Operator’s Manual
Symbols

Trademarks®:
- Bluetooth® is a registered trademark of Bluetooth SIG Inc.
- ESP® and PRE-SAFE® are registered trademarks of Daimler.
- HomeLink® is a registered trademark of Prince, a Johnson Controls Company.

The following symbols are found in this Operator’s Manual:

⚠️ Warning! ⚠️
Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

⚠️ Highlights hazards that may result in damage to your vehicle.

ℹ️ Helpful hints or further information you may find useful.

▶️ This symbol points to instructions for you to follow.

▶️ A number of these symbols appearing in succession indicates a multiple-step procedure.

▶️ page This symbol tells you where to look for further information on a topic.

▶️▶️ This continuation symbol marks a warning or procedure which is continued on the next page.

Display Text in displays, such as the control system, are printed in the type shown here.
Our company and staff congratulate you on the purchase of your new Mercedes-Benz. Your selection of our product is a demonstration of your trust in our company name. Furthermore, it exemplifies your desire to own an automobile that will be as easy as possible to operate and provide years of service.

Your Mercedes-Benz represents the efforts of many skilled engineers and craftsmen. To help assure your driving pleasure, and also the safety of you and your passengers, we ask you to make a small investment of time:

- Please read this manual carefully, then return it to your vehicle where it will be handy for your reference.
- Please follow the recommendations contained in this manual. They are designed to acquaint you with the operation of your Mercedes-Benz.
- Please pay attention to the warnings and cautions contained in this manual. They are designed to help improve the safety of the vehicle operator and occupants.

We extend our best wishes for many miles of safe, pleasurable driving.

Product Information

Please observe the following in your own best interest:

We recommend using Genuine Mercedes-Benz Parts as well as conversion parts and accessories explicitly approved by us for your vehicle model.

We have tested these parts to determine their reliability, safety and special suitability for Mercedes-Benz vehicles.

We are unable to make an assessment for other products and therefore cannot be held responsible for them, even if in individual cases an official approval or authorization by governmental or other agencies should exist. Use of such parts and accessories could adversely affect the safety, performance or reliability of your vehicle. Please do not use them.

Genuine Mercedes-Benz Parts and pre-approved conversion parts and accessories are available at any authorized Mercedes-Benz Center. In addition, you will receive comprehensive information on permissible technical modifications and expert installations.

Notes

This Operator’s Manual contains a great deal of useful information. We urge you to read it carefully and familiarize yourself with the vehicle before driving.

For your own safety and longer service life of the vehicle, we urge you to follow the instructions and warnings contained in this Operator’s Manual. Ignoring them could result in damage to the vehicle or personal injury to you or others. Vehicle damage caused by failure to follow instructions is not covered by the Mercedes-Benz Limited Warranty.

We continuously strive to improve our product, and ask for your understanding that we reserve the right to make changes in design and equipment. Therefore, information, illustrations and descriptions in this Operator’s Manual might differ from your vehicle.

Vehicle equipment

Your vehicle may have some or all of the equipment described in this manual. Therefore, you may find explanations for optional equipment not installed in your vehicle. If you have any questions about operating any equipment, any authorized Mercedes-Benz Center will be glad to demonstrate the proper procedures.

Optional equipment is also described in this manual, including operating instructions wherever necessary. Since they are special-order items, the descriptions and illustrations herein may vary slightly from the actual equipment of your vehicle.

If there are any equipment details that are not shown or described in this Operator’s Manual, any authorized Mercedes-Benz Center will be glad to inform you of correct care and operating procedures. The Operator’s Manual and Maintenance Booklet are important documents and should be kept with the vehicle.
Service and warranty information

The Service and Warranty Information booklet contains detailed information about the warranties covering your Mercedes-Benz, including:

- New Car Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Connecticut, Maine, Massachusetts, New York, Pennsylvania, Rhode Island, and Vermont Emission Control System Warranty
- State Warranty Enforcement Laws (Lemon Laws)

Important notice for California retail buyers and lessees of Mercedes-Benz automobiles

Under California law you may be entitled to a replacement of your vehicle or a refund of the purchase price or lease price, if after a reasonable number of repair attempts Mercedes-Benz USA, LLC and/or its authorized repair or service facilities fail to fix one or more substantial defects or malfunctions in the vehicle that are covered by its express warranty. During the period of 18 months from original delivery of the vehicle or the accumulation of 18,000 miles (approximately 29,000 km) on the odometer of the vehicle, whichever occurs first, a reasonable number of repair attempts is presumed for a retail buyer or lessee if one or more of the following occurs:

1. The same substantial defect or malfunction results in a condition that is likely to cause death or serious bodily injury if the vehicle is driven, that defect or malfunction has been subject to repair two or more times, and you have directly notified Mercedes-Benz USA, LLC in writing of the need for its repair,

2. The same substantial defect or malfunction of a less serious nature than category (1) has been subject to repair four or more times and you have directly notified us in writing of the need for its repair, or

3. The vehicle is out of service by reason of repair of the same or different substantial defects or malfunctions for a cumulative total of more than 30 calendar days.

Written notification should not be sent to a dealer, it should be addressed to Mercedes-Benz USA, LLC Customer Assistance Center One Mercedes Drive Montvale, NJ 07645-0350

Maintenance

The Maintenance Booklet describes all the necessary maintenance work which should be performed at regular intervals. Always have the Maintenance Booklet with you when you take the vehicle to an authorized Mercedes-Benz Center for service. The service advisor will record each service in the booklet for you.
Roadside Assistance

The Mercedes-Benz Roadside Assistance Program provides factory-trained technical help in the event of a breakdown. Calls to the toll-free Roadside Assistance number 1-800-FOR-MERCedes (in the USA) 1-800-387-0100 (in Canada) will be answered by Mercedes-Benz Customer Assistance Representatives 24 hours a day, 365 days a year.

For additional information refer to the Mercedes-Benz Roadside Assistance Program brochure (in the USA) or the Roadside Assistance section of the Service and Warranty Information Booklet (in Canada) in your vehicle literature portfolio.

Change of address or ownership

If you change your address, be sure to send in the “Change of Address Notice” found in the Service and Warranty Information Booklet, or simply call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERCedes, or Customer Service (in Canada) at 1-800-387-0100. This will assist us in contacting you in a timely manner should the need arise.

If you sell your Mercedes, please leave all literature with the vehicle to make it available to the next operator.

If you bought this vehicle used, be sure to send in the “Notice of Purchase of Used Car” found in the Service and Warranty Information Booklet, or call the Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERCedes, or Customer Service (in Canada) at 1-800-387-0100.

Operating your vehicle outside the USA or Canada

If you plan to operate your vehicle in foreign countries, please be aware that:

- service facilities or replacement parts may not be readily available,
- unleaded gasoline for vehicles with catalytic converters may not be available; the use of leaded fuels will damage the catalysts,
- gasoline may have a considerably lower octane rating, and improper fuel can cause engine damage.

Certain Mercedes-Benz models are available for delivery in Europe under our European Delivery Program. For details, consult an authorized Mercedes-Benz Center or write to:

In the USA:
Mercedes-Benz USA, LLC
European Delivery Department
One Mercedes Drive
Montvale, NJ 07645-0350

In Canada:
Mercedes-Benz Canada, Inc.
European Delivery Department
98 Vanderhoof Avenue
Toronto, Ontario M4G 4C9
Operating safety

⚠️ Warning!
Work improperly carried out on electronic components and associated software could cause them to cease functioning. Because the vehicle’s electronic components are interconnected, any modifications made may produce an undesired effect on other systems. Electronic malfunctions could seriously impair the operating safety of your vehicle.
Contact an authorized Mercedes-Benz Center for repairs or modifications to electronic components.
Other improper work or modifications on the vehicle could also have a negative impact on the operating safety of the vehicle.
Some safety systems only function while the engine is running. You should therefore never turn off the engine while driving.

⚠️ Warning!
Heavy blows against the vehicle underbody or tires/wheels, for example when running over an obstacle, road debris or a pothole, may cause serious damage and impair the operating safety of your vehicle. If you feel a sudden significant vibration or ride disturbance, or you suspect that damage to your vehicle has occurred, you should turn on your hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road. Inspect the vehicle underbody and tires/wheels for possible damage. If the vehicle appears unsafe, have it towed to the nearest authorized Mercedes-Benz Center or other qualified maintenance or repair facility for further inspection or repairs.

Proper use of the vehicle
Proper use of the vehicle requires that you are familiar with the following information and rules:
- the safety precautions in this manual
- the “Technical data” section in this manual
- traffic rules and regulations
- motor vehicle laws and safety standards

⚠️ Warning!
Various warning labels are attached to your vehicle. These warning labels are intended to make you and others aware of various risks. You should not remove any of these warning labels unless explicitly instructed to do so by information on the label itself. Removal of any of these labels may cause you and others to be unaware of certain risks which may result in an accident and/or personal injury.
Problems with your vehicle

If you should experience a problem with your vehicle, particularly one that you believe may affect its safe operation, we urge you to contact an authorized Mercedes-Benz Center immediately to have the problem diagnosed and corrected if required. If the matter is not handled to your satisfaction, please discuss the problem with the Mercedes-Benz Center management or, if necessary, contact us at one of the following addresses:

**In the USA:**
Customer Assistance Center  
Mercedes-Benz USA, LLC  
One Mercedes Drive  
Montvale, NJ 07645-0350

**In Canada:**
Customer Relations Department  
Mercedes-Benz Canada, Inc.  
98 Vanderhoof Avenue  
Toronto, Ontario M4G 4C9

For the USA only:
The following text is published as required of manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mercedes-Benz USA, LLC.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mercedes-Benz USA, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA Headquarters, 1200 New Jersey Avenue, SE, West Building, Washington, DC 20590.

You can also obtain other information about motor vehicle safety from http://www.safercar.gov.
Vehicle data recording

Information regarding electronic recording devices

(Including notice pursuant to California Code § 9951)

Please note that your vehicle is equipped with devices that can record vehicle systems data and, if equipped with the Tele Aid system, may transmit some data in certain accidents. This information helps, for example, to diagnose vehicle systems after a collision and to continuously improve vehicle safety. Daimler may access the information and share it with others:

- for safety research or vehicle diagnosis purposes
- with the consent of the vehicle owner or lessee
- in response to an official request by law enforcement or other government agency
- for use in dispute resolution involving Daimler, its affiliates or sales/service organization and/or
- as otherwise required or permitted by law.

Please check the Tele Aid subscription service agreement for details regarding the information that may be recorded or transmitted via that system.

Occupant safety

Introduction
In this section you will learn the most important facts about the restraint system components of the vehicle.
The restraint systems are
- Seat belts
- Child restraints
- Lower Anchors and Tethers for CHildren (LATCH)

Additional protection potential is provided by:
- Supplemental Restraint System (SRS) with
  - Air bags
  - Air bag control unit (with crash sensors)
  - Emergency Tensioning Device (ETD) for seat belts
  - Seat belt force limiter
- Active head restraints
- Preventive occupant safety (PRE-SAFE®)
- Air bag system components with
- Front passenger front air bag off indicator lamp
- Front passenger seat with Occupant Classification System (OCS)

Although the systems are independent, their protective functions work in conjunction with each other.

⚠️ Warning!
Modifications to or work improperly conducted on restraint system components or their wiring, as well as tampering with interconnected electronic systems, can lead to the restraint systems no longer functioning as intended.

Air bags or Emergency Tensioning Devices (ETDs), for example, could deploy inadvertently or fail to deploy in accidents although the deceleration threshold for air bag deployment is exceeded. Therefore, never modify the restraint systems. Do not tamper with electronic components or their software.

ℹ️ For information on infants and children traveling with you in the vehicle and restraint systems for infants and children, see “Children in the vehicle” (page 59).
**SRS indicator lamp**

The SRS system conducts a self-test when the ignition is switched on and in regular intervals while the engine is running. This facilitates detection of system malfunctions. The **SRS** indicator lamp in the instrument cluster comes on when the ignition is switched on and goes out no later than a few seconds after the engine has been started. The SRS components are in operational readiness if the **SRS** indicator lamp is not lit when the engine is running.

A malfunction in the system has been detected if the **SRS** indicator lamp:

- fails to go out after approximately 4 seconds after the engine is started  
- does not come on at all  
- comes on after the engine was started or while driving

⚠️ **Warning!**

In the event that the **SRS** indicator lamp comes on while driving or does not come on at all, the SRS self-check has detected a malfunction. For your safety, we strongly recommend that you contact an authorized Mercedes-Benz Center immediately to have the system checked; otherwise the SRS may not deploy when needed in an accident, which could result in serious or fatal injury, or it might deploy unexpectedly and unnecessarily which could also result in injury.

In addition, improper work on the SRS creates a risk of rendering the SRS inoperative or causing unintended air bag deployment. Work on the SRS must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.

If it is necessary to modify an air bag system to accommodate a person with disabilities, contact an authorized Mercedes-Benz Center or call our Customer Assistance Center at 1-800-FOR-MERCEdes (1-800-367-6372) for details.

---

**Air bags**

⚠️ **Warning!**

Air bags are designed to reduce the potential of injury and fatality in certain frontal impacts (front air bags, driver side knee bag), side impacts (side impact air bags and window curtain air bags), or rollovers (window curtain air bags). However, no system available today can completely eliminate injuries and fatalities.

The deployment of the air bags temporarily releases a small amount of dust from the air bags. This dust, however, is neither injurious to your health, nor does it indicate a fire in the vehicle. The dust might cause some temporary breathing difficulty for people with asthma or other breathing trouble. To avoid this, you may wish to get out of the vehicle as soon as it is safe to do so. If you have any breathing difficulty but cannot get out of the vehicle after the air bag inflates, then get fresh air by opening a window or door.

⚠️ **Warning!**

To reduce the risk of injury when the front air bags inflate, it is very important for the driver and front passenger to always be in
Occupant safety

a properly seated position and to wear their respective seat belt.

For maximum protection in the event of a collision always be in normal seated position with your back against the seat backrest. Fasten your seat belt and make sure it is properly positioned on your body.

Since the air bag inflates with considerable speed and force, a proper seating position and correct positioning of the hands on the steering wheel will help to keep you at a safe distance from the air bag. Occupants who are not wearing their seat belt, are not seated properly or are too close to the air bag can be seriously injured or killed by an air bag as it inflates with great force instantaneously:

• Sit with the seat belt properly fastened in a position that is as upright as possible with your back against the seat backrest.

• Move the driver seat as far back as possible, still permitting proper operation of vehicle controls. The distance from the center of the driver’s chest to the center of the air bag cover on the steering wheel must be at least 10 inches (25 cm) or more. You should be able to accomplish this by adjusting the seat and steering wheel. If you have any difficulties, please contact an authorized Mercedes-Benz Center.

• Do not lean your head or chest close to the steering wheel or dashboard.

• Keep hands on the outside of the steering wheel rim. Placing hands and arms inside the rim can increase the risk and potential severity of hand/arm injury when the driver’s front air bag inflates.

• Adjust the front passenger seat as far as possible rearward from the dashboard when the seat is occupied.

• Occupants, especially children, should never place their bodies or lean their heads in the area of the door where the side impact air bags inflates. This could result in serious injuries or death should the side impact air bag be deployed. Always sit as upright as possible, wear the seat belt properly and use an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.

Failure to follow these instructions can result in severe injuries to you or other occupants.

If you sell your vehicle, it is important that you make the buyer aware of this safety information. Be sure to give the buyer this Operator’s Manual.

⚠️ Warning!

Accident research shows that the safest place for children in an automobile is in the rear seat.

There is a possibility for a side impact air bag related injury if occupants, especially children, are not properly seated or restrained when next to a side impact air bag which needs to deploy rapidly in a side impact in order to do its job.

To help avoid the possibility of injury, please follow these guidelines:

1. Occupants, especially children, should never place their bodies or lean their heads in the area of the door where the side impact air bags inflates. This could result in serious injuries or death should the side impact air bag be deployed. Always sit as upright as possible, wear the seat belt properly and use an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.

2. Always sit as upright as possible, properly use the seat belts, and for children 12 years old and under, use an appropriately
sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child.

(3) Always wear seat belts properly.

If you believe that, even with the use of these guidelines, it would be safer for your rear seat occupants to have the rear mounted side impact air bags deactivated, then deactivation can be carried out upon your written request at an authorized Mercedes-Benz Center at an additional cost. Please contact an local authorized Mercedes-Benz Center or call the Customer Assistance Center (in the USA) at 1-800-FOR-MERCEDES (1-800-367-6372), or Customer Service (in Canada) at 1-800-387-0100 for details.

Air bags are designed to deploy only in certain frontal impacts (front air bags, driver side knee bag), side impacts (side impact and window curtain air bags) which exceed preset deployment thresholds, and in certain rollovers (window curtain air bags). Only in the event of such a situation will they provide their supplemental protection.

The driver and passengers should always wear their seat belts. Otherwise it is not possible for the air bags to provide their supplemental protection.

In case of other types of impacts and impacts below air bag deployment thresholds, air bags will not deploy. The driver and passenger will then be protected to the extent possible by a properly fastened seat belt. A properly fastened seat belt is also needed to provide the best possible protection in a rollover. Air bags are not a substitute for seat belts. Always wear your seat belt, regardless of whether or not your vehicle is equipped with air bags.

It is important to your safety and that of your passengers that you replace deployed air bags and repair any malfunctioning air bags to make sure the vehicle will continue to provide supplemental crash protection for occupants.

Safety guidelines for the seat belt, Emergency Tensioning Device (ETD) and air bag

⚠️ Warning!

- Damaged seat belts or seat belts that have been subjected to stress in an accident must be replaced and their anchoring points must also be checked. Only use seat belts installed or supplied by an authorized Mercedes-Benz Center.

- Air bags and ETDs contain Perchlorate material, which may require special handling and regard for the environment. Check with your local government’s disposal guidelines. California residents, see http://www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm.

- Air bags and ETDs are designed to function on a one-time-only basis. An air bag or ETD that is deployed must be replaced.

- Do not pass seat belts over sharp edges. They could tear.

- Do not make any modification that could change the effectiveness of the seat belts.

- Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.

- No modifications of any kind may be made to any components or wiring of the SRS. This includes changing or removing any component or part of the SRS, the installation of additional trim material, seat covers, badges, etc. over the steer-
Occupant safety

- Do not hang items such as coat hangers from the coat hooks or handles over the door. These items may be thrown around in the vehicle and cause head and other injuries when the window curtain air bag is deployed.
- Air bag system components will be hot after an air bag has inflated. Do not touch them.
- Never place your feet on the instrument panel, dashboard, or on the seat. Always keep both feet on the floor in front of the seat.
- In addition, improper repair work on the SRS creates a risk of rendering the SRS inoperative or causing unintended air bag deployment. Work on the SRS must therefore only be performed by qualified technicians. Contact an authorized Mercedes-Benz Center.
- For your protection and the protection of others, when scrapping the air bag unit or ETD, our safety instructions must be followed. These instructions are available from any authorized Mercedes-Benz Center.
- Given the considerable deployment speed, required inflation volume, and the material of the air bags, there is the possibility of abrasions or other, potentially more serious injuries resulting from air bag deployment.

⚠️ Warning!

Only use seat covers which have been tested and approved by Mercedes-Benz for your vehicle model. Using other seat covers may interfere with or prevent the deployment of the front side impact air bags. Contact an authorized Mercedes-Benz Center for availability.

If you sell your vehicle, we strongly recommend that you inform the subsequent owner that the vehicle is equipped with SRS and refer them to the applicable section in the Operator’s Manual.

Front air bags

⚠️ Observe Safety notes, see page 45.

① Driver front air bag
② Front passenger front air bag
③ Knee bag

The front air bags are designed to provide increased protection for the driver and front passenger against the risk of injuries to the head and thorax.

Driver and front passenger front air bags and driver’s side knee bag are deployed:
- in the event of certain frontal impacts
- if impact exceeds a preset deployment threshold
• if the system determines that air bag deployment can offer additional protection to that provided by the seat belt
• depending on whether the seat belt is in use
• independently of the side impact air bags and/or the window curtain air bags

The front air bags in this vehicle have been designed to inflate in two stages. This allows the air bags to have different rates of inflation that are based on the vehicle deceleration rate as assessed by the air bag control unit. On the front passenger side, the front air bag deployment is additionally influenced by the passenger’s weight category as identified by the Occupant Classification System (OCS) (page 48).

The lighter the front passenger side occupant, the higher the vehicle deceleration rate required for second stage inflation of the front air bag.

The air bags will not deploy in impacts which do not exceed the system’s preset deployment thresholds. You will then be protected by the fastened seat belts.

The front air bags will not deployed in the event of a rollover unless the vehicle’s rate of longitudinal deceleration or acceleration exceeds the preset deployment threshold for the front air bags.

The front passenger front air bag will only be deployed if:

• the system, based on OCS weight sensor readings, detects that the front passenger seat is occupied
• the indicator lamp in the center console is not lit (page 50)
• the impact exceeds a preset deployment threshold

Knee bag
The knee bag is located on the driver side lower instrument panel. It is designed to operate together with the driver front air bag in certain frontal impacts exceeding a preset deployment threshold. The knee bag operates best in conjunction with a properly positioned and fastened seat belt.

Side impact air bags

⚠️ Observe Safety notes, see page 45.

1 Front side impact air bag
2 Rear side impact air bag
When deployed, the side impact air bags are designed to provide increased protection for the thorax (but not the head, neck and arms) of the occupants on the side of the vehicle on which the impact occurs.

The side impact air bags are deployed:

• on the impacted side of the vehicle
• in side impacts exceeding a preset deployment threshold
• regardless of whether the seat belt is in use
Occupant safety

• independently of the front air bags
• independently of the ETDs

The side impact air bags are not deployed in side impacts which do not exceed the system’s deployment threshold. The side air bags will not be deployed in the event of a rollover unless the vehicle’s rate of lateral deceleration or acceleration exceeds the preset deployment threshold for the side air bags.

Window curtain air bags

⚠️ Observe Safety notes, see page 45.

When deployed, the window curtain air bags are designed to provide increased protection for the head (but not the chest or arms) of the occupants on the side of the vehicle on which the impact occurs.

The window curtain air bags are deployed:
• on the impacted side of the vehicle
• in side impacts exceeding a preset deployment threshold
• independently of the front air bags
• regardless of whether the front passenger seat is occupied
• in certain vehicle rollovers, if the system determines that air bag deployment can offer additional protection to that provided by the seat belt

The window curtain air bags are not deployed in impacts which do not exceed the system’s deployment threshold.

The window curtain air bags deploy in the area indicated by the arrows.

Occupant Classification System

The Occupant Classification System (OCS) automatically turns the front passenger front air bag on or off based on the classified occupant weight category determined by weight sensor readings from the front passenger seat.

The system does not deactivate the front passenger side impact air bag, the window curtain air bag and the Emergency Tensioning Devices (ETDs).

Occupants must sit with the seat belt properly fastened in a position that is as upright as possible with their back against the seat backrest and feet on the floor to be correctly classified. If the occupant’s weight is transferred to another object in the vehicle (e.g. by leaning on armrests), the OCS may not be able to properly approximate the occupant’s weight category.

Furthermore, the occupant weight may appear to increase or decrease due to the following: objects hanging on the seat, lodged underneath the seat, stuffed between the seat and middle console or the seat and door, other passengers pushing on the seat, or objects applying pressure to the back of the seat. Always make sure the seat has clearance in all directions at all times.
If your seat, including the trim cover and cushion, needs to be serviced in any way, take the vehicle to an authorized Mercedes-Benz Center.

Only seat accessories approved by Mercedes-Benz may be used.

Both the driver and the front passenger should always use the indicator lamp as an indication of whether or not the front passenger is properly positioned.

**Warning!** If the indicator lamp illuminates when an adult or someone larger than a small individual is in the front passenger seat, have the front passenger reposition himself or herself in the seat until the indicator lamp goes out, or check whether objects are caught under or around the seat.

In the event of a collision, the air bag control unit will not allow front passenger front air bag deployment when the OCS has classified the front passenger seat occupant as weighing as much as or less than a typical 12-month-old child in a standard child restraint or if the front passenger seat is classified as being empty.

When the OCS senses that the front passenger seat occupant is classified as being up to or less than the weight of a typical 12-month-old child in a standard child restraint, the indicator lamp will illuminate when the engine is started and remain illuminated, indicating that the front passenger front air bag is deactivated.

When the OCS senses that the front passenger seat is classified as being empty, the indicator lamp will illuminate when the engine is started and remain illuminated, indicating that the front passenger front air bag is deactivated.

When the OCS senses that the front passenger seat occupant is classified as being heavier than the weight of a typical 12-month-old child seated in a standard child restraint or as being a small individual (such as a young teenager or a small adult), the indicator lamp will illuminate for approximately 6 seconds when the engine is started and then, depending on occupant weight sensor readings from the seat, remain illuminated or go out. With the indicator lamp illuminated, the front passenger front air bag is deactivated. With the indicator lamp out, the front passenger front air bag is activated.

When the OCS senses that the front passenger seat occupant is classified as an adult or someone larger than a small individual, the indicator lamp will illuminate for approximately 6 seconds when the engine is started and then go out, indicating that the front passenger front air bag is activated.

If the indicator lamp is illuminated, the front passenger front air bag is deactivated and will not be deployed.

If the indicator lamp is not illuminated, the front passenger front air bag is activated and will be deployed:

- in the event of certain frontal impacts
- if impact exceeds a preset deployment threshold
- independently of the side impact air bags
If the front passenger front air bag is deployed, the rate of inflation will be influenced by:

- the rate of relevant vehicle deceleration as assessed by the air bag control unit
- the front passenger’s weight category as identified by the OCS.

For information about air bag display messages (page 258).

Deployment of the driver front air bag does not mean that the front passenger front air bag also should have deployed.

The OCS may have determined:

- that the seat was empty or occupied by the weight up to or less than that of a typical 12-month-old child seated in a standard child restraint – both instances where the system may suppress deployment of the front passenger front air bag even though the impact met the criteria and was of sufficient severity to deploy the driver front air bag
- that the seat was occupied by a small individual (such as a young teenager or a small adult) or a child who weighs more than the weight of a typical 12-month-old child in a standard child restraint – both of which are instances where the system may suppress deployment of the front passenger front air bag even though the impact met the criteria and was of sufficient severity to deploy the driver front air bag.

Front passenger front air bag off indicator lamp

The indicator lamp will be illuminated, except with the SmartKey removed from the starter switch or with the starter switch in position 0.

⚠️ Warning!

If the indicator lamp and the indicator lamp are lit at the same time, there is a malfunction in the OCS. The front passenger front air bag will be deactivated in this case. Have the system checked as soon as possible by qualified technicians. Contact an authorized Mercedes-Benz Center.

Only have the seat repaired or replaced at an authorized Mercedes-Benz Center.

In order to ensure proper operation of the air bag system and OCS:

- Do not place more than 4.4 lb (2 kg) into the storage bag on the back of the front passenger seat. Otherwise, the OCS may not be able to properly approximate the occupant weight category.
- Do not place objects under and/or around the front passenger seat.
- Do not hang anything from or attach any items to the seats.
- Do not stuff objects such as books between the front passenger seat and the middle console or front passenger door.
- Do not move the front passenger seat backwards against stiff objects.
- Sit with the seat belt properly fastened in a position that is as upright as possible with your back against the seat backrest.
While seated, an occupant should not position him/herself in such a way as to cause the occupant’s weight to be lifted from the seat bottom as this may result in the OCS being unable to correctly approximate the occupant’s weight category.

• Read and observe all warnings in this chapter.

Occupant Classification System Self-test

After turning the SmartKey in the starter switch to position 1 or 2 or pressing the KEY-LESS-GO start/stop button once or twice, the indicator lamp illuminates. If an adult occupant is properly sitting on the front passenger seat and the system classifies the occupant as an adult, the indicator lamp will illuminate and go out after approximately 6 seconds.

If the seat is not occupied and the system classifies the front passenger seat as being empty, the indicator lamp will illuminate and not go out.

⚠️ Warning!

If the indicator lamp does not illuminate, the system is not functioning. You must contact an authorized Mercedes-Benz Center before seating any child on the front passenger seat.

For more information, see the “Practical hints” section (page 301).

⚠️ Warning!

Never place anything between seat cushion and child seat (e.g. pillow), since it reduces the effectiveness of the OCS. The bottom of the child seat must make full contact with the passenger seat cushion. An incorrectly mounted child seat could cause injuries to the child in case of an accident, instead of increasing protection for the child.

Follow the manufacturer’s instructions for installation of child seats.

Safety notes

The use of seat belts and infant and child restraint systems is required by law in all 50 states, the District of Columbia, the U.S. territories and all Canadian provinces.

Even where this is not the case, all vehicle occupants should have their seat belts fastened whenever the vehicle is in motion.

For information on infants and children traveling with you in the vehicle and restraint systems for infants and children, see “Children in the vehicle” (page 59).

⚠️ Warning!

Always fasten your seat belt before driving off. Always make sure all of your passengers are properly restrained. You and your passengers should always wear seat belts. Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident.

If you are ever in an accident, your injuries can be considerably more severe without your seat belt properly buckled. Without your seat belt buckled, you are much more
Occupant safety

likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed.
In the same crash, the possibility of injury or death is lessened if you are properly wearing your seat belt. The air bags can only protect as intended if the occupants are properly wearing their seat belts.

⚠️ Warning!
Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the seat belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The seat backrest and seat belt provide the best restraint when the wearer is in a position that is as upright as possible and the seat belt is properly positioned on the body.

⚠️ Warning!
Never let more people ride in the vehicle than there are seat belts available. Make sure everyone riding in the vehicle is correctly restrained with a separate seat belt. Never use a seat belt for more than one person at a time.

⚠️ Warning!
Damaged seat belts or seat belts that were highly stressed in an accident must be replaced and their anchoring points must also be checked. Only use seat belts which have been approved by Mercedes-Benz. Do not make any modifications to the seat belts. This can lead to unintended activation of the ETDs or to their failure to activate when necessary. Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection. Have all work carried out only by qualified technicians. Contact an authorized Mercedes-Benz Center.

Proper use of seat belts

⚠️ Warning!
USE SEAT BELTS PROPERLY
• Seat belts can only work when used properly. Never wear seat belts in any other way than as described in this section, as that could result in serious injuries in case of an accident.
• Each occupant should wear their seat belt at all times, because seat belts help reduce the likelihood of and potential severity of injuries in accidents, including rollovers. The integrated restraint system includes SRS (driver front air bag, driver side knee bag, front passenger front air bag, side impact air bags, window curtain air bags for side windows), Emergency Tensioning Device (ETD), seat belt force limiters, and front seat knee bolsters. The system is designed to enhance the protection offered to properly belted occupants in certain frontal (front air bags, driver side knee bag, and ETD) and side (side impact air bags, window curtain air bags, and ETD) impacts which exceed preset deployment thresholds and in certain rollovers (window curtain air bags and ETD).
• Never wear the shoulder belt under your arm, against your neck or off your shoulder. In a frontal crash, your body would move too far forward. That would increase the chance of head and neck injuries. The seat belt would also apply
Occupant safety

- Too much force to the ribs or abdomen, which could severely injure internal organs such as your liver or spleen.
- Adjust the seat belt so that the shoulder section is located as close as possible to the middle of the shoulder (it should not touch the neck). Never pass the shoulder portion of the seat belt under your arm. For this purpose, you can adjust the height of the seat belt outlet.
- Position the lap belt as low as possible on your hips and not across the abdomen. If the lap belt is positioned across your abdomen, it could cause serious injuries in a crash.
- Never wear seat belts over rigid or breakable objects in or on your clothing, such as eyeglasses, pens, keys etc., as these might cause injuries.
- Make sure the seat belt is always fitted snugly. Take special care of this when wearing loose clothing.
- Never use a seat belt for more than one person at a time. Do not fasten a seat belt around a person and another person or other objects at the same time.
- Seat belts should not be worn twisted. In a crash, you would not have the full width of the seat belt to distribute impact forces. The twisted seat belt against your body could cause injuries.
- Pregnant women should also always use a lap-shoulder belt. The lap belt portion should be positioned as low as possible on the hips to avoid any possible pressure on the abdomen.
- Place the seat backrest in a position that is as upright as possible.
- Check your seat belt during travel to make sure it is properly positioned.
- Never place your feet on the instrument panel, dashboard, or on the seat. Always keep both feet on the floor in front of the seat.
- When using a seat belt to secure infant restraints, toddler restraints, or children in booster seats, always follow the child seat manufacturer’s instructions.

Warning!
Do not pass seat belts over sharp edges. They could tear.

Fastening the seat belts

Warning!
Always fasten your seat belt before driving off. Always make sure all of your passengers are properly restrained. You and your passengers should always wear seat belts. Failure to wear and properly fasten and position your seat belt greatly increases your risk of injuries and their likely severity in an accident.

If you are ever in an accident, your injuries can be considerably more severe without
your seat belt properly buckled. Without your seat belt buckled, you are much more likely to hit the interior of the vehicle or be ejected from it. You can be seriously injured or killed.

In the same crash, the possibility of injury or death is lessened if you are properly wearing your seat belt. The air bags can only protect as intended if the occupants are properly wearing their seat belts.

⚠️ **Warning!**
According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating position. Thus, we strongly recommend that children be placed in the rear seats whenever possible. Regardless of seating position, children 12 years old and under must be seated and properly secured in an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child. For additional information, see “Children in the vehicle”.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

⚠️ **Warning!**
Never let more people ride in the vehicle than there are seat belts available. Make sure everyone riding in the vehicle is correctly restrained with a separate seat belt. Never use a seat belt for more than one person at a time.

⚠️ **Warning!**
Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the seat belt would apply force at the abdomen or neck. That could cause serious or even fatal injuries. The seat backrest and seat belt provide the best restraint when the wearer is in a position that is as upright as possible and the seat belt is properly positioned on the body.

1. Seat belt outlet
2. Latch plate
3. Buckle
4. Seat belt release button

- With a smooth motion, pull the seat belt out of seat belt outlet ①.
- Place the shoulder portion of the seat belt across the top of your shoulder and the lap portion across your hips.
- Push latch plate ② into buckle ③ until it clicks.
If necessary, adjust the seat belt to the correct height.
If necessary, tighten the lap portion to a snug fit by pulling shoulder portion up.

Seat belt outlet height adjustment

- **Raising:** Slide seat belt height adjuster ① upward.
- **Lowering:** Press and hold release button ②.
- Slide seat belt height adjuster ① downward.
- Release button ② and make sure seat belt height adjuster ① engages into place.

Releasing the seat belts

- Press the seat belt release button (page 54).
  Allow the retractor to completely rewind the seat belt by guiding the latch plate.

⚠️ Make sure the seat belt retracts fully so that the seat belt and/or latch plate cannot get caught or pinched in the door or in the seat mechanism. This can damage the seat belt and impair its effectiveness, and/or cause damage to the door and/or door trim panel. Such damage is not covered by the Mercedes-Benz Limited Warranty.

Damaged seat belts must be replaced. Contact an authorized Mercedes-Benz Center.

Enhanced seat belt reminder system

When the engine is started, the seat belt telltale < will always illuminate for 6 seconds to remind you and your passengers to fasten your seat belts.
If the driver’s seat belt is not fastened when the engine is started, an additional warning chime will also sound for a maximum of 6 seconds or until the driver’s seat belt is fastened.
If after these 6 seconds the driver’s or the front passenger’s seat belt (with the front passenger seat occupied) is not fastened with front doors closed,
- the seat belt telltale < remains illuminated for as long as either the driver’s or front passenger’s seat belt is not fastened.
- and if the vehicle speed once exceeds 15 mph (25 km/h), the seat belt telltale < starts flashing and a warning chime sounds with increasing intensity for a maximum of 60 seconds or until the driver’s and front passenger’s seat belt are fastened.
If you and/or your passenger release the seat belt during driving, the seat belt telltale < starts flashing and the warning chime sounds as described before.
If the driver’s or the front passenger’s seat belt remains unfastened after 60 seconds,
Occupant safety

the warning chime stops sounding, the seat belt telltale \( \text{\ding{127}} \) stops flashing but continues to be illuminated.

After a vehicle standstill, the warning chime is reactivated and the seat belt telltale \( \text{\ding{127}} \) is flashing again if the vehicle speed once exceeds 15 mph (25 km/h).

The seat belt telltale \( \text{\ding{127}} \) will only go out if both the driver’s and the front passenger’s seat belt (with the front passenger seat occupied) are fastened, or the vehicle is standing still and a front door is opened.

For more information, see “Practical hints” (▷ page 293).

Emergency Tensioning Device (ETD), seat belt force limiter

The seat belts for the front seats and rear outer seats are equipped with ETDs and seat belt force limiters.

The ETD is designed to activate in the following cases:
- in frontal or rear-end impacts exceeding the system’s preset deployment threshold
- in side impacts exceeding the system’s preset deployment threshold on the far side of the impact
- in certain vehicle rollovers
- if the restraint systems are operational and functioning correctly, see SRS indicator lamp (▷ page 43)

The ETDs for the front seats will only activate if the front seat belts are fastened (latch plate properly inserted into buckle).

The ETDs for the rear outer seats will activate whether the respective seat belts are fastened.

In an impact, ETDs remove slack from the seat belts in such a way that the seat belts fit more snugly against the body. Seat belt force limiters, when activated, are employed to help reduce the peak force exerted by the seat belts on occupants during a crash.

ETDs do not correct an incorrect seat position or incorrectly worn seat belts.

ETDs do not pull occupants back toward the seat backrest.

Warning!
An ETD that was activated must be replaced.

For your safety, when disposing of the ETD always follow our safety instructions. These are available at any authorized Mercedes-Benz Center.

Automatic comfort-fit feature seat belt

An automatic comfort-fit feature for the front seats reduces the retracting force of the seat belts when they are in normal use.

Preventive occupant safety (PRE-SAFE®)

Warning!
The PRE-SAFE® system is intended to reduce the effects of an accident on vehicle occupants who are wearing their seat belt properly. Despite having the PRE-SAFE® system in your vehicle, the possibility of injuries occurring as a result of an accident cannot be eliminated. Therefore, you should always drive carefully and adjust your driving to the prevailing road, weather, and traffic conditions.

Your vehicle automatically takes preventive measures to better protect the occupants in the following hazardous situations.
PRE-SAFE® takes action in:

- Emergency braking situations, e.g. if the Brake Assist System (BAS) (> page 66) is activated.
- Critical dynamic driving situations, e.g. when the vehicle is understeering or oversteering because it has exceeded its physical limitations or in case of evasive steering maneuvers at speeds above approximately 85 mph (140 km/h).

When you are driving faster than 20 mph (30 km/h), PRE-SAFE® takes the following measures in such situations:

- The front seat belts are pre-tensioned automatically.
- If the passenger seat is in an unfavorable position, it will be adjusted to a better position.
- If the vehicle is in a critical dynamic driving situation, the door windows and the tilt/sliding sunroof also close until only a small gap remains.

If the closing procedure of the tilt/sliding sunroof or door windows is blocked, the tilt/sliding sunroof or door windows will stop and open slightly.

Once the hazardous situation is over without an accident occurring, the seat belt pre-tensioning is deactivated. You can readjust all of the settings made by PRE-SAFE®.

If the seat belts do not release:

- Adjust the seat backrest or seat slightly to the rear until the seat belt tension is diminished.
- The locking mechanism releases.

When moving the seats, make sure there are no items in the footwell or behind the seats. Otherwise, you could damage the seats.

### Active head restraints

The active head restraints are intended to offer the driver and front passenger increased protection from whiplash-type injuries. In the event of a rear-end collision, the active head restraints on the driver’s and front passenger’s seats are designed to move forward in the direction of travel, providing the head with increased support earlier on in the collision sequence. The active head restraints move forward whether the seat is occupied or not.

**Warning!**

Do not attach any objects (e.g. hangers) to the head restraint posts. Otherwise, the active head restraints may not be able to function properly or offer the intended degree of protection they were designed for in the event of a rear-end collision.

If the active head restraints have been triggered in an accident, the active head restraints must be reset. Otherwise, the active head restraints cannot offer any additional protection in the event of another rear-end collision.

For information on resetting the activated active head restraints, see “Resetting activated head restraints” (> page 305).

You cannot remove the active head restraint on the driver’s and front passenger’s seats. For removal contact an authorized Mercedes-Benz Center.

**Warning!**

Only use seat or head restraint covers which have been tested and approved by Mercedes-Benz for your vehicle model. Using other seat or head restraint covers may interfere with or prevent the activation of the active head restraints and/or the...
Occupant safety deployment of the front side impact air bags. Contact an authorized Mercedes-Benz Center for availability.

**Warning!**
For your protection, drive only with properly positioned head restraints. Adjust the head restraint so that it is as close to the head as possible and the center of the head restraint supports the back of the head at eye level. This will reduce the potential for injury to the head and neck in the event of an accident or similar situation.

For information on head restraint adjustment, see “Head restraints” (page 86).

**Correct driver seat adjustment**

**Warning!**
In order to avoid possible loss of vehicle control all seat, head restraint, steering wheel, and rear view mirror adjustments, as well as fastening of seat belts, must be done before the vehicle is put into motion.

For information on seat belt adjustment, see “Seat belts” (page 87).

**Observe Safety notes, see page 84.**

Observe the following points:

- Always be in a properly seated position.
- The position should be as far rearward from the front air bag in steering wheel as possible, while still permitting proper operation of vehicle controls.
- Adjust seat to a comfortable seating position that still allows you to reach the accelerator/brake pedal safely.
- Seat must be adjusted so that you can correctly fasten and position your seat belt.
- The seat backrest must be in a position that is as nearly upright as possible.
- Adjust the seat cushion so that the front edge of the seat cushion lightly supports your legs.
- Adjust the head restraint so that it is as close to the head as possible and the cen-
Occupant safety

The center of the head restraint supports the back of the head at eye level.

- Never place hands under seat (3) or near any moving parts while seat (3) is being adjusted.

▶ Properly position steering wheel (1) (▶ page 90).

⚠️ Observe Safety notes, see page 90.

Make sure:
- You can reach steering wheel (1) with your arms slightly bent at the elbows.
- You can move your legs freely.
- All displays (including malfunction and indicator lamps) on the instrument cluster are clearly visible.

▶ Correctly fasten and position your seat belt (2) (▶ page 53).

⚠️ Observe Safety notes, see page 51.

Make sure:
- Seat belt (2) is always fitted snugly.
- Adjust seat belt (2) so that the shoulder section is located as close as possible to the middle of the shoulder.
- Place the lap portion of seat belt (2) as low as possible on your hips.

Children in the vehicle

Safety notes

If an infant or child is traveling with you in the vehicle:

▶ Secure the child using an infant or child restraint appropriate to the age and size of the child.

▶ Make sure the infant or child is properly secured at all times while the vehicle is in motion.

⚠️ Warning!

When leaving the vehicle, always remove the SmartKey from the starter switch. Always take the SmartKey with you and lock the vehicle. Do not leave children unattended in the vehicle, even if they are secured in a child restraint system, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and or serious personal injury. The children could

- injure themselves on parts of the vehicle
- be seriously or fatally injured through excessive exposure to extreme heat or cold
- injure themselves or cause an accident with vehicle equipment that can be operated even if the SmartKey is removed from the starter switch or removed from the vehicle, such as seat adjustment, steering wheel adjustment, or the memory function.

If children open a door, they could injure other persons or get out of the vehicle and injure themselves or be injured by following traffic.
Occupant safety

Do not expose the child restraint system to direct sunlight. The child restraint system’s metal parts, for example, could become very hot, and the child could be burned on these parts.

⚠️ Warning!
Do not carry heavy or hard objects in the passenger compartment unless they are firmly secured in place.

Unsecured or improperly positioned cargo increases a child’s risk of injury in the event of:

- strong braking maneuvers
- sudden changes of direction
- an accident

For more information on loading, please refer to the “Loading and Storing” (page 173) chapter.

Infant and child restraint systems

⚠️ Observe Safety notes, see page 59.

We recommend all infants and children be properly restrained at all times while the vehicle is in motion.

All lap-shoulder belts except the driver’s seat belt have special seat belt retractors for secure fastening of child restraints.

To fasten a child restraint, follow child restraint instructions for mounting. Then pull the shoulder belt out completely and let it retract. During seat belt retraction, a ratcheting sound can be heard to indicate that the special seat belt retractor is activated. The seat belt is now locked. Push down on child restraint to take up any slack.

To deactivate, release the seat belt buckle and let the seat belt retract completely. The seat belt can again be used in the usual manner.

⚠️ Warning!
Never release the seat belt buckle while the vehicle is in motion, since the special seat belt retractor will be deactivated.

Information on child seats with mounting fittings for tether anchorages (page 61).

For information on LATCH-type child seat anchors (page 62).

The use of infant or child restraints is required by law in all 50 states, the District of Columbia, the U.S. territories and all Canadian provinces.

Infants and small children should be seated in an appropriate infant or child restraint system, properly secured in accordance with the manufacturer’s instructions for the child restraint, that complies with U.S. Federal Motor Vehicle Safety Standards 213 and 225 and Canadian Motor Vehicle Safety Standards 213 and 210.2.

A statement by the child restraint manufacturer of compliance with these standards can be found on the instruction label on the restraint and in the instruction manual provided with the restraint.

When using any infant restraint, toddler restraint, or booster seat, make sure to carefully read and follow all manufacturer’s instructions for installation and use.

Please read and observe warning labels affixed to the inside of the vehicle and to infant or child restraints.

⚠️ Warning!
Infants and small children should never share a seat belt with another occupant. During an accident, they could be crushed between the occupant and seat belt.
A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

Children too big for a toddler restraint must ride in seats using regular seat belts. Position shoulder belt across chest and shoulder, not face or neck. A booster seat may be necessary to achieve proper seat belt positioning for children over 41 lbs until they reach a height where a lap/shoulder belt fits properly without a booster.

When the child restraint is not in use, remove it from the vehicle or secure it with the seat belt to prevent the child restraint from becoming a projectile in the event of an accident.

### Installation of infant and child restraint systems

This vehicle is equipped with tether anchorage for a top tether strap at each of the rear seating positions.

Top tether straps enable an additional connection to be made between child restraint systems secured with LATCH-type anchors and rear seats. This can further reduce the risk of injury.

⚠️ **Observe Safety notes, see page 59.**

1. **Anchorage ring cover**
   - Remove anchorage ring cover 1 from the anchorage ring of the seat on which a child seat is to be installed.
   - Store anchorage ring cover 1 in a convenient place (e.g. glove box).

2. **Anchorage ring**
3. **Hook**
4. **Top tether strap**

- Guide top tether strap 4 between head restraint and top of the seat backrest. The head restraint must be positioned such that the top tether strap 4 can pass freely between the head restraint and top of the seat backrest.
- Make sure top tether strap 4 is not twisted.
- Securely fasten hook 3, which is part of top tether strap 4, to anchorage ring 2.

1. For safety, make sure hook 3 is attached to anchorage ring 2 beyond the safety catch, as illustrated.
Occupyant safety

Once top tether anchorage hook ③ is attached, the child restraint itself can be secured.

- Install the child restraint system and tighten top tether strap ④ according to the child restraint manufacturer’s instructions.

After removing the child restraint system and the top tether strap ④.
- Reinstall the anchorage ring cover ①.

Child seat anchors – LATCH-type

This vehicle is equipped with two LATCH-type anchors (at each of the rear seats) for the installation of a LATCH-type child seat with matching mounting fittings.

⚠️ Observe Safety notes, see page 59.

⚠️ Warning!
Children too big for a toddler restraint must ride in seats using regular seat belts. Position shoulder belt across chest and shoulder, not face or neck.

A booster seat may be necessary to achieve proper seat belt positioning for children over 41 lbs until they reach a height where a lap/shoulder belt fits properly without a booster.

Install child seat according to manufacturer’s instructions.

The child seat must be firmly attached to the right and left side anchors.

An incorrectly mounted child seat may come loose during an accident which could result in serious injury or death to the child.

Damaged or impact damaged child seats or child seat anchor fittings must be replaced.

Non-LATCH-type child seats may also be used and can be installed using the vehicle’s seat belt system. Install child seat according to the manufacturer’s instructions.

The LATCH-type anchors are covered with upholstery blends.

① Indicates the position of the anchors
② Anchors

- Fold the upholstery blend upward to access the anchors ②.
- Install a LATCH-type child seat according to the manufacturer’s instructions.

A rigid connection is established between the child seat and the body of the vehicle.
Child safety

Child safety locks

⚠️ Observe Safety notes, see page 59.

⚠️ Warning!
Children could open a rear door from the inside. This may cause serious personal injury or an accident. Therefore, secure the rear doors with the child safety locks whenever children are riding in the back seats of the vehicle.

The child safety locks on the rear doors enable you to secure each rear door individually. You cannot open a secured rear door from the inside. You can open the rear door from the outside when the vehicle is unlocked.

② Releasing

- **Securing**: Press the lever up in direction of arrow ①.
- **Check**: To make sure the child safety locks are working properly.
- **Releasing**: Press the lever down in direction of arrow ②.

Override switch

⚠️ Observe Safety notes, see page 59.

You can disable the rear door windows operation and the 12-V power outlet in the rear passenger compartment for added safety (for instance when you have children riding in the rear passenger compartment).

⚠️ Warning!
Activate the override switch when children are riding in the back seats of the vehicle. The children may otherwise injure themselves, e.g. by becoming trapped in the window opening.

① Override switch
② Indicator lamp

- **Activating**: Press override switch ①. Indicator lamp ② comes on.

The functions in the rear are disabled. It is still possible to operate the rear door windows using the switches located on the door control panel of the driver’s door.

- **Deactivating**: Press override switch ① again. Indicator lamp ② goes out.

The functions in the rear are enabled again.

For more information on power windows, see the “Controls in detail” section (page 103).
Driving safety systems

Panic alarm

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Activating: Press and hold button 1 for at least 1 second.
An audible alarm and flashing exterior lamps will operate briefly.

Deactivating: Press button 1 again.
or
Insert the SmartKey in the starter switch.
or
Press the KEYLESS-GO start/stop button.
The SmartKey with KEYLESS-GO must be inside the vehicle.

Introduction

This section contains information about the following driving safety systems:
- ABS (Antilock Brake System)
- Adaptive Brake
- BAS (Brake Assist System)
- EBP (Electronic Brake Proportioning)
- ESP® (Electronic Stability Program)

In winter operation, the maximum effectiveness of most of the driving systems described in this section is only achieved with winter tires, or snow chains as required.

Safety notes

⚠️ Warning!
The following factors increase the risk of accidents:
- Excessive speed, especially in turns
- Wet and slippery road surfaces
- Following another vehicle too closely
The driving safety systems described in this section cannot reduce these risks or prevent the natural laws of physics from acting on the vehicle. They cannot increase braking or steering efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded. Only a safe, attentive, and skillful driver can prevent accidents.

The capabilities of a vehicle equipped with the driving safety systems described in this section must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

Always adjust your driving style to the prevailing road and weather conditions and keep a safe distance to other road users and objects on the street.

If a driving system malfunctions, other driving safety systems may also switch off. Observe indicator and warning lamps that may come on as well as messages in the multifunction display that may appear.

### ABS

⚠ **Observe Safety notes, see page 64.**

⚠ **Warning!**

Do not pump the brake pedal. Use firm, steady brake pedal pressure instead. Pumping the brake pedal defeats the purpose of the ABS and significantly reduces braking effectiveness.

The Antilock Brake System (ABS) regulates the brake pressure so that the wheels do not lock during braking. This allows you to maintain the ability to steer your vehicle.

The ABS is functional above a speed of approximately 5 mph (8 km/h) independent of road surface conditions.

On slippery road surfaces, the ABS will respond even to light brake pressure. The indicator lamp in the instrument cluster comes on when you switch on the ignition. It goes out when the engine is running.

### Braking

At the instant one of the wheels is about to lock up, a slight pulsation can be felt in the brake pedal, indicating that the ABS is in the regulating mode.

► Keep firm and steady pressure on the brake pedal while you feel the pulsation.

Continuous, steady brake pedal pressure yields the advantages provided by the ABS, namely braking power and the ability to steer the vehicle.

The pulsating brake pedal can be an indication of hazardous road conditions and functions as a reminder to take extra care while driving.

### Emergency brake maneuver

► Keep continuous full pressure on the brake pedal.

⚠ **Warning!**

If the ABS malfunctions, other driving safety systems such as the BAS or the ESP® are also switched off. Observe indicator and warning lamps that may come on as well as messages in the multifunction display that may appear.

If the ABS malfunctions, the wheels may lock during hard braking, reducing steering capability and extending the braking distance.
Driving safety systems

For more information, see “What to do if ...?” (page 291).

BAS

⚠️ Observe Safety notes, see page 64.

The Brake Assist System (BAS) operates in emergency situations. If you apply the brakes very quickly, the BAS automatically provides full brake boost, thereby potentially reducing the braking distance.

- Apply continuous full braking pressure until the emergency braking situation is over.
  - The ABS will prevent the wheels from locking.

When you release the brake pedal, the brakes function again as normal. The BAS is then deactivated.

⚠️ Warning!

If the BAS malfunctions, the brake system still functions, but without the additional brake boost available that the BAS would normally provide in an emergency braking maneuver. Therefore, the braking distance may increase.

Adaptive Brake

Adaptive Brake provides a high level of braking safety as well as increased braking comfort. It is coupled with ABS, ESP® and BAS. Adaptive Brake takes driver and vehicle characteristics into consideration, thus achieving an optimal braking effect.

For more information on the brake system, see (page 234).

EBP

⚠️ Observe Safety notes, see page 64.

The Electronic Brake Proportioning (EBP) enhances braking effectiveness by allowing the rear brakes to supply a greater proportion of the braking effort in straight line braking without a loss of vehicle stability.

⚠️ Warning!

If the EBP malfunctions, the brake system will still function with full brake boost. However, the rear wheels could lock up during emergency braking situations, for example. You could lose control of the vehicle and cause an accident.

ESP®

⚠️ Observe Safety notes, see page 64.

The Electronic Stability Program (ESP®) is operational as soon as the engine is running and monitors the vehicle’s traction (force of adhesive friction between the tires and the road surface) and handling.

The ESP® recognizes when a wheel is spinning or if the vehicle starts to skid. By applying brakes to the appropriate wheel and by limiting the engine output, the ESP® works to stabilize the vehicle. The ESP® is especially useful while driving off and on wet or slippery road surfaces. The ESP® also stabilizes the vehicle during braking and steering maneuvers.

The ESP® warning lamp in the instrument cluster comes on when you switch on the ignition. It goes out when the engine is running.
The ESP® warning lamp \(\text{\ding{102}}\) in the instrument cluster flashes when the ESP® is engaged.

**Warning!**

Never switch off the ESP® when you see the ESP® warning lamp \(\text{\ding{102}}\) flashing in the instrument cluster. In this case proceed as follows:

- When driving off, apply as little throttle as possible.
- While driving, ease up on the accelerator pedal.
- Adapt your speed and driving style to the prevailing road conditions.

Failure to observe these guidelines could cause the vehicle to skid. The ESP® cannot prevent accidents resulting from excessive speed.

⚠️ **Warning!**

Because the ESP® operates automatically, the engine and ignition must be shut off (SmartKey in starter switch position 0 or 1 or KEYLESS-GO start/stop button in position 0 or 1) when the parking brake is being tested on a brake test dynamometer or when the vehicle is being towed with the front axle raised.

Active braking action through the ESP® may otherwise seriously damage the brake system which is not covered by the Mercedes-Benz Limited Warranty.

ℹ️ The ESP® will only function properly if you use wheels of the recommended tire size as specified in the “Technical data” section of this Operator’s Manual.

ℹ️ The Distronic system and cruise control switch off automatically when the ESP® engages.

For more information, see the “Practical hints” section (page 256) and (page 293).

**Electronic Traction System (ETS)**

⚠️ **Observe Safety notes, see page 64.**

The ETS (Electronic Traction System) is a component of the ESP®. The ETS improves the vehicle’s ability to utilize available traction, especially under slippery road conditions by applying the brakes to a spinning wheel.

Except CLS 63 AMG:

When you switch off the ESP®, the ETS is still enabled.

### Switching off the ESP®

**Switching off the ESP® (except CLS 63 AMG)**

⚠️ **Warning!**

The ESP® should not be switched off during normal driving other than in the circumstances described below. Disabling the system will reduce vehicle stability in driving maneuvers.

Do not switch off the ESP® when a spare wheel is mounted.
Driving safety systems

To improve the vehicle’s traction, switch off the ESP® in driving situations in which it would be advantageous to have the drive wheels spin and thus cut into surfaces for better grip such as:

- when driving with snow chains
- in deep snow
- in sand or gravel

⚠️ Warning!
Switch on the ESP® immediately if the aforementioned circumstances do not apply anymore. Otherwise the ESP® will not stabilize the vehicle when it is starting to skid or a wheel is spinning.

When you switch off the ESP®

- the ESP® does not stabilize the vehicle
- the engine output is not limited, which allows the drive wheels to spin and thus cut into surfaces for better grip
- the ETS will still apply the brakes to a spinning wheel
- the ESP® continues to operate when you are braking

- you cannot activate the cruise control or the Distronic system
- the cruise control or the Distronic system switch off if activated

⚠️ Warning!
When the ESP® is switched off and one or more drive wheels are spinning, the ESP® warning lamp ⚠️ in the instrument cluster flashes. However, the ESP® will then not stabilize the vehicle.

- With the engine running, press ESP® switch 1 until the ESP® warning lamp ⚠️ in the instrument cluster comes on. The ESP® is switched off.

⚠️ Warning!
When the ESP® warning lamp ⚠️ is illuminated continuously, the ESP® is switched off or is not operational due to a malfunction. Vehicle stability in standard driving maneuvers is reduced.
Adapt your speed and driving to the prevailing road conditions and to the non-operating status of the ESP®.

⚠️ Avoid spinning of a drive wheel for an extended period with the ESP® switched off. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Switching off the ESP® (CLS 63 AMG only)

⚠️ Warning!
The ESP® should not be switched off during normal driving.
Disabling of the system will result in the following:

- no restriction to engine torque
- loss of system supported traction control

“ESP® OFF” is designed for driving on closed tracks when the vehicle’s natural oversteer and understeer characteristics are desired and requires a highly skilled and experienced driver able to handle these critical driving situations.
You could lose control of your vehicle and cause an accident.
Please be aware of these limits when you switch off the ESP®.
Do not switch off the ESP® when a spare wheel is mounted.
Anti-theft systems

When you switch off the ESP®
- the ESP® does not stabilize the vehicle
- the engine output is not limited, which allows the drive wheels to spin
- the ETS will still apply the brakes to a spinning wheel
- the ESP® operates while you are braking
- you cannot activate the cruise control or the Distronic system
- the cruise control or Distronic system switch off if currently activated

ℹ️ When the ESP® is switched off and one or more drive wheels are spinning, the ESP® warning lamp in the instrument cluster flashes. However, the ESP® will then not stabilize the vehicle.

➤ With the engine running, press ESP® switch 1 until the ESP® warning lamp in the instrument cluster comes on.

The ESP® is switched off.

⚠️ Warning!
When the ESP® warning lamp is illuminated continuously, the ESP® is switched off or is not operational due to a malfunction. Vehicle stability in standard driving maneuvers is reduced.
Adapt your speed and driving to the prevailing road conditions and to the non-operating status of the ESP®.

⚠️ Avoid spinning of a drive wheel for an extended period with the ESP® switched off. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Switching on the ESP®

➤ Press ESP® switch 1 until the ESP® warning lamp in the instrument cluster goes out.

You are now again in normal driving mode with the ESP® switched on.

Anti-theft systems

Immobilizer

The immobilizer prevents unauthorized persons from starting your vehicle.
When leaving the vehicle, always take the SmartKey with you and lock the vehicle. The engine can be started by anyone with a valid SmartKey that is left inside the vehicle.

Activating

➤ With the SmartKey: Remove the Smart-Key from the starter switch.
➤ With KEYLESS-GO: Turn off the engine and open the driver’s door.

Deactivating

➤ Switch on the ignition.

ℹ️ Starting the engine will also deactivate the immobilizer.

In the event that the engine cannot be started (yet the vehicle’s battery is charged), the system is not operational. Contact an authorized Mercedes-Benz Center or call 1-800-FOR-MERCEDES (in the USA), or 1-800-387-0100 (in Canada).
Anti-theft systems

Anti-theft alarm system

Once the alarm system has been armed, a visual and audible alarm is triggered when someone opens:
- a door
- the trunk
- the hood

The alarm will stay on even if the activating element (a door, for example) is immediately closed.

The alarm system will also be triggered when:
- the vehicle is opened with the mechanical key
- a door is opened from the inside
- the trunk is opened with the emergency release button

To cancel the alarm after it has been triggered, see “Canceling the alarm” (page 70).

If the alarm stays on for more than 30 seconds, a call to the Response Center is initiated automatically by the Tele Aid system provided that you have subscribed to the Tele Aid service and that it has been activated properly, and that the necessary mobile phone, power supply and GPS coverage are available.

Indoor lamp

1. Indicator lamp

- **Arming**: Lock the vehicle with the SmartKey or with KEYLESS-GO.
  The turn signal lamps flash three times to indicate that the vehicle is locked. Indicator lamp 1 flashes to indicate that the alarm system is armed.

  - If the turn signal lamps do not flash three times, a door or the trunk may not be properly closed.

  Close the respective element and lock the vehicle again.

  - **Disarming**: Unlock the vehicle with the SmartKey or with KEYLESS-GO.
  The turn signal lamps flash once to indicate that the alarm system is disarmed.

  - The vehicle will lock and the alarm system will rearm automatically again after approximately 40 seconds unless you open a door or the trunk.

  **Canceling the alarm**

  To cancel the alarm, do one of the following:

  - Insert the SmartKey in the starter switch.
  - Press the [ ] or [ ] button on the SmartKey.

  In vehicles with KEYLESS-GO:

  - Grasp an outside door handle.
    The SmartKey must be within 3 ft (1 m) of the vehicle.
  - Press the KEYLESS-GO start/stop button.
    The SmartKey must be inside the vehicle.

This Operator’s Manual describes all features, standard or optional, potentially available for your vehicle at the time of purchase. Please be aware that your vehicle might not be equipped with all features described in this manual.

### Locking and unlocking

#### Notes

⚠️ **Observe Safety notes, see page 59.**

When unlocking or locking the vehicle with the SmartKey an acoustic signal sounds. The acoustic signal is activated at the factory. If you wish to deactivate the feature, or adjust its signal volume, contact an authorized Mercedes-Benz Center.

When unlocking the vehicle, all turn signal lamps flash once, an acoustic signal sounds once, the locking knobs in the doors move up, and the anti-theft alarm system is disarmed.

When locking the vehicle, all turn signal lamps flash three times, an acoustic signal sounds three times, the locking knobs in the doors move down, and the anti-theft alarm system is armed.

All doors and the trunk must be closed.

⚠️ If you cannot lock or unlock the vehicle with the SmartKey, the batteries in the SmartKey are discharged, the SmartKey is malfunctioning, or the vehicle battery is drained.

- Check the batteries in the SmartKey and replace them if necessary.
- Use the mechanical key to unlock the driver’s door and the trunk.
- Use the mechanical key to lock the vehicle.
- Have the vehicle battery and the vehicle battery connections checked at an authorized Mercedes-Benz Center.

If the SmartKey is malfunctioning, contact Roadside Assistance or an authorized Mercedes-Benz Center.

#### SmartKey

Your vehicle comes supplied with two SmartKeys, each with remote control and a removable mechanical key.

The SmartKey locks and unlocks centrally:

- the doors
- the trunk lid
- the fuel filler flap
When you open a door, the side window on that side lowers slightly. Once you close the door, the window moves up again.

A side window will not work if it is blocked with ice or if the vehicle battery is discharged. If you cannot shut a door, do not force it or you could damage the door or side window. Fix whatever is affecting the window before trying to shut the door.

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Factory setting

Global unlocking: Press button  .
The vehicle will lock again automatically and rearm the anti-theft alarm system within approximately 40 seconds of unlocking if neither door nor trunk is opened.

Global locking: Press button  .

Selective setting
If you frequently travel alone, you may wish to reprogramm the SmartKey so that pressing button  only unlocks the driver’s door, interior lockable storage compartments and the fuel filler flap.

Switching on/off: Press and hold buttons  and  simultaneously for approximately 5 seconds until battery check lamp  (page 73) flashes twice.
The SmartKey will then function as follows:

Unlocking driver’s door and fuel filler flap: Press button  once.

Global unlocking: Press button  twice.

Global locking: Press button  .
Controls in detail

Locking and unlocking

**KEYLESS-GO**

Vehicles equipped with KEYLESS-GO come with two SmartKeys with KEYLESS-GO, each with remote control and a removable mechanical key.

The KEYLESS-GO function is integrated into the SmartKey. On these vehicles, the validity of the SmartKey with KEYLESS-GO is checked every time you pull an outside door handle. If the SmartKey with KEYLESS-GO is valid, your vehicle unlocks

- the doors
- the fuel filler flap
- the trunk lid

When you open a door, the side window on that side lowers slightly. Once you close the door, the window moves up again.

⚠️ A side window will not work if it is blocked with ice or if the vehicle battery is discharged. If you cannot shut a door, do not force it or you could damage the door or side window. Fix whatever is affecting the window before trying to shut the door.

**USA only:**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

**Canada only:**

This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Great notes on using KEYLESS-GO

- You can also use the SmartKey with KEYLESS-GO like a normal SmartKey (page 72).
- You can combine KEYLESS-GO functions with normal SmartKey functions (e.g. unlocking with KEYLESS-GO and locking with button).
- Always carry the SmartKey with KEYLESS-GO with you.
- Never store the SmartKey with KEYLESS-GO together with:
  - Electronic items such as a mobile phone or another SmartKey with KEYLESS-GO
  - Metallic objects such as coins or metal foil

Doing so could impair the function of the KEYLESS-GO system.

- To lock or unlock the vehicle, the SmartKey with KEYLESS-GO must be located outside the vehicle within approximately 3 ft (1 m) of a door or the trunk.
- If the SmartKey with KEYLESS-GO is positioned farther away from the vehicle, the system may no longer recognize the SmartKey with KEYLESS-GO. The vehicle cannot...
be locked or the engine started via the KEYLESS-GO system.

- If the SmartKey with KEYLESS-GO is removed from the vehicle (e.g. if a passenger exits the vehicle with the SmartKey with KEYLESS-GO)
  - when pressing the KEYLESS-GO start/stop button or trying to lock the vehicle with the lock button on an outside door handle the message Key Not Detected appears in the multifunction display
  - with the engine running, the message Key Not Detected appears in the multifunction display while driving off

Find the SmartKey with KEYLESS-GO or change its present location immediately (e.g. place it on the front passenger seat or insert it in shirt pocket).

- If you have started the engine with the KEYLESS-GO start/stop button, you can turn it off again by
  - pressing the KEYLESS-GO start/stop button
  - inserting the SmartKey into the starter switch when the vehicle is at a standstill and the automatic transmission is in park position P

- The vehicle could be inadvertently unlocked if the SmartKey with KEYLESS-GO is within 3 ft (1 m) of the vehicle and
  - an outside door handle is splashed with water
  - you attempt to clean an outside door handle

- Remember that the engine can be started by anyone with a SmartKey with KEYLESS-GO that is left inside the vehicle.

**Possibility 1** (One SmartKey with KEYLESS-GO in the vehicle, one SmartKey with KEYLESS-GO outside the vehicle):
If you leave the SmartKey with KEYLESS-GO behind when exiting and locking the vehicle, no message appears in the multifunction display.

**Possibility 2** (One SmartKey with KEYLESS-GO in the vehicle, no SmartKey with KEYLESS-GO outside the vehicle):
When exiting and trying to lock the vehicle, the message Key Detected In Vehicle appears in the multifunction display. The vehicle will not be locked.

**Factory setting**

- **Global unlocking**: Pull an outside door handle.
  
The vehicle will lock again automatically and rearm the anti-theft alarm system within approximately 40 seconds if neither door nor trunk is opened.

**Selective setting**

If you frequently travel alone, you may wish to reprogram the SmartKey with KEYLESS-GO so when you pull the driver’s outside door handle
Locking and unlocking
handle, only the driver’s door and the fuel filler flap unlocks.

- **Switching on/off:** Press and hold buttons  and  simultaneously for approximately 5 seconds until battery check lamp  (page 73) flashes twice.

The SmartKey with KEYLESS-GO will then function as follows:

- **Unlocking driver’s door and fuel filler flap:** Pull the driver’s outside door handle.
- **Global unlocking:** Pull any outside door handle other than the driver’s outside door handle.
- **Global locking:** Press lock button  on an outside door handle.

### Checking SmartKey batteries
- Press button  or .
  Battery check lamp  (page 73) comes on briefly to indicate that the SmartKey batteries are in order.

If the battery check lamp does not come on briefly during check, the SmartKey batteries are discharged.
- Replace the batteries (page 306).

#### Loss of the SmartKey
If you lose your SmartKey or mechanical key, you should do the following:
- Have the SmartKey deactivated by an authorized Mercedes-Benz Center.
- Report the loss of the SmartKey or the mechanical key to your car insurance company immediately.
- Have the mechanical lock replaced if necessary.

Any authorized Mercedes-Benz Center will be glad to supply you with a replacement.

### Opening the doors from the inside
You can open a locked door from the inside. Open door only when conditions are safe to do so.
Locking and unlocking

If the vehicle has previously been locked with the SmartKey or with KEYLESS-GO, opening a door from the inside will trigger the anti-theft alarm system.

To cancel the alarm, see (page 70).

► Front doors: Pull on inside door handle 2 on the respective front door to open door.
If the door was locked, locking knob 1 will move up.

Opening a door causes its window to open slightly. It will fully close when the door is shut.

► Rear doors: Pull up locking knob 1 on the respective rear door to unlock door.
► Pull on inside door handle 2 on the respective rear door to open door.

Automatic central locking

The doors and the trunk lock automatically when the vehicle is set into motion.
You can open a locked door from the inside. Open door only when conditions are safe to do so.

The doors are designed to unlock automatically after an accident if the force of the impact exceeds a preset threshold.
The vehicle locks automatically when the ignition is switched on and the wheels are turning at vehicle speeds of approximately 9 mph (15 km/h) or more. You could therefore lock yourself out when the vehicle is pushed or towed or is on a test stand.

You can deactivate the automatic central locking using the control system (page 138).

Locking and unlocking from the inside

⚠️ Observe Safety notes, see page 59.

You can lock or unlock the vehicle from inside using the central locking switches. This can be useful, for example, if you want to lock the vehicle before starting to drive.
The central locking switches do not lock or unlock the fuel filler flap.

1 Central unlocking switch
2 Central locking switch

If all doors are closed, the vehicle locks.

► Unlocking: Press central unlocking switch 1.

1 Locking knob
2 Inside door handle
Locking and unlocking

You can open a locked door from inside at any time. Open door only when conditions are safe to do so.

If the vehicle was previously locked with the central locking switch:

- and the SmartKey is set to factory settings, the complete vehicle is unlocked when a door is opened from the inside
- and the SmartKey is set to selective settings, only the door opened from inside is unlocked

If the vehicle was previously centrally locked with the SmartKey or with KEYLESS-GO, it will not unlock using the central unlocking switch.

Opening the trunk

⚠️ Warning!
Make sure the trunk is closed when the engine is running and while driving. Among other dangers, deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

You can open the trunk when the vehicle is stationary.

A minimum height clearance of 5.90 ft (1.80 m) is required to open the trunk lid.

⚠️ The trunk lid swings open upwards automatically. Always make sure there is sufficient overhead clearance.

Opening the trunk from the outside

- Press and hold button 🔄 on the SmartKey until trunk unlocks and begins to open.
- Pull on handle 1.

In vehicles without KEYLESS-GO: The vehicle must be unlocked.

If the trunk does not open, it is still locked separately (▶ page 82).

Vehicles with trunk opening/closing system:
▶ Stopping the opening procedure: Press button 🔄 on the SmartKey.

Opening the trunk from the inside

Vehicles without trunk opening/closing system

1. Indicator lamp
2. Remote trunk opening switch

Controls in detail
Vehicles with trunk opening/closing system:

- Indicator lamp
- Remote trunk opening/closing switch

- Pull switch 2 until the trunk begins to open.
  - Indicator lamp 1 in the switch comes on and remains lit until the trunk is closed.

If the trunk does not open, it is still locked separately (> page 82).

Vehicles with trunk opening/closing system:

- **To interrupt the opening procedure:** Press or pull switch 1.

---

### Closing the trunk

**Warning!**
Make sure the trunk is closed when the engine is running and while driving. Among other dangers, deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

**Warning!**
To prevent possible personal injury, always keep hands and fingers away from the trunk opening when closing the trunk lid. Be especially careful when small children are around.

**Observe Safety notes, see page 59.**
Do not leave the SmartKey in the open trunk. You may lock yourself out.

If the vehicle was previously centrally locked with the SmartKey or KEYLESS-GO, the trunk lid will lock automatically when closed. All turn signal lamps flash three times to confirm locking.

Vehicles with KEYLESS-GO:
To prevent a possible inadvertent lockout, the trunk lid will open automatically if a SmartKey with KEYLESS-GO is recognized inside the vehicle or in the trunk.

The vehicle is only locked when the turn signal lamps flash three times. If you are carrying a second SmartKey with KEYLESS-GO with you, you can still lock the vehicle.

### Closing the trunk from the outside manually

- **Handle**
  - Lower trunk lid by pulling firmly on handle 1.
  - Close trunk with hands placed flat on trunk lid.
Controls in detail

Locking and unlocking

Closing the trunk from the inside automatically

⚠️ Warning!
Maintain sight of the area around the rear of the vehicle while operating the trunk lid with the door mounted switch. Monitor the closing procedure carefully to make sure no one is in danger of being injured.

To interrupt the closing procedure, press or pull the door mounted remote trunk opening/closing switch.

Even with the SmartKey removed from the starter switch or the SmartKey with KEYLESS-GO removed from the vehicle, the remote trunk opening/closing switch can be operated. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

If the trunk lid comes into contact with an object while closing (e.g. luggage that has been piled too high) in the upper motion sequence, the closing procedure is stopped and the trunk reopens slightly.

In vehicles with trunk opening/closing system you can close the trunk from the inside using the remote trunk opening/ closing switch.

1. Indicator lamp
2. Remote trunk opening switch

- Press switch 1 until the trunk is closed.
  
  The indicator lamp in the switch goes out when the trunk is closed.

To interrupt the closing procedure:

- Release switch 1.

Closing the trunk from the outside automatically

⚠️ Warning!
Monitor the closing procedure carefully to make sure no one is in danger of being injured. To prevent possible personal injury, always keep hands and fingers away from the trunk opening when closing the trunk lid. Be especially careful when small children are around. To stop the closing procedure, do one of the following:

- Press button 3 on the SmartKey.
- Press or pull the remote trunk opening/ closing switch (on the driver’s door).
- Press the trunk closing switch.
- Press the KEYLESS-GO locking/closing switch.
- Pull the trunk lid handle.

Even with the SmartKey removed from the starter switch or the SmartKey with KEYLESS-GO removed from the vehicle, the remote trunk opening/closing switch can be operated. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

In vehicles with trunk opening/closing system you can close the trunk separately from the outside using the trunk closing switch.
Locking and unlocking

Vehicles without KEYLESS-GO

1. Trunk closing switch

If the trunk lid comes into contact with an object while closing (e.g. luggage that has been piled too high) in the upper motion sequence, the closing procedure is stopped and the trunk lid reopens slightly.

**Closing the trunk and locking vehicle from outside**

In vehicles with trunk opening/closing system and KEYLESS-GO, you can close the trunk and lock the vehicle simultaneously from the outside using the KEYLESS-GO locking/closing switch.

1. Trunk closing switch

** leaps

** The locking knobs in the doors move down.**

** The trunk lid starts to close automatically.**

** All turn signal lamps flash three times to confirm locking once the trunk has closed completely.**

** An acoustic signal sounds three times.**

** The anti-theft alarm system is armed.**

If the trunk lid comes into contact with an object while closing (e.g. luggage that has been piled too high) in the upper motion sequence, the closing procedure is stopped and the trunk lid reopens slightly.

**Trunk lid emergency release**

With the emergency release button, the trunk lid can be opened from inside the trunk.

1. KEYLESS-GO locking/closing switch

** Make sure you have the SmartKey with KEYLESS-GO with you.**

** Press switch 1 briefly.**

With all doors closed:
Locking and unlocking

1 Emergency release button

- Briefly press emergency release button 1.
  The trunk lid unlocks and opens.

The emergency release button unlocks and opens the trunk while the vehicle is standing still or in motion.

Illumination of the emergency release button:
- The button flashes for 30 minutes after opening the trunk.
- The button flashes for 60 minutes after closing the trunk.

The emergency release button does not open the trunk, if the vehicle battery is discharged or disconnected.

If the vehicle has previously been centrally locked with the SmartKey or KEYLESS-GO, opening the trunk from the inside using the emergency release button will trigger the anti-theft alarm system.

To cancel the alarm, see ( page 70).

### Valet locking

To deny any unauthorized person access to the trunk, e.g. when you valet park the vehicle, lock it separately with the mechanical key. Leave only the SmartKey less its mechanical key with the vehicle.

- Insert the mechanical key in the trunk lid lock.
- Turn the mechanical key clockwise to position 2 and remove the mechanical key in that position to lock the trunk.

The trunk remains locked even when the vehicle is centrally unlocked.

You can only cancel the separate trunk locking mode by means of the mechanical key.

- Insert the mechanical key in the trunk lid lock.
- Turn the mechanical key counterclockwise to neutral position 1 and remove the mechanical key in that position to unlock the trunk.

You can now open the trunk.

1 Neutral position
2 Locked

- Close the trunk.
- Remove the mechanical key from the SmartKey ( page 303).
Starter switch positions

**SmartKey**

*Observe Safety notes, see page 59.*

![Starter switch positions](image)

**Starter switch positions**

- **0** For removing SmartKey (gear selector lever must be in park position `P`)
- **1** Power supply for some electrical consumers, e.g. radio
- **2** Ignition (power supply for all electrical consumers) and driving position
- **3** Starting position

When you switch on the ignition, all lamps (except high-beam headlamp indicator lamp, and turn signal indicator lamps unless activated) in the instrument cluster come on. If a lamp in the instrument cluster fails to come on when the ignition is switched on, have it checked and replaced if necessary. If a lamp in the instrument cluster remains on after starting the engine or comes on while driving, refer to “Lamps in instrument cluster” (> page 290).

If the SmartKey is left in starter switch position 0 for an extended period of time, it can no longer be turned in the starter switch. In this case, the steering is locked. To unlock, remove SmartKey from the starter switch and reinsert.

The steering is locked when the SmartKey is removed from the starter switch.

If the SmartKey cannot be turned in the starter switch, the vehicle battery may not be sufficiently charged.

- Check the vehicle battery and charge it if necessary.
- Get a jump start.

To prevent accelerated vehicle battery discharge or a completely discharged vehicle battery, always remove the SmartKey from the starter switch when the engine is not in operation.

**KEYLESS-GO**

*Observe Safety notes, see page 59.*

Vehicles equipped with the KEYLESS-GO feature are supplied with a SmartKey with integrated KEYLESS-GO function.

With the SmartKey with KEYLESS-GO present in the vehicle, pressing the KEYLESS-GO start/stop button

- without the brake pedal depressed corresponds to the various starter switch positions (> page 83)
- with the brake pedal firmly depressed will start the engine (> page 106)

The function of the SmartKey overrules the KEYLESS-GO function.

The SmartKey with KEYLESS-GO must be located in the vehicle.

- Make sure the automatic transmission is in park position `P`.
- Do not depress the brake pedal.
Seats

KEYLESS-GO start/stop button
1  USA only
2  Canada only

Position 0
Before you press the KEYLESS-GO start/stop button, the vehicle’s on-board electronics have status 0 (as with SmartKey removed).

Position 1
Press the KEYLESS-GO start/stop button once.
This supplies power for some electrical consumers, such as radio functions.

i If you now press the KEYLESS-GO start/stop button once, the power supply is again switched off.

Ignition (or position 2)
Press the KEYLESS-GO start/stop button twice.
This supplies power for all electrical consumers.
All lamps (except high-beam headlamp indicator lamp and turn signal indicator lamps unless activated) in the instrument cluster come on. If a lamp in the instrument cluster fails to come on when the ignition is switched on, have it checked and replaced if necessary. If a lamp in the instrument cluster remains on after starting the engine or comes on while driving, refer to “Lamps in instrument cluster” (→ page 290).

i If you now press the KEYLESS-GO start/stop button once more, the ignition (position 2) is switched on
• twice more the power supply is again switched off

Safety notes

⚠️ Warning!
In order to avoid possible loss of vehicle control all seat, head restraint, steering wheel, and rear view mirror adjustments, as well as fastening of seat belts, must be done before the vehicle is put into motion.

⚠️ Warning!
Do not adjust the driver’s seat while driving. Adjusting the seat while driving could cause the driver to lose control of the vehicle.
Never ride in a moving vehicle with the seat backrest in an excessively reclined position as this can be dangerous. You could slide under the seat belt in a collision. If you slide under it, the seat belt would apply force at the abdomen or neck. That could cause serious or fatal injuries. The seat backrest and seat belts provide the best restraint when the wearer is in a position that is as upright as possible and seat belts are properly positioned on the body.
Warning!
Your seat must be adjusted so that you can correctly fasten your seat belt. Observe the following points:

- Adjust the seat backrest until your arms are slightly angled when holding the steering wheel.
- Adjust the seat to a comfortable seating position that still allows you to reach the accelerator/brake pedal safely. The position should be as far back as possible with the driver still able to operate the controls properly.
- Adjust the head restraint so that it is as close to the head as possible and the center of the head restraint supports the back of the head at eye level.
- Never place hands under the seat or near any moving parts while a seat is being adjusted.

Failure to do so could result in an accident and/or serious personal injury.

Warning!
The power seats can be operated at any time. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

Warning!
According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating position. Thus, we strongly recommend that children be placed in the rear seats whenever possible. Regardless of seating position, children 12 years old and under must be seated and properly secured in an appropriately sized infant restraint, toddler restraint, or booster seat recommended for the size and weight of the child. For additional information, see “Children in the vehicle”.

A child’s risk of serious or fatal injuries is significantly increased if the child restraints are not properly secured in the vehicle and/or the child is not properly secured in the child restraint.

Seat adjustment

![Diagram of seat adjustment controls]

⚠️ When moving the seats, make sure there are no items in the footwell or behind the seats. Otherwise, you could damage the seats.

Power seat

1. Head restraint height
2. Seat cushion tilt
3. Seat height
4. Seat fore and aft adjustment
5. Seat backrest tilt

The memory function (▶ page 93) lets you store the settings for the seat position together with the settings for the steering wheel and the exterior rear view mirrors.
Seats

- **Seat fore and aft adjustment:** Press the switch forward or backward in direction of arrow 4.

  - When moving the seat fore or aft, the head restraints may readjust automatically.

- **Seat backrest tilt:** Press the switch forward or backward in direction of arrow 5.

- **Seat height:** Press the switch up or down in direction of arrow 3.

- **Seat cushion tilt:** Press the switch up or down in direction of arrow 2 until your upper legs are lightly supported.

- **Head restraint height:** Press the switch up or down in direction of arrow 1.

  - **Warning!**
  - For your protection, drive only with properly positioned head restraints.
  - Adjust the head restraint so that it is as close to the head as possible and the center of the head restraint supports the back of the head at eye level. This will reduce the potential for injury to the head and neck in the event of an accident or similar situation.
  
  - Do not drive the vehicle without the seat head restraints. Head restraints are intended to help reduce injuries during an accident.

**Head restraint**

- **Warning!**
  - When folding back the side cushions, never reach between the side cushion and the mounting post. You could otherwise be trapped.

**Comfort head restraint**

- **Warning!**
  - When folding back the side cushions, never reach between the side cushion and the mounting post. You could otherwise be trapped.

- **While seated, reach behind you with both hands and find upper edge of the head restraint.**

- **Adjust the head restraint to the desired position by pushing or pulling on the upper edge of the head restraint cushion.**

**Adjusting side cushions:** Pull or push side cushions 1 into desired position.

**Adjusting forward or backward:** Pull or push head restraint in direction of arrow 2.
Seats

Lumbar support

You can adjust the contour of the front seat’s lumbar support to help enhance support to your spine.

![Adjustment lever](image)

1 Adjustment lever

- Move adjustment lever 1 in direction of the arrows until you have reached a comfortable seating position.

Rear seat head restraints

⚠️ **Warning!**
For safety reasons, always drive with the rear head restraints in the upright position when the rear seats are occupied.

Keep the area around head restraints clear of articles (e.g. clothing) to not obstruct the folding operation of the head restraints.

⚠️ **Warning!**
For your protection, drive only with properly positioned head restraints.

Adjust the head restraint in such a way that it is as close to the head as possible and the center of the head restraint supports the back of the head at eye level. This will reduce the potential for injury to the head and neck in the event of an accident or similar situation.

With a rear seat occupied, make sure to move the respective head restraint up from the lowest non-use position and have the occupant adjust the head restraint properly.

Do not drive the vehicle without the seat head restraints installed when the rear seats are occupied. Head restraints are intended to help reduce injuries during an accident.

⚠️ **Warning!**
Make sure the rear seat head restraints engage when placing them upright manually. Otherwise their protective function cannot be ensured.

The back of the head will not be supported in the event of a collision. That could cause serious or even fatal injuries. Rear seat occupants can be seriously injured or killed.

Folding head restraints back

The rear seat head restraints can be folded backward for increased visibility.
Seats

Placing head restraints upright

- Head restraint release switch
  - Switch on the ignition.
  - Press the symbol-side on switch 1 to release the head restraints. The head restraints will fold backward.

- Pull the head restraint forward until it locks into position.

Multicontour seat

The multicontour seat has a movable seat cushion and inflatable air cushions built into the seat backrest to provide additional lumbar and side support.

- Seat backrest side bolster
- Seat backrest center
- Seat backrest bottom
- Seat cushion depth
  - Switch on the ignition.
  - Seat cushion depth: Adjust the seat cushion depth to the length of your upper leg using switch 4.
  - Seat backrest contour: Adjust the contour of the seat backrest to the desired position using + or −.
Move the seat backrest support cushion to the bottom with button 3 or to the center with button 2.

**Seat backrest side bolsters:** Adjust the side bolsters so that they provide good lateral support using switch 1.

If, after a period of time, the seat no longer provides the desired contour, then repeat the adjustment procedure.

**Seat ventilation**

The blue indicator lamps in the switch come on to show which ventilation level you have selected.

The seat ventilation for the driver's seat can be activated using summer opening feature (page 105).

- Switch on the ignition.
- **Switching on:** Press switch 1. Three blue indicator lamps in the switch come on.
- Press switch 1 repeatedly until the desired ventilation level is set.
- **Switching off:** Press switch 1 repeatedly until all indicator lamps go out.

If one or more of the indicator lamps in the seat ventilation switch 1 are flashing, there is insufficient voltage available since too many electrical consumers are turned on. The seat ventilation switches off automatically. The seat ventilation will switch back on again automatically as soon as sufficient voltage is available.

**Seat heating**

- Front seat heating switch
- Rear seat heating switch (Canada only)

The red indicator lamps in the switch come on to show which heating level you have selected.
Controls in detail

Multifunction steering wheel

The seat heating switches from level 3 (high) to level 2 after approximately 5 minutes.
The seat heating switches from level 2 to level 1 (low) after approximately 10 minutes.
The seat heating automatically switches off after approximately 20 minutes.

- Switch on the ignition.

- Switching on: Press switch 1.
  Three red indicator lamps in the switch come on.

- Continue pressing switch 1 until desired seat heating level is reached.

- Switching off: Press switch 1 repeatedly until all indicator lamps go out.

If one or more of the indicator lamps in the seat heating switch 1 are flashing, there is insufficient voltage available since too many electrical consumers are turned on. The seat heating switches off automatically.
The seat heating will switch back on again automatically as soon as sufficient voltage is available.

Safety notes

⚠️ Warning!
Do not adjust the steering wheel while driving. Adjusting the steering wheel while driving could cause the driver to lose control of the vehicle.
The electrical steering wheel adjustment feature can be operated at any time. Therefore, do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

Make sure
- you can reach the steering wheel with your arms slightly bent at the elbows
- you can move your legs freely
- all displays (including malfunction and indicator lamps) on the instrument cluster are clearly visible

Steering wheel adjustment

1 Adjusting steering wheel, in or out
2 Adjusting steering wheel, up or down

- Adjusting steering wheel in or out: Move stalk in direction of arrows 1.
- Adjusting steering wheel up or down: Move stalk in direction of arrows 2.

ℹ️ The memory function (page 93) lets you store the settings for the steering wheel together with the settings for the seat position and the exterior rear view mirrors.
Easy-entry/exit feature

This feature allows for easier entry into and exit from the vehicle. When entering and exiting the vehicle, the steering wheel is in its uppermost position.

The easy-entry/exit feature can be activated or deactivated in the Convenience submenu of the control system (page 138).

⚠️ Warning!

You must make sure no one can become trapped or injured by the moving steering wheel when the easy-entry/exit feature is activated.

To stop steering wheel movement, move steering wheel adjustment stalk or press one of the memory position buttons.

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could open the driver’s door and unintentionally activate the easy-entry/exit feature, which could result in an accident and/or serious personal injury.

With the easy-entry/exit feature activated, the steering wheel will return to its last set position when you close the driver’s door with the ignition switched on. The steering wheel will also return to its last set position when you insert the SmartKey into the starter switch or press the KEYLESS-GO start/stop button once with the driver’s door closed.

The last set steering wheel position is stored when the ignition is switched off or the position is stored in memory (page 93).

With the easy-entry/exit feature activated, the steering wheel tilts upwards when you remove the SmartKey from the starter switch. The steering wheel also tilts upwards when you open the driver’s door with the SmartKey in starter switch position 0 or 1 or the KEYLESS-GO start/stop button in position 1.

When the current position for the steering wheel is in the uppermost tilt position, the steering wheel will no longer be able to move upward when the easy-entry/exit feature is activated.

The adjustment procedure is briefly interrupted when the engine is started.

⚠️ Warning!

Let the system complete the adjustment procedure before setting the vehicle in motion. All steering wheel adjustment must be completed before setting the vehicle in motion. Driving off with the steering wheel still adjusting could cause the driver to lose control of the vehicle.

Heated steering wheel

The steering wheel heating warms up the leather area of the steering wheel.

1 Switching on
2 Switching off
3 Indicator lamp

- Switch on the ignition.
- **Switching on:** Turn switch at the tip of stalk in direction of arrow 1.
  
  Indicator lamp 3 comes on.
The steering wheel heating is temporarily suspended while indicator lamp 3 remains on when the temperature of the vehicle interior is above 86°F (30°C) or if the temperature of the steering wheel is above 95°F (35°C).

When these conditions do not apply anymore, steering wheel heating continues.

**Switching off:** Turn switch at the tip of stalk in direction of arrow 2.
Indicator lamp 3 goes out.

Indicator lamp 3 flashes or goes out in case of power surge or undervoltage or if the steering wheel heating malfunctions.

The steering wheel heating switches off automatically when you remove the Smart-Key from the starter switch or, on vehicles with KEYLESS-GO, when you switch off the ignition and open the driver’s door.

For information on steering wheel, see “Multifunction steering wheel” (> page 122).

---

### Mirrors

**Notes**

Adjust the interior and exterior rear view mirrors before driving so that you have a good view of the road and traffic conditions.

### Interior rear view mirror

- Adjust the interior rear view mirror manually.

For more information, see “Auto-dimming rear view mirrors” (> page 93).

### Exterior rear view mirrors

**Warning!**

Exercise care when using the passenger-side exterior rear view mirror. The mirror surface is convex (outwardly curved surface for a wider field of view). Objects in mirror are closer than they appear. Check your interior rear view mirror or glance over your shoulder before changing lanes.

If an exterior rear view mirror was forcibly hit from the front, manually snap it back into place.
At low ambient temperatures, the exterior rear view mirrors will be heated automatically.

**Auto-dimming rear view mirrors**

The reflection brightness of the exterior rear view mirror on the driver’s side and the interior rear view mirror will respond automatically to glare when the ignition is switched on and incoming light from headlamps falls on the sensor in the interior rear view mirror.

The rear view mirrors will not react if the automatic transmission is set to reverse gear R or the interior lighting is switched on.

⚠️ **Warning!**

The auto dimming function does not react if incoming light is not aimed directly at sensors in the interior rear view mirror.

The interior rear view mirror and the exterior rear view mirror on the driver’s side do not react, for example, if the rear window sunshade is in raised position.

Light hitting the mirror(s) at certain angles (incident light) could blind you. As a result, you may not be able to observe traffic conditions and could cause an accident.

### Memory function

**Notes**

With the memory function you can store up to three different configurations.

Each stored position on the driver’s side includes the following settings:

- Seat position
- Multicontour seat: previously saved setting
- Steering wheel position
- Exterior rear view mirrors’ position

⚠️ **Warning!**

Do not activate the memory function while driving. Activating the memory function while driving could cause the driver to lose control of the vehicle.

Each stored position on the front passenger side includes the following settings:

- Seat position
- Multicontour seat: previously saved setting

#### Storing positions into memory

- Adjust the seats, on the driver’s side also the steering wheel and exterior rear view mirrors, to the desired positions.
- Press memory button M.
- Release memory button M and press memory position button 1, 2 or 3 within 3 seconds.

When the settings are stored to the selected position, an acknowledgement signal sounds.
Recalling positions from memory

- Press and hold desired memory position button 1, 2 or 3 until the seat, on the driver’s side also the steering wheel and exterior rear view mirrors, have completely moved to the stored positions.

- Releasing the memory position button stops movement to the stored positions immediately.

Notes

- If you drive in countries where vehicles drive on the other side of the road than the country where the vehicle is registered, you must have the headlamps modified for symmetrical low beams. Relevant information can be obtained at any authorized Mercedes-Benz Center.

- Vehicles equipped with active Bi-Xenon headlamps:
  The active Bi-Xenon headlamps monitor the vehicle’s steering angle and speed, then automatically shift their beams to either side to better follow the curvature of the road ahead, increasing usable illumination over conventional headlamps.

Exterior lamp switch

1 - Standing lamps, left
2 - Standing lamps, right
3 - Off
4 - Automatic headlamp mode
5 - Parking lamps (also tail lamps, license plate lamps, side marker lamps and instrument panel lamps)
6 - Low-beam headlamps or high-beam headlamps
7 - Front fog lamps
8 - Rear fog lamp

- The exterior lamps go out automatically when you remove the SmartKey from the
starter switch or open the driver’s door with the ignition switched off.
When the parking lamps or the rear fog lamp are switched on and you remove the SmartKey from the starter switch or open the driver’s door, an acoustic signal sounds.
In addition the message Switch Off Lights appears in the multifunction display.
Switch off the parking lamps or the rear fog lamp manually.

⚠️ Failure to switch off the parking lamps when leaving the vehicle may result in a discharged battery.

Low-beam headlamps
The low-beam headlamps can be switched on and off with the exterior lamp switch using the manual headlamp mode.

► Switch on the ignition.

► Switching on: Turn the exterior lamp switch to position 🟢. The following lamps come on:
  • Low-beam headlamps
  • Tail and parking lamps
  • License plate lamps
  • Side marker lamps
  • Instrument panel lamps
  • Green indicator lamp 🟢 in the exterior lamp switch
  • Green indicator lamp 🟢 in the instrument cluster

► Switching off: Turn the exterior lamp switch to position 🟠.

Automatic headlamp mode
The following lamps come on and go out automatically depending on the brightness of the ambient light:
  • Low-beam headlamps
  • Tail and parking lamps
  • License plate lamps
  • Side marker lamps

⚠️ Warning!
If the exterior lamp switch is set to 🟢, the headlamps will not automatically come on under foggy conditions.
To minimize risk to you and to others, activate headlamps by turning exterior lamp switch to 🟢 when driving or when traffic and/or ambient lighting conditions require you to do so.

In low ambient lighting conditions, only switch from position 🟢 to 🟢 with the vehicle at a standstill in a safe location. Switching from 🟢 to 🟢 will briefly switch off the headlamps. Doing so while driving in low ambient lighting conditions may result in an accident.
The automatic headlamp feature is only an aid to the driver. The driver is responsible for the operation of the vehicle’s lights at all times.

► Switching on: Turn the exterior lamp switch to position 🟢.
With the SmartKey in starter switch position 1 or the KEYLESS-GO start/stop button pressed once, the tail and parking lamps, the license plate lamps and the side marker lamps will come on and go out depending on the brightness of the ambient light.
When the engine is running the low-beam headlamps, the tail and parking lamps, the license plate lamps and the side marker lamps will come on and go out depending on the brightness of the ambient light.
Lighting

Canada only:
High-beam headlamps are only available with the exterior lamp switch in position AUTO.

Daytime running lamp mode

In Canada the daytime running lamp mode is mandatory and therefore in a constant mode. In the USA the daytime running lamp mode is deactivated by default. Activate the daytime running lamp mode using the control system, see “Setting daytime running lamp mode (USA only)” (page 135).

- Turn the exterior lamp switch to position 0 or AUTO.

When the engine is running, the low-beam headlamps come on.
In low ambient lighting conditions, the following lamps will come on additionally:
- Tail and parking lamps
- License plate lamps
- Side marker lamps

With the daytime running lamp mode activated and the engine running, you cannot switch off the low-beam headlamps manually.

Canada only

With the exterior lamp switch in position 0 or AUTO, you cannot switch on the high-beam headlamps.

The high-beam flasher is available at all times. For nighttime driving turn the exterior lamp switch to position  to permit activation of the high-beam headlamps.

When the engine is running, and you
- shift from a driving position to neutral position N or park position P with the vehicle at a standstill, the low-beam headlamps will go out with a delay of 3 minutes.
- turn the exterior lamp switch to position , the low-beam headlamps, the tail and parking lamps, the license plate lamps and the side marker lamps come on.
- turn the exterior lamp switch to position , the manual headlamp mode has priority over the daytime running lamp mode.

The corresponding exterior lamps come on (page 94).

USA only

With the exterior lamp switch in position 0, you cannot switch on the high-beam headlamps.

The high-beam flasher is available at all times. For nighttime driving turn the exterior lamp switch to position 0 or AUTO to permit activation of the high-beam headlamps.

When the engine is running, and you turn the exterior lamp switch to position , the manual headlamp mode has priority over the daytime running lamp mode.

The corresponding exterior lamps come on (page 94).

Fog lamps

Fog lamps cannot be switched on with the exterior lamp switch in position AUTO. To switch on the fog lamps, turn the exterior lamp switch to position 0 first.

Warning!
In low ambient lighting or foggy conditions, only switch from position AUTO to 0 with the vehicle at a standstill in a safe location.
Switching from AUTO to 0 will briefly switch off the headlamps. Doing so while driving in low ambient lighting conditions may result in an accident.

Fog lamps will operate with the parking lamps and/or the low-beam headlamps on. Fog
Lamps should only be used in conjunction with low-beam headlamps. Consult your State or Province Motor Vehicle Regulations regarding permissible lamp operation.

- Switch on the ignition.
- Turn the exterior lamp switch to position \( \text{C or B} \) (page 94).
- **Switching on front fog lamps**: Pull out the exterior lamp switch to first stop. The green indicator lamp \( \text{10} \) in the exterior lamp switch comes on.
- **Switching on rear fog lamp**: Pull out the exterior lamp switch to second stop. The rear fog lamp, the front fog lamps and the yellow indicator lamp \( \text{02} \) in the exterior lamp switch come on.
- **Switching off front fog lamps/rear fog lamp**: Push in the exterior lamp switch to its stop.

### Locator lighting and night security illumination

Locator lighting and night security illumination are described in the “Control system” section, see “Setting locator lighting” (page 136) and “Setting night security illumination (Headlamps delayed shut-off feature)” (page 136).

### Combination switch

1. High beam
2. High-beam flasher

### High beam

- Turn the exterior lamp switch to position \( \text{B} \) (page 94).
- **Switching on**: Push the combination switch in direction of arrow \( \text{1} \). The high-beam headlamp indicator lamp \( \text{A} \) in the instrument cluster comes on.
- **Switching off**: Pull the combination switch in direction of arrow \( \text{2} \) to its original position.

### High-beam flasher

- **Switching on**: Pull the combination switch briefly in direction of arrow \( \text{2} \).
Lighting

Turn signals

① Turn signals, right
② Turn signals, left

▶ Press the combination switch in direction of arrow ① or ②.

The corresponding turn signal indicator lamp  或  in the instrument cluster flashes.

The combination switch resets automatically after major steering wheel movements.

⚠ To signal minor directional changes such as changing lanes, press combination switch only to point of resistance and release. The corresponding turn signal lamps will flash three times.

Hazard warning flasher

The hazard warning flasher can be switched on at all times, even with the SmartKey removed from the starter switch or with the SmartKey with KEYLESS-GO removed from the vehicle.

The hazard warning flasher comes on automatically when an air bag deploys.

The hazard warning flasher switch is located on the center console.

① Hazard warning flasher switch

▶ Switching on: Press hazard warning flasher switch ①.

All turn signal lamps are flashing.

⚠ With the hazard warning flasher activated and the combination switch set for either left or right turn, only the respective left or right turn signals will operate when the ignition is switched on.

▶ Switching off: Press hazard warning flasher switch ① again.

⚠ If the hazard warning flasher has been activated automatically, press hazard warning flasher switch ① once to switch off.

Headlamp cleaning system

With the engine running the headlamps will automatically be cleaned with a high-pressure water jet when you have

- switched on the headlamps and
- the windshield wipers have wiped the windshield with washer fluid five times

When you switch off the ignition, the counter resets.

For information on filling up the washer reservoir, see “Washer system and headlamp cleaning system” (page 203).
Corner-illuminating front fog lamps

The corner-illuminating front fog lamps improve illumination of the area in the direction into which you are turning. The corner-illuminating front fog lamps will only operate
- in low ambient lighting conditions
- at driving speeds below 25 mph (40 km/h)
- with the front fog lamps switched off

Switching on

- Make sure the engine is running.
- Turn the exterior lamp switch to position \( B \) or \( U \) (> page 94).
  
or
- Activate the daytime running lamp mode (> page 96).
- Switch on the left or right turn signal, depending on whether you are turning left or right.
  The respective front fog lamp comes on. If you have switched on the turn signal for one side but turn the steering wheel in the other direction, the corner-illuminating front fog lamp comes on on the side of the turn signal.
  or
- Turn steering wheel in desired direction. Driving forward: The front fog lamp on the side of your steering direction comes on. Driving in reverse: The front fog lamp opposite to your steering direction comes on.
  The corner-illuminating front fog lamps will come on automatically depending on the steering angle, even if you did not switch on either turn signal. If the corner-illuminating front fog lamps came on automatically, they will also go out automatically depending on the steering angle and vehicle speed.
  The corner-illuminating front fog lamps temporarily come on on both sides of the vehicle if you turn the steering wheel in one direction and then again in the other direction shortly thereafter.
  The corner-illuminating front fog lamp remains lit for a maximum of 3 minutes. Afterward, it goes out even if the turn signal is still switched on.

Switching off

- Switch off the left or right turn signal.
  or
- Steer straight ahead. The front fog lamp goes out.
  
  There may be a brief delay before the corner-illuminating front fog lamps go out.
Controls in detail

Lighting

Interior lighting in the front

Automatic control

▶ Activating: Press switch 🗼. The interior lighting comes on in darkness, when you:
  • unlock the vehicle
  • remove the SmartKey from the starter switch
  • open a door
  • open the trunk

▶ Deactivating: Press switch 🗼. The interior lighting goes out after a preset time (▷ page 137).

If a door remains open, the interior lamps go out automatically after approximately 5 minutes.

Manual control

⚠ An interior lamp switched on manually does not go out automatically.

Leaving an interior lamp switch in the ON position for extended periods of time with the engine turned off could result in a discharged battery.

Switching on/off front interior lighting: Press switch 🗼.

Switching on/off rear interior lighting: Press switch 🗼.

Switching on/off front reading lamps: Press respective switch 🗼.

Ambient lighting

The brightness of the ambient lighting 🦁 is adjusted via the “Control system” (▷ page 136).

Interior lighting in the rear

⚠ An interior lamp switched on manually does not go out automatically.

Leaving an interior lamp switch in the ON position for extended periods of time with the engine turned off could result in a discharged battery.

1  Left front reading lamp on/off
2  Rear interior lighting on/off
3  Automatic control on/off
4  Front interior lighting on/off
5  Right front reading lamp on/off
6  Interior lighting
7  Ambient lighting
8  Front reading lamps
The overhead control panel is located above the rear seat bench.

![Image of overhead control panel with switches labeled 1 and 2]

1. Left rear reading lamp on/off
2. Right rear reading lamp on/off

**Switching on/off rear reading lamps:**
Press respective reading lamp switch.

**Wipers**

**Notes**

⚠️ Do not operate the wipers when the windshield is dry. Dust that accumulates on a windshield might scratch the glass and/or damage the wiper blades when wiping occurs on a dry windshield. If it is necessary to operate the wipers in dry weather conditions, always operate the wipers with washer fluid.

**Windshield wipers**

**Switching windshield wipers on/off**

- 0 Windshield wipers off
- ・・・ Slow intermittent wiping
  Rain sensor operation with low sensitivity.
- ・・・ Fast intermittent wiping
  Rain sensor operation with high sensitivity.
-  Slow continuous wiping
-  Fast continuous wiping

- Turn the combination switch in direction of arrow 2 to the desired position, depending on the intensity of the rain.

**Intermittent wiping**

Only switch on intermittent wiping under wet weather conditions or in the presence of precipitation.

When you select intermittent wiping, the rain sensor is activated. The rain sensor automat-
Wipers

ically sets a suitable wiping interval depending on the wetness of the sensor surface.

⚠️ Do not leave windshield wipers on an intermittent setting when the vehicle is taken to an automatic car wash or during windshield cleaning. Windshield wipers will operate in the presence of water sprayed on the windshield, and windshield wipers may be damaged as a result.

⚠️ If you have set intermittent wiping, dirt on the surface of the rain sensor or optical effects may cause the windshield wipers to wipe in an undesired fashion. This could then damage the windshield wiper blades or scratch the windshield. You should therefore switch off the windshield wipers when weather conditions are dry.

■ Turn the combination switch to position U or V.

After the initial wipe, pauses between wipes are automatically controlled by the rain sensor.

Intermittent wiping is interrupted when the vehicle is at a standstill and a front door is opened. This protects persons getting into or out of the vehicle from being sprayed.

Intermittent wiping will be continued when all doors are closed and
- the automatic transmission is in drive position D or reverse gear R
or
- the wiper setting is changed using the combination switch

**Single wipe**

➤ Press the combination switch briefly in direction of arrow 1 to the resistance point.

The windshield wipers wipe one time without washer fluid.

**Wiping with washer fluid**

➤ Press the combination switch in direction of arrow 1 past the resistance point.

The windshield wipers operate with washer fluid.

⚠️ To prevent smears on the windshield or noisy/chattering wiper blades, wipe with washer fluid every now and then even when it is raining.

For information on filling up the washer reservoir, see “Washer system and headlamp cleaning system” (page 203).
For information on cleaning the headlamps with washer fluid, see “Headlamp cleaning system” (page 98).

**Problems with wipers**

⚠️ If anything blocks the windshield wipers (leaves, snow, etc.), switch them off immediately.

For safety reasons, stop the vehicle in a safe location, and
- remove the SmartKey from the starter switch
  or
- turn off the engine by pressing the KEYLESS-GO start/stop button and open the driver’s door (with the driver’s door open, starter switch is in position 0, same as with SmartKey removed from starter switch)
- engage the parking brake before attempting to remove any blockage.
- Remove blockage.
- Turn the windshield wipers on again.

If the windshield wipers fail to function at all with the combination switch in position U or V, set the combination switch to the next higher wiper speed.

- have the windshield wipers checked at the nearest authorized Mercedes-Benz Center

**Power windows**

**Opening and closing**

The door windows are opened and closed electrically. The switches for all door windows are located on the driver’s door control panel. The switches for the respective door windows are located on the front passenger door and on the rear doors.

\[\text{Operating the rear door windows from the rear is not possible if you activate the override switch (→ page 63).}\]

**Warning!**

When opening or closing the door windows, make sure there is no danger of anyone being harmed by the opening/closing procedure.

The door windows are equipped with the express operation and automatic reversal function. If in express operation mode a door window encounters an obstruction that blocks its path, the automatic reversal function will stop the door window and open it slightly.

The door windows operate differently when the switch is pressed and held. See the

“Closing when a door window is blocked” section for details.

The closing of the door windows can be immediately halted by releasing the switch or, if the switch was pulled past the resistance point and released, by either pressing or pulling the respective switch.

If a door window encounters an obstruction that blocks its path in a circumstance where you are closing the door windows by pressing and holding button \(\text{Y}\) on the SmartKey or by pressing and holding the lock button (vehicles with KEYLESS-GO) on an outside door handle the automatic reversal function will not operate.

Activate the override switch when children are riding in the back seats of the vehicle. The children may otherwise injure themselves, e.g. by becoming trapped in the door window opening/closing.

\[\text{Observe Safety notes, see page 59.}\]

You can also open or close the door windows using the SmartKey, see “Summer opening feature” (→ page 105) and “Convenience closing feature” (→ page 105).
Power windows

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the door windows until you open the driver’s or front passenger door. If no door was opened you can operate the door windows for up to 5 minutes.

- **Express operation**: Press or pull switch 1 to 4 past the resistance point and release. The corresponding door window opens or closes completely.

- **Stopping during Express operation**: Press or pull the respective switch again.

**Closing when a door window is blocked**

- **Warning!** Make sure that nobody can become trapped and be seriously or even fatally injured when closing a door window with greater force or without automatic reversal function.

If the upward movement of a door window is blocked during the closing procedure, the door window will stop and open slightly. However, the door window will exert greater force before reversing than when the door window is closed in express operation. Please exercise caution!

- Immediately after the door window has stopped because it was blocked, pull the respective switch upwards until the door window is fully closed.

If the door window is blocked again and opens slightly:

- Immediately after the door window was blocked, pull the respective switch upwards until the door window is fully closed.

- **Warning!** Pressing and holding the switch to close the door window immediately after it had been blocked two times will cause the door window to close without any reversal function for as long as you hold the switch.

**Synchronizing door windows**

The door windows must be synchronized after the battery has been disconnected or if the door windows cannot be fully closed (Express operation).

Each door window must be synchronized separately.

- Close all doors.
- Switch on the ignition.
- Pull and hold switch 1, 2, 3 or 4 (page 103) until the respective door window is closed.

The door window opens again slightly.
Pull and hold the respective switch once more immediately until the door window is completely closed.

Hold the respective switch for approximately 1 second. The door window is synchronized.

Power windows

Summer opening feature

If the weather is warm, you can ventilate the vehicle before driving off by simultaneously:

- opening the door windows
- opening the tilt/sliding sunroof
- switching on the seat ventilation for the driver’s seat

The “Summer opening” feature can only be activated via the remote control of the SmartKey. The SmartKey must be in close proximity to the driver’s outside door handle.

- Aim transmitter eye of the SmartKey at the driver’s outside door handle.
- Press and hold button \( \text{K} \) on the SmartKey until the door windows and the tilt/sliding sunroof have reached the desired position.

- Release button \( \text{K} \) on the SmartKey to interrupt the opening procedure.

Convenience closing feature

When locking the vehicle, you can simultaneously close the door windows and the tilt/sliding sunroof.

⚠️ Warning!

When closing the door windows and the tilt/sliding sunroof, make sure there is no danger of anyone being harmed by the closing procedure.

If potential danger exists, proceed as follows:

- Release button \( \text{K} \) to stop the closing procedure. To open, press and hold button \( \text{K} \). To continue the closing procedure after making sure that there is no danger of anyone being harmed by the closing procedure, press and hold button \( \text{K} \).

Vehicles with KEYLESS-GO:

- Release the lock button on the driver’s outside door handle to stop the closing procedure.
- Immediately pull on the same outside door handle and hold firmly. The door windows and the tilt/sliding sunroof will open for as long as the door handle is held but the door not opened.

With SmartKey

The SmartKey must be in close proximity to the driver’s outside door handle.

- Aim transmitter eye of the SmartKey at the driver’s outside door handle.
- Press and hold button \( \text{K} \) of the SmartKey until the door windows and the tilt/sliding sunroof are completely closed.

With KEYLESS-GO

The SmartKey with KEYLESS-GO must be located outside the vehicle within approximately 3 ft (1 m) of a door.
Driving and parking

- Close all doors.
- Press and hold the lock button on an outside door handle (page 74) until the door windows and the tilt/sliding sunroof are completely closed.
- Release the lock button on the outside door handle to interrupt the closing procedure.

### Driving and parking

#### Safety notes

**Warning!**
Make sure absolutely no objects are obstructing the pedals’ range of movement. Keep the driver’s footwell clear of all obstacles. If there are any floormats or carpets in the footwell, make sure the pedals still have sufficient clearance.

During sudden driving or braking maneuvers the objects could get caught between the pedals. You could then no longer brake or accelerate. This could lead to accidents and injury.

**Warning!**
With the engine not running, there is no power assistance for the brake and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle. Adapt your driving accordingly.

### Starting the engine

**Warning!**
Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open at all times.
Automatic transmission

Gearshift pattern for automatic transmission

| P | Park position with gear selector lever lock |
| R | Reverse gear |
| N | Neutral position |
| D | Drive position |

For more information, see “Automatic transmission” (page 112).

- Make sure the automatic transmission is in park position P.

Starting with the SmartKey

- Do not depress the accelerator pedal.

- Turn the SmartKey in the starter switch to position 3 (page 83) and release it. The engine starts automatically.

Starting with KEYLESS-GO

⚠️ Warning!
As long as the SmartKey is in your vehicle, the vehicle can be started. Therefore, never leave children unattended in the vehicle, as they could otherwise accidentally start the engine.

When leaving the vehicle, always take the SmartKey with you and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. A child’s unsupervised access to a vehicle could result in an accident and/or serious personal injury.

You can start your vehicle without the SmartKey in the starter switch using the KEYLESS-GO start/stop button on the gear selector lever.

The SmartKey must be located in the vehicle.

KEYLESS-GO start/stop button

1. USA only
2. Canada only

- Depress the brake pedal during the starting procedure.
- Do not depress the accelerator pedal.
- Press the KEYLESS-GO start/stop button once.

The engine starts automatically.

Starting difficulties

⚠️ Remember that extended starting attempts can drain the battery.
Driving and parking

The engine does not start. You can hear the starter.

There could be a malfunction in the engine electronics or in the fuel supply system.

Carry out the following steps:

- If you are starting the engine with the SmartKey: Turn the SmartKey in the starter switch to position 0 and repeat the starting procedure.

- If you are starting the engine with KEYLESS-GO: Close any doors that may be open to allow for better detection of the SmartKey. or

- Start the engine with the SmartKey as radio signals from another source may be interfering with the KEYLESS-GO function.

- Repeat the starting procedure.

If the engine does not start after several starting attempts:

- Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

The engine does not start. You cannot hear the starter.

The battery may not be sufficiently charged.

- Get a jump start (page 324).

If the engine will not start despite a jump start:

- Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

The starter has been exposed to excessive temperatures.

- Let the starter cool for about two minutes.

- Repeat the starting procedure.

If the engine does not start after several starting attempts:

- Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

Driving off

⚠️ Warning!
On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

⚠️ Do not run cold engine at high engine speeds. Running a cold engine at high engine speeds may shorten the service life of the engine. This is not covered by the Mercedes-Benz Limited Warranty.

CLS 63 AMG: At engine temperatures below 68°F (20°C), the engine’s maximum speed is restricted in order to protect it from damage. Avoid driving your vehicle at full speed when the engine is cold to prevent premature engine wear and/or diminished comfort.

⚠️ If you hear a warning signal and the message Release Parking Brake appears in the multifunction display when driving off, you have forgotten to release the parking brake.

Release the parking brake.

⚠️ Avoid spinning of a drive wheel. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

⚠️ Simultaneously depressing the accelerator pedal and applying the brakes reduces engine performance and causes premature brake and drivetrain wear which is not covered by the Mercedes-Benz Limited Warranty.
Driving and parking

Once the vehicle is in motion, the automatic central locking system engages and the locking knobs in the doors move down. The automatic door lock feature can be deactivated (page 138).

Automatic transmission

**Warning!**

It is dangerous to shift the automatic transmission out of park position P or neutral position N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

![Image of shift lever]

![Image of warning label]

Only shift the automatic transmission into reverse gear R or park position P when the vehicle is stopped. Otherwise the automatic transmission could be damaged.

- Depress the brake pedal.
  - The gear selector lever lock is released.

- Shift the automatic transmission into drive position D or reverse gear R.

Shifting the automatic transmission out of park position P is only possible with the brake pedal depressed. Only depressing the brake pedal releases the gear selector lever lock.

- Wait for the gear selection process to complete before setting the vehicle in motion.
- Release the brake pedal.
- If engaged, release the parking brake.
- Carefully depress the accelerator pedal.

After a cold start, the automatic transmission shifts at a higher engine revolution. This allows the catalytic converter to reach its operating temperature earlier.

For more information on driving, see “Driving instructions” (page 233).

Problems while driving

**The engine runs erratically and misfires**

- An ignition cable may be damaged.
- The engine electronics may not be operating properly.
- Unburned gasoline may have entered the catalytic converter and damaged it.
- Give very little gas.
- Have the problem checked at an authorized Mercedes-Benz Center as soon as possible.

**The coolant temperature is above 248°F (120°C)**

The coolant is too hot and is no longer cooling the engine.

- Stop the vehicle in a safe location as soon as possible.
- Turn off the engine immediately.
- Allow the engine and coolant to cool off.
- Check the coolant level and add coolant if necessary (page 202).
Driving and parking

In case of accident

If the vehicle is leaking fuel:

- Do not start the engine under any circumstances.
- Exit the vehicle at a safe distance from the roadway.
- Notify local fire and/or police authorities.

If the extent of the damage cannot be determined:

- Contact an authorized Mercedes-Benz Center or call Roadside Assistance.

If no damage can be determined on the major assemblies, fuel system, engine mount:

- Start the engine in the usual manner.

Parking

⚠️ Warning!
Do not park this vehicle in areas where combustible materials such as grass, hay or leaves can come into contact with the hot exhaust system, as these materials could be ignited and cause a vehicle fire.

To reduce the risk of serious personal injury, or damage to the vehicle or the vehicle drivetrain, as a result of vehicle movement, always do the following before turning off the engine and leaving the vehicle:

- Keep right foot on the brake pedal.
- Engage the parking brake.
- Shift the automatic transmission into park position P.
- Slowly release the brake pedal.
- When parked on an incline, always turn the front wheels towards the road curb.
- Turn the SmartKey in the starter switch to position 0 and remove the SmartKey from the starter switch, or press the KEY-LESS-GO start/stop button.
- Take the SmartKey with you and lock the vehicle when leaving.

⚠️ Warning!
Vehicles with Airmatic: If you have selected the Comfort suspension tuning, the vehicle lowers slightly when you lock it within approximately 60 seconds after turning off the engine. You should therefore make sure that no one is standing near the wheel arches or lying underneath the vehicle when it is being locked. Otherwise, personal injury could result.

Also, make sure your vehicle cannot come into contact with objects, such as a road curb, while lowering. Your vehicle could otherwise be damaged.

Parking brake

⚠️ Warning!
Engaging the parking brake while the vehicle is in motion can cause the rear wheels to lock up. You could lose control of the vehicle and cause an accident. In addition,
the vehicle’s brake lights do not light up when the parking brake is engaged.

⚠️ Warning!
When leaving the vehicle, always remove the SmartKey from the starter switch, take it with you, and lock the vehicle. Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could release the parking brake and/or shift the automatic transmission out of park position P, either of which could result in an accident and/or serious personal injury.

- **Releasing**: Pull on release handle ①. When the ignition is switched on or the engine is running, the brake warning lamp  (USA only) or  (Canada only) in the instrument cluster goes out.
- **Engaging**: Step firmly on parking brake pedal ②. When the engine is running, the brake warning lamp  (USA only) or  (Canada only) in the instrument cluster comes on.

### Turning off the engine

⚠️ Warning!
Do not turn off the engine before the vehicle has come to a complete stop. With the engine not running, there is no power assistance for the brake and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle.

- Shift the automatic transmission into park position P.
- Engage the parking brake.

### Turning off with SmartKey

- Turn the SmartKey in the starter switch to position 0.
- Remove the SmartKey from the starter switch. The immobilizer is activated.

The SmartKey can only be removed from the starter switch with the automatic transmission in park position P.

### Turning off with KEYLESS-GO

- Press the KEYLESS-GO start/stop button. With the driver’s door closed, the starter switch is now in position 1. With the driver’s door opened, the starter switch is set to position 0, same as the SmartKey removed from the starter switch (page 83).

If you hear a warning signal, you have tried to turn off the engine with the KEYLESS-GO.
Automatic transmission

start/stop button while the automatic transmission was not in park position P.

Read and observe messages that may appear in the multifunction display (page 266).

**Automatic transmission**

**Introduction**

For information on driving with an automatic transmission, see “Driving and parking” (page 106).

⚠️ **Warning!**

Make sure absolutely no objects are obstructing the pedals’ range of movement. Keep the driver’s footwell clear of all obstacles. If there are any floormats or carpets in the footwell, make sure the pedals still have sufficient clearance.

During sudden driving or braking maneuvers the objects could get caught between the pedals. You could then no longer brake or accelerate. This could lead to accidents and injury.

⚠️ Allow engine to warm up under low load use. Do not place full load on the engine until the operating temperature has been reached.

Avoid spinning of a drive wheel for an extended period when driving off on slippery road surfaces.

This may cause serious damage to the engine and the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

ℹ️ During the brief warm-up, transmission upshifting is delayed. This allows the catalytic converter to heat up more quickly to operating temperature.

**Gear selector lever**

Gearshift pattern for automatic transmission

- P: Park position with gear selector lever lock
- R: Reverse gear
- N: Neutral position
- D: Drive position
Warning!
It is dangerous to shift the automatic transmission out of park position P or neutral position N if the engine speed is higher than idle speed. If your foot is not firmly on the brake pedal, the vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift into gear when the engine is idling normally and when your right foot is firmly on the brake pedal.

Only shift the automatic transmission into reverse gear R or park position P when the vehicle is stopped. Otherwise the automatic transmission could be damaged.

Shifting the automatic transmission out of park position P is only possible with the brake pedal depressed. Only depressing the brake pedal releases the gear selector lever lock.

The current gear selector lever position corresponds with the current transmission position. The current transmission position P, R, N, or D appears in the multifunction display (page 113).

There are additional indicators on the cover of the shifting gate showing the current gear selector lever position. The indicators come on when you insert the SmartKey into the starter switch, and go out when you remove the SmartKey from the starter switch.

Shifting procedure
The automatic transmission selects individual gears automatically, depending on:
- drive position D (page 114) with gear ranges (page 115)
- the selected program mode: C/S (page 116) or M (CLS 63 AMG only) (page 118)
- the position of the accelerator pedal
- the vehicle speed

With drive position D selected, you can influence transmission shifting by:
- limiting the gear range
- extending the gear range
- changing the gears manually (CLS 63 AMG only)

Transmission positions
The current transmission position appears in the multifunction display.
## Automatic transmission

<table>
<thead>

<tr>
<td>Park position</td>
<td>Shift the automatic transmission into reverse gear <strong>R</strong> only when the vehicle is stopped.</td>
<td></td>
</tr>
<tr>
<td>Shift the automatic transmission into park position <strong>P</strong> only when the vehicle is stopped. The park position is not intended to serve as a brake when the vehicle is parked. Rather, the driver should always engage the parking brake in addition to shifting the automatic transmission into park position <strong>P</strong> to secure the vehicle. The SmartKey can only be removed from the starter switch with the gear selector lever in park position <strong>P</strong>. With the SmartKey removed from the starter switch, the gear selector lever is locked in park position <strong>P</strong>. If the vehicle’s electrical system is malfunctioning, the gear selector lever could remain locked in park position <strong>P</strong> (▶ page 304).</td>
<td>No power is transmitted from the engine to the drive axle. When the brakes are released, the vehicle can be moved freely (pushed or towed). To avoid damage to the transmission, never shift the automatic transmission into neutral position <strong>N</strong> while driving. If the ESP® is deactivated or malfunctioning: Shift the automatic transmission into neutral position <strong>N</strong> only if the vehicle is in danger of skidding, e.g. on icy roads.</td>
<td></td>
</tr>

<td></td>
</tr>
</tbody>
</table>
Automatic transmission

Effect
The automatic transmission shifts automatically. All forward gears are available.

Driving tips

Kickdown
Use the kickdown when you want maximum acceleration.
- Fully depress the accelerator pedal.
  Depending on the engine speed the automatic transmission shifts into a lower gear.

You may encounter a resistance point. If so, depress the accelerator pedal past this resistance point.

Working on the vehicle

⚠️ Warning!
When working on the vehicle, engage the parking brake and shift the automatic transmission into park position P. Otherwise the vehicle could roll away which could result in an accident and/or serious personal injury.

Gear ranges
With the automatic transmission in drive position D and driving in automatic program mode C or S, you can limit or extend the gear range, see “One-touch gearshifting” (page 117).

The current gear range appears in the multifunction display.

<table>

Gear range indicator

1  Gear range indicator
The current program mode appears in the multifunction display.

Never change the program mode when the automatic transmission is out of park position P. This could result in a change of driving characteristics for which you may not be prepared.

The last selected automatic program mode (C or S) is switched on when the engine is restarted.

Press the program mode selector switch repeatedly until the letter of the desired program mode appears in the multifunction display.
Selecting program mode C means:
- The vehicle starts out more gentle, both forward and reverse, except when driving off with full throttle.
- Traction and driving stability are improved on icy roads.
- Upshifts occur earlier even when you give more gas. The engine then operates at lower rpms and the wheels are less likely to spin.

Selecting program mode S means that upshifts occur later.

One-touch gearshifting

With the automatic transmission in drive position D and driving in automatic program mode C or S, you can limit or extend the gear range using the gear selector lever or the steering wheel gearshift control.

Steering wheel gearshift control is available on vehicles with AMG Sport Package and on CLS 63 AMG only.

CLS 63 AMG: For information on using the gear selector lever or the steering wheel gearshift control in manual program mode M, see “Manual shift program” (page 118).

Limiting gear range

⚠️ Warning!  
On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

- Briefly press the gear selector lever to the left in the D- direction.

or

- Briefly pull left gearshift control 1.  
The automatic transmission will shift into the next lower gear as permitted by the shift program. This action simultaneously limits the gear range of the automatic transmission.

To avoid overrevving the engine when downshifting, the automatic transmission will not shift into a lower gear if the engine’s max. speed would be exceeded.

Extending gear range

- Briefly press the gear selector lever to the right in the D+ direction.

or

- Briefly pull right gearshift control 2.  
The automatic transmission will shift into the next higher gear as permitted by the shift program. This action simultaneously...
Automatic transmission

extends the gear range of the automatic transmission.

If you press on the accelerator pedal when the engine has reached its rpm limit, the automatic transmission will upshift beyond any gear range limit selected.

Canceling gear range limit

Press and hold the gear selector lever to the right in the D+ direction until D reappears in the multifunction display.

or

Pull and hold right gearshift control 2 until D reappears in the multifunction display. The automatic transmission will shift from the current gear range directly into drive position D.

Shifting into optimal gear range

Press and hold the gear selector lever to the left in the D- direction.

or

Pull and hold left gearshift control 1. The automatic transmission will automatically select the gear range suited for optimal acceleration and deceleration. This will involve shifting down one or more gears.

Manual shift program

The manual shift program is available on CLS 63 AMG only.

Manual program mode M differs with regard to spontaneity, response time, and shifting smoothness from automatic program mode S.

In manual program mode M, system-controlled automatic gearshifting is switched off. You need to change the gears by manually upshifting or downshifting using the gear selector lever or the steering wheel gearshift control.

Program mode selector switch

Controls in detail

C Comfort  For standard driving
S Sport  For sporty driving
M Manual  For manual gearshifting

The current program mode appears in the multifunction display (page 116).

For information on automatic program mode (C or S), see “Automatic shift program” (page 116) and “One-touch gearshifting” (page 117).

Activating manual shift program

Press the program mode selector switch repeatedly until M appears in the multifunction display.

The automatic transmission switches to manual program mode M. Automatic shifting is switched off. The gear range is not limited.

You can change the gears manually with drive position D selected. You can upshift or downshift through the gears in succession.

Manual program mode M will not be stored. When the engine is turned off with manual program mode M selected, the
automatic transmission will go to automatic program mode (C or S) when the engine is restarted.

**Upshifting**

![Warning]

In manual program mode M, the automatic transmission will not upshift, even if the engine has reached its overrevving range. Shift up into the next gear before the engine has reached its overrevving range. Make absolutely certain that the engine speed does not reach the red marking on the tachometer. Otherwise the engine could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

- Briefly press the gear selector lever to the right in the D+ direction.

or

- Briefly pull right gearshift control 2 (>
page 117).

The automatic transmission shifts into the next higher gear.

**Upshift indicator**

1. Current gear
2. Upshift indicator

In manual program mode M, upshift indicator 2 in the multifunction display advises you to upshift before the engine reaches the over-speed range. In addition, symbol ^ may appear instead of manual program mode symbol M in the multifunction display. Thus you can drive at the maximum engine speed for each gear without overrevving the engine.

- Shift the automatic transmission from current gear 1 into the next higher gear.
  
  The fuel supply will otherwise be interrupted to prevent the engine from overrevving.

**Downshifting**

![Warning]

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

- Briefly press the gear selector lever to the left in the D- direction.

or

- Briefly pull left gearshift control 1 (> page 117).

The automatic transmission shifts into the next lower gear.

- For maximum acceleration, press and hold the gear selector lever to the left in the D- direction or pull and hold the left gearshift control. Depending on the engine speed the automatic transmission selects the optimal gear for maximum acceleration.

- When you brake or stop, the automatic transmission shifts down into a gear from which you can easily accelerate or take off.
Controls in detail

Instrument cluster

Kickdown

Using the kickdown when driving in manual program mode M is not possible.

Deactivating manual shift program

▶ Press the program mode selector switch repeatedly until C or S appears in the multifunction display.

or

▶ Restart the engine.

The automatic transmission will go to automatic program mode (C or S).

Manual program mode M is not stored.

Emergency operation (limp-home mode)

If vehicle acceleration becomes less responsive or sluggish or the automatic transmission no longer shifts, the automatic transmission is most likely operating in limp-home (emergency operation) mode. In this mode only second gear and reverse gear R can be selected.

▶ Stop the vehicle in a safe location.

▶ Shift the automatic transmission into park position P.

▶ Turn off the engine.

▶ Wait at least 10 seconds before restarting.

▶ Restart the engine.

▶ Shift the automatic transmission into drive position D (for second gear) or reverse gear R.

▶ Have the automatic transmission checked at an authorized Mercedes-Benz Center as soon as possible.

Instrument cluster

Introduction

For a full view illustration of the instrument cluster, see “Instrument cluster” (page 30).

⚠️ Warning!

No messages will be displayed if either the instrument cluster or the multifunction display is inoperative.

As a result, you will not be able to see information about your driving conditions, such as speed or outside temperature, warning/indicator lamps, malfunction/warning messages or the failure of any systems. Driving characteristics may be impaired.

If you must continue to drive, please do so with added caution. Contact an authorized Mercedes-Benz Center as soon as possible.
Activating the instrument cluster

The instrument cluster is activated when you
• open a front door
• switch on the ignition
• press reset button 1
• switch on the exterior lamps (> page 94)
For information on changing the instrument cluster settings, e.g. the language, see (> page 134).

Adjusting the instrument cluster illumination

The instrument cluster illumination is dimmed or brightened automatically to suit ambient light conditions.
The instrument cluster illumination will also be adjusted automatically when you switch on the vehicle’s exterior lamps.

To brighten illumination: Turn reset button 1 clockwise until the desired level of illumination is reached.

To dim illumination: Turn reset button 1 counterclockwise until the desired level of illumination is reached.

Coolant temperature indicator

⚠️ Warning!
Driving when your engine is overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.
Steam from an overheated engine can cause serious burns which can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Stop the vehicle in a safe location away from other traffic. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.

During severe operating conditions, e.g. stop-and-go traffic, the coolant temperature may rise close to 248°F (120°C).

Excessive coolant temperature triggers a warning in the multifunction display and the red coolant temperature warning lamp in the instrument cluster comes on.
The engine should not be operated with a coolant temperature above 248°F (120°C). Doing so may cause serious engine damage which is not covered by the Mercedes-Benz Limited Warranty.
Control system

Resetting trip odometer

- Make sure you are viewing the standard display (▷ page 126) in the multifunction display.
- Press and hold the reset button in the instrument cluster (▷ page 120) until the trip odometer is reset.

Tachometer

The red marking on the tachometer (▷ page 30) denotes excessive engine speed.

Avoid driving at excessive engine speeds, as it may result in serious engine damage that is not covered by the Mercedes-Benz Limited Warranty.

To help protect the engine, the fuel supply is interrupted if the engine is operated within the red marking.

Control system

Introduction

The control system is activated as soon as the starter switch is in position 1 (▷ page 83). The control system enables you to call up information about your vehicle and to change vehicle settings.

For example, you can use the control system to find out when your vehicle is next due for maintenance service, to set the language for messages in the instrument cluster display, and much more.

⚠️ Warning!

A driver’s attention to the road and traffic conditions must always be his/her primary focus when driving.

For your safety and the safety of others, selecting features through the multifunction steering wheel should only be done by the driver when traffic and road conditions permit it to be done safely.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

The control system relays information to the multifunction display.

Multifunction steering wheel

The displays in the multifunction display and the settings in the control system are controlled by the buttons on the multifunction steering wheel.
## Controls in detail

### Control system

You can select whether the digital speedometer or the outside temperature appears in the standard display (page 135).

Press button \( \uparrow \) or \( \downarrow \) to select the functions in the **Standard display** menu.

The following functions are available:
- Checking tire inflation pressure (page 212)
- Calling up digital speedometer or outside temperature (page 126)
- Calling up maintenance service indicator (page 240)

### Calling up digital speedometer or outside temperature

You can select whether the digital speedometer or the outside temperature is shown in the status line display (page 134).

**Warning!**

The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose.

Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still

---

6 AMG vehicles only.

7 The vehicle status message memory menu is only displayed if there is a message stored.
be icy, especially in wooded areas or on bridges.

- Press button ▲ or ▼ repeatedly until the digital speedometer or the outside temperature appears in the multifunction display.

1 Basic display with digital speedometer
2 Status line display with outside temperature
3 Trip odometer

**AMG menu**

This function is only available in AMG vehicles.
The main screen of the AMG menu shows you the gear currently engaged as well as the engine oil temperature.

- Press button ▲ or ▼ repeatedly until the AMG menu appears in the multifunction display.

1 Gear indicator
2 Engine oil temperature indicator

The engine oil temperature flashes if the engine oil temperature has not yet reached 80°C. During this time, avoid driving at full engine speed.

If the engine reaches the overspeed range in the manual shift program, the menu will be shown in red. In addition, you will see UP next to gear indicator 1 as a reminder to upshift.

Use buttons ▲ or ▼ to select the following functions in the AMG menu:
- Vehicle supply voltage (page 127)
- RACETIMER (page 128)
- Overall analysis (page 129)
- Lap analysis (page 129)

**Vehicle supply voltage**

- Press button ▲ or ▼ repeatedly until the AMG menu appears in the multifunction display.

- Press button ▼ repeatedly until the vehicle supply voltage appears in the multifunction display.

1 Gear indicator
2 Vehicle supply voltage indicator
Control system

RACETIMER

⚠️ Warning!
The RACETIMER feature is only for use on roads and in conditions where high speed driving is permitted. Racing on public roads is prohibited under all circumstances and the driver is and must always remain responsible for following posted speed limits.

The RACETIMER allows you to time and save driving stretches.

► Press button + or – repeatedly until the AMG menu appears in the multifunction display.

► Press button − repeatedly until the RACETIMER appears in the multifunction display.

You can start the RACETIMER when the engine is running or the starter switch is in position 2 (page 83).

While the RACETIMER is being displayed, you cannot adjust the audio volume using buttons + or –.

► **Starting:** Press button +.

► **Displaying intermediate time:** Press button − while the timer is running.

The intermediate time is shown for 5 seconds.

► **Stopping:** Press button +.

When you stop the vehicle and turn the SmartKey to position 1 (page 83) or, in vehicles with KEYLESS-GO, turn off the engine and do not open the driver’s door, the RACETIMER stops timing. Timing is resumed when you switch the ignition back on or restart the engine and then press the + button.

Saving lap time and starting a new lap

You can save up to nine laps.

► Press button − while the timer is running.

The intermediate time will be shown for 5 seconds.

► Press button − within 5 seconds.

The intermediate time shown will be saved as a lap time.

The RACETIMER begins timing the new lap. The new lap begins to be timed as soon as the intermediate time is called up.

1 Gear indicator
2 RACETIMER
3 Lap number
4 Best lap time
Resetting current lap

- Press button \( + \) while the timer is running.
  The timer stops.
- Press button \( - \).
  The lap time is reset to “0”.

Deleting all laps

It is not possible to delete a single saved lap.
When you turn off the engine, the RACETIMER will be reset to “0” after 30 seconds. All laps are deleted.
- Press button \( + \) while the timer is running.
  The timer stops.
- Press the reset button in the instrument cluster twice (\( \triangleright \) page 30).
- Press button \( + \).
  The timer starts. The saved laps are deleted.

Overall analysis

This function is only available if you have saved at least one lap and have stopped the RACETIMER.
- Press button \( \triangleright \) or \( \triangleleft \) repeatedly until the AMG menu appears in the multifunction display.
- Press button \( \triangleleft \) repeatedly until the overall analysis appears in the multifunction display.

Lap analysis

This function is only available if you have saved at least two laps and have stopped the RACETIMER.

- Press button \( \triangleright \) or \( \triangleleft \) repeatedly until the AMG menu appears in the multifunction display.
- Press button \( \triangleleft \) repeatedly until the lap analysis appears in the multifunction display.

Each lap is shown in its own submenu. The fastest lap is indicated by flashing symbol \( \triangleright \).
Control system

Audio/DVD menu

The functions in the Audio/DVD menu operate the audio or video equipment which you currently have turned on.

If no audio equipment is currently turned on, the message AUDIO Off appears in the multifunction display.

The following functions are available:
- Selecting radio station (page 130)
- Operating audio devices/audio media (page 130)
- Operating video DVD (page 131)

Selecting radio station

- Turn on the COMAND system and select radio. Refer to separate COMAND system operating instructions.
- Press button or repeatedly until the currently tuned station appears in the multifunction display.

Example illustration

1. Wave band setting
2. Station frequency

Select next or previous stored station:
- Press or briefly to select a stored station.

Select next or previous station in the station list:
- Press and hold or to select a station.

Select next or previous station in wave band (Only if no station list is available):
- Press and hold or to select a station.

You can only store new stations using the corresponding feature on the radio. Refer to separate COMAND system operating instructions.

You can also operate the radio in the usual manner.

Additional optional satellite radio equipment and a subscription to satellite radio service provider are required for satellite radio operation. Contact an authorized Mercedes-Benz Center for details and availability for your vehicle.

For more information, refer to separate COMAND system operating instructions.

Operating audio devices/audio media

- Turn on the COMAND system and select the audio device or audio media. Refer to separate COMAND system operating instructions.
- Press button or repeatedly until Audio/DVD menu appears in the multifunction display.

Example illustration

1. Disc number
2. Current track
Selecting previous or next track: Press button << or >> briefly.

Selecting a track from the track list (quick search): Press and hold button << or >>.

The current track does not appear during Audio AUX mode operation.

Operating video DVD

Turn on the COMAND system and select DVD-Video. Refer to separate COMAND system operating instructions.

Press button << or >> repeatedly until Audio/DVD menu appears in the multifunction display.

Navigation menu

The Navigation menu contains the functions needed to operate your navigation system.

- Press button << or >> repeatedly until the Navigation menu appears in the multifunction display.

The message shown in the multifunction display depends on the status of the navigation system:

- With the COMAND system switched off, the message NAVI Off appears in the multifunction display.
- With the COMAND system switched on but route guidance not activated, the direction of travel and, if applicable, the name of the street currently traveled on appear in the multifunction display.
- With the COMAND system switched on and route guidance activated, the direction of travel and maneuver instructions appear in the multifunction display.

Please refer to the COMAND system operating instructions for instructions on how to activate the route guidance system.

Distronic menu (USA only)

Use the Distronic menu to display the current settings for your Distronic system. The information shown in the multifunction display depends on whether the Distronic system is activated or deactivated.

Please refer to the “Driving systems” section of this manual (page 144) for instructions on how to activate Distronic.

Vehicle status message memory menu

Use the Vehicle status message memory menu to scan malfunction and warning messages that may be stored in the memory. Such messages appear in the multifunction display and are based on conditions or system status the vehicle’s system has recorded. The Vehicle status message memory menu only appears, if messages have been stored.

⚠️ Warning!

Malfunction and warning messages are only indicated for certain systems and are intentionally not very detailed. The malfunction and warning messages are simply a reminder with respect to the operation of
Controls in detail

Control system

certain systems. They do not replace the owner’s and/or driver’s responsibility to maintain the vehicle’s operating safety. Have all required maintenance and safety checks performed on the vehicle. Bring the vehicle to an authorized Mercedes-Benz Center to address the malfunction and warning messages.

Press button ▼ or ▶ repeatedly until the **Vehicle status message memory** menu appears in the multifunction display. If conditions have occurred causing status messages to be recorded, the number of messages appears in the multifunction display:

![Vehicle status message memory](image)

Press button ▼ or ▶.

The stored messages will now be displayed in the order in which they have occurred.

For malfunction and warning messages, see “Vehicle status messages in the multifunction display” (page 255).

Should the vehicle’s system record any conditions while driving, the number of messages will reappear in the multifunction display when the SmartKey in the starter switch is turned to position 0 or removed from the starter switch. With KEYLESS-GO the number of messages will reappear when you turn off the engine by pressing the KEYLESS-GO start/stop button and open the driver’s door.

Except for high-priority messages, the vehicle status message memory will be cleared when you turn off the ignition.

Press button ▼ or ▶ repeatedly until the **Settings menu** appears in the multifunction display.

**Settings menu**

**Introduction**

In the Settings menu there are two functions: The function To reset, press reset button for 3 seconds., with which you can reset all the settings to the original factory settings and a collection of submenus with which you can make individual settings for your vehicle.

The following settings and submenus are available in the **Settings menu**:

- Resetting to factory settings (page 132)
- Submenus in the Settings menu (page 133)
- Instrument cluster submenu (page 134)
- Lighting submenu (page 135)
- Vehicle submenu (page 138)
- Convenience submenu (page 138)

**Resetting to factory settings**

You can reset the functions of all submenus to the factory settings.

For safety reasons, the function Headlamp Mode in the Lighting submenu cannot be reset while driving.

Press button ▼ or ▶ repeatedly until the **Settings menu** appears in the multifunction display.
- Press the reset button in the instrument cluster for approximately 3 seconds.
  The request to press the reset button once more to confirm appears in the multifunction display.

- Press the reset button once more.
  The functions of all the submenus will be reset to factory settings.

The settings you have changed will not be reset unless you confirm the action by pressing the reset button a second time. After approximately 5 seconds, the Settings menu reappears in the multifunction display.

**Submenus in the Settings menu**

- Press button " or " repeatedly until the Settings menu appears in the multifunction display.

- Press button ".
  The collection of the submenus appears in the multifunction display. There are more submenus than can be simultaneously displayed.

- Press button ".
  The selection marker moves to the next submenu.

- Scroll down with button " , scroll up with button ".

- With the selection marker on the desired submenu, use button " to access the individual functions within that submenu.

- Once within the submenu, use button " to move to the next function or button " to move to the previous function within that submenu.

- Use button " or " to change the settings of the respective function.

The following lists show what settings can be changed within the various menus. Detailed instructions on making individual settings can be found on the following pages.

**Instrument cluster submenu**

- Selecting speedometer display mode (page 134)
- Selecting language (page 134)
- Selecting display (speed display or outside temperature) for status line (page 134)
- Selecting display (speed display or outside temperature) for standard display (page 135)

**Lighting submenu**

- Setting daytime running lamp mode (USA only) (page 135)
- Setting locator lighting (page 136)
- Setting ambient lighting (page 136)
- Setting night security illumination (Headlamps delayed shut-off feature) (page 136)
- Setting interior lighting delayed shut-off (page 137)

**Vehicle submenu**

- Setting automatic locking (page 138)
Control system

Convenience submenu
• Activating easy-entry/exit feature (› page 138)

Instrument cluster submenu
The following functions are available:
• Selecting speedometer display mode (› page 134)
• Selecting language (› page 134)
• Selecting display (speed display or outside temperature) for status line (› page 134)
• Selecting display (speed display or outside temperature) for standard display (› page 135)

Selecting speedometer display mode
► Move the selection marker with button + or – to the Instr. Cluster sub-menu.
► Press button + or – to set speedometer unit to Km or Miles.

Selecting language
► Move the selection marker with button + or – to the Instr. Cluster sub-menu.
► Press button ◀ or ▶ repeatedly until the message Language appears in the multifunction display.
The selection marker is on the current setting.

Odometer appears in the multifunction display.
The selection marker is on the current setting.

► Press button + or – to select the language to be used for the multifunction display messages.

Selecting display (speed display or outside temperature) for status line
► Move the selection marker with button + or – to the Instr. Cluster sub-menu.
► Press button ◀ or ▶ repeatedly until the message Status Line Display appears in the multifunction display.
The selection marker is on the current setting.
Press button \( + \) or \( - \) to select the status line to Speed or Outside Temp. You will see the status line display when you have called up a different display from the standard display.

Selecting display (speed display or outside temperature) for standard display

- Move the selection marker with button \( + \) or \( - \) to the Instr. Cluster submenu.
- Press button \( \rightarrow \) or \( \leftarrow \) repeatedly until the message Basic Display appears in the multifunction display.
  The selection marker is on the current setting.

- Press button \( + \) or \( - \) to select the display shown in the standard display.
  The other display now appears in the Standard display menu (page 126).

**Lighting submenu**

Access the Lighting submenu via the Settings menu. Use the Lighting submenu to change the lamp and lighting settings on your vehicle.

The following functions are available:

- Setting daytime running lamp mode (USA only) (page 135)
- Setting locator lighting (page 136)
- Setting ambient lighting (page 136)
- Setting night security illumination (page 136)
- Setting interior lighting delayed shut-off (page 137)

**Setting daytime running lamp mode (USA only)**

- Move the selection marker with button \( + \) or \( - \) to the Lighting submenu.
- Press button \( \rightarrow \) or \( \leftarrow \) repeatedly until the message Headlamp Mode appears in the multifunction display.
  The selection marker is on the current setting.

- Press button \( + \) or \( - \) to select manual operation (Manual) or daytime running lamp mode (Constant).

With daytime running lamp mode activated and the exterior lamp switch in position \( 0 \) or \( \text{Auto} \), the low-beam headlamps are switched on when the engine is running.

In low ambient light conditions the following lamps will come on additionally:

- Parking lamps
- Tail lamps
- License plate lamps
- Side marker lamps

For more information on the daytime running lamp mode, see “Lighting” (page 96).

For safety reasons, resetting all the functions of all submenus to the factory settings while driving (page 132) will not deactivate the daytime running lamp mode.
The following message appears in the multifunction display:
Lighting - Cannot be completely reset to factory settings while driving.

Setting locator lighting
With the locator lighting feature activated and the exterior lamp switch in position AUTO, the following lamps will come on during darkness when the vehicle is unlocked using button  on the SmartKey:
- Parking lamps
- Tail lamps
- License plate lamps
- Side marker lamps
- Front fog lamps
The locator lighting goes out when the driver’s door is opened.
If you do not open the driver’s door after unlocking the vehicle with the SmartKey, the lamps will go out automatically after approximately 40 seconds.

Setting ambient lighting
Use this function to adjust the brightness of the ambient lighting.

Moving the selection marker with button + or - to the Lighting submenu.
Press button + or - repeatedly until the message Surround Light Function appears in the multifunction display. The selection marker is on the current setting.
Press button + or - to switch the locator lighting function On or Off.
Turn the exterior lamp switch to position AUTO when exiting the vehicle. The locator lighting feature is activated.
Press button + or - to select the desired brightness of the ambient lighting. The setting 1 represents the darkest level and setting 5 the brightest level. The ambient light is switched off at setting 0.

Setting night security illumination (Headlamps delayed shut-off feature)
Use this function to set whether you would like the exterior lamps to remain on for 15 seconds during darkness after exiting the vehicle and closing all doors.
With the headlamps delayed shut-off feature activated and the exterior lamp switch in position \textbf{AUTO} before the engine is turned off, the following lamps will come on when the engine is turned off:

- Parking lamps
- Tail lamps
- License plate lamps
- Side marker lamps
- Front fog lamps

If, after turning off the engine, you do not open a door or do not close an opened door, the lamps will automatically go out after 60 seconds.

\textbf{Move the selection marker with button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{to the} \textbf{Lighting} \textbf{submenu.}

\textbf{Press button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{repeatedly until the message} Headlamps Delayed Shut-off \textbf{appears in the multifunction display.}

The headlamps delayed shut-off feature is activated.

You can temporarily deactivate the headlamps delayed shut-off feature:

\textbf{Move the selection marker with button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{to the} \textbf{Lighting} \textbf{submenu.}

\textbf{Press button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{to switch the} headlamps delayed shut-off feature \textbf{On} or \textbf{Off.}

\textbf{Turn the exterior lamp switch to position} \textbf{AUTO} \textbf{before turning off the engine.}

The headlamps delayed shut-off feature is activated.

You can temporarily deactivate the headlamps delayed shut-off feature:

\textbf{Move the selection marker with button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{to the} \textbf{Lighting} \textbf{submenu.}

\textbf{Press button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{repeatedly until the message} Interior Lighting Delayed Shut-off \textbf{appears in the multifunction display.}

The selection marker is on the current setting.

You can temporarily deactivate the headlamps delayed shut-off feature:

\textbf{Before exiting the vehicle, turn the Smart-Key in the starter switch to position} \textbf{0.}

\textbf{Then turn it to position} \textbf{2} \textbf{and back to position} \textbf{0.}

The headlamps delayed shut-off feature is deactivated. It will reactivate as soon as you start the engine.

\textbf{Press button} \textbf{æ} \textbf{or} \textbf{ç} \textbf{to switch the} interior lighting delayed shut-off feature \textbf{On} or \textbf{Off.}
Control system

Vehicle submenu
Access the Vehicle submenu via the Settings menu. Use the Vehicle submenu to set the automatic locking.

Setting automatic locking
Use this function to activate or deactivate the automatic central locking. With the automatic central locking system activated, the vehicle is centrally locked at vehicle speeds of approximately 9 mph (15 km/h).

► Move the selection marker with button + or − to the Vehicle submenu.
► Press button Ñ or Ç repeatedly until the message Automatic Door Locking appears in the multifunction display. The selection marker is on the current setting.

► Press button + or − to switch the automatic central locking On or Off.

Convenience submenu
Access the Convenience submenu via the Settings menu. Use the Convenience submenu to activate the easy-entry/exit feature.

Activating easy-entry/exit feature
Use this function to activate and deactivate the easy-entry/exit feature (► page 91).

⚠️ Warning!
You must make sure no one can become trapped or injured by the moving steering wheel when the easy-entry/exit feature is activated.

To stop steering wheel movement, move steering wheel adjustment stalk or press one of the memory position buttons.

Do not leave children unattended in the vehicle, or with access to an unlocked vehicle. Children could open the driver’s door and unintentionally activate the easy-entry/exit feature, which could result in an accident and/or serious personal injury.

► Move the selection marker with button + or − to the Convenience submenu.
► Press button Ñ or Ç repeatedly until the message Easy-entry Function appears in the multifunction display. The selection marker is on the current setting.

► Press button + or − to switch the easy-entry feature On or Off.

**Trip computer menu**

Use the **Trip computer** menu to call up statistical data on your vehicle.

The following information is available:

- Fuel consumption statistics since start (>
  page 139)
- Fuel consumption statistics since last reset (>
  page 139)
- Resetting fuel consumption statistics (>
  page 139)
- Distance to empty (>
  page 140)

**Fuel consumption statistics since start**

- Press button $\text{ or } \text{ repeatedly until the first function of the Trip computer menu appears in the multifunction display.}$
- Press button $\text{ or } \text{ repeatedly until the message From Start appears in the multifunction display.}$

**Fuel consumption statistics since last reset**

- Press button $\text{ or } \text{ repeatedly until the first function of the Trip computer menu appears in the multifunction display.}$
- Press button $\text{ or } \text{ repeatedly until the message From Reset appears in the multifunction display.}$

**Resetting fuel consumption statistics**

- Press button $\text{ or } \text{ repeatedly until the first function of the Trip computer menu appears in the multifunction display.}$
- Press button $\text{ or } \text{ repeatedly until the reading that you want to reset appears in the multifunction display.}$
- Press and hold the reset button in the instrument cluster until the respective values are reset to 0.

The fuel consumption statistics reset automatically to 0 after 99,999 miles or 9,999 hours, whichever occurs first.
Control system

Distance to empty

- Press button ì or í repeatedly until the first function of the Trip computer menu appears in the multifunction display.
- Press button ê or ì repeatedly until the message Range: appears in the multifunction display.

The calculated remaining driving range based on the current fuel tank level appears in the multifunction display.

If only very little fuel is left in the tank, a vehicle at the fuel pump ê is shown instead of the range.

Telephone menu

⚠️ Warning!
A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call. If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when weather, road and traffic conditions permit.

Some jurisdictions prohibit the driver from using a mobile phone while driving a vehicle.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

Never operate radio transmitters equipped with a built-in or attached antenna (i.e. without being connected to an external antenna) from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or personal injury.

You can connect your telephone via Bluetooth® to the COMAND system, see separate COMAND system operating instructions.

- Switch on the COMAND system.
  See separate COMAND system operating instructions.
- Press button ê or í on the multifunction steering wheel repeatedly until the message TEL appears in the multifunction display.

One of the following messages will appear in the multifunction display:

- No Service: No network is available.
- Bluetooth Ready: The telephone has not been connected to the COMAND system via Bluetooth® yet.
  - Connect the telephone to the COMAND system via Bluetooth®.

- Ready or name of the network provider (if available): The telephone has found a network and is ready for use. You can operate it using the control system.
Answering a call

When your telephone is ready to receive calls, you can answer a call at any time. In the multifunction display you will then see the message, or if available, the caller ID (number and name):

- Press button \[\text{1}\].
  You have answered the call.

Ending a call or rejecting an incoming call

- Press button \[\text{1}\].

Dialing a number from the phone book

If your telephone is ready to receive calls, you may select and dial a number from the phone book at any time.

- Press button \[\text{1}\] or \[\text{1}\] on the multifunction steering wheel repeatedly until the message TEL appears in the multifunction display.
- Press button \[\text{1}\] or \[\text{1}\] repeatedly until the desired name appears in the multifunction display.

If you press and hold button \[\text{1}\] or \[\text{1}\] for longer than 1 second, the system scrolls rapidly through the list of names until you release the button again.

The stored names are displayed in ascending or descending alphabetical order.

Redialing

The control system stores the most recently dialed phone numbers. This eliminates the need to search through your entire phone book.

- Press button \[\text{1}\].
  The control system dials the selected phone number.

If the connection is successful and this feature is supported by your network provider, the name of the party (if stored in your phone book) you are calling will appear in the multifunction display.

The control system stores the dialed number in the redial memory.

or

- Press button \[\text{1}\] if you do not want to make the call.

1 Selected name from the phone book

2 Connected To NEWMAN
Driving systems

- Press button \( \text{X} \) or \( \text{X} \) on the multifunction steering wheel repeatedly until the message TEL appears in the multifunction display.
- Press button \( \text{X} \).
  The first number in the redial memory appears in the multifunction display.
- Press button \( \text{X} \) or \( \text{X} \) repeatedly until the desired number or name appears in the multifunction display.
- Press button \( \text{X} \).
  The control system dials the selected phone number.

### Driving systems

#### Introduction

This section describes the following driving systems of your vehicle:
- Cruise control and Distronic
- Distance warning function is only available with Distronic
- Airmatic DC
- Parktronic system

The ABS, Adaptive Brake, BAS, EBP and ESP® driving safety systems are described in the “Safety and security” section (page 64).

### Cruise control

The cruise control automatically maintains the speed you set for your vehicle.

The use of the cruise control is recommended for driving at a constant speed for extended periods of time.

The currently set speed or last set speed (“Resume” function) appears in the multifunction display for approximately 5 seconds. The corresponding cruise control speed segments from the selected speed to the vehicle maximum speed in the multifunction display are illuminated.

⚠️ **Warning!**

The cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must always remain responsible for the vehicle’s speed and for safe brake operation.

Only use the cruise control if the road, traffic, and weather conditions make it advisable to travel at a constant speed.

- The use of the cruise control can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a constant speed.
- The use of the cruise control can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control.
- Deactivate the cruise control when driving in fog.

The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.
Warning! The cruise control brakes automatically so that the set speed is not exceeded. Keep in mind that the cruise control is a convenience system designed to assist the driver during vehicle operation. The driver is and must always remain responsible for the vehicle’s speed and for safe brake operation.

### Activating cruise control

You can activate the cruise control at vehicle speeds above 20 mph (30 km/h).

You cannot activate the cruise control:
- when you brake
- when you have engaged the parking brake
- when the automatic transmission is in park position P, reverse gear R, or neutral position N
- the ESP® is switched off or has switched off due to a malfunction

The vehicle speed displayed in the speedometer can briefly vary from the speed setting for the cruise control system.

### Setting current speed

- Accelerate or decelerate to the desired speed.
- Briefly lift the cruise control lever in direction of arrow 1 or depress in direction of arrow 2.
- Remove your foot from the accelerator pedal.

On uphill grades, the cruise control may not be able to maintain the set speed. Once the grade eases, the set speed will be resumed.

On downhill grades, the cruise control maintains the set speed by braking with the vehicle’s brake system. In addition, on longer downhill grades the automatic transmission will automatically downshift.

### Canceling cruise control

- Depress the brake pedal.
- Briefly push the cruise control lever in direction of arrow 3.

The last set speed is stored for later use.

The last stored set speed is canceled when the engine is turned off.

The cruise control switches off automatically when you depress the brake pedal or you engage the parking brake. In this case, the cruise control speed segments in the multifunction display will go out.

The cruise control also switches off automatically when:
- the vehicle speed falls below 20 mph (30 km/h)
- the ESP® is in operation
Driving systems

- the ESP® is switched off with the ESP® switch
- the ESP® has switched off due to a malfunction
- you shift the automatic transmission into neutral position N while driving

The cruise control speed segments in the multifunction display goes out and an acoustic warning will sound. Observe additional messages in the multifunction display that may appear.

Depressing the accelerator pedal does not deactivate the cruise control. After a brief acceleration (e.g. for passing), the cruise control will resume the last set speed.

Changing the set speed

⚠️ Warning!
Keep in mind that it may take a brief moment until the vehicle has made the necessary adjustments.

Increase or decrease the set vehicle speed to a value that the prevailing road conditions and legal speed limits permit. Otherwise, sudden and unexpected acceleration or deceleration of the vehicle could cause an accident and/or serious injury to you and others.

When you use the cruise control lever to decelerate, the brake system will automatically brake the vehicle if the engine’s braking power does not brake the vehicle sufficiently.

- Lift the cruise control lever in direction of arrow 1 and hold it up to increase, or
depress the cruise control lever in direction of arrow 2 and hold it down to decrease, until the desired speed is reached.

- Release the cruise control lever.
The new speed is set and the vehicle will accelerate or decelerate.

Fine adjustment in 1 mph (Canada: 1 km/h) increments

- Briefly tip the cruise control lever in direction of arrow 1 to increase or in direction of arrow 2 to decrease.

Resume last stored speed

⚠️ Warning!
The set speed stored in memory should only be set again if prevailing road conditions and legal speed limits permit. Possible acceleration or deceleration differences arising from returning to the preset speed could cause an accident and/or serious injury to you and others.

- Briefly pull the cruise control lever in direction of arrow 4.
If no speed is stored, the current speed is set and stored.
- Remove your foot from the accelerator pedal.
The last stored set speed is canceled when the engine is turned off.

Distronic

Safety notes

When activated, the Distronic adaptive cruise control increases the driving convenience afforded by the cruise control while traveling on expressways and other major roadways.

- If the Distronic distance sensor detects a slower moving vehicle directly ahead, your vehicle speed will be reduced so that you
follow that vehicle at your preset following distance.

- If there is no vehicle directly ahead of you, the Distronic will function in the same way as standard cruise control (page 142).

⚠️ **Warning!**
The Distronic is a convenience system. Its speed adjustment reduction capability is intended to make cruise control more effective and usable when traffic speeds vary. It is not however, intended to, nor does it, replace the need for extreme care. The responsibility for the vehicle’s speed, distance to the preceding vehicle and, most importantly, brake operation to ensure a safe stopping distance, always remains with the driver.

Complex driving situations are not always fully recognized by the Distronic. This could result in wrong or missing distance warnings.

⚠️ **Warning!**
The Distronic adaptive cruise control is not a substitute for active driving involvement. It does not react to pedestrians or on stationary objects, nor does it recognize or predict the lane curvature or the movement of preceding vehicles.

The Distronic can only apply 20% of the maximum braking power of the vehicle. It is the driver’s responsibility at all times to be attentive to the road, weather and traffic conditions. Additionally, the driver must provide the steering, braking and other driving inputs necessary to remain in control of the vehicle.

High-frequency sources such as toll stations, speed measuring systems etc. can cause the Distronic system to malfunction.

⚠️ **Warning!**
The Distronic requires familiarity with its operational characteristics. We strongly recommend that you review the following information carefully before operating the system.

⚠️ **Warning!**
The Distronic cannot take road and traffic conditions into account. Only use the Distronic if the road, weather and traffic conditions make it advisable to travel at a constant speed.

⚠️ **Warning!**
Use of the Distronic can be dangerous on slippery roads. Rapid changes in tire traction can result in wheel spin and loss of control.

The Distronic does not function in adverse sight and distance conditions. Do not use the Distronic during conditions of fog, heavy rain, snow or sleet.

⚠️ **Warning!**
The Distronic cannot take weather conditions into account. Switch off the Distronic or do not switch it on if:

- roads are slippery or covered with snow or ice. The wheels could lose traction while braking or accelerating, and the vehicle could skid.
- the Distronic system sensor cover is dirty or visibility is diminished due to snow, rain or fog, for example. The distance control system functionality could be impaired.

Always pay attention to surrounding traffic conditions even while the Distronic is switched on. Otherwise, you may not be able to recognize dangerous situations until it is too late. This could cause an accident.
Driving systems

in which you and/or others could be injured.

⚠️ Warning!
The “Resume” function should only be operated if the driver is fully aware of the previously set speed and wishes to resume this particular preset speed.

⚠️ Warning!
Close attention to road and traffic conditions is imperative at all times, regardless of whether or not the Distronic is activated. Use of the Distronic can be dangerous on winding roads or in heavy traffic because conditions do not allow safe driving at a constant speed.
The Distronic will not react to stationary objects in the roadway (e.g. a stopped vehicle in a traffic jam or a disabled vehicle). The Distronic will also not respond to oncoming vehicles.

Switch off the Distronic:
- when changing from the left to the right lane if vehicles are moving more slowly in the left lane
- when entering a turn lane or highway off ramp
- in complex driving situations, such as in highway construction zones

In these situations, the Distronic will continue to maintain the set speed unless deactivated.
The Distronic is designed and intended only to maintain a set speed and keep a set distance from moving objects in front of it.

⚠️ USA only:
This device has been approved by the FCC as a “Vehicular Radar System”. The radar sensor is intended for use in an automotive radar system only. Removal, tampering, or altering of the device will void any warranties, and is not permitted by the FCC. Do not tamper with, alter, or use in any non-approved way.
Any unauthorized modification to this device could void the user’s authority to operate the equipment.

⚠️ Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.
Removal, tampering, or altering of the device will void any warranties, and is not permitted. Do not tamper with, alter, or use in any non-approved way.
Any unauthorized modification to this device could void the user’s authority to operate the equipment.
Driving systems

Distronic displays in the speedometer

① Set speed
② Cruise control speed segments
③ Speed of the vehicle ahead

If the Distronic is activated, one or two cruise control speed segments come on around the set speed.

The vehicle speed displayed on the speedometer can briefly vary from the speed setting on the Distronic system.

If the Distronic detects a vehicle directly ahead, the cruise control speed segments ② appear in the speedometer. These segments represent the difference between the set speed of your vehicle ① and the speed of the preceding vehicle ③.

If the Distronic calculates that there is a danger of collision, the distance warning lamp ⚠️ in the instrument cluster comes on and an intermittent warning sounds.

- Immediately apply the brakes to avoid a collision.

Under no circumstances should the driver await the intermittent warning sound before braking.

The intermittent warning sound ceases and the distance warning lamp ⚠️ goes out when the necessary distance to the vehicle ahead is established again.

⚠️ Warning!

An intermittent warning sounds and the distance warning lamp ⚠️ in the instrument cluster is illuminated if the Distronic system calculates that the distance to the vehicle ahead and your vehicle’s current speed indicate that the Distronic will not be capable of slowing the vehicle sufficiently to maintain the preset following distance, which creates a danger of a collision. Immediately brake the vehicle to increase your distance to the preceding vehicle. The warning sound is intended as a final caution in which you should intercede with your own braking inputs to avoid a potentially dangerous situation. Do not wait for the operation of the warning signal to intercede with your own braking. This will result in potentially dangerous emergency braking which will not always result in an impact being avoided.

Tailgating increases the risk of an accident.
Driving systems

⚠️ Warning!
The Distronic brakes your vehicle with a maximum deceleration of 6.5 ft/s² (2 m/s²). This corresponds to approximately 20% of the maximum deceleration of your vehicle.
The Distronic brakes the vehicle in an effort to restore the preset distance or to maintain the set speed.

Distronic menu in the control system

The information shown in the multifunction display depends on whether the Distronic system and/or the distance warning function are activated or deactivated.

ℹ️ To activate or deactivate the Distronic system, see (page 149) or see (page 150).
To activate or deactivate the Distance warning function, see (page 153).

Press button 🦫 or 🦫 repeatedly until one of the following two displays appears in the multifunction display.

Distronic deactivated

When the Distronic is deactivated, you will see the standard Distronic display in the multifunction display.

1 Preceding vehicle, if detected
2 Actual distance to the preceding vehicle
3 Preset distance threshold to the preceding vehicle
4 Your vehicle
5 Symbol for activated distance warning function (page 153)

Distronic activated

When the Distronic is activated, you will see the set speed in the multifunction display for approximately 5 seconds. The following display appears in the multifunction display.

1 Distronic activated

Cruise control lever

The Distronic system is operated by means of the cruise control lever.

1 Setting current or higher speed
2 Setting current or lower speed
Deactivating the Distronic
Activating the Distronic, resuming to the last set speed or increasing speed in 1 mph (Canada: 1 km/h) increments

Activating Distronic
You can activate the Distronic when the vehicle speed is between 20 mph (30 km/h) and 110 mph (180 km/h).

When the Distronic is activated, one or two cruise control speed segments around the set speed in the multifunction display are illuminated. The multifunction display will briefly show a message such as DISTRONIC 55 MPH (Canada: DISTRONIC 90 km/h).

If the Distronic is not activated after the cruise control lever is pulled in direction of arrow ④ (page 148), you will see the message — in the multifunction display.

In the following cases you cannot activate the Distronic:
- up to 2 minutes after starting the engine
- when you brake
- when you have engaged the parking brake

Setting the current speed
- Accelerate or decelerate to the desired speed.
- Briefly lift the cruise control lever in direction of arrow ① or depress in direction of arrow ② (page 148).
- Remove your foot from the accelerator pedal.

If you do not take your foot off of the accelerator pedal and continue to accelerate past the set speed, the following message will appear in the multifunction display:
DISTRONIC Override
The distance to a slower moving vehicle in front of you will not be set. Your vehicle speed will then be determined only by the accelerator pedal position.

Setting a higher speed

⚠️ Warning!
Keep in mind that it may take a brief moment until the vehicle has made the necessary adjustments.
Increase the set vehicle speed to a value that the prevailing road conditions and legal speed limits permit. Otherwise, sudden and unexpected acceleration of the vehicle could cause an accident and/or serious injury to you and others.

You can increase the set speed in two ways.

Adjustment in 5 mph (Canada: 10 km/h) increments
- Briefly lift the cruise control lever up in direction of arrow ① (page 148).

The new speed is set and the vehicle will accelerate. Keep in mind that it may take a brief moment until the vehicle has reached the set speed.
Driving systems

Fine adjustment in 1 mph (Canada: 1 km/h) increments
- Briefly pull the cruise control lever in direction of arrow 4 (page 148).

Setting a lower speed

⚠️ Warning!
Keep in mind that it may take a brief moment until the vehicle has made the necessary adjustments.

Decrease the set vehicle speed to a value that the prevailing road conditions and legal speed limits permit. Otherwise, sudden and unexpected deceleration of the vehicle could cause an accident and/or serious injury to you and others.

ℹ️ When you use the cruise control lever to decelerate, the brake system will automatically brake the vehicle if the engine’s braking power does not brake the vehicle sufficiently.

Adjustment in 5 mph (Canada: 10 km/h) increments
- Briefly press the cruise control lever down in direction of arrow 2 (page 148).
  The new speed is set and the vehicle will decelerate. Keep in mind that it may take a brief moment until the vehicle has reached the set speed.

Setting stored speed (Resume function)

⚠️ Warning!
The set speed stored in memory should only be set again if prevailing road conditions and legal speed limits permit. Possible acceleration or deceleration differences arising from returning to the preset speed could cause an accident and/or serious injury to you and others.

- Briefly pull the cruise control lever in direction of arrow 4 (page 148).
  If no speed is stored, the current speed is set and stored.
- Remove your foot from the accelerator pedal.

Deactivating Distronic
- Depress the brake pedal.
  or
- Briefly push the cruise control lever in direction of arrow 3 (page 148).
  The cruise control speed segments in the multifunction display will go out and the following message appears briefly in the multifunction display: DISTRONIC Off
  The last set speed is stored for later use.

The last stored set speed is deleted when the engine is turned off.

The Distronic switches off automatically when you depress the brake pedal or you engage the parking brake. In this case, the cruise control speed segments in the multifunction display will go out.

The Distronic also switches off automatically when
- the vehicle speed falls below 20 mph (30 km/h)
- the ESP® is in operation
- the ESP® is switched off with the ESP® switch
Driving systems

Setting the following distance in Distronic

You can set the specified following distance for Distronic by varying the time setting between 1.0 and 2.0 seconds. Using this time setting and the current speed of your vehicle, Distronic calculates and sets the required following distance to the preceding vehicle. The set distance will be shown in the multifunction display.

⚠️ Warning!
It is up to the driver to exercise discretion to select the appropriate setting given road conditions, traffic, driver’s preferred driving style and applicable laws and driving recommendations for safe following distance.

Increasing the distance setting tells Distronic to maintain a greater following distance to the preceding vehicle.

Decreasing distance: Turn thumbwheel towards "-".

Decreasing the distance setting tells Distronic to maintain a shorter following distance to the preceding vehicle.

Driving with Distronic

This section describes a number of driving situations where special precaution is required on the part of the driver. Be prepared to brake in such situations. Braking will deactivate the Distronic system.

⚠️ Warning!
Distronic works to maintain the speed selected by the driver unless a moving obstacle proceeding directly ahead of it in the same travel direction is detected (e.g. following another vehicle ahead of you at your set distance).
Driving systems

This means that:

- Your vehicle can pass another vehicle after you have changed lanes.
- While in a sharp turn or if the preceding vehicle is in a sharp turn, Distronic could lose sight of the preceding vehicle. Your vehicle could then accelerate to the previously selected speed.

Distronic regulates only the distance between your vehicle and those directly ahead of it, but does not register stationary objects in the road, e.g.:

- a stopped vehicle in a traffic jam
- a disabled vehicle
- an oncoming vehicle

The driver must always be alert, observe all traffic and intercede as required by means of steering or braking the vehicle.

⚠️ Warning!
Distronic should not be used in snowy or icy road conditions.

The most likely cause for a malfunctioning system is a dirty Distronic system sensor cover (located in the hood grille), especially at times of snow and ice or heavy rain.

In such a case, Distronic will switch off, and the message DISTRONIC Currently Unavailable - See Operator’s Manual appears in the multifunction display.

For cleaning and care of the Distronic system sensor cover, see (page 244).

ℹ️ If the message DISTRONIC Currently Unavailable - See Operator’s Manual disappears during driving and the last set speed flashes for approximately 5 seconds, the dirt (e.g. slush) has dissolved; Distronic works again.

Turns and bends

In turns or bends, Distronic may not detect a moving vehicle in front, or it may detect one too soon. This may cause your vehicle to brake late or unexpectedly.

Offset driving

A vehicle traveling in your lane but offset from your direct line of travel may not be detected by Distronic. There will be insufficient distance to the preceding vehicle.

Lane changing
Driving systems

Distronic has not yet detected the vehicle changing lanes. There will be insufficient distance to the lane-changing vehicle.

Narrow vehicles

Because of their narrow profile, the vehicles traveling near the outer edges of the lane have not yet been detected by Distronic. There will be insufficient distance to the preceding vehicles.

Distance warning function

When the Distronic is deactivated, this function will continue to warn you when recognizing a stationary obstacle or a slower vehicle moving in your vehicle’s path and the danger of a collision exists:

- The distance warning lamp \( \text{\textbullet} \) in the instrument cluster comes on.
- An intermittent warning will sound if necessary.

If these warnings are issued, you must brake manually to maintain a safe distance and avoid a collision with the preceding vehicle. When depressing the brake pedal, the warning sound ceases. The warning sound will also cease when the distance to the preceding vehicle is sufficient again without applying the brakes. In this case, the distance warning lamp \( \text{\textbullet} \) will also go out.

⚠️ Warning!

If the distance warning lamp \( \text{\textbullet} \) in the instrument cluster comes on while driving and/or at an intermittent warning sounds, immediate attention on the part of the driver is required. As required by the traffic situation, apply the brakes and navigate around a possible obstacle. However, do not drive by relying on the distance warning function, as this will result in an emergency braking application. This will not always enable you to avoid a collision, especially when traveling on varying road surface conditions and with varying driver reaction. Complex driving situations are not always fully recognized by the distance warning function. This could result in wrong or missing distance warnings.
Driving systems

comes on. A loudspeaker symbol appears in the multifunction display (page 148).

Airmatic DC (Dual Control)

Introduction

The Airmatic DC consists of two components. The Adaptive Damping System (ADS) (page 154) and the vehicle level control (page 154).

Adaptive Damping System (ADS)

The fine tuning of the damping is dependent on:

- road surface conditions
- your driving style
- vehicle loading
- your personal settings

The following settings are available:

- **Comfort**
  Both indicator lamps 2 are off.

- **Sport 1**
  One indicator lamp 2 is on.

- **Sport 2**
  Both indicator lamps 2 are on.

1. Start the engine.
2. Press ADS switch 1 repeatedly until the desired suspension tuning is reached.

The setting remains stored when you turn off the engine.

**Warning!**

If you have selected the Comfort suspension tuning, the vehicle lowers slightly when you lock it within approximately 60 seconds after turning off the engine. To avoid personal injury, make sure nobody is in the vicinity of the wheel housing or under the vehicle when you turn off the engine.

When parking, make sure there is sufficient clearance under the vehicle for it to lower without making contact with the road curb for example. Otherwise, the vehicle could be damaged.

Vehicle level control

**Warning!**

To help avoid personal injury, keep hands and feet away from wheel housing area, and stay away from under the vehicle when lowering the vehicle chassis.

Your vehicle automatically adjusts its ride height to increase vehicle safety and to reduce fuel consumption.

You can choose between raised or normal level.

Controls in detail
The vehicle chassis ride height is raised or lowered according to the selected level setting and to the vehicle speed. At a speed exceeding approximately 68 mph (110 km/h) with normal level set or exceeding 75 mph (120 km/h) with raised level set, the ride height is reduced automatically. With decreasing speed, the ride height is again raised to the normal level.

These height adjustment are so small that you may not notice any change.

Select the raised level only when required by current driving conditions. Otherwise, the handling may be impaired and the fuel consumption may increase.

The following vehicle level settings can be selected when the vehicle is stationary and the engine is running:

<table>
<thead>
<tr>
<th>Vehicle level when stationary</th>
<th>Indicator lamp (▷ page 156)</th>
<th>Suspension tuning</th>
<th>Use for</th>
<th>Ride height increase over normal</th>
<th>Automatic lowering</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>Lamp off</td>
<td>Comfort</td>
<td>For driving on normal roads</td>
<td>None</td>
<td>Max. approx. 0.4 in (10 mm)</td>
</tr>
<tr>
<td>Normal</td>
<td>Lamp off</td>
<td>Sport 1 or 2</td>
<td>For driving on normal roads</td>
<td>None</td>
<td>Max. approx. 0.6 in (15 mm)</td>
</tr>
<tr>
<td>Raised</td>
<td>Lamp on</td>
<td>Comfort</td>
<td>For driving on rough roads or with snow chains</td>
<td>Approx.. 0.8 in (20 mm)</td>
<td>Max. approx. 1.2 in (30 mm)</td>
</tr>
<tr>
<td>Raised</td>
<td>Lamp on</td>
<td>Sport 1 or 2</td>
<td>For driving on rough roads or with snow chains</td>
<td>Approx.. 0.8 in (20 mm)</td>
<td>Max. approx. 1.4 in (35 mm)</td>
</tr>
</tbody>
</table>
Driving systems

1 Vehicle level control switch
2 Indicator lamp

► Start the engine.
► Briefly press switch 1 to change from normal level to raised level. When vehicle is at raised level, pressing switch 1 will return the vehicle to normal level.

At a speed of approximately above 75 mph (120 km/h) or if the speed amounts to between 50 mph (80 km/h) and 75 mph (120 km/h) for approximately 5 minutes, the setting raised is canceled. The indicator lamp 2 in switch 1 goes out. The vehicle then lowers to normal level.

If you do not drive in this speed range, the selected vehicle level setting remains stored in memory even if the SmartKey is removed from the starter switch.

Parktronic system

The Parktronic system is an electronic parking aid with ultrasonic sensors designed to assist the driver during parking maneuvers. It visually and audibly indicates the relative distance between the vehicle and an obstacle.

The Parktronic system is automatically activated when you switch on the ignition, release the parking brake, and the automatic transmission is in drive position D, reverse gear R, or neutral position N.

The Parktronic system deactivates at speeds over approximately 11 mph (18 km/h). At lower speeds the Parktronic system turns on again.

The Parktronic system also deactivates when you shift the automatic transmission into park position P or engage the parking brake.

The Parktronic system monitors the surroundings of your vehicle with six sensors in the front bumper and four sensors in the rear bumper.

1 Sensors in the front bumper

To function properly, the sensors must be free of dirt, ice, snow and slush. Clean the sensors regularly, being careful not to scratch or damage the sensors, see “Cleaning the Parktronic system sensors” (page 244).

⚠️ Warning!
The Parktronic is a supplemental system. It is not intended to, nor does it replace, the need for extreme care. The responsibility during parking and other critical maneuvers always remains with the driver.

⚠️ Warning!
Make sure no persons or animals are in the area in which you are maneuvering. You could otherwise injure them.
Special attention must be paid to objects with smooth surfaces or low silhouettes (e.g. trailer couplings, painted posts, elevated crossbars or road curbs). Such objects may not be detected by the system and can damage the vehicle. During parking maneuvers, pay special attention to objects located above or below the height of the sensors (e.g. street curbs, painted posts, or trailer hitches etc.). The Parktronic system will not detect such objects at close range and damage to your vehicle or the object may result.

Ultrasonic signals from outside sources (e.g. truck air brakes, car wash, or jackhammers) may impair the operation of the Parktronic system.

---

### Range of the sensors

<table>
<thead>
<tr>
<th>Front sensors</th>
<th>Rear sensors</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Center</strong></td>
<td><strong>Center</strong></td>
</tr>
<tr>
<td>approx. 40 in</td>
<td>approx. 48 in (120 cm)</td>
</tr>
<tr>
<td><strong>Corners</strong></td>
<td><strong>Corners</strong></td>
</tr>
<tr>
<td>approx. 24 in</td>
<td>approx. 32 in (80 cm)</td>
</tr>
</tbody>
</table>

### Minimum distance

<table>
<thead>
<tr>
<th>Front sensors</th>
<th>Rear sensors</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Center</strong></td>
<td><strong>Center</strong></td>
</tr>
<tr>
<td>approx. 8 in</td>
<td>approx. 8 in (20 cm)</td>
</tr>
<tr>
<td><strong>Corners</strong></td>
<td><strong>Corners</strong></td>
</tr>
<tr>
<td>approx. 6 in</td>
<td>approx. 6 in (15 cm)</td>
</tr>
</tbody>
</table>

If the Parktronic system detects an obstacle in this range, all the distance warning segments illuminate and you hear a warning signal. If the obstacle is closer than the minimum distance, the actual distance may no longer be indicated by the Parktronic system.

### Warning indicators

Visual signals indicate to the driver the relative distance between the sensors and an obstacle.
Driving systems

Front area warning indicator
1 Left side of the vehicle
2 Right side of the vehicle
3 Readiness indicators

Each warning indicator is divided into five yellow and two red distance segments for either side of the vehicle. The Parktronic system is ready to measure when the yellow readiness indicators are illuminated.

The current transmission position determines which warning indicator will be activated.

<table>
<thead>
<tr>
<th>Current transmission position</th>
<th>Warning indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Front area activated</td>
</tr>
<tr>
<td>R or N</td>
<td>Front and rear area activated</td>
</tr>
</tbody>
</table>

As your vehicle approaches an object, one or more distance segments will illuminate, depending on the distance. When the seventh distance segment illuminates, you have reached the minimum distance.

- **Front area**: An intermittent acoustic warning will sound as the first red distance segment illuminates and a constant acoustic warning lasting a maximum of 2 seconds will sound for the second red distance segment. The signal is canceled when the automatic transmission is shifted into park position P or the parking brake is engaged.

- **Rear area**: An intermittent acoustic warning will sound as the first red distance segment illuminates and a constant acoustic warning lasting a maximum of 2 seconds will sound for the second red distance segment. The signal is canceled when the automatic transmission is shifted into drive position D, or park position P, or the parking brake is engaged.

**Switching the Parktronic system on/off**

The Parktronic system is automatically switched on when the ignition is switched on.

### Switching off Parktronic system:
Press Parktronic switch 1.
Indicator lamp 2 comes on.

### Switching on Parktronic system:
Press Parktronic switch 1 again.
Driving systems

Parktronic system malfunction

There is a malfunction in the Parktronic system, if only the red distance segments illuminate and an acoustic warning sounds. The Parktronic system will automatically switch off after 20 seconds and the indicator lamp \(^2\) in the Parktronic switch \(^1\) comes on.

- Have the Parktronic system checked at an authorized Mercedes-Benz Center as soon as possible.

If only the red distance segments illuminate and no acoustic warning sounds, the Parktronic system sensors are dirty (e.g. dirt, ice, snow and slush) or there is an interference from other radio or ultrasonic signals (e.g. truck air brakes, car wash, or jackhammers). The Parktronic system will automatically switch off after 20 seconds and the indicator lamp in the Parktronic switch comes on.

- Switch off the ignition.
- Clean the Parktronic system sensors (\(\rightarrow\) page 244).
- Switch on the ignition.
  or
- Check the Parktronic system operation at another location to rule out interference from outside radio or ultrasonic signals.

### Controls in detail

- **Function**
  - Rear air-conditioning remote control (USA only)
  - Rear air-conditioning remote control (Canada only)
  - Increasing air volume
  - Climate control on/off
  - Decreasing air volume
  - MAX COOL on/off (USA only)
  - Residual heat/ventilation (Canada only)
  - Temperature control, driver’s side, lowering
  - Air recirculation
  - Air distribution and air volume, driver’s side (automatic mode)

### Recommendation/Notes

- Switch on the climate control system. The indicator lamp in button **OFF** goes out.
- With the engine turned off, it is possible to continue to heat or ventilate the interior.
- Set the temperature to 72°F (22°C).
- Only use this function for a short time, e.g. in a tunnel. Otherwise, the windows can fog up due to lack of fresh air.
- Switch on the automatic mode. The indicator lamp in button **AUTO** comes on.
Climate control system

Rear climate control

1. Temperature control, left, raising
2. Display
3. Temperature control, right, raising
4. Temperature control, right, lowering
5. Temperature control, left, lowering

Notes on climate control system

The climate control system is operational whenever the engine is running. You can operate the climate control system in either the automatic or manual mode. The system cools or heats the interior depending on the selected interior temperature and the current outside temperature.

It can only function optimally when you are driving with the windows and the tilt/sliding sunroof closed.

Nearly all dust particles, pollutants and odors are filtered out before outside air enters the passenger compartment through the air distribution system.

**Warning!**
Severe conditions (e.g. strong air pollution) may require replacement of the filter before its scheduled replacement interval. A clogged filter will reduce the air volume to the interior and the windows could fog up, impairing visibility and endangering you and others. Have a clogged filter replaced as soon as possible at an authorized Mercedes-Benz Center.

The air conditioning will not engage (no cooling) if the A/C mode (page 164) is deactivated.

---

**Warning!**
Follow the recommended settings for heating and cooling given on the following pages. Otherwise the windows could fog up, impairing visibility and endangering you and others.

Keep the air intake grille in front of the windshield free of snow and debris.

Do not obstruct air flow by placing objects on the air flow-through exhaust slots below the rear window.

If the vehicle interior is hot, ventilate the interior before driving off, see “Summer opening feature” (page 105). The climate control will then adjust the interior temperature to the set value much faster.
Climate control system

Deactivating the climate control system

⚠️ Warning!
When the climate control is switched off, the outside air supply and circulation are also switched off. Only choose this setting for a short time. Otherwise the windows could fog up, impairing visibility and endangering you and others.

► Deactivating: Press button OFF. 0 appears in display 4 (page 160).
► Reactivating: Press button OFF again. Display 4 comes on. The previous settings are once again in effect.

Air conditioning

The air conditioning is operational while the engine is running and cools the interior air to the temperature set by the operator. In addition, the air conditioning dehumidifies the interior air and helps prevent window fogging.

⚠️ Warning!
If you switch off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.

Activating

Moist air can fog up the windows. You can dehumidify the interior air with the air conditioning.

► Press button A/C again.
The indicator lamp in the button comes on.
The air conditioning uses the refrigerant R134A. This refrigerant is free of CFCs which are harmful to the ozone layer.

Automatic mode

When operating the climate control system in automatic mode, the interior air temperature, air volume and air distribution are adjusted automatically.

In automatic mode, cooling with dehumidification is switched on. This function can be switched off if necessary.

⚠️ Warning!
If you switch off the cooling function, the vehicle will not be cooled when weather conditions are warm. The windows can fog up more quickly. Window fogging may impair visibility and endanger you and others.
Press buttons ▼ or ▲ to separately adjust the interior air temperature on each side of the passenger compartment.

**Activating:** Press one button AUTO. The indicator lamp in the button comes on. AUTO appears in display ④ (▷ page 160). The air volume and air distribution are adjusted automatically.

**Deactivating:** Press button ◐ or ◑. AUTO disappears in display ④. The automatic function for air volume is switched off, and air volume is controlled according to the desired setting. The automatic air distribution remains switched on.

Turn air distribution control ① or ⑦ (▷ page 160) on each side of the passenger compartment to the desired symbol. The indicator lamp in button AUTO goes out. Automatic air distribution is switched off in the corresponding zone, and air distribution is controlled according to the desired position. The automatic air volume remains switched on.

### Setting the temperature

You can adjust the air temperature for each of the 4 zones separately. You should raise or lower the temperature setting in small increments, preferably starting at 72°F (22°C).

#### Front zones

**Increasing/decreasing:** Press button ▲ or ▼ until the desired temperature appears in display ④ (▷ page 160).

#### Rear zones

**Press button REAR TEMP.** Display ④ (▷ page 160) switches over.

**Increasing/decreasing:** Press button ▲ or ▼ until the desired temperature appears in display ④. After approximately 5 seconds after the last adjustment, display ④ switches back to its standard display.

You can also press button REAR TEMP once more to switch back to the standard display.

### Rear climate control

You can adjust the air temperature on each side of the rear passenger compartment. You should raise or lower the temperature setting in small increments, preferably starting at 72°F (22°C).

**Increasing/decreasing:** Press button ▲ or ▼ until the desired temperature appears in display ② (▷ page 163).
Climate control system

Adjusting air vents

⚠️ Warning!
When operating the climate control, the air that enters the passenger compartment through the air vents can be very hot or very cold (depending on the set temperature). This may cause burns or frostbite to unprotected skin in the immediate area of the air vents.

Always keep sufficient distance between unprotected parts of the body and the air vents. If necessary, use the air distribution adjustment to direct the air to air vents in the vehicle interior that are not in the immediate area of unprotected skin.

Please comply with the following instructions in order for the climate control to function optimally:

- Keep the air intake grille in front of the windshield free of snow, leaves, sticks, and any other debris.
- Always keep all air vents and grilles in the passenger compartment free from obstruction.

For draft-free ventilation, move the adjustable center and side air vents to the middle position.

Center air vents

1. Left center air vent, adjustable
2. Right center air vent, adjustable
3. Thumbwheel for air volume control for adjustable right center air vent
4. Thumbwheel for air volume control for adjustable left center air vent

Opening/closing: Turn thumbwheels 3 and 4 upward or downward.

Side air vents

Example illustration driver’s side
1. Left side defroster air vent, fixed
2. Left side air vent, adjustable
3. Thumbwheel for air volume control for adjustable left side air vent

Opening/closing: Turn thumbwheel 3 in the required direction.

Front center console storage compartment ventilation

The center console storage compartment can be ventilated, for instance to cool its contents, when the climate control system is activated. The level of airflow to the center console storage compartment depends on the airflow and air distribution settings. The
temperature of the air is approximately the same as that of the air flowing from the center air vents.

危 Close the center console storage compartment air vent when heating the vehicle interior. Activate the air conditioning (cooling function) when the outside temperature is high. Otherwise, temperature-sensitive items stored in the center console storage compartment could be damaged.

Rear center console air vents

1. Left rear center air vent, adjustable
2. Right rear center air vent, adjustable
3. Thumbwheel for air volume control for right rear center air vent
4. Rear climate control panel
5. Thumbwheel for air volume control for left rear center air vent

- **Opening/closing:** Turn thumbwheel 3 or 5 upward or downward.

### Adjusting air distribution

The air distribution can be adjusted separately on each side of the passenger compartment.

The symbols on the control represent the following functions:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Symbol Z" /></td>
<td>Directs air through the center, side and defroster air vents to the windshield and side windows</td>
</tr>
<tr>
<td><img src="image" alt="Symbol a" /></td>
<td>Directs air through the center and side air vents</td>
</tr>
<tr>
<td><img src="image" alt="Symbol X" /></td>
<td>Directs air into the entire vehicle interior</td>
</tr>
<tr>
<td><img src="image" alt="Symbol Y" /></td>
<td>Directs air through the center and side air vents and to the footwells</td>
</tr>
</tbody>
</table>

- Turn air distribution control 1 or 7 (page 160) to the desired symbol.

You can also turn the air distribution control to a position between two symbols.
Climate control system

Adjusting air volume

- **Decrease/increase:** Press button ☀ or ☀.

Front defroster

You can use this setting to defrost the windshield, for example if it is iced up.
You can also defog the windshield and the side windows.

- **Activating:** Press button ☀.
The indicator lamp in the button comes on.
The climate control switches to the following functions automatically:
  * cooling on to dehumidify
  * most efficient blower speed and heating power, depending on outside temperature
  * air flows onto the windshield and the front side windows
  * the air recirculation mode is switched off

You can adjust the air volume, air distribution and interior air temperature when the front defroster is switched on.

- **Deactivating:** Press button ☀ again.
The indicator lamp in the button goes out.

Windshield fogged on the outside

- **Activating:** Press button ☀.
The indicator lamp in button ☀ goes out. Air volume and air distribution are adjusted automatically.

- **Deactivating:** Press button ☀.
The indicator lamp in button ☀ goes out.

Maximum cooling MAX COOL

This feature is only available in U.S. vehicles.
You can use this setting to provide the fastest possible cooling of the vehicle interior (when windows and tilt/sliding sunroof are closed).

- **Activating:** Press button ☀ (page 160).
MAX COOL appears in display ☀ (page 160).
The air conditioning switches automatically to the following functions:
  * maximum cooling
  * maximum blowing power
  * the air recirculation mode is switched on

- **Deactivating:** Press button ☀ again. MAX COOL disappears in display ☀.
The previous settings are once again in effect.

To switch the maximum cooling function off, you can also press button ☀, ☀, ☀, ☀ or ☀.

Controls in detail

Controls in detail
Air recirculation mode

Switch to air recirculation mode to prevent unpleasant odors from entering the vehicle from the outside (e.g. before driving through a tunnel). This setting cuts off the intake of outside air and recirculates the air in the passenger compartment.

⚠️ Warning!

Fogged windows impair visibility, endangering you and others. If the windows begin to fog on the inside, switching off the air recirculation mode immediately should clear interior window fogging. If interior window fogging persists, make sure the air conditioning is activated, or press button \[\text{Max}\].

▶ Activating: Press button \[\text{Rec}\]. The indicator lamp in the button comes on.

ℹ️ The manually selected air recirculation mode is deactivated automatically:
- after 5 minutes if the outside temperature is below approximately 41°F (5°C)
- after 5 minutes if the air conditioning is turned off
- after 30 minutes if the outside temperature is above approximately 41°F (5°C)

A quantity of outside air is added after approximately 30 minutes.

▶ Deactivating: Press button \[\text{Rec}\] again. The indicator lamp in the button goes out.

The indicator lamp in button \[\text{Max}\] is not lit when the air recirculation mode is automatically switched on.

Residual heat and ventilation

This feature is only available in Canada vehicles. With the engine switched off, it is possible to continue to heat or ventilate the interior for up to 30 minutes. This feature makes use of the residual heat produced by the engine.

ℹ️ The air recirculation mode is activated automatically at high outside temperatures and if the concentration of carbon monoxide (CO) and nitrogen oxide in the outside air increases, for example in a tunnel. The indicator lamp in button \[\text{Rec}\] is not lit when the air recirculation mode is automatically switched on.

▶ Activating: Switch off the ignition. Press button \[\text{Rest}\]. The indicator lamp in the button comes on.

▶ Deactivating: Press button \[\text{Rest}\]. The indicator lamp in the button goes out.

The residual heat is automatically turned off:
- when the ignition is switched on
- after approximately 30 minutes
- if the battery voltage drops
- if the coolant temperature is too low

Regardless of the selected air volume, the blower operates at low speed.

How long the system will provide heating depends on the coolant temperature and the selected temperature. The blower will run at speed setting 1 regardless of the air volume control setting.
Power tilt/sliding sunroof

Rear window defroster

⚠️ Warning!
Any accumulation of snow and ice should be removed from the rear window before driving. Visibility could otherwise be impaired, endangering you and others.

The rear window defroster uses a large amount of power. To keep the battery drain to a minimum, switch off the defroster as soon as the rear window is clear. The defroster is automatically switched off after some time of operation depending on the outside temperature.

► Switch on the ignition.

► **Switching on:** Press button ▼ on the respective climate control panel.
   The indicator lamp in the button comes on.

► **Switching off:** Press button ▼ again.

⚠️ If the rear window defroster switches off too soon and the indicator lamp starts flashing, too many electrical consumers are operating simultaneously and there is insufficient voltage in the battery. The system responds automatically by switching the rear window defroster off.

As soon as the battery has sufficient voltage, the rear window defroster switches back on automatically.

⚠️ Warning!
When opening or closing the tilt/sliding sunroof, make sure there is no danger of anyone being harmed by the opening/closing procedure.

The tilt/sliding sunroof is equipped with the express operation and automatic reversal function. If in express operation mode the tilt/sliding sunroof encounters an obstruction that blocks its path, the automatic reversal function will stop the tilt/sliding sunroof and open it slightly.

The tilt/sliding sunroof operates differently when the sunroof switch is pressed and held. See the “Closing when the tilt/sliding sunroof is blocked” section for details.

The opening/closing procedure of the tilt/sliding sunroof can be immediately halted by releasing the sunroof switch or, if the sunroof switch was moved past the resistance point and released, by moving the sunroof switch in any direction.
Observe Safety notes, see page 59.

Warning!
The tilt/sliding sunroof is made out of glass. In the event of an accident, the glass may shatter. This may result in an opening in the roof.

In a vehicle rollover, occupants not wearing their seat belts or not wearing them properly may be thrown out of the opening. Such an opening also presents a potential for injury for occupants wearing their seat belts properly as entire body parts or portions of them may protrude from the passenger compartment.

To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the tilt/sliding sunroof.

Do not open the tilt/sliding sunroof if there is snow or ice on the roof, as this could result in malfunctions.

If you cannot open or close the tilt/sliding sunroof due to a malfunction contact Roadside Assistance or an authorized Mercedes-Benz Center.

Please keep in mind that weather conditions can sometimes change rapidly. Make sure to close the tilt/sliding sunroof when leaving the vehicle. If water enters the vehicle interior, vehicle electronics could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

You can also open or close the tilt/sliding sunroof using the SmartKey or the KEYLESS-GO function, see “Summer opening feature” (page 105) and “Convenience closing feature” (page 105).

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the tilt/sliding sunroof until you open the driver’s or front passenger door. If no door was opened you can operate the tilt/sliding sunroof for up to 5 minutes.

To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the tilt/sliding sunroof.

Do not open the tilt/sliding sunroof if there is snow or ice on the roof, as this could result in malfunctions.

If you cannot open or close the tilt/sliding sunroof due to a malfunction contact Roadside Assistance or an authorized Mercedes-Benz Center.

Please keep in mind that weather conditions can sometimes change rapidly. Make sure to close the tilt/sliding sunroof when leaving the vehicle. If water enters the vehicle interior, vehicle electronics could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

You can also open or close the tilt/sliding sunroof using the SmartKey or the KEYLESS-GO function, see “Summer opening feature” (page 105) and “Convenience closing feature” (page 105).

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the tilt/sliding sunroof until you open the driver’s or front passenger door. If no door was opened you can operate the tilt/sliding sunroof for up to 5 minutes.

To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the tilt/sliding sunroof.

Do not open the tilt/sliding sunroof if there is snow or ice on the roof, as this could result in malfunctions.

If you cannot open or close the tilt/sliding sunroof due to a malfunction contact Roadside Assistance or an authorized Mercedes-Benz Center.

Please keep in mind that weather conditions can sometimes change rapidly. Make sure to close the tilt/sliding sunroof when leaving the vehicle. If water enters the vehicle interior, vehicle electronics could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

You can also open or close the tilt/sliding sunroof using the SmartKey or the KEYLESS-GO function, see “Summer opening feature” (page 105) and “Convenience closing feature” (page 105).

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the tilt/sliding sunroof until you open the driver’s or front passenger door. If no door was opened you can operate the tilt/sliding sunroof for up to 5 minutes.

To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the tilt/sliding sunroof.

Do not open the tilt/sliding sunroof if there is snow or ice on the roof, as this could result in malfunctions.

If you cannot open or close the tilt/sliding sunroof due to a malfunction contact Roadside Assistance or an authorized Mercedes-Benz Center.

Please keep in mind that weather conditions can sometimes change rapidly. Make sure to close the tilt/sliding sunroof when leaving the vehicle. If water enters the vehicle interior, vehicle electronics could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

You can also open or close the tilt/sliding sunroof using the SmartKey or the KEYLESS-GO function, see “Summer opening feature” (page 105) and “Convenience closing feature” (page 105).

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the tilt/sliding sunroof until you open the driver’s or front passenger door. If no door was opened you can operate the tilt/sliding sunroof for up to 5 minutes.

To avoid damaging the seals, do not transport any objects with sharp edges which can stick out of the tilt/sliding sunroof.

Do not open the tilt/sliding sunroof if there is snow or ice on the roof, as this could result in malfunctions.

If you cannot open or close the tilt/sliding sunroof due to a malfunction contact Roadside Assistance or an authorized Mercedes-Benz Center.

Please keep in mind that weather conditions can sometimes change rapidly. Make sure to close the tilt/sliding sunroof when leaving the vehicle. If water enters the vehicle interior, vehicle electronics could be damaged which is not covered by the Mercedes-Benz Limited Warranty.

You can also open or close the tilt/sliding sunroof using the SmartKey or the KEYLESS-GO function, see “Summer opening feature” (page 105) and “Convenience closing feature” (page 105).

After switching off the ignition or removing the SmartKey from the starter switch, you can operate the tilt/sliding sunroof until you open the driver’s or front passenger door. If no door was opened you can operate the tilt/sliding sunroof for up to 5 minutes.
Power tilt/sliding sunroof

Switch on the ignition.

Opening

- **Opening manually:** Press and hold the sunroof switch to the resistance point in direction of arrow 2.
- Release the sunroof switch when the desired position is reached.
- **Express operation:** To open the tilt/sliding sunroof completely, press the sunroof switch past the resistance point in direction of arrow 2 and release.
- **Stopping during Express operation:** Move the sunroof switch in any direction.

Raising

- **Raising manually:** Press and hold the sunroof switch to the resistance point in direction of arrow 1.
- Release the sunroof switch when the desired position is reached.
- **Express operation:** To raise the tilt/sliding sunroof completely, press the sunroof switch past the resistance point in direction of arrow 1 and release.
- **Stopping during Express operation:** Move the sunroof switch in any direction.

Closing

- **Closing manually:** Pull and hold the sunroof switch to the resistance point in direction of arrow 3.
- Release the sunroof switch when the desired position is reached.
- **Express operation:** To close the tilt/sliding sunroof completely, pull the sunroof switch past the resistance point in direction of arrow 3 and release.
- **Stopping during Express operation:** Move the sunroof switch in any direction.

Closing when the tilt/sliding sunroof is blocked

**Warning!**
Make sure that nobody can become trapped and be seriously or even fatally injured when closing the tilt/sliding sunroof with greater force or without automatic reversal function.

If the movement of the tilt/sliding sunroof is blocked during the closing procedure, the tilt/sliding sunroof will stop and open slightly. However, the tilt/sliding sunroof will exert greater force before reversing than when the tilt/sliding sunroof is closed in express operation. Please exercise caution!

- Immediately after the tilt/sliding sunroof has stopped because it was blocked, pull the sunroof switch in direction of arrow 3 (> page 171) until the tilt/sliding sunroof is fully closed.

If the tilt/sliding sunroof is blocked again and opens slightly:

- Immediately after the tilt/sliding sunroof was blocked, pull the sunroof switch in direction of arrow 3 until the tilt/sliding sunroof is fully closed.

---

When the tilt/sliding sunroof is open, resonance noises may result in addition to the usual wind noises. They are caused by minimal pressure changes in the passenger compartment. To reduce or eliminate these noises, change the position of the tilt/sliding sunroof or open a window slightly.
Warning!
Pulling and holding the sunroof switch to close the tilt/sliding sunroof immediately after it had been blocked two times will cause the tilt/sliding sunroof to close without any reversal function for as long as you hold the sunroof switch.

Synchronizing
The tilt/sliding sunroof must be synchronized
• after the battery has been disconnected or discharged
• after a malfunction
• if the tilt/sliding sunroof does not open smoothly

If the tilt/sliding sunroof cannot be closed or synchronized, contact an authorized Mercedes-Benz Center or call Roadside Assistance.

Vehicles with SmartKey: Switch off the ignition and remove the SmartKey from the starter switch.

Vehicles with KEYLESS-GO: Switch off the ignition and open the driver’s door (this puts the starter switch in position 0, same as with the SmartKey removed from the starter switch). The driver’s door then can be closed again.

Remove the fuse for the tilt/sliding sunroof from the fuse box (page 329).

Reinsert the fuse in the fuse box.

Switch on the ignition.

Press and hold the sunroof switch in direction of arrow 1 (page 171) until the tilt/sliding sunroof is fully raised at the rear.

Keep holding the sunroof switch in direction of arrow 1 for approximately 1 second.

Check the Express operation feature (page 172).

If the tilt/sliding sunroof opens and closes completely, the roof is synchronized. Otherwise repeat the above steps.

Loading and storing
Loading instructions

Warning!
Always fasten items being carried as securely as possible using cargo tie-down hooks and fastening materials appropriate for the weight and size of the load.

In an accident, during hard braking or sudden maneuvers, loose items will be thrown around inside the vehicle and can cause injury to vehicle occupants unless the items are securely fastened in the vehicle.

To help avoid personal injury during a collision or sudden maneuver, exercise care when transporting cargo. Do not pile luggage or cargo higher than the seat backs.

The trunk is the preferred place to carry objects. Always use cargo tie-down hooks when transporting cargo. Do not place anything on the rear-window shelf.

Never drive vehicle with the trunk open. Deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.
Loading and storing

Load distribution

The total load weight including vehicle occupants and luggage/cargo should not exceed the total load limit indicated on the corresponding Tire and Loading Information placard located on the driver’s door B-pillar (page 206).

The handling characteristics of a fully loaded vehicle depend greatly on the load distribution. It is therefore recommended to load the vehicle accordingly with the heaviest items being placed towards the front of the vehicle. Please pay attention to and comply with the following instructions when loading the vehicle and transporting cargo:

- Always place items being carried against front or rear seat backrests, and fasten them as securely as possible.
- The heaviest portion of the cargo should always be kept as low as possible against front or rear seat backrests.

Roof rack

For information about further roof rack equipment, contact an authorized Mercedes-Benz Center.

⚠️ Warning!

Only use roof racks approved by Mercedes-Benz for your vehicle model to avoid damage to the vehicle.

Follow the manufacturer’s installation instructions. Otherwise, an improperly attached roof rack system or its load could become detached from the vehicle.

Do not exceed the maximum roof load of 220 lb (100 kg).

Take into consideration that when the roof rack is loaded, the handling characteristics are different from those when operating the vehicles without the roof rack loaded.

Make sure

- you can raise the tilt/sliding sunroof completely
- you can open the trunk completely

Trim cover

- Flip trim covers 1 open.
- Only attach the roof rack to the anchorage points under trim covers 1.
- Observe manufacturer’s instructions for installation.
Ski bag (Canada only)

⚠️ Warning!
The ski bag is designed for up to four pairs of skis. Do not load the ski bag with other objects.
Always fasten the ski bag securely. In an accident, an unfastened ski bag can cause injury to vehicle occupants.

Unfolding and loading

- Fold rear armrest down.

- Pull catches ② in direction of arrows.
- Open cover ① downwards in direction of the arrow.

- Hook and loop fastener
  - Unfasten hook and loop fastener ①.
  - Pull ski bag into passenger compartment and unfold.
  - Remove the cup holder (page 181).
  - Open the trunk.

- From trunk, slide skis into ski bag.

① Cover
② Catch

① Button
The flap opens in direction of arrow.

Press button ①.
Loading and storing

1 Strap
- Tighten strap ① by pulling at the loose end (arrow) until the skis in the ski bag are tightly secured.

2 Hook
- Connect hook ① to eye ② located in the front storage compartment in the rear center console.
- Tighten strap by pulling at the loose end (arrow).

1 Cover
- With insert or cup holder removed, fold cover ① upward.

- Place folded ski bag inside recess of seat backrest.
- Close ski bag compartment cover.

Removing the ski bag

For ski bag removal, we recommend that you contact an authorized Mercedes-Benz Center.

⚠️ Warning!
Never drive vehicle with trunk open while the ski bag is removed. Deadly carbon monoxide (CO) gases may enter vehicle interior, resulting in unconsciousness and death.

To prevent unauthorized persons from access to the trunk, always close the cover.

Unloading and folding

- Loosen both straps.
- Disconnect hook ① from eye ②.
- Unload skis.
- Close flap in trunk.
- Fold and flatten ski bag lengthwise.
**Parcel net**

⚠️ **Warning!**

The parcel net is intended for storing lightweight items only, such as road maps, mail, etc.

Heavy objects, objects with sharp edges or fragile objects may not be transported in the parcel net. In an accident, during hard braking, or sudden maneuvers, they could be thrown around inside the vehicle and cause injury to vehicle occupants.

The parcel net cannot protect transported goods in the event of an accident.

A parcel net is located in the front passenger footwell.

---

**Cargo tie-down hooks**

Four cargo tie-down hooks are located in the trunk.

Carefully secure cargo by applying even load on all hooks with rope of sufficient strength to hold down the cargo.

Always follow loading instructions (▷ page 173).

---

**Retaining hook**

A retaining hook can be used to attach cargo items such as bags.

1. Tab
2. Retaining hook

▷ Pull tab 1 of retaining hook 2 down.

⚠️ Do not use the retaining hook to tie down cargo.
Loading and storing

Storage compartments

⚠️ Warning!
To help avoid personal injury during a collision or sudden maneuver, exercise care when storing objects in the vehicle. Put luggage or cargo in the trunk if possible.

- Do not pile luggage or cargo higher than the seat backs.
- Do not place anything on shelf below the rear window.
- Parcel nets cannot secure hard or heavy objects.
- Keep compartment lids closed. This will help to prevent stored objects from being thrown about and injuring vehicle occupants during
  - braking
  - vehicle maneuvers
  - an accident

Glove box

Depending on vehicle equipment, an AUX socket or a media interface are located in the glove box. For information on Audio AUX mode or on media interface, see separate COMAND system operating instructions.

1. Glove box lid release
2. Glove box lid

- **Opening:** Press glove box lid release 1.
- **Closing:** Push glove box lid 2 up until it engages.

**Locking and unlocking the glove box separately**
You can lock the glove box separately, e.g. when the vehicle is in the shop for service. The glove box can only be locked or unlocked with the mechanical key.

1. Unlocking glove box
2. Locking glove box

Storage compartment under front center armrest

1. Button to open storage compartment
2. Cover
Loading and storing

The Roadside Assistance button (page 187) and the Information button (page 188) are located in the storage compartment.

Opening storage compartment: Press button ① right or left and fold cover ② sideward.

Storage compartment in the rear center console

[Image]

① Power outlet (page 184)
② Cover

- Slide cover ② forward or rearward.

Storage compartment in the rear armrest

[Image]

- Press the handle upwards and fold the rear armrest lid up.

⚠ Do not sit on or lean your body weight against the armrest when it is folded down, as you could otherwise damage it.

Seat storage compartment

A storage compartment is located in the seat base of the driver’s seat.

[Image]

Driver’s seat storage compartment

① Handle

- Opening: Pull handle ① up.
- Fold the lid forward.

Storage bags

⚠ Warning!

Do not place objects with a combined weight of more than 4.4 lb (2 kg) into the storage bag. Otherwise, the Occupant Classification System OCS may not be able to properly approximate the occupant weight category.

The storage bag is intended for storing light-weight items only.
Useful features

Heavy objects, objects with sharp edges or fragile objects may not be transported in the storage bag. In an accident, during hard braking, or sudden maneuvers, they could be thrown around inside the vehicle and cause injury to vehicle occupants.

The storage bag cannot protect transported goods in the event of an accident.

Storage bags are located on the back of the front seats.

Useful features

Cup holders

⚠️ **Warning!**

In order to help prevent spilling liquids on vehicle occupants and/or vehicle equipment, only use containers that fit into the cup holder. Use lids on open containers and do not fill containers to a height where the contents, especially hot liquids, could spill during braking, vehicle maneuvers, or in an accident. Liquids spilled on vehicle occupants may cause serious personal injury. Liquids spilled on vehicle equipment may cause damage not covered by the Mercedes-Benz Limited Warranty.

The cup holder must be extended when in use with bottles.

When not in use, keep the cup holder closed. An open cup holder may cause injury to you or others when contacted during braking, vehicle maneuvers, or in an accident.

Keep in mind that objects placed in the cup holder may come loose during braking, vehicle maneuvers, or in an accident and be thrown around in the vehicle interior.

Objects thrown around in the vehicle interior may cause an accident and/or serious personal injury.

Cup holder in front center console

- **Extending:** Briefly press mark on cup holder.
  - The cup holder automatically extends upward.

- **Retracting:** Press mark on cup holder and push cup holder in until it engages.
  - The cup holder can be removed for cleaning purposes.
Useful features

- **Removing:** Extend cup holder.
- **Press mark on cup holder and remove cup holder by pulling it upward.**
- **Reinstalling:** Insert cup holder into opening.

! Make sure that the cup holder is correctly positioned in the guide while you are reinstalling it. Otherwise the cup holder can be damaged.

- **Press mark on cup holder and press cup holder downward until it engages.**

**Cup holder in rear center console**

- **Opening/closing:** Slide cover 1 forward or rearward.
  The cup holder can be removed for cleaning purposes.

![Cup holder in rear center console](image)

1 Cup holder
2 Locking pin

- **Removing:** Move pin 2 in direction of arrow to unlock the cup holder.
- **With the cup holder unlocked, take cup holder 1 out upwards.**
- **Reinstalling:** Insert cup holder 1.
- **Move pin 2 against direction of arrow to lock the cup holder.**

**Cup holder in rear armrest**

- **Opening:** Briefly press the front of the rear armrest.
- **Closing:** Slide cup holder back until it engages.

! Do not sit on or lean your body weight against the armrest when it is folded down, as you could otherwise damage it.

! Close the cup holder before folding the armrest upwards. Otherwise you could damage the cup holder.
Useful features

Sun visors

⚠️ Warning!
Do not use the vanity mirror while driving. Keep the vanity mirrors in the sun visors closed while vehicle is in motion. Reflected glare can endanger you and others.

Glare through the windshield
- Flip sun visor 3 down when you experience glare.

Glare through a door window
- Close vanity mirror cover 6 (if opened).
- Disengage sun visor 3 from mounting 2.
- Pivot sun visor 3 to the side.

Vanity mirror
The mirror lamp only functions when the sun visor is engaged in mounting.
- To use vanity mirror 5, lift up vanity mirror cover 6.
  Vanity mirror lamp 1 comes on.

Rear window sunshade

⚠️ Warning!
When operating the rear window sunshade make sure there is no danger of anyone being harmed by the extending or retracting procedure. The extending or retracting procedure can be immediately halted by briefly pressing switch 1. To reverse direction of movement, press switch 1 again.

⚠️ Observe Safety notes, see page 59.

1 Rear window sunshade switch
Always extend the sunshade fully for its support against the window frame.
- Switch on the ignition.
Useful features

Ashtrays

Center console ashtray

- **Warning!** Remove front ashtray insert only with vehicle standing still.

- **Extending:** Press switch ① briefly.
- **Retracting:** Press switch ① briefly.

- **Opening:** Briefly press the marking on the bottom of cover ①.
- **Removing ashtray insert:** Secure vehicle from movement by engaging the parking brake.
- **Shift the automatic transmission into neutral position N.**
- **Push sliding knob ② to the right and hold.**
- **Grab and remove insert from ashtray frame.**
- **Reinstalling ashtray insert:** Push the ashtray insert back into frame until it engages.
- **Closing:** Push down cover ①.

Rear door ashtray

- **Opening:** Briefly press the top of ashtray ②.
- **Removing ashtray insert:** Pull ashtray release ① in direction of arrow.
- **Shift the automatic transmission into neutral position N.**
- **Remove ashtray insert upwards from ashtray frame.**
- **Reinstalling ashtray insert:** Push ashtray insert back into ashtray frame until it engages.
- **Closing:** Push the top of ashtray ②.

Cigarette lighter

- **Warning!** Never touch the heating element or sides of the lighter; they are extremely hot. Hold the knob only.

Make sure any children traveling with you do not injure themselves or start a fire with the hot cigarette lighter.
Useful features

1 Cigarette lighter

- Open the cover (>

- Switch on the ignition.
- Push in cigarette lighter ①.
  Cigarette lighter ① will pop out automatically when hot.
- Take out cigarette lighter ①.
- Reinsert cigarette lighter ① in its socket after use.

- The lighter socket can be used to accommodate 12V DC electrical accessories (up to a maximum of 85 W) designed for use with the standard “cigarette lighter” plug type. Keep in mind, however, that connecting accessories to the lighter socket (for example extensive connecting and disconnecting, or using plugs that do not fit properly) can damage the lighter socket. With the socket damaged, the lighter may not function properly any longer.

Power outlets

- ! Make sure no fluids come into contact with the power outlet, as this could cause a short circuit.

- ! Make sure the override switch is not activated. The power outlet in the rear center console will not function if the override switch is activated.

The power outlets can be used to accommodate 12V DC electrical accessories (e.g. air pump, auxiliary lamps) up to a maximum of 15 A (180 W).

- Switch on the ignition.
Tele Aid

In order to activate the Tele Aid system, a subscriber agreement must be completed. To ensure your system is activated and operational, please press the button to perform the acquaintance call. Failure to complete either of these steps may result in a system that is not activated.

If you have any questions regarding activation, please call the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada).

Shortly after the completion of your Tele Aid acquaintance call, you will receive a user ID and password in the mail. You may use this password to access the Tele Aid section in “Owner’s Online” at mbusa.com (USA only). The “My Tele Aid” section will give you access to account information, remote door unlock and more.

The Tele Aid system is available if

- it has been activated and is operational. Activation requires a subscription for monitoring services, connection and cellular air time.
- vehicle battery power is available
- the relevant cellular phone network and GPS signals are available and pass the information on to the Response Center.
- Location of the vehicle on a map is only possible if the vehicle is able to receive signals from the GPS satellite network and pass the information on to the Response Center.

The Tele Aid system (Telematic Alarm Identification on Demand)
The Tele Aid system consists of three types of response:

- Automatic and manual emergency
- Roadside Assistance
- Information

The Tele Aid system is operational providing that the vehicle’s battery is charged, properly connected, not damaged, and cellular and GPS coverage is available. The Tele Aid system utilizes the cellular network for communication and the GPS (Global Positioning System) satellites for vehicle location. If either of these signals are unavailable, the Tele Aid system may not function and if this occurs, assistance must be summoned by other means.

To adjust the speaker volume during a Tele Aid call do the following:

- Press button or on the multifunction steering wheel.
- Use the adjustment button on your COMAND system headunit.

System self-test

The system performs a self-test after you have switched on the ignition.

⚠️ Warning!

If the indicator lamps in the SOS button, in the Roadside Assistance button and/or in the Information button remain illuminated constantly in red and/or the message Tele Aid Inoperative is displayed in the multifunction display after the system self-test, a malfunction in the system has been detected.

If a malfunction is indicated as outlined above, the system may not operate as
Useful features

Expected. In case of an emergency, help will have to be summoned by other means. Have the system checked at the nearest Mercedes-Benz Center or contact the Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada) as soon as possible.

Emergency calls

An emergency call is initiated automatically following an accident in which the Emergency Tensioning Devices (ETDs) or air bags deploy. An emergency call can also be initiated manually.

Once the emergency call is in progress, the indicator lamp in the SOS button will begin to flash. The message Connecting Call appears in the multifunction display and the COMAND system is muted. When the connection is established, the message Call Connected appears in the multifunction display.

All information relevant to the emergency, such as the location of the vehicle (determined by the GPS satellite location system), vehicle model, identification number and color are generated.

A voice connection between the Response Center and the occupants of the vehicle will be established automatically soon after the emergency call has been initiated. The Response Center will attempt to determine more precisely the nature of the emergency provided they can speak to an occupant of the vehicle.

If no vehicle occupant responds, an ambulance will be sent to the vehicle immediately.

Warning!

If the indicator lamp in the SOS button is flashing continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate an emergency call (e.g. the relevant cellular phone network is not available).

The message Call Failed appears in the multifunction display for approximately 10 seconds. Should this occur, assistance must be summoned by other means.

Initiating an emergency call manually

The “911” emergency call system is a public service. Using it without due cause is a criminal offense.

1. Cover
2. SOS button

- Briefly press on cover 1 to open.
- Press SOS button 2 briefly.
  The indicator lamp in SOS button 2 will flash until the emergency call is concluded.
- Wait for a voice connection to the Response Center.
- Close cover 1 after the emergency call is concluded.
**Warning!**

If you feel at any way in jeopardy when in the vehicle (e.g. smoke or fire in the vehicle, vehicle in a dangerous road location), please do not wait for voice contact after you have pressed the emergency button. Carefully leave the vehicle and move to a safe location. The Response Center will automatically contact local emergency officials with the vehicle’s approximate location if they receive an automatic SOS signal and cannot make voice contact with the vehicle occupants.

Roadside Assistance button

- Open the storage compartment (> page 178).

- Press and hold button  for longer than 2 seconds.

  A call to a Mercedes-Benz Roadside Assistance dispatcher will be initiated. The button  will flash while the call is in progress. The message Connecting Call will appear in the multifunction display and the COMAND system is muted.

When the connection is established, the message Call Connected appears in the multifunction display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).

- The COMAND system display indicates that a Tele Aid call is in progress. While the call is connected you can change to the navigation menu by pressing the NAV button on the COMAND system headunit. Spoken commands are not available.

A voice connection between the Roadside Assistance dispatcher and the occupants of the vehicle will be established.

- Describe the nature of the need for assistance.

The Mercedes-Benz Roadside Assistance dispatcher will either dispatch a qualified Mercedes-Benz technician or arrange to tow your vehicle to the nearest authorized Mercedes-Benz Center. For services such as labor and/or towing, charges may apply. Refer to the Roadside Assistance manual for more information.

The following is only available in the USA: Sign and Drive services: Services such as a jump start, a few gallons of fuel or the replacement of a flat tire with the vehicle spare tire are obtainable at no charge.

- If the indicator lamp in the Roadside Assistance button  is flashing continuously and there was no voice connection to the Response Center established, then
Useful features

the Tele Aid system could not initiate a Roadside Assistance call (e.g. the relevant cellular phone network is not available). The message **Call Failed** appears in the multifunction display.

**Terminating calls:** Press button [(NAME)] on the multifunction steering wheel.

or

Press the respective button for ending a telephone call on the COMAND system headunit.

**Information button**

[IMAGE]

Press and hold button [NAME] for longer than 2 seconds.

A call to the Customer Assistance Center will be initiated. The button [NAME] will flash while the call is in progress. The message **Connecting Call** will appear in the multifunction display and the COMAND system is muted.

When the connection is established, the message **Call Connected** appears in the multifunction display. The Tele Aid system will transmit data generating the vehicle identification number, model, color and location (subject to availability of cellular and GPS signals).

The COMAND system display indicates that a Tele Aid call is in progress. While the call is connected you can change to the navigation menu by pressing the NAV button on the COMAND system headunit. Spoken commands are not available.

A voice connection between the Customer Assistance Center representative and the occupants of the vehicle will be established. Information regarding the operation of your vehicle, the nearest authorized Mercedes-Benz Center or Mercedes-Benz USA products and services is available to you.

For more details concerning the Tele Aid system, please visit [www.mbusa.com](http://www.mbusa.com) (USA only), log in to “Owner’s Online” and visit the “My Tele Aid” section to learn more.

If the indicator lamp in the Information button [NAME] is flashing continuously and there was no voice connection to the Response Center established, then the Tele Aid system could not initiate an Information call (e.g. the relevant cellular phone network is not available). The message **Call Failed** appears in the multifunction display.

**Terminating calls:** Press button [NAME] on the multifunction steering wheel.

or

Press the respective button for ending a telephone call on the COMAND system headunit.

**Call priority**

If other service calls such as a Roadside Assistance call or Information call are active, an emergency call is still possible. In this case, the emergency call will take priority and override all other active calls.
The indicator lamp in the respective button flashes until the call is concluded. Emergency calls can only be terminated by a Response Center or Customer Assistance Center representative. All other calls can be terminated by pressing button on the multifunction steering wheel or the respective button for ending a telephone call on the COMAND system headunit.

When a Tele Aid call has been initiated, the COMAND system audio is muted. The mobile phone is no longer connected to the headunit. If you must use this phone, we recommend that you use it only with the vehicle at a standstill in a safe location.

**Destination Download to the COMAND system**

The components and operating principles of the COMAND system can be found in the separate COMAND operating instructions.

Destination Download allows you access to a database of over 10,000,000 points of interest (POIs) that can be downloaded to your vehicle’s navigation system. If you know the destination the address can be downloaded, or can be provided with points of interests near your location.

The Response Center can transmit destination data to the COMAND system during the connection with the Roadside Assistance or Customer Assistance Center. The transmitted data can contain address details for a Mercedes-Benz Center or POIs.

**Route guidance**

A prompt appears for confirmation if route guidance to the address is to be started.

- Select Yes using button or .
- Press button to confirm.

The system starts the route calculation and subsequently the route guidance to the defined address.

If you select No, you can save the address in your address book.

The destination download feature is available if the relevant mobile phone network is available and data connection is possible.

**Remote door unlock**

In case you have locked your vehicle unintentionally (e.g. SmartKey inside vehicle), and the reserve SmartKey is not available:

- Contact the Mercedes-Benz Response Center at 1-800-756-9018 (in the USA) or 1-888-923-8367 (in Canada). You will be asked to provide your password.
- Then return to your vehicle at the time arranged with the Response Center and pull the trunk recessed handle for a minimum of 20 seconds until the SOS button is flashing. The message Connecting Call appears in the multifunction display.

As an alternative, you may unlock the vehicle via Internet in the “My Tele Aid” section of “Owner’s Online”, using your ID and password (USA only).

The Response Center will then unlock your vehicle with the remote door unlocking feature.

The remote door unlock feature is available if the relevant cellular phone network is available. The SOS button will flash and the message Connecting Call will appear in the multifunction display to indicate receipt of the door unlock command.
Useful features

Once the vehicle is unlocked, a Response Center specialist will attempt to establish voice contact with the vehicle occupants. If the tailgate recessed handle was pulled for more than 20 seconds before door unlock authorization was received by the Response Center, you must wait 15 minutes before pulling the tailgate recessed handle again.

Stolen Vehicle Recovery services

In the event your vehicle was stolen:

► Report the incident to the police.
  The police will issue a numbered incident report.

► Pass this number on to the Mercedes-Benz Response Center along with your password.
  The Response Center will then attempt to covertly contact the vehicle’s Tele Aid system. Once the vehicle is located, the Response Center will contact the local law enforcement and you. The vehicle’s location will only be provided to law enforcement.

► If the anti-theft alarm stays on for more than 30 seconds, a call to the Response Center is initiated automatically by the Tele Aid system provided Tele Aid service was subscribed to and properly activated, and that necessary cellular service and GPS coverage are available. See “Anti-theft alarm system” (► page 70).

Garage door opener

The integrated remote control can operate up to three separately controlled devices compatible with HomeLink® or some other systems.

See the following instructions for programming information.

Warning!

Before programming the integrated remote control to a garage door opener or gate operator, make sure people and objects are out of the way of the device to prevent potential harm or damage. When programming a garage door opener, the door moves up or down. When programming a gate operator, the gate opens or closes.

Do not use the integrated remote control with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards.

When programming a garage door opener, park vehicle outside the garage.

Do not run the engine while programming the integrated remote control. Inhalation of
exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death.

Programming the integrated remote control

- **Step 1:** Switch on the ignition.
- **Step 2:** If you have previously programmed a signal transmitter button and wish to retain its programming, proceed to step 3. or
- If you are programming the integrated remote control for the first time, press and hold the two outer signal transmitter buttons 2 and 4 and release them only when indicator lamp 1 begins to flash after approximately 20 seconds (do not hold the button for longer than 30 seconds).

This procedure erases any previous settings for all three channels and initializes the memory. If you later wish to program a second and/or third hand-held transmitter to the remaining two signal transmitter buttons, do not repeat this step and begin directly with step 3.

**Step 3:** Hold the end of hand-held remote control 5 of the device you wish to train approximately 2 to 12 in (5 to 30 cm) away from the signal transmitter button (2, 3 or 4) to be programmed, while keeping indicator lamp 1 in view.

**Step 4:** Using both hands, simultaneously press hand-held remote control button 6 and the desired signal transmitter button (2, 3 or 4). Do not release the buttons until step 5 is completed. Indicator lamp 1 will flash, first slowly and then rapidly.

Indicator lamp 1 flashes immediately the first time the signal transmitter button is programmed. If this button has already been programmed, the indicator lamp will only start flashing after 20 seconds.

**Step 5:** After indicator lamp 1 changes from a slow to a rapidly flashing light, release the hand-held remote control button and the signal transmitter button.

**Step 6:** Press and hold the just-trained signal transmitter button (2, 3 or 4) and observe indicator lamp 1.

If indicator lamp 1 stays on constantly, programming is complete and your device should activate when the respective signal transmitter button (2, 3 or 4) is pressed and released.

- If indicator lamp 1 flashes rapidly for approximately 2 seconds and then turns to a constant light, continue with programming steps 8 through 12 as your garage door opener may be equipped with the “rolling code” feature.

**Step 7:** To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.

Rolling code programming

To train a garage door opener (or other rolling code devices) with the rolling code feature, follow these instructions after completing the “Programming” portion (steps 1 through 6) of this text. (A second person may make the following training procedures quicker and easier.)

**Step 8:** Locate the “training” button on the garage door opener motor head unit.

Indicator lamp 1 flashes immediately the first time the signal transmitter button is programmed. If this button has already been programmed, the indicator lamp will only start flashing after 20 seconds.

**Step 5:** After indicator lamp 1 changes from a slow to a rapidly flashing light, release the hand-held remote control button and the signal transmitter button.

**Step 6:** Press and hold the just-trained signal transmitter button (2, 3 or 4) and observe indicator lamp 1.

If indicator lamp 1 stays on constantly, programming is complete and your device should activate when the respective signal transmitter button (2, 3 or 4) is pressed and released.

- If indicator lamp 1 flashes rapidly for approximately 2 seconds and then turns to a constant light, continue with programming steps 8 through 12 as your garage door opener may be equipped with the “rolling code” feature.

**Step 7:** To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.

**Rolling code programming**

To train a garage door opener (or other rolling code devices) with the rolling code feature, follow these instructions after completing the “Programming” portion (steps 1 through 6) of this text. (A second person may make the following training procedures quicker and easier.)

**Step 8:** Locate the “training” button on the garage door opener motor head unit.

Indicator lamp 1 flashes immediately the first time the signal transmitter button is programmed. If this button has already been programmed, the indicator lamp will only start flashing after 20 seconds.

**Step 5:** After indicator lamp 1 changes from a slow to a rapidly flashing light, release the hand-held remote control button and the signal transmitter button.

**Step 6:** Press and hold the just-trained signal transmitter button (2, 3 or 4) and observe indicator lamp 1.

If indicator lamp 1 stays on constantly, programming is complete and your device should activate when the respective signal transmitter button (2, 3 or 4) is pressed and released.

- If indicator lamp 1 flashes rapidly for approximately 2 seconds and then turns to a constant light, continue with programming steps 8 through 12 as your garage door opener may be equipped with the “rolling code” feature.

**Step 7:** To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.
Useful features

“smart” button. If there is difficulty locating the transmitting button, refer to the garage door opener Operator’s Manual.

► Step 9: Press the “training” button on the garage door opener motor head unit. The “training light” is activated. You have 30 seconds to initiate the following two steps.

► Step 10: Return to the vehicle and firmly press, hold for 2 seconds and release the programmed signal transmitter button (2, 3 or 4).

► Step 11: Press, hold for 2 seconds and release same signal transmitter button a second time to complete the training process.

Some garage door openers (or other rolling code equipped devices) may require you to press, hold for 2 seconds and release the same signal transmitter button a third time to complete the training process.

► Step 12: Confirm the garage door operation by pressing the programmed signal transmitter button (2, 3 or 4).

► Step 13: To program the remaining two signal transmitter buttons, repeat the steps above starting with step 3.

Gate operator/Canadian programming

Canadian radio-frequency laws require transmitter signals to “time-out” (or quit) after several seconds of transmission which may not be long enough for the integrated signal transmitter to pick up the signal during programming. Similar to this Canadian law, some U.S. gate operators are designed to “time-out” in the same manner.

If you live in Canada or if you are having difficulties programming a gate operator (regardless of where you live) by using the programming procedures, replace step 4 with the following:

► Step 4: Press and hold the signal transmitter button (2, 3 or 4). Do not release this button until it has been successfully trained.

► While still holding down the signal transmitter button (2, 3 or 4), “cycle” your hand-held remote control button 6 as follows: Press and hold button 6 for 2 seconds, then release it for 2 seconds, and again press and hold it for 2 seconds. Repeat this sequence on the hand-held remote control until the frequency signal has been learned.

Upon successful training, indicator lamp 1 will flash slowly and then rapidly after several seconds.

► Proceed with programming step 5 and step 6 to complete.

Upon completion of programming the integrated remote control, make sure you retain the hand-held remote control that came with the garage door opener, gate operator or other device. You may need it for use in other vehicles, for future programming of an integrated remote control, or simply for continued use as a hand-held remote control to operate the respective device in other situations.

Reprogramming a single signal transmitter button

To program a device using a signal transmitter button previously trained, follow these steps:
Useful features

Operation of integrated remote control

Switch on the ignition.
Select and press the appropriate integrated signal transmitter button (2, 3 or 4) to activate the remote controlled device.
The integrated remote control transmitter continues to send the signal as long as the button is pressed – up to 20 seconds.

Programming tips

If you are having difficulty programming the integrated remote control, here are some helpful tips:

- Check the frequency of hand-held remote control 5 (typically located on the reverse side of the remote). The integrated remote control is compatible with radio-frequency devices operating between 280-390 MHz.
- Put a new battery in hand-held remote control 5. This will increase the likelihood of the hand-held remote control sending a faster and more accurate signal to the integrated remote control.
- While performing step 3, hold hand-held remote control 5 at different lengths and angles from the signal transmitter button (2, 3 or 4) you are programming. Attempt varying angles at the distance of 2 to 12 inches (5 to 30 cm) away or the same angle at varying distances.
- If another hand-held remote control is available for the same device, try the programming steps again using that other hand-held remote control. Make sure new batteries are in the hand-held remote control before beginning the procedure.
- Straighten the antenna wire from the garage door opener assembly. This may help improve transmitting and/or receiving signals.

Erasing the integrated remote control memory

If you sell your vehicle, erase the codes of all three channels.

USA only:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- Certain types of garage door openers are incompatible with the integrated remote control. If you should experience further difficulties with programming the integrated remote control, contact an authorized Mercedes-Benz Center, or call Mercedes-Benz Customer Assistance Center (in the USA) at 1-800-FOR-MERcedes, or Customer Service (in Canada) at 1-800-387-0100.
- Check the frequency of hand-held remote control 5 (typically located on the reverse side of the remote). The integrated remote control is compatible with radio-frequency devices operating between 280-390 MHz.
Useful features

1. This device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

i Canada only:
This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

Floormats

⚠️ Warning!
Whenever you are using floormats, make sure there is enough clearance and that the floormats are securely fastened.
Floormats should always be securely fastened using the fastening equipment.
Before driving off, check that the floormats are securely in place and adjust them if necessary. A loose floormat could slip and hinder proper functioning of the pedals.
Do not place several floormats on top of each other as this may impair pedal movement.

To install or remove the floormat more easily, move the driver’s seat or front passenger seat as far to the rear as possible.

① Retainer pin
② Eyelet

► Removing: Pull floormat off of retainer pins ①.
► Installing: Press floormat eyelets ② onto retainer pins ①.

Vehicle equipment

This Operator’s Manual describes all features, standard or optional, potentially available for your vehicle at the time of purchase. Please be aware that your vehicle might not be equipped with all features described in this manual.

The first 1000 miles (1500 km)

The more cautiously you treat your vehicle during the break-in period, the more satisfied you will be with its performance later on.

- Drive your vehicle during the first 1000 miles (1500 km) at varying but moderate vehicle and engine speeds.
- During this period, avoid heavy loads (full throttle driving) and excessive engine speeds (no more than $\frac{2}{3}$ of maximum rpm in each gear).
- Select C as the preferred shift program (▶ page 116) for the first 1000 miles (1500 km).
- Avoid accelerating by kickdown.
- Do not attempt to slow the vehicle down by shifting to a lower gear using the gear selector lever.
- Select gear ranges 3, 2 or 1 (▶ page 115) only when driving at moderate speeds (for hill driving).

After 1000 miles (1500 km) you may gradually increase vehicle and engine speeds to the permissible maximum.

Additional instructions for AMG vehicles:

- During the first 1000 miles (1500 km), do not exceed a speed of 85 mph (140 km/h).
- During this period, avoid engine speeds above 4500 rpm in each gear.
- Shift gears in a timely manner.

All of the above instructions, as may apply to your vehicle type, also apply when driving the first 1000 miles (1500 km) after the engine or the rear differential has been replaced.

Always obey applicable speed limits.
At the gas station

Refueling

⚠️ Warning!
Gasoline is highly flammable and poisonous. It burns violently and can cause serious personal injury.

Never allow sparks, flames or smoking materials near gasoline!

Turn off the engine before refueling.

Whenever you are around gasoline, avoid inhaling fumes and any skin or clothing contact. Extinguish all smoking materials.

Direct skin contact with fuels and the inhalation of fuel vapors are damaging your health.

⚠️ Warning!
Overfilling of the fuel tank may create pressure in the system which could cause a gas discharge. This could cause the gas to spray back out when removing the fuel pump nozzle, which could cause personal injury.

⚠️ Never refuel vehicles with gasoline engine with diesel fuel. Even small amounts of diesel fuel will damage the fuel system and engine. Damage resulting from the use of non-approved fuels or fuel additives or result from mixing gasoline with diesel fuel is not covered by the Mercedes-Benz Limited Warranty.

⚠️ If you have accidentally filled the tank with incorrect or non-approved fuel, do not switch on the ignition. Otherwise the incorrect or non-approved fuel will get into the fuel lines. The fuel system must be drained completely. Contact an authorized Mercedes-Benz Center to have the fuel system drained completely.

⚠️ To prevent damage to the catalytic converters, only use premium unleaded gasoline in this vehicle.

Any noticeable irregularities in engine operation should be repaired promptly. Otherwise, excessive unburned fuel may reach the catalytic converter, causing it to overheat and potentially start a fire.

⚠️ Only use premium unleaded gasoline with a minimum Posted Octane Rating of 91 (average of 96 RON / 86 MON). Information on gasoline quality can normally be found on the fuel pump. Please contact gas station personnel in case labels on the pump cannot be found.

For more information on gasoline, see “Premium unleaded gasoline” (> page 346), see “Fuel requirements” (> page 347), or contact an authorized Mercedes-Benz Center, or visit www.mbusa.com (USA only).

The fuel filler flap is located on the right-hand side of the vehicle towards the rear.

Locking/unlocking the vehicle with the SmartKey automatically locks/unlocks the fuel filler flap.

⚠️ In case that the central locking system does not release the fuel filler flap, or the opening mechanism is clamping, contact Roadside Assistance or an authorized Mercedes-Benz Center.

The fuel filler flap is located on the right-hand side of the vehicle towards the rear.

Locking/unlocking the vehicle with the SmartKey automatically locks/unlocks the fuel filler flap.

⚠️ In case that the central locking system does not release the fuel filler flap, or the opening mechanism is clamping, contact Roadside Assistance or an authorized Mercedes-Benz Center.

The fuel filler flap is located on the right-hand side of the vehicle towards the rear.

Locking/unlocking the vehicle with the SmartKey automatically locks/unlocks the fuel filler flap.

⚠️ In case that the central locking system does not release the fuel filler flap, or the opening mechanism is clamping, contact Roadside Assistance or an authorized Mercedes-Benz Center.
At the gas station

1 Fuel filler flap
2 Fuel filler cap
3 Holder

- Turn off the engine.

- Leaving the engine running and the fuel filler cap open can cause the yellow fuel tank reserve warning lamp to flash and the malfunction indicator lamp (USA only) or (Canada only) to illuminate. For more information, see also “Practical hints” (page 298).

- Remove the SmartKey from the starter switch.

KEYLESS-GO: Open the driver’s door (this puts the starter switch in position 0, same as with the SmartKey removed from the starter switch). The driver’s door then can be closed again.

- **Opening**: Push fuel filler flap 1 at the point indicated by the arrow.
- Turn fuel filler cap 2 counterclockwise.
- Take off fuel filler cap 2.
- Place fuel filler cap 2 in direction of arrow into holder 3 located on the inside of fuel filler flap.
- Fully insert filler nozzle unit and refuel.
- Only fill your tank until the filler nozzle unit cuts out – **do not top off or overfill**.
- **Closing**: Turn fuel filler cap 2 clockwise until it audibly engages.

- Make sure to close the fuel filler flap before locking your vehicle as the flap locking pin prevents closing after you have locked the vehicle.

- Close fuel filler flap 1.

---

**Check regularly and before a long trip**

For information on quantities and requirements of operating agents, see “Fuels, coolants, lubricants, etc.” (page 343).

Check the following:

- Engine oil level (page 200)
- Tire inflation pressure (page 212)
- Coolant level (page 202)
- Vehicle lighting (page 94), (page 308)
- Washer system and headlamp cleaning system (page 203)
- Brake fluid (page 234), (page 271) and (page 291)
**Engine compartment**

**Hood**

⚠️ **Warning!**
Do not pull the release lever while the vehicle is in motion. Otherwise the hood could be forced open by passing air flow. This could cause the hood to come loose and injure you and/or others.

**Opening**

⚠️ **Warning!**
If you see flames or smoke coming from the engine compartment, or if the coolant temperature indicator indicates that the engine is overheated, do not open the hood. Move away from the vehicle and do not open the hood until the engine has cooled. If necessary, call the fire department.

⚠️ **Warning!**
You could be injured when the hood is open – even when the engine is turned off. Parts of the engine can become very hot. To prevent burns, let the engine cool off completely before touching any components on the vehicle. Comply with all relevant safety precautions.

⚠️ **Warning!**
To help prevent personal injury, stay clear of moving parts when the hood is open and the engine is running. The radiator fan may continue to run for approximately 30 seconds or may even restart after the engine has been turned off. Stay clear of fan blades.

⚠️ **Warning!**
The engine is equipped with a transistorized ignition system. Because of the high voltage it is dangerous to touch any components (ignition coils, spark plug sockets, diagnostic socket) of the ignition system with the engine running, while starting the engine, or when the ignition is switched on and the engine is turned manually.

- Pull release lever 1.
  The hood is unlocked.

⚠️ To avoid damage to the windshield wipers or hood, never open the hood if the wiper arms are folded forward away from the windshield.
Engine compartment

2 Handle for opening the hood

Push handle 2 under the hood upwards.

Pull up on the hood and then release it.

The hood will be automatically held open at shoulder height by gas-filled struts.

Closing

⚠️ Warning!
When closing the hood, use extreme caution not to catch hands or fingers. Be careful that you do not close the hood on anyone.

Make sure the hood is securely engaged before driving off. Do not continue driving if the hood can no longer engage after an accident, for example. The hood could otherwise come loose while the vehicle is in motion and injure you and/or others.

Let the hood drop from a height of approximately 1 ft (30 cm).

Check to make sure the hood is fully closed.

If you can raise the hood at a point above the headlamps, then it is not properly closed. Open it again and let it drop with somewhat greater force.

Engine oil

The amount of oil your engine needs will depend on a number of factors, including driving style. Increased oil consumption can occur when the vehicle is new or the vehicle is driven frequently at higher engine speeds.

Engine oil consumption checks should only be made after the vehicle break-in period.

⚠️ Do not use any special lubricant additives, as these may damage the drive assemblies. Using special additives not approved by Mercedes-Benz may cause damage not covered by the Mercedes-Benz Limited Warranty.

For further information contact an authorized Mercedes-Benz Center.

Notes on checking engine oil level

When checking the oil level
• the vehicle must be parked on level ground
• with the engine at operating temperature, the vehicle must have been stationary for at least 5 minutes with the engine turned off
• with the engine not at operating temperature, the vehicle must have been stationary for at least 30 minutes with the engine turned off
Checking engine oil level

1. Open the hood (page 199).
2. Oil dipstick
3. Upper (max) mark
4. Lower (min) mark

1. Pull out oil dipstick 1.
2. Wipe oil dipstick 1 clean.
3. Fully insert oil dipstick 1 into the dipstick guide tube.
4. Pull out oil dipstick 1 again after approximately 3 seconds to obtain accurate reading.

The oil level is correct when it is between lower (min) mark 3 and upper (max) mark 2 of oil dipstick 1.

CLS 550:
The filling quantity between the upper and lower marks on the oil dipstick is approximately 2.1 US qt. (2.0 l).

CLS 63 AMG:
The filling quantity between the upper and lower marks on the oil dipstick is approximately 1.6 US qt. (1.5 l).

1. If necessary, add engine oil.

For more information on engine oil, see “Fuels, coolants, lubricants etc.” (page 343).

For information on messages in the multifunction display concerning engine oil, see the “Practical hints” section (page 282).

Adding engine oil

1. Only use approved engine oils and oil filters required for vehicles with Maintenance System. For a listing of approved engine oils and oil filters, contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only).

Using engine oils and oil filters of specification other than those expressly required for the Maintenance System, or changing
Engine compartment

CLS 63 AMG

1 Filler cap

- Unscrew filler cap 1 from filler neck.
- Add engine oil as required. Be careful not to overfill with oil.

Be careful not to spill any oil when adding. Avoid environmental damage caused by oil entering the ground or water.

Excess oil must be siphoned or drained off. It could cause damage to the engine and emission control system not covered by the Mercedes-Benz Limited Warranty.

- Screw filler cap 1 back on filler neck.

For more information on engine oil, see the “Technical data” section (page 343) and (page 345).

Transmission fluid level

The transmission fluid level does not need to be checked. If you notice transmission fluid loss or gearshifting malfunctions, have an authorized Mercedes-Benz Center check the transmission.

Coolant level

The engine coolant is a mixture of water and anticorrosion/antifreeze.

When checking the coolant level, the vehicle must be parked on level ground, and the coolant temperature must be below 158°F (70°C).

⚠️ Warning!

In order to avoid any potentially serious burns:

- Use extreme caution when opening the hood if there are any signs of steam or coolant leaking from the cooling system, or if the coolant temperature indicator indicates that the coolant is overheated.
- Do not remove pressure cap on coolant reservoir if coolant temperature is above 158°F (70°C). Allow engine to cool down before removing cap. The coolant reservoir contains hot fluid and is under pressure.
- Using a rag, slowly open the cap approximately 1/2 turn to relieve excess pressure. If opened immediately, scalding hot fluid and steam will be blown out under pressure.
- Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts.
Using a rag, turn cap ① slowly approximately \( \frac{1}{2} \) counterclockwise to release any excess pressure.

Continue turning cap ① counterclockwise and remove it.

The coolant level is correct if the level

- for cold coolant: reaches marking bar ③ in expansion tank ②
- for warm coolant: is approximately 0.6 in (1.5 cm) higher

Add coolant as required.

Replace and tighten cap ①.

For more information on coolant, see the “Technical data” section (page 347).

### Washer system and headlamp cleaning system

#### Warning!

Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite and burn. You could be seriously burned.

Always use washer solvent/antifreeze where temperatures may fall below freezing point. Failure to do so could result in damage to the washer system/fluid reservoir.

Only use washer fluid which is suitable for plastic lenses. Improper washer fluid can damage the plastic lenses of the headlamps.

Do not use distilled or de-ionized water in the washer fluid reservoir. Otherwise, the washer fluid level sensor could be damaged.

**Opening washer fluid reservoir:** Pull tab of cap ① upwards.

**Refill the washer fluid reservoir with MB Windshield Washer Concentrate “MB SummerFit”** and water (or commercially available premixed washer solvent/antifreeze,
Tires and wheels

depending on ambient temperatures) (▷ page 350).

- Closing washer fluid reservoir: Press cap onto filler hole until it engages.

For more information, see “Washer system and headlamp cleaning system” (▷ page 345).

---

**Tires and wheels**

**Safety notes**

Contact an authorized Mercedes-Benz Center for information on tested and recommended rims and tires for summer and winter operation. They can also offer advice concerning tire service and purchase.

⚠️ **Warning!**

Replace rims or tires with the same designation, manufacturer and type as shown on the original part. For further information contact an authorized Mercedes-Benz Center. If incorrectly sized rims and tires are mounted, the wheel brakes or suspension components can be damaged. Also, the correct operating clearance of the wheels and the tires may no longer be correct.

⚠️ **Warning!**

Worn, old tires can cause accidents. If the tire tread is worn to minimum tread depth, or if the tires have sustained damage, replace them.

When replacing rims, only use genuine Mercedes-Benz wheel bolts specified for the particular rim type. Failure to do so can result in the bolts loosening and possibly an accident.

Retreaded tires are not tested or recommended by Mercedes-Benz, since previous damage cannot always be recognized on retreads. The operating safety of the vehicle cannot be assured when such tires are used.

⚠️ **Warning!**

If you feel a sudden significant vibration or ride disturbance, or you suspect that possible damage to your vehicle has occurred, you should turn on the hazard warning flashers, carefully slow down, and drive with caution to an area which is a safe distance from the road.

Inspect the tires and the vehicle underbody for possible damage. If the vehicle or tires appear unsafe, have the vehicle towed to the nearest authorized Mercedes-Benz Center or tire dealer for repairs.

⚠️ **Warning!**

Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You could lose control of the vehicle. Continued driving with a flat tire or driving at high
speed with a flat tire will cause excessive heat build-up and possibly a fire.

### Important guidelines
- Only use sets of tires and rims of the same type and make.
- Tires must be of the correct size for the rim.
- Break in new tires for approximately 60 miles (100 km) at moderate speeds.
- Regularly check the tires and rims for damage. Dented or bent rims can cause tire inflation pressure loss and damage to the tire beads.
- If vehicle is heavily loaded, check tire inflation pressure and correct as required.
- Do not allow your tires to wear down too far. Adhesion properties on wet roads are sharply reduced at tread depths of less than $\frac{1}{8}$ in (3 mm).
- When replacing individual tires, you should mount new tires on the front wheels first (on vehicles with same-sized wheels all around).

### Tire care and maintenance

#### Warning!
Regularly check the tires for damage. Damaged tires can cause tire inflation pressure loss. As a result, you could lose control of your vehicle.
Worn, old tires can cause accidents. If the tire tread is worn to minimum tread depth, or if the tires have sustained damage, replace them.

Check the tire inflation pressure at least every other week. For more information on checking tire inflation pressure, see “Recommended tire inflation pressure” († page 210).

### Tire inspection

Every time you check the tire inflation pressure, you should also inspect your tires for the following:
- excessive treadwear († page 205)
- cord or fabric showing through the tire’s rubber
- bumps, bulges, cuts, cracks or splits in the tread or side of the tire

### Life of tire

#### Warning!
Tires and spare tire should be replaced after 6 years, regardless of the remaining tread.

The service life of a tire is dependent upon varying factors including but not limited to:
- Driving style
- Tire inflation pressure
- Distance driven

### Tread depth

#### Warning!
Although the applicable federal motor vehicle safety laws consider a tire to be worn when the treadwear indicators (TWI) become visible at approximately $\frac{1}{16}$ in.
Tires and wheels

(1.6 mm), we recommend that you do not allow your tires to wear down to that level. As tread depth approaches \(1/8\) in (3 mm), the adhesion properties on a wet road are sharply reduced. Depending upon the weather and/or road surface (conditions), the tire traction varies widely.

Do not allow your tires to wear down too far. Adhesion properties on wet roads are sharply reduced at tread depths of less than \(1/8\) in (3 mm). Treadwear indicators (TWI) are required by law. These indicators are located in six places on the tread circumference and become visible at a tread depth of approximately \(1/16\) in (1.6 mm), at which point the tire is considered worn and should be replaced. The recommended minimum tire tread depth for summer tires is \(1/8\) in (3 mm). The recommended minimum tire tread depth for winter tires is \(1/6\) in (4 mm).

Direction of rotation

Unidirectional tires offer added advantages, such as better hydroplaning performance. To benefit, however, you must make sure the tires rotate in the direction specified. An arrow on the sidewall indicates the intended direction of rotation (spinning) of the tire.

Spare wheels may be mounted against the direction of rotation (spinning) even with a unidirectional tire for temporary use only until the regular drive wheel has been repaired or replaced. Always observe and follow applicable temporary use restrictions and speed limitations indicated on the spare wheel.

Storing tires

! Keep unmounted tires in a cool, dry place with as little exposure to light as possible. Protect tires from contact with oil, grease and fuels.

Cleaning tires

! Never use a round nozzle to power wash tires. The intense jet of water can result in damage to the tire. Always replace a damaged tire.

Loading the vehicle

Two labels on your vehicle show how much weight it may properly carry.

(1) The Tire and Loading Information placard can be found on the driver’s door B-pillar. This placard tells you important information about the number of people that can be in the vehicle and the total weight that can be carried in the vehicle. It also contains information on the proper size and recommended tire inflation pres-
sures for the original equipment tires on your vehicle.

(2) The certification label, also found on the driver’s door B-pillar. It tells you about the gross weight capacity of your vehicle, called the Gross Vehicle Weight Rating (GVWR). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo. The certification label also tells you about the front and rear axle weight capacity, called the Gross Axle Weight Rating (GAWR).

The GAWR is the total allowable weight that can be carried by a single axle (front or rear). Never exceed the GVWR or GAWR for either the front axle or rear axle.

Following is a discussion on how to work with the information contained on the Tire and Loading Information placard with regards to loading your vehicle.

**Tire and Loading Information**

⚠️ **Warning!**

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

**Tire and Loading Information placard**

1 Data shown on Tire and Loading Information placard example are for illustration purposes only. Load limit data are specific to each vehicle and may vary from data shown in the following illustration. Refer to Tire and Loading Information placard on vehicle for actual data specific to your vehicle.

1 Load limit information on the Tire and Loading Information placard

The Tire and Loading Information placard showing the load limit information is located on the driver’s door B-pillar (page 206).

▶ Locate the statement “The combined weight of occupants and cargo should never exceed XXX kilograms or XXX lbs.” on the Tire and Loading Information placard.

The combined weight of all occupants, cargo/luggage and trailer tongue load (if applicable) should never exceed the weight referenced in that statement.
Seating capacity

The seating capacity gives you important information on the number of occupants that can be in the vehicle. Observe front and rear seating capacity. The Tire and Loading Information placard showing the seating capacity is located on the driver’s door B-pillar (page 206).

Data shown on Tire and Loading Information placard example are for illustration purposes only. Seating capacity data are specific to each vehicle and may vary from data shown in the following illustration. Refer to Tire and Loading Information placard on vehicle for actual data specific to your vehicle.

Steps for determining correct load limit

The following steps have been developed as required of all manufacturers under Title 49, Code of U.S. Federal Regulations, Part 575 pursuant to the “National Traffic and Motor Vehicle Safety Act of 1966”.

Step 1: Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s Tire and Loading Information placard.

Step 2: Determine the combined weight of the driver and passengers that will be riding in your vehicle.

Step 3: Subtract the combined weight of the driver and passengers from XXX kilograms or XXX lbs.

Step 4: The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1 400 lbs and there will be five 150 lbs passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs (1 400 - 750 (5 x 150) = 650 lbs).

Step 5: Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

Step 6 (if applicable): If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle (page 210).

The following table shows examples on how to calculate total and cargo load capacities with varying seating configurations and number and size of occupants. The following examples use a load limit of 1 500 lbs. This is for illustration purposes only. Make sure...
you are using the actual load limit for your vehicle stated on the vehicle’s Tire and Loading Information placard (➤ page 208).

### Example

<table>
<thead>
<tr>
<th>Example</th>
<th>Combined weight limit of occupants and cargo from Tire and Loading Information placard</th>
<th>Number of occupants (driver and passengers)</th>
<th>Seating configuration</th>
<th>Occupants weight</th>
<th>Combined weight of all occupants</th>
<th>Available cargo/luggage and trailer tongue weight (total load limit from Tire and Loading Information placard minus combined weight of all occupants)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1,500 lbs</td>
<td>5</td>
<td>front: 2, rear: 3</td>
<td>Occupant 1: 150 lbs, Occupant 2: 180 lbs, Occupant 3: 160 lbs, Occupant 4: 140 lbs, Occupant 5: 120 lbs</td>
<td>750 lbs</td>
<td>1,500 lbs - 750 lbs = 750 lbs</td>
</tr>
<tr>
<td>2</td>
<td>1,500 lbs</td>
<td>3</td>
<td>front: 1, rear: 2</td>
<td>Occupant 1: 200 lbs, Occupant 2: 190 lbs, Occupant 3: 150 lbs</td>
<td>540 lbs</td>
<td>1,500 lbs - 540 lbs = 960 lbs</td>
</tr>
<tr>
<td>3</td>
<td>1,500 lbs</td>
<td>1</td>
<td>front: 1</td>
<td>Occupant 1: 150 lbs</td>
<td>150 lbs</td>
<td>1,500 lbs - 150 lbs = 1,350 lbs</td>
</tr>
</tbody>
</table>

The higher the weight of all occupants, the less cargo and luggage load capacity is available.

For more information, see “Trailer tongue load” (➤ page 210).

### Certification label

Even after careful determination of the combined weight of all occupants, cargo and the trailer tongue load (if applicable) (➤ page 210) as to not exceed the permissible load limit, you must make sure your vehicle never exceeds the Gross Vehicle Weight Rating (GVWR) and the Gross Axle Weight Rating (GAWR) for either the front or rear axle. You can obtain the GVWR and GAWR from the certification label. The certification label can be found on the driver’s door B-pillar, see the “Technical data” section (➤ page 333).
Gross Vehicle Weight Rating (GVWR): The total weight of the vehicle, all occupants, all cargo, and the trailer tongue load must never exceed the GVWR.

Gross Axle Weight Rating (GAWR): The total allowable weight that can be carried by a single axle (front or rear).

To assure that your vehicle does not exceed the maximum permissible weight limits (GVWR and GAWR for front and rear axle), have the loaded vehicle (including driver, passengers and all cargo and, if applicable, trailer fully loaded) weighed on a suitable commercial scale.

**Trailer tongue load**

The tongue load of any trailer is an important weight to measure because it affects the load you can carry in your vehicle. If a trailer is towed, the tongue load must be added to the weight of all occupants riding and any cargo you are carrying in the vehicle. The tongue load typically is 10% of the trailer weight and everything loaded in it.

Your Mercedes-Benz has been designed primarily to carry passengers and their cargo. Mercedes-Benz does not recommend trailer towing with your vehicle.

---

**Recommended tire inflation pressure**

⚠️ **Warning!**

Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Your vehicle is equipped with the Tire and Loading Information placard located on the driver’s door B-pillar (page 206).

The tire inflation pressure should be checked regularly and should only be adjusted on cold tires. The tires can be considered cold if the vehicle has been parked for at least 3 hours or driven less than 1 mile (1.6 km).

Follow recommended cold tire inflation pressures listed on Tire and Loading Information placard on the driver’s door B-pillar.

Keeping the tires properly inflated provides the best handling, tread life and riding comfort.

In addition to the Tire and Loading Information placard on the driver’s door B-pillar, also consult the tire inflation pressure label (if available) on the inside of the filler flap for any additional information pertaining to special driving situations. For more information, see “Important notes on tire inflation pressure” (page 211).

ℹ️ Data shown on Tire and Loading Information placard example are for illustration purposes only. Tire data are specific to each vehicle and may vary from data shown in the following illustration. Refer to Tire and Loading Information placard on vehicle for actual data specific to your vehicle.
Tire and Loading Information placard with recommended cold tire inflation pressures

The Tire and Loading Information placard lists the recommended cold tire inflation pressures for maximum loaded vehicle weight. The tire inflation pressures listed apply to the tires installed as original equipment.

**Important notes on tire inflation pressure**

⚠️ **Warning!**

If the tire inflation pressure drops repeatedly, check the tires for punctures from foreign objects and/or whether air is leaking from the valves or from around the rim.

Tire temperature and tire inflation pressure are also increased while driving, depending on the driving speed and the tire load.

If you will be driving your vehicle at high speeds of 100 mph (160 km/h) or higher, where it is legal and conditions allow, consult the tire inflation pressure label on the inside of the fuel filler flap (if available) on how to adjust the cold tire inflation pressure. If you do not adjust the tire inflation pressure, excessive heat can build up and result in sudden tire failure.

If your vehicle is not equipped with the tire inflation pressure label on the inside of the fuel filler flap, contact an authorized Mercedes-Benz Center for proper tire inflation pressure.

Driving comfort may be reduced when the tire inflation pressure is adjusted to the value for speeds above 100 mph (160 km/h) as specified on the tire inflation pressure label located on the inside of the fuel filler flap.

Make sure to readjust the tire inflation pressure for normal driving speeds. You should wait until the tires are cold before adjusting the tire inflation pressure.

Some vehicles may have supplemental tire inflation pressure information for vehicle loads less than the maximum loaded vehicle condition. If such information is provided, it can be found on the tire inflation pressure label located on the inside of the fuel filler flap (▶ page 197).

Tire inflation pressure changes by approximately 1.5 psi (0.1 bar) per 18°F (10°C) of air temperature change. Keep this in mind when checking tire inflation pressure where the temperature is different from the outside temperature.

### Potential problems associated with underinflated and overinflated tires

#### Underinflated tires

⚠️ **Warning!**

Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Underinflated tires can

- cause excessive and uneven tire wear
- adversely affect fuel economy
Tires and wheels

- lead to tire failure from being overheated
- adversely affect handling characteristics

Overinflated tires

⚠️ Warning!
Follow recommended tire inflation pressures.
Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Overinflated tires can
- adversely affect handling characteristics
- cause uneven tire wear
- be more prone to damage from road hazards
- adversely affect ride comfort
- increase stopping distance

Checking tire inflation pressure

Safety notes

⚠️ Warning!
Follow recommended tire inflation pressures.
Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Check the tire inflation pressure at least every other week.

Check and adjust the tire inflation pressure when the tires are cold. The tires can be considered cold if the vehicle has been parked for at least 3 hours or driven less than 1 mile (1.6 km).

If you check the tire inflation pressure when the tires are warm (the vehicle has been driven for several miles or sitting less than 3 hours), the reading will be approximately 4 psi (0.3 bar) higher than the cold reading. This is normal. Do not let air out to match the specified cold tire inflation pressure. Otherwise, the tire will be underinflated.

Checking tire inflation pressure manually

Follow the steps below to achieve correct tire inflation pressure:

- Remove the cap from the valve on one tire.
- Firmly press a tire gauge onto the valve.
- Read the tire inflation pressure on the tire gauge and check against the recommended tire inflation pressure on the Tire and Loading Information placard on the driver’s door B-pillar (page 206). If necessary, add air to achieve the recommended tire inflation pressure.
If you have overfilled the tire, release tire inflation pressure by pushing the metal stem of the valve with e.g. a tip of a pen. Then recheck the tire inflation pressure with the tire gauge.

Install the valve cap.

Repeat this procedure for each tire.

Run Flat Indicator (Canada only)

While the vehicle is being driven, the Run Flat Indicator monitors the set tire inflation pressures by evaluating each wheel’s rotational speed. This allows the system to detect a significant loss of pressure in a tire. If a wheel’s rotational speed changes due to falling tire inflation pressure, you will see a corresponding warning message in the multifunction display.

The Run Flat Indicator may function in a restricted manner or with a delay

- when snow chains are mounted to the vehicle
- in the presence of ice and snow
- when you are driving on a loose surface (e.g. sand or gravel)

- when you are driving in a very sporty manner (involving rapid acceleration or high speeds in curves)
- when you are driving with a loaded roof rack or heavily laden vehicle

⚠️ Warning!

When the multifunction display shows the message Tire Pressure Check Tires, one or more of your tires is significantly underinflated. You should stop and check your tires as soon as possible, and inflate them to the proper tire inflation pressure as indicated on the vehicle’s Tire and Loading Information placard or, if available, on the tire inflation pressure label.

Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Each tire, including the spare, should be checked every other week when cold and set to the recommended tire inflation pressure as specified on the Tire and Loading Information placard on the driver’s door B-pillar or, if available, on the tire inflation pressure label located on the inside of the fuel filler flap.

The recommended tire inflation pressures for your vehicle can be found on the Tire and Loading Information placard located on the driver’s door B-pillar (page 206) or, if available, on the tire inflation pressure label on the on the inside of the fuel filler flap (page 197). The tire inflation pressures are not listed in the Operator’s Manual.

⚠️ Warning!

The Run Flat Indicator does not provide a warning for wrongly selected tire inflation pressures. Always adjust tire inflation pressure according to the Tire and Loading Information placard on the driver’s door B-pillar or, if available, on the tire inflation pressure label located on the inside of the fuel filler flap.

The Run Flat Indicator does not replace regular checks of the tire inflation pressures since a gradual pressure loss in more than one tire cannot be detected by the Run Flat Indicator.

The Run Flat Indicator is not able to issue a warning due to a sudden dramatic loss of tire inflation pressure (e.g. tire blowout caused by a foreign object). In this case bring the vehicle to a halt by carefully apply-
Tires and wheels

Operation

Switch on the ignition.

Make sure the standard display appears in the multifunction display (> page 126).

Press button 🔄 or 🔄 on the multifunction steering wheel repeatedly until the following message appears in the multifunction display:

Run Flat Indicator
Active
Menu: R-Button

Press the reset button (> page 120).

The following message will appear in the multifunction display:

Restart Run Flat Indicator?

If you wish to confirm: Press button +.

The following message will appear in the multifunction display:

Run Flat Indicator Restarted

After a certain “learning phase”, the Run Flat Indicator checks the set pressure values for all four tires.

If you wish to cancel: Press button -.

or

Wait until the message Restart Run Flat Indicator? disappears.

Tire Pressure Monitoring System (TPMS), (USA only)

The Tire Pressure Monitoring System (TPMS) is equipped with a combination low tire pressure/TPMS malfunction telltale in the instrument cluster. Depending on how the telltale illuminates, it indicates a low tire pressure condition or a malfunction in the TPMS system itself:

• If the telltale illuminates continuously, one or more of your tires is significantly underinflated. There is no malfunction in the TPMS.

• If the telltale flashes for 60 seconds and then stays illuminated, the TPMS system itself is not operating properly.

Restarting the Run Flat Indicator

The Run Flat Indicator must be restarted in the following situations:

• after you have changed the tire inflation pressure
• after you have replaced the wheels or tires
• after you have installed new wheels or tires

Using the Tire and Loading Information placard on the driver’s door B-pillar or, if available, the tire inflation pressure label on the inside of the fuel filler flap, make sure the tire inflation pressure of all four tires is correct.

Warning!
The Run Flat Indicator can only warn you in a reliable manner if you have set the correct tire inflation pressures for each tire. If an incorrect tire inflation pressure was set, the system will monitor the pressure according to the incorrect value.
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

The TPMS only functions on wheels that are equipped with the proper electronic sensors. It monitors the tire inflation pressure, as selected by the driver, in all four tires. A warning is issued to alert you to a decrease in pressure in one or more of the tires.

⚠️ **Warning!**
The TPMS does not indicate a warning for wrongly selected inflation pressures. Always adjust tire inflation pressure according to the Tire and Loading Information placard or, if available, on the supplemental tire inflation pressure information on the inside of the fuel filler flap.

The TPMS is not able to issue a warning due to a sudden dramatic loss of pressure (e.g. tire blowout caused by a foreign object). In this case bring the vehicle to a halt by carefully applying the brakes and avoiding abrupt steering maneuvers.

⚠️ **Warning!**
Each tire, including the spare (if provided), should be checked every other week when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver’s door B-pillar or, if available, the tire inflation pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the Tire and Loading Information placard or, if available, the tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately 1 minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of incompatible replacement or alternate tires.
Tires and wheels

or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

If a condition causing the TPMS to malfunction develops, it may take up to 10 minutes for the system to signal a malfunction using the TPMS telltale flashing and illumination sequence. The telltale extinguishes after a few minutes driving if the malfunction has been corrected.

Operating radio transmission equipment (e.g. wireless headsets, two-way radios) in or near the vehicle could cause the TPMS to malfunction.

Tire inflation pressure warnings

If the system detects a significant loss of tire inflation pressure in one or more than one tire, a message appears in the multifunction display.

Example illustration

In addition, a warning signal sounds.

Restarting the TPMS

⚠️ Warning!

It is the driver’s responsibility to calibrate the TPMS on the recommended cold inflation pressure. Underinflated tires affect the ability to steer or brake the vehicle. You might lose control over the vehicle.

The TPMS must be restarted when you have adjusted the tire inflation pressure to a new level (e.g. because of different load or driving conditions). The TPMS is then recalibrated to the current tire inflation pressures.

Using the Tire and Loading Information placard on the driver’s door B-pillar (page 206) or, if available, the supplemental tire inflation pressure information on the inside of the fuel filler flap

(⇒ page 197), make sure the tire inflation pressure of all four tires is correct.

Restart the TPMS after adjusting the tire inflation pressure to the inflation pressure recommended for the vehicle operating condition. Tire pressure should only be adjusted on cold tires. Observe the recommended tire inflation pressure on the Tire and Loading Information placard on the driver’s door B-pillar. Some vehicles may have supplemental tire pressure information for driving at high speeds or for vehicle loads less than the maximum loaded vehicle condition. If such information is provided, it can be found on the inside of the fuel filler flap.

Switch on the ignition.

Press button [ ] or [ ] on the multifunction steering wheel repeatedly until the standard display appears in the multifunction display (⇒ page 126).

Press button [ ] or [ ] repeatedly until you see the current inflation pressures for each tire appear in the display or the following message appears in the display

Tire Pressure Monitor
Active
Menu: R-Button
Press the reset button (page 120). The following message will appear in the multifunction display:
Restart tire pressure monitor?

If you wish to confirm: Press button .
The following message will appear in the multifunction display:
Tire Pressure Monitor Restarted

After driving a few minutes the system verifies that the current tire inflation pressures are within the system’s specified range. Afterwards the current tire inflation pressures are accepted as reference values and then monitored.

If you wish to cancel: Press button .

Advanced Tire Pressure Monitoring System (Advanced TPMS), (Canada only)

This device complies with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

1. This device may not cause interference, and
2. this device must accept any interference received, including interference that may cause undesired operation of the device.

Any unauthorized modification to this device could void the user’s authority to operate the equipment.

The TPMS only functions on wheels that are equipped with the proper electronic sensors. It monitors the tire inflation pressure, as selected by the driver, in all four tires. A warning is issued to alert you to a decrease in pressure in one or more of the tires.

Warning!
The TPMS does not indicate a warning for wrongly selected inflation pressures. Always adjust tire inflation pressure according to the Tire and Loading Information placard or, if available, on the supplemental tire inflation pressure information on the inside of the fuel filler flap.

The TPMS is not able to issue a warning due to a sudden dramatic loss of pressure (e.g. tire blowout caused by a foreign object). In this case bring the vehicle to a halt by carefully applying the brakes and avoiding abrupt steering maneuvers.

Warning!
Each tire, including the spare (if provided), should be checked every other week when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver’s door B-pillar or, if available, the tire inflation pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the Tire and Loading Information placard or, if available, the tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure
Tires and wheels

telltale illuminates, you should stop and check your tires as soon as possible. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Tire pressure inquiries are made using the multifunction display. The present inflation pressures are displayed only after a few minutes’ travel time.

Possible differences between the readings of a tire pressure gauge of an air hose, e.g. gas station equipment, and the vehicle’s control system can occur. Usually the readings issued by the control system are more precise.

Switch on the ignition.

Press button or on the multifunction steering wheel repeatedly until the standard display appears in the multifunction display (page 126).

Press button or until the current inflation pressures for each tire appear in the multifunction display.

When the vehicle has been parked for longer than 20 minutes, the message appears in the multifunction display.

Attention!

It is the driver’s responsibility to calibrate the TPMS on the recommended cold inflation pressure. Underinflated tires affect the ability to steer or brake the vehicle. You might lose control over the vehicle.

With a spare wheel mounted, the system may still indicate the tire inflation pressure of the removed road wheel for some minutes. If this happens, keep in mind that the indicated value where the spare wheel is mounted does not reflect the actual spare tire inflation pressure.

Operating radio transmission equipment (e.g. wireless headsets, two-way radios) in or near the vehicle could cause the TPMS to malfunction.

Tire inflation pressure warnings

If the system detects a significant loss of tire inflation pressure in one or more than one tire, a message appears in the multifunction display.

Example illustration

The respective tire is indicated by a red rectangle. In addition, a warning signal sounds.

Restarting Advanced TPMS

Attention!

It is the driver’s responsibility to calibrate the TPMS on the recommended cold infla-
Tires and wheels

Tire pressure. Underinflated tires affect the ability to steer or brake the vehicle. You might lose control over the vehicle.

The TPMS usually recognizes new reference values automatically, for example when you have

• adjusted the tire inflation pressure
• changed wheels or tires
• mounted new wheels or tires

If you want to set new reference values manually:

▶ Using the Tire and Loading Information placard on the driver’s door B-pillar (▶ page 206) or, if available, the supplemental tire inflation pressure information on the inside of the fuel filler flap (▶ page 197), make sure the tire inflation pressure of all four tires is correct.

Restart the TPMS after adjusting the tire inflation pressure to the inflation pressure recommended for the vehicle operating condition. Tire pressure should only be adjusted on cold tires. Observe the recommended tire inflation pressure on the Tire and Loading Information placard on the driver’s door B-pillar. Some vehicles may have supplemental tire pressure information for driving at high speeds or for vehicle loads less than the maximum loaded vehicle condition. If such information is provided, it can be found on the inside of the fuel filler flap.

▶ Switch on the ignition.
▶ Press button + or - on the multifunction steering wheel repeatedly until the standard display appears in the multifunction display (▶ page 126).
▶ Press button + or - repeatedly until you see the current inflation pressures for each tire appear in the display or the following message appears in the multifunction display:

Tire pressure is only displayed after driving for a few minutes

▶ Press the reset button (▶ page 120).

The following message will appear in the multifunction display:

Restart tire pressure monitor?

▶ If you wish to confirm: Press button +.

The following message will appear in the multifunction display:

Tire Pressure Monitor Restarted

After driving a few minutes the system verifies that the current tire inflation pressures are within the system’s specified range. Afterwards the current tire inflation pressures are accepted as reference values and then monitored.

or

▶ If you wish to cancel: Press button -.

When the wheel positions have been changed, the air pressure of a tire may be displayed for the wrong position temporarily. After driving for a few minutes, the air pressure will be shown for the correct position.
Tires and wheels

MOExtended system

The MOExtended system allows you to continue driving your vehicle even if there is a total loss of pressure in one or more tires. You may only use the MOExtended system in conjunction with the Run Flat Indicator (> page 213), the TPMS (> page 214), or the Advanced TPMS (> page 217).

For information on driving in case of pressure loss in one or more tires (emergency mode), see the “Practical Hints” section (> page 321).

Tire labeling

Besides tire name (sales designation) and manufacturer name, a number of markings can be found on a tire.

Following are some explanations for the markings on your vehicle’s tires:

1. Uniform Tire Quality Grading Standards (> page 226)
2. DOT, Tire Identification Number (> page 224)
3. Maximum tire load (> page 224)
4. Maximum tire inflation pressure (> page 225)
5. Manufacturer
6. Tire ply material (> page 227)
7. Tire size designation, load and speed rating (> page 220)
8. Load identification (> page 223)
9. Tire name

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

For more information, see “Rims and tires” (> page 336).

Tire size designation, load and speed rating

1. Tire width
2. Aspect ratio in %
3. Radial tire code
4. Rim diameter
Tires and wheels

5 Tire load rating
6 Tire speed rating

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

General: Depending on the design standards used, the tire size molded into the sidewall may have no letter or a letter preceding the tire size designation.

No letter preceding the size designation (as illustrated above): Passenger car tire based on European design standards.
Letter “P” preceding the size designation: Passenger car tire based on U.S. design standards.
Letter “LT” preceding the size designation: Light Truck tire based on U.S. design standards.
Letter “T” preceding the size designation: Temporary spare tires which are high pressure compact spares designed for temporary emergency use only.

Tire width
Tire width 1 indicates the nominal tire width in millimeters.

Aspect ratio
Aspect ratio 2 is the dimensional relationship between tire section height and section width and is expressed in percentage. The aspect ratio is arrived at by dividing section height by section width.

Tire code
Tire code 3 indicates the tire construction type. The “R” stands for radial tire type. Letter “D” means diagonal or bias ply construction; letter “B” means belted-bias ply construction.

At the tire manufacturer’s option, any tire with a speed capability above 149 mph (240 km/h) can include a “ZR” in the size designation (for example: 245/40 ZR 18). For additional information, see “Tire speed rating” (> page 222).

Rim diameter
Rim diameter 4 is the diameter of the bead seat, not the diameter of the rim edge. The rim diameter is indicated in inches (in).

Tire load rating

⚠️ Warning!
The tire load rating must always be at least half of the GAWR of your vehicle. Otherwise, tire failure may be the result which may cause an accident and/or serious injury to you or others.

Always replace rims and tires with the same designation, manufacturer and type as shown on the original part.

⚠️ Warning!
Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.

Tire load rating 5 is a numerical code associated with the maximum load a tire can support.

For example, a load rating of 91 corresponds to a maximum load of 1356 lb (615 kg) the tire is designed to support. See also “Maximum tire load” (> page 224) where the maximum load associated with the load index is indicated in kilograms and lbs.

For additional information on tire load rating, see “Load identification” (> page 223).
Tires and wheels

Tire speed rating

⚠️ Warning!

Even when permitted by law, never operate a vehicle at speeds greater than the maximum speed rating of the tires.

Exceeding the maximum speed for which tires are rated can lead to sudden tire failure, causing loss of vehicle control and possibly resulting in an accident and/or serious personal injury and possible death, for you and for others.

Regardless of the tire speed rating, local speed limits should be obeyed. Use prudent driving speeds appropriate to prevailing conditions.

Tire speed rating ⚡ indicates the approved maximum speed for the tire.

Summer tires

<table>
<thead>
<tr>
<th>Index</th>
<th>Speed rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>up to 118 mph (190 km/h)</td>
</tr>
<tr>
<td>H</td>
<td>up to 130 mph (210 km/h)</td>
</tr>
<tr>
<td>V</td>
<td>up to 149 mph (240 km/h)</td>
</tr>
<tr>
<td>W</td>
<td>up to 168 mph (270 km/h)</td>
</tr>
<tr>
<td>Y</td>
<td>up to 186 mph (300 km/h)</td>
</tr>
<tr>

<td>up to 186 mph (300 km/h)</td>
</tr>
<tr>
<td>ZR</td>
<td>above 149 mph (240 km/h)</td>
</tr>
</tbody>
</table>

At the tire manufacturer’s option, any tire with a speed capability above 149 mph (240 km/h) can include a “ZR” in the size designation (for example: 245/40 ZR18). To determine the maximum speed capability of the tire, the service description for the tire must be referred to.

The service description is comprised of tire load rating ⤿ and tire speed rating ⚡. If your tire includes “ZR” in the size designation and no service description is given, the tire manufacturer must be consulted for the maximum speed capability.

If a service description is given, the speed capability is limited by the speed symbol in the service description. Example: 245/40 ZR18 97Y. In this example, “97Y” is the service description. The letter “Y” designates the speed rating and the speed capability of the tire is limited to 186 mph (300 km/h).

Any tire with a speed capability above 186 mph (300 km/h) must include a “ZR” in the size designation AND the service description must be placed in parenthesis. Example: 275/40 ZR 18 (99Y). The “(Y)” speed rating in parenthesis designates the maximum speed capability of the tire as being above 186 mph (300 km/h). Consult the tire manufacturer for the actual maximum permissible speed of the tire.

8 or M+S ⚠ for winter tires
Not all M+S rated tires provide special winter performance. Make sure the tires you use show M+S and the mountain/snowflake marking on the tire sidewall. These tires meet specific snow traction performance requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) and have been designed specifically for use in snow conditions.

An electronic speed limiter prevents your vehicle from exceeding a speed of:

- 130 mph (210 km/h):
  CLS 550
  CLS 550 (Sport Package)
- 155 mph (250 km/h):
  CLS 63 AMG
- 186 mph (300 km/h):
  CLS 63 AMG (Performance Package)

The factory equipped tires on your vehicle may have a tire speed rating above the maximum speed permitted by the electronic speed limiter.

Make sure your tires have the required tire speed rating as specified for your vehicle in the “Technical data” section (> page 336), for example when purchasing new tires. If you are uncertain about the correct reading of the information given on a tire’s sidewall, any authorized Mercedes-Benz Center will be glad to assist you.

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

In addition to tire load rating, special load identification may be molded into the tire sidewall following the letter designating the tire speed rating (> page 220).

- No specification given: absence of any text (like in above example) indicates a standard load (SL) tire.
- XL or Extra Load: designates an extra load (or reinforced) tire.
- Light Load: designates a light load tire.
- C, D, E: designates load range associated with the maximum load a tire can carry at a specified pressure.

<sup>8</sup> or M+S for winter tires

Load identification
Tires and wheels

**DOT, Tire Identification Number (TIN)**

U.S. tire regulations require each new tire manufacturer or tire retreader to mold a TIN into or onto a sidewall of each tire produced. The TIN is a unique identifier which facilitates efforts by tire manufactures to notify purchasers in recall situations or other safety matters concerning tires and gives purchasers the means to easily identify such tires. The TIN is comprised of “Manufacturer’s identification mark”, “Tire size”, “Tire type code” and “Date of manufacture”.

1. DOT
2. Manufacturer’s identification mark
3. Tire size
4. Tire type code (at the option of the tire manufacturer)
5. Date of manufacture

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

**DOT (Department of Transportation)**

Tire branding symbol 1 denotes that the tire meets requirements of the U.S. Department of Transportation.

**Manufacturer’s identification mark**

Manufacturer’s identification mark 2 denotes the tire manufacturer.

New tires have a mark with two symbols. Retreaded tires have a mark with four symbols. For more information on retreaded tires, see (> page 204).

**Tire size**

Code 3 indicates the tire size.

**Tire type code**

Tire type code 4 may, at the option of the manufacturer, be used as a descriptive code for identifying significant characteristics of the tire.

**Date of manufacture**

The date of manufacture 5 identifies the week and year of manufacture.

The first two figures identify the week, starting with “01” to represent the first full week of the calendar year. The second two figures represent the year.

For example, “3202” represents the 32nd week of 2002.

**Maximum tire load**

⚠️ Warning!

Do not overload the tires by exceeding the specified load limit as indicated on the Tire and Loading Information placard on the driver’s door B-pillar. Overloading the tires can overheat them, possibly causing a blowout. Overloading the tires can also result in handling or steering problems, or brake failure.
Maximum tire load rating

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

The maximum tire load is the maximum weight the tires are designed to support. For more information on tire load rating, see (page 221). For information on calculating total and cargo load capacities, see (page 208).

Maximum tire inflation pressure

⚠️ Warning!

Never exceed the maximum tire inflation pressure. Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

Maximum permissible tire inflation pressure

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

This is the maximum permissible tire inflation pressure for the tire. Always follow the recommended tire inflation pressure (page 210) for proper tire inflation.
The Uniform Tire Quality Grading is a U.S. Government requirement designed to give drivers consistent and reliable information regarding tire performance. Tire manufacturers are required to grade tires based on three performance factors: treadwear, traction, and temperature resistance. Although not a Government of Canada requirement, all tires made for sale in North America have these grades branded on the sidewall.

Quality grades can be found, where applicable, on the tire sidewall between tread shoulder and maximum section width. For example:

<table>
<thead>
<tr>
<th>Treadwear</th>
<th>Traction</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>AA</td>
<td>A</td>
</tr>
</tbody>
</table>

All passenger car tires must conform to federal safety requirements in addition to these grades.

### Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified U.S. Government test course. For example, a tire graded 150 would wear one and one-half \((1 \frac{1}{2})\) times as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

### Traction

⚠️ **Warning!**

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

⚠️ **Warning!**

If ice has formed on the road, tire traction will be substantially reduced. Under such weather conditions, drive, steer and brake with extreme caution.

The safe speed on a wet, snow covered or icy road is always lower than on a dry road. You should pay particular attention to the condition of the road whenever the outside temperature is close to the freezing point.

Mercedes-Benz recommends winter tires (▷ page 231) with a minimum tread depth of approximately 1/6 in (4 mm) on all four wheels.
for the winter season to ensure normal balanced handling characteristics. On packed snow, they can reduce your stopping distance compared to summer tires. Stopping distance, however, is still considerably greater than when the road is not covered with snow or ice. Exercise appropriate caution.

Avoid spinning of a drive wheel. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

**Temperature**

⚠️ **Warning!**

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause excessive heat build-up and possible tire failure.

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

This marking tells you about the type of cord and number of plies in the sidewall and under the tread.

### Tire ply material

- **1** Plies in sidewall
- **2** Plies under tread

For illustration purposes only. Actual data on tires are specific to each vehicle and may vary from data shown in above illustration.

**Accessory weight**

The combined weight (in excess of those standard items which may be replaced) of automatic transmission, power steering, power brakes, power windows, power seats, radio, and heater, to the extent that these items are available as factory-installed equipment (whether installed or not).

**Air pressure**

The amount of air inside the tire pressing outward on each square inch of the tire. Air pressure is expressed in pounds per square inch (psi), or kilopascal (kPa) or bar.

**Aspect ratio**

Dimensional relationship between tire section height and section width expressed in percentage.
Tires and wheels

Bar
Another metric unit for air pressure. There are 14.5038 pounds per square inch (psi) to 1 bar; there are 100 kilopascals (kPa) to 1 bar.

Bead
The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

Cold tire inflation pressure
Tire inflation pressure when your vehicle has been sitting for at least 3 hours or driven no more than 1 mile (1.6 km).

Curb weight
The weight of a motor vehicle with standard equipment including the maximum capacity of fuel, oil, and coolant, and, if so equipped, air conditioning and additional optional equipment, but without passengers and cargo.

DOT (Department of Transportation)
A tire branding symbol which denotes the tire meets requirements of the U.S. Department of Transportation.

GAWR (Gross Axle Weight Rating)
The GAWR is the maximum permissible axle weight. The gross vehicle weight on each axle must never exceed the GAWR for the front and rear axle indicated on the certification label located on the driver’s door B-pillar.

GVW (Gross Vehicle Weight)
The GVW comprises the weight of the vehicle including fuel, tools, spare wheel, installed accessories, passengers and cargo and, if applicable, trailer tongue load. The GVW must never exceed the GVWR indicated on the certification label located on the driver’s door B-pillar.

GVWR (Gross Vehicle Weight Rating)
This is the maximum permissible vehicle weight of the fully loaded vehicle (weight of the vehicle including all options, passengers, fuel, and cargo and, if applicable, trailer tongue load). It is indicated on certification label located on the driver’s door B-pillar.

Kilopascal (kPa)
The metric unit for air pressure. There are 6.9 kPa to 1 psi; another metric unit for air pressure is bar. There are 100 kilopascals (kPa) to 1 bar.

Maximum load rating
The maximum load in kilograms and pounds that can be carried by the tire.

Maximum loaded vehicle weight
The sum of curb weight, accessory weight, total load limit, and production options weight.

Maximum permissible tire inflation pressure
This number is the greatest amount of air pressure that should ever be put in the tire.

Normal occupant weight
The number of occupants the vehicle is designed to seat, multiplied by 68 kilograms (150 lb).

Occupant distribution
The distribution of occupants in a vehicle at their designated seating positions.
Production options weight
The combined weight of those installed regular production options weighing over 5 lbs (2.3 kilograms) in excess of those standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim.

PSI (Pounds per square inch)
A standard unit of measure for air pressure.

Recommended tire inflation pressure
The recommended tire inflation pressure for normal driving conditions is listed on the Tire and Loading Information placard located on the driver’s door B-pillar and provides best handling, tread life and riding comfort. If so equipped, supplemental information pertaining to special driving situations can be found on the tire inflation pressure label on the inside of the fuel filler flap.

Rim
A metal support for a tire or a tire and tube assembly upon which the tire beads are seated.

Sidewall
The portion of a tire between the tread and the bead.

TIN (Tire Identification Number)
Unique identifier which facilitates efforts by tire manufacturers to notify purchasers in recall situations or other safety matters concerning tires and gives purchasers the means to easily identify such tires. The TIN is comprised of “Manufacturer’s identification mark”, “Tire size”, “Tire type code” and “Date of manufacture”.

Tire load rating
Numerical code associated with the maximum load a tire can support.

Treadwear indicators
Narrow bands, sometimes called “wear bars” that show across the tread of a tire when only 1/16 in (1.6 mm) of tread remains.

Traction
Force exerted by the vehicle on the road via the tires. The amount of grip provided.

Tread
The portion of a tire that comes into contact with the road.

Tire speed rating
Part of tire designation; indicates the speed range for which a tire is approved.

Total load limit
Rated cargo and luggage load plus 68 kilograms (150 lb) times the vehicle’s designated seating capacity.

Operation
Tires and wheels
Tires and wheels

Uniform Tire Quality Grading Standards
A tire information system that provides consumers with ratings for a tire’s traction, temperature and treadwear. Ratings are determined by tire manufacturers using U.S. government testing procedures. The ratings are molded into the sidewall of the tire.

Vehicle maximum load on the tire
Load on an individual tire that is determined by distributing to each axle its share of the maximum loaded vehicle weight and dividing it by two.

Rotating tires

⚠️ Warning!
Rotate front and rear wheels only if the tires are of the same dimension.
If your vehicle is equipped with mixed-size tires (different tire dimensions front vs. rear), tire rotation is not possible.

⚠️ Warning!
Have the tightening torque checked after changing a wheel. Wheels could become loose if not tightened with a torque of 96 lb-ft (130 Nm).
Only use genuine Mercedes-Benz wheel bolts specified for your vehicle’s rims.

Tire rotation can be performed on vehicles with tires of the same dimension all around. If your vehicle is equipped with tires of the same dimension all around, tires can be rotated, observing a front-to-rear rotation pattern that will maintain the intended rotation (spinning) direction of the tire (► page 206).

In some cases, such as when your vehicle is equipped with mixed-size tires (different tire dimension front vs. rear), tire rotation is not possible.

If applicable to your vehicle’s tire configuration, tires can be rotated according to the tire manufacturer’s recommended intervals in the tire manufacturer’s warranty pamphlet located in your vehicle literature portfolio. If none is available, tires should be rotated every 3000 to 6000 miles (5000 to 10000 km), or sooner if necessary, according to the degree of tire wear. The same rotation (spinning) direction must be maintained.

Rotate tires before the characteristic tire wear pattern becomes visible (shoulder wear on front tires and tread center wear on rear tires).

Thoroughly clean the mounting face of wheels and brake disks, i.e. the inner side of the wheels/tires, during each rotation. Check for and ensure proper tire inflation pressure.
For information on wheel change, see “Flat tire” (► page 314).
Winter driving

General information

Have your vehicle winterized at an authorized Mercedes-Benz Center.

Winter tires

⚠️ Warning!

Winter tires with a tread depth of less than 1/6 in (4 mm) must be replaced. They are no longer suitable for winter operation.

⚠️ Warning!

If you use your spare wheel when winter tires are fitted on the other wheels, be aware that the difference in tire characteristics may very well impair turning stability and that overall driving stability may be reduced. Adapt your driving style accordingly.

Have the spare wheel replaced by regular road wheel with a winter tire at the nearest authorized Mercedes-Benz Center.

Always use winter tires at temperatures below 45°F (7°C) and whenever wintry road conditions prevail. Not all M+S rated tires provide special winter performance. Make sure the tires you use show the mountain/snowflake marking on the tire sidewall. These tires meet specific snow traction performance requirements of the Rubber Manufacturers Association (RMA) and the Rubber Association of Canada (RAC) and have been designed specifically for use in snow conditions. Use of winter tires is the only way to achieve the maximum effectiveness of your vehicle’s driving safety systems such as the ABS and the ESP in winter operation.

For safe handling, make sure all mounted winter tires are of the same make and have the same tread design.

For information on winter tires for your vehicle model, see the “Technical data” section (page 336).

Always observe the speed rating of the winter tires installed on your vehicle. If the maximum speed for which your tires are rated is below the speed rating of your vehicle, you must place a notice to this effect where it will be seen by the driver. Such notices are available at your tire dealer or any authorized Mercedes-Benz Center.

Snow chains

⚠️ When driving with snow chains, always select the raised level of the vehicle level control. Other settings may result in damage to your vehicle.

⚠️ Some tire sizes do not leave adequate clearance for snow chains. To help avoid serious damage to your vehicle or tires, make sure the use of snow chains is permissible as specified in the “Technical data” section of this Operator’s Manual.

Snow chains should only be driven on snow-covered roads at speeds not to exceed 30 mph (50 km/h). Remove chains as soon as possible when driving on roads without snow.

Observe the following guidelines when using snow chains:

- Use of snow chains is not permissible with all wheel/tire combinations (page 336).
- Use snow chains in pairs and on rear wheels only. Follow the manufacturer’s mounting instructions.

⚠️ If snow chains are mounted to the front wheels, they may scrape against the body.
Winter driving

or axle components. The tires or the vehicle could be damaged as a result.

- Only use snow chains that are approved by Mercedes-Benz. Any authorized Mercedes-Benz Center will be glad to advise you on this subject.
- Use of snow chains may be prohibited depending on location. Always check local and state laws before installing snow chains.
- Do not use snow chains on the spare wheel.

**i** All models except CLS 63 AMG: When driving with snow chains, you may wish to switch off the ESP® (page 66) before setting the vehicle in motion. This will improve the vehicle’s traction.

**i** CLS 63 AMG only: Do not switch off the ESP® when driving in snow or with snow chains mounted.

### Winter driving instructions

**⚠️ Warning!**

If the vehicle becomes stuck in snow, make sure snow is kept clear of the exhaust pipe and from around the vehicle with the engine running. Otherwise, deadly carbon monoxide (CO) gases may enter vehicle interior resulting in unconsciousness and death.

To assure sufficient fresh air ventilation, open a window slightly on the side of the vehicle not facing the wind.

**⚠️ Warning!**

The outside temperature indicator is not designed to serve as an ice-warning device and is therefore unsuitable for that purpose.

Indicated temperatures just above the freezing point do not guarantee that the road surface is free of ice. The road may still be icy, especially in wooded areas or on bridges.

**⚠️ Warning!**

On slippery road surfaces, never downshift in order to obtain braking action. This could result in drive wheel slip and reduced vehicle control. Your vehicle’s ABS will not prevent this type of loss of control.

The most important rule for slippery or icy roads is to drive sensibly and to avoid abrupt acceleration, braking and steering maneuvers. Do not use the cruise control system under such conditions.

When the vehicle is in danger of skidding, shift the automatic transmission to neutral position **N**. Try to keep the vehicle under control by corrective steering action.

**i** For information on driving with snow chains, see “Snow chains” (page 231).

Road salts and chemicals can adversely affect braking efficiency. Increased pedal force may become necessary to produce the normal brake effect.

Depressing the brake pedal periodically when traveling at length on salt-strewn roads can bring road-salt-impaired braking efficiency back to normal.

If the vehicle is parked after being driven on salt-treated roads, the braking efficiency should be tested as soon as possible after driving is resumed.
Driving instructions

**Drive sensibly – save fuel**

To save fuel you should:
- Keep tires at the recommended inflation pressures.
- Remove unnecessary loads.
- Remove roof rack when not in use.
- Allow engine to warm up under low load use.
- Avoid frequent acceleration and deceleration.
- Have all maintenance work performed at the intervals specified in the Maintenance Booklet and as required by the Maintenance system. Contact an authorized Mercedes-Benz Center.

Fuel consumption is also increased by driving in cold weather, in stop-and-go traffic, on short trips and in mountainous areas.

**Drinking and driving**

**Warning!**

Drinking and driving and/or taking drugs and driving are very dangerous combinations. Even a small amount of alcohol or drugs can affect your reflexes, perceptions and judgment.

The possibility of a serious or even fatal accident are greatly increased when you drink or take drugs and drive.

Do not drink or take drugs and drive or allow anyone to drive who has been drinking or taking drugs.

**Pedals**

**Warning!**

Make sure absolutely no objects are obstructing the pedals’ range of movement. Keep the driver’s footwell clear of all obstacles. If there are any floor mats or carpets in the footwell, make sure that the pedals still have sufficient clearance.

During sudden driving or braking maneuvers, the objects could get caught between the pedals. You could then no longer brake.
Driving instructions

or accelerate. This could lead to accidents and injury.

Power assistance

⚠️ Warning!
There is no power assistance for the steering and the service brake when the engine is not running.

Steering and braking requires significantly more effort and you could lose control of the vehicle and cause an accident as a result.

Do not turn off the engine while the vehicle is in motion.

Brakes

Downhill grades

⚠️ When driving down long and steep grades, relieve the load on the brakes by shifting into a lower gear to use the engine’s braking power. This helps prevent overheating of the brakes and reduces wear.

When using the engine’s braking power, a drive wheel may not spin for an extended period of time, e.g. on slippery road surfaces. This may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

Continuous or hard braking

⚠️ Warning!

Resting your foot on the brake pedal will cause excessive and premature wear of the brake pads.

It can also result in the brakes overheating, thereby significantly reducing their effectiveness. It may not be possible to stop the vehicle in sufficient time to avoid an accident.

After hard braking, it is advisable to drive on for some time, rather than immediately park, so that the air stream will cool down the brakes faster.

Wet roads

⚠️ Warning!

After driving in heavy rain for some time without applying the brakes or through water deep enough to wet brake components, the first braking action may be somewhat reduced and increased pedal pressure may be necessary to obtain expected brake effect. Maintain a safe distance from vehicles in front.

The first time the brakes are applied after a long period of driving in heavy rain without braking, it is possible that there will be a delayed braking response and that you will need to depress the brake pedal more firmly. You should therefore maintain a greater distance from the vehicle in front.

To help prevent brake disk corrosion after driving on wet or salt-covered roads, it is advisable to brake the vehicle with considerable force prior to parking. The heat generated serves to dry the brakes.
Driving instructions

Salt-covered roads

⚠️ Warning!
A layer of salt on the brake discs and the brake linings may cause a delay in the braking effect, resulting in a significantly increased braking distance, which could lead to an accident.

To avoid this danger, you should:

* occasionally brake carefully when you are driving on salt-covered roads, so that any layer of salt that may have built up on the brake discs and the brake linings is removed without putting other road users at risk
* maintain a greater distance to the vehicle ahead and drive with particular care
* carefully apply the brakes at the end of a trip and immediately after commencing a new trip, so that salt residues are removed from the brake disc

Brake service

⚠️ The brake fluid level in the reservoir may be too low if the brake warning lamp in the instrument cluster comes on and an acoustic warning sounds although the parking brake is released. Observe additional messages in the multifunction display that may appear.

Brake pad wear or a leak in the system may be the reason for low brake fluid in the reservoir.

Have the brake system inspected immediately. Contact an authorized Mercedes-Benz Center.

All checks and service work on the brake system should be carried out by qualified technicians only. Contact an authorized Mercedes-Benz Center.

Only install brake pads and brake fluid recommended by Mercedes-Benz.

⚠️ Warning!
If other than recommended brake pads are installed, or other than recommended brake fluid is used, the braking properties of the vehicle can be degraded to an extent that safe braking is substantially impaired. This could result in an accident.

⚠️⚠️ Because the ESP® operates automatically, the engine and ignition must be shut off (SmartKey in starter switch position 0 or 1 or KEYLESS-GO start/stop button in position 0 or 1) when the parking brake is being tested on a brake test dynamometer or when the vehicle is being towed with the front axle raised.

Active braking action through the ESP® may otherwise seriously damage the brake system which is not covered by the Mercedes-Benz Limited Warranty.

If your brake system is normally only subjected to moderate loads, you should occasionally test the effectiveness of the brakes by applying above-normal braking pressure at higher speeds. This will also enhance the grip of the brake pads.

⚠️ Warning!
Make sure not to endanger any other road users when carrying out these braking maneuvers.

Refer to the description of the Brake Assist System (BAS) (page 66).

High-performance brake system

The high-performance brake system is only available on CLS 63 AMG.

⚠️ Warning!
New vehicle brake pads and discs, and replacement brake pads and discs may
Driving instructions

As with any brake system, the wear of individual brake system components such as brake pads or disks strongly depends on your driving style and the conditions under which you operate the vehicle. Thus, a driving style calling for high demand braking will cause your vehicle’s brakes to wear more quickly.

Driving off

Warm up the engine smoothly. Do not place full load on the engine until the operating temperature has been reached.

- When driving off on a slippery surface, do not allow a drive wheel to spin for an extended period with the ESP® switched off. Doing so may cause serious damage to the drivetrain which is not covered by the Mercedes-Benz Limited Warranty.

- Simultaneously depressing the accelerator pedal and applying the brakes reduces engine performance and causes premature brake and drivetrain wear which is not covered by the Mercedes-Benz Limited Warranty.

Hydroplaning

Depending on the depth of the water layer on the road, hydroplaning may occur, even at low speeds and with new tires.

- Reduce vehicle speed, avoid track grooves in the road and apply brakes cautiously in the rain.

Standing water

- Do not drive through flooded areas. Before driving through water, determine its depth.

If you must drive through standing water, drive slowly to prevent water from entering the passenger compartment or the engine compartment. Water in these areas could cause damage to electrical components or wiring of the engine or transmission, or could result in water being ingested by the engine through the air intake causing severe internal engine damage. Any such damage is not covered by the Mercedes-Benz Limited Warranty.
Driving abroad
If you plan to drive the vehicle outside the U.S. or Canada, you should request dealer network information for your destination from any authorized Mercedes-Benz Center.

Control and operation of radio transmitter

Safety notes

⚠️ Warning!
Please do not forget that your primary responsibility is to drive the vehicle safely. Only operate the COMAND (Cockpit Management and Data system), radio or telephone if road, weather and traffic conditions permit. Otherwise, you may not be able to observe traffic conditions and could endanger yourself and others.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

⚠️ Warning!
Never operate radio transmitters equipped with a built-in or attached antenna, such as a portable telephone or a citizens band unit, from inside the vehicle while the engine is running. Doing so could lead to a malfunction of the vehicle’s electronic system, possibly resulting in an accident and/or serious personal injury. Radio transmitters should only be used inside the vehicle if they are connected to an antenna that is installed on the outside of the vehicle.

⚠️ Warning!
Please do not forget that your primary responsibility is to drive the vehicle. A driver’s attention to the road must always be his/her primary focus when driving. For your safety and the safety of others, we recommend that you pull over to a safe location and stop before placing or taking a telephone call.

If you choose to use the telephone while driving, please use the hands-free device and only use the telephone when road, weather and traffic conditions permit. Some jurisdictions prohibit the driver from using a mobile telephone while driving a vehicle.

Only operate the COMAND (Cockpit Management and Data System) if road, weather and traffic conditions permit.

Bear in mind that at a speed of just 30 mph (approximately 50 km/h), your vehicle is covering a distance of 44 feet (approximately 14 m) every second.

Refer to the radio transmitter operation instructions regarding use of an external antenna.

9 Observe all legal requirements.
10 Observe all legal requirements.
Maintenance

Emission control
Certain systems of the engine serve to keep the toxic components of the exhaust gases within permissible limits required by law. These systems will function properly only when maintained strictly according to factory specifications. Any adjustments on the engine should, therefore, be carried out only by qualified Mercedes-Benz Center authorized technicians.

Engine adjustments should not be altered in any way. Moreover, the specified service procedures must be carried out regularly according to Mercedes-Benz servicing requirements. For details refer to the Maintenance Booklet.

⚠️ Warning!
Inhalation of exhaust gas is hazardous to your health. All exhaust gas contains carbon monoxide (CO), and inhaling it can cause unconsciousness and possible death.

Do not run the engine in confined areas (such as a garage) which are not properly ventilated. If you think that exhaust gas fumes are entering the vehicle while driving, have the cause determined and corrected immediately. If you must drive under these conditions, drive only with at least one window fully open at all times.

Maintenance

Notes
The Maintenance System in your vehicle tracks distance driven and the time elapsed since the last maintenance service, calculates other maintenance service work required, and calls for the next maintenance service accordingly.

We strongly recommend that you have your vehicle serviced at an authorized Mercedes-Benz Center, in accordance with the Maintenance Booklet at the times called for by the maintenance service indicator.

⚠️ Failure to have the vehicle maintained in accordance with the Maintenance Booklet and maintenance service indicator at the designated times/mileage (kilometers) will result in vehicle damage not covered by the Mercedes-Benz Limited Warranty.
Maintenance service indicator message

The maintenance service indicator message will notify you when the next maintenance service is due.

Starting approximately 1 month before the next maintenance service is due, one of the following messages will appear in the multifunction display while you are driving or when you switch on the ignition (example service A):

- Service A Due In XXXX Miles (Km)
- Service A Due In XXX Days
- Service A Due In X Day
- Service A Due Now

The maintenance services will be indicated by showing a service type A through type H in the multifunction display. Types A through H are classified based on estimated time needed to perform the maintenance service, ranging:

- Service A (approximately 1 hour)
- to Service H (approximately 8 hours)

Refer to Maintenance Booklet for a listing of maintenance services and intervals they need to be performed at.

Clearing the maintenance service indicator message

The maintenance service indicator message is automatically cleared:

- after approximately 10 seconds when you switch on the ignition
- after approximately 10 seconds when reaching the service threshold while driving
- after approximately 30 seconds, once the suggested maintenance service term has passed

To clear the maintenance service indicator message: Press reset button 1 on the instrument cluster.

The standard display appears in the multifunction display.

Maintenance service term exceeded

If you have exceeded the suggested maintenance service term, you will see the following message in the multifunction display:

- Service A Exceeded By XXXXX Miles (Km)
- Service A Exceeded By XXX Days
- Service A Exceeded By X Day

In addition, a signal sounds when the message appears.
Maintenance

Any authorized Mercedes-Benz Center will reset the maintenance service indicator following a completed maintenance service.

**Calling up the maintenance service indicator display**

The menu overview can be found on (page 125).

You can call up the maintenance service indicator display at any time to check when the next maintenance service is due.

- Switch on the ignition.
- Press button  or  on the multifunction steering wheel repeatedly until the standard display (page 126) appears in the multifunction display.
- Press button  or  on the multifunction steering wheel until the maintenance service indicator display with the service symbol  and the maintenance service deadline appears in the multifunction display.

If the battery is disconnected, the days of disconnection will not be included in the count shown by the maintenance service indicator. To arrive at the true maintenance service deadline, you will need to subtract these days from the days shown in the maintenance service indicator message or maintenance service indicator display.

Do not confuse the maintenance service indicator with the engine oil level indicator .

**Resetting the maintenance service indicator**

In the event that the maintenance service on your vehicle is not carried out at an authorized Mercedes-Benz Center, you can have the maintenance service indicator reset.

The automotive maintenance facility carrying out the maintenance service will find the information for resetting the maintenance service indicator in the maintenance-relevant literature for your vehicle. Such literature is available from any authorized Mercedes-Benz Center or directly from Mercedes-Benz.

If the maintenance service indicator was inadvertently reset, have an authorized Mercedes-Benz Center correct it.

Only reset if the proper maintenance service has been performed. Resetting the system without performing the proper maintenance service as called for by the maintenance service indicator will result in engine damage and/or other vehicle damage not covered by the Mercedes-Benz Limited Warranty.
Vehicle care

Cleaning and care of the vehicle

Notes

Regular and proper care will help to maintain the value of your vehicle.

⚠️ Warning!
Many cleaning products can be hazardous. Some are poisonous, others are flammable. Always follow the instructions on the particular container. Always open your vehicle’s doors or windows when cleaning the inside. Never use fluids or solvents that are not designed for cleaning your vehicle. Always lock away cleaning products and keep them out of reach of children.

⚠️ When cleaning the vehicle, do not use scouring agents. Never apply strong force and only use a soft, wet cloth or sponge. Otherwise you may scratch or damage the surface to be cleaned.

While in operation, even while parked, your vehicle is subjected to varying external influences which, if gone unchecked, can attack the paintwork as well as the vehicle underbody and cause lasting damage. Such damage is caused not only by extreme and varying climatic conditions, but also by:

- Air pollution
- Road salt
- Tar
- Gravel and stone chipping

To avoid paint damage, you should immediately remove:

- Grease and oil
- Fuel
- Coolant
- Brake fluid
- Bird droppings
- Insects
- Tree resins etc.

Frequent washing reduces and/or eliminates the aggressiveness and potency of the above adverse influences.

More frequent washings are necessary to deal with unfavorable conditions:

- near the ocean
- in industrial areas (smoke, exhaust emissions)
- during winter operation

You should check your vehicle from time to time for stone chipping or other damage. Any damage should be repaired as soon as possible to prevent corrosion.

In doing so, do not neglect the underbody of the vehicle. A prerequisite for a thorough check is a washing of the underbody followed by a thorough inspection. Damaged areas need to be re-undercoated.

Your vehicle has been treated at the factory with a wax-base rustproofing in the body cavities which will last for the lifetime of the vehicle. Post-production treatment is neither necessary nor recommended by Mercedes-Benz because of the possibility of incompatibility between materials used in the production process and others applied later.

We have selected vehicle-care products and compiled recommendations which are especially matched to our vehicles and which always reflect the latest technology. You can obtain Mercedes-Benz approved vehicle-care
Vehicle care

products at an authorized Mercedes-Benz Center.

Scratches, corrosive deposits, corrosion or damage due to negligent or incorrect care cannot always be removed or repaired with the vehicle-care products recommended here. In such cases it is best to seek aid at an authorized Mercedes-Benz Center.

The following topics deal with the cleaning and care of your vehicle and give important “how-to” information as well as references to Mercedes-Benz approved vehicle-care products.

Power washer

Follow the instructions provided by the power washer manufacturer on maintaining a distance between the vehicle and the nozzle of the power washer.

Never use a round nozzle to power-wash tires. The intense jet of water can result in damage to the tire.

Always replace a damaged tire.

Always keep the jet of water moving across the surface. Do not aim directly at electrical parts, electrical connectors, seals, or other rubber parts.

Vehicles with KEYLESS-GO:

If a door handle is hit by a strong jet of water, and a SmartKey is within approximately 3 ft (1 m) of the vehicle, it could be inadvertently locked or unlocked.

Tar stains

Quickly remove tar stains before they dry and become more difficult to remove. A tar remover is recommended.

Paintwork, painted body components

Affixing stickers, magnets, adhesive tape or similar materials to painted body components may damage the paintwork.

Mercedes-Benz approved Paint Care should be applied when water drops on the paint surface do not “bead up”. This should normally be done every 3 to 5 months, depending on the climate and washing detergent used.

Mercedes-Benz approved Paint Cleaner should be applied if the paint surface shows signs of embedded dirt (i.e. loss of gloss).

Do not apply any of these products or wax if your vehicle is parked in the sun or if the hood is still hot.

Use the appropriate MB-Touch-Up Stick for quick and provisional repairs of minor paint damage (i.e. chips from stones, vehicle doors, etc.).

Engine cleaning

Prior to cleaning the engine compartment, make sure to protect electrical components and connectors from contact with water and cleaning agents.

Corrosion protection, such as MB Anticorrosion Wax should be applied to the engine compartment after every engine cleaning. Before applying, all control linkage bushings and joints should be lubricated. The poly-V-belt and all pulleys should be protected from any wax.

Vehicle washing

In the winter, thoroughly remove all traces of road salt as soon as possible.

When washing the vehicle underbody, do not forget to clean the inner sides of the wheels.

Vehicles with KEYLESS-GO:

If a door handle is hit by a strong jet of water, and a SmartKey is within approxi-
mately 3 ft (1 m) of the vehicle, it could be inadvertently locked or unlocked.

**Hand-wash**

Do not use hot water or wash your vehicle in direct sunlight.

- Only use a soft, wet cloth or sponge to clean the vehicle.
- Do not spray directly towards the ventilation intake.
- Only use a mild vehicle wash detergent, such as Mercedes-Benz approved Car Shampoo.
- Thoroughly spray the vehicle with a diffused jet of water.
- Do not spray directly towards the ventilation intake.
- Use plenty of water and rinse the sponge and chamois frequently.
- Rinse with clean water and thoroughly dry with a chamois.
- Do not allow cleaning agents to dry on the finish.

**Automatic car wash**

You can have your vehicle washed in an automatic car wash from the start. Brushless car washes are preferable.

- To protect the filter system, activate the air recirculation mode using button \( \text{on} \) the climate control panel.
- Do not clean your vehicle in an automatic touchless car wash which uses caustic spray. Otherwise the caustic spray will damage the paint or ornamental moldings. If the vehicle is very dirty, prewash it before running it through the automatic car wash.
- Make sure the combination switch is set to wiper setting \( \text{M} \). Otherwise, the rain sensor could activate and cause the wipers to move unintentionally. This may lead to vehicle damage.
- Due to the width of the vehicle, fold in exterior rear view mirrors prior to running the vehicle through an automatic car wash to prevent damage to the mirrors.

When leaving the automatic car wash, make sure the mirrors are folded out.

After running the vehicle through an automatic car wash, wipe any wax off of the windshield and the wiper blade inserts. This will prevent smears and reduce wiping noise which can be caused by residual wax on the windshield.

**Ornamental moldings**

- For regular cleaning and care of ornamental moldings, use a damp cloth.
- Do not use chrome cleaner on ornamental moldings. Although ornamental moldings may have chrome appearance, they could be made of anodized aluminum that will be damaged when cleaned with chrome cleaner. Instead, use a damp cloth to clean those ornamental moldings.

For very dirty ornamental moldings of which you are sure are chrome-plated, use a chrome cleaner. If in doubt whether an ornamental molding is chrome-plated, contact an authorized Mercedes-Benz Center.

**Headlamps, brake lamps, tail lamps, side markers, turn signal lenses**

- Use a mild vehicle wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water.
Vehicle care

Only use window cleaning solutions that are suitable for plastic lamp lenses. Window cleaning solutions which are not suitable may damage the plastic lamp lenses of the headlamps. Therefore, do not use abrasives, solvents or cleaners that contain solvents.

Cleaning the Distronic system sensor cover

1 Distronic system sensor cover

- Switch off the ignition.
- Only clean sensor cover 1 by hand.
- Use a mild vehicle wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water and a non-scratching cloth to clean sensor cover 1.
- Restart the engine after cleaning sensor cover 1.

Cleaning the Parktronic system sensors

Parktronic system sensors are located in the front and rear bumper.

1 Parktronic system sensors in front bumper

- Only clean sensors 1 by hand.
- Use a mild vehicle wash detergent, such as Mercedes-Benz approved Car Shampoo, with plenty of water and a soft, non-scratching cloth to clean sensors 1 on the bumpers.

- Applying strong pressure may damage the sensor covers.

Cleaning the windows and the wiper blades

The windshield wipers must be in a vertical position before folding them away from the windshield. They could otherwise damage the hood.

Never open the hood when the wiper arms are folded forward.

- Make sure the hood is fully closed.
- Switch on the ignition.
- Turn combination switch to wiper setting ⏯ (› page 101).
- With wiper arms in vertical position, switch off the ignition.

⚠️ Warning!
For safety reasons, switch off wipers and remove SmartKey from starter switch (vehicles with KEYLESS-GO: Make sure the vehicle’s on-board electronics have status 0) before cleaning the windshield and/or the wiper blades. Otherwise, the wiper motor could suddenly turn on and cause injury.
Do not pull on the wiper blade inserts. They could tear.

- Fold the wiper arms forward until they snap into place.
- Clean the windshield and the wiper blade inserts with a clean cloth and mild detergent solution.
- Use a soft, clean cloth and a mild window cleaning solution on all outside and inside glass surfaces.
  An automotive glass cleaner is recommended.

Fold the windshield wiper arms back onto the windshield before turning the SmartKey in the starter switch or pressing the KEYLESS-GO start/stop button (vehicles with KEYLESS-GO).

Hold on to the wiper when folding the wiper arm back. If released, the force of the impact from the tensioning spring could crack the windshield.

To clean the window interior, do not use a dry cloth, abrasives, solvents or cleaners containing solvents. Do not touch the inside of the front, rear or side windows with hard objects such as an ice scraper or ring. Doing so may damage the windows.

**Light alloy wheels**

If possible, clean wheels once a week.

- Use Mercedes-Benz approved Wheel Care, a soft bristle brush and a strong spray of water for cleaning the light alloy wheels.

Only use acid-free cleaning materials. Acid may cause corrosion or damage the clear coat.

The vehicle should not be parked for an extended period of time immediately after it has been cleaned, especially not after the wheel rims have been cleaned with wheel rim cleaner. Wheel rim cleaners can lead to increased corrosion of the brake disks and brake pads. Non-approved wheel cleaners may also damage the wheel paint if the vehicle is not driven after cleaning.

Therefore, the vehicle’s brake system should always be warmed-up before it is parked after cleaning. To do so, please drive your vehicle for several minutes to allow the brakes to dry. When applying Mercedes-Benz approved Tire Care and Mercedes-Benz approved Wheel Care products, take care not to spray them on the brake disks.

**Plastic and rubber parts**

- Use a gentle dishwashing detergent or mild detergent for delicate fabrics as a washing solution.
- Wipe with a cloth moistened in a lukewarm solution.
  The surface may temporarily change color. If this is the case, wait for it to dry.

**Warning!**

Do not use cleaners or cockpit care sprays containing solvents to clean the cockpit or the steering wheel. Cleaners containing solvents will make the surface porous and vehicle occupants could suffer serious injuries from plastic parts coming loose in the event of air bag deployment.

Do not use oil, wax or scouring agents. Otherwise you may scratch or damage the surface.
Vehicle care

Hard plastic trim items
- Use Mercedes-Benz approved Interior Care on a soft, lint-free cloth and apply with light pressure.

COMAND display
- You must switch off the COMAND display and allow it to cool prior to cleaning.
- Do not use any liquids or cleaning agents. These can damage or even destroy the audio display screen.
- Use a standard microfiber cloth and apply with light pressure.

Steering wheel and gear selector lever
- Wipe with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care.

Carpets
- Use Mercedes-Benz approved Carpet and Fabric Care for cleaning the carpets.

Headliner and shelf below rear window
- Use a soft bristle brush or a dry-shampoo cleaner in case of excessive dirt.

Seat belts
- Only use clear, lukewarm water and soap.
- The seat belts must not be treated with chemical cleaning agents. Do not dry the seat belts at temperatures above 176°F (80°C) or in direct sunlight.
- Do not bleach or dye seat belts as this may severely weaken them. In a crash they may not be able to provide adequate protection.

Upholstery
Using aftermarket seat covers or wearing clothing that have the tendency to give off coloring (e.g. when wet, etc.) may cause the upholstery to become permanently discolored. By lining the seats with a proper intermediate cover, contact-discoloration will be prevented.

Leather upholstery
Please note that leather upholstery is a natural product and is therefore subject to a natural aging process. Leather upholstery may also react to certain ambient influences such as high humidity or high temperature by showing wrinkles for example.
- Wipe leather upholstery with a damp cloth and dry thoroughly or clean with Mercedes-Benz approved Leather Care.
- To avoid damage to leather upholstery:
  - Wipe with light pressure only.
  - Do not clean with abrasive cleaning agents such as scouring milk or powder.

Warning!
Only use seat or head restraint covers which have been tested and approved by Mercedes-Benz for your vehicle model. Using other seat or head restraint covers may interfere with or prevent the activation of the active head restraints and/or the deployment of the front side impact airbags. Contact an authorized Mercedes-Benz Center for availability.
• Do not soak the leather upholstery.
  As leather is a natural product, it could otherwise harden or become porous.

• Exercise particular care when cleaning perforated leather as its underside should not become wet.

**Wood trims**

- Only use water and a damp cloth to clean wood trims in your vehicle.

! Do not use solvents like tar remover or wheel cleaner nor polishes or waxes as these may be abrasive.

**Chrome-plated exhaust tip**

Regular cleaning and care of chrome-plated exhaust tips will help to maintain their shine and the classy appearance.

- Use Mercedes-Benz approved Chrome Polishing Paste each time the vehicle has been washed, especially during the winter.

! Do not use alkaline cleaners such as wheel cleaners as they could cause corrosion.

Vehicle equipment

This Operator’s Manual describes all features, standard or optional, potentially available for your vehicle at the time of purchase. Please be aware that your vehicle might not be equipped with all features described in this manual.

Vehicle tool kit

The vehicle tool kit is located in the space underneath the trunk floor. The vehicle tool kit includes:

- Alignment bolt
- Collapsible wheel chock
- Electric air pump¹¹
- Jack
- Pair of universal pliers
- Towing eye bolt
- Valve extractor¹¹
- Wheel wrench

Removing: Open the trunk (page 78).

- Lift the trunk floor using the floor handle.
- Engage the floor handle on the upper trunk lip.
- Remove the luggage box (if so equipped) (page 254).

First aid kit

Check expiration dates and contents for completeness at least once a year and replace missing/expired items.

The first aid kit is located in the storage compartment under the front passenger seat.

1 Handle

- Pull handle 1 upward.
- Fold the lid down.
- Remove the first aid kit.

¹¹ Vehicular with spare wheel with collapsible tire only.

Practical hints
Example illustration
1 Tool bag and jack
2 Collapsible wheel chock
3 Electrical air pump
4 Storage well casing

► To access jack: Remove tool bag 1.

Always lower trunk floor before closing trunk.

Collapsible wheel chock

The collapsible wheel chock serves to secure the vehicle, e.g. while changing a wheel.

► Take the collapsible wheel chock from the vehicle tool kit (► page 250).

1 Tilt the plates upward
2 Fold the lower plate outward
3 Insert the plate

► Setting up: Tilt both plates upward 1.
   ► Fold the lower plate outward 2.
   ► Guide the tabs of the lower plate all the way into the openings of base plate 3.

For information on where to place wheel chocks when changing a wheel, see “Lifting the vehicle” (► page 315).

Storage position

► Turn the crank handle in the direction of arrow as far as it will go.

Jack

⚠️ Warning!
Only use the jack supplied with your vehicle to lift the vehicle briefly for wheel changes. If you use the jack for any other purpose, you or others could be injured, as the jack is designed only for the purpose of changing a wheel.

When using the jack, observe the safety notes in the “Mounting the spare wheel” section and the notes on the jack.

► Take the jack from the vehicle tool kit (► page 250).
Where will I find ...?

Operational position

- Turn the crank handle clockwise.

Before placing the jack back in the vehicle tool kit:

- Fully collapse the jack.
- Fold in the crank handle (storage position).

Spare wheel

⚠️ Observe Safety notes, see page 314.

The spare wheel is located in the space underneath the trunk floor.

- Open the trunk (☞ page 78).
- Lift the trunk floor using the floor handle.
- Engage the floor handle on the upper trunk lip.
- Remove the luggage box (if so equipped) (☞ page 254).

⚠️ Always lower trunk floor before closing trunk.

Vehicles with Minispare wheel

1️⃣ Spare wheel
2️⃣ Luggage bowl

- **Removing:** Remove luggage bowl 2️⃣ by turning it counterclockwise.
- Remove spare wheel 1️⃣.

For information on mounting the spare wheel, see “Flat tire” (☞ page 314).

**Storing the spare wheel after use**

- Place the spare wheel in the spare wheel well.
- Secure the spare wheel by turning luggage bowl 2️⃣ clockwise.
Vehicles with spare wheel with collapsible tire

Removing: Remove the storage well casing (▶ page 251).

1. Spare wheel
2. Tensioning strap
3. Retaining screw
4. Storage well casing base

- Remove storage well casing base 4.
- Remove retaining screw 3 by turning it counterclockwise.
- Remove spare wheel 1.

For information on mounting the spare wheel, see “Flat tire” (▶ page 314).

Storing the spare wheel after use
If you wish to store the spare wheel after use, carry out the following steps. Otherwise, the spare wheel may not fit the spare wheel well.

⚠️ Make sure the spare wheel is dry before storing it.

- Unscrew the valve cap from the valve of the collapsible tire.
- Unscrew the valve insert from the valve using the valve extractor integrated in the valve cap.
- Allow the air to escape.

⚠️ It may take a few minutes for the collapsible tire to deflate completely.

- Screw the valve insert back into the valve.
- Screw the valve cap back on the valve.

⚠️ Vehicles with 19" spare wheel only: Before placing the spare wheel in the spare wheel well fasten tensioning straps, see “Compressing the collapsible tire” (▶ page 253).

- Place the spare wheel in the spare wheel well.
- Secure the spare wheel by turning retaining screw 3 clockwise.

Compressing the collapsible tire
This description applies to vehicles with 19" spare wheel only.
The collapsible tire on a 19" spare wheel must be compressed with two tensioning straps before you can store it in the spare wheel well.

⚠️ The tensioning straps are shown in red for illustration purposes. The tensioning straps on the spare wheel of your vehicle are black.

12 Vehicles with 19" spare wheel only.
Where will I find ...?

- Extend the tensioning strap by pulling the slider.
- Place tensioning strap around the spare wheel rim and collapsible tire with the buckle facing the inside of the rim.
- Close the buckle.
- Pull the loose end of the tensioning strap. The tensioning strap must be pulled as tight as possible.

Luggage box

Vehicles with spare wheel with collapsible tire are not equipped with a luggage box.

- **Removing:** Open the trunk (page 78).
- Lift the trunk floor using the floor handle.
- Engage the floor handle on the upper trunk lip.

![Image](P68.00-3891-31)

1. Fastening clip
2. Luggage box

- Turn fastening clips 1 to the left upwards from the fastening bolts.
- Lift luggage box 2 in the area of the fastening bolts and remove it from the trunk.

- **Installing:** Insert the luggage box into the trunk so that the fastening clips are in line with the fastening bolts.

- Push the front edge of the luggage box in direction of arrows under the cover of the trunk sill.
- Press the fastening clips onto the fastening bolts until they lock into place.
Vehicle status messages in the multifunction display

Notes

Warning and malfunction messages appear in the multifunction display located in the instrument cluster. Certain warning and malfunction messages are accompanied by an audible signal. Address these messages accordingly and follow the additional instructions given in this Operator’s Manual.

Selecting the Vehicle status message memory menu in the control system (▷ page 131) displays both cleared and uncleared messages. High-priority messages appear in the multifunction display in red color.

Certain messages of high priority cannot be cleared from the multifunction display using the reset button (▷ page 120) or button ▶️, ▶️, ▶️ or ▶️ on the multifunction steering wheel. They are then stored in the Vehicle status message memory menu (▷ page 131). Remember that clearing a message will only make the message disappear. Clearing a message will not correct the condition that caused the message to appear.

⚠️ Warning!

All categories of messages contain important information which should be taken note of and, where a malfunction is indicated, addressed as soon as possible at an authorized Mercedes-Benz Center. Failure to repair condition noted may cause damage not covered by the Mercedes-Benz Limited Warranty, or result in property damage or personal injury.

Other messages of high priority and messages of less immediate priority can be cleared from the multifunction display using the reset button (▷ page 120) or button ▶️, ▶️, ▶️ or ▶️ on the multifunction steering wheel.

⚠️ Warning!

No messages will be displayed if either the instrument cluster or the multifunction display is inoperative. As a result, you will not be able to see information about your driving conditions, such as speed or outside temperature, warning/indicator lamps, malfunction/warning messages or the failure of any systems. Driving characteristics may be impaired. If you must continue to drive, please do so with added caution. Contact an authorized Mercedes-Benz Center as soon as possible.

On the pages that follow, you will find a compilation of the most important warning and malfunction messages that may appear in the multifunction display. For your convenience the messages are divided into text messages (▷ page 256) and Symbol messages (▷ page 271).

<tr>
<td></td>
<td></td>
<td>▶ If necessary, change the wheel (page 314).</td>
</tr>
</tbody>
</table>

⚠️ **Warning!**

Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You may lose control of the vehicle. Continued driving with a flat tire will cause excessive heat build-up and possibly a fire.

⚠️ **Warning!**

Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.

Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.

</table>
| ![BRAKE](usa.png) (USA only) ![.smart](can.png) (Canada only) | **Check Brake Fluid Level** | There is insufficient brake fluid in the reservoir. | Risk of accident!  
- Stop the vehicle in a safe location or as soon as it is safe to do so.  
- Do **not** drive any further.  
- Contact an authorized Mercedes-Benz Center or call Roadside Assistance.  
Do not add brake fluid! This will not solve the problem. |

⚠️ **Warning!**

Driving with the message **Check Brake Fluid Level** displayed can result in an accident. Have your brake system checked immediately. Do not add brake fluid before checking the brake system. Overfilling the brake fluid reservoir can result in spilling brake fluid on hot engine parts and the brake fluid catching fire. You can be seriously burned.

⚠️ If you find that the brake fluid in the brake fluid reservoir has fallen to the minimum mark or below, have the brake system checked for brake pad thickness and leaks.
## Safety systems

<td>Engine Service</td>
<td>There may be a malfunction in:  - The fuel management system  - The ignition system  - The exhaust system  - The fuel system</td>
</tr>
<tr>
<td>![display malfunction](Canada only)</td>
<td>Display Malfunc- tion  Service Required</td>
<td>Certain electronic systems are unable to relay information to the control system. The coolant temperature display or the tachometer may have failed.</td>
</tr>
<tr>
<td>![top up coolant](Canada only)</td>
<td>Top Up Coolant  See Operator’s Man.</td>
<td>The coolant level is too low.</td>
</tr>
</tbody>
</table>

⚠️ **Warning!**
Do not spill antifreeze on hot engine parts. Antifreeze contains ethylene glycol which may burn if it comes into contact with hot engine parts. You could be seriously burned.

❗ Do not ignore the low engine coolant level warning. Extended driving with the message and symbol displayed may cause serious engine damage not covered by the Mercedes-Benz Limited Warranty. Do not drive without sufficient amount of coolant in the cooling system. The engine will overheat causing major engine damage.
### Vehicle status messages in the multifunction display

<table>
<thead>
<tr>
<th>Display messages</th>

</thead>
</table>
| ![Coolant icon] Stop Vehicle. turn engine off. | The coolant is too hot. | ▶ Stop the vehicle in a safe location or as soon as possible.  
▶ Turn off the engine immediately.  
▶ Only start the engine again after the message disappears. You could otherwise damage the engine.  
▶ Engage the parking brake.  
▶ Observe the coolant temperature indicator in the instrument cluster.  
▶ If the temperature rises again: Contact an authorized Mercedes-Benz Center immediately.  
During severe operation conditions and stop-and-go city traffic, the coolant temperature may rise close to 248°F (120°C). |

⚠️ **Warning!**

Driving when your engine is overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns which can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.

Stop the vehicle in a safe location away from other traffic. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.
The engine should not be operated with the coolant temperature above 248°F (120°C). Doing so may cause serious damage which is not covered by the Mercedes-Benz Limited Warranty.

</tr>
</tbody>
</table>

If the message **Check oil level at next refueling** appears while the engine is running and at operating temperature, the engine oil level has dropped to approximately the minimum level.

The message will be stored in the vehicle status message memory after you have cleared it from the multifunction display.

Visually check for oil leaks. If there are no obvious oil leaks, drive to the nearest service station to refill your engine oil to the required level.

For information on approved engine oils contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only).

#### Tires

<table>
<thead>
<tr>
<th>Display messages</th>
<th>Possible cause/consequence</th>
<th>Possible solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>🚗 Please correct the tire pressure.</td>
<td>The tire pressure is too low in one or more tires. or The tire pressure of the individual tires differ from each other significantly.</td>
<td>▶ Check and correct tire inflation pressure as required (▷ page 212).</td>
</tr>
<tr>
<td>🚗 Tire Pressure Caution Tire Defect</td>
<td>One or more tires are deflating.</td>
<td>▶ Carefully bring the vehicle to a halt, avoiding abrupt steering and braking maneuvers. ▶ If necessary, change the wheel (▷ page 314).</td>
</tr>
<tr>
<td>🚗 Tire Pressure Check Tires</td>
<td>The tire pressure in one or more tires is already below the minimum value.</td>
<td>▶ Carefully bring the vehicle to a halt, avoiding abrupt steering and braking maneuvers. ▶ Check and adjust tire pressure as required. ▶ If necessary, change the wheel (▷ page 314).</td>
</tr>
</tbody>
</table>

⚠️ **Warning!**

Do not drive with a flat tire. A flat tire affects the ability to steer or brake the vehicle. You may lose control of the vehicle. Continued driving with a flat tire will cause excessive heat build-up and possibly a fire.

⚠️ **Warning!**

Follow recommended tire inflation pressures.

Do not underinflate tires. Underinflated tires wear excessively and/or unevenly, adversely affect handling and fuel economy, and are more likely to fail from being overheated.
Do not overinflate tires. Overinflated tires can adversely affect handling and ride comfort, wear unevenly, increase stopping distance, and result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes etc.
What to do if ...

<table>
<thead>
<tr>
<th>Lamps in instrument cluster</th>
</tr>
</thead>
</table>

Notes

If any of the following lamps in the instrument cluster fails to come on during the bulb self-check when switching on the ignition, have the respective bulb checked and replaced if necessary.

When you switch on the ignition, all lamps (except low-beam headlamp indicator lamp, high-beam headlamp indicator lamp, and turn signal indicator lamps unless activated) in the instrument cluster come on. If a lamp in the instrument cluster fails to come on when the ignition is switched on, have it checked and replaced if necessary.
## Brake

<table>

<tr>
<td><strong>BRAKE</strong> (USA only)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| (Canada only)  | The red brake warning lamp comes on while the engine is running and you hear a warning sound. | There is insufficient brake fluid in the reservoir. | ▶ Risk of accident! Do not drive any further. Stop the vehicle in a safe location as soon as it is safe to do so.  
▶ Engage the parking brake.  
▶ Read and observe messages that may appear in the multifunction display (» page 255).  
▶ Contact an authorized Mercedes-Benz Center. Do not add brake fluid! This will not solve the problem. |

**Warning!**

Driving with the brake warning lamp illuminated can result in an accident. Have your brake system checked immediately if the brake warning lamp stays on. Do not add brake fluid before checking the brake system.

Overfilling the brake fluid reservoir can result in spilling brake fluid on hot engine parts and the brake fluid catching fire. You can be seriously burned.

**!** If you find that the brake fluid in the brake fluid reservoir has fallen to the minimum mark or below, have the brake system checked for brake pad thickness and leaks.

<tr>
<td>⚠ The red coolant temperature warning lamp comes on when the engine is running and you hear a warning sound.</td>
<td>The coolant temperature has exceeded 248°F (120°C).</td>
<td>▶ Stop in a safe location as soon as possible and allow the engine and coolant to cool down.</td>
</tr>
</tbody>
</table>

⚠ **Warning!**
Driving when your engine is overheated can cause some fluids which may have leaked into the engine compartment to catch fire. You could be seriously burned.

Steam from an overheated engine can cause serious burns which can occur just by opening the engine hood. Stay away from the engine if you see or hear steam coming from it.
Stop the vehicle in a safe location away from other traffic. Turn off the engine, get out of the vehicle and do not stand near the vehicle until the engine has cooled down.
### Practical hints

#### What to do if ...

#### Tires

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause/consequence</th>
<th>Suggested solutions</th>
</tr>
</thead>
</table>
| 🚗 USA only:  
Combination low tire pressure telltale/TPMS malfunction telltale for the TPMS illuminates continuously. 
Canada only:  
Low tire pressure telltale for the Advanced TPMS illuminates continuously. | The TPMS (USA only) or Advanced TPMS (Canada only) detects a loss of pressure in at least one tire. | ▶ Carefully bring the vehicle to a halt, avoiding abrupt steering and braking maneuvers. Observe the traffic situation around you.  
▶ Read and observe messages in the multifunction display (> page 255).  
If the tire inflation pressure in the respective tire(s) has (have) been corrected, the combination low tire pressure/TPMS malfunction telltale goes out after a few minutes of driving. |
| 🚗 USA only:  
Combination low tire pressure telltale/TPMS malfunction telltale for the TPMS flashes 60 seconds and then stays illuminated. | There is a malfunction in the TPMS. | ▶ Read and observe messages in the multifunction display (> page 255).  
▶ Have the TPMS checked by an authorized Mercedes-Benz Center.  
After the malfunction has been remedied, the combination low tire pressure/TPMS malfunction telltale goes out after a few minutes of driving. |

⚠️ **Warning!**
Each tire, including the spare (if provided), should be checked every other week when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the Tire and Loading Information placard on the driver’s door B-pillar or, if available, the tire inflation pressure label on the inside of the fuel filler flap. If your vehicle has tires of a different size than the size indicated on the vehicle placard or the tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.
As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires are significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure.

Underinflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if underinflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

USA only:
Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately 1 minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

### Lamp in center console

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause/consequence</th>
<th>Suggested solutions</th>
</tr>
</thead>
</table>
| The indicator lamp illuminates and remains illuminated with the weight of a typical adult or someone larger than a small individual on the front passenger seat. | The system is malfunctioning. | ▶ Have the system checked as soon as possible at an authorized Mercedes-Benz Center.  
▶ Read and observe messages in the multifunction display and follow corrective steps (▶ page 255). |
<table>
<thead>
<tr>

</thead>
</table>
| The indicator lamp does not illuminate and/or does not remain illuminated with the weight of a typical 12-month-old child in a standard child restraint or less on the front passenger seat. | The system is malfunctioning. | ▶ Make sure there is nothing between seat cushion and child seat and check installation of the child seat.  
▶ Make sure no objects applying supplemental weight onto the seat are present.  
▶ Make sure no objects which apply forces to the seat are present (e.g. objects such as books, briefcases etc. lodged behind or around the seat, head restraints pushing against roof etc.). The system may recognize such forces as supplemental weight.  
▶ If the indicator lamp remains out, have the system checked as soon as possible at an authorized Mercedes-Benz Center. Do not transport a child on the front passenger seat until the system has been repaired.  
▶ Read and observe messages in the multifunction display and follow corrective steps (➔ page 255). |

**Warning!**

If the indicator lamp does not illuminate or remains out with the weight of a typical 12-month-old child in a standard child restraint or less on the front passenger seat, do not transport a child on the front passenger seat until the system has been repaired.
Unlocking/locking manually

Unlocking the vehicle

If you cannot unlock the vehicle with the SmartKey or with KEYLESS-GO, unlock the driver’s door and the trunk using the mechanical key.

Unlocking the vehicle with the mechanical key and opening the driver’s door or the trunk will trigger the anti-theft alarm system.

To cancel the alarm, insert the SmartKey in the starter switch.

Removing the mechanical key

Move locking tab ① in direction of arrow.
Slide mechanical key ② out of the housing.

Unlocking the driver’s door

Insert mechanical key ② into the driver’s door lock until it stops.
Turn mechanical key ② counterclockwise to position ① until the locking knob moves up.
The driver’s door is unlocked.
Pull the door handle to open the driver’s door.

Unlocking the trunk

A minimum height clearance of 5.9 ft (1.8 m) is required to open the trunk lid.

Insert mechanical key ① into the trunk lid lock until it stops.
Turn mechanical key ① counterclockwise to position ③ and hold it in this position.
Pull handle ② and lift the trunk lid.
Always make sure there is sufficient overhead clearance.
Turn mechanical key ① back and remove it from the trunk lid lock.
Unlocking/locking manually

**Locking the vehicle**

If you cannot lock the vehicle with the Smart-Key or with KEYLESS-GO, lock it as follows:

- Close the passenger door, the rear doors, and the trunk.
- Open the driver’s door.
- Press the central locking switch (page 77).
- Check to see whether the locking knobs on the doors have moved down.
- If necessary, push them down manually.
- Remove the mechanical key from the SmartKey (page 303).
- Check whether the trunk is locked.
- If it is not locked, lock it with the mechanical key (page 82).

Except for the driver’s door, the vehicle should now be locked.

**Manually unlocking the gear selector lever**

If the vehicle’s electrical system is malfunctioning, the gear selector lever could remain locked in park position P. In this case the gear selector lever can be unlocked manually, e.g. to tow the vehicle.

1. Gear selector lever cover
2. Release

- Engage the parking brake.

**Practical hints**

- This procedure does not arm the anti-theft alarm system, nor does it lock the fuel filler flap.
Resetting activated head restraints

If the active head restraints have been triggered in a rear-end collision, the active head restraints must be reset.

You can tell that the active head restraints have been triggered when they have been moved forward and cannot be adjusted.

**Warning!**
For safety reasons, have the active head restraints checked at an authorized Mercedes-Benz Center after a rear-end collision.

**Warning!**
When pushing back the head restraint cushion, make sure your fingers do not become caught between the head restraint cushion and the cover. Failing to do so may lead to injury.

For your convenience, we recommend that you have this work carried out at an authorized Mercedes-Benz Center.

Be careful not to damage upholstery.

Fuel filler flap

**Warning!**
Avoid contact with the vehicle walls as they may contain sharp edges. Otherwise, you could injure yourself while releasing the fuel filler flap.

In case the central locking system does not release the fuel filler flap, you can open it manually.

1. Open the trunk.
2. Remove right side trim panel.
3. Removing the side trim panel is a demanding process. We recommend that you contact Roadside Assistance (page 187) if you do not feel to have the ability to perform this process.

1. Pull release knob 1 in direction of arrow. The fuel filler flap is unlocked.
2. Open the fuel filler flap (page 197).
Replacing SmartKey batteries

1. Reset tool
2. Active head restraint cushion
3. Rectangular opening

- Take reset tool 1 out of the Mercedes-Benz literature pouch.
- Guide reset tool 1 into rectangular opening 3 between active head restraint cushion 2 and head restraint cover.
- Press reset tool 1 downward in direction of arrow until you hear the head restraint release mechanism audibly engage.
- Pull out reset tool 1.
- Firmly press the active head restraint cushion 2 backward towards the head restraint cover in direction of arrow until it engages.

- Repeat this procedure for the second front seat.
- After resetting the active head restraints store reset tool 1 in the Mercedes-Benz literature pouch.

For information on active head restraints, see “Active head restraints” (page 57).
For information on head restraint adjustment, see “Seats” (page 84).

Replacing SmartKey batteries

If the batteries in the SmartKey are discharged, the vehicle can no longer be locked or unlocked. It is recommended to have the batteries replaced at an authorized Mercedes-Benz Center.

⚠️ Warning!
Batteries contain poisonous and corrosive substances. Therefore, keep the batteries out of reach of children.
If a battery is swallowed, seek medical help immediately.

⚠️ Warning
SmartKey batteries contain Perchlorate material, which may require special handling and regard for the environment. Check with your local government’s disposal guidelines. California residents, see http://www.dtsc.ca.gov/HazardousWaste/Perchlorate/index.cfm.

Batteries contain materials that can harm the environment if disposed of improperly. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.
Replacing SmartKey batteries

When inserting the batteries, make sure they are clean and free of lint.
When replacing batteries, always replace both batteries.

The required replacement batteries are available at any authorized Mercedes-Benz Center.

Replacement batteries: Lithium, type CR 2025 or equivalent.

1. Remove the mechanical key from the SmartKey (⇒ page 303).

2. Insert mechanical key ① into opening.

3. Press mechanical key ① in direction of arrow.

4. Battery compartment ② is unlatched.

5. Pull battery compartment ② out of the SmartKey housing.

6. Pull out batteries ③.

7. Insert new batteries ③ under contact springs ④ with the positive terminal (+) side facing up.

8. Return battery compartment ② into SmartKey housing until it locks into place.

9. Slide mechanical key ① back into the SmartKey.

10. Check the operation of the SmartKey as well as the KEYLESS-GO function.
Replacing bulbs

Safety notes

Safe vehicle operation depends to a large degree on proper exterior lighting and signaling.

Correct headlamp adjustment is extremely important. Have headlamps checked and readjusted at regular intervals and when a bulb has been replaced. Contact an authorized Mercedes-Benz Center for headlamp adjustment.

⚠️ Warning!

Bulbs and bulb sockets can be very hot. Allow the lamp to cool down before changing a bulb.

Keep bulbs out of reach of children.

Halogen lamps contain pressurized gas. A bulb can explode if you:
- touch or move it when hot
- drop the bulb
- scratch the bulb

Wear eye and hand protection.

Because of high voltage in Xenon lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.

⚠️ Warning!

The bulbs in the tail lamps cannot be replaced individually. The tail lamp bulbs are under pressure and could explode during an attempt to replace them.

If the tail lamps are malfunctioning, have them replaced at an authorized Mercedes-Benz Center.

ℹ️ If the headlamps or front fog lamps are fogged up on the inside as a result of high humidity, driving the vehicle a distance with the lights on should clear up the fogging.

### Notes on bulb replacement

- Only use 12 volt bulbs of the same type and with the specified watt rating.
- Switch the lights off before changing a bulb to prevent short circuits.
- Always use a clean lint-free cloth when handling bulbs.
- Your hands should be dry and free of oil and grease.
- If the newly installed bulb does not come on, contact an authorized Mercedes-Benz Center.

Have the LEDs and bulbs for the following lamps replaced at an authorized Mercedes-Benz Center:

- Additional turn signal lamps in the exterior rear view mirrors
- Bi-Xenon lamps

---

13 Vehicles with Bi-Xenon headlamps: Low beam and high beam use the same D2S-35 W lamp. Do not replace the Bi-Xenon bulbs yourself. Contact an authorized Mercedes-Benz Center.
Replacing bulbs

- Front fog lamps
- Front side marker lamps
- Parking and standing lamps (vehicles with Bi-Xenon headlamps only)
- Rear lamps (except license plate lamps)
- High-mounted brake lamp

⚠ Do not replace the LEDs yourself. You could otherwise damage the LEDs or parts of the vehicle. Only have the LEDs replaced at an authorized Mercedes-Benz Center.

Replacing bulbs for front lamps

Before you start to replace a bulb for a front lamp, do the following first:

- Switch off the ignition.
- Turn the exterior lamp switch to position M.
- Open the hood (> page 199).

⚠ Warning!
Do not remove the cover for the Bi-Xenon headlamp. Because of high voltage in Xenon lamps, it is dangerous to replace the bulb or repair the lamp and its components. We recommend that you have such work done by a qualified technician.

Low-beam bulb (halogen headlamps only)

- Turn housing cover 1 counterclockwise and remove it.
- Turn bulb socket 6 with the bulb counterclockwise and remove it.
- Pull the bulb out of bulb socket 6.
- Press the new bulb gently into bulb socket 6.
Replacing bulbs

- Place bulb socket 6 back into the housing and turn it clockwise until it engages.
- Align housing cover 1 and turn it clockwise until it engages.

High-beam and high-beam flasher bulb (halogen headlamps)/high-beam flasher bulb (Bi-Xenon headlamps)
- Turn housing cover 2 counterclockwise and remove it.
- Turn bulb socket 4 with the bulb counterclockwise and remove it.
- Pull the bulb out of bulb socket 4.
- Press the new bulb gently into bulb socket 4.
- Place bulb socket 4 back into the housing and turn it clockwise until it engages.
- Align housing cover 2 and turn it clockwise until it engages.

Front turn signal lamp bulb
- Turn bulb socket 3 with the bulb counterclockwise and remove it.
- Press gently onto the bulb and turn it counterclockwise out of bulb socket 3.
- Press the new bulb gently into bulb socket 3 and turn clockwise until it engages.
- Place bulb socket 3 back into the housing and turn it clockwise until it engages.

Parking and standing lamp bulb

Halogen headlamps
- Turn housing cover 2 counterclockwise and remove it.
- Pull out bulb socket 5 with the bulb.
- Pull the bulb out of bulb socket 5.
- Press the new bulb gently into bulb socket 5.
- Press bulb socket 5 back into the lamp.
- Align housing cover 2 and turn it clockwise.

Bi-Xenon headlamps
In vehicles with Bi-Xenon headlamps, the bulbs of the parking and standing lamps are LEDs.

- Do not replace the LEDs yourself. You could otherwise damage the LEDs or parts of the vehicle. Only have the LEDs replaced at an authorized Mercedes-Benz Center.

Replacing bulbs for rear lamps

Tail lamp unit
The tail lamps are equipped with HiP bulbs and LEDs. Have them replaced at an authorized Mercedes-Benz Center.

- Observe Safety notes, see page 308.

License plate lamps

- Screws
- Lamp cover
- Switch off the ignition.
- Turn the exterior lamp switch to position 0.
Replacing wiper blades

- Open the trunk.
- Loosen both screws ①.
- Remove lamp cover ②.
- Replace the bulb.
- Reinstall lamp cover ②.
- Retighten screws ①.

### Replacing wiper blades

#### Safety notes

⚠️ **Warning!**

For safety reasons, switch off wipers and remove SmartKey from starter switch (vehicles with KEYLESS-GO: Make sure the vehicle’s on-board electronics have status 0) before replacing a wiper blade. Otherwise, the wiper motor could suddenly turn on and cause injury.

⚠️ **Warning!**

Wiper blades are components that are subject to wear and tear. Replace the wiper blades twice a year, preferably in the spring and fall. Otherwise the windows will not be properly wiped. As a result, you may not be able to observe surrounding traffic conditions and could cause an accident.

⚠️ To avoid damage to the hood the wiper arms should only be folded forward when in the vertical position.

⚠️ Never open the hood when a wiper arm is folded forward. Hold on to the wiper when folding a wiper arm back. If released, the force of the impact from the tensioning spring could crack the windshield.

Do not allow a wiper arm to contact the windshield glass without a wiper blade inserted.

For your convenience, we recommend that you have this work carried out at an authorized Mercedes-Benz Center.

---

**Placing wiper arms in vertical position**

- Make sure the hood is fully closed.
Replacing wiper blades

### Vehicles with SmartKey

- Turn the SmartKey in the starter switch to position **1**.
- Turn combination switch to wiper setting **u**.
- With wiper arms in vertical position, turn the SmartKey in the starter switch to position **0**.
- Remove the SmartKey from the starter switch.

### Vehicles with KEYLESS-GO

- Turn off the engine. With the driver’s door closed, the starter switch is now in position **1**.
- Turn combination switch to wiper setting **u**.
- With wiper arms in vertical position, open the driver’s door. The starter switch is set to position **0**, same as the SmartKey removed from the starter switch.
- Turn combination switch to wiper setting **0**.

#### Removing wiper blades

- Do not pull on the wiper blade inserts. They could tear.
- Fold the wiper arm forward until it snaps into place.

#### Installing wiper blades

- Slide the wiper blade onto wiper arm until it locks in place.
- Rotate the wiper blade into position parallel to the wiper arm.
- Fold the wiper arm backward to rest on the windshield. Make sure you hold on to the wiper when folding the wiper arm back.

- Make sure the wiper blades are properly installed. Improperly installed wiper blades may cause windshield damage.

---

*Practical hints*
Flat tire

Safety notes

Your vehicle may be equipped with a Minispare wheel or a spare wheel with collapsible tire.

For information on your vehicle’s equipment, see “Rims and tires” (>

Warning!
The dimensions of the spare wheel are different from those of the road wheels. As a result, the vehicle handling characteristics change when driving with a spare wheel mounted. Adapt your driving style accordingly.

The spare wheel is for temporary use only. When driving with spare wheel mounted, ensure proper tire inflation pressure and do not exceed a vehicle speed of 50 mph (80 km/h).

Contact the nearest authorized Mercedes-Benz Center as soon as possible to have the spare wheel replaced with a regular road wheel.

Never operate the vehicle with more than one spare wheel mounted.

Do not switch off the ESP® when a spare wheel is mounted.

Preparing the vehicle

- Park the vehicle in a safe distance from moving traffic on a hard, flat surface when possible.
- Turn on the hazard warning flasher.
- Turn the steering wheel so that the front wheels are in a straight-ahead position.
- Engage the parking brake.
- Shift the automatic transmission into park position P.
- Turn off the engine.
- Remove the SmartKey from the starter switch.

or

- Vehicles with KEYLESS-GO: Open the driver’s door (this puts the starter switch in position 0, same as with the SmartKey removed from the starter switch). The driver’s door can then be closed again. Open doors only when conditions are safe to do so.
- Have any passenger exit the vehicle at a safe distance from the roadway. Open doors only when conditions are safe to do so.

Mounting the spare wheel

Introduction

- Prepare the vehicle as described (> page 314).
- Take the following out of the vehicle:
  - spare wheel
  - jack
  - vehicle tool kit
  - wheel wrench
  - electric air pump (required for vehicles with spare wheel with collapsible tire only)

For information on where to find the respective items, see “Where will I find ...?” (> page 250) and (> page 252).

Removing tensioning straps from spare wheel

This description applies to vehicles with 19" spare wheel with collapsible tire only.

A 19" spare wheel with collapsible tire has two tensioning straps on it that must be removed before mounting the spare wheel.

The tensioning straps are shown in red for illustration purposes. The tensioning straps...
on the spare wheel of your vehicle may be of a different color.

The jack is designed exclusively for jacking up the vehicle at the jack take-up brackets built into both sides of the vehicle. Make sure the jack arm is fully seated in the jack take-up bracket. The jack must always be vertical when in use, especially on inclines or declines.

The jack is intended only for lifting the vehicle briefly for wheel changes. It is not suited for performing maintenance work under the vehicle. To help avoid personal injury, use the jack only to lift the vehicle during a wheel change.

Never get beneath the vehicle while it is supported by the jack. Keep hands and feet away from the area under the lifted vehicle. Always lower the vehicle onto sufficient capacity jackstands before working under the vehicle.

Always firmly set the parking brake and block the wheels with wheel chocks or other sizeable objects before raising the vehicle with the jack. Do not disengage the parking brake while the vehicle is raised.

Make sure that the ground on which the vehicle is standing and where you place the jack is solid, level and not slippery. If necessary, use a large underlay. On slippery surfaces, such as tiled floors, you should use a non-slip underlay, for example a rubber mat.

Do not use wooden blocks or similar objects to support the jack. Otherwise the jack may not be able to achieve its load-bearing capacity if it is not at its full height.

Never start the engine when the vehicle is raised.

Also observe the notes on the jack.

 Prevent the vehicle from rolling away by blocking wheels with wheel chocks or other sizeable objects.

One wheel chock is included with the vehicle tool kit (page 250). For information on setting up the collapsible wheel chock, see (page 251).

When changing wheel on a level surface:

 Place the wheel chock in front of and another wheel chock or other sizeable object behind the wheel that is diagonally opposite to the wheel being changed.

Lifting the vehicle

⚠️ **Warning!**

When jacking up the vehicle, only use the jack which has been specifically approved by Mercedes-Benz for your vehicle.
Flat tire

Always try lifting the vehicle using the jack on a level surface. However, should circumstances require you to do so on a hill, place the wheel chock and another sizeable object as follows:

▲ Place wheel chocks or other sizeable objects on the downhill side blocking both wheels of the axle not being worked on.

⚠️ Warning!
Only jack up the vehicle on level ground or on slight inclines/declines. Otherwise, the vehicle could fall off the jack and injure you or others.

▲ On wheel to be changed, loosen but do not yet remove the wheel bolts (approximately one full turn with wrench ①). The jack take-up brackets are located directly behind the front wheel housings and in front of the rear wheel housings.

⚠️ Warning!
The jack is designed exclusively for jacking up the vehicle at the jack take-up brackets. Make sure the jack arm is fully seated in the jack take-up bracket.
If you do not position the jack correctly in the jack take-up bracket, the vehicle can fall off the jack and seriously or fatally injure you or others.

⚠️ Do not position the jack on the body of the vehicle, as this may cause damage to the vehicle.

① Wheel wrench

② Take-up bracket
③ Jack
④ Crank

▲ Place jack ③ on firm ground.
▲ Position jack ③ under take-up bracket ② so that it is always vertical as seen from the side, even if the vehicle is parked on an incline.
- Turn crank 4 clockwise until jack 3 is fully seated in take-up bracket 2 and the jack base evenly meets the ground.
- Jack up the vehicle until the wheel is a maximum of 1.2 in (3 cm) from the ground.

## Removing the wheel

1. **Alignment bolt**
   - Unscrew uppermost wheel bolt and remove it.
   - Replace this wheel bolt with alignment bolt 1 supplied with the vehicle tool kit.
   - Remove the remaining bolts.
   - **Warning!** Do not place wheel bolts in sand or dirt. This could result in damage to the wheel bolts and wheel hub threads.
   - Remove the wheel.

## Attaching the spare wheel

### Warning!
Vehicles with spare wheel with collapsible tire only: Inflate collapsible tire only after the wheel is properly attached.
Inflate the collapsible tire using the electric air pump before lowering the vehicle.

### Warning!
Always replace wheel bolts that are damaged or rusted.
Never apply oil or grease to wheel bolts. Damaged wheel hub threads should be repaired immediately. Do not continue to drive under these circumstances! Contact an authorized Mercedes-Benz Center or call Roadside Assistance.
Incorrect wheel bolts or improperly tightened wheel bolts can cause the wheel to come off. This could cause an accident. Be sure to use the correct wheel bolts.

### Warning!
Only use genuine Mercedes-Benz wheel bolts. Other wheel bolts may come loose. Do not tighten the wheel bolts when the vehicle is raised. Otherwise the vehicle could fall off the jack.
Flat tire

- Clean contact surfaces of wheel and wheel hub.

⚠ To avoid paint damage, place wheel flat against hub and hold it there while installing first wheel bolt.

- Guide the spare wheel onto the alignment bolt and push it on.
- Insert the wheel bolts and tighten them slightly.
- Unscrew the alignment bolt.
- Install last wheel bolt and tighten it slightly.

**Vehicles with spare wheel with collapsible tire:** Continue the procedure by following the instructions under “Inflating the collapsible tire” (page 318) and then “Lowering the vehicle” (page 320).

**Vehicles with Minispare wheel:** Continue the procedure by following the instructions under “Lowering the vehicle” (page 320).

---

**Inflating the collapsible tire**

⚠ **Warning!**
Inflate collapsible tire only after the wheel is properly attached.
Inflate the collapsible tire using the electric air pump before lowering the vehicle.

⚠ **Warning!**
Observe safety instructions on air pump label.

⚠ Do not lower the vehicle before inflating the collapsible tire. Otherwise the rim may be damaged.

Your vehicle may be equipped with either of two versions of the electric air pump:

- **Version 1:** The air hose with pressure gauge and the electrical plug are located behind a flap.
- **Version 2:** The pressure gauge is located in the pump housing. The air hose and electrical plug are located at the bottom of the pump housing.

The following description applies to both versions. Differences in usage are expressly declared.

**Version 1**

1. Flap
2. Air pump switch
3. Electrical plug

**Version 2**

1. Flap
2. Air pump switch
3. Electrical plug
4. Pressure gauge
5. Air hose
4 Air hose with pressure gauge and vent screw
5 Union nut

4 Air hose with pressure gauge and vent screw
5 Union nut

Version 2
2 Air pump switch
3 Electrical plug
4 Pressure gauge
5 Union nut
6 Deflate button

Version 1 only: Open flap 1 on electric air pump.

Version 1 only: Pull out electrical plug 3 and air hose with pressure gauge 4.

Version 2 only: Pull electrical plug 3 and the air hose out of the pump housing bottom.

Version 1 only: Close vent screw on air hose 4.

Remove the valve cap from the collapsible tire valve.

Screw union nut 5 onto the collapsible tire valve.

Make sure air pump switch 2 is set to 0.

Insert electrical plug 3 into the cigarette lighter socket (page 183) or a power outlet (page 184).

Turn the SmartKey in the starter switch to position 1.

or

Vehicles with KEYLESS-GO: Press the KEYLESS-GO start/stop button on the gear selector lever once. Do not depress the brake pedal.

Press I on electric air pump switch 2. The electric air pump switches on and inflates the collapsible tire.

Inflate the collapsible tire to the recommended tire inflation pressure as specified for your vehicle (page 340). This should take approximately 5 minutes.

Warning!
The air hose and the union nut can become hot during inflation. Exercise proper caution to avoid burning yourself when using the equipment.

Do not operate the electric air pump longer than 8 minutes without interruption. Otherwise it may overheat. You may operate the air pump again after it has cooled off.

Compare the recommended tire inflation pressure for your vehicle with the tire inflation pressure on the yellow label located on the spare wheel rim.

If the tire inflation pressure on the yellow label on the spare wheel rim differs from the values given in this Operator’s Manual, inflate the tire to the recommended tire inflation pressure given on the yellow label on the spare wheel rim.
Flat tire

- Press 0 on electric air pump switch ②.
- Turn the SmartKey in the starter switch to position 0.

or

- Vehicles with KEYLESS-GO: Press the KEYLESS-GO start/stop button on the gear selector lever twice. Do not depress the brake pedal.

- **Version 1 only:** If the tire inflation pressure is above the recommended tire inflation pressure as specified for your vehicle (page 340), decrease tire pressure using the vent screw on air hose ④.

- **Version 2 only:** If the tire inflation pressure is above the recommended tire inflation pressure as specified for your vehicle (page 340), decrease tire pressure using deflate button ⑥.

⚠️ **Warning!**
Follow recommend inflation pressures. Do not overinflate tires. Overinflating tires can result in sudden deflation (blowout) because they are more likely to become punctured or damaged by road debris, potholes, etc.

- Detach the electric air pump.
- Reinstall collapsible tire valve cap.
- **Version 1 only:** Store electrical plug ③ and air hose ④ behind flap ① and place the electric air pump back in its designated storage space.
- **Version 2 only:** Store electrical plug ③ and the air hose back into the pump housing bottom.
- Place the electric air pump back in its designated storage space.
- Lower the vehicle.

**Lowering the vehicle**

⚠️ **Warning!**
Vehicles with spare wheel with collapsible tire only: Inflate collapsible tire only after the wheel is properly attached.

Inflate the collapsible tire using the electric air pump before lowering the vehicle.

- Lower the vehicle by turning crank counterclockwise until the vehicle is resting fully on its own weight.
- Remove the jack.

⚠️ **Warning!**
Have the tightening torque checked after changing a wheel. The wheels could come loose if they are not tightened to a torque of 96 lb-ft (130 Nm).
Flat tire

- Fully collapse the jack, with handle folded in (storage position), see (‡ page 250).
- Store the jack and the other vehicle tools in the designated storage space.
- Wrap the damaged wheel in the protective wrap that comes with the spare wheel and put the wheel in the trunk.
- You can also place the damaged wheel down into the spare wheel well. In this case, you must store the luggage bowl in the trunk.

For information on storing the spare wheel in the trunk after it has been replaced by a regular road wheel, see (‡ page 252).

Vehicles with TPMS or Advanced TPMS: Do not restart the tire inflation pressure monitor until a full size wheel/tire with functioning sensor has been placed back into service on the vehicle.

**MOExtended system**

The MOExtended system allows you to continue driving your vehicle even if there is a total loss of pressure in one or more tires.

You may only use the MOExtended system in conjunction with the Run Flat Indicator (‡ page 213), the TPMS (‡ page 214), or the Advanced TPMS (‡ page 217).

The maximum distance in emergency mode depends on the vehicle’s load. It is 30 miles (50 km) if the vehicle is partially loaded and 18 miles (30 km) if the vehicle is fully loaded.

The point at which the maximum driving distance in emergency mode begins is when the warning message appears in the multifunction display indicating that there is a loss of tire inflation pressure.

- Do not exceed the maximum speed of 50 mph (80 km/h).

**Warning!**

In emergency mode, your vehicle’s driving characteristics are diminished in such situations as:

- driving around curves
- while braking
- while accelerating rapidly

Therefore, your driving style must be adapted accordingly. Avoid abrupt steering and driving maneuvers, as well as driving over obstacles (road curbs, potholes, or off-road areas). This is especially important if the vehicle is heavily loaded.

The emergency driving distance that can be achieved greatly depends on the demands placed on the vehicle. Depending on speed, load, driving maneuvers, road conditions, outside temperature, etc., the distance can be significantly shorter or, if the vehicle is driven cautiously, somewhat longer.

Do not continue driving in emergency mode if

- you notice knocking sounds
- the vehicle starts to shake
- smoke develops and you smell rubber
- ESP® is intervening continuously
- you notice tears on the tire sidewalls

After driving in emergency mode, you must have the rims inspected by an authorized Mercedes-Benz Center to check if they are suitable for further use. The failed tire must be replaced in any case.

When replacing individual or all tires on the vehicle, make sure only tires marked with
“MOExtended” are mounted in the size specified for your vehicle (> page 336).

**Battery**

**Safety notes**

A battery should always be sufficiently charged in order to achieve its rated service life. Refer to Maintenance Booklet for battery maintenance intervals. If you use your vehicle mostly for short-distance trips, you will need to have the battery charge checked more frequently. When replacing a battery, always use a battery approved by Mercedes-Benz. If you do not intend to operate your vehicle for an extended period of time, contact an authorized Mercedes-Benz Center about steps you need to observe.

**Warning!**

Observe all safety instructions and precautions when handling automotive batteries. Risk of explosion.

Fire, open flames and smoking are prohibited when handling batteries. Avoid creating sparks.

Battery acid is caustic. Do not allow it to come into contact with skin, eyes or clothing. Wear suitable protective clothing, especially gloves, apron and face-guard.

Wear eye protection. Rinse any acid spills immediately with clear water. Contact a physician if necessary.

Keep children away.

Follow the instructions in this Operator’s Manual.

Batteries contain materials that can harm the environment if disposed of improperly. Large 12-volt storage batteries contain lead. Recycling of batteries is the preferred method of disposal. Many states require sellers of batteries to accept old batteries for recycling.
Warning!
Failure to follow these instructions can result in severe injury or death.
Never lean over batteries while connecting, you might get injured.
Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water and seek medical help if necessary.
A battery will also produce hydrogen gas, which is flammable and explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking etc.

Warning!
Do not place metal objects on the battery as this could result in a short circuit.
Use leak-proof batteries only to avoid the risk of acid burns in the event of an accident.

The battery is a Valve-Regulated Lead Acid (VRLA) battery, also referred to as “fleece” battery.
Such batteries do not require topping-up of the electrolyte level. VRLA batteries therefore do not have cell caps and the battery cover is non-removable. Do not attempt to open the battery as otherwise the battery will be damaged.
Even though VRLA batteries do not require topping-up of the electrolyte level and cannot be opened to check the electrolyte level, the battery condition must be checked periodically by performing a battery conductance test. Refer to Maintenance Booklet for battery condition testing intervals.
The factory-equipped VRLA battery is leak-proofed. Only use a battery as replacement that has the same security features and is of identical size, voltage, and capacity as the factory-equipped battery.

As with any other battery, have the battery disconnect at a qualified workshop or an authorized Mercedes-Benz Center if you do not intend to operate your vehicle for an extended period of time to prevent battery discharge. You may also connect an accessory battery charge unit expressly approved by Mercedes-Benz for your vehicle model to maintain the battery charge. Contact an authorized Mercedes-Benz Center for further information.
The battery, the battery ventilation hose and the lateral plug must always be securely installed when the vehicle is in operation.

Never loosen or detach battery terminal clamps while the engine is running or the SmartKey is in the starter switch or KEY-LESS-GO button is in position 1. Otherwise the alternator and other electronic components could be severely damaged.
Have the battery checked regularly at an authorized Mercedes-Benz Center.
Refer to Maintenance Booklet for maintenance intervals or contact an authorized Mercedes-Benz Center for further information.

Only replace a discharged battery with a battery recommended by Mercedes-Benz.

After battery power was interrupted, do the following:
• Synchronize the power windows (page 104).
• Synchronize the tilt/sliding sunroof (page 173).
Jump starting

Charging the battery

⚠️ Warning!
Never charge a battery while still installed in the vehicle unless the accessory battery charge unit approved by Mercedes-Benz is being used. Gases may escape during charging and cause explosions that may result in paint damage, corrosion or personal injury.

An accessory battery charge unit specially adapted for Mercedes-Benz vehicles and tested and approved by Mercedes-Benz is available, permitting the charging of the battery in its installed position. Contact an authorized Mercedes-Benz Center for information and availability.

Charge battery in accordance with the separate instructions for the accessory battery charger.

Have batteries charged at an authorized Mercedes-Benz Center. If you charge the batteries yourself, follow the operating instructions for your charging device.

Only use a battery charge unit with a maximum charging voltage of 14.8 V.

Charge battery in accordance with the instructions of the battery charger manufacturer.

Jump starting

⚠️ Warning!
Failure to follow these directions will cause damage to the electronic components, and can lead to a battery explosion and severe injury or death.

Never lean over batteries while connecting or jump starting, you might get injured.

Battery fluid contains sulfuric acid. Do not allow this fluid to come in contact with eyes, skin or clothing. In case it does, immediately flush affected area with water, and seek medical help if necessary.

A battery will also produce hydrogen gas, which is flammable and very explosive. Keep flames or sparks away from battery, avoid improper connection of jumper cables, smoking, etc.

Attempting to jump start a frozen battery can result in it exploding, causing personal injury.

Read all instructions before proceeding.

⚠️ Do not tow-start the vehicle.
Jump starting should only be performed using the jump-start terminals located in the engine compartment. Avoid repeated and lengthy starting attempts. Do not attempt to start the engine using a battery quick-charge unit.

If the engine does not run after several unsuccessful starting attempts, have it checked at the nearest authorized Mercedes-Benz Center. Excessive unburned fuel generated by repeated failed starting attempts may damage the catalytic converter and may present a fire risk.

Make sure the jumper cables do not have loose or missing insulation. Make sure the cable clamps do not touch any other metal part while the other end is still attached to a battery.

If the battery is discharged, the engine can be started with jumper cables and the battery of another vehicle. Observe the following:

- Jump starting should only be performed when the engine and catalytic converter are cold.
- Do not start the engine if the battery is frozen. Let the battery thaw out first.
- Only jump start from batteries with the same voltage rating (12 V). Jump starting with a more powerful battery could damage the vehicle’s electrical system, which will not be covered by the Mercedes-Benz Limited Warranty.
- Only use jumper cables with sufficient cross-section and insulated terminal clamps.
- Always make sure the jumper cables are not on or near pulleys, fans or other parts that move when an engine is started or running.

⚠️ Warning!
Keep flames or sparks away from battery. Do not smoke. Observe all safety instructions and precautions when handling automotive batteries.

The battery is located in the trunk underneath the luggage box (page 254).
- Make sure the two vehicles do not touch.
- Turn off all electrical consumers.
- Apply the parking brake.
- Make sure the automatic transmission is in park position P.
- Open the trunk.

Never invert the terminal connections!

- Connect positive terminals ① and ③ of the batteries with a jumper cable. Clamp the cable to positive terminal ③ of the charged battery first.
- Start engine of the vehicle with the charged battery and run at idle speed.
- Connect negative terminals ② and ④ of the batteries with a jumper cable. Clamp the cable to negative terminal ④ of the charged battery first.
Practical hints

Towing the vehicle

- Start engine of the vehicle with the discharged battery and run at idle speed. You can now turn on the electrical consumers. Do not switch on the headlamps under any circumstances.
- Remove the jumper cables first from negative terminals 2 and 4 and then from positive terminals 1 and 3. You can now switch on the headlamps.
- Have the battery checked at the nearest authorized Mercedes-Benz Center.

**Towing the vehicle**

**Safety notes**

Mercedes-Benz recommends that the vehicle be transported with all wheels off the ground using flatbed or appropriate wheel lift/dolly equipment. This method is preferable to other types of towing.

⚠️ To prevent damage during transport, do not tie down vehicle by its chassis or suspension parts.

If circumstances do not permit the recommended towing methods, the vehicle may be towed with all wheels on the ground or front axle raised only so far as necessary to have the vehicle moved to a safe location where the recommended towing methods can be employed.

⚠️ Before towing the vehicle observe the following instructions:

- Do not tow-start the vehicle. You could otherwise seriously damage the automatic transmission which is not covered by the Mercedes-Benz Limited Warranty.
- Do not tow with sling-type equipment. Towing with sling-type equipment over bumpy roads will damage radiator and supports.

- Towing of the vehicle should only be done using the properly installed towing eye bolt. Never attach a tow cable, tow rope or tow rod to the vehicle chassis, frame or suspension parts.

⚠️ If the battery is disconnected or discharged

- the SmartKey will not turn in the starter switch
- the automatic transmission will remain in park position P
- For more information see “Battery” (page 322) or “Jump starting” (page 324).
- For information on manually unlocking the gear selector lever, see (page 304)
Installing towing eye bolt

Depending on whether you are towing a vehicle or you are being towed, the towing eye bolt can be screwed into threaded holes which are located behind covers on each bumper.

The towing eye bolt is supplied with the vehicle tool kit, located underneath the trunk floor (> page 250).

➤ Take the vehicle tool kit out of the trunk.

Removing cover in front bumper

➤ Press mark on cover ① as indicated by the arrow.
➤ Lift cover ① off to reveal the threaded hole for the towing eye bolt.

Removing cover in rear bumper

⚠️ Warning!

In order to avoid possible serious burns or injury, use extreme caution when removing the rear cover, because the rear exhaust pipe is extremely hot.

Fixing towing eye bolt

Example illustration front bumper

① Towing eye bolt

➤ Take the towing eye bolt ① and the wheel wrench from the vehicle tool kit.
➤ Screw towing eye bolt ① clockwise into threaded hole to its stop.
➤ Insert wheel wrench into towing eye and tighten towing eye bolt ① by turning it clockwise.
**Towing the vehicle**

**Removing towing eye bolt**

- Loosen towing eye bolt 1 counterclockwise with wheel wrench.
- Unscrew towing eye bolt 1.
- **Reinstalling cover:** Fit cover 1 (➤ page 327) and snap it into place.
- Store the towing eye bolt and wheel wrench back into the vehicle tool kit.

**Towing with front axle raised**
When towing the vehicle with the front axle raised, the wheels on the ground have to move freely.

- Make sure the ignition is switched on.
- With the vehicle at a standstill, depress the brake pedal and keep it pressed.
- Shift the automatic transmission into neutral position **N**.
- Release the brake pedal.
- If engaged, release the parking brake.
- Switch off the automatic central locking (➤ page 138).

- Switch off the ignition and leave the SmartKey in the starter switch.
- Switch on the hazard warning flasher (➤ page 98).

⚠️ Make sure that the ignition is switched off. If the starter switch is in position **2**, active braking action through the ESP® may otherwise seriously damage the brake system.

⚠️ The vehicle may be towed only for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h).

**Towing with all wheels on the ground**

⚠️ **Warning!**
If circumstances require towing the vehicle with all wheels on the ground, always tow with a tow bar if:
- the engine will not run
- there is a malfunction in the brake system
- there is a malfunction in the power supply or in the vehicle’s electrical system

This is necessary to adequately control the towed vehicle.

Prior to towing the vehicle with all wheels on the ground, make sure the SmartKey is in starter switch position **2**.

If the SmartKey is left in the starter switch position **0** for an extended period of time, it can no longer be turned in the switch. In this case, the steering is locked. To unlock, remove SmartKey from starter switch and reinsert.

⚠️ **Warning!**
With the engine not running, there is no power assistance for the brake and steering systems. In this case, it is important to keep in mind that a considerably higher degree of effort is necessary to brake and steer the vehicle. Adapt your driving accordingly.

- Make sure the ignition is switched on.
- With the vehicle at a standstill, depress the brake pedal and keep it pressed.
- Shift the automatic transmission into neutral position **N**.
- Release the brake pedal.
If engaged, release the parking brake.

Switch on the hazard warning flasher (> page 98).

The vehicle may be towed only for distances up to 30 miles (50 km) and at a speed not to exceed 30 mph (50 km/h).

To signal turns while being towed with the hazard warning flasher in use you can activate the combination switch for the left or right turn signal in the usual manner – only the selected turn signal will operate. Upon canceling the turn signal, the hazard warning flasher will operate again.

---

**Fuses**

**Introduction**

The electrical fuses in your vehicle serve to switch off malfunctioning power circuits. If a fuse is blown, the components and systems secured by that fuse will stop operating.

**Warning!**

Only use fuses approved by Mercedes-Benz with the specified amperage for the system in question and do not attempt to repair or bridge a blown fuse. Using other than approved fuses or using repaired or bridged fuses may cause an overload leading to a fire, and/or cause damage to electrical components and/or systems. Have the cause determined and remedied by an authorized Mercedes-Benz Center.

A blown fuse must be replaced by an appropriate spare fuse (recognizable by its color or the fuse rating given on the fuse) of the amperage recommended in the fuse chart. Any Mercedes-Benz Center will be glad to advise you on this subject.

In case of a blown fuse contact Roadside Assistance or an authorized Mercedes-Benz Center.

If a newly inserted fuse blows again, have the cause determined and rectified by an authorized Mercedes-Benz Center.

A fuse chart is located in the fuse box in the passenger compartment. The fuse chart explains the fuse allocation and fuse amperages.

The electrical fuses are located in fuse boxes in the passenger compartment or in the trunk.

---

**Before replacing fuses**

- Engage the parking brake.
- Make sure the automatic transmission is in park position P.
- Switch off all electrical consumers.
- Turn off the engine.
- Remove the SmartKey from the starter switch.
- Vehicles with KEYLESS-GO: Open the driver’s door (this puts the starter switch in position 0, same as with the SmartKey removed from the starter switch). The driver’s door then can be closed again.
Fuses

Fuse box in passenger compartment

⚠️ Do not use sharp objects such as a screwdriver to open the fuse box cover in the dashboard, as this could damage the fuse box cover or the dashboard.

1 Fuse box cover

► Opening: Open the driver’s door.
► Insert flat, blunt object as a lever in-between the edge of cover 1 and the dashboard at the position indicated by the arrow.
► Loosen cover 1 from the dashboard using the lever.
► Using your hands, pull cover 1 in direction of arrow and remove it.

► Closing: Hook cover 1 into the opening at the front.
► Press cover 1 back on until it engages.

⚠️ The fuse box cover must be properly positioned as described to prevent moisture or dirt from entering the fuse box and possibly impairing fuse operation.

Fuse box in trunk

1 Cover

► Opening: Open the trunk.
► Insert flat, blunt object as a lever into the edge of cover 1 and remove cover 1.
► Closing: Install cover 1.

Vehicle equipment

This Operator’s Manual describes all features, standard or optional, potentially available for your vehicle at the time of purchase. Please be aware that your vehicle might not be equipped with all features described in this manual.

Parts service

All authorized Mercedes-Benz Centers maintain a stock of Genuine Mercedes-Benz Parts required for maintenance and repair work. In addition, strategically located parts distribution centers provide quick and reliable parts service.

More than 300,000 different parts for Mercedes-Benz models are available.

Genuine Mercedes-Benz Parts are subjected to stringent quality inspections. Each part has been specifically developed, manufactured or selected for and adapted to Mercedes-Benz vehicles.

Therefore, Genuine Mercedes-Benz Parts should be installed.

Do not use non-genuine Mercedes-Benz parts and accessories not authorized by Mercedes-Benz. Doing so could damage the vehicle, which is not covered by the Mercedes-Benz Limited Warranty. Also, it could compromise the vehicle’s durability or safety.

Warranty coverage

Your vehicle is covered under the terms of the warranties printed in the Service and Warranty Information booklet.

Your authorized Mercedes-Benz Center will exchange or repair any defective parts originally installed in the vehicle in accordance with the terms of the following warranties:

- New Car Limited Warranty
- Emission System Warranty
- Emission Performance Warranty
- California, Connecticut, Maine, Massachusetts, New York, Pennsylvania, Rhode Island, and Vermont Emission Control Systems Warranty
- State Warranty Enforcement Laws (Lemon Laws)

Replacement parts and accessories are covered by the Mercedes-Benz Parts and Accessories warranties, copies of which are available at any authorized Mercedes-Benz Center.
Loss of Service and Warranty Information booklet

Should you lose your Service and Warranty Information booklet, have an authorized Mercedes-Benz Center arrange for a replacement. It will be mailed to you.

Identification labels

① Certification label (on driver’s door B-piller)

The Vehicle Identification Number (VIN) can be found in the following locations:

• on the certification label
• embossed underneath a cover in the front passenger footwell (page 334)
• on the lower edge of the windshield (page 334)

Example certification label (U.S. vehicles)
② VIN
③ Paintwork code

Example certification label (Canada vehicles)
② VIN
③ Paintwork code
Identification labels

Data shown on certification label are for illustration purposes only. These data are specific to each vehicle and may vary from data shown in the illustration. Refer to certification label on vehicle for actual data specific to your vehicle.

Move the front passenger seat backward as far as possible (page 85).

Fold cover (4) backward.

VIN (5) is now visible.

Emission control information label, includes both federal and California certification exhaust emission standards

VIN (on lower edge of windshield)

Engine number (engraved on engine)

When ordering parts, please specify vehicle identification and engine number.

\(^{15}\) Premium fuel required. Performance may vary with fuel octane rating.
Rims and tires

Notes

Only use tires which have been tested and approved by Mercedes-Benz. Tires approved by Mercedes-Benz are developed to provide best possible performance in conjunction with the driving safety systems on your vehicle such as the ABS or the ESP®. Tires specially developed for your vehicle and tested and approved by Mercedes-Benz can be identified by finding the following on the tire’s sidewall:

- **MO** = Mercedes-Benz Original equipment tires
  - AMG vehicles: Does not apply to all approved tires on AMG vehicles. For information on tested and approved tires for AMG vehicles, contact an authorized Mercedes-Benz Center.
- **MOE** = Mercedes-Benz Original Extended (tires with limited run-flat characteristics) original equipment tires

Using tires other than those approved by Mercedes-Benz may result in damage that is not covered by the Mercedes-Benz Limited Warranty.

For information on driving with MOExtended tires, see the “Practical hints” section (> page 321).

Using tires other than those approved by Mercedes-Benz can have detrimental effects, such as
- poor handling characteristics
- increased noise
- increased fuel consumption

Moreover, tires and rims not approved by Mercedes-Benz may, under load, exhibit dimensional variations and different tire deformation characteristics that could cause them to come into contact with the vehicle body or axle parts. Damage to the tires or the vehicle may be the result.

Further information on tires and rims is available at any authorized Mercedes-Benz Center. A placard with the recommended tire inflation pressures is located on the driver’s door B-pillar. Some vehicles may have supplemental tire inflation pressure information for driving at high speeds or for vehicle loads less than the maximum loaded vehicle condition. If such information is provided, it can be found on the placard located on the inside of the fuel filler flap. The tire inflation pressure should be checked regularly and should only be adjusted on cold tires. Follow tire manufacturer’s maintenance recommendation included with the vehicle.

For information on recommended tire inflation pressure and supplemental tire inflation pressure information for special driving situations, see (> page 210).

The following pages also list the approved wheel rim and tire sizes for equipping your vehicles with winter tires. Winter tires are not available as standard or optional factory equipment, but can be purchased from an authorized Mercedes-Benz Center.

Equipping your vehicle with winter tires approved for your vehicle model may require the purchase of two or four wheel rims of the recommended size for use with these winter tires. This depends on vehicle model and the standard or optional factory-equipped wheel rim/tire configuration on your vehicle. For more information contact an authorized Mercedes-Benz Center.
**Same size tires**

Winter tires on rims with different wheel offset front vs. rear cannot be rotated.

### Rims and tires

#### Spare wheel

> Compare the recommended tire inflation pressure for your vehicle with the tire inflation pressure on the yellow label located on the spare wheel rim.

If the tire inflation pressure on the yellow label on the spare wheel rim differs from the values given in this Operator’s Manual, inflate the tire to the recommended tire inflation pressure given on the yellow label on the spare wheel rim.

> Please note that the tire inflation pressure of the spare wheel differs from the tire inflation pressure of the road tires.

<sup>27</sup> Engine with oil cooler.

Warning!

Comply with all valid regulations with respect to handling, storing, and disposing of service fluids. Otherwise you could endanger persons or the environment. Keep service fluids out of the reach of children.

For health reasons, you should prevent service fluids from coming into direct contact with your skin or clothing.

If a service fluid is swallowed, contact a physician immediately.

28 CLS 63 AMG with Performance Package.
Approved engine oils

Engine oils are specifically tested for their suitability in our engines and durability for our service intervals. Therefore, only use approved engine oils and oil filters required for vehicles with Maintenance System. Conventional petroleum-based oils must not be used for vehicles with Maintenance System.

For a listing of approved engine oils and oil filters, contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only).

![Warning icon]

Using engine oils and oil filters of specification other than those expressly required for the Maintenance System, or changing of oil and oil filter at change intervals longer than those called for by the Maintenance System will result in engine or emission control system damage not covered by the Mercedes-Benz Limited Warranty. Please follow Maintenance System recommendations for scheduled oil changes. Failure to do so will result in engine or emission control system damage not covered by the Mercedes-Benz Limited Warranty.

Mercedes-Benz recommends MOBIL OIL. Use the table below to determine the MB sheet number.

### Viscosity grades for engine oils

Using the chart below, select oil viscosity according to the lowest air temperature expected before the next oil change.

<table>
<thead>
<tr>
<th>Model</th>
<th>Engine type</th>

<td>229.5</td>
</tr>
</tbody>
</table>

MB sheet numbers are printed on the outside of oil containers.

---

29 Use MB Windshield Washer Concentrate “MB SummerFit” and water for temperatures above freezing point or MB Windshield Washer Concentrate “MB SummerFit” and commercially available premixed washer solvent/antifreeze for temperatures below freezing point.

30 Restriction: Only SAE XW-40 engine oils may be used.
Fuels, coolants, lubricants etc.

### Engine oil additives

⚠️ Do not blend oil additives with engine oil. They may damage the engine. Damage or malfunctions resulting from blending oil additives are not covered by the Mercedes-Benz Limited Warranty.

### Air conditioning refrigerant

R-134a (HFC) refrigerant and special PAG lubricating oil are used in the air conditioning system.

⚠️ Never use R-12 (CFC) or mineral-based lubricating oil. Otherwise damage to the system will occur.

### Brake fluid

⚠️ **Warning!**  
During vehicle operation, the boiling point of the brake fluid is continuously reduced through the absorption of moisture from the atmosphere.  
Under extremely strenuous operating conditions, this moisture content can lead to the formation of bubbles in the system, thus reducing the system’s efficiency. Therefore, the brake fluid must be replaced regularly. Refer to your vehicle’s Maintenance Booklet for replacement interval.

Only brake fluid approved by Mercedes-Benz is recommended. Any authorized Mercedes-Benz Center will provide you with additional information.

### Premium unleaded gasoline

⚠️ **Warning!**  
Gasoline is highly flammable and poisonous. It burns violently and can cause serious personal injury.  
Never allow sparks, flames or smoking materials near gasoline!  
Turn off the engine before refueling.  
Whenever you are around gasoline, avoid inhaling fumes and any skin or clothing contact. Extinguish all smoking materials. Direct skin contact with fuels and the inhalation of fuel vapors are damaging your health.

⚠️ To maintain the engine’s durability and performance, premium unleaded gasoline must be used.  
If premium unleaded gasoline is not available and low octane gasoline is used, follow these precautions:

- Have the fuel tank only partially filled with unleaded regular gasoline and fill up with premium unleaded gasoline as soon as possible.
- Avoid full throttle driving and abrupt acceleration.
• Do not exceed an engine speed of 3000 rpm if the vehicle is loaded with a light load such as two persons and no luggage.

• Do not exceed $\frac{2}{3}$ of maximum accelerator pedal position if the vehicle is fully loaded or operating in mountainous terrain.

These blends must also meet all other fuel requirements, such as resistance to spark knock, boiling range, vapor pressure, etc.

### Gasoline additives

A major concern among engine manufacturers is carbon build-up caused by gasoline. Mercedes-Benz recommends only the use of quality gasoline containing additives that prevent the build-up of carbon deposits.

After an extended period of using fuels without such additives carbon deposits can build up, especially on the intake valves and in the combustion area, leading to engine performance problems such as:

- Warm-up hesitation
- Unstable idle
- Knocking/pinging
- Misfire
- Power loss

In areas where carbon deposits may be encountered due to lack of availability of gasoline which contains these additives, Mercedes-Benz recommends the use of additives approved by us for use on Mercedes-Benz vehicles.

Contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only) for a listing of approved product(s). Follow directions on product label.

Do not blend other fuel additives with fuel. This only results in unnecessary cost and may be harmful to the engine operation.

Damage or malfunction resulting from poor fuel quality or from blending additional fuel additives other than those tested and approved by us for use on Mercedes-Benz vehicles are not covered by the Mercedes-Benz Limited Warranty or by any pre-owned or Extended Limited warranties.

### Coolants

The engine coolant is a mixture of water and anticorrosion/antifreeze, which provides:

- Corrosion protection
- Freeze protection
- Boiling protection (by increasing the boiling point)

The cooling system was filled at the factory with a coolant providing freeze protection to approximately $-35^\circ\text{F} (-37^\circ\text{C})$ and corrosion protection.

---

Fuel requirements

Only use premium unleaded gasoline. The octane number (posted at the pump) must be 91 min. It is an average of both the Research Octane Number (RON) and the Motor Octane Number (MON): \(\text{RON} + \text{MON}/2\). This is also known as the ANTI-KNOCK INDEX.

Reformulated gasolines (RFG) and/or unleaded gasoline containing oxygenates such as ethanol, TAME, ETBE, IPA, IBA, and TBA can be used provided the ratio of any one of these oxygenates to gasoline does not exceed 10%; MTBE must not exceed 15%.

The ratio of methanol to gasoline must not exceed 3% plus additional cosolvents.

Using mixtures of ethanol and methanol is not allowed. Gasohol, which contains 10% ethanol and 90% unleaded gasoline, can be used.

Contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only) for a listing of approved product(s). Follow directions on product label.

Do not blend other fuel additives with fuel. This only results in unnecessary cost and may be harmful to the engine operation.

Damage or malfunction resulting from poor fuel quality or from blending additional fuel additives other than those tested and approved by us for use on Mercedes-Benz vehicles are not covered by the Mercedes-Benz Limited Warranty or by any pre-owned or Extended Limited warranties.
Add premixed coolant solution only. Adding water and MB 325.0 Anticorrosion/Antifreeze separately from each other, could cause engine damage not covered by the Mercedes-Benz Limited Warranty.

If the antifreeze mixture is effective to -35°F (-37°C), the boiling point of the coolant in the pressurized cooling system is reached at approximately 266°F (130°C).

The coolant solution must be used year round to provide the necessary corrosion protection and increase boil-over protection. Refer to the Maintenance Booklet for replacement interval.

Coolant system design and coolant used determine the replacement interval. The replacement interval published in the Maintenance Booklet is only applicable if MB 325.0 Anticorrosion/Antifreeze solution or other Mercedes-Benz approved products of equal specification are used to renew the coolant concentration or bring it back up to the proper level.

For information on other Mercedes-Benz approved products of equal specification, contact an authorized Mercedes-Benz Center or visit www.mbusa.com (USA only).

Anticorrosion/antifreeze

Your vehicle contains a number of aluminum parts. The use of aluminum components in motor vehicle engines necessitates that anticorrosion/antifreeze coolant used in such engines be specifically formulated to protect the aluminum parts. Failure to use such anticorrosion/antifreeze coolant will result in a significantly shortened service life.

Therefore, the following product is strongly recommended for use in your vehicle: MB 325.0 Anticorrosion/Antifreeze agent.

Before the start of the winter season (or once a year in hot southern regions), you should have the anticorrosion/antifreeze concentration checked.

The coolant is also regularly checked each time you bring your vehicle to an authorized Mercedes-Benz Center for service.

**Washer system and headlamp cleaning system**

⚠️ **Warning!**
Washer solvent/antifreeze is highly flammable. Do not spill washer solvent/antifreeze on hot engine parts, because it may ignite and burn. You could be seriously burned.

**Washer fluid mixing ratio**

For temperatures above freezing point, use MB Windshield Washer Concentrate “MB SummerFit” and water:

- 1 part “MB SummerFit” to 100 parts water  
  
  (1.34 fl oz [40 ml] “MB SummerFit” to 1 gal [4.0 l] water)

For temperatures below freezing point, use MB Windshield Washer Concentrate “MB SummerFit” and commercially available pre-mixed washer solvent/antifreeze:

- 1 part “MB SummerFit” to 100 parts solvent  
  
  (1.34 fl oz [40 ml] “MB SummerFit” to 1 gal [4.0 l] solvent)
Service and Literature

Your authorized Mercedes-Benz Center has trained technicians and Genuine Mercedes-Benz Parts to service your vehicle properly. For expert advice and quality service, contact an authorized Mercedes-Benz Center.

If you are interested in obtaining service literature for your vehicle, please contact an authorized Mercedes-Benz Center. We consider this the best way for you to obtain accurate information for your vehicle.

For further information you can find us on the Mercedes-Benz web-site www.mbusa.com (USA only) or www.mercedes-benz.ca (Canada only).

⚠️ Warning!

To help avoid personal injury, be extremely careful when performing any service work or repairs. Improper or incomplete service or the use of incorrect or inappropriate parts or materials may damage the vehicle or its equipment, which may in turn result in personal injury.

If you have any questions about carrying out any type of service, turn to the advice of an authorized Mercedes-Benz Center.

We reserve the right to make changes in design and equipment.

Therefore, information, illustrations and descriptions in this Operator's Manual might differ from your vehicle. Reprinting, translation and copying, even of excerpts, is not permitted without our prior authorization in writing.
