your Mercedes-Benz Center directory, you should request pertinent information from an authorized Mercedes-Benz Center.

Control and operation of radio transmitters

COMAND, radio and telephone

Warning!

Please do not forget that your primary responsibility is to drive the vehicle safely. Only operate the COMAND (Cockpit Management and Data System), radio or telephone 1 if road, weather, and traffic conditions permit.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

1 Observe all legal requirements.

Telephones and two-way radios

Warning!

Never operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or personal injury.

Radio transmitters, such as a portable telephone or a citizens band unit should only be used inside the vehicle if they are connected to an antenna that is installed on the outside of the vehicle.

Refer to the radio transmitter operation instructions regarding use of an external antenna.
Operation

Driving instructions

Catalytic converter

Your Mercedes-Benz is equipped with monolithic-type catalytic converters, an important element in conjunction with the oxygen sensors to achieve substantial control of the pollutants in the exhaust emissions. Keep your vehicle in proper operating condition by following our recommended maintenance instructions as outlined in your Maintenance Booklet.

To prevent damage to the catalytic converters, only use premium unleaded gasoline in this vehicle.

Any noticeable irregularities in engine operation should be repaired promptly. Otherwise, excessive unburned fuel may reach the catalytic converter causing it to overheat and potentially start a fire.

Warning!

As with any vehicle, do not idle, park or operate this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

Emission control

Certain systems of the engine serve to keep the toxic components of the exhaust gases within permissible limits required by law.

These systems, of course, will function properly only when maintained strictly according to factory specifications. Any adjustments on the engine should therefore be carried out only by qualified Mercedes-Benz Center authorized technicians. Engine adjustments should not be altered in any way. Moreover, the specified service jobs must be carried out regularly according to Mercedes-Benz servicing requirements. For details refer to the Maintenance Booklet.
Operation

Driving instructions

Coolant temperature

During severe operating conditions, e.g. stop-and-go city traffic, the coolant temperature may rise close to approx. 266°F (130°C).

The engine should not be operated with the coolant temperature over 248°F (120°C). Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.

Warning!

Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide, and inhaling it can cause unconsciousness and possible death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open at all times.

Warning!

- Driving when your engine is badly overheated can cause some fluids, which may have leaked into the engine compartment, to catch fire. You could be seriously burned.
- Steam from an overheated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.
At the gas station

Refuelling

The fuel filler flap is located on the right-hand side of the vehicle towards the rear. Locking/unlocking the vehicle with the SmartKey or the SmartKey with KEYLESS-GO* automatically locks/unlocks the fuel filler flap.

Warning!

Gasoline is highly flammable and poisonous. It burns violently and can cause serious injury. Whenever you are around gasoline, avoid inhaling fumes and skin contact, extinguish all smoking materials. Never allow sparks, flame or smoking materials near gasoline!

Turn off the engine

- by turning the SmartKey to position 0. Remove the SmartKey from the starter switch.
- by pressing the KEYLESS-GO* start/stop button. Open the driver’s door (with the driver’s door open, starter switch is in position 0, same as SmartKey removed from starter switch).

Open the fuel filler flap by pushing at the point indicated by the arrow. The fuel filler flap springs open.

Turn the fuel cap to the left and hold on to it until possible pressure is released.

Take off the cap and set it in the recess on the fuel filler flap.

Only fill your tank until the filler nozzle unit cuts out – do not top up or overfill.
Operation

At the gas station

Warning!
Overfilling of the fuel tank may create pressure in the system which could cause a gas discharge. This could cause the gas to spray back out when removing the fuel pump nozzle, which could cause personal injury.

- Replace the fuel cap by turning it clockwise until it audibly engages.
- Close the fuel filler flap.
  You should hear the latch close shut.

Only use premium unleaded gasoline with a minimum Posted Octane Rating of 91 (average of 96 RON/86 MON).
Information on gasoline quality can normally be found on the fuel pump.
For more information on gasoline, see “Premium unleaded gasoline” (page 448) or the Factory Approved Service Pamphlet.

Leaving the engine running and the fuel cap open can cause the engine malfunction indicator lamp (USA only) or the engine malfunction indicator lamp (Canada only) to illuminate.
For more information, see the “Practical hints” section (page 335).
Check regularly and before a long trip

For information on quantities and requirements of operating agents, see “Fuels, coolants, lubricants, etc.” (page 445).

- Open the hood (page 272).

Windshield washer and headlamp cleaning system

For information on refilling the reservoir, see “Windshield washer system and headlamp cleaning system” (page 280).

Brake fluid

For information on brake fluid, see “Fuels, coolants, lubricants, etc.” (page 445).

If you find that the brake fluid in the brake fluid reservoir has fallen to the minimum mark or below, have the brake system checked for brake pad thickness and leaks immediately. Notify an authorized Mercedes-Benz Center immediately. Do not add brake fluid as this will not solve the problem. For more information, see the “Practical hints” section (page 363).

Coolant level

For information on checking the coolant level, see “Coolant” (page 278).

Engine oil level

For more information on checking the engine oil level, see “Checking engine oil level with the control system” (page 274).

Vehicle lighting

Check function and cleanliness. For more information, see “Replacing bulbs” (page 391).

Exterior lamp switch, see “Switching on headlamps” (page 53).

Tire inflation pressure

For information on checking the tire inflation pressure, see “Checking tire inflation pressure” (page 293).
Operation

Engine compartment

Hood

Warning!

Do not pull the release lever while the vehicle is in motion. Otherwise the hood could be forced open by passing air flow.

Opening

Pull lever ① downwards. The hood is unlocked.

To avoid damage to the windshield wipers or hood, never open the hood if the wiper arms are folded forward away from the windshield.

Push lever ② on the hood upwards. The hood will be automatically held open at shoulder height by gas-filled struts.

Warning!

To help prevent personal injury, stay clear of moving parts when the hood is open and the engine is running. Make sure the hood is properly closed before driving. When closing the hood, use extreme caution not to catch hands or fingers.

The radiator fan may continue to run for approximately 30 seconds or may even restart after the engine has been turned off. Stay clear of fan blades.
Let the hood drop from a height of approximately 1 1/2 ft (50 cm). The hood will lock audibly.

Check to make sure the hood is fully closed.

If you can raise the hood at a point above the headlamps, then it is not properly closed. Open it again and let it drop with somewhat greater force.

Warning!
If you see flames or smoke coming from the engine compartment, or if the coolant temperature gauge indicates that the engine is overheated, do not open the hood. Move away from the vehicle and do not open the hood until the engine has cooled. If necessary, call the fire department.

Warning!
The engine is equipped with a transistorized ignition system. Because of the high voltage it is dangerous to touch any components (ignition coils, spark plug sockets, diagnostic socket) of the ignition system with the engine running, while starting the engine, if ignition is “on” and the engine is turned manually.

Warning!
Be careful that you do not close the hood on anyone.
Engine oil

The amount of oil your engine needs will depend on a number of factors, including driving style. Higher oil consumption can occur when

- the vehicle is new
- the vehicle is driven frequently at higher engine speeds

Engine oil consumption checks should only be made after the vehicle break-in period.

Do not use any special lubricant additives, as these may damage the drive assemblies. Using special additives not approved by Mercedes-Benz may cause damage not covered by the Mercedes-Benz Limited Warranty. More information on this subject is available at any Mercedes-Benz Center.

Checking engine oil level with the control system

When checking the oil level

- the vehicle must be parked on level ground
- with the engine at operating temperature, the vehicle must have been stationary for at least 5 minutes with the engine turned off
- with the engine not at operating temperature, the vehicle must have been stationary for at least 30 minutes with the engine turned off

To check the engine oil level via the multifunction display, do the following:

- Switch on the ignition (>).
- The standard display (>). Should appear in the multifunction display.

Press button or on the steering wheel until the following message appears in the multifunction displays:

![Multifunction display image]
One of the following messages will subsequently appear in the right multi-function display:

- Engine oil level
  - OK
- Add 1.0 qt. to reach max. oil level
  (Canada: 1.0 l)
- Add 1.5 qts. to reach max. oil level
  (Canada: 1.5 l)
- Add 2.0 qts. to reach max. oil level
  (Canada: 2.0 l)

- If necessary, add engine oil.
  For adding engine oil, see ( page 276).
  For more information on engine oil, see the “Technical data” section ( page 445) and ( page 447).

**Other display messages**

If the SmartKey or the KEYLESS-GO* start/stop button is not in position 2, the following message will appear:

**Turn ignition on to measure engine oil level**

- Switch on the ignition ( page 36).

If you see the message:

**Observe waiting time**

- If the engine is at operating temperature, wait 5 minutes before repeating the check procedure.
- If the engine is not at operating temperature yet, wait 30 minutes before repeating the check procedure.

If you see the message:

**Engine oil level Not when engine on**

- Turn off the engine.
- If the engine is at operating temperature, wait 5 minutes before checking oil.
- If the engine is at operating temperature yet, you must wait 30 minutes before checking oil.

If you want to interrupt the checking procedure, press the \( \text{[} \) or \( \text{]} \) button on the multifunction steering wheel.
Operation

Engine compartment

If there is excess engine oil with the engine at normal operating temperature, the following message will appear:

**Engine oil level**
Reduce oil level

- Have excess oil siphoned or drained off. Contact an authorized Mercedes-Benz Center.

![Warning icon]

Excess oil must be siphoned or drained off. It could cause damage to the engine and catalytic converter not covered by the Mercedes-Benz Limited Warranty.

For more information on messages in the display concerning engine oil, see the "Practical hints" section (page 369).

### Adding engine oil

**Warning icon**

Only use approved engine oils and oil filters required for vehicles with Maintenance System (U.S. vehicles) or FSS (Canada vehicles). For a listing of approved engine oils and oil filters, refer to the Factory Approved Service Products pamphlet in your vehicle literature portfolio, or contact an authorized Mercedes-Benz Center.

Using engine oils and oil filters of specification other than those expressly required for the Maintenance System (U.S. vehicles) or FSS (Canada vehicles), or changing of oil and oil filter at change intervals longer than those called for by the Maintenance System (U.S. vehicles) or FSS (Canada vehicles) will result in engine damage not covered by the Mercedes-Benz Limited Warranty.

---

SL 500 and SL 55 AMG

1. Filler cap

SL 600

1. Filler cap
Unscrew filler cap 1 from filler neck. Add engine oil as required. Be careful not to overfill with oil. Be careful not to spill any oil when adding. Avoid environmental damage caused by oil entering the ground or water.

Excess oil must be siphoned or drained off. It could cause damage to the engine and catalytic converter not covered by the Mercedes-Benz Limited Warranty.

Screw filler cap 1 back on filler neck. For more information on engine oil, see the “Technical data” section (▷ page 445) and (▷ page 447).

Transmission fluid level

The transmission fluid level does not need to be checked. If you notice transmission fluid loss or gear shifting malfunctions, have an authorized Mercedes-Benz Center check the automatic transmission.

Oil level in the ABC system

The oil level in the ABC system does not need to be checked. If there is visible oil loss or if malfunction messages appear in the display, have an authorized Mercedes-Benz Center check the ABC system.
The engine coolant is a mixture of water and anticorrosion/antifreeze. To check the coolant level, the vehicle must be parked on level ground and the engine must be cool.

The coolant expansion tank is located on the passenger side of the engine compartment.

1 Coolant expansion tank

Using a rag, turn the cap slowly approximately one half turn to the left to release any excess pressure.

Continue turning the cap to the left and remove it.

The coolant level is correct if the level

- for cold coolant: is up to the upper mark on the bracing rib of the coolant expansion tank (translucent)
- for warm coolant: is approx. 0.6 in (1.5 cm) higher

Add coolant as required.

Replace and tighten cap.

SL 600 and SL 65 AMG: Only open the cap on coolant expansion tank 1. Never open the cap between the two charge-air coolers. Otherwise, the engine could be damaged.

For more information, see “Coolants” (page 450).

Warning!

In order to avoid any possibly serious burns:

- Use extreme caution when opening the hood if there are any signs of steam or coolant leaking from the cooling system, or if the coolant temperature gauge indicates that the coolant is overheated.
- Do not remove pressure cap on coolant reservoir if coolant temperature is above 158°F (70°C). Allow engine to cool down before removing cap. The coolant reservoir contains hot fluid and is under pressure.
- Using a rag, slowly open the cap approximately 1/2 turn to relieve excess pressure. If opened immediately, scalding hot fluid and steam will be blown out under pressure.
- Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts.

- Continue turning the cap to the left and remove it.

The coolant level is correct if the level

- for cold coolant: is up to the upper mark on the bracing rib of the coolant expansion tank (translucent)
- for warm coolant: is approx. 0.6 in (1.5 cm) higher

- Add coolant as required.
- Replace and tighten cap.

SL 600 and SL 65 AMG: Only open the cap on coolant expansion tank 1. Never open the cap between the two charge-air coolers. Otherwise, the engine could be damaged.

For more information, see “Coolants” (page 450).
Battery

Your vehicle is equipped with two batteries:

- The starter battery (located in the engine compartment)
- The battery for electrical consumers (located in the trunk)

These batteries should always be sufficiently charged in order to achieve their rated service life. Refer to Maintenance Booklet for battery maintenance intervals.

If you use your vehicle mostly for short-distance trips, you will need to have the battery charge checked more frequently.

When replacing batteries, always use batteries approved by Mercedes-Benz.

If you do not intend to operate your vehicle for an extended period of time, consult an authorized Mercedes-Benz Center about steps you need to observe.

Observe all safety instructions and precautions when handling automotive batteries.

Risk of explosion

Keep flames or sparks away from battery. Do not smoke.

Battery acid is caustic. Do not allow it to come into contact with skin, eyes or clothing.

In case it does, immediately flush affected area with clear water and seek medical help if necessary.

Wear eye protection.

Keep children away.

Follow the instructions in this Operator’s Manual.

Batteries contain materials that can harm the environment if disposed of improperly. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.
Windshield washer system and headlamp cleaning system

The windshield washer reservoir is located in the engine compartment.

During all seasons, add MB Windshield Washer Concentrate “S” to water. Premix the windshield washer fluid in a suitable container.

Warning!

Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite and burn. You could be seriously burned.

Refill the reservoir with MB Windshield Washer Concentrate and water (or commercially available premixed windshield washer solvent/antifreeze, depending on ambient temperatures).

Always use washer solvent/antifreeze where temperatures may fall below freezing point. Failure to do so could result in damage to the washer system/reservoir.

Only use washer fluid which is suitable for plastic lenses. Improper washer fluid can damage the plastic lenses of the headlamps.

For more information, see “Windshield and headlamp washer system” (page 452).
Tires and wheels

See an authorized Mercedes-Benz Center for information on tested and recommended rims and tires for summer and winter operation. They can also offer advice concerning tire service and purchase.

Warning!

Replace rims or tires with the same designation, manufacturer and type as shown on the original part. See an authorized Mercedes-Benz Center for further information. If incorrectly sized rims and tires are mounted:

- The wheel brakes or suspension components can be damaged.
- The operating clearance of the wheels and the tires may no longer be correct.

Warning!

Worn, old tires can cause accidents. If the tire tread is badly worn, or if the tires have sustained damage, replace them. When replacing rims, only use genuine Mercedes-Benz wheel bolts specified for the particular rim type. Failure to do so can result in the bolts loosening and possibly an accident.

Retreaded tires are not tested or recommended by Mercedes-Benz, since previous damage cannot always be recognized on retreads. The operating safety of the vehicle cannot be assured when such tires are used.

Important guidelines

- Only use sets of tires and rims of the same type and make.
- Tires must be of the correct size for the rim.
- Break in new tires for approximately 60 miles (100 km) at moderate speeds.
- Regularly check the tires and rims for damage. Dented or bent rims can cause tire inflation pressure loss and damage to the tire beads.
- If vehicle is heavily loaded, check tire inflation pressure and correct as required.
- Do not allow your tires to wear down too far. Adhesion properties on wet roads are sharply reduced at tread depths under \( \frac{1}{8} \) in (3 mm).
- When replacing individual tires, you should mount new tires on the front wheels first (on vehicles with same-sized wheels all around).
Tires and wheels

Tire care and maintenance

Warning!
Regularly check the tires for damage. Damaged tires can cause tire inflation pressure loss. As a result, you could lose control of your vehicle.

Worn, old tires can cause accidents. If the tire tread is badly worn, or if the tires have sustained damage, replace them.

Regularly check your tire inflation pressure at least once a month. For more information on checking tire inflation pressure, see “Recommended tire inflation pressure” (page 291).

Tire inspection
Every time you check your tire inflation pressure, you should also inspect your tires for the following:
- excessive treadwear (page 283)
- cord or fabric showing through the tire’s rubber
- bumps, bulges, cuts, cracks or splits in the tread or side of the tire

Replace the tire if you find any of the above conditions.

Make sure you also inspect the spare tire periodically for condition and inflation. Spare tires will age and become worn over time even if never used, and thus should be inspected and replaced when necessary.

Life of tire
The service life of a tire is dependent upon varying factors including but not limited to:
- Driving style
- Tire inflation pressure
- Distance driven

Warning!
Tires and spare tire should be replaced after 6 years, regardless of the remaining tread.
Tread depth

Do not allow your tires to wear down too far. Adhesion properties on wet roads are sharply reduced at tread depths under 1/8 in (3 mm).

Treadwear indicators (TWI) are required by law. These indicators are located in six places on the tread circumference and become visible at a tread depth of approximately 1/16 in (1.6 mm), at which point the tire is considered worn and should be replaced.

Recommended minimum tire tread depth:
- Summer tires 1/8 in (3 mm)
- Winter tires 1/6 in (4 mm)

Warning!

Although the applicable federal motor safety laws consider a tire to be worn when the treadwear indicators (TWI) become visible at approximately 1/16 in (1.6 mm), we recommend that you do not allow your tires to wear down to that level. As tread depth approaches 1/8 in (3 mm), the adhesion properties on a wet road are sharply reduced.

Depending upon the weather and/or road surface (conditions), the tire traction varies widely.

Storing tires

![Warning]

Keep unmounted tires in a cool, dry place with as little exposure to light as possible. Protect tires from contact with oil, grease and gasoline.

Cleaning tires

![Warning]

Never use a round nozzle to power wash tires. The intense jet of water can result in damage to the tire.

Always replace a damaged tire.
Tires and wheels

Operation

Direction of rotation

Unidirectional tires offer added advantages, such as better hydroplaning performance. To benefit, however, you must make sure the tires rotate in the direction specified.

An arrow on the sidewall indicates the intended direction of rotation (spinning) of the tire.

Loading the vehicle

Two labels on your vehicle show how much weight it may properly carry.

- The Tire and Loading Information placard (Example A) or the Vehicle Tire Information placard (Example B) can be found on the driver’s door B-pillar. This placard tells you important information about the number of people that can be in the vehicle and the total weight that can be carried in the vehicle. It also contains information on the proper size and recommended tire inflation pressures for the original equipment tires on your vehicle.

- The Certification label, also found on the driver’s door B-pillar tells you about the gross weight capacity of your vehicle, called the Gross Vehicle Weight Rating (GVWR). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo. The Certification label also tells you about the front and rear axle weight capacity, called the Gross Axle Weight Rating (GAWR). The GAWR is the total allowable weight that can be carried by a single axle (front or rear). Never exceed the GVWR or GAWR for either the front axle or rear axle.

Spare wheels may be mounted against the direction of rotation (spinning) even with a unidirectional tire for temporary use only until the regular drive wheel has been repaired or replaced. Always observe and follow applicable temporary use restrictions and speed limitations indicated on the spare wheel.
Tire and Loading Information

**Warning!**

Do not overload the tires by exceeding the specified load limit or vehicle capacity weight as indicated on the placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

![Driver’s door B-pillar]

Following is a discussion on how to work with the information contained on the two placards with regards to loading your vehicle.

Your vehicle is equipped with either the Tire and Loading Information placard (Example A) or the Vehicle Tire Information placard (Example B).

Data shown on placard examples are for illustration purposes only. Load limit data are specific to each vehicle and may vary from data shown in the illustrations below. Refer to placard on vehicle for actual data specific to your vehicle.
Operation

Tires and wheels

Placard (Example A)

The placard showing the load limit information is located on the driver’s door B-pillar. If your vehicle is equipped with the Tire and Loading Information placard (Example A), locate the statement “The combined weight of occupants and cargo should never exceed XXX kilograms or XXX lbs.” on this placard. The combined weight of all occupants, cargo/luggage and trailer tongue load (if applicable) should never exceed the weight referenced in that statement.

Placard (Example B)

The placard showing the load limit information is located on the driver’s door B-pillar. If your vehicle is equipped with the Vehicle Tire Information placard (Example B), locate the heading “Vehicle Capacity Weight” on this placard. The combined weight of all occupants, cargo/luggage and trailer tongue (if applicable) should never exceed the weight listed next to vehicle capacity weight.

Seating capacity

The seating capacity gives you important information on the number of occupants that can be in the vehicle. Observe front and rear seating capacity. Your vehicle is equipped with either placard Example A or placard Example B located on the driver’s door B-pillar (> page 285).

Data shown on placard examples are for illustration purposes only. Seating data are specific to each vehicle and may vary from data shown in the illustrations below. Refer to placard on vehicle for actual data specific to your vehicle.
Steps for determining correct load limit

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the "National Traffic and Motor Vehicle Safety Act of 1966".

**Step 1 (Vehicles equipped with placard Example A)**

- Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

**Step 1 (Vehicles equipped with placard Example B)**

- Locate the heading “Vehicle Capacity Weight” on your vehicle's placard.
Operation

Tires and wheels

Step 2
- Determine the combined weight of the driver and passengers that will be riding in your vehicle.

Step 3
- Subtract the combined weight of the driver and passengers from XXX kilograms or XXX lbs.

Step 4
- The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lbs. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 - 750 (5 x 150) = 650 lbs.)

Step 5
- Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

Step 6 (if applicable)
- If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle (> page 290).

The following table shows examples on how to calculate total and cargo load capacities with varying seating configurations and number and size of occupants. The following examples use a load limit of 1500 lbs. This is for illustration purposes only. Make sure you are using the actual load limit for your vehicle stated on the vehicle’s placard (> page 286).
The higher the weight of all occupants, the less cargo and luggage load capacity is available.

For more information, see “Trailer tongue load” (> page 290).

<table>
<thead>
<tr>
<th>Example</th>
<th>Combined weight limit of occupants and cargo from placard</th>
<th>Number of occupants (driver and passengers)</th>
<th>Occupants weight</th>
<th>Combined weight of all occupants</th>
<th>Available cargo/luggage and trailer tongue weight (total load limit or vehicle capacity weight from placard minus combined weight of all occupants)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1500 lbs</td>
<td>1</td>
<td>Occupant 1: 175 lbs</td>
<td>175 lbs</td>
<td>1500 lbs - 175 lbs = 1325 lbs</td>
</tr>
<tr>
<td>2</td>
<td>1500 lbs</td>
<td>2</td>
<td>Occupant 1: 175 lbs Occupant 2: 195 lbs</td>
<td>370 lbs</td>
<td>1500 lbs - 370 lbs = 1130 lbs</td>
</tr>
</tbody>
</table>
Even after careful determination of the combined weight of all occupants, cargo and the trailer tongue load (if applicable) (> page 290) as to not exceed the permissible load limit, you must make sure that your vehicle never exceeds the Gross Vehicle Weight Rating (GVWR) and the Gross Axle Weight Rating (GAWR) for either the front or rear axle. You can obtain the GVWR and GAWR from the Certification label. The Certification Label can be found on the driver’s door B-pillar, see “Technical data” (> page 430).

Gross Vehicle Weight Rating (GVWR): The total weight of the vehicle, all occupants, all cargo, and the trailer tongue load (> page 290) must never exceed the GVWR.

Gross Axle Weight Rating (GAWR): The total allowable weight that can be carried by a single axle (front or rear).

To assure that your vehicle does not exceed the maximum permissible weight limits (GVWR and GAWR for front and rear axle), have the loaded vehicle (including driver, passengers and all cargo and, if applicable, trailer fully loaded) weighed on a suitable commercial scale.

Trailer tongue load

The tongue load of any trailer is an important weight to measure because it affects the load you can carry in your vehicle. If a trailer is towed, the tongue load must be added to the weight of all occupants riding and any cargo you are carrying in the vehicle. The tongue load typically is 10 percent of the trailer weight and everything loaded in it.

Your Mercedes-Benz has been designed primarily to carry passengers and their cargo. Mercedes-Benz does not recommend trailer towing with your vehicle.
Recommended tire inflation pressure

**Warning!**

Follow recommended tire inflation pressures.
Do not underinflated tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.
Do not overinflated tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Your vehicle is equipped with either the Tire and Loading Information placard (Example A) or the Vehicle Tire Information placard (Example B) located on the driver’s door B-pillar (>
page 285).

The tire inflation pressure should be checked regularly and should only be adjusted on cold tires. The tires can be considered cold if the vehicle has been parked for at least 3 hours or driven less than 1 mile (1.6 km).

Follow recommended cold tire inflation pressures listed on placard.

Keeping the tires properly inflated provides the best handling, tread life and riding comfort.

In addition to the tire placard on the driver’s door B-pillar, also consult the fuel filler flap for any additional information pertaining to special driving situations. For more information, see “Important notes on tire inflation pressure” (>
page 292).

Data shown on placard examples are for illustration purposes only. Tire data are specific to each vehicle and may vary from data shown in the illustrations below. Refer to placard on vehicle for actual data specific to your vehicle.

Placard (Example A)

Placard (Example A) lists the recommended cold tire inflation pressures for maximum loaded vehicle weight. The tire inflation pressures listed apply to the tires installed as original equipment.
Placard (Example B)

Vehicle Tire Information placard with recommended cold tire inflation pressures

Placard (Example B) lists the recommended cold tire inflation pressures for maximum loaded vehicle weight. The tire inflation pressures listed apply to the tires installed as original equipment.

Placard (Example B) may list recommended cold tire inflation pressures for different vehicle loads.

Important notes on tire inflation pressure

Warning!

If the tire inflation pressure repeatedly drops:
• Check the tires for punctures from foreign objects.
• Check to see whether air is leaking from the valves or from around the rim.

Tire temperature and tire inflation pressure are also increased while driving, depending on the driving speed and the tire load.

If you will be driving your vehicle at high speeds of 100 mph (160 km/h) or higher, where it is legal and conditions allow, consult the placard on the inside of the fuel filler flap on how to adjust the cold tire inflation pressure. If you do not adjust the tire inflation pressure, excessive heat can build up and result in sudden tire failure.

Be sure to readjust the tire inflation pressure for normal driving speeds. You should wait until the tires are cold before adjusting the tire inflation pressure.

Some vehicles may have supplemental tire pressure information for vehicle loads less than the maximum loaded vehicle condition. If such information is provided, it can be found on the placard located on the inside of the fuel filler flap.

Tire inflation pressure changes by approximately 1.5 psi (0.1 bar) per 18°F (10°C) of air temperature change. Keep this in mind when checking tire inflation pressure where the temperature is different from the outside temperature.
Checking tire inflation pressure

Regularly check your tire inflation pressure at least once a month.

Check and adjust the tire inflation pressure when the tires are cold. The tires can be considered cold if the vehicle has been parked for at least 3 hours or driven less than 1 mile (1.6 km).

If you check the tire inflation pressure when the tires are warm (the vehicle has been driven for several miles or sitting less than 3 hours), the reading will be approximately 4 psi (0.3 bar) higher than the cold reading. This is normal. Do not let air out to match the specified cold tire inflation pressure. Otherwise, the tire will be underinflated.

Checking tire inflation pressure manually

Follow the steps below to achieve correct tire inflation pressure:

- Remove the cap from the valve on one tire.
- Firmly press a tire gauge onto the valve.
- Read tire inflation pressure on tire gauge and check against the recommended tire inflation pressure on the placard on the driver’s door B-pillar (page 291). If necessary, add air to achieve the recommended tire inflation pressure.

If you have overfilled the tire, release tire inflation pressure by pushing the metal stem of the valve with e.g. a tip of a pen. Then recheck the tire inflation pressure with the tire gauge.

- Install the valve cap.
- Repeat this procedure for each tire.

Run Flat Indicator* (Canada only)

While the vehicle is being driven, the Run Flat Indicator monitors the set tire inflation pressures by evaluating each wheel’s rotational speed. This allows the system to detect a significant loss of pressure in a tire.

If a wheel’s rotational speed changes due to falling tire inflation pressure, you will see a corresponding warning message in the multifunction display.

The Run Flat Indicator may function in a restricted manner or with a delay if:

- snow chains are mounted to the vehicle
- winter road conditions prevail
- you are driving on a loose surface (e.g. sand or gravel)
- you are driving in a very sporty manner (involving rapid acceleration or high speeds in curves)
Warning!
When the multifunction display shows the message **Tire pressure Check tires**, one or more of your tires is significantly under-inflated. You should stop and check your tires as soon as possible, and inflate them to the proper tire inflation pressure as indicated on the vehicle’s tire information placard. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Each tire, including the spare, should be checked monthly when cold and set to the recommended tire inflation pressure as specified in the vehicle placard and owner’s manual.

1 The recommended tire inflation pressures for your vehicle can be found on the tire placard located on the driver’s door B-pillar (> page 285) or, if available, the inside of the fuel filler flap. The tire inflation pressures are not listed in the owner’s manual.

Warning!
The Run Flat Indicator does not indicate a warning for wrongly selected tire inflation pressures. Always adjust tire inflation pressure according to the placard on the driver’s door B-pillar or fuel filler flap.
The Run Flat Indicator does not replace regular checks of the tire inflation pressures since a gradual pressure loss in all four tires cannot be detected by the Run Flat Indicator.
The Run Flat Indicator is not able to issue a warning due to a sudden dramatic loss of tire inflation pressure (e.g., tire blowout caused by a foreign object). In this case bring the vehicle to a halt by carefully applying the brakes and avoiding abrupt steering maneuvers.
Reactivating the Run Flat Indicator

The tire inflation pressure monitor must be reactivated in the following situations:

- If you have changed the tire inflation pressure
- If you have replaced the wheels or tires
- If you have installed new wheels or tires

1. Using the tire placard on the driver’s door B-pillar or, if available, the inside of the fuel filler flap, make sure the tire inflation pressure of all four tires is correct.

2. Switch on the ignition (page 36).

3. Make sure the standard display menu appears in the multifunction display (page 140).

4. Press button “” or “” repeatedly until the following message appears in the multifunction display:

   Run Flat Indicator active
   Reactivation poss. using

5. Press button “”.

The following message will appear in the multifunction display:

   Tire pressure OK now?

If you wish to confirm activation:

- Press button “”.

   The following message will appear in the multifunction display:
   Run Flat Indicator reactivated

After a certain “learning phase”, the Run Flat Indicator checks the set pressure values for all four tires.

If you wish to cancel activation:

- Press button “”.

   or

- Wait until the message
   Tire pressure OK now?
   disappears.

Warning!

The Run Flat Indicator can only warn you in a reliable manner if you have set the correct tire inflation pressures for each tire.

If an incorrect tire inflation pressure was set, the system will monitor the pressure according to the incorrect value.
Checking tire pressure electronically with the Tire Pressure Monitoring System (TPMS), (USA only)

The Tire Pressure Monitoring System (TPMS) is equipped with a combination low tire pressure/TPMS malfunction telltale in the instrument cluster (> page 27). Depending on how the telltale illuminates, it indicates a low tire pressure condition or a malfunction in the TPMS system itself:

- If the telltale illuminates continuously, one or more of your tires is significantly under-inflated. There is no malfunction in the TPMS.
- If the telltale flashes for 60 seconds and then stays illuminated, the TPMS system itself is not operating properly.

The TPMS only functions on wheels that are equipped with the proper electronic sensors. It monitors the tire inflation pressure, as selected by the driver, in all four tires. A warning is issued to alert you to a decrease in pressure in one or more of the tires.

Warning!

The TPMS does not indicate a warning for wrongly selected inflation pressures. Always adjust tire inflation pressure according to the placard on the driver’s door B-pillar or, if available, the supplemental tire pressure information on the inside of the fuel filler flap. The TPMS is not able to issue a warning due to a sudden dramatic loss of pressure (e.g. tire blowout caused by a foreign object). In this case bring the vehicle to a halt by carefully applying the brakes and avoiding abrupt steering maneuvers.

Warning!

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or the tire inflation pressure label. If your vehicle has tires of a different size than the size indicated on the vehicle placard or the tire inflation pressure label, you should determine the proper tire inflation pressure for those tires. As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.
Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

If a condition causing the TPMS to malfunction develops, it may take up to 10 minutes for the system to signal a malfunction using the TPMS telltale flashing and illumination sequence. The telltale extinguishes after a few minutes driving if the malfunction has been corrected.

Operating radio transmission equipment (e.g. wireless headsets, two-way radios) in or near the vehicle could cause the TPMS to malfunction.

Reactivating the TPMS

Warning!

It is the driver’s responsibility to calibrate the TPMS on the recommended cold inflation pressure. Underinflated tires affect the ability to steer or brake the vehicle. You might lose control over the vehicle.

The TPMS must be reactivated when you have adjusted the tire inflation pressure to a new level (e.g. because of different load or driving conditions). The TPMS is then recalibrated to the current tire inflation pressures.

- Using the tire placard on the driver’s door B-pillar (> page 285) or, if available, the supplemental tire pressure information on the inside of the fuel filler flap (> page 269), make sure the tire inflation pressure of all four tires is correct.

- Press button \( \square \) or \( \square \) on the multifunction steering wheel repeatedly until the standard display menu appears in the multifunction display (> page 140).

- Press the \( \square \) or \( \square \) button repeatedly until you see the flowing message:

  - Tire pressure monitor active
  - Reactivation possible: R-button

- Press the reset button.

  The following message will appear in the multifunction display:

  Check current tire pressure?
Press the \[+\] button.

The following message will appear in the multifunction display:
Tire pres. monitor reactivated

After driving a few minutes the system verifies that the current tire inflation pressures are within the system’s specified range. Afterwards the current tire inflation pressures are accepted as reference pressures and then monitored.

If you wish to cancel activation:
Press the \[-\] button.

Potential problems associated with underinflated and overinflated tires

**Underinflated tire inflation pressure**
Underinflated tires can:
- cause excessive and uneven tire wear
- adversely affect fuel economy
- lead to tire failure from being overheated
- adversely affect handling characteristics

**Overinflated tire inflation pressure**
Overinflated tires can:
- adversely affect handling characteristics
- cause uneven tire wear
- be more prone to damage from road hazards
- adversely affect ride comfort
- increase stopping distance

**Warning!**
Follow recommended tire inflation pressures.
Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

**Warning!**
Follow recommended tire inflation pressures.
Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.
MOExtended system*

The MOExtended system allows you to continue driving your vehicle even if there is a total loss of pressure in one or more tires.

You may only use the MOExtended system in conjunction with the Run Flat Indicator* (Canada vehicles) (> page 293) or TPMS (U.S. vehicles) (> page 296).

For information on driving in case of pressure loss in one or more tires (emergency mode), see the “Operation” section (> page 411).

Tire labeling

Besides tire name (sales designation) and manufacturer name, a number of markings can be found on a tire.

Following are some explanations for the markings on your vehicle’s tires:

1. Uniform Quality Grading Standards (> page 308)
2. DOT, Tire Identification Number (TIN) (> page 305)
3. Maximum tire load (> page 306)
4. Maximum tire inflation pressure (> page 307)
5. Manufacturer
6. Tire ply material (> page 310)
7. Tire size designation, load and speed rating (> page 301)
8. Load identification (> page 304)
9. Tire name

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

For more information, see “Rims and tires” (> page 434).
Tire size designation, load and speed rating

General:
Depending on the design standards used, the tire size molded into the sidewall may have no letter or a letter preceding the tire size designation.

No letter preceding the size designation (as illustrated above): Passenger car tire based on European design standards.
Letter “P” preceding the size designation: Passenger car tire based on U.S. design standards.
Letter “LT” preceding the size designation: Light Truck tire based on U.S. design standards.
Letter “T” preceding the size designation: Temporary spare tires which are high pressure compact spares designed for temporary emergency use only.

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

Tire width
The tire width (page 301) indicates the nominal tire width in mm.

Aspect ratio
The aspect ratio (page 301) is the dimensional relationship between tire section height and section width and is expressed in percentage. The aspect ratio is arrived at by dividing section height by section width.

Tire code
The tire code (page 301) indicates the tire construction type. The “R” stands for radial tire type. Letter “D” means diagonal or bias ply construction; letter “B” means belted-bias ply construction.

At the tire manufacturer’s option, any tire with a speed capability above 149 mph (240 km/h) can include a “ZR” in the size designation (for example: 245/40 ZR 18). For additional information, see “Tire speed rating” (page 303).
Rim diameter
The rim diameter (page 301) is the diameter of the bead seat, not the diameter of the rim edge. Rim diameter is indicated in inches (in).

Tire load rating
The tire load rating (page 301) is a numerical code associated with the maximum load a tire can support.
For example, a load rating of 91 corresponds to a maximum load of 1,356 lbs (615 kg) the tire is designed to support. See also "Maximum tire load" (page 306) where the maximum load associated with the load index is indicated in kilograms and lbs.

Warning!
The tire load rating must always be at least half of the GAWR (page 311) of your vehicle. Otherwise, tire failure may be the result which may cause an accident and/or serious personal injury to you or others. Always replace rims and tires with the same designation, manufacturer and type as shown on the original part.

Warning!
Do not overload the tires by exceeding the specified load limit or vehicle capacity weight as indicated on the placard located on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

For additional information on tire load rating, see “Load identification” (page 304).

Tire load rating and tire speed rating are also referred to as "service description".
**Tire speed rating**

The tire speed rating ⑥ (page 301) indicates the approved maximum speed for the tire.

**Warning!**

Even when permitted by law, never operate a vehicle at speeds greater than the maximum speed rating of the tires. Exceeding the maximum speed for which tires are rated can lead to sudden tire failure, causing loss of vehicle control and possibly resulting in an accident and/or personal injury and possible death, for you and for others.

Tire load rating ⑤ (page 301) and tire speed rating ⑥ (page 301) are also referred to as “service description”.

**Summer tires**

<table>
<thead>
<tr>
<th>Index</th>
<th>Speed rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q</td>
<td>up to 100 mph (160 km/h)</td>
</tr>
<tr>
<td>R</td>
<td>up to 106 mph (170 km/h)</td>
</tr>
<tr>
<td>S</td>
<td>up to 112 mph (180 km/h)</td>
</tr>
<tr>
<td>T</td>
<td>up to 118 mph (190 km/h)</td>
</tr>
<tr>
<td>H</td>
<td>up to 130 mph (210 km/h)</td>
</tr>
<tr>
<td>V</td>
<td>up to 149 mph (240 km/h)</td>
</tr>
<tr>
<td>W</td>
<td>up to 168 mph (270 km/h)</td>
</tr>
<tr>
<td>Y</td>
<td>up to 186 mph (300 km/h)</td>
</tr>
<tr>
<td>(Y)</td>
<td>above 186 mph (300 km/h)</td>
</tr>
<tr>
<td>ZR</td>
<td>above 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>

- At the tire manufacturer’s option, any tire with a speed capability above 149 mph (240 km/h) can include a “ZR” in the size designation (for example: 245/40 ZR18). To determine the maximum speed capability of the tire, the service description for the tire must be referred to. The service description is comprised of the tire load rating ⑤ (page 301) and the tire speed rating ⑥ (page 301).

If your tire includes “ZR” in the size designation and no service description ⑤ and ⑥ (page 301) is given, the tire manufacturer must be consulted for the maximum speed capability.

If a service description ⑤ and ⑥ (page 301) is given, the speed capability is limited by the speed symbol in the service description.

Example: 245/40 ZR18 97Y. In this example, “97Y” is the service description. The letter “Y” designates the speed rating and the speed capability of the tire is limited to 186 mph (300 km/h).
Any tire with a speed capability above 186 mph (300 km/h) must include a “ZR” in the size designation AND the service description must be placed in parenthesis. Example: 275/40 ZR 18 (99Y). The “(Y)” speed rating in parenthesis designates the maximum speed capability of the tire as being above 186 mph (300 km/h). Consult the tire manufacturer for the actual maximum permissible speed of the tire.

¹ or M+S ![mountain/snowflake symbol](image) for winter tires

Not all M+S rated tires provide special winter performance. Make sure the tires you use show M+S and the mountain/snowflake symbol ![mountain/snowflake symbol](image) marking on the tire sidewall. These tires meet specific snow traction performance requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) and have been designed specifically for use in snow conditions.

---

**Load identification**

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.
In addition to tire load rating, special load information may be molded into the tire sidewall following the letter designating the tire speed rating (\(\geq\) page 304).

No specification given: absence of any text (like in above example) indicates a standard load (SL) tire.

XL or Extra Load: designates an extra load (or reinforced) tire.

Light Load: designates a light load tire.

C, D, E: designates load range associated with the maximum load a tire can carry at a specified pressure.

**DOT, Tire Identification Number (TIN)**

U.S. tire regulations require each new tire manufacturer or tire retreader to mold a TIN into or onto a sidewall of each tire produced.

The TIN is a unique identifier which facilitates efforts by tire manufactures to notify purchasers in recall situations or other safety matters concerning tires and gives purchasers the means to easily identify such tires.

The TIN is comprised of “Manufacturer’s identification mark”, “Tire size”, “Tire type code” and “Date of manufacture”.

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.
Operation

Tires and wheels

DOT (Department of Transportation)
A tire branding symbol \(^1\) (page 305) which denotes the tire meets requirements of the U.S. Department of Transportation.

Manufacturer’s identification mark
The manufacturer’s identification mark \(^2\) (page 305) denotes the tire manufacturer.

New tires have a mark with two symbols.
Retreaded tires have a mark with four symbols. For more information on retreaded tires, see (page 281).

Tire size
The code \(^3\) (page 305) indicates the tire size.

Tire type code
The code \(^4\) (page 305) may, at the option of the manufacturer, be used as a descriptive code for identifying significant characteristics of the tire.

Date of manufacture
The date of manufacture \(^5\) (page 305) identifies the week and year of manufacture.

The first two figures identify the week, starting with “01” to represent the first full week of the calendar year. The second two figures represent the year.

For example, “3202” represents the 32nd week of 2002.

Maximum tire load

Maximum tire load rating

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

The maximum tire load is the maximum weight the tires are designed to support.
For more information on tire load rating (page 302).

For information on calculating total and cargo load capacities (page 287).
Uniform Tire Quality Grading Standards (U.S. vehicles)

Tire manufacturers are required to grade tires based on three performance factors: treadwear, traction and temperature resistance.

Quality grades can be found, where applicable, on the tire sidewall between tread shoulder and maximum section width. For example:

<table>
<thead>
<tr>
<th>Treadwear</th>
<th>Traction</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>AA</td>
<td>A</td>
</tr>
</tbody>
</table>

All passenger car tires must conform to federal safety requirements in addition to these grades.

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.
Traction
The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Temperature
The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning!
The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Warning!
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.
Tire ply material

1. Plies in sidewall
2. Plies under tread

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

This marking tells you about the type of cord and number of plies in the sidewall and under the tread.

Tire and loading terminology

Accessory weight
The combined weight (in excess of those standard items which may be replaced) of automatic transmission, power steering, power brakes, power windows, power seats, radio, and heater, to the extent that these items are available as factory-installed equipment (whether installed or not).

Air pressure
The amount of air inside the tire pressing outward on each square inch of the tire. Air pressure is expressed in pounds per square inch (psi), or kilopascals (kPa) or bars.

Aspect ratio
Dimensional relationship between tire section height and section width expressed in percentage.

Bar
Another metric unit for air pressure. There are 14.5038 pounds per square inch (psi) to 1 bar; there are 100 kilopascals (kPa) to 1 bar.

Bead
The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

Cold tire inflation pressure
Tire inflation pressure when your vehicle has been sitting for at least 3 hours or driven no more than 1 mile (1.6 km).

Curb weight
The weight of a motor vehicle with standard equipment including the maximum capacity of fuel, oil, and coolant, and, if so equipped, air conditioning and additional optional equipment, but without passengers and cargo.
**DOT (Department of Transportation)**
A tire branding symbol which denotes the tire meets requirements of the U.S. Department of Transportation.

**GAWR (Gross Axle Weight Rating)**
The GAWR is the maximum permissible axle weight. The gross vehicle weight on each axle must never exceed the GAWR for the front and rear axle indicated on the certification label located on the driver’s door B-pillar.

**GVW (Gross Vehicle Weight)**
The GVW comprises the weight of the vehicle including fuel, tools, spare wheel, installed accessories, passengers and cargo and, if applicable, trailer tongue load. The GWV must never exceed the GWVR indicated on the certification label located on the driver’s door B-pillar.

**GVWR (Gross Vehicle Weight Rating)**
This is the maximum permissible vehicle weight of the fully loaded vehicle (weight of the vehicle including all options, passengers, fuel, and cargo and, if applicable, trailer tongue load). It is indicated on certification label located on the driver’s door B-pillar.

**Kilopascal (kPa)**
The metric unit for air pressure. There are 6.9 kPa to 1 psi; another metric unit for air pressure is bars. There are 100 kilopascals (kPa) to 1 bar.

**Maximum load rating**
The maximum load in kilograms and pounds that can be carried by the tire.

**Maximum loaded vehicle weight**
The sum of curb weight, accessory weight, vehicle capacity weight and production options weight.

**Maximum tire inflation pressure**
This number is the greatest amount of air pressure that should ever be put in the tire under normal driving conditions.

**Normal occupant weight**
The number of occupants the vehicle is designed to seat, multiplied by 68 kilograms (150 lbs).

**Occupant distribution**
The distribution of occupants in a vehicle at their designated seating positions.

**Production options weight**
The combined weight of those installed regular production options weighing over 5 lbs (2.3 kilograms) in excess of those standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim.
Tires and wheels

**PSI (Pounds per square inch)**
A standard unit of measure for air pressure -> bar, kilopascal (kPa).

**Recommended tire inflation pressure**
Recommended tire inflation pressure listed on placard located on driver’s door B-pillar for normal driving conditions. Provides best handling, tread life and riding comfort.

**Rim**
A metal support for a tire or a tire and tube assembly upon which the tire beads are seated.

**Sidewall**
The portion of a tire between the tread and the bead.

**TIN (Tire Identification Number)**
Unique identifier which facilitates efforts by tire manufacturers to notify purchasers in recall situations or other safety matters concerning tires and gives purchases the means to easily identify such tires. The TIN is comprised of “Manufacturer’s identification mark”, “Tire size”, “Tire type code” and “Date of manufacture”.

**Tire load rating**
Numerical code associated with the maximum load a tire can support.

**Tire ply composition and material used**
This indicates the number of plies or the number of layers of rubber-coated fabric in the tire tread and sidewall. Tire manufacturers also must indicate the ply materials in the tire and sidewall, which include steel, nylon, polyester, and others.

**Tire speed rating**
Part of tire designation; indicates the speed range for which a tire is approved.

**Traction**
Force exerted by the vehicle on the road via the tires. The amount of grip provided.

**Tread**
The portion of a tire that comes into contact with the road.

**Treadwear indicators**
Narrow bands, sometimes called “wear bars” that show across the tread of a tire when only 1/16 in (1.6 mm) of tread remains.
Uniform Tire Quality Grading Standards
A tire information system that provides consumers with ratings for a tire’s traction, temperature and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire.

Vehicle capacity weight
Rated cargo and luggage load plus 68 kilograms (150 lbs) times the vehicle’s designated seating capacity.

Vehicle maximum load on the tire
Load on an individual tire that is determined by distributing to each axle its share of the maximum loaded vehicle weight and dividing it by two.

Rotating tires
Tire rotation can be performed on vehicles with tires of the same dimension all around. If your vehicle is equipped with tires of the same dimension all around, tires can be rotated, observing a front-to-rear rotation pattern that will maintain the intended rotation (spinning) direction of the tire (> page 284).

In some cases, such as when your vehicle is equipped with mixed-size tires (different tire dimension front vs. rear), tire rotation is not possible.

Warning!
Rotate front and rear wheels only if the tires are of the same dimension.
If your vehicle is equipped with mixed-size tires (different tire dimensions front vs. rear), tire rotation is not possible.

If applicable to your vehicle’s tire configuration, tires can be rotated according to the tire manufacturer’s recommended intervals in the tire manufacturer’s warranty pamphlet located in your vehicle literature portfolio. If none is available, tires should be rotated every 3000 to 6000 miles (5000 to 10000 km), or sooner if necessary, according to the degree of tire wear. The same rotation (spinning) direction must be maintained (> page 284).

Rotate tires before the characteristic tire wear pattern becomes visible (shoulder wear on front tires and tread center wear on rear tires).

Thoroughly clean the mounting face of wheels and brake disks, i.e. the inner side of the wheels/tires, during each rotation. Check for and ensure proper tire inflation pressure.
**Operation**

**Tires and wheels**

---

**Warning!**

Have the tightening torque checked after changing a wheel. Wheels could become loose if not tightened with a torque of 96 lb-ft (130 Nm).

Only use genuine Mercedes-Benz wheel bolts specified for your vehicle’s rims.

For information on wheel change, see the “Practical hints” section (> page 383) and (> page 399).
Winter driving

Before the onset of winter, have your vehicle winterized at an authorized Mercedes-Benz Center. This service includes:

- Check of anticorrosion and antifreeze concentration.
- Addition of cleaning concentrate to the water of the windshield and headlamp cleaning system. Add MB Concentrate “S” to a pre-mixed windshield washer solvent/antifreeze which is formulated for temperatures below freezing point (> page 451).
- Battery test. Battery capacity drops with decreasing ambient temperature. A well charged battery helps to ensure that the engine can be started and the electro-hydraulic brake system will be fully operational even at low ambient temperatures.
- Tire change.

When scraping ice or snow from the rear window, be careful not to damage the sealing strip or apertures along the side of the window.

Winter tires

Always use winter tires at temperatures below 45°F (7°C) and whenever wintry road conditions prevail. Not all M+S rated tires provide special winter performance. Make sure the tires you use show M+S and the mountain/snowflake symbol marking on the tire sidewall. These tires meet specific snow traction performance requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC), and have been designed specifically for use in snow conditions. Use of winter tires is the only way to achieve the maximum effectiveness of the ABS and ESP® in winter operation.

For safe handling, make sure all winter tires mounted are of the same make and have the same tread design.
Operation

Winter driving

Warning!

Winter tires with a tread depth of less than \(\frac{1}{6}\) in (4 mm) must be replaced. They are no longer suitable for winter operation.

Always observe the speed rating of the winter tires installed on your vehicle. If the maximum speed for which your tires are rated is below the speed rating of your vehicle, you must place a notice to this effect where it will be seen by the driver. Such notices are available at your tire dealer or any authorized Mercedes-Benz Center.

Warning!

If you use your spare tire when winter tires are fitted on the other wheels, be aware that the difference in tire characteristics may very well impair turning stability and that overall driving stability may be reduced. Adapt your driving style accordingly.

Have the spare tire replaced with a winter tire at the nearest authorized Mercedes-Benz Center.

Block heater (Canada only)

The engine is equipped with a block heater.

The electrical cable may be installed at an authorized Mercedes-Benz Center.

Block heater not available for SL 55 AMG and SL 65 AMG.
Snow chains

When driving with snow chains, always select setting 1 of the level control system (>). Other settings may result in damage to your vehicle.

Snow chains should only be driven on snow-covered roads at speeds not to exceed 30 mph (50 km/h). Remove chains as soon as possible when driving on roads without snow.

When driving with snow chains, you may wish to deactivate the ESP® (>) before setting the vehicle in motion. This will improve the vehicle’s traction.

Please observe the following guidelines when using snow chains:

- Use of snow chains is not permissible with all wheel/tire combinations.
- Snow chains should only be used on the rear wheels. Follow the manufacturer’s mounting instructions.
- Only use snow chains that are approved by Mercedes-Benz. Your authorized Mercedes-Benz Center will be glad to advise you on this subject.
- Use of snow chains may be prohibited depending on location. Always check local and state laws before installing snow chains.

Some tire sizes do not leave adequate clearance for snow chains. To help avoid serious damage to your vehicle or tires, use of snow chains is not permissible with the spare wheel and with tire size:

- 285/35 R18 97W
- 285/35 R18 97Y
- 285/35 ZR18 97Y
- 285/35 R18 97Y MOE
- 285/35 R18 97V M+S
- 285/30 ZR19 98Y XL (Extra Load)
We strongly recommend that you have your vehicle serviced by an authorized Mercedes-Benz Center, in accordance with the Maintenance Booklet at the times called for by the maintenance service indicator.

Failure to have the vehicle maintained in accordance with the Maintenance Booklet and the maintenance service indicator at the designated times/mileage may result in vehicle damage not covered by the Mercedes-Benz Limited Warranty.

Maintenance service indicator message

The maintenance service indicator message will notify you when your next maintenance service is due.

Starting approximately 1 month before your next maintenance service is due, one of the following messages will appear in the right multifunction display while you are driving or when you switch on the ignition (example service A):

- Service A in XXXX miles (km)
- Service A in XXX days
- Service A Due now

The type of maintenance service due is indicated in the left multifunction display:

- Basic service (A)
- Extended service (B)

Vehicles equipped with FSS (Flexible Service System) only (Canada vehicles):

The interval between maintenance services depends on your driving habits. A gentle driving style, moderate engine speeds and the avoidance of short-distance trips will lengthen the interval between services.

Clearing the maintenance service indicator message

The maintenance service indicator message is automatically cleared after approximately 30 seconds

- after you have switched on the ignition
- after you have reached the maintenance service threshold while driving

You can also clear the maintenance service indicator message yourself.
Maintenance service term exceeded

If you have exceeded the suggested maintenance service term, you will see the following message in the right multifunction display:

Service A exceeded by XXXX miles (km)
Service A exceeded by XXX days

In addition, a signal sounds when the message appears.

Any authorized Mercedes-Benz Center will reset the maintenance service indicator following a completed maintenance service.

Calling up the maintenance service indicator display

- Switch on the ignition (> page 36).
  The standard display of the control system appears (> page 135).
- Press button or on the multifunction steering wheel repeatedly until the standard display appears in the multifunction display (> page 140).
- Press button or on the multifunction steering wheel until the maintenance service indicator message with the maintenance service symbol or appears in the left multifunction display and the maintenance service deadline appears in the right multifunction display.
Resetting the maintenance service indicator

In the event that the maintenance service on your vehicle is not carried out by an authorized Mercedes-Benz Center, you can have the maintenance service indicator reset. The automotive maintenance facility carrying out the maintenance service will find the information for resetting the maintenance service indicator in the maintenance-relevant information for your vehicle. Such information is available either from an authorized Mercedes-Benz Center or directly from Mercedes-Benz.

If the battery supplying the vehicle’s electrical consumers is disconnected, the days of disconnection will not be included in the count shown by the maintenance service indicator. To arrive at the true maintenance service deadline, you will need to subtract these days from the days shown in the maintenance service indicator display.

Do not confuse the service indicator with the engine oil level indicator.

If the maintenance service indicator was inadvertently reset, have an authorized Mercedes-Benz Center correct it. Only reset if the proper service has been performed. Resetting the system without performing proper service as called for by the maintenance service indicator will result in engine damage not covered by the Mercedes-Benz Limited Warranty.
Operation

Vehicle care

Cleaning and care of the vehicle

Warning!

Many cleaning products can be hazardous. Some are poisonous, others are flammable. Always follow the instructions on the particular container. Always open your vehicle's doors or windows when cleaning the inside. Never use fluids or solvents that are not designed for cleaning your vehicle. Always lock away cleaning products and keep them out of reach of children.

While in operation, even while parked, your vehicle is subjected to varying external influences which, if gone unchecked, can attack the paintwork as well as the underbody and cause lasting damage.

Such damage is caused not only by extreme and varying climatic conditions, but also by:

- Air pollution
- Road salt
- Tar
- Gravel and stone chipping

To avoid paint damage, you should immediately remove:

- Grease and oil
- Fuel
- Coolant
- Brake fluid
- Bird droppings
- Insects
- Tree resins, etc.

Frequent washing reduces and/or eliminates the aggressiveness and potency of the above adverse influences.

More frequent washings are necessary to deal with unfavorable conditions:

- near the ocean
- in industrial areas (smoke, exhaust emissions)
- during winter operation

You should check your vehicle from time to time for stone chipping or other damage. Any damage should be repaired as soon as possible to prevent corrosion.

In doing so, do not neglect the underbody of the vehicle. A prerequisite for a thorough check is a washing of the underbody followed by a thorough inspection. Damaged areas need to be re-undercoated.

Your vehicle has been treated at the factory with a wax-base rustproofing in the body cavities which will last for the lifetime of the vehicle. Post-production treatment is neither necessary nor recommended by Mercedes-Benz because of the possibility of incompatibility between materials used in the production process and others applied later.

Warning!

Many cleaning products can be hazardous. Some are poisonous, others are flammable. Always follow the instructions on the particular container. Always open your vehicle's doors or windows when cleaning the inside. Never use fluids or solvents that are not designed for cleaning your vehicle. Always lock away cleaning products and keep them out of reach of children.
We have selected car-care products and compiled recommendations which are specially matched to our vehicles and which always reflect the latest technology. You can obtain Mercedes-Benz approved car-care products at an authorized Mercedes-Benz Center.

Scratches, corrosive deposits, corrosion or damage due to negligent or incorrect care cannot always be removed or repaired with the car-care products recommended here. In such cases it is best to seek aid at an authorized Mercedes-Benz Center.

The following topics deal with the cleaning and care of your vehicle and give important “how-to” information as well as references to Mercedes-Benz approved car-care products.

**Power washer**

Follow the instructions provided by the power washer manufacturer on maintaining a distance between the vehicle and the nozzle of the power washer.

Never use a round nozzle to power-wash tires. The intense jet of water can result in damage to the tire.

Always replace a damaged tire.

Always keep the jet of water moving across the surface. Do not aim directly at electrical parts, electrical connectors, seals, or other rubber parts.

**Vehicles with KEYLESS-GO*:**

If a door handle is hit by a strong jet of water, and a SmartKey with KEYLESS-GO* is in close proximity, i.e. within approximately 3 ft (1 m), the vehicle could be inadvertently locked or unlocked.

**Tar stains**

Quickly remove tar stains before they dry and become more difficult to remove. A tar remover is recommended.
Paintwork, painted body components

Affixing stickers, adhesive tape or similar materials to painted body components may damage the paintwork.

Mercedes-Benz approved Paint Care should be applied when water drops on the paint surface do not “bead up”. This should normally be done every 3 to 5 months, depending on climate and washing detergent used.

Mercedes-Benz approved Paint Cleaner should be applied if the paint surface shows signs of embedded dirt (i.e. loss of gloss).

Do not apply any of these products or wax if your vehicle is parked in the sun or if the hood is still hot.

Use the appropriate MB-Touch-Up Stick for quick and provisional repairs of minor paint damage (i.e. chips from stones, vehicle doors, etc.).

Engine cleaning

Prior to cleaning the engine compartment, make sure to protect electrical components and connectors from contact with water and cleaning agents.

Corrosion protection, such as MB Anticorrosion Wax, should be applied to the engine compartment after every engine cleaning. Before applying, all control linkage bushings and joints should be lubricated. The poly-V-belt and all pulleys should be protected from any wax.

Vehicle washing

In the winter, thoroughly remove all traces of road salt as soon as possible.

When washing the underbody, do not forget to clean the inner sides of the wheels.

Vehicles with KEYLESS-GO*:

If a door handle is hit by a strong jet of water, and a SmartKey with KEYLESS-GO* is in close proximity, i.e. within approximately 3 ft (1 m), the vehicle could be inadvertently locked or unlocked.
Operation

Vehicle care

**Hand-wash**

Do not use hot water or wash your vehicle in direct sunlight.

- Only use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo.
- Thoroughly spray the vehicle with a diffused jet of water.
  - Direct only a very weak spray towards the ventilation intake.
- Use plenty of water and rinse the sponge and chamois frequently.
- Rinse with clean water and thoroughly dry with a chamois.
  - Do not allow cleaning agents to dry on the finish.

**Automatic car wash**

You can have your car washed in an automatic car wash from the start. Automatic car washes without brushes are preferable.

If the vehicle is very dirty, prewash it before running it through the automatic car wash.

After running the vehicle through an automatic car wash, wipe any wax off of the windshield (page 327). This will prevent smears and reduce wiping noise which can be caused by residual wax on the windshield.

When leaving the car wash, make sure that the mirrors are folded out. Otherwise they may vibrate.

Due to the width of the vehicle, fold in exterior rear view mirrors prior to running the vehicle through an automatic car wash to prevent damage to the mirrors.

Make sure that the windshield wiper switch is set to 0 (page 54). Otherwise, the rain sensor could activate and cause the wipers to move unintentionally. This may lead to vehicle damage.
Ornamental moldings
For regular cleaning and care of ornamental moldings, use a damp cloth.

Do not use chrome cleaner on ornamental moldings. Although ornamental moldings may have chrome appearance, they could be made of anodized aluminum that will be damaged when cleaned with chrome cleaner. Instead, use a damp cloth to clean those ornamental moldings.

Very dirty ornamental moldings of which you are sure are chrome-plated, use a chrome cleaner. If in doubt whether an ornamental molding is chrome-plated, contact an authorized Mercedes-Benz Center.

Headlamps, tail lamps, side markers, turn signal lenses
- Use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water.

- Only use window cleaning solutions that are suitable for plastic lamp lenses. Window cleaning solutions which are not suitable may damage the plastic lamp lenses of the headlamps. Therefore, do not use abrasives, solvents or cleaners that contain solvents.

- Never apply strong force and only use a soft, non-scratching cloth when cleaning the lenses. Do not attempt to wipe dirty lenses with a dry cloth or sponge. Otherwise you may scratch or damage the lens surface.

Cleaning the Distronic* system sensor cover
- Switch off the ignition (▷ page 36).

- Use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water and a non-scratching cloth to clean sensor cover ①.
Operation
Vehicle care

1. To prevent scratches or damage, never apply strong force and only use a soft, non-scratching cloth when cleaning the sensor cover 1. Do not attempt to wipe dirty sensors with a dry cloth or sponge.

- Restart the engine after cleaning sensor cover 1.

Cleaning the Parktronic system* sensors

![Image of Parktronic system sensors]

1. Parktronic system* sensors in front bumper

- Use a mild car wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water and a soft, non-scratching cloth to clean sensors 1 on the bumpers.

- Do not apply strong pressure to the sensor covers. Applying strong pressure may damage the sensor covers.

- Follow the instructions provided by the power washer manufacturer on maintaining a distance between the vehicle and the nozzle of the power washer.

- To prevent scratches, never apply strong force and only use a soft, non-scratching cloth when cleaning the sensors. Do not attempt to wipe dirty sensors with a dry cloth or sponge.
Wiper blades

! The windshield wipers must be in a vertical position before folding them away from the windshield. They could otherwise damage the hood.

- Turn on the wipers and place them in a vertical position.

For information on how to position the wipers in a vertical position, see “Replacing wiper blades” (page 397).

Clean the wiper blade inserts with a clean cloth and detergent solution.

Cleaning the windows and the wiper blades

! Fold the windshield wiper arms back onto the windshield before turning the SmartKey in the starter switch. Hold on to the wiper when folding the wiper arm back. If released, the force of the impact from the tensioning spring could crack the windshield.

Warning!

For safety reasons, switch off wipers and remove SmartKey from starter switch (vehicles with KEYLESS-GO*: Make sure the vehicle’s on-board electronics have status 0) before cleaning the wiper blades. Otherwise the wiper motor could suddenly turn on and cause injury.

- Switch on the ignition (page 36).
- Turn combination switch to wiper setting II (page 54).
- With wiper arms in vertical position, switch off the ignition (page 36).
Warning!

For safety reasons, switch off wipers and remove SmartKey from starter switch (vehicles with KEYLESS-GO*: Make sure the vehicle’s on-board electronics have status 0.) before cleaning the windshield and/or the wiper blades. Otherwise, the wiper motor could suddenly turn on and cause injury.

- Fold the wiper arms forward until they snap into place.
- Clean the wiper blade inserts with a clean cloth and detergent solution.
- Use a soft, clean cloth and a mild window cleaning solution on all outside and inside glass surfaces.

An automotive glass cleaner is recommended.

Rear window cleaning

Clean the rear window with the hardtop fully raised and closed.

Warning!

Do not clean the rear window with the hardtop in a position other than the fully raised and closed position. Otherwise, the hardtop may move unexpectedly which may result in personal injury to you or others.

- Use a soft, clean cloth and a mild window cleaning solution on all outside and inside glass surfaces.

An automotive glass cleaner is recommended.
Light alloy wheels

If possible, clean wheels once a week.

- Use Mercedes-Benz approved Wheel Care, a soft bristle brush and a strong spray of water for cleaning the light alloy wheels.

- Only use acid-free cleaning materials. Acid may cause corrosion or damage the clear coat.

Instrument cluster and cup holders

- The vehicle should not be parked for an extended period of time immediately after it has been cleaned, especially not after the wheel rims have been cleaned with wheel rim cleaner. Wheel rim cleaners can lead to increased corrosion of the brake disks and brake pads. Therefore, the vehicle’s brake system should always be warmed-up before it is parked after cleaning.

- When applying Mercedes-Benz approved Tire Care and Mercedes-Benz approved Wheel Care products, take care not to spray them on the brake disks.

- To prevent scratches, do not use scouring agents.

Hard plastic trim items

- Use Mercedes-Benz approved Interior Care, a soft, lint-free cloth and apply with light pressure.

- To prevent scratches, do not use scouring agents.
**Operation**

**Vehicle care**

**Steering wheel and gear selector lever**
- Wipe with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care.

**Carpets**
- Use Mercedes-Benz approved Carpet and Fabric Care for cleaning the carpets.

**Headliner**
- Use a soft bristle brush or a dry-shampoo cleaner in case of excessive dirt.

**Seat belts**
- Only use clear, lukewarm water and soap.

- The webbing must not be treated with chemical cleaning agents. Do not dry the webbing at temperatures above 176°F (80°C) or in direct sunlight.

**Upholstery**
- Using aftermarket seat covers or wearing clothing that have the tendency to give off coloring (e.g. when wet, etc.) may cause the upholstery to become permanently discolored. By lining the seats with a proper intermediate cover, contact-discoloration will be prevented.

**Leather upholstery**
- Wipe leather upholstery with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care.

- Exercise particular care when cleaning perforated leather as its underside should not become wet.

**Wood trims**
- Dampen cloth using water and use damp cloth to clean wood trims in your vehicle.

- Do not use solvents like tar remover or wheel cleaner nor polishes or waxes as these may be abrasive.

---

**Warning!**

Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.

**Warning!**

Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.

</tbody>
</table>
Warning!

Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

| ![Exclamation] The red seat belt telltale comes on and a warning chime sounds for approximately 6 seconds after starting the engine with all doors closed. | The seat belt telltale reminds you and your passengers to fasten your seat belts before driving off. | ► Fasten your seat belts.  
The seat belt telltale goes out. |
| ![Exclamation] The red seat belt telltale remains illuminated after driving off. The vehicle’s speed does not exceed 15 mph (25 km/h). | You and/or your front passenger have forgotten to fasten your seat belts.  
There are items placed on the front passenger seat and therefore the system senses the front passenger seat as being occupied. | ► Fasten your seat belts.  
► Remove the items from the front passenger seat and put them in a safe place. |
| ![Exclamation] The red seat belt telltale flashes and you additionally hear an intermittent warning chime with increasing intensity for a maximum of 60 seconds from the time the vehicle’s speed exceeds 15 mph (25 km/h). | You and/or your front passenger have forgotten to fasten your seat belts.  
There are items placed on the front passenger seat and therefore the system senses the front passenger seat as being occupied. | ► Fasten your seat belts.  
► Remove the items from the front passenger seat and put them in a safe place. |

ℹ️ After 60 seconds with an unfastened seat belt on one of the front seats, the warning chime stops sounding and the seat belt telltale illuminates continuously. The seat belt telltale will only go out if both the driver and front passenger’s seat belt are fastened, or the vehicle is standing still and a front door is opened.

</tr>
</thead>
<tbody>
<tr>
<td>The red SRS indicator lamp comes on while driving.</td>
<td>There is a malfunction in the restraint systems. The airbags or Emergency Tensioning Devices (ETDs) could deploy unexpectedly or fail to activate in an accident.</td>
<td>Drive with added caution to the nearest authorized Mercedes-Benz Center.</td>
</tr>
</tbody>
</table>

### Warning!

In the event that a malfunction of the SRS is indicated as outlined above, the SRS may not be operational. For your safety, we strongly recommend that you visit an authorized Mercedes-Benz Center immediately to have the system checked; otherwise the SRS may not be activated when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in an accident and/or injury to you or to others.

| ![Exclamation] Combination low tire pressure/TPMS malfunction telltale for the TPMS illuminates continuously. | The TPMS detects a loss of pressure in at least one tire. | ▶ Carefully bring the vehicle to a halt, avoiding abrupt steering and braking maneuvers. Observe the traffic situation around you.  
▶ Read and observe messages in the multifunction display.  
If the tire inflation pressure in the respective tire(s) has (have) been corrected, the combination low tire pressure/TPMS malfunction telltale goes out after few minutes driving. |
| ![Exclamation] Combination low tire pressure/TPMS malfunction telltale for the TPMS flashes for 60 seconds and then stays illuminated. | There is a malfunction in the TPMS. | ▶ Read and observe messages in the multifunction display.  
▶ Have the TPMS checked by an authorized Mercedes-Benz Center.  
After the malfunction has been remedied the combination low tire pressure/TPMS malfunction telltale goes out after few minutes driving. |
Warning!

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or the tire inflation pressure label. If your vehicle has tires of a different size than the size indicated on the vehicle placard or the tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

If the indicator lamp remains out: ▶ Have the system checked at an authorized Mercedes-Benz Center as soon as possible. Do not use the BabySmart™ restraint to transport children on the front passenger seat until the system has been repaired.</td>
</tr>
</tbody>
</table>
Vehicle status messages in the multifunction display

Warning and malfunction messages appear in the multifunction display located in the instrument cluster.

Certain warning and malfunction messages are accompanied by an audible signal.

Address these messages accordingly and follow the additional instructions given in this Operator’s Manual.

Selecting the vehicle status message memory menu in the control system (page 144) displays both cleared and uncleared messages.

High-priority messages appear in the multifunction display in red color.

Certain messages of high priority cannot be cleared from the multifunction display using the reset button (page 24) or buttons , , , or on the multifunction steering wheel.

Other messages of high priority and messages of less immediate priority can be cleared from the multifunction display using the reset button or buttons , , , or on the multifunction steering wheel. They are then stored in the vehicle status message memory (page 144). Remember that clearing a message will not correct the condition that caused the message to appear.

Warning!

All categories of messages contain important information which should be taken note of and, where a malfunction is indicated, addressed as soon as possible at an authorized Mercedes-Benz Center.

Failure to repair condition noted may cause damage not covered by the Mercedes-Benz Limited Warranty, or result in property damage or personal injury.

Warning!

No messages will be displayed if either the instrument cluster or the multifunction display is inoperative. Contact your nearest authorized Mercedes-Benz Center.
Switching on the ignition causes all instrument cluster lamps (except high beam headlamp indicator lamp and turn signal indicator lamps unless activated) as well as the multifunction display to come on. Make sure the lamps and the multifunction display are in working order before starting your journey.

On the pages that follow, you will find a compilation of the most important warning and malfunction messages that may appear in the multifunction display. For your convenience the messages are divided into two sections:

- Text messages (► page 347)
- Symbol messages (► page 359)

| USA only: ![Brake Icon](image) **Reduced brake effect** | **Visit workshop** | The electro-hydraulic brake system is in emergency operation mode. Considerable brake pedal force is required and the stopping distance is increased. | - Continue driving with added caution.  
- Adjust driving to be consistent with reduced braking responsiveness.  
- Visit an authorized Mercedes-Benz Center immediately. Adjust driving to be consistent with reduced braking responsiveness. |
| Canada only: ![Warning Icon](image) | | | |

**Warning!**

Driving while this message is displayed can result in an accident. Have your brake system checked immediately.

If there is a malfunction in the electro-hydraulic brake system, we recommend that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment.

A tow bar must be used if circumstances do not permit the use of the recommended towing methods and the vehicle requires towing with all four wheels on the ground. Towing the vehicle with all four wheels on the ground is only permissible for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h). For more information, see “Towing the vehicle” (> page 421).

If the electro-hydraulic brake system enters its emergency operation mode, the driver must apply significantly greater brake pedal pressure and depress the pedal much further than normal to obtain braking effect. If necessary, apply full pressure to the brake pedal. Brakes are only applied to the front wheels. Stopping distance is increased!

| ![Coolant Check level] | Coolant Check level | The coolant level is too low. | ▶ Add coolant (page 278).  
▶ If you have to add coolant frequently, have the cooling system checked by an authorized Mercedes-Benz Center. |

**Warning!**

Do not ignore the low engine coolant level warning. Extended driving with this message and symbol displayed may cause serious engine damage not covered by the Mercedes-Benz Limited Warranty. Do not drive without sufficient amount of coolant in the cooling system. The engine will overheat, causing major engine damage.

Practical hints

What to do if ...

During severe operating conditions, e.g. stop-and-go traffic, the coolant temperature may rise close to 248°F (120°C).

<table>
<thead>
<tr>
<th>Left display</th>
<th>Right display</th>
<th>Possible cause/consequence</th>
<th>Possible solution</th>
</tr>
</thead>
</table>
| ![Coolant]  | Coolant Stop, put engine off! | The coolant is too hot. | ▶ Stop the vehicle in a safe location and turn off the engine.  
▶ Only start the engine again after the message disappears. You could otherwise damage the engine. |

Warning!

Driving when your engine is badly overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns and can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

During severe operating conditions, e.g. stop-and-go traffic, the coolant temperature may rise close to 248°F (120°C).

⚠️ The engine should not be operated with the coolant temperature above 248°F (120°C). Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.

<td>▶ Close the doors.</td>
</tr>
</tbody>
</table>
| ![Entry position](Entry position) | Entry position | The steering wheel has not yet moved into its preset driving position. | ▶ Wait until the steering wheel has moved to its driving positions.  
The message disappears. |
| ![USA only](USA only) | USA only: Add 1 qt. engine oil at next refueling  
Canada only: Add 1 liter engine oil at next refueling | The engine oil level is too low. | ▶ Add engine oil (> page 276) and check the engine oil level (> page 274). |
| ![Engine oil level](Engine oil level) | Engine oil level  
Stop, put engine off | There is no oil in the engine. There is a danger of engine damage. | ▶ Carefully bring the vehicle to a halt as soon as possible.  
▶ Turn off the engine.  
▶ Add engine oil (> page 276) and check the engine oil level (> page 274). |
| ![Engine oil level](Engine oil level) | Engine oil level  
Reduce oil level | You have added too much engine oil. There is a risk of damaging the engine or the catalytic converter. | ▶ Have excess oil siphoned or drained off. Observe all legal requirements with respect to its disposal. |
Practical hints
What to do if ...

When the message **Add 1 qt engine oil at next refueling (Canada: 1 l)** appears while the engine is running and at operating temperature, the engine oil level has dropped to approximately the minimum level.

<table>
<thead>
<tr>

<td>The engine oil has dropped to a critical level.</td>
<td>▶ Check the engine oil level (▶ page 274) and add oil as required (▶ page 276).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>▶ If you must add engine oil frequently, have the engine checked for possible leaks.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The measuring system is malfunctioning.</td>
<td>▶ Have the measuring system checked by an authorized Mercedes-Benz Center.</td>
</tr>
</tbody>
</table>

When this occurs, the warning will first come on intermittently and then stay on if the oil level drops further.

If no oil leaks are noted, continue to drive to the nearest service station where the engine oil should be topped to the required level with an approved oil specified in the Factory Approved Service Products pamphlet.

**Warning:**
The engine oil level warnings should not be ignored. Extended driving with the symbol displayed could result in serious engine damage that is not covered by the Mercedes-Benz Limited Warranty.

Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may ignite when it comes into contact with hot engine parts. You could be seriously burned.
Where will I find ...?

First aid kit

The first aid kit is located in storage compartment under the passenger seat.

1 Handle
2 Lid

- Pull handle 1 up.
- Fold lid 2 down.

You can now remove the first-aid kit.

Vehicle tool kit, jack, and spare wheel

The vehicle tool kit, jack, and spare wheel are stored in the space underneath the trunk floor.

- Lift up the trunk floor cover.
- You can now remove the tools and accessories.

The vehicle tool kit includes:
- One pair of universal pliers
- Two open-end wrenches
- One hex-socket wrench
- One interchangeable slot/Phillips screwdriver
- One towing eye bolt
- One alignment bolt
- One fuse extractor
- One fuse chart for the main fuse box
- Spare fuses

The jack is exclusively designed for lifting the vehicle during a wheel change. Always lower the vehicle on sufficient capacity jack stands before working under the vehicle.

Check expiration dates and contents for completeness at least once a year and replace missing/expired items.
Practical hints

Where will I find ...?

Vehicles with spare wheel

1. Spare wheel
2. Electric air pump
3. Vehicle tool kit
4. Battery for electrical consumers

5. Jack (under spare wheel)
6. Wheel wrench (under spare wheel)

Vehicles with TIREFIT kit
(SL 65 AMG only)

1. TIREFIT kit
2. Electric air pump
3. Vehicle tool kit
4. Battery for electrical consumers
5. Wheel wrench
6. Jack
Practical hints

Locking/unlocking in an emergency

Unlocking the vehicle

If you cannot unlock the driver’s door using the SmartKey, open the door using the mechanical key.

Unlocking your vehicle with the mechanical key will trigger the anti-theft alarm system. To cancel the alarm, do one of the following:

- Press button [A] or [B] on the SmartKey.
- Insert the SmartKey in the starter switch.
- Press the KEYLESS-GO* start/stop button (> page 37).
- Grasp the outside door handle (vehicles with KEYLESS-GO* only).

Unlocking the driver’s door

1. Unlocking
   - Unlock the door with the mechanical key. To do so, push the mechanical key in the lock until it stops and turn it counterclockwise.

2. Mechanical key locking tab
3. Mechanical key
   - Move locking tab 1 direction of arrow and slide the mechanical key 2 out of the housing.
Practical hints

Locking/unlocking in an emergency

Unlocking the trunk
A minimum height clearance of 6.2 ft (1.89 m) is required to open the trunk lid.

If you are unable to unlock the trunk with the SmartKey, open the trunk with the mechanical key.
The handle is located above the rear license plate recess.

Trunk lid lock

1 Unlocking
2 Handle

Insert the mechanical key into the trunk lid lock.

Turn the mechanical key counterclockwise to position 1 and hold it in this position.

Pull the trunk lid handle 2 and lift lid.

Unlocking your vehicle with the mechanical key will trigger the anti-theft alarm system. To cancel the alarm, do one of the following:

- Press button Œ or Œ on the SmartKey.
- Insert the SmartKey in the starter switch.
- Press the KEYLESS-GO* start/stop button (> page 37).
- Grasp the outside door handle (vehicles with KEYLESS-GO* only).

Unlocking the glove box
Lockable storage areas in the passenger compartment include:

- the glove box
- the storage compartment under the armrest
- the rear storage compartments

If these cannot be unlocked by means of the SmartKey or the SmartKey with KEYLESS-GO*, use the mechanical key to unlock the glove box.

To unlock the remaining storage compartments, the cause for the malfunction of the SmartKey or the SmartKey with KEYLESS-GO* must be determined and corrected, see (> page 99) and (> page 104).
Practical hints

Locking/unlocking in an emergency

Separately unlocking the glove box

1. Slide mechanical key out of SmartKey housing (page 385).
2. Insert the mechanical key into the glove box lock and turn it to position 1.
3. If necessary, push it down manually.
4. Check whether the trunk is locked.
5. If necessary, lock the trunk with the mechanical key (page 110).

Except for the driver’s door, the vehicle should now be locked.

Unlocking the glove box with the mechanical key will trigger the anti-theft alarm system. To cancel the alarm, do one of the following:

- Press button \(^*\) or \(^\dagger\) on the SmartKey.
- Insert the SmartKey in the starter switch.
- Press the KEYLESS-GO* start/stop button (page 37).
- Grasp the outside door handle (vehicles with KEYLESS-GO* only).

Locking the vehicle

If you cannot lock the vehicle with the SmartKey, lock it with the mechanical key as follows:

- Close the passenger door and the trunk.
- Press the central locking switch in the center console (page 113).
- Check whether the locking knob on the passenger door has moved down.
- If necessary push it down manually.
- Remove the mechanical key from of the SmartKey (page 385).
- Check whether the trunk is locked.
- If necessary, lock the trunk with the mechanical key (page 110).
Practical hints

Locking/unlocking in an emergency

1 Locking

- Insert the mechanical key into the driver’s door lock until it stops.
- Turn the mechanical key clockwise to position 1.

The driver’s door is locked.

Lowering the load assist manually

If the load assist feature does not fully lower the retractable hardtop into the trunk compartment and you are unable to close the trunk lid, follow the instructions below.

1 Hex-socket wrench
2 Locking screw

- Remove the trunk floor from the trunk.
- Lift up the lid located at the lower left side of the trunk.
- Have a second person lift and hold the retracted hardtop.

- Using the hex-socket wrench provided in the vehicle tool kit, carefully turn the locking screw 2 approximately one quarter of a turn.
- Hook luggage cover into holders (▶ page 196).
- Let go of the hardtop.
  It should gradually lower into the trunk.
- When top is completely lowered, return locking screw 2 to its original position.

Do not overtighten the screw.

- Close the lid.
- Replace the trunk floor.
- Visit an authorized Mercedes-Benz Center as soon as possible.
Replacing SmartKey batteries

If the batteries in the SmartKey or the SmartKey with KEYLESS-GO* are discharged, the vehicle can no longer be locked or unlocked. It is recommended to have the batteries replaced at an authorized Mercedes-Benz Center.

Batteries contain materials that can harm the environment if disposed of improperly. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.

When inserting batteries, make sure they are clean and free of lint.

Warning!

Keep the batteries out of reach of children. If a battery is swallowed, seek medical help immediately.

SmartKey

Replacement batteries: Lithium, type CR 2025 or equivalent.

- Remove mechanical key ① (▷ page 385).
- Pull battery compartment ③ out of the housing in direction of arrow.
- Remove the batteries in direction of arrow.
- Using a lint-free cloth, insert new batteries ④ under contact spring ⑤ with the positive terminal (+) facing up.
- Return battery compartment ③ into housing until it locks into place.
- Slide mechanical key ① back into the SmartKey.
- Check the operation of the SmartKey.

Pull battery compartment ③ out of the housing in direction of arrow.

Remove the batteries in direction of arrow.

Using a lint-free cloth, insert new batteries ④ under contact spring ⑤ with the positive terminal (+) facing up.

Return battery compartment ③ into housing until it locks into place.

Slide mechanical key ① back into the SmartKey.

Check the operation of the SmartKey.
Practical hints
Replacing SmartKey batteries

SmartKey with KEYLESS-GO*

Replacement battery: Lithium, type CR 2025 or equivalent.

When replacing batteries, always replace both batteries. The required replacement batteries are available at any authorized Mercedes-Benz Center.

- Remove the mechanical key (》 page 385).
- Take the battery compartment out of the SmartKey housing (》 page 389).

Using mechanical key ③, apply pressure to position ②.
Battery ① tilts up slightly.
- Pull out battery ① in direction of arrow.

Using a lint-free cloth, insert the new battery under the contact spring with the plus (+) side facing up.
- Return the battery compartment into the housing until it locks into place.
- Slide mechanical key ① back into the SmartKey, see “SmartKey” (》 page 389).
- Check the operation of the SmartKey with KEYLESS-GO.
Replacing bulbs

Safe vehicle operation depends on proper exterior lighting and signaling. It is therefore essential that all bulbs and lamp assemblies are in good working order at all times.

Correct headlamp adjustment is extremely important. Have headlamps checked and readjusted at regular intervals and when a bulb has been replaced. See an authorized Mercedes-Benz Center for headlamp adjustment.

If the headlamps or front fog lamps are fogged up on the inside as a result of high humidity, driving the vehicle a distance with the lights on should clear up the fogging.

Substitute bulbs will be brought into use when the following lamps malfunction:

- Turn signal lamps
- Brake lamps
- Parking lamps
- Tail lamps

Observe the messages in the multifunction display (▷ page 345).
## Practical hints

### Replacing bulbs

Practical hints
Replacing bulbs

---

**Warning!**

Bulbs and bulb sockets can be very hot. Allow the lamp to cool down before changing a bulb.

Keep bulbs out of reach of children.

Halogen lamps contain pressurized gas. A bulb can explode if you:

- touch or move it when hot
- drop the bulb
- scratch the bulb

Wear eye and hand protection.

Because of high voltage in Xenon lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.

---

**Notes on bulb replacement**

- Only use 12-volt bulbs of the same type and with the specified watt rating.
- Switch the lights off before changing a bulb to prevent short circuits.
- Always use a clean lint-free cloth when handling bulbs.
- Your hands should be dry and free of oil and grease.
- If the newly installed bulb does not come on, visit an authorized Mercedes-Benz Center.

---

Have the LEDs and bulbs for the following lamps replaced by an authorized Mercedes-Benz Center:

- the additional turn signals in the exterior rear view mirrors
- the high mounted brake lamp
- the brake lamps
- the parking lamps and the side marker lamps in the tail lamp unit
- the rear fog lamps
- the low beam (Xenon or Bi-Xenon*) lamps
- the front fog lamps
- the front side marker lamps

---

Have the headlamp adjustment checked regularly.
Replacing bulbs for front lamps

Before you start to replace a bulb for a front lamp, do the following first:

- Turn the exterior lamp switch to position 0 (> page 123).
- Open the hood (> page 272).

1. Bulb socket for turn signal lamp
2. High beam headlamp cover
3. Low beam headlamp cover (Xenon or Bi-Xenon* lamp). Do not remove.
4. High beam bulbs
5. Locking mechanism
6. Parking and standing lamps

Front turn signal bulb

- Turn bulb socket 1 counterclockwise and pull it out.
- Push the bulb into socket 1, turn socket 1 counterclockwise and remove it.
- Insert the new bulb in socket 1, push and turn bulb socket 1 clockwise.
- Reinsert bulb socket 1 in lamp and turn bulb socket 1 clockwise.

Warning!

Do not remove the cover for the Xenon or Bi-Xenon* headlamp. Because of high voltage in Xenon and Bi-Xenon* lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.
High beam/ high beam flasher bulbs
- Press ends of headlamp cover tab together and remove high beam headlamp cover ②.
- Pull the electrical connector off.
- Turn locking mechanism ③ counterclockwise and take out the bulb.
- Insert the new bulb so that the base locates in the recess on the holder.
- Turn locking mechanism ③ clockwise.
- Plug the connector onto the bulb.
- Align high beam headlamp cover ② and click it into place.

Parking and standing lamp bulbs
- Press ends of cover tab together and remove high beam headlamp cover ②.
- Pull out bulb socket ④ with the bulb.
- Pull the bulb out of bulb socket ⑥.
- Insert a new bulb in bulb socket ⑥.
- Reinstall bulb socket ⑥.
- Align high beam headlamp cover ② and click it into place.

Additional turn signal lamp bulbs
The additional turn signal lamps in the exterior rear view mirrors have LEDs. If a malfunction occurs or LEDs fail to function, the entire turn signal unit must be replaced. Have the turn signal unit replaced by an authorized Mercedes-Benz Center.

Front side marker lamp bulbs
Since replacing the side marker lamp bulbs is a technically highly demanding process, we recommend you have the side marker lamp bulbs replaced by an authorized Mercedes-Benz Center.
Practical hints
Replacing bulbs

Replacing bulbs for rear lamps

Before you start to replace a bulb for a rear lamp, do the following first:

- Turn the exterior lamp switch to position M (> page 123).
- Open the trunk (> page 108).

Tail lamp unit

Fold the trim to the side and remove it.
- Turn the bulb socket counterclockwise and pull it out.
- Gently push the bulb into the socket, turn it counterclockwise and remove it.
- Insert the new bulb and reinstall the bulb socket.
  The bulb socket should audibly click into place.
- Reinstall the trim.

License plate lamp

- Loosen both screws 1.
- Remove the license plate lamp.
- Replace the bulb.
- Reinstall the license plate lamp.
- Retighten screws 1.

1 Backup lamp
2 Turn signal lamp
3 Driver’s side: Rear fog lamp
   Passenger’s side: Substitute lamp

P94.35-2024-31
Practical hints
Replacing wiper blades

Never open the hood when the wiper arms are folded forward.
Hold on to the wiper when folding the wiper arm back. If released, the force of the impact from the tensioning spring could crack the windshield.
Do not allow the wiper arms to contact the windshield glass without a wiper blade inserted.
Make sure the wiper blades are properly installed. Improperly installed wiper blades may cause windshield damage.
For your convenience, we recommend that you have this work carried out by an authorized Mercedes-Benz Center.

To avoid damage to the hood, the wiper arms should only be folded forward when in the vertical position.

Warning!

For safety reasons, switch off wipers and remove SmartKey from starter switch (vehicles with KEYLESS-GO*: Make sure the vehicle's on-board electronics have status 0) before replacing a wiper blade. Otherwise the wiper motor could suddenly turn on and cause injury.

- Turn SmartKey in starter switch to position 1.
- Turn combination switch to wiper setting II (> page 54).
- With wiper arms in the vertical position, turn SmartKey in starter switch to position 0.
Practical hints

Replacing wiper blades

Fold the wiper arm forward until it snaps into place.

Turn wiper blade at a right angle to the wiper arm.

Slide the wiper blade sideways out of the retainer.

Installing wiper blades

- Slide the wiper blade onto the wiper arm in opposite direction of arrow.
- Rotate the wiper blade into a position parallel to the wiper arm.
- Fold the wiper arm backward to rest on the windshield. Make sure you hold on to the wiper when folding the wiper arm back.
▼ **Flat tire**

Your SL 55 AMG with Performance Package* and SL 65 AMG are equipped with a TIREFIT kit.

**Preparing the vehicle**

- Park the vehicle in a safe distance from moving traffic on a hard, flat surface when possible.
- Turn on the hazard warning flashers.
- Turn the steering wheel so that the front wheels are in a straight ahead position.
- Set the parking brake.
- Move the gear selector lever to P.

Vehicles with SmartKey:

- Turn off the engine (>
page 60).
- Remove the SmartKey from the starter switch.

Vehicles with KEYLESS-GO*:

- Turn off the engine by pressing the KEYLESS-GO* button on the gear selector lever once (> page 60).
- Open the driver’s door (this puts the starter switch in position <0, same as with the SmartKey removed from the starter switch). The driver’s door then can be closed again.
- Open door only when conditions are safe to do so.
- Have any passenger exit the vehicle at a safe distance from the roadway.

**Sealing tires with TIREFIT**

SL 55 AMG with Performance Package* and SL 65 AMG only.

**Warning!**

Keep TIREFIT away from sparks, open flame or heat source.
Do not smoke.

Small tire punctures, particularly those in the tread, can be sealed with TIREFIT. TIREFIT can be used in ambient temperatures down to -4°F (-20°C).
**Practical hints**

**Flat tire**

**Warning!**

TIREFIT is a limited repair device. TIREFIT cannot be used for cuts or punctures larger than approx. 0.16 in (4 mm) and tire damage caused by driving with extremely low tire inflation pressure, or on a flat tire, or a damaged wheel. Do not drive the vehicle under such circumstances. Contact your nearest Mercedes-Benz Center for assistance or call Roadside Assistance.

- Foreign objects (e.g. screws or nails) should not be removed from the tire.
- Take TIREFIT, the sticker, and the electric air pump out of the trunk.
- Attach the sticker where it will be easily seen by the driver on the instrument cluster.

**Warning!**

Take care not to allow the contents of TIREFIT to come in contact with hair, eyes or clothing. TIREFIT is harmful if inhaled, swallowed or absorbed through the skin - causes skin, eye and respiratory irritation. Any contact with eyes or skin should be flushed immediately with plenty of water. If clothing comes in contact with TIREFIT, change clothing as soon as possible. In case of allergic reaction or rash, consult a physician immediately.

**Warning!**

Keep TIREFIT out of reach of children. If swallowed, rinse mouth immediately with plenty of water and drink plenty of water. Do not induce vomiting! Consult a physician immediately. Keep away from open flame or heat source.

**Tip:** If sealant has leaked out, let it dry. You can then peel it off.

![Diagram of TIREFIT components:](image)

1. TIREFIT container
2. Flap
3. Notch
4. Electrical plug
5. Air hose
6. Flange

- Open flap 2 on the electric air pump.
- Pull plug 4 and air hose 5 out of the pump housing.
Practical hints

Flat tire

- Screw the air pump’s air hose ⑤ onto flange ⑥ of the TIREFIT container.

- Stick TIREFIT container ① upside down into notch ③ of the electric air pump.

- Unscrew the valve cap from tire valve ⑦.

- Screw filler hose ⑩ onto tire valve ⑦.

- Insert electrical plug ④ into vehicle cigarette lighter socket.

- Turn the SmartKey in the starter switch to position ① (page 36).

- Press the KEYLESS-GO* start/stop button (page 37) on the gear selector lever once. Do not depress brake pedal.

- Press I on electric air pump switch ⑧.

The electric air pump should now switch on and inflate the tire.

⚠️ Do not operate the electric air pump longer than 8 minutes without interruption. Otherwise it may overheat.

You may operate the air pump again after it has cooled off.

After 5 minutes, the pressure gauge must display at least 26 psi (1.8 bar). The air hose can become hot during inflation. Please exercise appropriate caution.

- If this tire inflation pressure is not attained, turn off the electric air pump, detach the filler hose from the tire valve, and drive vehicle back and forth very slowly approximately 30 ft (10 m).

This serves to better distribute the TIREFIT sealant material inside the tire.

- Unscrew the air pump’s air hose ⑤ from flange ⑥ of the TIREFIT container.

- Screw air hose ⑤ onto tire valve ⑦.

- Inflate the tire again.

Warning!

Observe safety instructions on air pump label.
**Practical hints**

**Flat tire**

- After attaining a tire inflation pressure of 26 psi (1.8 bar), press 0 on electric air pump switch.
  - The electric air pump should now be switched off.

- Turn the SmartKey in the ignition to position 0 (> page 36).
- Press the KEYLESS-GO* start/stop button (> page 37) on the gear selector lever twice. Do not depress brake pedal.
- Detach the electric air pump.
- The air hose may still be hot. Please exercise appropriate caution.
- Place the electric air pump back in the trunk.
- Close the trunk lid.
- Drive away immediately.
  - The TIREFIT sealant will distribute itself evenly inside the tire.

**Warning!**

- If a tire inflation pressure of 26 psi (1.8 bar) is not attained, tire is too severely damaged for TIREFIT to provide a reliable tire repair.
  - In this case, TIREFIT cannot properly seal the tire.
  - Do not drive the vehicle.
  - Contact the nearest Mercedes-Benz Center or call Roadside Assistance.

- Do not exceed vehicle speed of 50 mph (80 km/h). A TIREFIT repair is not designed to operate at higher speeds.
  - The sticker must be attached on the instrument cluster where it will be easily seen by the driver.
- Vehicle handling characteristics may change. Adapt your driving accordingly.
After driving vehicle for an initial 10 minutes, check tire inflation pressure using the pressure gauge on the air pump.

**Warning!**

If tire inflation pressure has fallen below 20 psi (1.3 bar) do not continue to drive the vehicle.

Park your vehicle safely away from the roadway and contact the nearest authorized Mercedes-Benz Center or Roadside Assistance.

If tire inflation pressure is at least 20 psi (1.3 bar), inflate tire to correct pressure (see placard on the driver’s door B-pillar), and drive vehicle to nearest tire repair facility to have tire repaired or replaced.

Recommended duration of use: 300 miles (500 km) at 50 mph (80 km/h) with the recommended tire inflation pressure.

**Warning!**

Follow recommend inflation pressures. Do not overinflate tires. Overinflating tires can result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes, etc.

Do not underinflate tires. Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overload the tires by exceeding the specified vehicle capacity weight (as indicated by the label on the pillar in the driver’s door opening). Overloading the tires can overheat them, possibly causing a blowout.

**Warning!**

Do not exceed vehicle speed of 50 mph (80 km/h). A TIREFIT repair is not designed to operate at higher speeds.

The sticker must be attached on the instrument cluster where it will be easily seen by the driver.

Vehicle handling characteristics may change. Adapt your driving accordingly.

Visit an authorized Mercedes-Benz Center as soon as possible to obtain a new TIREFIT kit.

Bring used TIREFIT materials to an authorized Mercedes-Benz Center for proper disposal.

Replace your TIREFIT container every 4 years. Replacement containers are available at your authorized Mercedes-Benz Center.
Mounting the spare wheel

Warning!

The dimensions of the spare wheel are different from those of the road wheels. As a result, the vehicle handling characteristics change when driving with a mounted spare wheel. Adapt your driving style accordingly.

The spare wheel is for temporary use only. When driving with spare wheel mounted, ensure proper tire inflation pressure and do not exceed vehicle speed of 50 mph (80 km/h).

Drive to the nearest Mercedes-Benz Center as soon as possible to have the spare wheel replaced with a regular road wheel.

Never operate the vehicle with more than one spare wheel mounted.

Do not switch off the ESP® when a spare wheel is mounted.

Preparing the vehicle

Prepare the vehicle as described (> page 399).

- Turn spare wheel bracket counter-clockwise to loosen.
- Take the spare wheel out of the trunk.

Lifting the vehicle

- Prevent the vehicle from rolling away by blocking wheels with wheel chocks (not included) or other sizable objects.

When changing wheel on a level surface:

- Place one wheel chock or other sizable object in front of and another wheel chock or sizable object behind the wheel that is diagonally opposite to the wheel being changed.

Always try lifting the vehicle using the jack on a level surface. However, should circumstances require you to do so on a hill, place a wheel chock or other sizable object and the other wheel chock or sizable object as follows:

- Place wheel chocks or other sizable objects on the downhill side blocking both wheels of the axle not being worked on.

- Take the vehicle tool kit and the jack out of the storage compartment under the trunk floor (> page 383).
Practical hints

Flat tire

On wheel to be changed, loosen but do not yet remove the wheel bolts (approximately one full turn with wrench).

The jack support tubes are located behind the front wheel housings and in front of the rear wheel housings.

Warning!

The jack is designed exclusively for jacking up the vehicle at the jack tubes built into both sides of the vehicle. To help avoid personal injury, use the jack only to lift the vehicle during a wheel change. Never get beneath the vehicle while it is supported by the jack. Keep hands and feet away from the area under the lifted vehicle. Always firmly set parking brake and block wheels before raising vehicle with jack.

Do not disengage parking brake while the vehicle is raised. Be certain that the jack is always vertical (plumb line) when in use, especially on hills. Always try to use the jack on level surface. Be sure that the jack arm is fully inserted in the jack tube. Always lower the vehicle onto sufficient capacity jack-stands before working under the vehicle.

Warning!

When turning the wheel wrench to loosen the wheel bolts, make sure you position hands on the wrench in such a way that you avoid injury to yourself, such as scraping your hands against the wheel. Make sure turning the wheel wrench will not scratch or damage the wheel rim.

On wheel to be changed, loosen but do not yet remove the wheel bolts (approximately one full turn with wrench).
Practical hints

Flat tire

1. Jack support tube cover (except SL 55 AMG, SL 65 AMG and vehicles with Sport Package*)
   - Open cover 1 by pressing at point indicated by arrow.
   - Remove cover 1, taking care not to damage the locking tabs.

2. Jack support tube hole (SL 55 AMG, SL 65 AMG and vehicles with Sport Package* only)
   - Insert a flat blade screwdriver in the opening of cover 2 and pry it out.
   - Remove cover 2, taking care not to damage the locking tabs.

Warning!

Insert the jack arm fully into the jack support tube hole up to the stop. Otherwise the vehicle may fall from the jack and cause personal injury or damage to the vehicle.
Practical hints

Flat tire

Keeping jack in this position, turn crank \( \circ \) clockwise until the jack base meets the ground. Make sure the jack is vertical (plumb line).

Continue to turn the crank until the tire is a maximum of 1.2 in (3 cm) from the ground.

Removing the wheel

1. Alignment bolt
   - Unscrew upper-most wheel bolt and remove.
   - Replace this wheel bolt with alignment bolt \( \circ \) supplied in the tool kit.
   - Remove the remaining bolts.

1. Do not place wheel bolts in sand or dirt. This could result in damage to the bolt and wheel hub threads.

   - Remove the wheel.

Mounting the new wheel

1. Clean contact surfaces of wheel and wheel hub.

2. Guide the spare wheel onto the alignment bolt and push it on.

3. Insert wheel bolts and tighten them slightly.

   - Do not place wheel bolts in sand or dirt. This could result in damage to the bolt and wheel hub threads.

   - Remove the wheel.

Warning!

Inflate spare wheel tire only after the wheel is properly mounted.

Inflate the spare wheel tire using the electric pump (\> page 408) before lowering the vehicle.

- Clean contact surfaces of wheel and wheel hub.
- Guide the spare wheel onto the alignment bolt and push it on.
- Insert wheel bolts and tighten them slightly.

Warning!

- Always replace wheel bolts that are damaged or rusted.

- Never apply oil or grease to wheel bolts.
Practical hints

Flat tire

Damaged wheel hub threads should be repaired immediately. Do not continue to drive under these circumstances! Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

Incorrect wheel bolts or improperly tightened wheel bolts can cause the wheel to come off. This could cause an accident. Be sure to use the correct wheel bolts.

- Unscrew the alignment bolt, install last wheel bolt and tighten slightly.

Inflating the spare tire

- Do not lower the vehicle before inflating the spare wheel tire. Otherwise the rim may be damaged.

- Take the electric air pump out of the trunk (▷ page 383).

**Warning!**

- Only use genuine equipment Mercedes-Benz wheel bolts. They are identified by the Mercedes star. Other wheel bolts may come loose.

- Do not tighten the wheel bolts when the vehicle is raised. Otherwise the vehicle could fall off the jack.

- Observe instructions on air pump label.

**Warning!**

- Do not lower the vehicle before inflating the spare wheel tire. Otherwise the rim may be damaged.

- Take the electric air pump out of the trunk (▷ page 383).

![Diagram of electric air pump]

1. Flap
2. Air pump switch
3. Electrical plug
4. Air hose with pressure gauge and vent screw
5. Union nut

- Open flap 1 on air pump.
- Pull out electrical plug 3 and air hose with the pressure gauge 4.
- Remove the valve cap from the tire valve.
- Screw union nut 5 onto the tire valve.
- Insert electrical plug 3 into vehicle cigar lighter socket.
Practical hints
Flat tire

Turn the SmartKey in the starter switch to position 1.

or

Press the KEYLESS-GO* start/stop button on the gear selector lever once without depressing the brake pedal.

Press 1 on the electric air pump switch ②.

The electric air pump should now switch on and inflate the tire.

Inflate the spare tire for the SL 500 to 36 psi (2.5 bar) and the spare tire for the SL 600 and SL 55 AMG to 44 psi (3.0 bar).

This takes about 5 minutes for the spare tire. Air hose ④ and union nut ⑤ can become hot during inflation. Exercise proper caution to avoid burning yourself when using the equipment.

Press 0 on the electric air pump switch ③.

Turn the SmartKey in the starter switch to position 0.

or

Press KEYLESS-GO* start/stop button on the gear selector lever twice without depressing the brake pedal.

The electric air pump should now be switched off.

If the spare tire inflation pressure for the SL 500 is above 36 psi (2.5 bar) and for the SL 600 and SL 55 AMG above 44 psi (3.0 bar), release excess spare tire inflation pressure using the vent screw.

Compare the recommended tire inflation pressure for your vehicle with the tire inflation pressure on the yellow label located on the spare wheel rim.

If the tire inflation pressure on the yellow label on the spare wheel rim differs from the values given in this Operator’s Manual, inflate the tire to the recommended tire inflation pressure given on the yellow label on the spare wheel rim.

Do not operate the electric air pump longer than 8 minutes without interruption. Otherwise it may overheat.

You may operate the air pump again after it has cooled off.

You may operate the air pump again after it has cooled off.
Practical hints

Flat tire

> Detach the electric air pump.
> Stow the electrical plug and the air hose behind the flap and place the air pump back in the trunk.

**Warning!**

Follow recommend inflation pressures.
Do not overinflate tires. Overinflating tires can result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes, etc.
Do not underinflate tires. Underinflated tires wear unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Lowering the vehicle

- Lower vehicle by turning crank counterclockwise until the full weight of the vehicle is resting on the ground.
- Pull the jack out of the jack support tube.

Tighten the five wheel bolts evenly, following the diagonal sequence illustrated (1 to 5), until all bolts are tight. Observe a tightening torque of 96 lb-ft (130 Nm).

The flat tire may be transported in the trunk when the retractable hardtop is raised. Use the protective sheet provided with the spare wheel. Do not activate the tire inflation pressure monitor until the deflated tire has been removed from the vehicle.
**Warning!**

Have the tightening torque checked after changing a wheel. The wheels could come loose if they are not tightened to a torque of 96 lb-ft (130 Nm).

**Warning!**

When turning the wheel wrench to tighten the wheel bolts, make sure you position hands on the wrench in such a way that you avoid injury to yourself, such as scraping your hands against the wheel. Make sure turning the wheel wrench will not scratch or damage the wheel rim.

- Before storing the jack in the trunk, crank back to storage position and fold in the arm.

---

### Replacing jack support tube cover

- Slide tongue of cover under the upper edge of the tube opening.
- Applying even pressure, press cover until it snaps into place.
Be careful not to damage the locking tabs or clamp the plastic retaining strap.

---

### MOExtended system*

The MOExtended system allows you to continue driving your vehicle even if there is a total loss of pressure in one or more tires.

You may only use the MOExtended system in conjunction with the Run Flat Indicator* (Canada vehicles) (> page 293) or TPMS (U.S. vehicles) (> page 296).

⚠️ The maximum distance in emergency mode depends on the vehicle’s load. It is 30 miles (50 km) if the vehicle is partially loaded and 18 miles (30 km) if the vehicle is fully loaded.

The point at which the maximum driving distance begins in emergency mode is when the warning message appears in the multifunction display indicating that there is a loss of tire inflation pressure.

Do not exceed the maximum speed of 50 mph (80 km/h).
Practical hints

Flat tire

Warning!

In emergency mode, your vehicle’s driving characteristics are diminished in such situations as:
• driving around curves
• while braking
• while accelerating rapidly
Therefore, your driving style must be adapted accordingly. Avoid abrupt steering and driving maneuvers, as well as driving over obstacles (road curbs, potholes, or off-road areas). This is especially important if the vehicle is heavily loaded.

The emergency driving distance that can be achieved greatly depends on the demands placed on the vehicle. Depending on speed, load, driving maneuvers, road conditions, outside temperature, etc., the distance can be significantly shorter or, if the vehicle is driven cautiously, somewhat longer.

Do not continue driving in emergency mode if
• you notice knocking sounds
• the vehicle starts to shake
• smoke develops and you smell rubber
• ESP® is intervening continuously
• you notice tears on the tire sidewalls

After driving in emergency mode, you must have the rims inspected by an authorized Mercedes-Benz Center to check if they are suitable for further use. The failed tire must be replaced in any case.

When replacing individual or all tires on the vehicle, make sure only matching tires marked with “MOExtended” are mounted in the size specified for your vehicle (> page 440).
Practical hints

Batteries

For more information on batteries, see “Battery” (▸ page 279).

Your vehicle is equipped with two batteries:

- The starter battery
- The battery for electrical consumers (consumer battery), located in the trunk

The starter battery is located on the right-hand side of the engine compartment.

The consumer battery is located on the right-hand side of the trunk.

The starter battery, its filler caps, and the vent tube must always be securely installed when the vehicle is in operation.

The consumer battery located in the trunk is a valve-regulated lead acid (VRLA) battery, also referred to as “fleece” battery. Such batteries do not require topping-up of the electrolyte level. VRLA batteries therefore do not
Batteries

have cell caps and the battery cover is non-removable. Do not attempt to open the consumer battery as otherwise the battery will be damaged.

Even though VRLA batteries do not require topping-up of the electrolyte level and cannot be opened to check the electrolyte level, the battery condition must be checked periodically by performing a battery conductance test. Refer to Maintenance Booklet for battery condition testing intervals.

As with any other battery, disconnect the consumer battery if you do not intend to operate your vehicle for an extended period of time to prevent battery discharge or connect an accessory battery charge unit expressly approved by Mercedes-Benz for your vehicle model to maintain the battery charge. Contact an authorized Mercedes-Benz Center for further information.

-----

**Warning!**

Failure to follow these instructions can result in severe injury or death.

Never lean over batteries while connecting, you might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking, etc.

Never loosen or detach battery terminal clamps while the engine is running or the SmartKey is in the starter switch. Otherwise the alternator and other electronic components could be severely damaged.

Have the starter battery checked regularly by an authorized Mercedes-Benz Center.

Refer to Maintenance Booklet for maintenance intervals or contact an authorized Mercedes-Benz Center for further information.

**Warning!**

Do not place metal objects on the battery as this could result in a short circuit.

Use leak-proof batteries only to avoid the risk of acid burns in the event of an accident.
Warning!
The brake system requires electrical power to operate.
A malfunction in the vehicle’s power supply or electrical system may impair brake system operation and switch it into its emergency operation mode. The same applies if battery is disconnected. To brake, the driver must then apply significantly greater brake pedal pressure and depress the pedal much further to obtain the expected braking effect. If necessary, apply full pressure to the brake pedal. Brakes are only applied to the front wheels. Stopping distance is increased! Adjust your driving style accordingly. For more information, see “Electro-hydraulic brake system” (§ page 88).

Warning!
With a disconnected battery
- you will no longer be able to turn the SmartKey in the starter switch and pressing the KEYLESS-GO* start/stop button on the gear selector lever will have no effect
- the gear selector lever will remain locked in position P.

Disconnecting the batteries

Always disconnect the batteries in the order described below, even if you only want to charge the starter battery, for example. Otherwise the vehicle’s electronics can be damaged.

➤ Make sure the gear selector lever is set to position P.
➤ Close the retractable hardtop (§ page 195).
➤ Turn off the engine (§ page 60).
➤ Turn off all electrical consumers.
➤ Remove the SmartKey from the starter switch.

or
➤ Vehicles with KEYLESS-GO*: Open the driver’s door.
Practical hints

Batteries

- Depress the parking brake pedal.
- Open the trunk.
- Read and observe safety instructions and precautions (› page 279).
- Unhook the luggage cover in the trunk.
- Remove the trunk floor.

The battery for electrical consumers is located in the right hand area of the trunk (› page 383).
- Use the 10 mm open-end wrench from the vehicle tool kit to disconnect the negative lead from negative terminal 4 of the consumer battery (› page 413).

Removing the batteries

Removing the consumer battery

- Remove the screws securing the battery in the trunk.
- Remove the battery support and bracket.
- Pull out the battery ventilation tube from the battery.

Depending on battery arrangement in your vehicle model, the ventilation tube is located either on the left or right side of the battery.
- Take out the battery.
Removing the starter battery

- Remove the screws securing the starter battery in the engine compartment.
- Pull out the battery ventilation tube from the battery.
- Depending on battery arrangement in your vehicle model, the ventilation tube is located either on the left or right side of the battery.
- Lift the retaining bracket.
- Remove the battery.

Charging and reinstalling batteries

- Charge batteries in accordance with the instructions of the battery charger manufacturer.
- Reinstall the charged batteries. Follow the previously described steps in reverse order.

Warning!

Never charge a battery while still installed in the vehicle unless the accessory battery charge unit approved by Mercedes-Benz is being used. Gases may escape during charging and cause explosions that may result in paint damage, corrosion or personal injury.

An accessory battery charge unit specially adapted for Mercedes-Benz vehicles and tested and approved by Mercedes-Benz is available, permitting the charging of the battery in its installed position. Contact an authorized Mercedes-Benz Center for information and availability. Charge battery in accordance with the separate instructions for the accessory battery charger.
**Practical hints**

**Batteries**

**Reconnecting the batteries**

- Turn off all electrical consumers.
- Install starter battery in the designated location in the engine compartment.
- Install consumer battery in the designated location in the trunk.
- Attach supports and brackets.
- Tighten support and bracket screws.

! Always connect the batteries in the order described below. Otherwise the vehicle’s electronics can be damaged.

» Connect positive lead 3 of the consumer battery and positive lead 1 of the starter battery and fasten covers.
- Connect negative lead 2 of the starter battery.
- Connect negative lead 4 of the consumer battery.
- Reinstall the trunk floor.
- Rehook trunk luggage cover into holders.

! Never invert the terminal connections!

The following procedures must be carried out following any interruption of battery power (e.g. due to reconnection):

- Resynchronize the ESP® (▷ page 354).
- Resynchronize side windows (▷ page 194).
### Jump starting

#### Warning!

Failure to follow these directions will cause damage to the electronic components, and can lead to a battery explosion and severe injury or death.

Never lean over batteries while connecting or jump starting, you might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water, and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and very explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking, etc.

Attempting to jump start a frozen battery can result in it exploding, causing personal injury.

Read all instructions before proceeding.

If the starter battery is discharged, the engine can be started with jumper cables and the battery of another vehicle. Observe the following:

- Jump starting should only be performed when the engine and catalytic converter are cold.
- Do not start the engine if the battery is frozen. Let the battery thaw out first.
- Only jump start from batteries with the same voltage rating (12V). Jump starting with a more powerful battery could damage the vehicle’s electrical system, which will not be covered by the Mercedes-Benz Limited Warranty.
- Only use jumper cables with sufficient cross section and insulated terminal clamps.
- Always make sure the jumper cables are not on or near pulleys, fans, or other parts that move when an engine is started or running.

### !

Jump starting may only be performed on the battery installed in the engine compartment.

Avoid repeated and lengthy starting attempts.

Do not attempt to start the engine using a battery quick charge unit.

If the engine does not run after several unsuccessful starting attempts, have it checked at the nearest authorized Mercedes-Benz Center.

Excessive unburned fuel generated by repeated failed starting attempts may damage the catalytic converter and may present a fire risk.

Make sure the jumper cables do not have loose or missing insulation.

Make sure the cable clamps do not touch any other metal part while the other end is still attached to a battery.
Practical hints

Jump starting

The starter battery is located on the right side of the engine compartment.

- Make sure the two vehicles do not touch.
- Turn off all electrical consumers.
- Apply the parking brake (> page 59).
- Shift gear selector lever to position P.
- Open the hood (> page 272).
- Remove the red cover from positive terminal on both vehicles (> page 413).

![Diagram showing connection points]

1. Negative terminal of charged battery
2. Negative terminal of discharged battery
3. Positive terminal of discharged battery
4. Positive terminal of charged battery

- Connect positive terminals 3 and 4 of the batteries with the jumper cables. Clamp cable to charged battery 4 first.
- Start the engine of the vehicle with the charged battery and run at idle speed.
- Connect negative terminals 1 and 2 of the batteries with the jumper cables. Clamp cable to charged battery 1 first.
- Start the engine of the disabled vehicle.
- You can now turn on the electrical consumers. Do not turn on the lights under any circumstances.
- Remove the jumper cables first from negative terminals 2 and 1 and then from positive terminals 3 and 4.
- You can now turn on the lights.
- Have the battery checked at the nearest Mercedes-Benz Center.

Warning!

Keep flames or sparks away from battery. Do not smoke.
Observe all safety instructions and precautions when handling automotive batteries (> page 279).

Never invert the terminal connections.

Do not tow-start the vehicle.
**Practical hints**

**Towing the vehicle**

Mercedes-Benz recommends that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment.

- Use flatbed or wheel lift/dolly equipment with SmartKey in starter switch turned to position 0.
- Do not tow with sling-type equipment. Towing with sling-type equipment over bumpy roads will damage radiator and supports.
- To prevent damage during transport, do not tie down vehicle by its chassis or suspension parts.
- Switch off the tow-away alarm and the automatic central locking.

When circumstances do not permit the recommended towing methods, the vehicle may be towed with all wheels on the ground or front wheels raised only so far as necessary to have the vehicle moved to a safe location where the recommended towing methods can be employed.

- If the vehicle is towed with the front axle raised, the engine must be shut off (SmartKey in starter switch position 0 or 1). Otherwise, the ESP® will immediately be engaged and will apply the rear wheel brakes.
- When towing the vehicle with all wheels on the ground, the gear selector lever must be in position N and the SmartKey must be in starter switch position 2.

When towing the vehicle with all wheels on the ground or the front axle raised, the vehicle may be towed only for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h).

To be certain to avoid a possibility of damage to the transmission, however, we recommend the drive shaft be disconnected at the rear axle drive flange for any towing beyond a short tow to a nearby garage.
Practical hints

Towing the vehicle

**Warning!**

If circumstances require towing the vehicle with all wheels on the ground, always tow with a tow bar if:

- the engine will not run
- there is a malfunction in the electro-hydraulic brake system
- there is a malfunction in the power supply or in the vehicle’s electrical system as that will be necessary to adequately control the towed vehicle.

Prior to towing the vehicle with all wheels on the ground, make certain that the SmartKey is in starter switch position 2.

If the SmartKey is left in starter switch position 0 for an extended period of time, it can no longer be turned in the switch. In this case, the steering is locked. To unlock, remove SmartKey from starter switch and reinsert.

---

To signal turns while being towed with the hazard warning flasher in use, turn SmartKey in starter switch to position 2 and activate the combination switch for the left or right turn signal in the usual manner – only the selected turn signal will operate.

Upon canceling the turn signal, the hazard warning flasher will operate again.

---

**Warning!**

The brake system requires electrical power to operate.

A malfunction in the vehicle’s power supply or electrical system may impair brake system operation and switch it into its emergency operation mode. To brake, the driver must then apply significantly greater brake pedal pressure and depress the pedal much further to obtain the expected braking effect. If necessary, apply full pressure to the brake pedal. Brakes are only applied to the front wheels. Stopping distance is increased! Adapt your driving style accordingly. For more information, see “Electro-hydraulic brake system” (▷ page 88).

With the engine not running, there is no power assistance for the brake and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle. Adapt your driving accordingly.
Practical hints

Towing the vehicle

When towing the vehicle with all wheels on the ground, please note the following:

With the automatic central locking activated and the SmartKey in starter switch position 2, or KEYLESS-GO* start/stop button in position 2, the vehicle doors lock if the left front wheel as well as the right rear wheel are turning at vehicle speeds of approx. 9 mph (15 km/h) or more.

To prevent the vehicle door locks from locking, deactivate the automatic central locking (> page 112).

Towing of the vehicle should only be done using the properly installed towing eye bolt. Never attach tow cable, tow rope or tow rod to the vehicle chassis, frame or suspension parts.

Installating towing eye bolt

Front of vehicle

If the battery is disconnected or discharged

- the SmartKey will not turn in the starter switch
- the gear selector lever will remain locked in position P.

For more information, see “Batteries” (> page 413) and “Jump starting” (> page 419).

Cover on right side of front bumper

To remove cover:

- Press mark on cover ① in direction of arrow.
- Lift cover ① off to reveal the threaded hole for towing eye bolt.

The towing eye bolt is supplied with the tool kit (located in the storage compartment under the trunk floor).
Practical hints

Towing the vehicle

To reinstall cover:

- Fit locking tabs of cover under the lower edge of the opening in the bumper.
- Apply even pressure on the upper part of the cover until it snaps into place.

Rear of vehicle

To remove cover:

- Insert flat, blunt object as a lever into upper left or right recess of cover ②.
- Loosen cover ② using the lever.
- Fold cover ② down in direction of arrow to reveal the threaded hole for the towing eye bolt.

The towing eye bolt is supplied with the tool kit (located in the storage compartment under the trunk floor).

To reinstall cover:

- Fit cover ② and snap into place.

② Cover on right side of rear bumper

To towing eye bolt in to its stop and tighten with lug wrench.

To reinstall cover:

- Insert flat, blunt object as a lever into upper left or right recess of cover ②.
- Loosen cover ② using the lever.
- Fold cover ② down in direction of arrow to reveal the threaded hole for the towing eye bolt.

The towing eye bolt is supplied with the tool kit (located in the storage compartment under the trunk floor).

To reinstall cover:

- Fit cover ② and snap into place.
Fuses

Fuses are designed to protect the electrical circuits in your vehicle from a short circuit. If a fuse is blown, the components and systems secured by that fuse will stop operating.

The following aids are available to help you replace fuses. They are located in the trunk with the vehicle tool kit (> page 383).

- Fuse chart
  The fuse chart explains the fuse allocation and fuse amperages.
- Spare fuses
- Fuse extractor

Warning!

Only use fuses approved by Mercedes-Benz with the specified amperage for the system in question. Using other fuses may cause an overload leading to a fire, and/or cause damage to electrical components and/or systems.

Never attempt to repair or bridge a blown fuse. Have the cause determined and remedied by an authorized Mercedes-Benz Center.

Main fuse box

The main fuse box is located in the engine compartment on the driver's side in front of the bulkhead (wall separating the engine and passenger compartment).

1 Main fuse box cover
2 Locking
3 Unlocking
**Practical hints**

**Fuses**

**Opening**
- Open the hood (▷ page 272).
- Move slide to position 3 and lift cover 1.

**Closing**
- Hook cover 1 onto tabs and close it.
- Move slide to position 2.

▶️ The fuse box cover must be properly positioned with the slide at the symbol to prevent moisture or dirt from entering the fuse box and possibly impairing fuse operation.

**Emergency engine shut-down**

If the engine cannot be turned off as described, you may use the following backup procedure.
- Open the main fuse box (▷ page 425).
- Pull out the two fuses labeled “ENGINE EMERGENCY STOP”.

The “Technical data” section provides the necessary technical data for your vehicle.

All authorized Mercedes-Benz Centers maintain a stock of Genuine Mercedes-Benz parts required for maintenance and repair work. In addition, strategically located parts distribution centers provide quick and reliable parts service.

More than 300,000 different parts for Mercedes-Benz models are available.

Genuine Mercedes-Benz parts are subject to stringent quality inspections. Each part has been specifically developed, manufactured or selected for and adapted to Mercedes-Benz vehicles.

Therefore, Genuine Mercedes-Benz parts should be installed.

⚠️ The use of non-genuine Mercedes-Benz parts and accessories not authorized by Mercedes-Benz could damage the vehicle, which is not covered by the Mercedes-Benz Limited Warranty, or could compromise the vehicle’s durability or safety.
Warranty coverage

Your vehicle is covered under the terms of the warranties printed in the Service and Warranty Information booklet. Your authorized Mercedes-Benz Center will exchange or repair any defective parts originally installed in the vehicle in accordance with the terms of the following warranties:

- New Vehicle Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Maine, Massachusetts, and Vermont Emission Control Systems Warranty

Replacement parts and accessories are covered by the Mercedes-Benz Parts and Accessories warranties, copies of which are available at any Mercedes-Benz Center.

Loss of Service and Warranty Information Booklet

Should you lose your Service and Warranty Information booklet, have an authorized Mercedes-Benz Center arrange for a replacement. It will be mailed to you.
Technical data

Identification labels

1. Certification label (includes Paintwork code)
2. Storage compartment lid
3. Trim
4. Vehicle Identification Number (VIN) (below right rear storage compartment)
   - Open storage compartment lid 2.
   - Remove storage compartment trim 3.

The VIN is located on the metal strap above the floor carpet.

5. Engine number (engraved on engine)
6. VIN, visible (lower edge of windshield)
7. Emission control information label, includes both federal and California certification exhaust emission standards
8. Vacuum line routing diagram label

When ordering parts, please specify vehicle identification and engine numbers.
Layout of poly-V-belt drive

**SL 500**
- 1 Automatic belt tensioner
- 2 ABC tandem pump (pump for power-steering assistance and ABC chassis)
- 3 Air conditioning compressor
- 4 Crankshaft

\(^2\) Premium fuel required. Performance may vary with fuel octane rating.
Technical data

Rims and tires

Only use tires which have been tested and approved by Mercedes-Benz. Tires approved by Mercedes-Benz are developed to provide best possible performance in conjunction with the driving safety systems on your vehicle such as ABS or ESP®. Tires specially developed for your vehicle and tested and approved by Mercedes-Benz can be identified by finding the following on the tire’s sidewall:

- **MO** = Mercedes-Benz Original equipment tires
  - AMG vehicles: Does not apply to all approved tires on AMG vehicles. For information on tested and approved tires for AMG vehicles, contact an authorized Mercedes-Benz Center.

- **MOE** = Mercedes-Benz Original Extended (tires with limited run-flat characteristics) original equipment tires

Using tires other than those approved by Mercedes-Benz may result in damage that is not covered by the Mercedes-Benz Limited Warranty.

For information on driving with MOExtended tires, see “MOExtended system*” (> page 300).

Using tires other than those approved by Mercedes-Benz can have detrimental effects, such as:

- poor handling characteristics
- increased noise
- increased fuel consumption

Moreover, tires and rims not approved by Mercedes-Benz may, under load, exhibit dimensional variations and different tire deformation characteristics that could cause them to come into contact with the vehicle body or axle parts. Damage to the tires or the vehicle may be the result.
Further information on tires and rims is available at any authorized Mercedes-Benz Center. A placard with the recommended tire inflation pressures is located on the driver's door B-pillar. Some vehicles may have supplemental tire inflation pressure information for driving at high speeds (> page 292) or for vehicle loads less than the maximum loaded vehicle condition (> page 292). If such information is provided, it can be found on the placard located on the inside of the fuel filler flap. The tire inflation pressure should be checked regularly and should only be adjusted on cold tires. Follow tire manufacturer's maintenance recommendation included with vehicle.

The following pages also list the approved wheel rim and tire sizes for equipping your vehicles with winter tires. Winter tires are not available as standard or optional factory equipment, but can be purchased from an authorized Mercedes-Benz Center.

Depending on vehicle model and the standard or optional factory-equipped wheel rim/tire configuration on your vehicle (Performance Package, Sport Package etc.), equipping your vehicle with winter tires approved for your vehicle model may also require the purchase of two or four wheel rims of the recommended size for use with these winter tires. See an authorized Mercedes-Benz Center for more information.

</tr>
</tbody>
</table>

<sup>1</sup> Must not be used with snow chains.

---

1. Please compare the recommended tire inflation pressure for your vehicle with the tire inflation pressure on the yellow label located on the spare wheel rim.

2. If the tire inflation pressure on the yellow label on the spare wheel rim differs from the values given in this Operator's Manual, inflate the spare wheel tire to the recommended tire inflation pressure given on the yellow label on the spare wheel rim.

3. Please note that the tire inflation pressure of the collapsible tire differs from the tire inflation pressure of the road tires.

4. Inflate the collapsible tire to approximately 51 psi (3.5 bar).

5. The SL 65 AMG and the SL 55 AMG with Performance Package* do not have a spare wheel. The SL 65 AMG and the SL 55 AMG with Performance Package* are equipped with TIREFIT (> page 399).

¹ Use MB Windshield Washer Concentrate "S" and water for temperatures above freezing or MB Windshield Washer Concentrate "S" and commercially available pre-mixed windshield washer solvent/antifreeze for temperatures below freezing. Follow suggested mixing ratios (> page 452).
Technical data

Fuels, coolants, lubricants, etc.

Engine oils

Engine oils are specifically tested for their suitability in our engines and durability for our service intervals. Therefore, only use approved engine oils and oil filters required for vehicles with Maintenance System (U.S. vehicles) or FSS (Canada vehicles). For a listing of approved engine oils and oil filters, refer to the Factory Approved Service Products pamphlet, or contact an authorized Mercedes-Benz Center.

Warning!

Using engine oils and oil filters of specification other than those expressly required for the Maintenance System (U.S. vehicles) or FSS (Canada vehicles), or changing oil and oil filter at change intervals longer than those called for by the Maintenance System (U.S. vehicles) or FSS (Canada vehicles) will result in engine damage not covered by the Mercedes-Benz Limited Warranty.

Please follow Maintenance System (U.S. vehicles) or FSS (Canada vehicles) recommendations for scheduled oil changes. Failure to do so could result in engine damage not covered by the Mercedes-Benz Limited Warranty.

Engine oil additives

Do not blend oil additives with engine oil. They may damage the engine. Damage or malfunctions resulting from blending oil additives are not covered by the Mercedes-Benz Limited Warranty.

Air conditioning refrigerant

R-134a (HFC) refrigerant and special PAG lubricating oil are used in the air conditioner system. Never use R-12 (CFC) or mineral-based lubricating oil. Otherwise damage to the system will occur.

Brake fluid

During vehicle operation, the boiling point of the brake fluid is continuously reduced through the absorption of moisture from the atmosphere.

Warning!

Under extremely strenuous operating conditions, this moisture content can lead to the formation of bubbles in the system, thus reducing the system’s efficiency. Therefore, the brake fluid must be replaced regularly. Refer to your vehicle’s Maintenance Booklet for replacement interval.

Only brake fluid approved by Mercedes-Benz is recommended. Your authorized Mercedes-Benz Center will provide you with additional information.
Technical data
Fuels, coolants, lubricants, etc.

**Premium unleaded gasoline**

**Warning!**

Gasoline is highly flammable and poisonous. It burns violently and can cause serious injury. Whenever you are around gasoline, avoid inhaling fumes and skin contact, extinguish all smoking materials. Never allow sparks, flame or smoking materials near gasoline!

<table>
<thead>
<tr>
<th>Fuel requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>To maintain the engine’s durability and performance, premium unleaded gasoline must be used. If premium unleaded is not available and low octane fuel is used, follow these precautions:</td>
</tr>
<tr>
<td>• have the fuel tank only partially filled with unleaded regular and fill up with premium unleaded as soon as possible</td>
</tr>
<tr>
<td>• avoid full throttle driving and abrupt acceleration</td>
</tr>
<tr>
<td>• do not exceed an engine speed of 3000 rpm if the vehicle is loaded with a light load such as two occupants and no luggage</td>
</tr>
<tr>
<td>• do not exceed 2/3 of maximum accelerator pedal position if the vehicle is fully loaded or operating in mountainous terrain</td>
</tr>
</tbody>
</table>

Only use premium unleaded fuel:

• The octane number (posted at the pump) must be 91 min. It is an average of both the Research (R) octane number and the Motor (M) octane number: (R+M)/2. This is also known as the ANTI-KNOCK INDEX.

Unleaded gasoline containing oxygenates such as ethanol, IPA, IBA and TBA can be used provided the ratio of any one of these oxygenates to gasoline does not exceed 10%; MTBE must not exceed 15%.

The ratio of methanol to gasoline must not exceed 3% plus additional cosolvents.
Using mixtures of ethanol and methanol is not allowed. Gasohol, which contains 10% ethanol and 90% unleaded gasoline, can be used.

These blends must also meet all other fuel requirements, such as resistance to spark knock, boiling range, vapor pressure, etc.

Gasoline additives

A major concern among engine manufacturers is carbon build-up caused by gasoline. Mercedes-Benz recommends only the use of quality gasoline containing additives that prevent the build-up of carbon deposits.

After an extended period of using fuels without such additives carbon deposits can build up, especially on the intake valves and in the combustion area, leading to engine performance problems such as:

- Warm-up hesitation
- Unstable idle
- Knocking/pinging
- Misfire
- Power loss

In areas where carbon deposits may be encountered due to lack of availability of gasolines which contain these additives, Mercedes-Benz recommends the use of additives approved by us for use on Mercedes-Benz vehicles. Refer to Factory Approved Service Products pamphlet for a listing of approved product(s). Follow directions on product label.

Do not blend other fuel additives with fuel. This only results in unnecessary cost and may be harmful to the engine operation. Damage or malfunction resulting from poor fuel quality or from blending additional fuel additives other than those tested and approved by us for use on Mercedes-Benz vehicles listed in the Factory Approved Service Products pamphlet are not covered by the Mercedes-Benz Limited Warranty.
Coolants

The engine coolant is a mixture of water and anticorrosion/antifreeze, which provides:

- corrosion protection
- freeze protection
- boiling protection (by increasing the boiling point)

The cooling system was filled at the factory with a coolant providing freeze protection to approximately -22°F (-30°C) and corrosion protection.

If the antifreeze mixture is effective to -22°F (-30°C), the boiling point of the coolant in the pressurized cooling system is reached at approximately 266°F (130°C).

The coolant solution must be used year round to provide the necessary corrosion protection and increase in the boil-over protection. Refer to Maintenance Booklet for replacement interval.

Coolant system design and coolant used stipulate the replacement interval. The replacement interval published in the Maintenance Booklet is only applicable if MB 325.0 anticorrosion/antifreeze solution or other Mercedes-Benz approved products of equal specification (see Factory Approved Service Products pamphlet) are used to renew the coolant concentration or bring it back up to the proper level.

To provide important corrosion protection, the solution must be at least 45% anticorrosion/antifreeze (equivalent to freeze protection to approx. -22°F [-30°C]). If you use a solution that is more than 55% anticorrosion/antifreeze (freeze protection to approx. -49°F [-45°C]), the engine temperature will increase due to the lower heat transfer capability of the solution. Therefore, do not use more than this amount of anticorrosion/antifreeze.

If the coolant level is low, water and MB 325.0 Anticorrosion/Antifreeze should be used to bring it up to the proper level (have cooling system checked for signs of leakage). Please make sure the mixture is in accordance with label instructions.

The water in the cooling system must meet minimum requirements, which are usually satisfied by normal drinking water. If you are not sure about the water quality, consult an authorized Mercedes-Benz Center.
Your vehicle contains a number of aluminum parts. The use of aluminum components in motor vehicle engines necessitates that anticorrosion/antifreeze coolant used in such engines be specifically formulated to protect the aluminum parts. (Failure to use such anticorrosion/antifreeze coolant will result in a significantly shortened service life.) Therefore, the following product is strongly recommended for use in your vehicle: Mercedes-Benz 325.0 anticorrosion/antifreeze agent.

Before the start of the winter season (or once a year in hot southern regions), you should have the anticorrosion/antifreeze concentration checked. The coolant is also regularly checked each time you bring your vehicle to an authorized Mercedes-Benz Center for service.

### Anticorrosion/antifreeze quantity

Windshield and headlamp washer system

Both the windshield and headlamp washer systems are supplied from the windshield washer fluid reservoir.

The windshield and headlamp washer fluid reservoir has a capacity of approx. 7.4 US qt (7 l).

- Refill the reservoir with MB Windshield Washer Concentrate and water (or concentrate and commercially available premixed windshield washer solvent/antifreeze, depending on ambient temperatures).

Warning!

Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts because it may ignite and burn. You could be seriously burned.

Windshield and headlamp washer fluid mixing ratio

For temperatures above freezing point, use MB Windshield Washer Concentrate “S” and water:

- 1 part “S” to 100 parts water
  (1.34 fl oz [40 ml] “S” to 1 gal [4.0 l] water)

For temperatures below freezing point, use MB Windshield Washer Concentrate “S” and commercially available premixed windshield washer solvent/antifreeze:

- 1 part “S” to 100 parts solvent
  (1.34 fl oz [40 ml] “S” to 1 gal [4.0 l] solvent)
ABS
(Antilock Brake System)
Prevents the wheels from locking up during braking so that the vehicle can continue to be steered.

ABC
(Active Body Control)
Active, computer-controlled system that hydraulically adjusts the suspension at all four wheels in response to various driving situations.

Accessory weight
(> page 310)

Air pressure
(> page 310)

Alignment bolt
Metal pin with thread. The alignment bolt, or centering bolt, is an aid used when changing a tire to align the wheel with the wheel hub.

Aspect ratio
(> page 310)

BabySmart™ airbag deactivation system
This system detects if a special system compatible child restraint seat is installed on the front passenger seat. The system will automatically deactivate the passenger front airbag when such a seat is properly installed (indicator lamp on the glove box comes on and remains illuminated).

BabySmart™ compatible child seats
Special restraint system for children. The sensor system for the passenger seat prevents deployment of the passenger front airbag if a BabySmart™ compatible child seat is installed. See your authorized Mercedes-Benz Center for availability.

Bar
(> page 310)

BAS
(Brake Assist System)
System for potentially reducing braking distances in emergency braking situations. The system is activated when it senses an emergency based on how fast the brake is applied.

Bead
(> page 310)

Bi-Xenon headlamps*
Headlamps which use an electric arc as the light source and produce a more intense light than filament headlamps. Bi-Xenon headlamps produce low beam and high beam.

CAC
(Customer Assistance Center)
Mercedes-Benz customer service center, which can help you with any questions about your vehicle and provide assistance in the event of a breakdown.
Technical terms

CAN system
(Controller Area Network)
Data bus network serving to control vehicle functions such as door locking or windshield wiping depending on vehicle settings and/or ambient conditions.

Cockpit
All instruments, switches, buttons and indicator/warning lamps in the passenger compartment needed for vehicle operation and monitoring.

Cold tire inflation pressure
(-> page 310)

Collapsible tire
An especially compact spare tire that must be inflated with a provided air pump before using. It should only be used to bring the vehicle to the nearest service station.

COMAND
(Cockpit Management and Data System)
Information and operating center for vehicle sound and communications systems, including the radio, CD changer and navigation system, as well as other optional equipment (e.g. telephone).

Control system
The control system is used to call up vehicle information and to change component settings. Information and messages appear in the multifunction display. The driver uses the buttons on the multifunction steering wheel to navigate through the system and to adjust settings.

Cruise control
Driving convenience system for automatically maintaining the vehicle speed set by the driver.

Curb weight
(-> page 310)

Distronic*
A driving convenience cruise control system which helps the driver maintain a pre-selected speed:

- If there is no vehicle directly ahead, the system operates in the same way as conventional cruise control.
- If a slower moving vehicle is ahead, Distronic* will reduce your vehicle speed to the extent permitted by reduced throttle and up to 20% braking power to maintain the preset minimum following distance.

DOT
(Department of Transportation)
(-> page 311)

DTR
(->Distronic*)

Electro-hydraulic brake system
Electronically controlled hydraulic braking system for increased braking safety and comfort.
Engine number
The number set by the manufacturer and placed on the cylinder block to uniquely identify each engine produced.

**ESP**
(Electronic Stability Program)
Improves vehicle handling and directional stability.

**ETD**
(Emergency Tensioning Device)
Device which deploys in certain frontal and rear collisions exceeding the system's threshold to tighten the seat belts.

**FSS (Canada vehicles)**
(Flexible Service System)
Maintenance service indicator in the multifunction display that informs the driver when the next vehicle maintenance service is due. FSS evaluates engine temperature, oil level, vehicle speed, engine speed, distance driven and the time elapsed since your last maintenance service, and calls for the next maintenance service accordingly.

**GAWR**
(Gross Axle Weight Rating)
(▷ page 311)

**Gear range**
Number of gears which are available to the automatic transmission for shifting. The automatic gear shifting process can be adapted to specific operating conditions using the gear selector lever.

**GPS**
(Global Positioning System)
Satellite-based system for relaying geographic location information to and from vehicles equipped with special receivers. Employs CD digital maps for navigation.

**GVW**
(Gross Vehicle Weight)
(▷ page 311)

**GVWR**
(Gross Vehicle Weight Rating)
(▷ page 311)

**Head-thorax airbag**
Installed in the doors, these airbags protect occupants during side impact collisions exceeding a preset threshold. Unlike normal side airbags, head-thorax airbags are also designed to provide protection for the head area.
Technical terms

Instrument cluster
The displays and indicator/warning lamps in the driver’s field of vision, including the tachometer, speedometer, engine temperature and fuel gauge.

KEYLESS-GO*
System for entering and operating the vehicle without the use of a key.

Kickdown
Depressing the accelerator past the point of resistance shifts the transmission down to the lowest possible gear. This very quickly accelerates the vehicle and should not be used for normal acceleration needs.

Kilopascal (kPa)
(> page 311)

Locking knob
Knob on the door which indicates whether the door is locked or unlocked. Pushing the locking knob down on an individual door from inside will lock that door.

Maintenance System (U.S. vehicles)
Maintenance service indicator in the multifunction display that informs the driver when the next vehicle maintenance service is due. The Maintenance System tracks distance driven and the time elapsed since the last maintenance service, calculates other maintenance service work required, and calls for the next maintenance service accordingly.

Maximum load rating
(> page 311)

Maximum loaded vehicle weight
(> page 311)

Maximum tire inflation pressure
(> page 311)

Memory function
Used to store three individual seat, steering wheel and exterior rear view mirror positions.

MON
The Motor Octane Number for gasoline as determined by a standardized method. It is an indication of a gasoline’s ability to resist undesired detonation (knocking). The average of both the MON (Motor Octane Number) and RON (Research Octane Number) is posted at the pump, also known as ANTI-KNOCK INDEX.

Multifunction display
Two display fields in the instrument cluster used to present information provided by the control system.

Multifunction steering wheel
Steering wheel with buttons for operating the control system.

Normal occupant weight
(> page 311)
**Overspeed range**
Engine speeds within the red marking on the tachometer dial, see “Tachometer” (ं> page 133). Avoid this engine speed range, as it may result in serious engine damage that is not covered by the Mercedes-Benz Limited Warranty.

**Parktronic (Parking assist)**
System which uses visual and acoustic signals to assist the driver during parking maneuvers.

**Poly-V-belt drive**
Drives engine-components (alternator, AC compressor, etc.) from the engine.

**Power train**
Collective term designating all components used to generate and transmit motive power to the drive axles, including:
- engine
- clutch/torque converter
- transmission
- transfer case
- drive shaft
- differential
- axle shafts/axles

**Production options weight**
(ं> page 311)

**Program mode selector switch**
Used to switch the automatic transmission between standard operation (S) and comfort operation (C).

SL 55 AMG with steering wheel gearshift control and manual shift program: In addition to S and C (for regular S or comfort C operation, see above), you can use MANUAL for manual shift program.

**PSI**
(Pounds per square inch)
(ं> page 312)

**Recommended tire inflation pressure**
(ं> page 312)

**REST**
(Residual Engine Heat Utilization)
Feature that uses the engine heat stored in the coolant to heat the vehicle interior for a short time after the engine has been turned off.
Retractable hardtop
Hardtop roof that can be opened and closed at the push of a button and stored in the trunk.

Rim
(► page 312)

Roll bar
Occupant protection system which consists of tubular steel sheathed in plastic. The roll bar is lowered into the car body during normal driving conditions and raised automatically. It may also be manually raised and lowered by operating a button during critical driving situations.

RON
The Research Octane Number for gasoline as determined by a standardized method. It is an indication of a gasoline’s ability to resist undesired detonation (knocking). The average of both the MON (Motor Octane Number) and RON (Research Octane Number) is posted at the pump, also known as ANTI-KNOCK INDEX.

Shift lock
When the vehicle is parked, this lock prevents the gear selector lever from being inadvertently moved out of position P without SmartKey turned and brake pedal depressed.

Sidewall
(► page 312)

SRS
(Supplemental Restraint System)
Seat belts, emergency tensioning device and airbags. Though independent systems, they are closely interfaced to provide effective occupant protection.

Tele Aid System
(Telematic Alarm Identification on Demand)
The Tele Aid system consists of three types of response: automatic and manual emergency, roadside assistance, and information. Tele Aid is initially activated by completing a subscriber agreement and placing an acquaintance call.
The Tele Aid system is operational provided that the vehicle’s battery is charged, properly connected, not damaged and cellular and GPS coverage is available.

Tightening torque
Force times lever arm (e.g. a lug wrench) with which threaded fasteners such as wheel bolts are tightened.

TIN
(Tire Identification Number)
(► page 312)

Tire load rating
(► page 312)
Vehicle level control
The ground clearance of the vehicle is automatically controlled according to a selected setting and speed. The driver can choose manually within a range of ground clearance, for example on very rough roads.

Vehicle maximum load on the tire
(▷ page 313)

VIN
(Vehicle Identification Number)
The number set by the manufacturer and placed on the body to uniquely identify each vehicle produced.

Voice control system*
Voice control system for car phones, portable cell phones and audio systems (radio, CD, etc.).

Wind screen
Screen for deflecting wind from the vehicle interior when the hardtop is lowered.

Xenon headlamps
Headlamps which use an electric arc as the light source and produce a more intense light than filament headlamps.

Service and Literature

Your authorized Mercedes-Benz Center has trained technicians and Genuine Mercedes-Benz Parts to service your vehicle properly. For expert advice and quality service, contact an authorized Mercedes-Benz Center.

If you are interested in obtaining service literature for your vehicle, please contact an authorized Mercedes-Benz Center. We consider this the best way for you to obtain accurate information for your vehicle.

For further information you can find us on the Mercedes-Benz web-site www.mbusa.com or www.mercedes-benz.ca.

Warning!

To help avoid personal injury, be extremely careful when performing any service work or repairs. Improper or incomplete service or the use of incorrect or inappropriate parts or materials may damage the vehicle or its equipment, which may in turn result in personal injury.

If you have any questions about carrying out any type of service, turn to the advice of an authorized Mercedes-Benz Center.

We reserve the right to modify the technical details of the vehicle as given in the data and illustrations of this Operator’s Manual. Reprinting, translation and copying, even of excerpts, are not permitted without our prior authorization in writing.
